Public Document Pack

Havering
LONDON BOROUGH

EXTRAORDINARY COUNCIL MEETING

7.30 pm Wednesday, 26 July 2017
At Council Chamber - Town Hall

Members of the Council of the London Borough of Havering are hereby summoned to attend a meeting of the Council at the time and place indicated for the transaction of the following business

Kathryn Robinson
Monitoring Officer

For information about the meeting please contact:
Anthony Clements tel: 01708 433065
anthony.clements@oneSource.co.uk

Please note that this meeting will be webcast.

Webcast

Members of the public who do not wish to appear in the webcast will be able to sit in the balcony, which is not in camera range.

Protocol for members of the public wishing to report on meetings of the London Borough of Havering

Members of the public are entitled to report on meetings of Council, Committees and Cabinet, except in circumstances where the public have been excluded as permitted by law.

Reporting means:-

- filming, photographing or making an audio recording of the proceedings of the meeting;
- using any other means for enabling persons not present to see or hear proceedings at a meeting as it takes place or later; or
- reporting or providing commentary on proceedings at a meeting, orally or in writing, so that the report or commentary is available as the meeting takes place or later if the person is not present.

Anyone present at a meeting as it takes place is not permitted to carry out an oral commentary or report. This is to prevent the business of the meeting being disrupted.

Anyone attending a meeting is asked to advise Democratic Services staff on 01708 433076 that they wish to report on the meeting and how they wish to do so. This is to enable employees to guide anyone choosing to report on proceedings to an appropriate place from which to be able to report effectively.

Members of the public are asked to remain seated throughout the meeting as standing up and walking around could distract from the business in hand.

AGENDA

1 PRAYERS

2 APOLOGIES FOR ABSENCE

To receive apologies for absence (if any).

3 DISCLOSURE OF INTERESTS

Members are invited to disclose any interest in any of the items on the agenda at this point of the meeting.

Members may still disclose any interest in an item at any time prior to the consideration of the matter.

4 ANNOUNCEMENTS BY THE MAYOR, BY THE LEADER OF THE COUNCIL OR BY THE CHIEF EXECUTIVE

To receive announcements (if any).

5 HAVERING LOCAL PLAN (Pages 1 - 3194)

NOTE: The deadline for amendments is midnight, Monday 24 July 2017.

To consider a report of Cabinet on the Havering Local Plan (attached, subject to approval by Cabinet).

6 MOTIONS (Pages 3195 - 3198)

Motions paper attached.

Havering
LONDON BOROUGH

COUNCIL, 26 JULY 2017

REPORT OF CABINET

HAVERING LOCAL PLAN

At its meeting on 19 July 2017, Cabinet is due to consider a report (attached) on the Havering Local Plan.

This report explains that a new Having Local Plan is being prepared and will, in due course once adopted, replace key elements of the Havering Local Development Framework which has been in place since 2008. A Local Plan sets out the long term strategic planning policies and objectives, opportunities for development and clear planning policies on what will or not be permitted and where.

The Local Plan will also enable important planning and regeneration initiatives such as the Council's two housing zones, its estates renewal programme and the opportunities arising from Crossrail to be reflected.

The report seeks Member approval for public consultation on the Proposed Submission version of the Local Plan and formal submission to the Secretary of State for public examination. In the event that this consultation requires amendments to the Local Plan before its formal submission delegated authority is sought to enable the appropriate adjustments to be made.

Subject to agreement of the report by Cabinet, Cabinet recommends that Council:

(i) Approve the proposed Submission Havering Local Plan (as included as Annex 1) and changes to the 2008 adopted Proposals Map (as included as Annex 2) and procedural and evidence documents (listed below) for publication and public consultation under Regulation 19 of the Regulations prior to submission to the Secretary of State;

- **Consultation Statement 2017 (Annex 5);**
- **Duty to Co-operate Statement 2017 (Annex 6);**
- **Health Impact Assessment (Annex 7);**
- **Equalities Impact Assessment 2017 (Annex 8)**
- **Sustainability Appraisal 2017 (Annex 9)**
- **Habitats Regulation Assessment 2017 (Annex 10);**
- **Outer North East London Strategic Housing Market Assessment 2016 (Annex 11)**

- **Outer North East London Strategic Housing Market Assessment: Update for Havering 2016 (Annex 12)**
- **Housing Position Statement (Annex 13)**
- **Retail and Commercial Leisure Needs Assessment 2015 (Annex 14)**
- **Employment Land Review 2015 (Annex 15)**
- **Open Space, Allotments and Sport and Recreation Needs Assessment 2016 (Annexes 16-21) comprising of:**
  - **Open Space Assessment Report**
  - **Open Space Standards Paper 2016**
  - **Indoor Sport and Leisure Facilities Assessment Report 2016**
  - **Indoor Sport and Leisure Facility Strategy 2016**
  - **Playing Pitch Strategy Assessment Report 2016**
  - **Playing Pitch Strategy and Action Plan 2016**
- **Infrastructure Delivery Plan 2017 (Annex 22)**
- **Gypsy and Traveller Accommodation Assessment 2017 (Annex 23)**
- **Gypsy and Traveller Position Statement 2017 (Annex 24)**
- **Town Centre Position Statement 2017 (Annex 25)**
- **Wind Resource Evidence Base 2016 (Annex 26)**
- **Green Belt Study 2016 (Annex 27)**
- **Residential Car Parking Standards 2017 (Annex 28)**
- **Viability Assessment 2017 (Annex 29)**
- **Strategic Flood Risk Assessment 2016 (Annex 30)**
- **Transport Position Statement 2016 (Annex 31)**
- **Havering Strategic Modelling Technical Note 2016 (Annex 32)**
- **Havering SINC Review 2017 (Annex 33)**

(ii) Approve the Proposed Submission Documents, as set out in (i) above and relevant supporting documentation as the final documents for submission to the Secretary of State under Regulation 22 of the Regulations, subsequent to public consultation provided that only non-material and minor amendments are required.

(iii) Delegate authority to the Director of Neighbourhoods, following consultation with the Cabinet Member for Housing, to finalise and approve the proposed Submission Documents, as set out in (i) above for submission to the Secretary of State, including to:

- **make non material/minor amendments to the proposed submission documents;**

- **undertake any further consultation required arising as a result of the Regulation 19 consultation;**

- **make modifications to the Submission Documentation during and as a result of the Examination process; and**

- **make submissions to the Planning Inspectorate in support of the Submission Local Plan during the Examination process.**

Havering
LONDON BOROUGH

CABINET
19 JULY 2017

Subject Heading:	Havering Local Plan
Cabinet Member:	Councillor Damian White Deputy Leader of the Council and Cabinet Member for Housing
SLT Lead:	Steve Moore, Director of Neighbourhoods
Report Author and contact details:	Martyn Thomas martyn.thomas@havering.gov.uk Tel :01708432845
Policy context:	National Planning Policy Framework (2012) London Plan 2015 (consolidated with Alterations since 2011) A City for all Londoners: London Mayor (2016) Havering Vision – Havering - Making a Greater London (2017) Havering Local Development Framework (2008)
Financial summary:	The total estimated cost of delivering the Local Plan is £536,800. Of this sum, £263,550 has been incurred between 2014 and June 2017. The remaining £273,250 will be incurred during 2017/18 and 2018/19 in relation to public consultation and examination, associated technical evidence and professional advice. The costs will be met from a combination of Planning Delivery Grant, and existing Neighbourhoods budgets. A funding gap of £166,200 currently exists, which will be met by a combination of reprioritisation of Neighbourhoods budgets and a one off contribution from the Business Risk Reserve. Further detail is set out in section 19 of the report.
Is this a Key Decision?	Yes - Significant effect on two or more Wards

When should this matter be reviewed? July 2019 (One year after likely adoption)

Reviewing OSC: Towns and Communities

The subject matter of this report deals with the following Council Objectives

Communities making Havering	[x]
Places making Havering	[x]
Opportunities making Havering	[x]
Connections making Havering	[x]

SUMMARY

1. Havering must have an up to date Local Plan for the Borough. A Local Plan is part of the statutory Development Plan for an area. It sets out the long term strategic planning priorities and objectives, opportunities for development and clear planning policies on what will or will not be permitted and where.

2. The report explains that a Havering Local Plan is being prepared and will, in due course once adopted, replace key elements of the Havering Local Development Framework (LDF) which has been in place since 2008.

3. Since the LDF was adopted, the Government has published the National Planning Policy Framework (NPPF) and the London Mayor has revised his London Plan. Both provide an important planning context for the preparation and delivery of Havering's Local Plan.

4. Importantly, the new Local Plan will be a very important tool in enabling the Council to deliver its vision: Havering - Making a Greater London. The Plan has been prepared alongside the preparation of the vision and is fully consistent with it.

5. The Local Plan will also enable important planning and regeneration initiatives such as the Council's two Housing Zones, its estates renewal programme and the opportunities arising from Crossrail to be reflected.

6. The Proposed Submission Local Plan includes a spatial strategy setting out the key elements of the proposed approach to planning in Havering over the plan period of 15 years including: the main growth in homes and jobs being focussed on Romford and Rainham and Beam Park, continued protection of the Green Belt, maintaining a prosperous economy in the borough, a focus on high quality development and creating good places for people to live, work and visit and for businesses to invest in, promotion of some key infrastructure improvements linked to transport and places and making sure there are enough schools and community facilities.

7. The preparation of the Proposed Submission Local Plan has already encompassed extensive engagement with external stakeholders and public consultation as legally required. Key stakeholders such as the Mayor of London have been involved throughout the work on the Local Plan and the views of the wider community have been canvassed.

8. The preparation of the Local Plan requires the Council to engage with local authorities that adjoin Havering as well as those further afield so that Havering can discharge its Duty to Co-operate responsibilities.

9. The opportunity has been taken to review and update the Local Development Scheme (LDS). This sets out the programme for further work on the Local Plan and linked documents and Member approval is sought for this.

10. The report seeks Member approval for public consultation on the Proposed Submission version of the Local Plan and formal submission to the Secretary of State for public examination. In the event that this consultation requires amendments to the Local Plan before its formal submission delegated authority is sought to enable the appropriate adjustments to be made.

RECOMMENDATIONS

1. That Cabinet:

   (i) Approve the Council's responses to the representations received during consultation under Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012 ("the Regulations") and additional representations received during the preparation of the Proposed Submission Havering Local Plan as set out in the Havering Local Plan Consultation Response Statement (as included in Annex 5);

   (ii) Approve the Local Development Scheme for publication (as included in Annex 3)

2. That Cabinet endorse and make the following recommendations to Council.

   That Council:

   (i) Approve the proposed Submission Havering Local Plan (as included as Annex 1) and changes to the 2008 adopted Proposals Map (as included as Annex 2) and procedural and evidence documents (listed below) for publication and public consultation under Regulation 19 of the Regulations prior to submission to the Secretary of State;

   - Consultation Statement 2017 (Annex 5);
   - Duty to Co-operate Statement 2017 (Annex 6);
   - Health Impact Assessment (Annex 7);
   - Equalities Impact Assessment 2017 (Annex 8)
   - Sustainability Appraisal 2017 (Annex 9)
   - Habitats Regulation Assessment 2017 (Annex 10);
   - Outer North East London Strategic Housing Market Assessment 2016 (Annex 11)

- Outer North East London Strategic Housing Market Assessment: Update for Havering 2016 (Annex 12)
- Housing Position Statement (Annex 13)
- Retail and Commercial Leisure Needs Assessment 2015 (Annex 14)
- Employment Land Review 2015 (Annex 15)
- Open Space, Allotments and Sport and Recreation Needs Assessment 2016 (Annexes 16-21) comprising of:
  - Open Space Assessment Report
  - Open Space Standards Paper 2016
  - Indoor Sport and Leisure Facilities Assessment Report 2016
  - Indoor Sport and Leisure Facility Strategy 2016
  - Playing Pitch Strategy Assessment Report 2016
  - Playing Pitch Strategy and Action Plan 2016
- Infrastructure Delivery Plan 2017 (Annex 22)
- Gypsy and Traveller Accommodation Assessment 2017 (Annex 23)
- Gypsy and Traveller Position Statement 2017 (Annex 24)
- Town Centre Position Statement 2017 (Annex 25)
- Wind Resource Evidence Base 2016 (Annex 26)
- Green Belt Study 2016 (Annex 27)
- Residential Car Parking Standards 2017 (Annex 28)
- Viability Assessment 2017 (Annex 29)
- Strategic Flood Risk Assessment 2016 (Annex 30)
- Transport Position Statement 2016 (Annex 31)
- Havering Strategic Modelling Technical Note 2016 (Annex 32)
- Havering SINC Review 2017 (Annex 33)

(ii) Approve the Proposed Submission Documents, as set out in 2(i) above and relevant supporting documentation as the final documents for submission to the Secretary of State under Regulation 22 of the Regulations, subsequent to public consultation provided that only non-material and minor amendments are required.

(iii) Delegate authority to the Director of Neighbourhoods, following consultation with the Cabinet Member for Housing, to finalise and approve the proposed Submission Documents, as set out in 2(i) above for submission to the Secretary of State, including to:

- make non material/minor amendments to the proposed submission documents;

- undertake any further consultation required arising as a result of the Regulation 19 consultation;

- make modifications to the Submission Documentation during and as a result of the Examination process; and

- make submissions to the Planning Inspectorate in support of the Submission Local Plan during the Examination process.

REPORT DETAIL

1. Purpose and content of this report

1.1 This report is to:

- outline progress on the Havering Local Plan; and
- secure Member approval for the Proposed Submission Havering Local Plan to be the subject of public consultation and formally submitted to the Planning Inspectorate (Secretary of State).

1.2 The report:

- outlines the reasons why the Havering Local Plan has been prepared (Section 2)
- identifies the structure and key contents of the Proposed Submission Local Plan including the Spatial Strategy (Section 3)
- explains how the Proposed Submission Local Plan has been prepared (Sections 4-9)
- updates the Local Development Scheme (Section 10)
- sets out the next steps including the forthcoming public consultation and the Examination in Public (Sections 11-15)

2. Why the Havering Local Plan has been prepared

2.1 There are several reasons why the Council is bringing forward a Local Plan for Havering and these are summarised below:

The existing planning framework for Havering needs to be updated

2.2 The Havering Local Development Framework has served the borough well since it was adopted in 2008. However, it is essential that Havering has an up to date planning framework in place to ensure the borough is able to respond positively to change over the next 15 years.

2.3 The Council must also be in a position to influence that change to ensure the borough remains a place where people want to live, work, visit and where businesses can prosper and invest.

2.4 Once adopted, the Local Plan will replace the Core Strategy and Development Control Policies Development Plan Document 2008 and the policies within the Romford Area Action Plan 2008.

Planning changes and challenges

2.5 Since the Local Development Framework was adopted, a number of significant changes and challenges have taken place with implications for planning and regeneration in Havering that include:

- new planning policies from the Government and the London Mayor (2012 and 2015, respectively);
- the preparation of Havering's new vision: Havering - Making a Greater London;
- a growing and changing population;
- the delivery of two Housing Zones in Havering to accelerate the delivery of new homes in Romford and Rainham and Beam Park;
- the Council's commitment to regeneration across twelve housing estates;
- making sure that Havering provides new homes;
- making sure that Havering optimises the benefits from Crossrail;
- the need to secure improved transport infrastructure particularly north-south connections;
- the need to secure the provision of early years and school places, health care and other key community facilities required to support a growing and changing population;
- the need to address increasing health inequalities and the wider determinants of health and well-being;
- making sure that Havering provides the right numbers and types of jobs;
- the need to create the right conditions to attract investors to the borough;
- the need to strengthen our town centres and improve their vitality and viability;
- providing a formal (statutory) framework to support further work by the Council and its partners to support the regeneration of Havering (such as the emerging Romford Masterplan); and
- pressure for the release of land in Havering's Green Belt.

2.6 The Havering Local Plan will provide the opportunity to put in place a new planning framework to address these challenges and opportunities up until 2031.

A tool to deliver the Council's vision and its other strategies

2.7 It is particularly important that Havering in its primary tool for land-use planning is able to inform how it intends to take forward the delivery of its new vision (adopted by the Council earlier this year).

2.8 Preparing a Local Plan also provides the scope to give emphasis to the importance of the new homes coming forward through its established Housing Zones and the regeneration of twelve Council housing estates.

2.9 The Local Plan will help the Council to securing major infrastructure investment needed to complement and support change and growth in Havering.

Responding to change in Havering

2.10 An up to date Local Plan will mean that Havering will be best placed to respond to proposals for change in the borough as planning legislation requires that planning decisions be taken in the context of the Development Plan for an area.

2.11 It follows that it is essential that a Council have an up to date Plan if it is to effectively control and guide development to secure the best outcomes for its borough including making better places. A Local Plan with up to date policies and evidential documents, influences significantly the Council's ability to respond to proposals for housing and protect the green belt.

2.12 Without an up to date Local Plan that has properly addressed housing supply issues, the Council is at a disadvantageous position to deal with housing proposals that may not meet Havering's priorities and objectives.

Making sure that Havering has the key role in planning decisions

2.13 Without an up to date Local Plan, there is a significant risk that the Council's ability as the Local Planning Authority to influence and control development will be eroded.

2.14 The risk is that schemes would proceed that the Council consider have an adverse impact on Havering. More decisions on planning in Havering would pass to the Secretary of State and Planning Inspectorate for determination and the Council will be less likely to be able to defend their own decisions.

2.15 It is likely that the extent of the influence and control of the London Mayor on planning decisions in Havering would also increase without an up to date Local Plan, through Mayoral 'Call-in' of planning applications pursuant to Section 2A of the Town and Country Planning Act 1990 and criteria in the Mayor of London Order 2008.

Co-ordinating with other schemes and strategies

2.16 Without an up to date Local Plan, the Council would also lose its ability to influence the co-ordination of development and ensure that individual schemes are consistent with other schemes and that sufficient infrastructure is provided across the borough (including schools, medical facilities and transport).

2.17 The Council will be in much stronger position to push for the improved infrastructure needed to support growth if it can show that it is identified through the Local Plan process, with a sound evidence base and thorough consultation.

Being ahead of other strategies changing

2.18 The Government is expected to review the National Planning Policy Framework in due course and this may adjust the national planning policy context against which local plans are prepared.

2.19 Additionally, it is understood that the Mayor of London is in the early stages of reviewing and updating several strategies for London that include planning and transport. Bringing forward a Local Plan for Havering now provides the opportunity to progress the preparation of the Local Plan against the current known Mayoral strategies which are broadly well suited to Havering.

Helping with Havering's responses to other strategies and supporting its bids for funding

2.20 An up to date Local Plan will help the Council to:

- respond to policy strategies prepared by other parties including the Government, the London Mayor and nearby authorities; and

- prepare and submit bids for funding to support its planning and regeneration ambitions (such as its annual submission to Transport for London for funding for transport projects and programmes).

Reputational advantage

2.21 Havering is more likely to be considered, by investors, central government, residents and businesses as a borough that 'has a plan' and 'knows where it's going' if it has an up to date Local Plan. It will show that Havering is positive, and pro-active and keen to engage with developers and their partners to deliver a better borough.

2.22 Over time, it will assist the Council in developing relationships with developers who have an established record of working with partners (such as local authorities) to bring forward schemes of high quality. It will assist developers by providing a climate of greater certainty in which they will make their investment decisions.

3. The Proposed Submission Havering Local Plan

Overview

3.1 The Proposed Submission Local Plan responds to the key planning challenges (as set out in Section 2), has considered representations received to previous consultations (as set out in Section 5), and incorporates the findings from the evidence base (as described in Section 7).

The structure and format of the proposed Submission Local Plan

3.2 The Plan has been structured to reflect the themes in the Council's vision: 'Havering – Making a Greater London'. Several policies are cross-cutting and will help secure the objectives of the overall Local Plan. It includes:

- Section 1: Overview;
- Section 2: Vision for Havering;
- Section 3: Strategic objectives;
- Section 4: Havering in the wider sub-region;
- Section 5: Borough-wide strategy for growth;
- Section 6: Strategic Development Areas;
- Section 7: Successful Places to Live;
- Section 8: Thriving Communities;
- Section 9: Opportunities to Prosper;
- Section 10: Connections;
- Section 11: High Quality Places;
- Section 12: Green Places;
- Section 13: Minerals;
- Section 14: Delivery and Implementation;
- Annexes – covering various technical and supporting topics

The Local Plan Strategy

3.3 In general terms, the approach in the Proposed Submission Local Plan has been to deliver a realistic, flexible and positive strategy for land use planning for the period to 2031 and ensuring that Havering remains a place where people want to live, work and visit and businesses can invest and prosper.

3.4 The proposed strategy:

- broadly reflects the approach to planning and regeneration that has underpinned the Council's previous statutory and non-statutory planning policies and frameworks as well as more recent important initiatives such as

the delivery of two Housing Zones in Romford and Rainham and Beam Park

- takes account of current planning priorities particularly the importance of ensuring that Havering has the necessary infrastructure to support planned change and growth and the need for new homes that will arise over the period of the plan.

3.5 The proposed spatial approach is to direct the major growth to two strategic development areas in Romford and Rainham and Beam Park as these areas have the capacity to accommodate new homes, jobs and infrastructure. By doing this, and optimising opportunities for new homes in the rest of the built up area, this will provide the most sustainable means of providing the necessary new homes needed in Havering. It will also enable robust commitment to be provided to maintaining Havering's established Green Belt.

3.6 There is a clear recognition of the importance of securing new infrastructure to support growth and tackle existing issues and to make sure that the community in Havering is well served by the schools and health facilities it requires.

3.7 The Local Plan recognises that parking provision needs to reflect local circumstances.

3.8 Provision for gypsy and traveller households will be made for those who meet the statutory definition with robust criteria for new sites.

3.9 The Local Plan identifies the key elements of its underlying Spatial Strategy as:

Housing Growth:

- Delivery of at least 17,550 high quality homes over the 15 year Plan period;
- Delivery of over 5,300 new homes in the Romford Strategic Development Area;
- Transformation of Rainham and Beam Park Strategic Development Area providing a new, well connected residential community of a least 3,000 homes served by Beam Park Station;
- Residential intensification of the borough's district centres, with proposed development compatible with their character, function and scale;
- Intensification and renewal of existing Council housing estates providing an improved housing stock; and
- At least 700 additional homes across the borough, outside of the Strategic Development Areas.

Economic Growth:

- Regeneration of Romford Town Centre, providing a more diverse and higher quality retail, leisure, cultural and employment offer;
- Directing an appropriate scale of retail, culture, service industries and office development to the boroughs network of town centres comprising of: Romford Metropolitan Centre, District Centres at Collier Row, Elm Park, Harold Hill, Hornchurch, Rainham and Upminster and 75 Local Centres including a new centre at Beam Park.
- Protection of the borough's Strategic Industrial Locations for continued industrial use;
- Protection of the borough's Locally Significant Industrial Sites for continued industrial and employment use;
- Intensification of the borough's industrial areas to optimise the use of the land and support transformational new developments to maximise the economic benefits for Havering;

Transport infrastructure:

- Improved public transport access to central London via Crossrail services at Romford, Gidea Park and Harold Wood and a new railway station at Beam Park on the Essex Thameside Line;
- Remodelling of Gallows Corner roundabout to increase safety, improve air quality and smooth motor vehicle traffic flows;
- Improved north-south links within the borough, connecting Rainham and Beam Park, Romford and Harold Hill;
- Increased capacity at Junction 28 of the M25;
- Remodelling of sections of the Romford Ring Road;
- Improvements to the A127 through the A127 Growth Corridor project;
- Working with Highways England to minimise the impact on Havering and its residents of the Governments preferred option for a Lower Thames Crossing.

Social infrastructure:

- Delivery of an early years and schools expansion programme to increase the number of early years and school places for new and existing residents;
- New early years and school provision in the growth areas of Romford and Rainham and Beam Park;
- New health facilities at the former St George's Hospital Site, Romford Town Centre, Rainham and Beam Park and in the north-west of the borough;
- Improvements to the borough's existing leisure facilities and new facilities in Romford Town Centre and Rainham and Beam Park.

Havering's most valued assets:

- Protecting and enhancing the Green Belt and the borough's open spaces;
- Preserving and enhancing the borough's rich heritage and historic environments;

The Proposals Map for the Havering Local Plan

3.10 Local Plans must include a Proposals Map to indicate land-use designations. The Map is required to illustrate geographically the policies in the Local Plan and it must be based on, or reproduced from, an Ordnance Survey map. The preparation of the Local Plan must show how a previously adopted Proposals Map (in this case, the one within the 2008 Havering LDF) will be changed by the new planning policies.

3.11 A Proposals Map Changes Booklet has been prepared to set out the changes to the Havering LDF Proposals Map (2008) (Annex 2). It reflects the policies in the Proposed Submission version of the Havering Local Plan.

3.12 A full version of the Proposals Map incorporating any changes resulting from the Examination will be prepared on adoption of the Havering Local Plan.

Taking the Havering Local Plan forward

3.13 It is envisaged that the Local Plan will be the first of a number of documents bought forward and will be the centrepiece of a 'suite' of planning documents.

3.14 The key document to be brought forward after this Local Plan will be a Site Specific Allocations Local Plan. This will identify individual sites for development and will set out the specific land uses, quantum and type of development. The Site Specific Allocations Local Plan has a critical role in delivering the priorities, objectives and strategy set out in this Local Plan.

3.15 Thereafter, it is expected that the opportunity will arise to bring forward new and updated Supplementary Planning Documents (SPDs) and other masterplans and frameworks. Some of these may be topic-specific or specific to particular areas of Havering depending on their purpose and content.

3.16 The opportunity has been taken in preparing the new Local Plan to 'signpost' these where possible. However, the Council will keep this under review and it is committed to bringing documents forward on a timely basis which will support and reinforce the Local Plan and assist the Council and / or prospective developers in its delivery.

3.17 As the Local Plan nears adoption a comprehensive review of the current SPDs will take place to help identify what existing/new Supplementary Planning Documents are necessary or appropriate.

3.18 The Council will be required to robustly monitor the Local Plan to make sure that it delivers the Council's objectives and priorities. If the need arises, then the Local Plan can be reviewed and revised (in part or wholly) if it is out of step with what the Council is seeking to achieve and or in the light of other circumstances such as changes in wider planning, transport and regeneration policies.

3.19 It is intended that the Local Plan will provide an opportunity for the Council to take steps to develop more positive engagement with prospective developers. This will encompass earlier discussions on the desired outcomes for sites and more clarity on the approach to matters such as urban design.

3.20 To reflect a growing priority on securing high quality schemes, it is expected that design review panels may be set up and key sites and schemes may be the subject of design / architectural competitions.

3.21 The Proposed Submission Local Plan recognises the importance of infrastructure improvements in Havering to support the growth identified in it. A key part of the delivery of the Local Plan will be for the Council to continue to engage with a wide range of stakeholders such as the London Mayor to secure the timely and effective delivery of this infrastructure if the ambition of the Local Plan is to be realised. It is recognised that the costs of securing this infrastructure may be very considerable and that the present funding for it is uncertain. The Council will work closely with stakeholders and partners to identify suitable funding and to encourage the future provision of appropriate funding streams. It is likely that the funding for some major elements of infrastructure will be determinant on several funding streams being identified to jointly combine for this. The Council will welcome the development of appropriate innovative funding mechanisms which may help secure infrastructure.

3.22 In parallel, the Council will review how it deals with planning applications and ensure that Members take full account of the strategic objectives behind proposals. It is intended that these several initiatives will help the Council and its partners deliver better places.

4. How the Havering Local Plan has been prepared

4.1 In December 2014, the Council agreed to prepare a Local Plan for Havering and approved initial consultation under Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012.

4.2 Local Plans should avoid repeating policy requirements set out elsewhere (such as the National Planning Policy Framework and the London Plan). The opportunity has therefore been taken to prepare a Local Plan which whilst 'fit for purpose', and well suited to taking Havering through to 2031, is as concise and focussed as possible.

4.3 The Council is keen to ensure that Havering benefits from an up to date Local Plan so that it has the best opportunity to control development and deliver the ideal programmes and projects it wants to. The preparation of the Local Plan has addressed this in the way that it has been prepared. In the interest of providing up to date planning policies as soon as possible, the preparation of the Plan has focussed on initial consultation under Regulation 18 of the

Regulations and the Regulation 19 consultation that will take place if the recommendations in this report are agreed.

4.4 Whilst formal consultation took place in spring 2015, the door has effectively been open with comments and proposals for individual sites (including those within the Green Belt) being welcomed throughout the preparation of the Proposed Submission Local Plan. Additionally, officers have engaged closely with staff of the London Mayor at all stages. The Duty to Co-operate responsibility has been reviewed and is considered to have been robustly discharged.

5. How consultation and engagement has been addressed in preparing the proposed Submission Havering Local Plan

5.1 The Proposed Submission Local Plan has been shaped through ongoing consultation and engagement with a wide range of stakeholders involving local people, businesses, community groups, external partners, and statutory Consultees. Regulation 18 of the Regulations sets out specific statutory requirements to consult and take into consideration the representations of appropriate business groups, bodies and residents.

5.2 Members have also had the opportunity to comment on the preparation of the Local Plan throughout the process and feedback has been incorporated. Topic specific briefings were provided to Cabinet Members and Members across the Council were recently afforded the opportunity to attend briefings to discuss the Local Plan. A briefing on the Local Plan for all Members took place before this Cabinet meeting and was attended by more than 30 Members from across the Council.

5.3 Additionally, the process of ensuring that the preparation of the Local Plan is in accordance with the statutory requirements including the Duty to Co-operate and whether it meets the tests of soundness contained in the NPPF, has been integral to the preparation of the Proposed Submission Local Plan.

5.4 The initial consultation under Regulation 18 took place in spring 2015 and invited representations on what the Local Plan ought to contain.

5.5 The Council has taken an open approach to the preparation of the Local Plan and has continued to accept comments and submissions throughout the process and outside of the statutory consultation period.

5.6 In autumn 2016, a Local Plan Direction of Travel Document was published to provide an update on the progress of the Local Plan and set out in further detail the emerging direction. It was also intended to facilitate on-going engagement and provided an opportunity for further comments. In line with its strong cross-Council working ethos, the opportunity has also been taken for work on the Local Plan to be informed by earlier work on regeneration initiatives such as the Masterplans and Frameworks prepared for Romford and Rainham.

5.7 A key consultee in the preparation of the Havering Local Plan is the London Mayor. The publication of the 'A City for all Londoners' document by the Mayor in late 2016 has informed the preparation of the Proposed Submission Local Plan particularly the approach to meeting and responding to 'good growth'. Officers consider that there is much to commend in the document and it will be beneficial to future wider discussions with the Mayor if it can be demonstrated that the new Local Plan has taken a positive stance to this as far as reflecting it in the Local Plan is concerned.

5.8 In the course of preparing the Proposed Submission Local Plan, officers have engaged on several occasions with officers from the Mayor's London Plan team and Transport for London to support, and inform, the preparation of the Local Plan.

5.9 Transport for London officers have also assisted Council staff in regard to addressing issues raised by adjoining authorities through the Duty to Co-operate meetings (see below).

5.10 It is envisaged that informal liaison with Mayoral staff will continue as the Local Plan progresses towards the Examination stage (see below). Notwithstanding this, it is very much hoped that the London Mayor will find much in the new Local Plan that he can support.

5.11 Members will note that later in this report reference is made to the Examination that will take place to assess the technical 'soundness' of the Local Plan. One of the issues that an Inspector will consider is the extent to which the Local Plan is in 'general conformity' with the London Plan as this is a statutory requirement.

5.12 All comments received from stakeholders during the preparation of the Proposed Submission Local Plan have been taken into consideration.

5.13 Initial consultation under Regulation 18 ran for a 6 week period in February – March 2015. The Council specifically sought views on the issues facing Havering and options for tackling these issues. The document was made available on-line and was sent to more than 700 stakeholders on the Local Plan Consultation Database which includes statutory bodies, local amenity and residents' groups, businesses and individual residents. There were 73 separate consultee responses raising almost 500 comments.

5.14 A key element of the consultation sought comments from residents and key stakeholders on preservation and/or development of the Havering Green Belt. Interested parties were invited to submit comments on the extent of the Green Belt and to identify any changes in the boundary that they considered would be appropriate. Almost 80 responses were submitted from parties suggesting that the Green Belt boundary should be changed. The consultation responses have been robustly considered in the light of the specific study that the Council has undertaken into the Green Belt.

5.15 A comprehensive Consultation Statement has been prepared to set out further details on the consultation process. It identifies each of the comments received throughout the preparation of the Local Plan and provides a detailed response to each of them including saying how the comments have been reflected in the Proposed Submission Local Plan.

5.16 This Consultation Statement is required to support the formal submission of the Local Plan. Members are recommended to approve this (Annex 5).

6. How the preparation of the proposed Submission Havering Local Plan has met the Duty to Co-operate

6.1 The Havering Local Plan is being prepared in accordance with the Duty to Co-operate, which places a legal duty on local authorities and other public bodies to engage constructively, actively and on an on-going basis to maximise the effectiveness of Local Plan preparation on strategic cross-boundary matters.

6.2 Officers have held several meetings with their counterparts from adjoining and nearby authorities to address strategic cross boundary issues. To support this work, and to recognise the importance of a wider strategic perspective being reflected in the work on the Local Plan, officers secured attendance from GLA and Transport for London officers. This support has been very beneficial to the preparation of the Local Plan.

6.3 A key part of this work has been linked to wider transport issues and the impact of development on this across the wider Outer London and Essex region. Informal agreement has been reached with officers across several authorities to continue to work closely alongside the preparation of their respective planning strategies so that transport issues remain 'front and centre' of further planning work.

6.4 A comprehensive Duty to Co-operate Statement is a statutory requirement to support the submission of the Havering Local Plan. Members are recommended to approve this (Annex 6).

7. Ensuring the proposed Submission Havering Local Plan has a robust evidence base

7.1 The National Planning Policy Framework requires that the Local Plan should be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the borough. There is unlikely to be much scope for the Local Plan to take an approach to planning issues that is out of step with the NPPF if there isn't a robust evidence base to support taking such a stance based on local circumstances.

7.2 A number of evidence base documents have been prepared to support the preparation of the Local Plan and to provide robust evidence on which to

base planning policies. All have been prepared to encompass appropriate 'good practice'.

7.3 A robust evidence base is important not only from the perspective of the preparation of the Local Plan but also to ensure that it can withstand external scrutiny by third parties (especially at the Examination stage – see below). A list of the evidence base and procedural documents that have been prepared is set out in Annex 4. Members are recommended to approve these documents.

7.4 Evidence base that has been prepared by other parties or by the Council but not for the primary purpose of supporting the Local Plan may also be referred to and used to support the Plan. These documents may be required to be submitted to the Secretary of State as part of the supporting evidence.

8. Assessments supporting the proposed Submission Havering Local Plan

8.1 Alongside the above, and in line with Planning Regulations, additional technical assessments have been prepared to inform and support the Local Plan during the Implementation process.

8.2 These include:

- Sustainability Appraisal
- Habitats Regulation Assessment
- Equalities Impact Assessment
- Health Impact Assessment

8.3 Members are recommended to approve these documents (Annexes 7-10)

9. Working across the Council and with other agencies

9.1 The draft Local Plan has been prepared with strong support from across the Council. It takes into account, as necessary, other Council plans and strategies that influence Havering and are also important in delivering the aspirations of the Council.

9.2 Many of the issues that are important to Members and the community, such as the provision of necessary health and community facilities, are outside of the Council's direct control and have required significant engagement with outside agencies.

9.3 As well as engagement with staff representing the London Mayor, there has been close working with external agencies such as the Havering Clinical Commissioning Group (CCG). Officers have been involved in the preparation of the CCG's document Havering Primary Care Infrastructure Capacity Plan (2017) to ensure that the Local Plan has a good fit with how that body is seeking to transform and deliver health services in the future.

10. The revised Local Development Scheme

10.1 It a statutory requirement (and good practice) that local planning authorities set out their programme for preparing Local Plans and their linked and supporting documents in a Local Development Scheme. In short, this is a project timetable that evidences how and when documents that are in the suite of documents encompassing the Local Plan will be prepared.

10.2 The opportunity has been taken to review and revise the LDS to bring it into line with the current approach to the Local Plan. It will be submitted with the Local Plan.

10.3 A copy of the latest proposed LDS is attached as Annex 3. Members are recommended to approve this.

11. What will happen after Cabinet and Council approval

11.1 Subject to Member approval at Cabinet and Council, the Local Plan must be subject to a period of statutory public consultation with a wide range of stakeholders including parties such as the London Mayor (including the Greater London Authority and Transport for London). Key stakeholders will be able to submit comments about the Local Plan.

11.2 This consultation has to be in accordance with planning legislation and the Council's Statement of Community Involvement 2015.

11.3 The consultation will differ from the earlier consultation. The Council will be asking whether the Local Plan has been prepared in accordance with legislative requirements and if it is 'sound' (see Section 12 below).

11.4 A statutory public notice must be published to mark the start of the consultation.

11.5 The consultation must be a minimum of 6 weeks but it may be extended to recognise the summer holiday period may impact on the ability of some stakeholders to submit representations.

11.6 If the Council amends the draft Local Plan to address the issues raised in the consultation, then dependent upon the 'material significance' of such amendments, the Local Plan may be subject to further consultation prior to submission and hence consideration by an Inspector at Examination.

11.7 There is a further opportunity for members of the public and key stakeholders to request amendments to the Local Plan if such amendments are not incorporated by the Council, at the Examination.

11.8 Submission to the Secretary of State will involve the Council sending copies of the Submission Local Plan and all other documentation to the Planning

Inspectorate. This will include the Submission documentation referred to in Recommendation 2(i) as well as other documents that the Inspector may wish to review such as those associated with the Regulation 18 consultation, evidence documents produced by other stakeholders and other procedural documentation.

12. At the Examination

12.1 The Council has engaged Counsel to assist in taking the Local Plan forward to the Examination. This is because of the importance of the Local Plan to securing the Council's vision and because of the context it will provide for a range of other strategies to be taken forward by the Council.

12.2 The key test for the Inspector at the Examination, is set out in paragraph 182 of the NPPF in regard to the Local Plan being 'sound', such considerations include:

- Is the Local Plan **positively prepared**? Is it based on a strategy that meets the borough's housing, employment and infrastructure requirements?

- Is the Local Plan **justified**? Are the proposed policies founded on a robust and credible evidence base? Do they represent the most appropriate strategy when considered against reasonable alternatives?

- Is the Local Plan **effective**? Are the proposed policies deliverable and flexible? Can the Council demonstrate how they will be monitored?

- Is the Local Plan **consistent with national policy**?

12.3 Exceptionally, the Inspector will recommend to the Council that the draft Local Plan be withdrawn if it is considered not to have been prepared in accordance with the Duty to Co-operate or be unsound.

12.4 The Council will need to appoint a Programme Officer to support the Planning Inspector appointed for the Examination and manage the day to day running of the Examination. Further details are set out in the Human Resources section of this report.

13. The outcome of the Examination

13.1 The Inspector's recommendation and, therefore, the outcome of the Examination are unable to be determined at this stage.

13.2 At the end of the Examination, the Inspector will prepare a report for the Council, which will either:

- Set out the modifications considered necessary to the Local Plan for it to be 'sound'. These modifications will be 'binding' on the Council meaning that

the Council must implement them if it wishes to take the Local Plan forward; or

- Reject the Local Plan as 'unsound' meaning that the Council will have to start the work on all [or some of] the Local Plan again and pending the adoption of the 're-worked' Local Plan, the Council will be in a far more vulnerable position regarding how it deals with development proposals that come forward.

13.3 Provided that the Local Plan is not rejected, the Council will be able to formally adopt it with the changes required by the Inspector (at a Council meeting) and will then be able to use the Local Plan to 'steer' development in Havering which is best suited to meeting its objectives and priorities.

14. What happens after adoption of the Local Plan

14.1 The Local Plan document is the first of a 'suite' of documents that the Council will bring forward to guide and support planning in Havering over the next 15 years.

14.2 The Local Plan will form a context for other planning and regeneration strategies that the Council wishes to bring forward.

14.3 Work is already in hand to bring these forward. The initial document will be a Site Specific Allocations Local Plan.

14.4 The Council will need to consider how it will keep the Local Plan under review as it is essential that it remains up to date. In particular, given the importance of housing delivery to the Local Plan and the implementation of the Housing Zones and estates regeneration programme it is envisaged that developing enhanced mechanisms for assessing progress on housing will be a key area of future work.

15. An indicative timetable for the adoption of Local Plan

15.1 Subject to Member approval, it is envisaged that consultation on the draft Local Plan will take place in late summer. This must be for a minimum period of 6 weeks but may be scheduled for a little longer to reflect that the holiday period may constrain third parties preparing and submitting any representations.

15.2 Officers maintain a dialogue with the Planning Inspectorate to ensure that the Inspectorate is fully aware of the progress with the Local Plan and to try and ensure that an early 'slot' for an Examination can be secured.

15.3 However, it must be recognised that this is largely outside of the control of the Council and will be dependent on the availability of an Inspector. Additionally, once an Inspector is allocated to a Local Plan, there is a period in which they will have to prepare for the Examination.

15.4 The duration of the Examination cannot be known at this stage and will be dependent upon the issues raised in the next round of consultation. Typically, Local Plan Examinations last 1-2 weeks.

15.5 Following the Examination there will be a period in which the Inspector will consider the matters raised and prepare their report before sending it to the Council for a 'fact check'.

15.6 Under these circumstances, the most reasonable, and optimistic assumption is that the Council may secure an Examination in late 2017 / early 2018 and be in a position to adopt the draft Local Plan in mid-2018.

16. Conclusions and next steps

16.1 The report has identified the importance of the Council having an up to date Local Plan to help ensure that the Havering vision is delivered. An up to date Local Plan will also better enable the Council to influence the changes that Havering will have to address in the next 15 years. The key features of the planning strategy have been set out. A programme for taking this work forward which should result in the Local Plan being in place in mid-2018 has been explained.

16.2 In terms of next steps and subject to the outcome from Council:

- The Proposed Submission version of the Havering Local Plan will be the subject of public consultation; and
- Provided that there are no comments requiring amendments to the Local Plan which require further consultation, the Local Plan will be submitted to the Secretary of State for independent examination which is anticipated to be later this year / early next year.

REASONS AND OPTIONS

17. Reasons for the decision:

17.1 The Local Plan has been prepared to comply with legislation and to ensure that Havering has an up to date development plan.

17.2 This will better enable the Council to ensure it is able to control and influence growth and change in the borough and to deliver its vision: Havering: Making a Greater London.

18. Other options considered:

18.1 The option of not taking forward a Local Plan and continuing to rely on the Local Development Framework has been considered and rejected for the following reasons:

- It is a statutory requirement for every local planning authority to have a Local Plan; and
- Over time, the current Development Plan (the LDF 2008) will become increasingly out of date and eventually will not provide sufficient policy support for refusing inappropriate development within the Borough.

18.2 The option of preparing a joint Local Plan with neighbouring boroughs has been rejected because it is essential that Havering has a draft Local Plan adopted in a reasonable timescale.

IMPLICATIONS AND RISKS

19. Financial implications and risks:

19.1 The two areas of cost in relation to the progression of the Havering Local Plan are those associated with the public consultation process and the examination in public. The table below summarises the funding and estimated expenditure in relation to delivery of the Local Plan totalling £536,810.

Description	Budget £	Costs £
Evidence base and Plan preparation		263,550
Planning Delivery Grant	160,500	
Directorate budgets	76,050	
External funding	27,000	
2014/15 to June 2017	**263,550**	**263,550**
Public Consultation		1,500
Programme Officer		30,000
Planning Counsel		70,000
Technical specialists		20,000
Technical evidence		101,750
Directorates existing budgets	95,000	
Planning Delivery grant	12,050	
Business Risk Reserve - up to the value of £166,204	116,200	
2017/18 (remaining periods)	**223,250**	**223,250**
Examination / Inspectors fees		50,000
Business Risk Reserve - up to the value of £166,204	50,000	
2018/19	**50,000**	**50,000**
Total	**536,800**	**536,800**

19.2 From 2014 to June 2017 the total expenditure incurred on the Local Plan was £263,550. This covers evidence base and plan preparation and has been funded through Planning Delivery Grant, Directorate budgets and external funding.

19.3 The estimated cost of completing the Local Plan over 2017/18 and 2018/19 is £273,250. The Neighbourhoods Directorate has identified £95,000 of existing base budget which currently leaves a budget gap of £166,200. The Directorate will endeavour to meet this sum from within its approved budget. However, any shortfall up to the value of £166,200 will be met from the Business Risk Reserve.

20. Legal implications and risks:

20.1 It is a statutory requirement for the Council to have a Local Plan in place and ensure it is relevant. The statutory provisions under which a Local Plan is made are within the Planning and Compulsory Purchase Act 2004 (as amended) and regulations made under the Town and Country Planning (Local Planning) (England) Regulations 2012 and the Environment Assessment of Plans and Programme Regulations 2004. To not prepare a Local Plan runs the risk that the Secretary of State will 'step in' and prepare a Local Plan for the borough.

20.2 The Cabinet and consequently the Council is being asked to approve the draft Local Plan to be published for representations for a minimum of 6 weeks and consequential submission, with appropriate amendments from such consultation, to the Secretary of State, in accordance with Regulations 17,19 and 21 of the Town and Country Planning (Local Planning) (England) Regulations 2012. The Local Plan should be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area. Consultation must be based on these statutory requirements and the Council's Statement of Community Involvement (2015).

20.3 Section 19 of the Planning and Compulsory Purchase Act 2004 sets out specific matters to which the local planning authority must have regard when preparing a Local Plan. Regulations 8 and 9 of the Town and Country Planning (Local Planning) (England) Regulations 2012 prescribe the general form and content of Local Plans and adopted policies map, while Regulation 10 states what additional matters local planning authorities must have regard to when drafting their plans.

20.4 The Local Plan is then submitted to the Secretary of State for examination, along with the Sustainability Appraisal, evidence base and a statement of representations and main issues in line with Regulation 22 of the Town and Country Planning (Local Planning) (England) Regulations 2012. Local planning authorities should ensure that their assessment of and strategies for housing, employment and other uses are integrated, and that they take full account of relevant market and economic signals. Whilst the National Planning Policy Framework does not compile a prescriptive list; the evidence should be focused tightly on supporting and justifying the particular policies in the Local Plan. Evidence of co-operation and considering different options for meeting development needs is key for this process.

20.5 Following submission of the Local Plan to the Secretary of State an Independent Inspector will assess the plan to determine whether it has been prepared in line with section 20 of the Planning and Compulsory Purchase Act 2004 and Regulations 23 – 24 of the Local Plan Regulations 2012.

20.6 The Inspector can recommend 'main modifications' (changes that materially affect the policies) to make a submission Local Plan sound and legally compliant only if asked to do so by the local planning authority under section

20(7C) of the 2004 Planning and Compulsory Purchase Act as amended) The Council can also put forward 'additional modifications' of its own to deal with more minor matters.

20.7 Where the changes recommended by the Inspector would be so extensive as to require a virtual re-writing of the Local Plan, the Inspector is likely to suggest that the local planning authority withdraws the plan. Exceptionally, under Section 21(9)(a) of the Planning and Compulsory Purchase Act 2004 the Secretary of State has the power to direct a local planning authority to withdraw its submitted plan.

20.8 Inspectors will require the local planning authority to consult upon all proposed main modifications. The Inspector's report on the plan will only be issued once the local planning authority has consulted on the main modifications and the Inspector has had the opportunity to consider the representations.

20.9 The risk of legal challenge will be avoided if Havering's Local Plan meets the objectively assessed needs of the Borough and the evidence is consistent with and has regard to the statutory framework and the requirements of the National Planning Policy Framework that include the Duty to Co-operate, s33A of the Planning and Compulsory Purchase Act 2004 (Local Development). The Duty to Co-operate is a legal test that requires co-operation between local planning authorities and other public bodies to maximise the effectiveness of policies for strategic matters in Local Plans. It is separate from but related to the Local Plan test of soundness. The test of soundness, is set out in full in the National Planning Policy Framework (paragraph 182), assesses whether the Local Plan is:

- positively prepared;
- justified;
- effective; and
- consistent with national policy.

20.10 The draft Local Plan and process undertaken to date, has been reviewed by Counsel and is considered to meet the statutory requirements as set out in these tests for consultation.

21. Human Resources implications and risks:

21.1 Appointment of a Programme Officer is required prior to submission of the Local Plan. As mentioned above, this role has previously been filled internally to minimise costs and to provide a development opportunity for staff. This option will be explored but if this is not feasible then it will be necessary to recruit externally. The Planning Inspectorate publicises a list of trained programme officers, which will assist with this process.

21.2 Most of the other aspects of the Local Plan publication and Submission can be delivered within existing staff resources. It may be necessary to engage

specialist technical assistance to address some representations if they cannot be dealt with by staff because of their nature.

21.3 Any recruitment activity and/or the engagement of temporary specialist resources will be undertaken in accordance with the Council's relevant Human Resources and/or Procurement policies.

22. Equalities implications and risks:

22.1 The Proposed Submission Havering Local Plan will provide the Council with a strategic framework to help deliver a range of outcomes including new homes, jobs, local economic growth and improved social infrastructure for residents across Havering including those who share the characteristics protected by the Equality Act 2010. As such, ensuring the Local Plan has addressed these has been a priority in its preparation. Because the Local Plan has a key role in influencing the built environment and how people use that, a key aspect of the EIA will be to ensure that access issues for people with disabilities is considered.

22.2 The Proposed Submission version of the Local Plan has been the subject of an Equality Impact Assessment. The Equality Impact Assessment is also to be published alongside this consultation.

1 Overview

1.1 What is the Local Plan?

1.1.1 This is the Local Plan for the London Borough of Havering which sets out the Council's ambitious vision and strategy for future growth and sustainable development over the next 15 years up to 2031. There is a need for new infrastructure, homes and jobs and Havering needs a spatial plan that will enable the borough to rise to these challenges and address each of these needs.

1.1.2 The Local Plan indicates the broad locations in Havering for future housing, employment, retail, leisure, transport, community services and other types of development. The policies in this Local Plan will help ensure that the needs of the borough over the next 15 years are sustainably met.

1.1.3 The Local Plan and Proposals Map together with the London Plan, the Joint Waste Development Plan Document (DPD) for the East London Waste Authority Boroughs and Havering's forthcoming Site Specific Allocations Local Plan will comprise the Development Plan for the borough and will be the primary basis against which planning applications are assessed.

1.1.4 In due course the Site Specific Allocations Local Plan will identify individual sites for specific uses that are intended to assist in delivering the priorities, objectives and strategy set out in this Local Plan.

1.1.5 The Local Plan has been prepared to be purposely focused and concise and to have a user friendly, accessible format. It is essential that the Plan is considered alongside the National Planning Policy Framework and the London Plan as it does not repeat policies that are already set out within these documents.

1.1.6 The policies within this Local Plan should be considered as a whole. Developments will be assessed against all applicable policies. Some policies apply only to specific geographical areas or particular types of development and this is set out clearly in the relevant policy and supporting text.

1.1.7 Further information on the context in which this Local Plan has been prepared and related policy documents are set out in Annexes 1 and 2.

1.2 Commenting on the Local Plan

How to make comments on the Local Plan

The Local Plan, all supporting documents and details of how to submit comments can be found at www.havering.gov.uk

Hard copies are also available for inspection at all public libraries in Havering.

At this stage in the plan-making process, comments should be made in a prescribed format and need to address whether the Local Plan has been made in accordance with legislative requirements and if the Local Plan is sound – that is:

- Is the Local Plan **positively prepared**? Is it based on a strategy that meets the borough's housing, employment and infrastructure requirements?
- Is the Local Plan **justified**? Are the proposed policies founded on a robust and credible evidence base? Do they represent the most appropriate strategy when considered against reasonable alternatives?
- Is the Local Plan **effective**? Are the proposed policies deliverable and flexible? Can the Council demonstrate how they will be monitored?
- Is the Local Plan **consistent with national policy**?

You can submit your comments:

- By email to developmentplanning@havering.gov.uk
- In writing to Development Planning, London Borough of Havering, Town Hall, Main Road, Romford, RM1 3BD

All comments should be submitted by xx.

Next steps

The representations received in response to the consultation will be submitted with the final submission version of the Local Plan, along with supporting documents, to the Secretary of State for Communities and Local Government. The Secretary of State will appoint a Planning Inspector to carry out an independent Examination in Public

Following the Examination, the Inspector will publish a report. If the report finds the Havering Local Plan to be "sound" the Council may formally adopt the Local Plan. Once adopted, it will supersede the policies currently contained in the Core Strategy and Development Control Policies Development Plan Document 2008 and the Romford Area Action Plan 2008.

2 Vision for Havering

2.1 Achieving Havering's corporate Vision

2.1.1 The Local Plan has an important role in contributing to the delivery of the Council's new dynamic vision which recognises that Havering is London's next big opportunity. Since February 2015, our vision has been to create a clean, safe and proud borough. Whilst these are key values to the people of Havering, our borough has so much more to offer, not just to our own residents but to the whole of London.

2.1.2 The Council's new vision **'Havering - Making a Greater London'** is about embracing the best of what Havering has to offer and how the borough can play an active role in the success of the whole of London, The new vision is focused around four cross-cutting priorities: **Communities, Places, Opportunities** and **Connections**:

- **Communities** - We want to help our residents to make positive lifestyle choices and ensure a good start for every child to reach their full potential. We will support families and communities to look after themselves and each other, with a particular emphasis on our most vulnerable residents.
- **Places** - We will work to achieve a clean, safe environment for all. This will be secured through working with residents to improve our award-winning parks and continuing to invest in our housing stock, ensuring decent, safe and high standard properties. Our residents will have access to vibrant culture and leisure facilities, as well as thriving town centres.
- **Opportunities** - We will provide first-class business opportunities by supporting the commercial development of companies within the borough, as well as being a hub for start-ups and expanding businesses. We will ensure sustainable economic growth that generates local wealth and opportunities, as well as securing investment in high-quality skills and careers.
- **Connections** - We want to capitalise on our location with fast and accessible transport links both within the borough and to central London, as well as making the most of national and international connections. Likewise, we will continue to make Havering a digitally-enabled borough that is connected to residents and businesses. Enhancing our connections will strengthen the borough's offer as a Greater London hub for business.

2.2 Havering in 15 years from now

2.2.1 It is an exciting time for Havering; the population is growing and becoming more diverse and the borough is an increasingly attractive part of London in which to live, develop and invest. We want to position Havering as one of London's most successful and attractive outer London boroughs. The vision for the Local Plan builds on the Council's overarching vision of **'Havering: Making a Greater London'** and provides a snapshot of what Havering will aspire to be like in 15 years from now.

2.2.2 By 2031, Havering will have seen significant levels of growth in the form of new infrastructure and high quality, well managed development. These developments will have further enhanced the borough as a highly desirable, attractive, safe and clean place to live and work, offering residents an excellent quality of life. Havering will be a place with integrated, sustainable communities in which residents are proud to live and where they have access to a range of high quality housing options, high standards of education, local and regional employment opportunities, community, leisure and cultural facilities, open space and a modern, reliable and effective transport system.

2.2.3 By 2031, significant progress will have been made, by working collaboratively with other stakeholders, towards the delivery of essential large scale infrastructure interventions. Gallows Corner roundabout will have been successfully remodelled providing further development opportunities, improved air quality, smoother traffic flows and enhanced road and pedestrian safety. Romford will have seen transformational changes to the road network, the western part of the ring road will have been tunnelled which will have enhanced the integration of surrounding residential communities with the town centre as well as improving traffic flow. A new, modern and efficient public transport connection between the North and South of the borough will be underway and will provide much needed connectivity.

2.2.4 Romford will have benefited from Crossrail and improved accessibility into Central London and beyond. The town's extensive residential and commercial development opportunities will have been realised and it will be thriving as the largest and most successful town centre within the borough and wider sub-region competing successfully with Stratford to the west and Lakeside and Bluewater to the east. As a key residential growth area Romford will offer high quality integrated town centre living and will be viewed as a place with a mixed and balanced community in which residents will wish to live and stay. There will be additional school places and a new health hub to serve both existing and new residents. The residential population will be supporting exciting new businesses and employment and entrepreneurial opportunities and Romford will be seen as an excellent place in which to do business. It will have built upon its historic character as a market town, with a successfully remodelled Market Place and a wide range of contemporary retail, service and leisure opportunities including an enhanced, and higher quality, restaurant and cultural offer.

2.2.5 Rainham Employment Area in the south of the borough will have been successfully transformed and a new high quality and healthy residential neighbourhood will have been delivered. The new development will have its own identity and sense of place and be structured around a new railway station and vibrant local centre at Beam Park. Contemporary new development will have been integrated effectively with the historic Rainham village and surrounding residential neighbourhoods. The character of New Road will have been transformed from a traffic dominated corridor into an attractive urban street with enhanced public realm and a linear parkway with safe and convenient cycle and pedestrian routes. New and existing residents will be making full use of essential community infrastructure including a new primary school at Beam Park and new health and community facilities.

2.2.6 By 2031, the Council will have successfully progressed its ambitious house building and estate regeneration programme, providing new, high quality, contemporary homes on existing council owned housing estates. Havering residents will be benefiting from a greatly improved housing stock and wider range of housing options in well managed, attractive and safe developments that are integrated with the surrounding area.

2.2.7 The employment area to the south of Rainham and Beam Park will have retained its role as a strategically important industrial area and will have benefited from transformational new developments and an intensification of employment uses. The area will have an enhanced reputation as a destination for international and local businesses and for skills and employment opportunities. Businesses will have been attracted to locate their head office within the area. Poor quality buildings will have been replaced with modern premises of different sizes providing exciting opportunities for a range of businesses including small companies wishing to expand.

2.2.8 The borough's district centres at Hornchurch, Upminster, Rainham, Collier Row, Elm Park and Harold Hill will be thriving as the heart of their communities and will provide an enhanced mix of uses, a successful retail and leisure offer and convenient local services. Opportunities that arise for new high quality residential development within, and in close proximity, to the centres will have provided much needed new homes and the increased residential populations will have enhanced the vitality and economic viability of the centres.

2.2.9 By 2031, the cultural and creative industries will have a more prominent role in the borough's town centres, contributing to their diversity and appeal. Hornchurch will continue to be a sub-regionally important cultural centre anchored by the Queen's Theatre and Fairkytes Arts Centre. Romford will have a significantly enhanced and high quality cultural offer to meet the needs of the growing residential population.

2.2.10 Smaller local centres throughout the borough will have been enhanced though improvements to the street scene and quality of the environment. They will continue to be of importance to local communities, providing essential services in convenient locations.

2.2.11 Havering will enjoy a modern, first class, integrated system for getting people and goods around the borough. The transport system will provide choice and options to reduce the need to travel, offer opportunities for healthier lifestyles and improve the quality of life for all sections of the community, including those who are less mobile. This will provide a competitive advantage for local businesses and will be a major attraction for people moving into the borough. New development will be focused on those parts of the borough most accessible to public transport.

2.2.12 By 2019, Havering will be benefiting from the completion of Crossrail and the enhanced connections and increased capacity that this will provide. A new rail station at Beam Park will serve new residents and businesses in London Riverside by 2020. The borough will also see improved bus services and more routes and services into areas which are currently poorly provided for.

2.2.13 The borough's road network will continue to be maintained and enhanced, reflecting Havering's location as an outer London borough and the recognition that some residents will continue to use the private car for travel. Provision will also be made for walking and cycling, offering a choice of transport modes for residents and visitors.

2.2.14 Havering's residents and businesses will benefit from modern, high quality digital infrastructure enabling both economic and social connections to be made.

2.2.15 Havering schools and colleges will maintain and build upon their reputation for excellence. More Havering residents will have the opportunity to participate in further and higher education and lifelong learning, enabling them to improve their skills and qualifications, as well as extending their personal development at all stages of life. Additional early learning and school places on existing and new school sites will be available to meet the needs of the current and future population in Havering.

2.2.16 Health will continue be a key focus for the borough building on the strengthened role and responsibility that the Council has for public health. The overall health of residents will have improved and new developments will have increased opportunities for people to pursue healthier and more active lifestyles. There will be an enhanced range of appropriate care provision for the borough's growing elderly population including support for people to live healthily and safely at home whenever possible.

2.2.17 Havering's Green Belt, green and open spaces and heritage assets will continue to be valued and enhanced, recognising their contribution to Havering's character, the appeal of the borough as a place to live, work and visit and the health and well-being and overall quality of life for residents. Havering's existing green spaces will continue to offer an array of recreation and leisure opportunities and, by 2031, will be more attractive and usable, as well as more accessible to residents.

2.2.18 Development in Havering will use water and energy more efficiently and there will be less demand for natural resources. Opportunities for renewable energy will have been explored. Development will also be capable of dealing with the effects of climate change including heatwaves and flooding. Waste will be managed in the most sustainable way and utilised as a valuable resource.

2.2.19 Over the lifetime of the Plan the Council will seek to maintain an appropriate aggregate landbank needed to support construction whilst ensuring that the individual and cumulative impacts of extraction are minimised and that sites are restored at the earliest opportunity to a high standard.

3 Strategic Objectives

3.1 Overarching aims

3.1.1 Linked to the Council's emerging new dynamic vision, the Local Plan has four overarching aims:

1. To enable vibrant, inclusive, healthy and happy communities
2. To provide opportunities for businesses and local people to thrive
3. To create successful, high quality places where people choose to live, work and spend time
4. To enhance physical and digital connections between places, communities and opportunities

3.2 Objectives

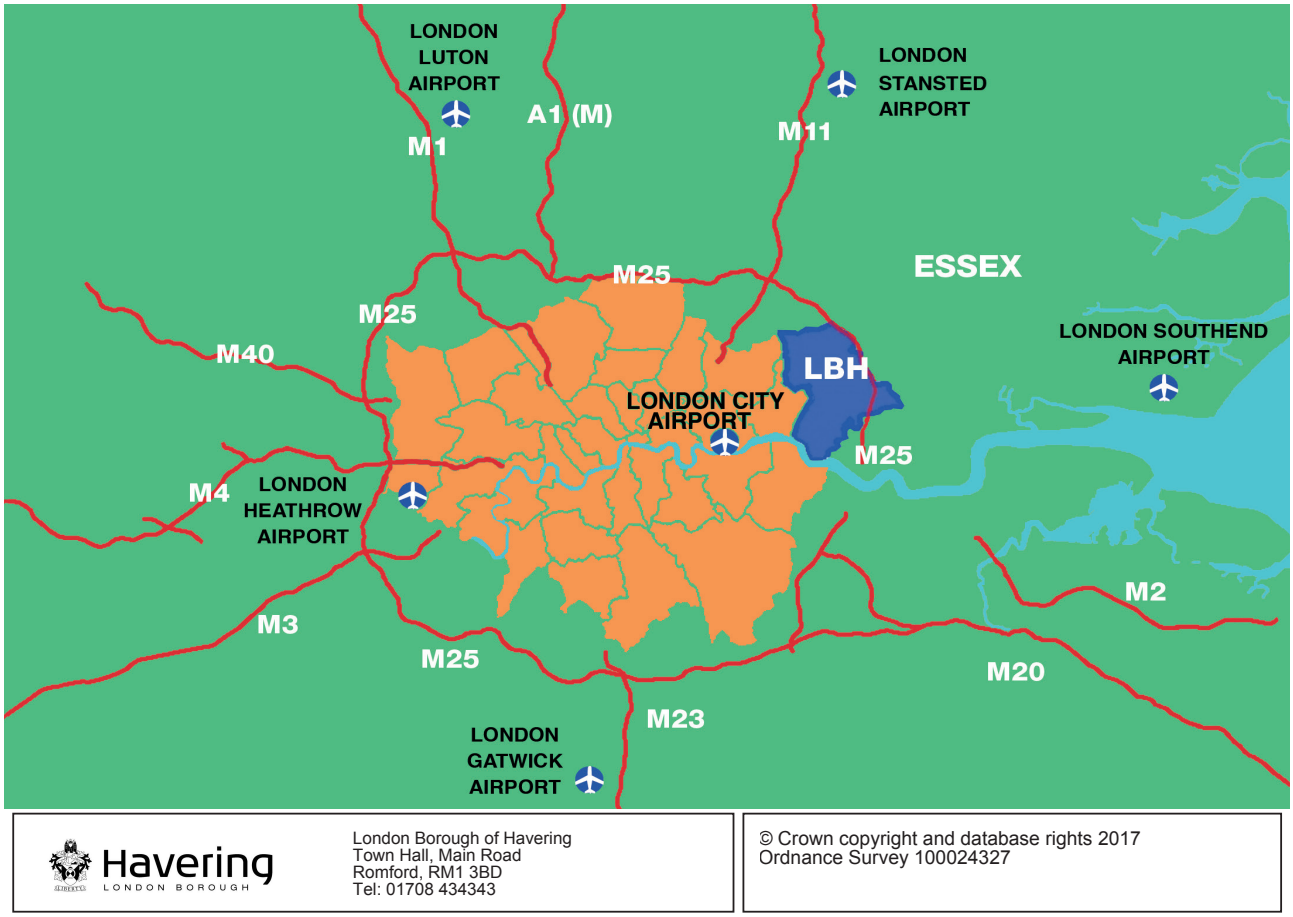
3.2.1 To achieve these overarching aims and to tackle Havering's key issues (identified in Annex 3), the following strategic objectives have been identified for the Local Plan:

i. Create high quality, safe neighbourhoods with cohesive and inclusive communities, where Havering residents want to live and settle;
ii. Increase the supply of high quality housing in Havering by a minimum of 17,550 dwellings over the Plan period;
iii. Ensure an appropriate mix of dwelling sizes and tenures to meet the needs of Havering's increasingly diverse population;
iv. Deliver sustainable new communities in Rainham and Beam Park and Romford;
v. Enable healthier lifestyles to improve the health and well-being of Havering's population and reduce health inequalities;
vi. Enhance the vitality and viability of Havering's town centres and the diversity and quality of uses within them, enabling them to meet the needs of local communities;
vii. Improve the cultural provision in Havering and protect and enhance existing cultural assets;
viii. Ensure that the essential physical and social infrastructure is provided and existing infrastructure is enhanced to support the planned growth in Havering;
ix. Support Havering's economic growth and the supply of high quality, modern and flexible business premises within the borough's town centres and designated industrial areas;
x. Increase the quantity and variety of employment, training and learning opportunities for Havering residents;
xi. Improve accessibility, connectivity and ease of movement to, from and within Havering;
xii. Support sustainable transport options and make Havering a better place to cycle and walk around;
xiii. Create, protect and enhance distinctive places, spaces and buildings in Havering that are of high architectural quality, are safe, well designed and respect the character of the local area;
xiv. Proactively conserve, enhance, and ensure greater understanding of Havering's heritage assets, their settings and wider historic environment;
xv. Increase the quality and accessibility of Havering's public open spaces and maintain and enhance biodiversity and geodiversity;
xvi. Protect and enhance Havering's Green Belt;
xvii. Facilitate the reuse, recycling and landfill diversion of waste in Havering;
xviii. Improve and manage air quality, noise, land and light pollution throughout the borough, protecting and enhancing the levels of amenity that Havering residents currently experience;
xix. Ensure that development in Havering minimises its energy use and is designed to adapt to, and reduce the effects of, climate change;
xx. Improve water quality and protect water resources in Havering;
xxi. Avoid, reduce and manage all forms of flood risk in Havering, and support the use of Sustainable Drainage Systems (SuDS);
xxii. Promote the re-use of minerals and minimise adverse environmental impacts from extraction in Havering.

The strategic objectives set out above are not listed in order of priority. The links between the policies in this Plan and the objectives above are clearly shown in Annex 8.

4 Havering in the wider sub-region

Figure 1 Havering in the wider sub-region



4.0.1 Havering's Local Plan has been prepared in the context of growth and development within London and the wider south east region. The entire sub region is experiencing significant development pressure to meet the needs of the growing population.

4.0.2 In London, the Mayor is responsible for setting out the over arching development plan including the levels of growth for all of the London Boroughs through the London Plan. The Havering Local Plan is required to be in general conformity with this.

4.0.3 In preparing the Local Plan, the Council has worked with neighbouring authorities both in Essex and London to understand and address the cross boundary issues linked to the level of growth being planned for individually and as a wider sub-region.

4.0.4 The Council is committed to working with the Mayor of London, neighbouring London boroughs and authorities, Essex County Council and other partners on an ongoing basis to address development issues affecting London and the wider sub-region.

4.0.5 Further details on the context provided by the London Plan and the Duty to Co-operate are set out in Annexes 2 and 5.

5 Boroughwide Strategy for Growth

5.1 Spatial strategy

5.1.1 Havering's population is expected to grow to over 293,000 [1] over the next 15 years. The Strategy underpinning the Local Plan seeks to ensure that there is the necessary growth in homes, jobs and critical infrastructure to support and sustain new and existing communities whilst also preserving and enhancing the borough's most valuable assets and maintaining its long established and strongly supported character and appearance as an outer London sub-urban borough.

5.1.2 The spatial strategy has been carefully prepared to reflect several important topics. Firstly, it takes account of the strategic context provided by the National Planning Policy Framework and the London Plan. It aims to translate the policy approaches applicable to Havering into planning policies that are both relevant and necessary. Secondly, it is the land-use planning tool whereby the Council will seek to translate the ambition of its overarching vision - 'Havering - Making a Greater London' into the places and communities that will endure well into the remainder of this century. Thirdly, at a time when the delivery of new homes is seen as critical to London's well being, it acknowledges the opportunity resulting from Havering having two key growth areas with Housing Zone status. The strategy is informed by the spatial portrait and key issues as set out in Annex 4 and is intended to deliver the vision and objectives as set out in Chapters 2 and 3. The strategy also takes account of environmental constraints, the finite availability of land for development and the need for the Council to balance different competing land uses and priorities in determining the most appropriate uses of land and forms of development.

5.1.3 The Council has developed its strategy to deliver 'good growth' in the right locations across Havering having regard to the potential of the individual areas identified for that growth and the importance of making sure it has a good fit with and integrates well with its surroundings. This growth will be dependent upon and facilitated by significant public transport investment and improvements. In line with national and Mayoral planning policy, development is to be directed to the most accessible and well connected areas in the borough where there are existing concentrations of supporting social and community infrastructure or where this can be delivered alongside, and supported by, new developments.

5.1.4 It follows from this that the Local Plan identifies two parts of Havering as the main areas for accommodating Havering's growth over the plan period. Consistent with national and Mayoral planning policy, these are focused in the borough's main town centre at Romford and the Rainham and Beam Park area which has been identified for several years as one of London's main brownfield development opportunities.

5.1.5 Romford is identified as a metropolitan centre in the London Plan and is the largest town centre in the borough. Romford has scope for development across a number of well located and well connected sites. The Local Plan recognises its potential for significant regeneration and intensification. Romford is already a key transport hub in Havering with more than 25 bus routes using the town centre. From 2019, it will benefit from improved rail services as a result of the arrival of Elizabeth line services through Crossrail. Its potential has been recognised by its designation as a Mayoral Housing Zone and the Local Plan will provide the means to assist in accelerating the delivery of new homes on a number of sites in and around the town centre. This plan also envisages business growth and an expanded leisure and cultural role for Romford. The next London Plan will re-affirm the role of Romford by designating it as an Opportunity Area in recognition of its potential to address an important part of Havering's growth potential.

5.1.6 Rainham and Beam Park is already identified within the London Riverside Opportunity Area which includes extensive land in both Havering and adjoining Barking and Dagenham. The London Riverside Opportunity Area Planning Framework (2015) identifies that the wider area has the capacity to provide 26,500 new homes and 16,000 new jobs across the two boroughs. In Havering, the focus will be on the intensification of industrial land in the Rainham Employment Area and the creation of new residential communities at Rainham and Beam Park. The scope for this is as a result of the provision of a new station at Beam Park and the opportunity to provide space for essential local services. Rainham and Beam Park was granted Housing Zone status by the Mayor of London in 2015 which will help accelerate residential development in the area.

1 GLA 2015 Round Population Projections - Long term trend

5.1.7 The strategy has taken account of the pressing need for new homes across London and in Havering. It aims to make a significant contribution towards this whilst reflecting the importance that the community in the borough places on Havering keeping and enhancing its well established character and supporting forms of development that are well suited to suburban outer London.

5.1.8 The strategy recognises that significant numbers of Havering residents travel out of the borough to work. Nevertheless, the Council places a very high priority on ensuring that Havering has a prosperous economy and the strategy is directed at protecting and enhancing employment across the borough. The scope for new jobs in the main growth areas is recognised and these will complement the new homes in these locations. At the same time, the strategy looks to protect existing industrial and employment land and to make sure that Havering provides a wide range of jobs in well connected locations.

5.1.9 Further growth will be accommodated from major regeneration of the Council's own housing estates. The Council is planning to build a significant number of new homes in one of the most ambitious local authority home building programmes in the country. The initial programme focuses on 12 sites across the borough delivering over 2,000 additional homes.

5.1.10 The borough's district centres are important providers of retail, leisure and essential services which meet the needs of local residents. The strategy is to maintain and enhance these centres and support the intensification of uses including residential development and business growth.

5.1.11 Havering is one of London's greenest boroughs with extensive open spaces and more than half of the borough designated as Metropolitan Green Belt as identified on the Proposals Map. The spatial strategy of the Local Plan is to optimise the use of brownfield land for meeting the demand for new homes and business growth and to provide continued protection for Havering's Green Belt and its most valuable open spaces.

5.1.12 Havering has a wealth of heritage assets that make a significant and important contribution to the quality and character of the borough, the spatial strategy seeks to preserve and enhance these assets whilst also enabling new development and growth to take place.

5.1.13 The spatial strategy of this Local Plan is based very clearly on improved transport infrastructure being secured to support the growth that is expected in Havering. Havering's transport infrastructure has remained largely unchanged for many years. It provides strong cross-borough connections (both road and rail) but journeys between the north and south of Havering are much less convenient because the transport infrastructure does not facilitate them. This adversely affects residents and businesses and must be addressed to support the growth envisaged in the Local Plan.

5.1.14 Successful delivery of the growth envisaged in the Local Plan will be dependent upon / facilitated by key strategic transport interventions including north-south linkages between Romford and Harold Hill and Rainham and Beam Park to improve connectivity between the main areas identified for new homes, jobs and business.

5.1.15 The Local Plan recognises that improvements to strategic transport linkages beyond Havering such as new river crossings across the Thames have the potential to impact on the borough. Havering will engage fully in discussions on these to ensure that opportunities are optimised and any adverse impacts mitigated.

Key features of the spatial strategy

Housing Growth

- Delivery of at least 17,550 high quality homes over the 15 year Plan period;
- Delivery of over 5,300 new homes in the Romford Strategic Development Area;
- Transformation of Rainham and Beam Park Strategic Development Area providing a new, well connected residential community of at least 3,000 homes served by Beam Park Station;
- Residential intensification of the borough's district centres, with proposed development compatible with their character, function and scale;
- Intensification and renewal of existing Council housing estates providing an improved housing stock and at least 700 additional homes across the borough, outside of the Strategic Development Areas.

Economic Growth

- Regeneration of Romford Town Centre, providing a more diverse and higher quality retail, leisure, cultural and employment offer;
- Directing an appropriate scale of retail, culture, service industries and office development to the boroughs network of town centres comprising of: Romford Metropolitan Centre, district centres at Collier Row, Elm Park, Harold Hill, Hornchurch, Rainham and Upminster and 75 local centres including a new local centre at Beam Park.
- Protection of the borough's Strategic Industrial Locations (SIL) (Rainham Employment Area, Harold Hill Industrial Area, King George Close Estate and Freightmaster Estate) for continued industrial use;
- Protection of the borough's Locally Significant Industrial Sites (LSIS) (Harold Wood, Hillman Close, the Seedbed Centre, Lyon Road and Crow Lane) for continued industrial and employment use;
- Intensification of the borough's designated industrial areas to optimise the use of the land and support transformational new developments which will and maximise the economic benefits for the borough.

Transport Infrastructure

- Improved public transport access to central London via Crossrail services at Romford, Gidea Park and Harold Wood and a new railway station at Beam Park on the Essex Thameside Line;
- Remodelling of Gallows Corner roundabout to increase safety, improve air quality and smooth motor vehicle traffic flows;
- Improved north-south links within the borough, connecting Rainham and Beam Park, Romford and Harold Hill;
- Remodelling of sections of the Romford Ring Road;
- Increased capacity at Junction 28 of the M25;
- Improvements to the A127 through the A127 Growth Corridor project;
- Working with Highways England to minimise the adverse impact on Havering and its residents of the Governments preferred option for a Lower Thames Crossing.

Social Infrastructure

- Delivery of an early years and schools expansion programme, which may include new provision, to increase the number of early years and school places for new and existing residents;
- New early years and school provision in the growth areas of Romford and Rainham and Beam Park;
- New health facilities at the former St George's Hospital Site, Romford Town Centre, Rainham and Beam Park and in the north-west of the borough;
- Improvements to the borough's existing leisure facilities and new facilities in Romford Town Centre and Rainham and Beam Park.

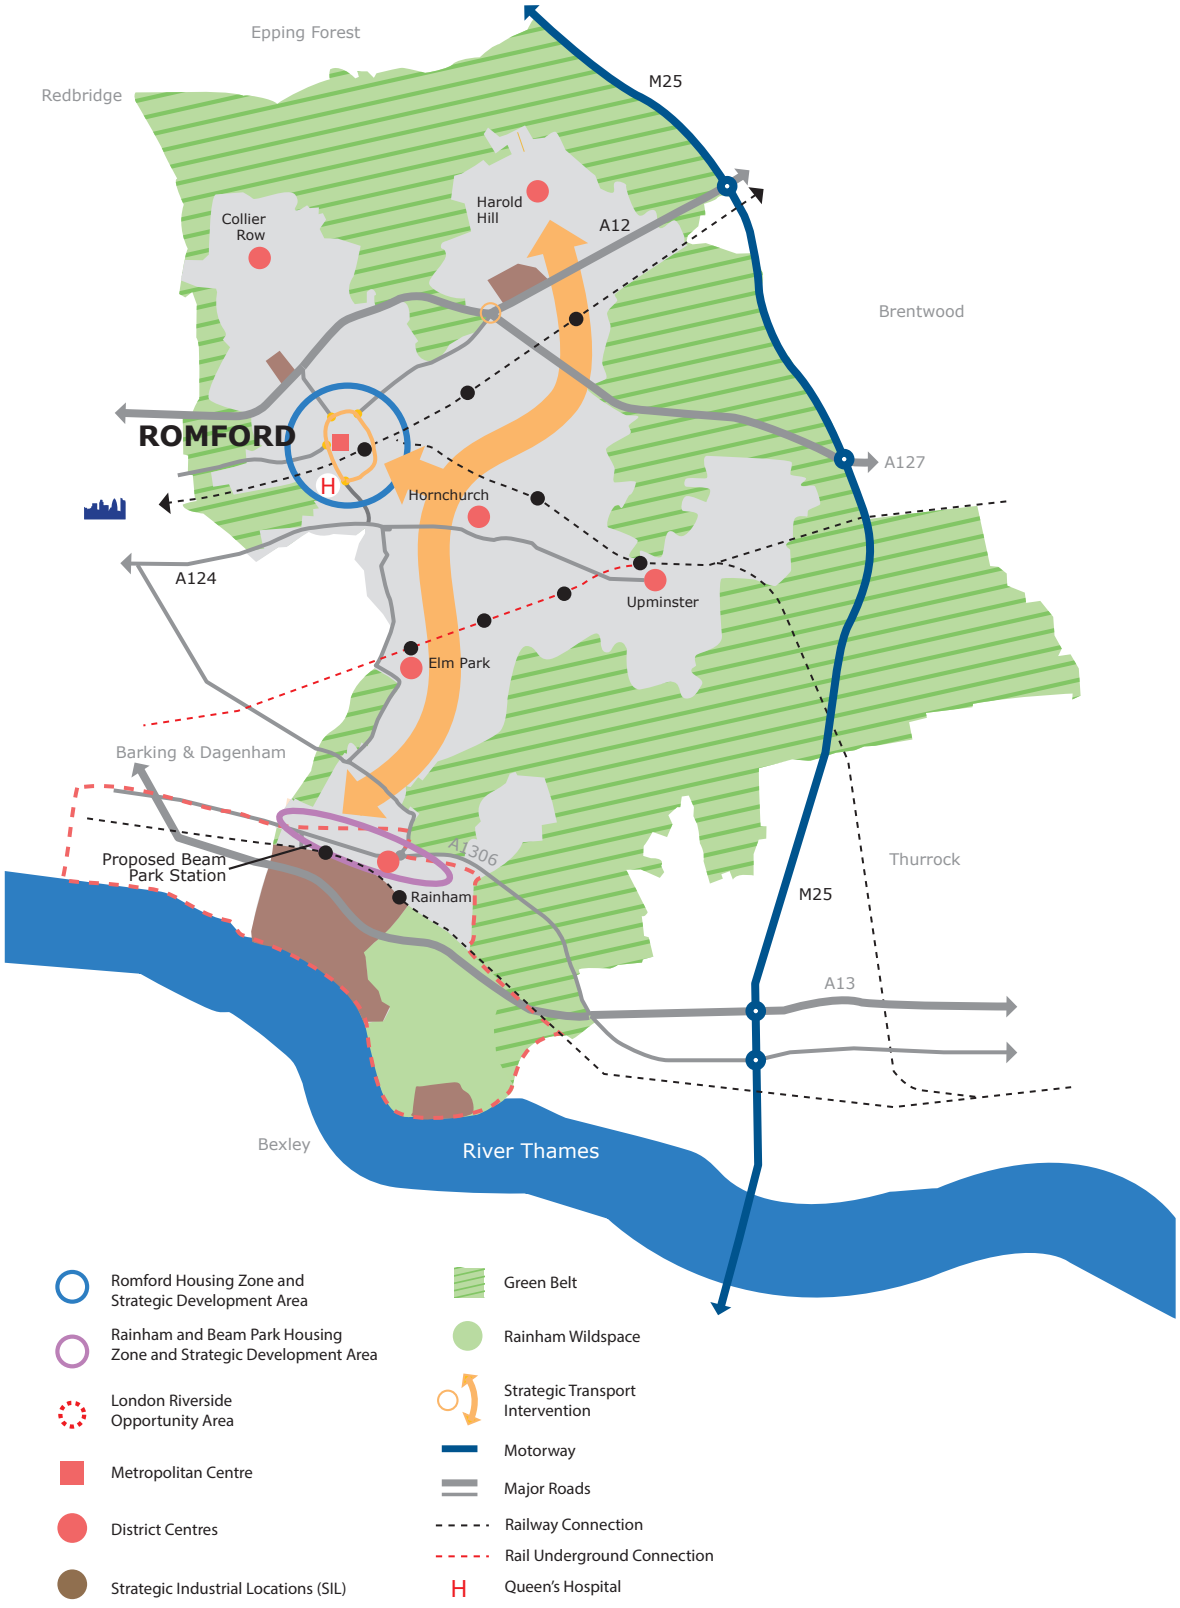
Havering's most valued assets

- Protecting and enhancing the Green Belt and the borough's open spaces;
- Preserving and enhancing the borough's rich heritage and historic environments.

5.2 Key Diagram

5.2.1 The Key Diagram illustrates the spatial strategy for Havering over the 2016 - 2031 lifetime of the Plan.

Figure 2 Key Diagram



6 Strategic Development Areas

6.1 Romford Strategic Development Area

6.1.1 Romford Strategic Development Area encompasses Havering's largest town centre and is one of Outer London's major growth and regeneration areas. The area offers exciting development and regeneration opportunities and over the next 15 years it will accommodate a significant level of housing and economic growth alongside new and enhanced supporting infrastructure. The Council will work with its partners to realise the opportunities in Romford and to ensure it retains its strategic role within Havering and north east London.

6.1.2 High quality, contemporary urban living will be integrated with a diverse and vibrant day-time and evening retail, leisure and cultural offer, modern office development and new employment opportunities. Improvements to transport and public realm will help ensure that Romford is a well connected and attractive place to live, work and visit. Growth and development in Romford should strengthen its role as a metropolitan centre and deliver a step-change in the quality of environment and buildings.

Policy 1

Romford Strategic Development Area

Residential Development

Over the plan period the Council will support the delivery of over 5,300 [(2)] new high quality homes in well managed residential and mixed use schemes that provide attractive places to live and which are well integrated with the existing community.

Commercial Development

To strengthen Romford's role as a metropolitan centre and to realise its potential as one of Outer London's largest and most successful town centres, the Council will support development proposals within the town centre boundary that:

i. Reinforces South Street as the main shopping street and spine of activity in the town centre
ii. Diversifies and improves the quality of the retail, cultural and leisure offer that contribute to the daytime and evening economies;
iii. Provides new modern retail units or refurbishment of existing retail units;
iv. Positively transforms the Market Place into a high quality civic space, accommodating a reconfigured, successful and vibrant market with a re-imagined public space and an enhanced retail and restaurant offer;
v. Creates a vibrant mix of commercial uses adjacent to the station;
vi. Accommodates mixed uses, with residential and commercial space provided above ground floor level where this does not prejudice the operation of the ground floor for retail and town centre activity;
vii. Provides new, fit for purpose office development as part of mixed use schemes; and
viii. Provides affordable office accommodation within or funded by new commercial and mixed use developments.

Connectivity

Romford is the most accessible and well connected area within the borough and has an important role as a transport hub. The Council will support proposals that further enhance connectivity and will:

x. Continue to work with partners to secure significant improvements to Romford station;
xi. Support the delivery of Crossrail services to Romford and improvements to the public realm in the vicinity of the station;
xii. Support the delivery of a new east-west shared use link from the railway station across the River Rom to the existing and new residential areas to the west;

2 at least 4750 homes will be built over the first 10 years of the plan period

xiii. Actively pursue opportunities with TfL and other partners to tunnel the western section of the ring road;
xiv. Work with TfL to improve accessibility into Romford Town Centre for active travel users;
xv. Work with the Barking Havering Redbridge University Hospital NHS Trust and TfL to improve links to Queens Hospital including increasing bus capacity at Queens interchange;
xvi. Require developers seeking to develop land adjacent to the ring road to address its perception as a barrier for active travel including opportunities for its greening;
xvii. Support development which improves the quality of the pedestrian environment, including the greening of the town centre with new street trees and planting and enhanced provision for pedestrians and cyclists.
xviii. Require developers to improve active travel links between Romford Station, Waterloo Road and Bridge Close;
xix. Support development proposals that better integrates The Brewery with South Street;
xx. Require proposals for development along the River Rom to improve the quality and setting of the river and to provide continuous, safe and accessible links alongside the river to promote active travel and improve north-south connectivity; and
xxi. Support development proposals that deliver an enhanced link between the Market Place, St Edward the Confessor Church, North Street and the Trinity Methodist Church, improving the quality of the pedestrian environment along Angel Way.

Social infrastructure

To support growth in the Romford Strategic Development Area and to assist in ensuring it is a successful place to live the Council will work with developers and service providers to ensure the delivery of:

xviii. Romford Leisure Centre
xix. New and enhanced public open spaces
xx. A new health hub, including the sexual health services relocated from Queens Hospital;
xxi. Additional school places in line with the Council's Commissioning Plan and Schools Expansion Programme over the Plan period;
xxii. Additional primary school provision equivalent to 3 forms of entry (FE) in the first 5 years of the Plan and a further 6FE need for primary school places beyond the first five years.
xxiii. A 5/6FE secondary school in the second phase of the Plan period (5-10 years);.

Development proposals that generate a primary school child yield equivalent to one additional form of entry will be expected to provide adequate space on site for the provision of a school. The Council will only support proposals without this provision where it can be robustly demonstrated that existing or planned education provision can cater for the additional demand for school places.

Design and Heritage

The Council will require development in Romford town centre to be of high architectural and urban design quality. Development and uses must be appropriate to and will be expected to improve the function, appearance, and character of the town centre.

The Council will support proposals that:

xxii. Create active streets with strong and well-articulated frontages to all existing and proposed pedestrian routes, particularly at ground floor level, avoiding blank facades and exposed service areas;
xxiii. Incorporate generous floor to ceiling heights at ground floor level to provide for flexibility and adaptability over time and respond to the needs of different retailers;
xxiv. Positively respond to the sensitive nature and urban fabric within the Conservation Area, views of St. Edward the Confessor Church and the historic crossroads where South Street, the High Street and the Market Place meet;
xxv. Make a positive contribution towards public realm improvements in the Market Place;
xxvi. Demonstrate how the proposed scheme responds to wider development opportunities, movement and environmental enhancements in the town centre;
xxvii. Open up access to the River Rom and positively incorporates the river into the development scheme(s);

xxviii. Optimises the design and location of development including the incorporation of resilience measures to address potential flood risk, where appropriate; and

xxix. Respond to the local character and context and make a positive contribution to the skyline. Tall buildings may be acceptable in the vicinity of the station subject to high quality design and strong public realm propositions at ground level. Proposals for tall buildings within the Conservation Area and north of the railway line along south street are inappropriate. The heights of proposed new buildings in this area will need to respond positively to the historic context. Elsewhere in the town centre the height of proposed buildings should respond to local character and context, and make a positive contribution to the skyline in Romford town centre.

Policies for specific opportunity sites in the Romford Strategic Development Area will be addressed in the Site Specific Allocations Local Plan.

6.1.3 The arrival of Crossrail in 2018/9 alongside the relative affordability of this area are key drivers of growth. They have already placed Romford firmly in the minds of investors and developers who are keen to realise its opportunities. The Mayor of London has already recognised this and in 2016 Romford was granted Housing Zone Status which will provide significant investment in order to accelerate the delivery of new homes. The area's significant growth potential is recognised through its anticipated designation by the Mayor of London as an Opportunity Area in the new London Plan. The Council aims to build on its positive relationship with the Mayor of London to further enhance Romford as a place to live and work and for businesses to invest.

6.1.4 There are a number of opportunity sites within the Romford Strategic Development Area which can accommodate housing growth. There is an increased demand for homes in east London, and with areas closer to central London becoming unaffordable to many, both demand and values will grow, especially with the arrival of Crossrail services.

6.1.5 Reflecting the significant opportunities that Romford offers and the importance of successfully integrating new schemes with existing developments and communities the Council is preparing a detailed Masterplan for Romford which will be taken forward as a Supplementary Planning Document.

6.1.6 The Havering Retail and Commercial Leisure Needs Assessment (2015) reports that whilst there is strong representation of multiple and independent retailers there is scope for the town centre to increase its market share of expenditure, some of which is currently leaking out of the borough to the Lakeside shopping centre in Thurrock. The retail offer within Romford needs to be upgraded to enable it to successfully compete with other centres and to retain its popularity as a comparison goods shopping destination, future-proofing the town centre and protecting its role and function as a metropolitan centre.

6.1.7 The Retail and Commercial Leisure Needs Assessment notes that demand is linked to the quality of provision. It recommends that new, larger-floorplan retail floorspace, involving the modernisation and amalgamation of existing retail premises, would attract additional retailers, particularly where this is provided in or close to the primary shopping area. Improvements to the quality of provision would also assist in diversifying the retail offer, helping to attract more middle and upper middle comparison goods retailers into the town centre.

6.1.8 South Street is integral to the fabric of the town but it includes many value retailers and small units. An improved retail offer here will cement and enhance Romford's currently strong trading position.

6.1.9 The Brewery forms an important part of the retail offer within Romford but it turns its back to the centre. Better integration between the two is required, including a coordinated public realm programme to strengthen east-west connections. Opportunities for new development around the Brewery that intensify existing uses here should also be explored

6.1.10 In addition to retail use, the Retail and Commercial Leisure Needs Assessment also considers the quality and provision of restaurant and café use (Use Classes A3 and A5). The study reports that the current provision is quite basic, serving a budget and youth market. There is a requirement across the borough for additional food and drink floorspace over the plan period, much of which should be directed towards Romford in the first instance, reflecting its role as a metropolitan centre. Diversification of the range and quality of restaurant use would bring wider benefits to the vitality and viability of the town centre.

6.1.11 The provision of existing A3 and A5 uses is mainly concentrated around The Brewery and South Street. The Market Place, with opportunities for outdoor seating and which The Retail and Commercial Leisure Needs Assessment states is 'not currently fulfilling it's potential as a large public space', has potential to support additional A3 and A5 floorspace.

6.1.12 Market Place is one of Romford's greatest assets and has potential to provide a key civic space within the town centre. The emerging Romford Masterplan will set out proposals for the consolidation of the market allowing for the flexibility of the pubic realm. The Council will support a new cluster of cafés and restaurants around Market Place leading to longer dwell times and additional footfall in the north of the town centre.

6.1.13 There is a lack of green open space within the town centre. The only such space within the ring road is St. Edward the Confessor Church's churchyard. However, there are a number of nearby parks a short walk beyond the ring road; these include Lodge Farm Park (off Main Road), and Cotton Park (at Mark's Road). The Council will support development proposals that contribute to a greener Romford.

6.1.14 Investment at Romford railway station, linked to Crossrail, provides an opportunity for provision of taller buildings, making the most of excellent public transport accessibility and regeneration potential. Development should be of high quality design, co-ordinated and come forward as part of a planned cluster.

6.1.15 Proposed uses adjacent to the station should complement the wider mix of uses in the town centre, including new office space. The Council's Employment Land Review states that new, flexible space for smaller businesses is required, responding to changing economics. Provision of such space can be accommodated within refurbished buildings and new mixed-use development that also includes residential and ancillary support uses to help create an attractive and vibrant area.

6.1.16 The ring road creates a barrier to the town centre and an under whelming entrance for visitors. The Council will continue to use its Transport for London (TfL) Local Implementation Plan funding programme and will also look to secure future funding opportunities (including TfL's Liveable Neighbourhoods programme) to design and deliver measures that support active travel and improve access into the town centre. Proposals for new development alongside the ring road should positively respond to the setting help overcome the barrier effect.

6.1.17 The River Rom, which runs north-south to the west of the town centre, is an under-utilised asset. The Council will work with the Environment Agency, land owners and developers to open up the river course as they bring development forward adjacent to the river. Consequently, the Council will require a co-ordinated approach to development that allows for a continuous pedestrian and cycle link to be provided along the River Rom. Provision of a new pedestrian and cycle link alongside the river will enhance the permeability of the town centre and provide for an attractive setting for living and active travel.

6.1.18 The Council is working closely with the Barking Havering Redbridge University Hospital NHS Trust (BHURT) on their emerging travel plan which will be monitored to ensure that progress is being made against targets for modal shift away from the car. There are currently 9 bus services (and a community bus) that access Queen's Hospital. Whilst this number of bus services accessing an outer London Hospital is very good, Queens has a very large catchment area and there continues to be pockets of the east London sub region that require at least two bus journeys in order to access Queens. Additionally, the Council will continue to work with agencies such as the Clinical Commissioning Group and BHURT to explore the scope for services to be provided within the wider community to reduce the need for people to travel to Queen's.

6.1.19 There is also a need to increase bus access here to provide people with an alternative to using private vehicles as parking spaces at the Hospital are at a premium. Work is currently being progressed on a detailed design of Queen's Hospital bus interchange where an additional bus stop is proposed to increase bus capacity and allow more bus routes to stop at Queen's Hospital.

6.1.20 The Council remains committed to working with its partners to secure significant improvements to Romford station to ensure that it provides an appropriate facility for rail users and is a safe, attractive and convenient place for rail journeys to, and from, Romford. Through TfL's Crossrail Complementary Measures programme, the Council is delivering public realm improvements around the vicinity of Romford station to better integrate the station into its surroundings and to improve accessibility between the busy bus interchange south of Romford Station and the station entrances.

6.1.21 The land immediately adjacent to the River Rom and Black's Brook is predominantly located within fluvial Flood Zone 2 with small areas designated as Flood Zone 3b. To address flood risk development should consider the guidance in the Strategic Flood Risk Assessment: Annex A - Growth Areas Review and follow the requirements of Policy 32.

6.1.22 Education provision is particularly challenging in Romford. Existing schools within the area are already at full capacity and whilst the Council's school expansion programme will assist in meeting future demand, this will not offer sufficient capacity over the Plan period. In order to meet the need for primary school places in the Romford area over the next five years an additional 3FE will be needed. 1FE is likely to be delivered through expansion of an existing school. A new 2FE school will be needed. There is a further 6FE need for primary school places beyond the first five years. This will need to be delivered through new schools. A 6/8FE secondary school is required in the second phase of the Plan period (5-10 years). The Council will seek to identify sites suitable for additional education provision through the Romford Masterplan and Site Specific Allocations Local Plan.

6.1.23 Due to the particular challenges in Romford and in advance of the delivery of the Site Specific Allocations Local Plan, the Council will require all development proposals that generate a primary school child yield equivalent to one additional form of entry to provide adequate space on site for the provision of a school or robustly demonstrate how this need will be accommodated through other developments.

6.1.24 When estimating the number of children that a new housing development will generate, and that will require a school place (yield), Havering takes account of the number of houses and flats that are suitable to accommodate children. Student and elderly accommodation are excluded. The primary school yield from qualifying homes is thirty pupils per one hundred homes (0.3 per dwelling). For secondary schools (including post 16 education or sixth form places) the yield is 20 pupils per 100 qualifying homes (0.2 per dwelling).

6.1.25 210 primary aged pupils represent one form of entry, across seven year groups, and this number is likely to be generated by approximately 700 new homes. However, this is dependant on the type and size of homes proposed and consequently sites delivering under 700 units may still generate a child yield that equates to one form of entry. Each proposal will be considered on a case by case basis.

6.1.26 Growth and change in the town centre must be accompanied by improvements to the quality of the public realm. The Council's Retail and Leisure Report identifies that there is significant scope to improve the appearance of the shopping streets in the town centre, that there is a lack of open space, trees and planting in the town centre, and that the ring road acts as a barrier to movement. An enhanced public realm will provide a pleasant and safe experience to encourage visitors to spend more time and money in the centre, and will support high quality development and other investment.

6.1.27 Most pedestrian movement in Romford now operates in an east-west direction, between the three shopping centres. Some of these routes suffer from blank facades and terminate at the ring road where crossings are neither pedestrian nor cycle friendly. Some of these crossings are currently provided by way of subways. The ring road in particular creates a barrier to the town centre and an under whelming entrance for visitors. The Council will look to improve these routes. Proposed developments adjacent to these crossings will be expected to contribute to their improvement. Development should also seek to open up blank facades with new active frontages and entrances.

6.1.28 South Street is the main pedestrian area and acts as the north south spine through the town, connecting residential areas with the station, main retail area and historic cross roads with the High Street and the Market Place. However the quality of the public realm along this route is tired and in need of improvement. The Market Place is the main public space in the town centre, but is currently undermined through extensive provision of surface car parking which could be rationalised to enhance the quality, usability and enjoyment of this space.

6.1.29 The railway station is an important arrival point into the town centre where the quality of the public realm should be improved, with enhanced links to the town centre and new development creating active, overlooked and well-proportioned streets and spaces. This should include reconsideration of the current bus station and routes to and from this which currently undermine the pedestrian environment.

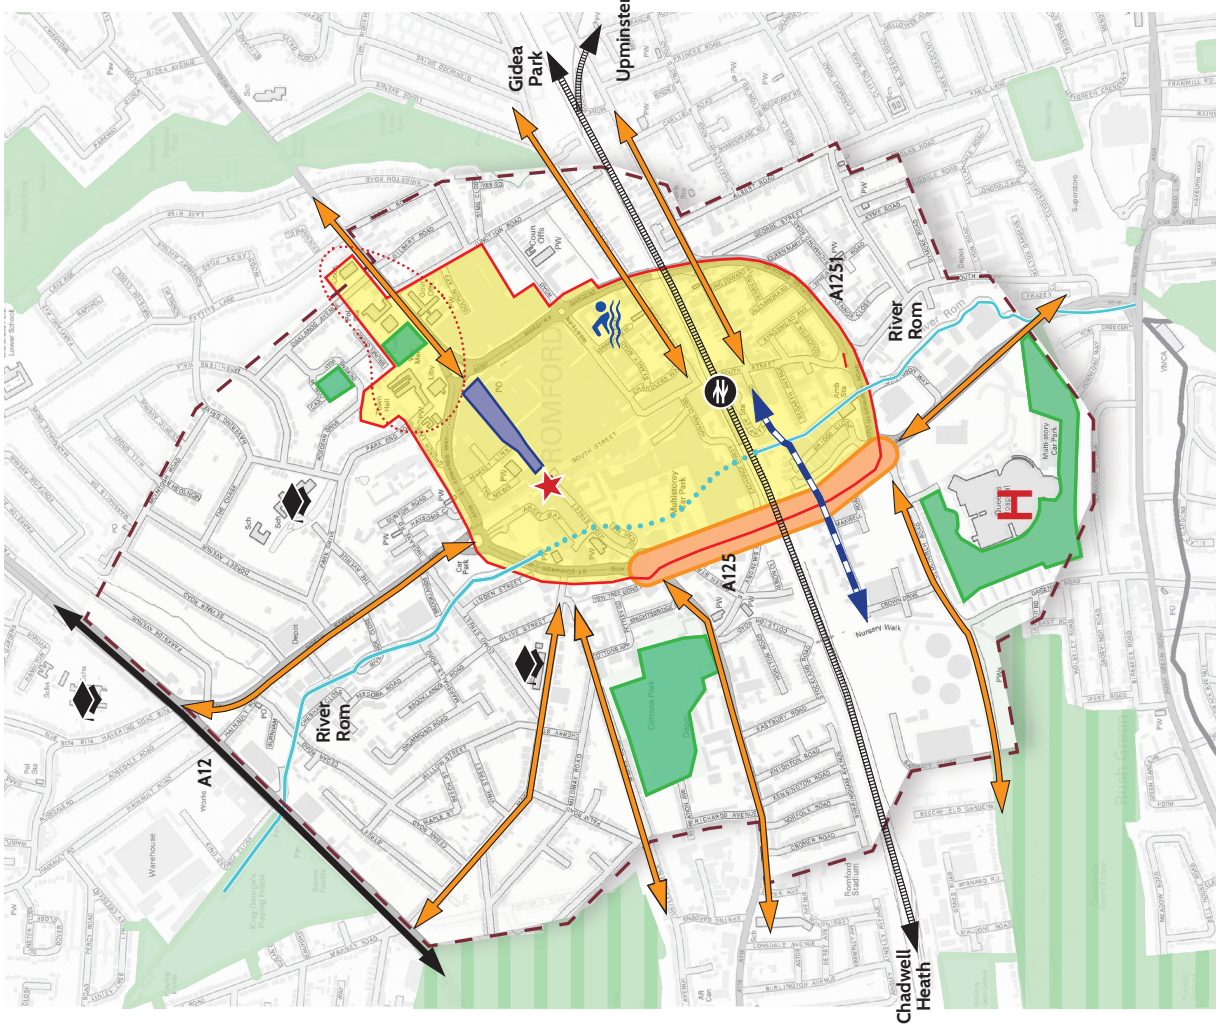


Figure 3 Romford Strategic Development Area

6.2 Rainham and Beam Park Strategic Development Area

6.2.1 Rainham and Beam Park Strategic Development Area is a major growth and regeneration area and provides the opportunity to establish an exciting new residential neighbourhood linked to the delivery of a new railway station on the existing Essex Thameside line at Beam Park.

6.2.2 The area falls within the London Riverside Opportunity Area, identified in the London Plan as having the capacity to provide a significant number of new homes and jobs. In June 2015, following a successful bidding process, Rainham and Beam Park was identified as one of the GLA's Housing Zones which is providing much needed investment to help secure and accelerate the delivery of new homes by overcoming barriers to development and supporting the provision of social and physical infrastructure in the area to create attractive new places to live.

Policy 2

Rainham and Beam Park Strategic Development Area

Residential Development

The Council will support the delivery of over 3,000 new high quality homes in attractive, well managed residential schemes which are well integrated with their surroundings. Development will be delivered on a series of connected sites to the south of New Road extending from the River Beam in the west to Dovers Corner/Bridge Road in the east, together with sites to the north of New Road which are currently occupied by incompatible uses. The Council will also support the redevelopment of undesignated sites in Rainham District Centre and wider Strategic Development Area.

Commercial Development

A new local centre adjoining Beam Park Station will be delivered providing between 3,500 and 4,000 sq m of floor space through the provision of new modern retail and commercial units.

The Council will support development that creates a vibrant mix of active ground floor uses with apartment blocks above within the Beam Park Local Centre.

New development will be required to incorporate generous floor to ceiling heights of 3.75m at ground floors of buildings in Beam Park Centre, and 3m at ground floors of buildings along New Road to provide for flexibility and adaptability for conversion into commercial spaces in the future.

Connectivity

New development in the Rainham and Beam Park Strategic Development Area has the opportunity to establish a new green neighbourhood that links the existing settlements of South Hornchurch and Orchard Village with Rainham Village. It will also enable the transformation of New Road (the A1306) from a traffic dominated corridor into an attractive high quality green street that provides an appropriate setting from a new and expanded residential community.

To support growth in the Rainham and Beam Park Strategic Development Area, the Council will work in partnership with the Mayor of London, developers and transport providers and other agencies to deliver:

i. Beam Park Station on the Essex Thameside Line;
ii. A transformational project along the A1306 (Beam Parkway) between Dovers Corner and the Marsh Way junction creating an attractive, high quality green street consisting of links to facilitate active travel along this corridor, "pocket parks" and crossing points, to improve permeability of the A1306;
iii. Significant improvements to public transport services including bus connections to / from Beam Park Station and Rainham Employment Area and to / from Romford including Queens Hospital;
iv. A continuous east-west active travel connection between Rainham Village, Beam Park Station and the Rainham Employment Area;
v. Bus connections to Beam Park Station and bus links to Romford and Queen's Hospital;
vi. Improved bus connections to and from Rainham Employment Area;

vii. A link across Rainham Creek to support east west movements and to enable buses to access the Rainham Employment Area; and
viii. A new, integrated network of shared use routes connecting neighbourhoods, local facilities and open spaces.

Supporting Infrastructure

To support growth in the Rainham and Beam Park Strategic Development Area, the Council will work with developers and service providers to ensure the delivery of:

ix. Expansion of existing primary schools in line with the Council's Commissioning Plan;
x. A new three form entry primary school at Beam Park;
xi. Additional secondary school places through expansion of existing schools in the later part of the plan period;
xii. Expansion of the Rainham Campus of Havering College;
xiii. Improved sport and leisure facilities; and
xiv. Provision of a new health centre.

Design and Heritage

To ensure the successful transformation of the area, the Council will support development proposals which:

xv. Adopt an integrated and comprehensive approach without prejudice to the achievement of the wider vision for the area as set out in paragraph 2.2.5;
xvi. Provide a layout that facilitates a coherent urban structure across the area as a whole and demonstrates that the layout achieves a coherent structure both in its own right, and in terms of its facilitation of future phases;
xvii. Better link the existing settlements of South Hornchurch and Orchard Village with Rainham Village, and transforms New Road (the A1306) from a traffic dominated corridor into an attractive high quality green urban street commensurate with the adjoining new residential neighbourhoods;
xviii. Overcome the barrier presented by the river and the industrial sites and brings significant enhancement of the wider area as an attractive place;
xix. Respond positively to the context within Rainham Village strengthening and enhancing the character of this historic village;
xx. Orientate buildings with their front and main entrance towards streets and open spaces to provide overlooking and natural surveillance and to help to create a place with a strong sense of place that is safe and welcoming;
xxi. Have buildings designed at street corners that ‘turn the corner’ and address both street spaces;
xxii. Provide a good sense of enclosure to streets and public spaces with buildings positioned along consistent building lines;
xxiii. Avoid adverse effects on the nearby Ingrebrourne Marshes SSSI and Inner Thames Marshes SSSI and seeks to achieve enhancements to these sites, where possible; and
xxiv. Optimise the design and location of development including the incorporation of resilience measures to address potential flood risk and explores opening up culverts, where appropriate.

Policies for specific opportunity sites in the Rainham and Beam Park Strategic Development Area will be addressed in the Site Specific Allocations Local Plan.

6.2.3 The transformation of the Rainham and Beam Park area into a successful residential neighbourhood can only be achieved if the area is dealt with comprehensively with developers contributing in a positive and proactive manner in finding solutions to ensure that the wider vision for the area is not prejudiced by any single development phase. Sites along New Road will be expected to be brought forward in a comprehensive manner avoiding 'piecemeal' development.

6.2.4 Residential development in Rainham and Beam Park will largely be focused on under-used industrial and employment land along the A1306 with the new railway station at Beam Park as a catalyst for development.

6.2.5 There are a number of development opportunities within public and private ownership. The GLA are an important landowner in the area and are bringing forward the Beam Park site for residential and mixed use development with Persimmon and L&Q.

6.2.6 The Council is actively acquiring land along the A1306 corridor and will be procuring a development partner to bring forward these sites in joint venture partnership with Mercury Land Holdings. Outline planning applications are currently being brought forward for these sites.

6.2.7 The A1306 corridor (New Road) is currently in employment and industrial uses. Fronting the northern side of New Road are a mix of residential properties intermingled with car repair shops and car sales areas many of which are unsightly. Employment sites to the south of New Road are mixed but several are vacant and under-used.

6.2.8 The Havering Employment Land Review (2015) recommends a change away from industrial employment uses in this area (totalling 15.4ha) to assist in meeting the housing and wider regeneration needs of the borough. The release of the industrial elements will also allow the boundaries of the Rainham SIL to the south to be consolidated, helping maintain the integrity of that industrial employment designation while helping to maintain residential amenity in the Rainham and Beam Park area.

6.2.9 The Employment Land review recommended the retention of the Rainham Steel office building. The site is of a good quality and is compatible with the housing development that will take place in the area. However, in the long term if Rainham Steel were to relocate from this location, the Council would not wish to retain the site for industrial use due to its prominent location and close proximity to the new residential development. The Council will seek a residential redevelopment in this scenario.

6.2.10 To support the increased residential population at Rainham and Beam Park, a new local centre will be established at Beam Park Station. The Beam Park Local Centre will provide local shops and services in walking distance of both the western part of the development area and the existing residential areas to the north. The local centre will offer apartment living in its upper floors and will be focused around a new gateway space outside the station and a new street link with new road that provides high quality public realm.

6.2.11 Rainham is a locally important district centre and includes a supermarket, local shops, cafes and historic pubs, a rail station and a new library. The district centre will continue to have this role and also serve new residents in the eastern part of the A1306 development.

6.2.12 For a number of years, Havering has been lobbying for a new station to be built at Beam Park to support the projected number of homes and jobs expected to be created in the London Riverside area. Beam Park station will provide direct access to Central London and is expected to open by 2020.

6.2.13 To support development planned south of the A1306 it is important that the A1306 is not perceived as a barrier for pedestrians and other road users. The Council has been allocated funding from TfL's Major Scheme budget to develop a detailed design for improvements along the A1306 to improve the local environment and encourage the use of active travel.

6.2.14 New Road will be transformed into the Beam Parkway - a green street that is well defined and enclosed by residential buildings. It will form the main spine of the area, connecting the wider area with the two centres at Beam Park and in Rainham Village. A network of streets will provide permeability and connect the development areas internally and across New Road with existing streets to the north.

6.2.15 Currently employees wishing to access the Rainham Employment area can only do so directly by car, with the nearest bus services terminating at CEME (174) or going to Rainham Village (103, 372). The Council is working with TfL London Buses who are undertaking a London Riverside study which is looking at the bus network needs in response to planned development in the London Riverside area. The Council will continue to support this work as it develops.

6.2.16 Additional school places will be needed to meet the needs of the new residential population in the Strategic Development Area. The need for primary school places will be met through the expansion of existing schools and a new three form entry free school on the Beam Park development site. The need for secondary school places will be met through the expansion of existing secondary schools.

6.2.17 Havering College operates the Rainham Campus Construction Centre. The college plans to expand their existing facilities to enhance the range of courses on offer.

6.2.18 There is a need to provide access to health care provision for new residents. The NHS and Clinical Commisioning Group have identified that a new health centre will be needed. A site will be idenitified through the Site Specific Allocations Local Plan.

6.2.19 The southern section of the Rainham and Beam Park Strategic Development Area is located within fluvial Flood Zones 3a and 2 with areas designated as Flood Zone 3b adjacent to the River Beam and Ingrebourne. To address flood risk, developers should consider the guidance in the Strategic Flood Risk Assessment: Annex A - Growth Areas Review and follow the requirements of Policy 32.

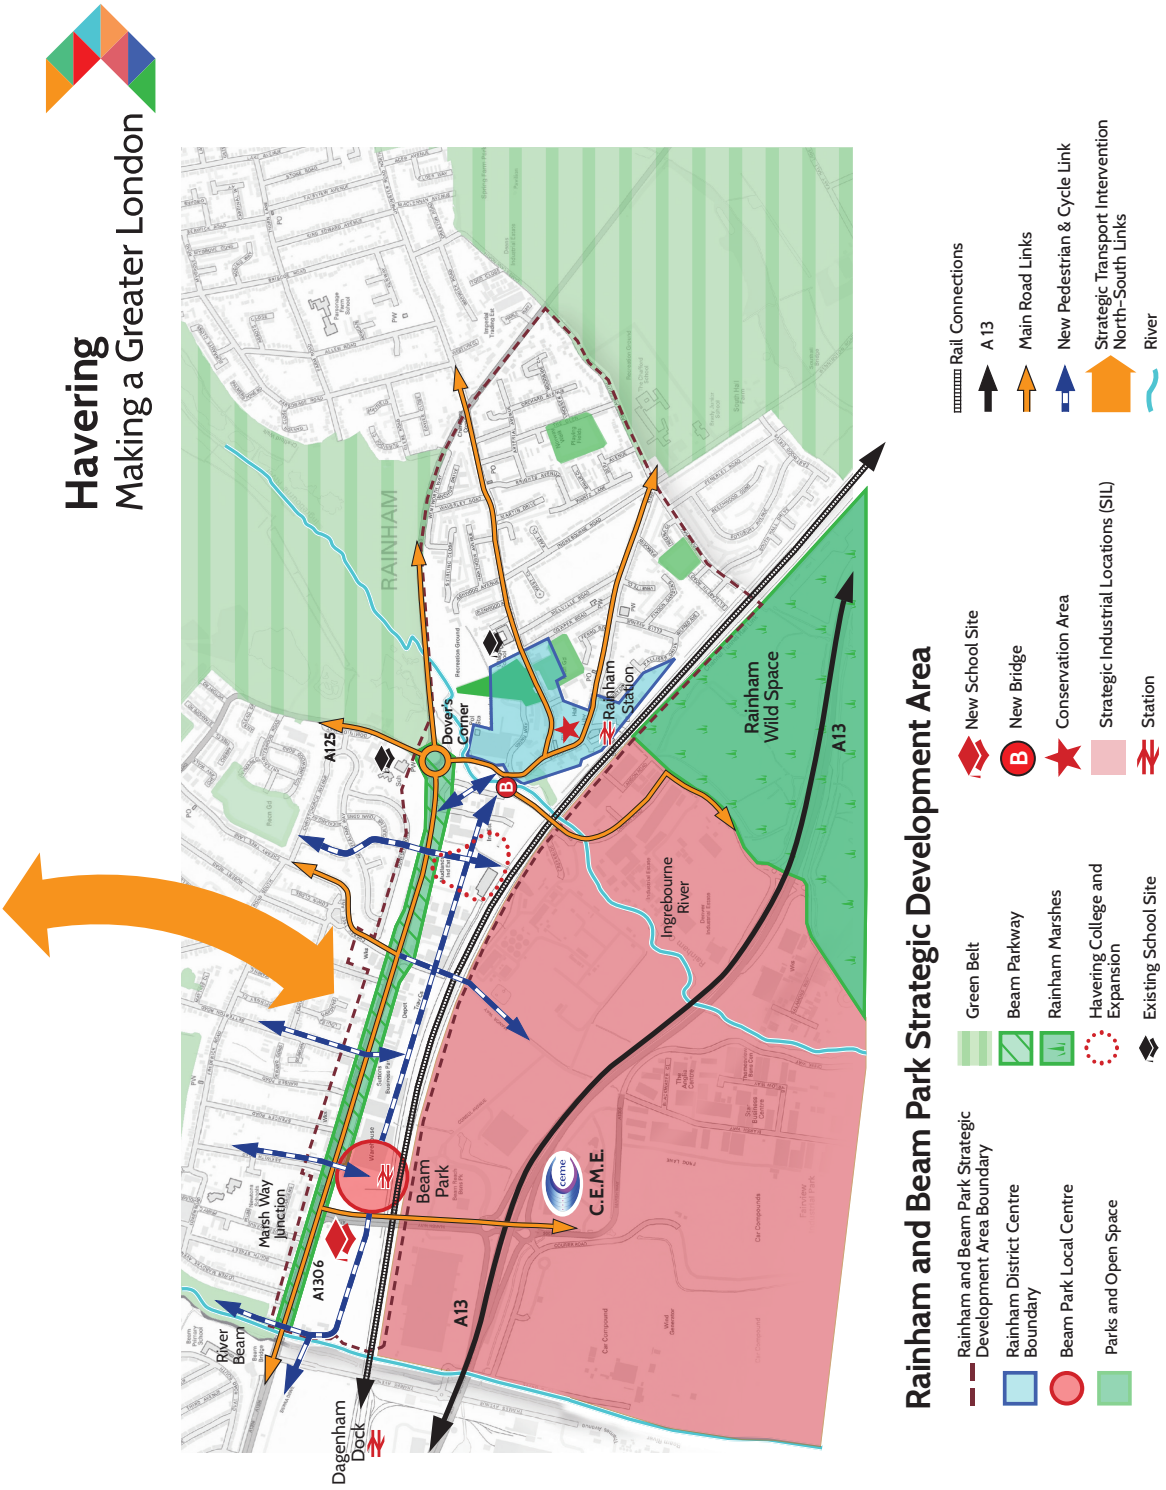

Figure 4 Rainham and Beam Park Strategic Development Area

7 Successful Places to Live

7.1 Housing supply

Policy 3

Housing supply

Ensuring an adequate supply of high quality housing in Havering is essential in ensuring that the borough is a place where people want to live and where residents are able to stay and prosper. The Council will take a pro-active approach to increasing the amount housing within the borough and will encourage the effective and efficient use of land by reusing previously developed land.

Over the full 15 year Plan period at least 17,550 new homes will be built in Havering. This will include the delivery of at least:

i. 5,300 homes on large sites in the Romford Strategic Development Area;
ii. 3,000 homes on large sites in the Rainham and Beam Park Strategic Development Area;
iii. 700 homes through the intensification and renewal of existing Council housing estates outside of the Strategic Development Areas;
iv. 400 homes on two large previously developed sites within the Green Belt; and
v. 2,790 homes on small sites across the borough.

The delivery of new homes will also be achieved by:

i. Promoting mixed use development in town centres and designated out of town centre locations;
ii. Prioritising all non-designated land for housing when it becomes available;
iii. Supporting appropriate development of infill, under-utilised and vacant sites in the borough's sub-urban areas;
iv. Resisting the net loss of residential development;
v. Supporting initiatives to bring back empty residential properties into use;
vi. Supporting self-build initiatives; and
vii. Seeking to optimise residential output and densities consistent with the density matrix set out in the London Plan.

7.1.1 London and the South East are experiencing significant development pressures and there is a need to increase the supply of housing to meet the demands of the growing population. The NPPF requires local planning authorities to identify and meet their full objectively assessed needs for housing.

7.1.2 Havering forms part of the London-wide housing market area with all of the other London boroughs. The Mayor of London, through the preparation of the 2015 London Plan sought to identify both the need for new housing and the potential supply across London. The GLA's Strategic Housing Market Assessment (SHMA) 2013 identifies a need for a minimum of 490,000 new homes in London between 2015-2026 (or 49,000 new homes per annum). In comparison, the GLA Strategic Housing Land Availability Assessment 2013 found that London has capacity for at least 420,000 additional homes or 42,000 per annum.

7.1.3 Based on this evidence, the London Plan sets out average annual minimum housing supply targets for each borough until 2025. For Havering, the target is a minimum of 11,701 new homes over the period 2015-2025. The London Plan states that the annual average (1,170) should be rolled forward for the remainder of the Plan period.

7.1.4 As a result of the cumulative deficit of identified housing supply across the Capital, the London Plan states that boroughs should seek to achieve and exceed the relevant minimum borough annual average housing target. Boroughs are expected to draw on the housing benchmarks in developing their housing targets, augmented where possible with extra housing capacity to close the gap between identified housing need and supply in line with the requirement of the NPPF. In line with the

requirements of the London Plan the Council will seek to deliver the minimum target set in the Plan. Over the 15 year lifetime of this Local Plan Havering's minimum housing target is therefore 17,550 as reflected in Policy 3.

7.1.5 At a sub-regional level, Havering forms part of the Outer North East London Housing Market Area with the London Boroughs of Barking and Dagenham and Redbridge. The Council has worked with these authorities to prepare a sub-regional SHMA. A subsequent update has been prepared for Havering taking into account updated GLA household projections [(3)] The 2016 SHMA Update for Havering indicates that Havering's full Objectively Assessed Need is for 30,052 new homes over the period 2011-2033 or 1,366 homes per annum.

7.1.6 Through the Local Plan process, the Council has sought to identify all sources of potential housing supply and identify sustainable development sites in order to close the gap between the housing target set in the London Plan and its objectively assessed need requirement. With two Strategic Development Areas in Romford and in Rainham and Beam Park (both with Housing Zone status), an ambitious estates regeneration programme for its own homes, the establishment of the Council's own housing company, opportunities across a range of well located brownfield sites and working pro-actively and collaboratively with developers to bring forward sites in private ownership, Havering is making every effort to increase housing supply and deliver the homes that are needed in regard to both quantity and quality.

7.1.7 Over the first 10 years of the Plan period (2016-2026), the Council has identified capacity to deliver at least 11,917 new homes in addition to bringing 260 existing vacant units back into use (see Table 1). This exceeds the minimum 10 year target set out in the London Plan but falls short of meeting the objectively assessed need identified through the Outer North East London SHMA. The Council recognises that Havering's objectively assessed housing need is higher than its identified sources of housing capacity. Policy 3, therefore, sets out a positive and proactive approach to housing development to increase the supply over the plan period. As part of managing the overall approach to housing growth in Havering, the Council adopts a general presumption in favour of housing to meet the identified housing need in the borough, and prioritises housing use on all non-allocated land when it becomes available.

7.1.8 Through the Duty to-Co operate, the GLA have confirmed that London forms one housing market area and unmet housing need is being addressed at the London wide level, with all boroughs seeking to identify additional capacity over and above the level identified in the current London Plan.

7.1.9 The NPPF requires local planning authorities to identify and update annually a supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements with an additional buffer of 5% (moved forward from later in the Plan Period) to ensure choice and competition in the market for land. Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the Plan Period) to provide a realistic prospect of achieving the planned supply and to ensure choice and competition in the market for land.

7.1.10 A significant proportion of new housing development will be delivered in the two Strategic Development Areas and predominantly on large sites within these. Work is already underway in Havering to bring these sites forward and whilst construction will start within the first five years of the Plan, completion is more likely to be towards the end of this period and into the second phase. The Council is making every effort to bring forward these sites as quickly as possible in order to boost housing supply and meet the short term need for housing.

7.1.11 Full details of the Council's land supply and the approach to delivery housing over a 10 year period is set out within the Housing Position Statement supporting this Local Plan. This also includes an action plan addressing the initiatives underway to increase housing supply.

7.1.12 As part of its strategy, the Council has looked at the scope for the Green Belt to provide land for new homes. It has undertaken a review against the functions of the Green Belt as set out in the NPPF. The Council is satisfied that all of the Green Belt in Havering fulfils its purpose and that having regard to the significant opportunities for new homes to come forward in Havering's built up area, there is

3 GLA 2015 Round Household Projections - Long Term Trends

no planning justification for releasing land from the Green Belt. Opportunities do exist on previously developed sites within the Green Belt at St George's Hospital in Hornchurch and Quarles Campus in Harold Hill.

7.1.13 In seeking to meet its objectively assessed housing need the Council explored and tested a number of alternative development strategies in its Sustainability Appraisal (SA) Report. The SA report demonstrates that the development strategy chosen by the Council is the most sustainable approach.

7.1.14 The Council supports self-build initiatives in order to give local residents the opportunity to design, build and own their homes. Since May 2016, the Council has published a register for individuals and groups to express an interest in acquiring self-build and custom build plots in Havering. The Council will continue to monitor this register to gather up to date evidence of the level of interest for these types of homes and accordingly seek to make provision for meeting this need within the Site Specific Allocations Local Plan.

7.1.15 Development densities should reflect the density matrix in the London Plan. However, the Council recognises that when determining an application, density is only one of a number of considerations. The density matrix should not be applied mechanistically. The Council will place a high priority on the quality and design of the scheme, the local context and the relationship with surrounding areas when determining whether a scheme is acceptable and will always aim at optimising residential output and densities consistent with the London Plan for different types of location within the borough through encouraging higher densities of housing development in places with good levels of public transport accessibility.

Table 1 Housing Supply 2016-2026

Source of Supply	Net additional homes 0-5 years	Net additional homes 5-10 years	Total 10 year supply
Large sites within the Romford Strategic Development Area*(1)	1,361	3,409	4,770
Large sites within the Rainham and Beam Park Strategic Development Area*	951	2,071	3,022
LBH Estate Regeneration Schemes (outside of the Strategic Development Areas)	-55	370	315
Large sites outside of the Strategic Development Areas*	1,758	192	1,950
Small Sites	930	930	1,860
Vacant units returning to use	130	130	260
TOTAL	**5,075**	**7,102**	**12,177**

1. *including sites with planning permission

7.2 Affordable Housing

Policy 4

Affordable housing

Havering residents should have access to high quality, affordable new homes and the Council will seek to maximise affordable housing provision from development proposals. All developments of more than 10 dwellings or residential developments with a site area of more than 1,000 sq m are required to provide at least 35% affordable housing based on habitable rooms.

Proposals which do not meet the 35% threshold, or require public subsidy to do so, will be required to submit a detailed viability assessment. The Council will also apply a review mechanism in order to ensure that the maximum affordable housing contributions is secured if viability improves over time.

Proposals that meet or exceed the 35% threshold without public subsidy are not required to submit viability information. Such applications will be subject to an early review mechanism, but this will only be triggered if an agreed level of progress is not made within two years of permission being granted.

The Council will strongly resist proposals brought forward that do not meet the requirements of affordable housing in circumstances where the viability of the scheme has been compromised by unreasonably high acquisition or design costs.

Development proposals will be required to deliver a tenure mix of 70% social/affordable rent and 30% intermediate provision.

The Council's priority is for affordable housing to be provided on-site. Where it can be robustly demonstrated to the Council's satisfaction that this is not possible, or appropriate, it may be acceptable to make off-site provision. In these circumstances the developer will be required to identify and secure a donor site. Only when it can be demonstrated to the Council's satisfaction that a site cannot be identified will a cash in lieu payment to the Council be considered.

7.2.1 The Council is committed to securing the highest level of affordable housing contribution as the rise in average house prices in comparison to average income levels has made market housing unaffordable for many Havering residents.

7.2.2 The Outer North East London SHMA estimates that of the 30,052 new homes needed in Havering over the period 2011-2033, 35% (10,520) of these are required to be affordable. The Council, therefore, considers it appropriate to seek at least 35% affordable housing from new developments. This is also consistent with the London Plan and the Mayor's Draft Affordable Housing and Viability Supplementary Planning Guidance (2016).

7.2.3 The Council has undertaken a Local Plan Viability Assessment to help inform the borough's affordable housing target. The Assessment found that in most cases, schemes can accommodate between 25% and 50% affordable housing with higher density flatted developments only likely to be able to achieve between 25% and 35% in the highest value locations.

7.2.4 Development proposals that meet or exceed the 35% threshold without public subsidy, provide affordable housing on site, meet the specified tenure mix and all other requirements and obligations are not required to submit viability information. However, these applications will be subject to an early review mechanism which will be triggered if an agreed level of progress is not made within two years of permission being granted. The level of progress will be agreed with the applicant on a site by site basis.

7.2.5 The Council supports a transparent approach to viability in line with the Mayor's Draft Affordable Housing and Viability Supplementary Planning Guidance (2016). Applicants will be required to pay for an independent viability assessment by a third party where requested by the Council. The Council will use review mechanisms to ensure that new development delivers the appropriate amount of affordable housing as viability improves.

7.2.6 Developers should engage at a very early stage with Registered Providers of affordable housing to discuss the the delivery of the affordable element of the proposal. A Registered Provider should be identified before making a planning application. The affordable offer and any grant funding should be factored into any financial viability assessment.

7.2.7 Where a development proposal is considered to under-develop a site, the Council will consider negotiating an increase in the number of dwellings, and thus affordable housing provision, or consider refusing the application. The Council has established that development sites of more than 1000 sq m are potentially able to be configured to deliver more than 10 residential and, therefore, contribute to affordable housing provision.

7.2.8 The Outer North East London SHMA identified two categories of need; those who can afford affordable housing for rent with housing benefit support and those who can afford affordable housing without housing benefit support and therefore require intermediate housing. In summary, the SHMA concludes that the vast majority of households in Havering can only afford social housing if they receive housing benefit. In light of these findings, the Council will seek a 70:30 tenure split between affordable rented and intermediate products.

7.2.9 There are a range of affordable and intermediate housing products on offer including Social Rent, London Affordable Rent, Affordable Rent, London Living Rent, Shared Ownership and Starter Homes. Havering's approach is to encourage a mix of affordable housing tenures. The Council will set out the preferred split between specific affordable products within Havering's emerging Housing Strategy.

7.2.10 In line with national and regional planning policy, affordable housing should, in the first instance, be delivered on-site. Off-site provision may be considered in exceptional circumstances as set out in the Mayor of London's Housing Supplementary Planning Guidance (2016). Where commuted sum payments are proposed by the applicant without the Council's agreement, for example, because there have been no pre-application discussions, the onus will be on the applicant to robustly justify to the Council why off-site provision or a commuted payment should be accepted.

7.2.11 In all circumstances where provision other than on-site is being considered, applicants will be required to draw on robust evidence to provide a statement that demonstrates;

- why affordable housing cannot be provided on-site, or
- in those cases where on-site provision is possible but does not result in the best housing outcome, how and why identified housing needs would be more effectively met off-site compared to on-site.

7.2.12 Details of the Council's financial model for calculating the value of a commuted sum will be provided in a Supplementary Planning Document.

7.3 Housing mix

Policy 5

Housing mix

The Council will support development proposals that provide a mix of dwelling types, sizes and tenures. All housing schemes should include a proportion of family sized homes and reflect the recommended housing mix identified in Table 2.

When considering the mix of dwelling sizes appropriate for a particular development proposal, the Council will have regard to individual site circumstances including location, site constraints, viability and the achievement of mixed and balanced communities. In all cases, the Council will require developers to demonstrate how they have sought to maximise the proportion of family units through the design of the scheme.

Where proposals are seeking to provide retirement, sheltered or extra care housing, the Council recognises that there may be a need for greater flexibility with regard the mix of units to be provided within developments, particularly in achieving the provision of 3 bedroom units.

Table 2 Housing Mix

	1 bed	2 bed	3 bed	4+ bed
Market Housing	5%	15%	64%	16%
Affordable Housing	10%	40%	40%	10%

7.3.1 There is a diverse population in Havering, with an equally diverse range of housing needs and requirements. Havering's residents require a mix of housing types at different stages in their lives and depending on their individual circumstances. It is important that there is a range of housing so that individuals or households can choose to pass through all phases of life living within the same neighbourhood, leading to improved community cohesion.

7.3.2 The key findings of the Outer North East London SHMA in relation to size mix show that over the Plan Period there is a significant need for three bed affordable and market properties. For market housing the Council will seek a size mix in line with the findings of the SHMA (as set out in Table 2).

7.3.3 In relation to affordable housing, the Council has considered evidence from both the SHMA and the current housing register. The combined evidence demonstrates that the Council's priority through the Local Plan should be for 2 and 3 bed properties with 1 bed properties less of a priority. The Council's preference is that 2 bed 4 person properties should be prioritised over 2 bed 3 person units as they offer greater flexibility of accommodation.

7.3.4 The Council does recognise that the high level of demand for three bed properties will be challenging and that it may not be possible to meet the recommended housing mix on all sites. Some sites, for example, may be more appropriate for families with children, particularly sites with safe access to amenity and play space. However, it is essential that the supply of family housing is stepped up to maintain an adequate stock of housing suitable for occupation as family dwellings. The Council will expect developers to demonstrate how they have sought to maximise the provision of family housing within their schemes. In flatted schemes, developers should be creative with their approaches to providing family accommodation and should demonstrate how they have considered the provision of family units such as duplexes at ground floor level. Where the recommended level of three bed properties cannot be achieved, the priority will be to provide two bed rather than one bed properties.

7.3.5 Proposals containing family housing (in this case units with 3 bedrooms or more) in excess of the above guidelines will be supported, provided that there are not high existing levels of family housing in an area, or there is a demonstrable need for such family housing in an area. There will be greater flexibility on the requirement for family units for proposals for retirement, sheltered or extra care housing. Justification for the dwelling mix proposed in development schemes is required, if differing from the mix set out in Table 2.

7.3.6 The preferred dwelling mix will be subject to periodic amendments based on up-to-date Council assessments of needs across the borough. Any amendments to this preferred mix will be published on the Council's website or contained within a Supplementary Planning Document, as appropriate.

7.4 Specialist accommodation

Policy 6

Specialist accommodation

The provision of appropriate housing to meet the specialist needs of local people will be supported where it can be robustly demonstrated that:

i. There is an identified need within the borough;
ii. The site has access to essential services and shops by walking and cycling;
iii. The site is well served by public transport;
iv. The proposal contributes to a mixed, balanced and inclusive community;
v. The site is suitable for the intended occupiers in terms of the standard of facilities, the level of independence, and the provision of support and/or care;
vi. An appropriate level of amenity space is provided to meet the needs of the intended occupants taking account of the need for an attractive outlook;
vii. Consideration has been given to all possible future needs and the development can be easily adapted to meet the needs of future occupants;
viii. The proposal does not have any adverse impacts on the surrounding area and will not be likely to give rise to significantly greater levels of noise and disturbance to occupiers of nearby residential properties;

ix. The proposal meets the parking requirements set out in Policy 24 and it will not have an unacceptable impact on parking conditions and traffic congestion in the area; and

x. Adequate provision for visitor and carer parking facilities is provided and where appropriate, provision is made for the safe and convenient storage of wheelchairs and mobility scooters.

The Council will encourage common areas to be provided to allow occupants a space where they can socialise and interact with others and the design takes into account the facilities and needs of the occupants.

The loss of existing specialist accommodation which meets the identified specific needs will be resisted unless it can be demonstrated that:

xi. The accommodation is no longer needed and the new accommodation will instead meet another identified prioritised local need; or

xii. The existing accommodation will be adequately re-provided to an equivalent or better standard on-site or elsewhere within the borough.

7.4.1 Specialist accommodation is that which has been specifically designed and built to meet the needs of the elderly, disabled, young or vulnerable adults.

7.4.2 Havering has a large and growing population of older people. In fact, Havering has the largest percentage of older people of all the London boroughs. There is a need to ensure that there is appropriate provision of specialist accommodation across the borough to meet this need including providing appropriate accommodation for those individuals suffering from Dementia.

7.4.3 Havering has just under 2,000 specialist housing units for older people across all tenures – including social housing, retirement accommodation, assisted living schemes and extra care housing. This does not include general needs housing that the Council has designated for older people. Over 60% of these specialist housing units are social housing, the vast majority of this being the Council's own sheltered housing accommodation (approximately 800 units).

7.4.4 Today, older people's housing needs and choices are very different from previous generations. Changes in life expectancy, income levels and social expectations of life after retirement have all contributed to a re-imagining of housing options for older people, with an emphasis on independence, choice and enablement.

7.4.5 In 2015, the Council undertook a review of the need for specialist older people's housing within the borough. This review looked at both the current and projected need for housing for older people and the specific types of specialist accommodation required. The Review found that:

- There is a current and projected surplus of affordable Sheltered Housing Schemes in Havering and this is projected to continue even with the projected growth in the number of older people living in Havering.
- There is a current and projected deficit in sheltered /retirement housing for lease and sale within Havering
- There is a current and projected deficit in enhanced and extra care housing and specialist housing for people with dementia across all housing tenures. The review acknowledged that the majority of older people will want to remain in their current homes for as long as possible but that there is a need to ensure that there is the quantity, quality and type of specialist housing available for older people when their current home is no longer suitable due to physical and/or mental frailty or affordability.

7.4.6 These findings are in line with the indicative annual benchmark for the provision of additional specialist older persons accommodation which is set out in the London Plan. In Havering, a need for 185 additional units per year has been identified of which 135 should be for private sale and 50 for intermediate sale. No need was identified for affordable rent products due to the current surplus.

7.4.7 To meet the needs of Havering's population, and as part of the Council's estate regeneration programme, the Council is proposing to close four sheltered housing schemes and redevelop three others. Three of the four sites that are closing will be regenerated to provide high quality general needs housing and one will provide high quality general needs flats for residents over the age of 55. Of the three sheltered schemes for redevelopment, two will become Older People's Villages offering

a range of housing options designed to support a variety of needs within a community setting. One sheltered scheme will become an Extra Care scheme offering residents the benefit of additional support to meet increasing needs.

7.4.8 In addition, there will be considerable financial investment focused on the remaining twelve sheltered schemes over the next two years. This will enable the Council to improve facilities and services within sheltered schemes, which will support the needs of older people and encourage our residents to remain as independent as possible for as long as possible so improving their quality of life and reducing the financial burdens on local health and social care services.

7.4.9 There is a need for both specialist and long term housing solutions to be found for people with a learning disability, mental health conditions, substance misuse and older looked after children within Havering. Work is underway to identify the demand for supported housing as part of the Council's housing development programme work.

7.4.10 For residents with a special educational need and disability who have reached 16, the Council is developing an integrated post-16 strategy that will include identifying housing needs and setting out suitable housing options. This will include the development of further supported living schemes and work to ensure that existing housing options are identified, such as the ground floor flats or bungalows that enable individuals to live independently (with appropriate support) in the community.

7.4.11 All development proposals for specialist accommodation should meet an identified and up to date local need. It is important that any new provision reflects the requirements of the local community in terms of the type, location and design of accommodation.

7.4.12 Specialist housing should be located in areas that have good public transport connections and have access to essential services by walking and cycling. This will enable residents to integrate into the local community and avoid social isolation.

7.4.13 Careful consideration should be given to the design of specialist accommodation to ensure that it is tailored to the needs of the intended occupants and that it is easily adaptable for future occupants who may have different needs. Residents should have access to high quality and usable outdoor amenity space. In circumstances where the intended occupants are unlikely to use outdoor space, it will still be important for an attractive outlook to be provided which should incorporate soft landscaping.

7.5 Residential design and amenity

Policy 7

Residential design and amenity

Residential development should be of a high design quality that is inclusive and provides an attractive, safe and accessible living environment for new residents whilst ensuring that the amenity and quality of life of existing and future residents is not adversely impacted.

To protect the amenity of existing and future residents the Council will support developments that do not result in:

i. Unacceptable overlooking or loss of privacy or outlook;
ii. Unacceptable loss of daylight and sunlight; and
iii. Unacceptable levels of noise, vibration and disturbance.

To ensure a high quality living environment for residents of new developments, the Council will support residential developments that:

iv. Meet the National Space Standards and the London Plan requirement for floor to ceiling heights;
v. Adhere to the London Plan policies in regards to 'Lifetime Homes Standards' and 'Lifetime Neighbourhoods';
vi. Are sited and designed to maximise daylight and sunlight;
vii. Incorporate an appropriate level of high quality, usable amenity space that is designed to be multi-functional and offer a range of leisure and recreation opportunities;

viii. Provide both balconies and communal amenity space in flatted schemes; and
ix. Provide dual aspect accommodation unless exceptional circumstances are demonstrated;

In any development affordable and market housing will be expected to have the same external appearance and equivalent amenity in relation to views, daylight, noise and proximity to open space.

New developments should promote independent living by utilising designs which can allow for alterations to be made in the future. The Council will require 90% of new build housing to meet Building Regulation requirement M4(2) 'Accessible and Adaptable Dwellings', with the remaining 10 percent meeting Building Regulation requirement M4(3) 'Wheelchair User Dwellings'.

The Council will support and encourage proposals which provide adaptations enabling residents to live independently and safely in their own homes.

7.5.1 All residents should feel at ease within their home. If people feel safe and comfortable in their homes then they are more likely to be positive about their surroundings and this can help ensure that they will wish to live and stay in an area and mix with their neighbours to create mixed, inclusive and integrated communities. Careful, high quality design is therefore required to ensure that new and existing residents have a good quality of life. Adequate privacy, amenity space, comfort and security are important design issues that contribute to the health and wellbeing of residents. Securing these benefits can help community cohesion and encourage people to put down roots and invest in an area.

7.5.2 The positioning and orientation of properties, including their windows and balconies, must be carefully considered to ensure that adequate privacy is maintained for everyone. In particular, habitable rooms and areas of private gardens close to dwellings should not be excessively overlooked by windows or balconies. Screening can reduce overlooking in these instances. All habitable rooms should contain at least one main window with an adequate outlook where nearby walls or buildings do not appear overbearing or unduly dominant. Loss of outlook arises from development taking place in close proximity to existing development and introducing or significantly increasing a sense of enclosure.

7.5.3 Developments will be expected to deliver 'lifetime' homes and 'lifetime' neighbourhoods reflecting the six principles relating to access, services and amenities, built and natural environments, social network and well-being, and housing. By developing homes which are adaptable to change based on the needs of residents, it will facilitate greater pride and sense of community.

7.5.4 The Council will expect the impact of development proposals to be assessed following the methodology set out in the most recent version of Building Research Establishment's (BRE) "Site layout planning for daylight and sunlight: A guide to good practice". Depending on the scale of the development a Daylight and Sunlight Report may be required to fully assess the impacts.

7.5.5 Amenity space provides many benefits in terms of opportunities for recreation and leisure, and enhancing quality of life through improved health, reduced stress levels, child development through play spaces and interaction with the natural environment.

7.5.6 The fundamental design considerations for amenity space are its quality and usability. The size, shape and slope of amenity space is key to its usability. Awkwardly shaped, narrow and very steeply sloping amenity spaces should be avoided. In designing high quality amenity space, consideration should be given to privacy, outlook, sunlight, trees and planting, materials (including paving), lighting and boundary treatment.

7.5.7 The design and provision of private amenity space is particularly important in flatted schemes. Balconies should be incorporated into all flatted developments and should, as a minimum, be 1.5 metres in depth and in line with the Mayor's Housing SPG. Ground floor dwellings in flatted schemes can provide direct access to a private garden space leading to a private communal space beyond. Communal amenity space will be expected on all flatted schemes and may be appropriate on some large housing schemes. Communal amenity space should be designed to be private, attractive, functional and safe. Its quality and management should encourage a sense of ownership and pride.

7.5.8 Where it is not possible or appropriate to provide private gardens and communal amenity space, roof gardens will normally be acceptable alternatives provided they do not result in overlooking which reduces the privacy of neighbouring residents or other occupiers within the development.

7.5.9 Proximity to public open space will be considered when assessing the adequacy of provision of private amenity space only where design and layout is of sufficient high quality and contributions are made through s106 for enhancements to existing open space.

7.5.10 In areas where restaurants, pubs, bars, and night clubs are already established prior to the development of new residential developments in the same area, developers are to include the Deed of Easement of Noise as part of the sales agreement.

7.6 Houses in multiple occupation

Policy 8

Houses in Multiple Occupation

The Council recognises that Houses in Multiple Occupation (HMOs) can make a valuable contribution to the private rented sector by catering for the housing needs of specific groups. This needs to be balanced with the potential harm that can arise from such development if they are not subject to control. The Council will support applications for HMOs where it can be demonstrated that:

i. The overall size of the original property to be converted is not less than 120 sq m;
ii. The proposal does not result in more than 10% of properties in one street becoming HMOs (including existing lawful HMOs) or more than two adjacent properties becoming HMOs, thereby undermining the principle of mixed communities;
iii. The proposal does not have an adverse impact on the surrounding area and will not be likely to give rise to significantly greater levels of noise and disturbance to occupiers of nearby residential properties than would a single family dwelling of equivalent size;
iv. The proposal meets Havering's parking requirements and it will not have an unacceptable impact on parking conditions and traffic congestion in the area;
v. Adequate, secure and well screened refuse storage is provided within the curtilage of the site and is accessible by all residents;
vi. The property contains communal space, including either a dining or living area, large enough for all the dwelling's occupants to use simultaneously; and
vii. The proposal meets the requirements of the East London HMO guidance.

7.6.1 In 2015, the Council introduced two Article 4 Directions that removed permitted development rights to convert properties to Houses in Multiple Occupation. Evidence suggests a trend towards conversion of smaller dwellings to form HMOs including semi-detached and terraced houses, particularly within Brooklands, Romford Town, Heaton and Gooshays wards. Direction Art4/1/2015 requires planning permission for the formation of an HMO from any existing residential property type encompassing detached, semi-detached and terrace houses and flats anywhere within these wards. Direction Art4/2/2015 introduces the requirement for planning permission to be obtained for the formation of an HMO from any existing semidetached or terraced house or flat anywhere within the remainder of the borough. The change of use from a detached house to a HMO (use class C4) is not covered by the second Article 4 Direction.

7.6.2 The threshold of 10% HMOs per street has been applied in order to ensure there are mixed communities in the borough. The limit aims to prevent the concentration of HMOs in certain roads and certain areas within these roads and to ensure an even distribution of HMOs across the borough. The 10% threshold will be applied to each named street, using Havering's HMO licencing register as a record of existing lawful HMOs in the borough.

7.6.3 The Council's policies seek to deliver appropriate residential conversions whilst maintaining a supply of family housing; this policy is in line with the strategic housing need of the borough. The Outer North East London SHMA identified a need for three bedroom properties in the borough, meaning the conversion of small family homes to HMOs would have a particularly negative impact on the supply of family housing. In order to protect family housing, properties must be at lease 120sq m in order for a conversion to an HMO to be considered acceptable.

7.6.4 All HMOs will also be expected to comply with the East London HMO guidance which has been adopted by the Council and sets out quality and minimum living space standards.

7.7 Conversions and subdivisions

Policy 9

Conversions and subdivisions

Proposals for conversion to residential use and subdivision of existing residential properties to self contained homes in Havering will be supported where it can be demonstrated that:

i. There is no conflict with surrounding uses;
ii. The existing house being subdivided has no less than 120 sq m of original floor space, including internal circulation, and the subdivision would provide a minimum of one family unit of 3 or more bedrooms;
iii. The new family unit is preferably on the ground floor with direct access to private, good quality, usable amenity space;
iv. The living areas of new properties do not abut the bedrooms of adjoining properties;
v. Safe, secure and convenient access is provided to each unit from the street; and
vi. The parking standards set out in Policy 24 are met.

7.7.1 Subdivision of existing houses and conversion of commercial floor space have been important sources of additional housing in Havering, particularly for smaller households. The Council acknowledges that there is a shortage of housing and the need to consistently increase the supply of high quality housing to meet the needs of residents. However, given that the Outer North East London Strategic Housing Market Assessment (SHMA) reports a pressing need for family homes of 3 bedrooms or more for both affordable and market housing, this policy sets out the criteria whereby conversion and subdivision schemes will contribute to the supply of priority family accommodation in Havering.

7.7.2 The threshold of 120 sq m for the subdivision of houses has been set to enable the retention of smaller dwellings for smaller households of single persons and young couples on moderate income, while permitting houses with greater floor space to be subdivided to provide a range of dwelling sizes and types. The subdivision of existing small houses consisting of floor space below 120 sq m into two smaller units will therefore not be supported.

7.7.3 All new development of either conversion or subdivision will be required to provide at least one 3b4p family unit with a minimum of 74 sq m of floor space, and a 1b1p or 1b2p flat with a floor space range of 37 - 50 sq m. This is consistent with standards set out by the Department for Communities and Local Government in its 'Technical housing standards - nationally described space standard' (2015). It has been established that conversion or subdivision schemes with a floor space of 120sq m can accommodate the retention of a family unit alongside the provision of an additional unit which meet the minimum space standards. The family unit should be on the ground floor with access to private, good quality, usable amenity space. The threshold of 120 sq m for the subdivision of houses has been set to enable the retention of smaller dwellings for smaller households of single persons and young couples on moderate income, while permitting houses with greater floor space to be subdivided to provide a range of dwelling sizes and types. The subdivision of existing houses consisting of floor space below 120 sq m into two smaller units will therefore not be supported.

7.7.4 In the particular circumstances of subdividing a heritage asset, the Council recognises that a different dwelling mix may be required to enable development in order to retain distinctive townscape character, and the historic layout of the property. As such, flexibility will be applied in such instances.

7.7.5 Subdivisions of basements should be carried out taking account of policies relating to Policies 7 and 31.

7.7.6 Proposals for conversions and subdivisions should also comply with other relevant requirements in the Local Plan, such as those relating to the provision of amenity space, privacy, daylight, parking and access, and refuse and recycling storage and collection as provided by the Residential design and amenity, Parking provision and design and waste management policies (Policies 7, 24 and 35 respectively).

7.8 Garden and backland development

Policy 10

Garden and backland development

Proposals for residential development on garden and backland sites in Havering will be supported when they:

i. Ensure good access and, where possible, retain existing through routes;
ii. Retain and provide adequate amenity space for existing and new dwellings;
iii. Do not have a significant adverse impact on the amenity of existing and new occupants;
iv. Do not prejudice the future development of neighbouring sites; and
v. The subdivision of plots and garden development will not be supported within the Hall Lane and Emerson Park Character Areas as designtated on the Proposals Map, unless it can be robustly demonstrated that the proposal would not have an adverse impact on the character of the area and that the proposed plot sizes are consistent with the size, setting and arrangement of properties in the surrounding area.

7.8.1 Much of the borough is sub-urban, characterised by spaciously set up neighbourhoods with large private gardens. Intensification of these areas by development on gardens or backland may provide valuable sources for housing. Development of such sites can be difficult as there are often a number of constraints. They require sensitive development and high quality design to ensure that the character of the area and the quality of life of existing and future residents is maintained. Particular care needs to be taken with proposals involving areas with a well-established character such as Emerson Park and Hall Lane.

7.8.2 This policy must be read in conjunction with Policy 7 Residential design and amenity and Policy 26 Urban design as sufficient privacy and amenity space for existing and new properties and the character and appearance are particular considerations for garden and backland development.

7.8.3 Private gardens also provide, besides important amenity and privacy roles, important ecological, drainage and flood mitigation functions. As a form of green infrastructure, these functions should be considered when any loss of garden land is proposed in line with Policy 29 Green infrastructure.

7.8.4 Land suitable for backland development may be in multiple ownerships. This may mean that not every parcel will come forward at the same time. Proposals must, therefore, demonstrate that the proposed development is of an acceptable size and that undeveloped parcels would not be landlocked or prejudiced. A comprehensive scheme removes the need for multiple entrances to small unconnected parcels which collectively may have a negative impact on highway safety and visual amenity.

7.8.5 The application will need to demonstrate that consideration has been given to all the land that has potential for development including land outside the ownership/control of the applicant. The layout must demonstrate how the additional land can be developed and that its future development will not be prejudiced. The access will need to be of a standard suitable to serve a comprehensive development with provision within the layout to extend the access to serve all the additional land. Applications which are for piecemeal development or do not satisfactorily demonstrate how a comprehensive development can be achieved will not be acceptable.

7.8.6 Emerson Park is one of the most mature and successful residential districts in the borough. It has a distinctive character and is typified by large, well maintained single family detached dwellings set within spacious plots with mature landscaping.

7.8.7 The Hall Lane area of Upminster is occupied mostly by established large detached and semi-detached dwellings, set in large gardens with considerable tree and shrub planting. The area's character derives primarily from the long and well landscaped rear gardens whose size and good tree cover create unusual spaciousness which is extensive and uninterrupted.

7.8.8 The Council has operated policies aimed at preserving the spacious character of these areas for around forty years. This has helped to maintain their special character and retain a critical stock of large good, quality family and executive homes which have contributed to the diversity of homes available within the borough. The Council will review the existing Supplementary Planning Documents for these area and will publish updated guidance to assist those bringing forward developments in these areas.

7.9 Gypsy and Traveller accommodation

Policy 11

Gypsy and Traveller accommodation

The Council will meet the identified current and future accommodation needs of Gypsies and Travellers and Travelling Showpeople in Havering by:

i. Formalising seven existing private sites providing a maximum of 33 pitches for Gypsies and Travellers. These sites are identified on the Proposals Map and the maximum number of pitches that will be permitted on each site is identified in paragraph 7.9.2; and
ii. Retaining and protecting the existing Travelling Showpeople plot at Fairoaks, St Marys Lane.

Proposals brought forward for permanent Gypsy and Traveller pitches on the sites identified on the Proposals Map will be required to demonstrate:

iii. A suitable layout of the site;
iv. That the site has essential services such as water, power, sewerage, drainage and waste disposal;
v. High quality boundary treatment and landscaping of the site; and
vi. The removal of ancillary equipment and structures not part of the residential accommodation.

Development of any additional permanent or temporary Gypsy and Traveller pitches must meet an up to date and evidenced need and will be determined in accordance with the National Planning Policy for Traveller Sites. Proposals must also satisfy the criteria below in addition to criteria iii-vi above:

vii. The site has safe and convenient access to the highway and public transport services;
viii. There is provision within the site for parking, turning and servicing;
ix. The site has reasonable access to local services and community facilities such as healthcare, schools and shops;
x. The proposal would not result in significant adverse impacts on the amenity of occupiers of neighbouring sites;
xi. The proposal would not result in significant adverse impacts on the visual amenity of the local area; and
xii. Sites at risk of flooding should be subject to the sequential and exception tests.

7.9.1 The Havering Gypsy and Traveller Accommodation Assessment (GTAA) 2017 provides a robust assessment of current and future need for Gypsy, Traveller and Travelling Showpersons accommodation in the borough up to 2031. The Assessment identifies a need for 33 additional pitches for the Gypsy and Traveller households who meet the planning definition as set out in the National Planning Policy for Traveller Sites. Of the 33 pitches needed, 26 pitches are required within the first 5 year period of the Plan (2016 – 2021), and the remaining 7 pitches in the latter part of the plan period. No additional need has been identified for plots for Travelling Showpeople over the 15 year plan period (2016-2031).

7.9.2 The GTAA demonstrates that all gypsy and traveller families living in the borough currently occupy private sites within the Green Belt. There are no public sites within the borough. The biggest constraint when trying to identify suitable land to meet the need for Gypsy and Traveller pitches in Havering is the Green Belt.

7.9.3 In accordance with National Planning Policy Gypsy and Traveller pitches are inappropriate development in the Green Belt and can only be permitted in very special circumstances. However, the Council has not been able to identify any suitable and deliverable land within the built-up area that could be used for the Gypsy and Traveller accommodation.

7.9.4 Policy 11 therefore seeks to meet the need identified in the GTAA through the allocation and intensification of sites within the Green Belt.

7.9.5 The sites are identified on the Proposals Map and are listed below. In order to provide firm controls and prevent further intensification, a maximum number of pitches will be permitted on each site as set out below:

- Tyas Stud Farm rear of Latchford Farm - maximum of 5 pitches
- Vinegar Hill - maximum of 4 pitches
- Hogbar Farm West - maximum of 3 pitches
- Ashlea View, Tomkyns Lane Lane - maximum of 2 pitches
- Benskins Lane - maximum of 10 pitches
- Fairhill Rise - maximum of 2 pitches
- Hogbar Farm East - maximum of 4 pitches
- Lower Bedfords Road - maximum of 1 pitches
- The Caravan Park, Putwell Bridge - maximum of 2 pitches

7.9.6 The sites are all currently in Gypsy and Traveller use and they have all been identified within the GTAA as contributing to the overall need for pitches in line with the definition of Gypsies and Travellers in the Planning Policy for Traveller sites 2012. The maximum number of pitches on each site takes into account the need arising from each site as identified in the GTAA and an understanding of what facilities and space a pitch typically requires. Further details are set out in the Gypsy and Traveller Position Statement that supports this Local Plan.

7.9.7 The GTAA also identified need for up to 29 additional pitches for “unknown households”, that is, households whose travelling status was not able to be determined through the assessment. These households either refused to be interviewed, or were not on site at the time of fieldwork. It is not possible to identify sites to meet an unknown need.

7.9.8 Where further sites are proposed the Council will ensure that they are required to meet legitimate additional borough. When considering applications for Gypsy and Traveller sites and Travelling Showpersons plots, the Council will take into account the policy criteria outlined in Policy 11 in addition to the requirements of National Policy.

7.9.9 In general, proposals for Gypsy and Traveller sites and Travelling Showpersons plots are inappropriate development in the Green Belt and any additional sites will only be approved when very special circumstances have been demonstrated in line with National Policy.

8 Thriving Communities

8.1 Healthy communities

Policy 12

Healthy communities

The Council will support development in Havering that provides opportunities for healthy lifestyles, contribute to the creation of healthier communities and helps reduce health inequalities.

The Council will seek to maximise the potential health gains from development proposals and ensure that any negative impacts are mitigated. All major development proposals must be supported by a Health Impact Assessment (HIA) to demonstrate that full consideration has been given to health and wellbeing.

The Local Plan will promote health and wellbeing by:

i. Directing new development to well connected locations to enable active travel (refer to Policy 3);
ii. Promoting well designed and safe places (refer to Policy 26);
iii. Promoting the diversification of uses within town centres and managing uses that can have a negative health impacts such as betting shops and fast food takeaways (refer to Policy 13);
iv. Supporting the delivery of essential community services (refer to Policies 16 and 17);
v. Providing and protecting open space, leisure and recreation facilities (refer to Policy 18);
vi. Supporting measures to promote walking and cycling (refer to Policy 23);
vii. Supporting the provision of multifunctional green infrastructure (refer to Policy 29);
viii. Seeking environmental improvements, minimising exposure to pollutants and improving air quality (refer to Policies 33 and 34); and
ix. Avoiding contributing to factors that affect climate change, and contribute to prevention measures that mitigate against the effects of climate change (refer to Policies 32 and 36).

Developers are required to consider wider local/regional primary care and other health strategies, as appropriate, to take into account how any developments can contribute to the aims and objectives of those strategies.

8.1.1 The population of the borough is anticipated to grow and change over the Plan Period. There is an urgency to improve health and wellbeing for the local population and decrease health inequalities. The Local Plan has the potential to decrease health inequalities in the borough and plan for healthy communities. The Council recognises that health and wellbeing is influenced by the impact of the built and natural environment and the interplay between the environment and social conditions. It is important to design places that encourage social interaction and promote health lifestyles, for example by designing out environments that can contribute to obesity and that provide opportunities for crime and antisocial behaviour.

8.1.2 It is important that the health and well-being of a buildings occupants is considered and appropriate measures taken to prevent sick building syndrome. Therefore, all new developments - residential, business, commercial, and industrial - need to comply with the Building Regulations and the Chartered Institute of Building Services Engineers (CIBSE) Guide on building control systems.

8.1.3 The Council has undertaken a Health Impact Assessment for the Local Plan to make sure that policies optimise the health outputs of new development (see Annex 5).

8.1.4 To ensure that health and wellbeing is given full consideration in the future development of the borough a Health Impact Assessment should be undertaken by developers for all major developments. HIAs can help to identify aspects of development that can be enhanced to achieve the greatest health gains and where there is a need to mitigate for any potential negative impacts. Developers should use the Council's Health Impact Assessment template when undertaking their assessments.

8.2 Town centre development

Policy 13

Town centre development

The Council will seek to enhance the vitality and vibrancy of Havering's town centres, maintaining their important role for local communities.

Applications for new main town centre uses will be subject to the sequential test as defined in the NPPF. An impact assessment will be required for retail, leisure and office developments over 200 sq m in edge or out of centre locations. Preference will be given for edge of centre and out of centre developments to be located on existing out of centre sites as designated on the Proposals Map and/or in accessible locations that are well connected to town centres.

The Council will support development proposals within town centres that:

i. Are appropriate to the scale and function of the town centre's position within the Town Centre Network (see Map 1 'Havering Town Centre Hierachy');
ii. Does not harm the town centre's vitality and viability;
iii. Promotes a wider retail offer and choice to consumers;
iv. Enhances and diversifies the borough's hotel offer;
v. Provides high quality shop front design and signage that enhances the character and appearance of the town centre;
vi. Provides active frontages at ground floor level, supports street activity and generates pedestrian movement; and
vii. Makes effective use of upper floors.

The Council will not support proposals for single use retail developments which do not optimise the development potential of the site within, on the edge or outside of town centres

To achieve a balanced mix of uses, the Council will support the change of use from A1 and A2 uses in addition to the above criteria, where development:

viii. Complements the other shopping uses within the town centre;
ix. Does not reduce the proportion of frontage in A1 and A2 use to less than 60% in primary frontages;
x. Has no significant adverse impact on surrounding amenity (including cumulative impact) in terms of anti-social behaviour, noise, odour, waste management, highways and parking; and
xi. Prevents the overconcentration of non-A1 or A2 uses by:

    a. Within primary frontages, maintaining a minimum of 3 units in alternative use between A5 uses and not increasing the proportion of A5 uses to be greater than 10%;
    b. Within secondary frontages and local centres, preventing the clustering of more than 2 A5 uses adjacent to each other, with individuals or groups separated by a minimum of 3 units in alternative use; and
    c. Within primary frontages, secondary frontages and local centres, allowing betting shops and pay day loan shops to comprise a maximum of 5% or 1 unit, whichever is the greater, while maintaining a minimum of 3 units in alternative use between these uses.

8.2.1 The vitality and viability of the borough's town centres is under pressure due to changing shopping patterns and competition of shopping locations outside of the borough. Policy 13 manages the uses within town centres to make sure they remain competitive and meet the needs of Havering's growing local communities.

8.2.2 The Havering Retail and Commercial Leisure Needs Assessment (2015) identified a quantitative need for the borough for comparison goods of up to 49,500sqm, for convenience goods of up to 13,200 sq m and for commercial leisure floorspace (A3, A4 and A5 uses) of up to 21,000sqm gross by 2031.

The largest proportion of the retail and commercial leisure development will be accommodated within Romford Metropolitan Town Centre, and the reminder spread across the district centres where further scope for development and enhancement has been identified.

8.2.3 Impact assessments should demonstrate the impact on the existing, planned and committed investment in centres and on town centre vitality and viability. The PPG sets out what issues should be considered in establishing a local threshold for impact assessments. A key consideration is the viability and vitality of town centres. The Havering Retail & Commercial Leisure Needs Assessment (2015) sets out the performance of the metropolitan and district centres in Havering. It notes that the vitality and viability between town centres differs. Elm Park and Collier Row are vulnerable, as being at risk from removal from the London Plan district centre level. Protection from out of centre developments that could draw significant amounts of footfall is therefore recommended by the study. Although overall performing well, the other district and metropolitan centres are subject to the over proliferation of non-retail uses and have a number of vacancies in prominent locations. The vitality and vitality of these town centres could therefore also be adversely impacted by out of centre development.

8.2.4 Another consideration is the impact on planned assessment in town centres. Significant investment has been planned in the Romford and Rainham and Beam Park SDAs. The former includes Romford Metropolitan Centre and the latter includes Rainham District Centre and the new Beam Park Local Centre. To make sure that proposals out of town centres do not affect the vitality and viability of existing town centres, and make sure future investments are optimised, the setting of a significantly lower locally specific threshold for impact assessments than that specified in the NPPF is justified. With regards to the average size of retail premises in town centres district centres in Havering are made up mostly of small shops, with the average floor space being below 200 sq m. In Romford the average floor space is generally higher, although this varies between frontages. The threshold for impact assessments for edge and out of town centre development is therefore set at 200 sq m in the Local Plan.

8.2.5 The borough's town centres provide important opportunities for social interaction, and community life, and as good places to live. In this regard, the Council will seek to assure their vibrancy through promoting and supporting the diversification of uses and the development of uses that remedy deficiencies within the town centres. However, in promoting diversification of development and uses, the Council is concerned to ensure that the retail function of town centres is not undermined. In promoting diversity acceptable upper floor uses would include residential, office and leisure uses. Residential development at the ground floor level in town centres will not be supported. In terms of shop front design, laminated glass and internal security grills are preferred above external shutters.

8.2.6 The Council has designated primary and secondary frontages within its metropolitan centre and six district centres. These are shown on the Proposals Map with a schedule of properties within these frontages listed in A.6 'Town Centres'. The borough's metropolitan and district centres are considered to be the borough's primary shopping areas.

8.2.7 Within primary frontages, the Council will seek to increase the amount of retail floorspace, resist the loss of shops and prevent the clustering of certain uses where this would harm the town centre's primary shopping function, character and appearance. Use Class A1 should be the principal and most dominant land use as this contains the most important shopping facilities, those which attract the greatest number of customers and those which contribute most to the vitality and viability of the respective centres. Due to the Permitted Development rights regarding the change of use from A1 to A2 uses it is justified to set a combined percentage for A1 and A2 uses. This is established at 60% to allow town centres to further diversify while maintaining the primary shopping function at a reasonable level.

8.2.8 In secondary frontages and local centres, the Council will seek to maintain a majority of retail uses. However, a wider mix of uses will be promoted, especially those non-retail uses that provide services which complement shopping facilities. Such uses provide active frontages, support street activity and generate a similar level of pedestrian movement to a retail use, and are open during the day (retail hours).

8.2.9 The overconcentration of particular uses can impact negatively on the amenity of adjacent uses and adversely affect the vitality and viability of the town centre. Policy 13, therefore, seeks to provide a balanced mix of uses within the town centres while preserving the primary shopping function of frontages. Therefore, restrictions for A5 uses (hot food take-aways), betting shops and pay day loan shops are included.

8.3 Eating and drinking

Policy 14

Eating and drinking

The Council supports the diversification of Havering's town centres and recognises the importance of eating and drinking establishments in creating attractive places where people enjoy spending their leisure time.

When considering planning applications for restaurant, pubs, and micro-brewery uses the Council will give consideration to the following factors:

i. The contribution the proposal will make to the diversification of town centre uses and the attractiveness of the centre as a whole;
ii. The impact on the amenity of adjoining or adjacent residential accommodation and non-residential uses, arising from cooking smells, noise disturbance and anti-social behaviour;
iii. The cumulative environmental impact of the use on the locality considering the number, capacity and location of such uses already existing in the adjacent area; and
iv. The possible impact of the design and location of the building on the site, exterior dining space (if applicable), and car parking on amenity and the free flow of traffic and highway safety.

Applicants will also be required to submit management plans detailing how the operation of their proposals will be managed in ways that do not exacerbate potential adverse impacts.

8.3.1 The Council recognises that restaurants and drinking establishments are an important part of Havering's local economy in providing jobs and business opportunities as well as opportunities for entertainment and socialising for residents, workers and visitors. These uses can, nevertheless, cause considerable pedestrian and vehicular activity which is likely to be greater than a retail use. This conflict can be made worse where there is a concentration of these uses within a locality. The main purpose of this policy is to control both the operation and location of restaurant uses so as to minimise their adverse impacts.

8.3.2 In determining whether a proposal would have adverse impact on amenity, the Council will take into account the proposed opening and closing hours, the proximity to residential and other sensitive land uses, the number, location and capacity of such uses already existing in the immediate area and the likelihood of noise and disturbance to nearby or adjacent residents, particularly at the weekend and late at night. Late closing uses should generally be located in the town centres and near places of entertainment.

8.3.3 In addition, where cooking smells and fumes will be created, the Council will require the installation of ventilation and fume extraction equipment. If this would be detrimental to visual amenity then planning permission may be refused. Where there is residential accommodation on upper floors, the Council will normally require ducting to discharge above eaves levels and the provision of adequate soundproofing. The Council will require submission with the planning application of the full details of ventilation and fume extraction equipment showing location of the flue and motor, dimensions, colour/material, model and noise levels. It will also require details of the refuse containment facilities.

8.3.4 In some areas the protection of residential amenities will demand more restricted opening hours and, where appropriate, the Council will impose these as conditions on planning permissions. Applicants are reminded that there may be licencing requirements for the uses supported by this policy.

8.3.5 In considering applications for outdoor sitting areas on pavements, the Council will take into account the impact of the use on local amenity and highway safety and will only support applications where the table and chairs are removable and are contained within a barrier/defensible space that is also removable.

8.3.6 It must be noted that as a general principle, the Council seeks to encourage well managed and operated restaurants and drinking establishments in its town centres and other appropriate locations, and to prevent any concentrations of such uses that would harm the attractiveness of Havering's town

centres or amenity of adjoining or adjacent residential occupiers and non-residential uses. To this end, applicants will be required to submit management plans detailing how the operation of their proposals will be managed in ways that do not exacerbate potential adverse impacts.

8.4 Culture and creativity

Policy 15

Culture and creativity

The Council is committed to sustaining and enhancing Havering's cultural offer and creating inclusive and diverse communities by:

i. Safeguarding the borough's existing diverse range of creative arts, cultural and performance spaces, professional sporting and entertainment facilities and their related facilities, and refusing to grant planning permission to development proposals that will result in their loss unless replacement facilities of equivalent or greater quality and quantity are provided on site or within the vicinity which meets the needs of the local community or particular groups, or it has been demonstrated that there is no demand for another similar use on site;
ii. Supporting development which enhances and diversifies the cultural offer within the borough's metropolitan centre of Romford, and the six district centres of Hornchurch, Collier Row, Harold Hill, Upminster, Elm Park and Rainham to contribute more effectively to their regeneration and town centre renewal;
iii. Permitting temporary use of vacant commercial buildings, and cleared sites for performance and creative work where they contribute positively to the regeneration, vitality and character of the area;
iv. Requiring provision of arts and cultural facilities in major mixed use developments;
v. Encouraging a diverse range of evening and night time activities including expanding opening hours of existing daytime facilities such as shops, cafés, medical facilities, libraries and theatres to integrate leisure and other uses to promote and sustain customer cross over;
vi. Seeking contributions from developments that result in additional need for cultural and leisure facilities to enhance existing facilities or provide new facilities;
vii. Ensuring that development proposals are designed to be inclusive;
viii. Working proactively with operators, landowners, stakeholders to maximise the positive impacts and mitigate the negative impacts of art, cultural and leisure activities; and
ix. Supporting planned improvement to existing arts, cultural and performance spaces, including creative work and related facilities.

8.4.1 Culture (defined as the attitudes, customs, and beliefs distinguishing one group or area from another) is expressed through fashion, art, theatre, history and so on. Culture plays a valuable role in place shaping with cultural developments creating a sense of place and belonging within the community. Such developments include theatres, art spaces, museums, galleries, libraries, and work spaces for creative industries.

8.4.2 The Council recognises the important contributions the cultural and creative sectors including entertainment facilities and related services play in its economic and social success. The Council is keen to sustain these contributions by supporting developments which enhance and diversify the existing offer and by guarding against the unnecessary loss of valued existing social, recreational and cultural facilities without their re-provision on site or elsewhere within the locality with a facility of equivalent or greater quality and quantity. The Council will encourage increased provision of new facilities especially in areas of defined need.

8.4.3 As a metropolitan centre, Romford has the opportunity to be the cultural heart of the borough. It already benefits from facilities such as the Havering Museum, Brookside Theatre, a Market Place and a selection of bars, restaurants, cinemas and night clubs. It is identified, and widely recognised by the London Plan, as a regional centre with strategic clusters of night time activity. Hornchurch is another important cultural centre of more than local importance in the borough with the Queens Theatre, the Fairkytes Arts Centre and other ancillary uses.

8.4.4 The Havering Arts Strategy (2013 to 2015) identifies a number of improvements to ensure the borough continues to offer high quality cultural facilities to its increasing population. These include:

- A new high quality visual arts exhibition space at Fairkytes Arts Centre;
- Rehearsal space and a café area at Queen's theatre; and
- On-going repair and maintenance of the Havering Museum.

8.4.5 The Council supports these improvement schemes and will encourage a diverse range of evening and night time activities to complement and support their success and expansion. Applications for eating and drinking establishments should have regard to Policy 14.

8.4.6 New cultural development should be appropriate in scale and type to the town centre it is located in, enhancing the current cultural offer and reflecting the diverse needs of Havering's changing population. Proposals must also comply with Policy 16.

8.4.7 Evening and night time economy uses, such as cafés, restaurants and evening entertainment, will specifically be supported in the town centres of Romford, Hornchurch, Collier Row, Harold Hill, Upminster, Elm Park and Rainham when they complement and diversify the existing offer and contribute more effectively to their regeneration and town centre renewal. Policy 13 controls the uses in town centres. The Mayor's upcoming Night-Time Economy Supplementary Planning Guidance will provide additional context for the enhancement of evening and night time activities.

8.4.8 Proposals within the Romford area should also adhere to Policy 1 to ensure developments meet the needs of the area while encouraging cultural and community-led activities. Proposals which include a cultural element that allow for the engagement of the local community give the opportunity to revitalise the area, create a sense of place, and allow local creative talent to be showcased.

8.4.9 Temporary use of vacant commercial units for cultural displays and creative uses will be supported. By allowing the space to be occupied during the transition from one commercial offer to another will maintain footfall within the area and has the potential to promote local talent.

8.4.10 All applications must be designed to be inclusive and ensure the safety and well-being of the community are not adversely affected. Applicants are encouraged to refer to the Secured by Design document and if necessary to consult with the crime prevention officer.

8.4.11 The Council will work in partnership with a range of partners (retailers, landowners, security agencies, health and transport services) to develop innovative approaches to managing and mitigating adverse impacts arising from clusters of these uses having regard to the safety or security of residents, workers and visitors to the town centres.

8.4.12 Applicants are reminded that there may be licencing requirements for the uses supported by this policy.

8.4.13 Where new development will result in additional need for cultural and leisure facilities the Council will seek developer contributions to enhance existing cultural, leisure and recreation facilities in the locality including for their maintenance and management.

8.5 Social infrastructure

Policy 16

Social infrastructure

The Council will work with infrastructure providers to support the provision of essential new services and improvement of existing facilities in Havering alongside residential development. The Council will make sure that new and existing residents will have access to a range of social infrastructure facilities by:

i. Supporting proposals for new and extended social infrastructure provided they:

   a. Are accessible by public transport and active travel;
   b. Are located within the community that they are intended to serve and incorporate an inclusive design;
   c. Make use of an innovative delivery of social infrastructure;
   d. Do not adversely impact on residential character and amenity;
   e. Ensure highway safety, especially in regards to pedestrians and cyclists;

f. Explore the possibility to co-locate with complimentary services; and
g. Are provided in multi-use, flexible, adaptable and 'healthy' buildings.

ii. Requiring major developments to provide new social infrastructure facilities as part of mixed-use developments where feasible, where a deficiency is identified through the Council's Infrastructure Delivery Plan (IDP).

Stakeholders will be encouraged to consider funding arrangements for on-going maintenance costs.

Proposals which would result in a loss of social infrastructure in areas of defined need for that type of social infrastructure without realistic proposals for re-provision will not be permitted.

The suitability of redundant social infrastructure premises for accommodating other forms of social infrastructure for which there is a defined need in the locality should be assessed before alternative developments will be considered by the Council.

The Council will protect existing burial space provision as designated on the Proposals Map to meet the need for burial space over the Plan period.

Social infrastructure covers a variety of health, community, cultural, sports and leisure facilities. It encompasses burial spaces, places of worship, health and education facilities, social care facilities, nurseries, theatres, sports pitches, swimming pools, and many other uses that provide a social function.

8.5.1 The Council will work with its partners to ensure facilities and services for local communities are provided in new developments. The Council's Infrastructure Delivery Plan (IDP) sets out the future requirements for a variety of infrastructure types and identifies projects that match the Council's priorities. Section 14 Delivery and implementation provides more detail on how the Council aims to fund and deliver the infrastructure it needs to support development over the plan period.

8.5.2 Town centres and the borough's Strategic Development Areas are the preferred location for new social infrastructure as the increased and changing population in these areas trigger the need for additional facilities. However, this cannot always be achieved as provision in some facilities lend themselves to be located in existing residential areas. It should be demonstrated that adverse impacts are appropriately mitigated where facilities generate movement and potentially affect the residential character and amenity of the area,

8.5.3 In line with the London Plan new social infrastructure is expected to be accessible for all, and to extend the use to serve the wider community. This should encourage community participation and inclusion, and result in the effective use of land and buildings. It also helps to meet the growing demand for facilities, and is for example applicable to facilities on educational sites.

8.5.4 Following recommendations of the Indoor Sport and Leisure Facility Strategy (2016), where relevant, Community Use Agreements (CUA) will be secured to ensure dual use through s106 planning obligations. The development and implementation of CUAs can help support well-managed and safe community access to facilities on educational sites. As well as widening access to facilities and providing clarity on their use CUAs can help to enhance links between educational establishments and sports clubs.

8.5.5 New social infrastructure facilities are expected to be co-located with complimentary services, wherever possible, because this could improve the viability of particular services. It is recognised that there is potential to deliver social infrastructure facilities as part of mixed-use developments with residential or commercial uses. However, the co-location with other social infrastructure facilities should be prioritised to meet local needs.

8.5.6 Sites currently used by social infrastructure facilities may come under pressure for redevelopment. The consolidation and modernisation of community facilities in accessible locations where multi-functional facilities can meet the needs of a range of users will be considered. The Council will, however, not permit proposals which would result in a loss of social infrastructure in an area of defined need for that type of social infrastructure without a convincing demonstration by the developer that an equivalent re-provision (in terms of size, usefulness, attractiveness, safety and quality) has been made. This process, as well as the disposal of surplus or redundant assets will need to be managed to ensure that critical uses are not lost from the local area.

8.5.7 The future demand for burial space in the borough has been identified through the Council's Infrastructure Delivery Plan. Sufficient supply of multi-faith/interdenominational plots has been identified for the full Local Plan period. With regards to demands for burials meeting specific Muslim requirements arising from the wider North East London, including Havering, sufficient capacity has been identified until around 2028. The Council will only support applications for burial space which meet an unmet need.

8.6 Education

Policy 17

Education

The Council seeks to safeguard existing education provision within Havering. Proposals which result in the net loss of education facilities will be resisted unless it can be robustly demonstrated that there is no current or future need.

Development proposals for childcare facilities, primary and secondary schools and further or higher education facilities will be supported where it can be demonstrated that the proposal:

i. Contributes to the delivery the Council's agreed Commissioning Plan for Education Provision and the Schools Expansion Programme;
ii. I located within the community it is intended to serve and is accessible by public transport, walking and cycling;
iii. Is of a high quality design and provides a safe environment; and
iv. Provides, private, secure and safe outdoor amenity and playing space in line with Government building guidelines, which is located away from busy roads.

Proposals with innovative and flexible design solutions and the shared use of open space and sports facilities will be considered favourably where it enables the delivery of a new school in an area of identified need.

Proposals for educational uses in the Green Belt, including the expansion of existing schools may be considered as very special circumstances where it can be robustly demonstrated that there are no suitable alternative sites within the appropriate education planning area and there is a demonstrable need for additional school places.

Where a new school is proposed, the Council will require facilities for early years provision to be included on site where there is an identified local need.

Development proposals for nurseries will also be expected to demonstrate that:

v. They meet the floorspace requirements as set out in the statutory framework for the early years foundation stage;
vi. Drop offs and pick ups can be catered for safely on site; and
vii. There is no significant adverse impact on the amenity of existing residents.

8.6.1 The Council is committed to ensuring that there is a good school within reach of every child in the borough. The Council's Commissioning Plan provides the strategic framework to achieve this and brings together key data and planning in terms of the provision of pupil places from the early years stage through to post-16, inclusive of special schools and Alternative Learning provision. The Council's expansion programme details the proposals putting forward to deliver much-needed extra early years, primary, secondary and SEN places.

8.6.2 The number of primary age pupils in Havering schools is expected to increase significantly from 21,074 in 2015/16 to 28,889 by 2025/26, and the number of secondary age pupils from 14,584 to 19,766 over the same period. These represent increases in demand for school places of 7,815 at primary level and 5,182 at secondary level over the period.

8.6.3 Current data for Havering suggests that an expected rise in the participation rate to full participation of 16 and 17 year-olds from 2015 will, to a large degree, be cancelled out by a fall in numbers of young people aged 16-18 in the next few years. However, in the longer term, the number of 16 and 17 year olds in Havering is projected to increase from 9,043 in 2016/17 to 10,318 in 2023/24. There is a range of options for pupils in this age group including sixth forms, colleges, and apprenticeships. Numbers on roll at Havering College of Further and Higher Education and Havering Sixth Form College are projected to increase by around 200 and 240 over this period, respectively.

8.6.4 These figures are the emerging position. The school roll projections are updated on an annual basis. The latest figures can be viewed in the Council's approved Commissioning Plan for Education Provision[4].

8.6.5 New primary school provision will be required in Rainham and Beam Park and in Romford to meet the expected level of housing growth (refer to Chapter 6). Outside of these areas demand is expected to be accommodated through current provision and the expansion of existing schools. The Council will continue to monitor the quantum of residential development that comes forward outside of the two key growth areas and will consider the cumulative impact of development on the need for additional school places. Where the cumulative impact indicates that additional provision will be needed this will be set out in the Council's Commissioning Plan which is updated annually. There may be some areas of Havering where if further major housing is brought forward, there will be no available options to expand existing schools. As such, school place demand arising from such developments will need to be met through new school provision that will require a site to enable delivery.

8.6.6 The Department for Education gives area guidelines for mainstream schools. In certain locations, particularly urban town centres, these guidelines can be difficult to achieve. Innovative design solutions should be considered in order to provide a school that sufficiently serves its pupils. These could include use of roofs for outdoor space, co-location with other uses, and shared use of facilities, including parks, sports pitches and Multi-Use-Games-Areas (MUGAs), particularly when located close by.

8.6.7 A number of Havering's schools are located within the Green Belt. In accordance with the NPPF, the construction of new buildings should be regarded as inappropriate in Green Belt. Inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. Very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations. The Council consider that very special circumstances may exist where there is a demonstrable need for school places and it can be robustly demonstrated that there are no other suitable non Green Belt sites. Such proposals will be considered on a case by case basis.

8.6.8 Access to adequate, affordable and high quality childcare (pre-school and school age) provision can play a key role in children's development. Where it enables increased parental employment rates of low income households, it may also help to reduce income inequalities. In Havering, the predicted 19% increase in population of 0-14 year olds between 2016 and 2026 means that additional childcare places need to be found. The Childcare Act 2006 places a duty on local authorities to ensure that there are enough childcare places to enable parents to work or train, and also to ensure that there are sufficient funded early education places for all three and four-year olds within the local authority area. In Havering the demand for funded 2, 3 & 4 year old places is predicted to increase from 5,900 in 2015/16 to 6,800 in 2025/26.

8.6.9 Childcare facilities should be safe, accessible for all, and provide both indoor and outdoor learning opportunities. There has been an increase in Havering in planning applications for nurseries in residential areas. Although these proposals can contribute towards meeting a local need, it is important that residential amenity and highway safety are preserved. As nurseries generate significant traffic during peak hours, proposals will be expected to provide sufficient car-parking including pick-up and drop-off points on-site. The conversion of a detached dwellings is typically more suitable than the conversion of a semi detached property, as both the traffic and amenity impact on surrounding dwellings is more likely to be acceptable. The type of dwelling and relation to neighbouring dwellings will therefore be considered in determining proposals involving nurseries. From September 2017,

4 https://www3.havering.gov.uk/Pages/Services/School-organisation-place-planning.aspx

working families will be entitled to up to 30 hours of childcare per week for 3 and 4 year olds, subject to the eligibility criteria for the additional free entitlement. There is already a need for additional Early Years places; with the additional hours being available this could see a further increase in demand.

8.7 Open space, sports and recreation

Policy 18

Open space, sports and recreation

The Council seeks to ensure that all residents of Havering have access to high quality open space, sports and recreation facilities. To achieve this, the Council will:

i. Continue to protect the borough's designated open spaces and existing sports and recreation facilities from development unless it can be demonstrated that:

   a. Replacement provision of equivalent or better quantity and quality will be made in a suitable location; or
   b. The development is for alternative sports and recreational provision and the need for this clearly outweighs the loss.

ii. Support proposals that improve the quality of and access to, existing open space, sports and recreation facilities;
iii. Promote the multi-functional and community use of existing and proposed spaces including schools, private sports facilities, playing pitches and supporting facilities through Community Use Agreements;
iv. Support proposals for new multi-functional open space, sports and recreation facilities that address areas of deficiency;
v. Support proposals to bring lapsed or disused playing fields back into use;
vi. Require developments to provide children's play and informal recreation space on-site in line with the London Plan;
vii. Support development proposals that include communal growing space as part of the amenity provision on site;
viii. Seek to ensure that adequate management and maintenance arrangements are in place from the outset; and
ix. Support improvements to the borough's sports and recreation facilities including:

   a. The replacement of Hornchurch Leisure Centre;
   b. The refurbishment of Chafford Sports complex;
   c. Expansion of Central Park Leisure Centre;
   d. Enhanced facilities and a wider range of uses of Bretons Outdoor Recreation Centre;
   e. New provision within the Rainham and Beam Park Strategic Development Area; and
   f. The provision of new 3G Artificial Grass Pitches (AGPs) and improvements to existing ones within the borough.

Where sufficient provision cannot be made on-site the Council will seek developer contributions to remedy deficiencies in quantity, quality, safety, usability and access to open space, sports and recreation facilities across the Borough.

8.7.1 Havering's extensive range of open spaces, leisure and sports facilities are highly valued by residents and make a significant contribution to their health and well being and overall quality of life. Access to good quality open space and sports facilities promotes healthy lifestyles by providing opportunities for relaxation, physical activity, social interaction and play. Open space and outdoor sports pitches can also play an important role in reducing the impacts of climate change, flooding and poor air quality. They also contribute to Havering's green and open character.

8.7.2 In applying Policy 18, open space will encompass parks and gardens, natural and semi natural green spaces, amenity space, children's play areas, allotments and cemeteries, churchyards and other burial grounds. Leisure and sports facilities encompass indoor sports halls, swimming pools, fitness centres, outdoor sports pitches, tennis courts and bowling greens.

8.7.3 Havering's Open Space Assessment and Standards Paper (2016) assesses the current quantity, quality and distribution of open space within Havering and considers the demand for future provision to meet the needs of Havering's growing population. The study covers 177 sites totalling 1,283 ha. There is generally a good coverage of parks, gardens, natural and semi natural spaces and amenity greenspaces across the borough. It is acknowledged that there are some areas of deficiency, although deficiency in one type of open space is often met by another type of open space. The priority is, therefore, to protect current provision and support improvements in quality and accessibility.

8.7.4 New residential and mixed use developments provide opportunities to incorporate new amenity greenspace and parks within the built up area and this will further enhance current provision. Natural and semi natural spaces are typically found on the edge of the urban areas in Havering and the inclusion of natural and semi-natural features as part of new developments will enhance existing provision.

8.7.5 Allotment provision in Havering does not meet the suggested standard of 0.25 hectares per 1,000 population from the National Society of Allotment and Leisure Gardeners (NSALG). There is also a high level of demand with waiting lists for plots across the borough. It is, therefore, important to safeguard and enhance existing allotment plots in order to meet current and future demand. The Council is supportive of innovative ways of providing food growing and gardening opportunities, particularly through community gardens and dedicated growing spaces within in new developments.

8.7.6 Play facilities that are safe and stimulating are essential for a child's well-being, health and future development. Whilst Havering has a good amount of, and generally good quality provision of, open space for children and young people it is important that opportunities to increase provision and quality are taken. Residential and mixed use proposals should incorporate or contribute to new play space based on the child yield expected from the development in accordance with the requirements of the London Plan and the associated Play and Informal recreation Supplementary Planning Document.

8.7.7 Havering's Outdoor Playing Pitch Assessment and Strategy (2016) assesses the current quantity, quality and distribution of outdoor sports facilities within the borough and considers the demand for future provision. The study covers outdoor football, rugby, cricket, artificial grass and softball pitches, outdoor tennis courts and bowling greens. The assessment identifies some current and future shortfalls in provision and recommends therefore, that all currently used sports pitches should be protected and their quality improved where appropriate. Shortfalls in provision can also be met by bringing back into use lapsed or disused playing field sites that formerly accommodated playing pitches. School sites are a key provider of outdoor sports facilities and the Council will seek to maximise the shared community use of these assets.

8.7.8 It is essential that Havering has modern and fit for purpose indoor sports facilities and the Council is actively seeking to upgrade the current provision. Havering's Indoor Sport and Leisure Facilities Assessment and Strategy (2016) found that investment is needed in both community and school sports facilities. Provision will be significantly enhanced by the new Romford Leisure Centre, replacement of Hornchurch Leisure Centre, refurbishment of Chafford Sports Complex and improved facilities at Bretons Outdoor Recreation Centre.

8.7.9 The quality of open space, sports and recreation facilities is closely linked to their on going management and maintenance. Applicants will be required to demonstrate that adequate arrangements have been made for future management and maintenance of facilities, for example, by means of commuted sum payments to the Council. This applies whether responsibility remains with the developer or is transferred to a private management company or the Council.

8.7.10 Where no on-site provision can be made, the Council will seek developer contributions to remedy deficiencies in the quantity, quality, safety, useability and access to open space, leisure and recreation facilities across the borough including for their maintenance and management.

9 Opportunities to Prosper

9.1 Business growth

Policy 19

Business growth

The Council is committed to building a strong and prosperous economy in Havering and will encourage and promote business growth by:

i. Protecting designated Strategic Industrial Locations for industrial uses as set out in the London Plan;
ii. Protecting designated Locally Significant Industrial Sites for B1 (b) (c), B2 and B8 uses;
iii. Directing office development to Romford Metropolitan Centre and the borough's district centres as part of mixed-use developments;
iv. Requiring large scale residential proposals within Romford Town Centre to incorporate high quality flexible business space, subject to viability;
v. Supporting the development of high quality affordable and flexible business spaces of varied unit sizes to meet the needs of small and medium sized enterprises (SMEs) and start-up businesses (see Policy 21);
vi. Supporting development proposals that improve the physical appearance, attractiveness and competitiveness of employment areas;
vii. Supporting the sustainable growth and expansion of business and enterprise in rural areas;
viii. Supporting the development of a hotel within, or in close proximity, to the Rainham Employment Area to support business growth and opportunities in this area; and
ix. Supporting the London Riverside and the emerging Romford Town Centre Business Improvement Districts.

The borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs) are shown on the Proposals Map.

Waste uses will be assessed in accordance with the Joint Waste Development Plan Document.

9.1.1 The Council is committed to building a strong and prosperous economy in Havering, supporting sustainable business growth and expansion and being 'business friendly'. To achieve this, it will create an environment that attracts and retains businesses through safeguarding designated employment areas and through encouraging and promoting the supply of high quality, well designed, flexible business spaces of varied types, unit sizes and cost to ensure the availability of sufficient and suitable land and floorspace to meet varied business needs within the borough.

9.1.2 Further, the Council will work with the Mayor of London and other stakeholders to designate and develop the proposed Strategic Outer London Development Centre (SOLDC) in Havering, as set out in the London Plan for its strategically significant logistics activities.

9.1.3 Havering is identified by the London Plan as a location suitable to be designated and developed as a Strategic Outer London Development Centre (SOLDC) as it has strategic significant growth potential in logistics activities of greater than sub-regional importance. Strategic Outer London Development Centres (SOLDC) are business locations with specialist strengths which potentially or already function above the sub-regional level and generate growth significantly above the long term outer London trend. These locations are proposed to be designated and developed as SOLDCs by the Mayor as set out in the London Plan Policy 2.16. These centres are intended to complement the network of town centres rather than compete with them, being identified on the basis of their distinctive function or scale. Havering will work with the Mayor of London and other stakeholders to identify, develop and promote SOLDC within it to realise its potential in logistics activities.

9.1.4 Strategic Industrial Locations (SILs) are locations identified by the Mayor of London, following assessment of future demand, as London's main reservoir of industrial land. They are identified as vital for providing capacity for activities such as logistics, waste management, utilities, land for transport, and industrial 'services to support the service sector', and they are accorded strategic protection by

the Mayor of London and London boroughs. The Locally Strategic Industrial Sites (LSISs) are sites identified by the Council as vital for local industrial functions, including availability of low rent accommodation, which support a range of local employment.

9.1.5 The Havering Employment Land Review (ELR) (2015) found that there is a gross demand for 350 ha of industrial land (B2 and B8) in Havering over the Local Plan period up to 2031/2. It notes that the vast majority of the existing Strategic Industrial Locations (SILs) are located away from residential areas with direct access to the strategic road network. The Locally Significant Industrial Sites (LSISs) are well functioning industrial employment areas with an on-going demand for space to service industrial and logistical occupiers. They are areas that remain the most suitable locations for accommodating Havering's industrial and warehousing demand. The Review also recommends the designation of Freightmaster Estate in Rainham as a Strategic Industrial Location.

9.1.6 The ELR advises that 19.5 hectares of industrial land previously designated for its local significance can be released from industrial employment uses. The land recommend for release comprises 2.7 ha at Crow Lane (Romford gas works), 15.4 ha at Rainham West and 1.4ha at Bridge Close, Romford. The de-designation of these sites will facilitate the delivery of new residential developments and make a significant contribution towards meeting the borough's housing need. Safeguarding SILs and the remaining LSISs will ensure that there is sufficient capacity to meet projected demand for industrial land in the borough going forward over the plan period.

9.1.7 The London Riverside SIL Employment Area is a thriving commercial area with a variety of businesses and occupiers including the Centre for Engineering and Mechanical Excellence (CEME) which is a centre for research, business support, skills and education. Within the SIL, there is a successful and active Business Improvement District which represents existing businesses and works with the Council and Greater London Authority to attract investment. Current development across the wider SIL includes the construction of 334,000 sq.ft. of new commercial space at SEGRO Park.

9.1.8 The high quality of the environment within designated industrial areas is an essential component of the attractiveness and competitiveness of these areas. By their nature some industrial uses may legitimately generate noise and odour or require open storage of materials. It is important that these uses are able to operate without undue adverse impact on other 'cleaner' industrial uses. The Council does, however, recognise that environmental improvements are required in specific parts of the borough's industrial areas to ensure that valuable businesses are attracted to and retained within Havering.

9.1.9 Salamons Way in the Rainham Employment Area has a number of existing premises that are in good condition and well maintained. However, the majority of buildings are in a poor condition and the general appearance of the area is exacerbated by the nature of some activities. With large areas of open storage land, the utilisation of land is inefficient. The highway is unadopted, and in poor condition. The Council will support redevelopment of all or part of the area to facilitate a modern business area with good environmental standards and an enhanced image.

9.1.10 Regarding office development, the ELR's forecast demand assessment identified a net additional demand of up to 17,132 sq m of B1 floorspace over the plan period across Havering. The report assessed Havering as standing to benefit from office occupiers seeking better value office accommodation as office rents rise closer to the centre of London and land availability reduces as employment land comes under pressure from higher value residential uses. The London Office Policy Review (2012) underlines this and recommends that office development in Romford Town Centre is delivered as part of mixed-use schemes led by other uses.

9.1.11 Romford Town Centre is identified as the preferred location for office and business space (e.g. Studios,workshops,and office) development. It is anticipated that new public transport investment such as Crossrail which passes through Romford and the consequent demand to be stimulated from potential outmigration of businesses from central London looking for lower office rents in accessible locations will likely result in an uplift in demand for offices in Romford. Development in the former Office Quarter and elsewhere in Romford Town Centre should explore opportunities to provide high quality flexible and smaller size studios, workshops and office workspace units as part of mixed-use schemes to accommodate the needs of smaller and medium sized businesses. This could be provided above shops, as part of a mixed use regeneration scheme or in existing office space when there is capacity. Mixed use schemes with active ground floor uses in district centres will also be supported.

9.1.12 In further demonstrating its commitment to being business friendly, the Council will support the sustainable growth and expansion of businesses and enterprises in the rural area, subject to proposals meeting the NPPF Green Belt policy requirements, by encouraging well designed new buildings and promoting the development and diversification of agricultural and other land-based rural business and by promoting the retention and development of local services and community facilities in villages, such as local shops,sports venue, meeting places, public houses and places of worship.

9.2 Loss of industrial land

Policy 20

Loss of industrial land

The Council will only support the loss of non-designated industrial land and floorspace in Havering where it can be demonstrated that:

i. The change of use from industrial employment uses will not lower the industrial capacity of the borough below that necessary to meet projected demand over the planning period as estimated by the most up to date Havering Employment Land Review;
ii. The existing employment land use causes unacceptable detrimental effects, that cannot be mitigated, on the amenity of nearby residential areas; and
iii. There is no market interest in the site following one year of continuous active marketing.

9.2.1 Non-designated industrial land and floorspace comprises land and floor space last used for employment use or land and floorspace which is currently in employment use but does not lie within the area identified and safeguarded as a Strategic Industrial Location (SIL) or a Locally Significant Industrial Site (LSIS).

9.2.2 The underlying purpose of Policy 20 is to protect and where possible enhance the employment potential of the existing non safeguarded employment land and floorspace. The policy provides some flexibility which aims to recognise individual site characteristics and allow some very limited loss of employment land and floor space where significant unacceptable detrimental effects on amenity of nearby residential uses and no market interest are clearly demonstrated. The policy thrust is therefore to ensure that not too much industrial land and floorspace is released as this could hinder the long term economic prospects of the borough.

9.2.3 As already noted in Policy 19 on Business Growth, the Havering Employment Land Review (ELR) (2015) identified 19.5 hectares of land to be released from designated industrial employment use to enable wider regeneration benefits. The ELR further advised that an additional 4 to 5 hectares of employment land could be released from other non-designated sites over the Plan Period, making the overall amount of employment land to be released not greater than 24 hectares. To allow for a loss bigger than the recommended 24 hectares benchmark would undermine Havering's economic development objectives. Companies seeking to expand or start a business in Havering in the future may not have sufficient land or business premises to do so. There are approximately 50 hectares of non-designated industrial sites remaining in the borough. These generally perform well as employment areas, meeting the needs of local businesses. By resisting further erosion of this type of employment land and floorspace this policy is seeking to maintain business land and spaces for local business.

9.2.4 As part of managing the overall approach of housing delivery in Havering, the Council recognises that there may be locations where the quality of residential environment is being compromised by the operation nearby industrial use, for example due to noise or access issues. In these cases the relocation of that offending industrial activity would be reasonable way forward in mitigating the adverse amenity issues may be acceptable. Every case will treated on its own merits.

9.2.5 To demonstrate a lack of market demand an applicant should submit transparent and robust marketing evidence that the site has been vacant and that a thorough continuous marketing exercise has been undertaken and sustained in the local area for a 12 month period. Marketing must be through a commercial agent that sets out the competitive price that genuinely reflects the market value of the

property in relation to its use, condition, quality and location. It must be demonstrated that consideration has been given to alternative layouts and business uses, including smaller premises with short term flexible leases appropriate for SMEs.

9.3 Affordable workspace

Policy 21

Affordable workspace

The Council will promote opportunities for start-up and small and medium enterprises by expecting major commercial and mixed-use schemes to provide 20% of its floorspace as affordable workspace.

Affordable workspace should incorporate flexible design features to provide adaptability for a range of uses and occupants with basic fit-out provided to a level beyond shell and core.

The applicant will be required to demonstrate flexible lease terms for target sectors, and where appropriate make provision for short-term, flexible 'all-in' or 'meanwhile' leases, and/or letting space on a per-desk rather than per sq ft basis with the Workspace Provider. The commercial lease terms to be agreed with the Workspace Provider for target sectors will be secured via legal agreement.

Where on-site provision is not possible, financial contributions for equivalent off-site provision will be sought and the amount must be to the satisfaction of the Council.

Redevelopment of existing low value employment floorspace reliant on less than market-level rent will be required to re-provide such floorspace suitable, in terms of design, rents and service charges, for existing uses, subject to scheme viability, current lease arrangements and the desire of existing businesses to remain on-site.

9.3.1 Havering has a high number of micro and small businesses, Havering's Employment Land Review (2015) reported that over 90% of businesses in the borough are micro companies with up to nine employees and a further 7% are small enterprises with between 10 and 49 employees. The ELR found that in the office sector the key gap in provision is in affordable and flexible serviced office accommodation to meet the needs of small start-up companies, there is also demand for smaller industrial unit space for start-up/young and growing businesses.

9.3.2 Many SMEs and start-ups with the potential for financial self-sufficiency seek affordable small offices, studios or workspace with favourable flexible lease or licence conditions but often discover that their particular needs cannot be met by market rent levels. The Council's business survey indicates that the cost of rents and poor availability of suitable premises are main factors in driving businesses out of the borough. The provision and preservation of affordable and suitable workspaces that can easily be sub-divided for different uses will increase the opportunities for small business which are essential to Havering's economic vitality and a catalyst for regeneration.

9.3.3 An affordable workspace is a workspace provided where rent and service charges, excluding business support services, are on average at least 20% less than comparable local market rates for the duration of a lease (although it is noted that, for some sectors and locations, much reduced rents may be needed to render them affordable to target occupiers). While a level of 80% of market rents may be acceptable in some cases, the Council's preference is for a sliding scale of 60% of markets rents from years 1 to 2; 80% from years 3 to 5; and 90% thereafter, subject to negotiation. A sliding scale is preferred as it will allow a larger rent relief during the initial stages of a company's development which will reduce as a company matures and is likely to be able to pay higher rents. This will also enable a more seamless transition to market level rent at the end of the period.

9.3.4 Major developments should provide 20% of total gross commercial floorspace as affordable workspace for a minimum of 5 years, subject to viability. In a redevelopment scheme, the Council will require the re-provision of low value employment floorspace reliant on less than market-level rent to ensure existing businesses are not displaced.

9.3.5 Where affordable workspace is to be provided it is important that the applicant initiates dialogue with a Workspace Provider, as nominated by or agreed with the Council, early on in the pre-application stage. At the planning application stage an agreed Workspace Provider must be identified.

9.3.6 The design of workspace for small and micro enterprises will vary, depending on the end occupier or sector. New business space should be flexible, with good natural light, suitable subdivision and configuration for new uses and activities. The proposal should incorporate flexible design features to provide adaptability for a range of uses and occupants. Basic fit-out should be provided to a level beyond shell and core to include toilets, super-fast broadband connections where appropriate, meeting room facilities, flexible desk arrangement, flexible space for events, good standard of insulation to mitigate any overspill from future alternative uses in the building, grouping of services, plumbing, electrics, cabling, and communications infrastructure. Light industrial or maker spaces have physical needs for greater floor-to-ceiling heights and service access to accommodate larger equipment and deliveries.

9.4 Skills and training

Policy 22

Skills and training

The Council will promote employment and skills development opportunities for local residents by supporting major development proposals that commit to:

i. A minimum local labour target of 20% during construction and end user phase for major commercial or mixed use developments including a proportion of apprenticeships where the length of construction phase allows;
ii. A minimum local labour target of 20% during construction for major residential developments;
iii. The notification of all vacancies associated with the development and its end use through the Council's employment service; and
iv. Offer opportunities to local businesses within their supply chains.

Where local labour targets cannot be achieved and it can be demonstrated that all opportunities to meet this target have been explored a commuted sum payable to the Council will be required.

Major development proposals will be expected to submit an Employment & Skills Plan for agreement with the Council to detail how these targets will be met. This must include the proportion of apprenticeships offered and the opportunities given to local businesses within their supply chains. The Employment & Skills Plan needs to comply with the Mayor of Lonon's Economic Development Strategy.

9.4.1 Promoting employment, skills development and training opportunities for local people will contribute to sustainable economic development, the health, well being and quality of life of residents. The availability of the right skills in the borough will mean that there will be less need for people with these skills to travel into Havering, reducing both congestion on Havering's transport networks (roads and public transport) and carbon emissions.

9.4.2 Havering has a high proportion of residents of working age and although employment rates are stable there are a lower proportion of Havering residents in high skilled jobs compared to other outer London boroughs. This is reflected in the average gross income which is £44,430 compared to the London average of £51,770. This places Havering within the lowest third of all London boroughs[5]. It is important that the borough has a strong economy and that local people have the opportunity to benefit from new developments, particularly where these offer the scope for jobs, skills development and training opportunities. Although Havering has good schools, academic qualifications are low; 35% aged 16 and over have no qualifications in the most deprived areas and 35% have qualifications at Level 1 or 2 (Level 2 is equivalent to a GCSE grade A*-C). This could be attributed to the high numbers of residents leaving full-time education aged 16 or under (more than 50%) compared to the London average of 24%[6]

5 Havering JSNA 2016 p6
6 A research study into skills and employment in Havering – Renaisi 2014 p5

9.4.3 The Council is keen that Havering residents are able to enjoy the same opportunities as those in other parts of London and currently supports a number of initiatives, including Job Clubs, employability and training support through Havering Adult College, the Troubled Families programme and other externally funded projects. A pilot employment service is currently being funded through European Social Fund (ESF) provision to support those furthest from the labour market. Moving forward, future projections for the London job market are heavily skewed towards higher level qualifications and there is a need, therefore, to support Havering residents to access skills development and training opportunities that will enhance their skills levels and earning capacity.

9.4.4 Havering is well-placed to support a 20% local labour target, which is considered reasonable given its demographics. As well as an established base of construction businesses, the borough is also home to the Havering College Construction Campus which can support the training needs of local residents.

9.4.5 The Employment and Skills Plan (ESP), which will form part of section 106 agreements and will be monitored by the Council, should detail the following:

- Number of jobs created (temp/ perm/ full time, part time etc);
- Forecasting of jobs;
- How they expect to fulfil the 20% local labour target, including providing more personalised support and improved delivery, and ensuring more effective training and employment support for all;
- How they will work with the Council to achieve those obligations, including getting more local unemployed persons back into work;
- How they will maintain a labour and apprenticeship register, which must be available for inspection by the Council.

9.4.6 Applicants should use the Council's Employment and Skills Plan template to set out the information showing that it meets the London Borough of Havering's requirement to accord with *the Promoting Employment Opportunities* within its *its Community Benefit Clauses in Procurement,* .

10 Connections

10.1 Transport connections

Policy 23

Transport connections

The Council will support and encourage developments in Havering in the locations that are most accessible by a range of transport options.

The Council supports development which ensures safe and efficient use of the highway and demonstrates that adverse impacts on the transport network are avoided or, where necessary, mitigated. Major planning applications will require a transport assessment in line with TfL's Transport Assessment Best Practice Guidance.

When bringing forward a planning application full Travel Plans or Travel Plan Statements will be required for development reaching certain thresholds as set out in Transport for London's (TfL) latest Guidance on Travel Plan requirements.

The Council will work with its partners, including developers, the Mayor of London and central government to improve transport infrastructure and the connectivity of the borough by:

i. Maximising the benefits from Crossrail for local businesses and residents;
ii. Lobbying for an increased train frequency and greater capacity on the Essex Thameside (C2C) line serving Rainham, Upminster and the proposed Beam Park stations;
iii. Lobbying for peak time 'fast' services serving Romford Station;
iv. Progressing improved north to south public transport connections in the borough, improving access to the Romford and Rainham and Beam Park Strategic Development Areas and Queens Hospital
v. Improving bus connections to/from key trip generators such as Queens Hospital;
vi. Enhancing strategic transport links across the borough;
vii. Improving road safety in the borough, especially in the vicinity of schools and KSI "hotspots";
viii. Providing residents with options to travel sustainably and enabling walking and cycling
ix. Working with partners to provide sustainable access to key employment areas across the borough including Rainham Employment Area and Queens Hospital;
x. Requiring new development to optimise sustainable access and other future transport connections, wherever applicable;
xi. Tackling key congestion "hotspots" through remodelling of Gallows Corner and Romford Ring Road to improve motor vehicle traffic flow and improve air quality;
xii. Promoting the benefits of active travel to schools, local businesses and developers and supporting the development, delivery and monitoring of school, residential and workplace travel plans;
xiii. Ensuring good sustainable access between new developments and public transport interchanges in the borough to promote active travel;
xiv. Supporting new developments that include shared use routes for people walking and cycling which lead to public open spaces and parks to promote active recreational activities;
xv. Taking an active role in the A127 Corridor for Growth project through cross borough engagement with Essex County Council and seeking improvements to the A127 that will facilitate growth along this corridor; and
xvi. Working with neighbouring authorities to better co-ordinate highway works.

The Council will work positively with those who share its ambition to deliver these key transport infrastructure improvements and will support development proposals that are able to contribute to their delivery.

10.1.1 Havering has good access to the rest of London, Essex, Kent, and the rest of the South East via its strategic transport connections and routes. Congestion, north-south connectivity and air pollution are some of the key issues affecting Havering's transport network.As new development generates new trips, proposals are expected to be accompanied by a transport assessment or statement which sets out how adverse impacts will be avoided or mitigated. Travel Plans submitted through the planning

application process will be reviewed and monitored to ensure that developers are meeting their targets for modal shift. The Council will engage with local business to encourage the use of travel planning to increase modal shift to/from work away for the private vehicle.

10.1.2 It is recognised that the scale of growth in the wider sub-region will have a cumulative impact on the road networks within the region. The Council is committed to working with its subregional partners to mitigate these impacts and is already engaging with key partners such as TfL, the GLA, Essex County Council and neighbouring boroughs including the establishment of an inter-borough group reviewing the A127 corridor.

10.1.3 Policy 23 addresses a wide range of transport issues and contains a number of priorities to make the borough more accessible for its residents and visitors. The Council supports projects that improve the frequency and capacity of public transport trips towards central London and will continue to lobby train operating companies for such improvements. It will continue to press for a significant improvement to Romford Station by working closely with the stakeholders who have a role in, or responsibility for, the station. The Council is also committed to optimising the transport connections to essential services across the borough for those who do not have access to a car. New development is expected to seize opportunities to contribute to the projects listed within policy, including by design.

10.1.4 Positive discussions are currently taking place with the GLA concerning securing Havering's key strategic transport aspirations of remodelling of Gallows Corner, the Romford Ring Road and improving north south public transport connectivity. Havering sees these projects as key to the successful delivery of good growth within the borough. Havering is actively progressing this work and a feasibility study is currently being conducted looking at options for a new north south public transport link to support growth within the Strategic Development Areas.

10.1.5 Through Havering's Local Implementation Plan Annual Spending Submission, the Council will continue to deliver initiatives that enable sustainable and active travel across the borough and help to meet its statutory targets and support the Mayor's Healthy Streets agenda. New funding opportunities will be sought to assist with delivering Havering's strategic transport intervention aspirations.

10.1.6 New developments will provide an opportunity for the Council to seek financial contributions that can improve public transport access and deliver highway improvements where necessary.

10.1.7 Where developments propose the adoption of highways by the Council, developers will be subject to the requirements of a separate 'section 38 agreement' (s38 of the Highways Act 1980). The Council is not required to adopt private roads but may agree to do so if the highway is built to an adoptable standard and a commuted sum towards its ongoing maintenance is secured. Where developers seek to carry out works on the public highway a section 278 agreement s278 of the Highways Act 1980) will be needed and supervision fees will be required to be paid.

10.1.8 The 2004 Traffic Management Act requires boroughs to *"secure the expeditious movement of traffic on the authorities' road network"*. The policies set out above will provide residents and visitors with alternative options to travelling by car and will help to meet this duty.

10.1.9 Promoting sustainable alternatives to the car can help to reduce congestion, reduce air pollution, and improve the health and wellbeing of Havering residents. There may be scope to provide longer routes for walkers and cyclists where these have the potential to connect to similar routes outside Havering.

10.1.10 Increasing accessibility to employment areas within Havering will reduce the need for residents to travel to work by private vehicle and increase the number of suitable job opportunities that are available for residents locally.

Table 3 Havering transport schemes

Transport Scheme	Scheme Description	Delivery Timescales	Key Partners
Strategic Transport Intervention - North South	A rapid transit link to improve north - south connectivity across the borough, in particular improving accessibility to Rainham, Romford and Harold Hill.	15 years+	Transport for London (TfL), Greater London Authority (GLA)

Transport Scheme	Scheme Description	Delivery Timescales	Key Partners
Public Transport Connection			
Strategic Transport Connection - Reconfiguration of Gallows Corner	Remodelling of Gallows Corner which will involve taking traffic underneath the junction to address congestion and smooth traffic flows at this busy traffic 'hot spot'. The proposal will enable better links between Harold Hill and Romford. It has the potential to improve the environment and provide scope for further development.	5-10 years	Transport for London (TfL), Greater London Authority (GLA)
Strategic Transport Connection - Romford Ring Road	Tunnelling parts of the western section of Romford Ring Road to improve pedestrian access into Romford town centre by reducing its barrier effect. The proposal has scope to provide further land for development and would complement the current housing zone proposals adjoining the west of Romford.	10-15 years	Transport for London (TfL), Greater London Authority (GLA)
Beam Park Station Development	A new station to be built along the Essex Thameside line at Beam Park. Network Rail are currently going through the GRIP design process and the station is expected to be operational by 2020.	0-5 years	Transport for London (TfL), Greater London Authority (GLA), Network Rail
A1306 Beam Parkway Major Scheme	Delivering transformational change to the road layout along the A1306 between Dovers Corner and borough boundary including Marsh Way bridge (2km in length). This will include Pocket Parks, play areas, new crossing points and shared use paths along the entire route to support the Rainham and Beam Park Housing Zone. This scheme is currently going through the detailed design process.	0-5 years	Transport for London (TfL)
Carriageway resurfacing	The Council is allocated funding through TfL's Principal Road Maintenance programme for carriageway resurfacing schemes (this applies to the "A" roads in the borough that are not the TLRN). The Council has a Highways Maintenance Capital programme to deliver carriageway and footway resurfacing improvements to other parts of the borough road network.	on-going	Transport for London
Improved bus access to London Riverside	Continuing to work with TfL London Buses looking at improving access by bus to the Rainham Employment Area to support the London Riverside Business Improvement District. The scope of the works includes bus linkages to Rainham from elsewhere in Havering as well as within the local area. The proposal supports the delivery of the London Riverside Opportunity Area, the Rainham and Beam Park Housing Zone, the new Beam Park station and the A1306 Major Scheme (funded by Transport for London).	on going	Transport for London (TfL), Greater London Authority (GLA), Developers
Improved access to Queens Hospital	Queens Hospital and King Georges Hospital (in LB Redbridge) have been undergoing a reconfiguration of some patient services in recent years. This has placed increasing pressure on the existing facilities	on going	Transport for London (TfL), Barking Havering Redbridge

Transport Scheme	Scheme Description	Delivery Timescales	Key Partners
	at Queens for people to park and local public transport including bus services. Increasing capacity at the bus interchange will, in time, allow for bus services to be routed via the Hospital and make it more accessible across the Hospital's catchment area. All transport modes to be targeted for improvement.		University Hospital NHS Trust
Railway capacity improvements	Havering continues to lobby relevant bodies including the Department for Transport, Network Rail, and Train Operating Companies (TOC) for longer (12 car) trains and "fast" peak time services to serve Romford Station. Havering also continues to lobby relevant bodies for 12 car trains to operate along the Essex Thameside line.	on-going	Department for Transport, Network Rail, Train Operating Companies
Romford Station Improvements (Southern Entrance)	The Council continues to lobby for a far more substantive programme of works for Romford Station to support the arrival of Crossrail. This includes developing a better interchange facility for passengers transferring from bus services south of Romford station to access the station itself from the south. The Council continues to press the case for a southern entrance for Romford station.	0-5 years	Transport for London (TfL), Crossrail, Greater London Authority (GLA)
Improving access to Crossrail stations (Romford, Gidea Park and Harold Wood)	A programme of improvements through the TfL Crossrail Complementary Measures programme resulting in public realm and access enhancements made to vicinity of Romford, Gidea Park and Harold Wood stations along the Crossrail line.	0-5 years	Transport for London (TfL)
Rainham Creek Bridge	Delivery of a link road to be used by buses that bridges the Creek and will connect existing roads. This will provide access to the Fairview Industrial estate and allow buses to travel on further through the Rainham and Beam Park Strategic Development Area.	0-5 years	Transport for London (TfL), Greater London Authority (GLA), London Riverside BID
Romford town Centre Accessibility Improvements	Improving walking and cycling access into Romford town centre including an improved east west link. Havering has been encouraged to apply for funding from TfL's 'Liveable Neighbourhoods' programme based on TfL's Healthy Streets Initiative. Urban realm design consultants are preparing a detailed design and associated works to support funding bid to TfL later in 2017. Scheme would include improvements to Ring Road junctions to make it easier to access Romford town centre by means other than the car.	0-5 years	Transport for London (TfL)
Improving bus access to Harold Hill.	Continuing to work with TfL London Buses looking at improving access by bus between Harold Wood Station and Harold Hill.	on going	Transport for London (TfL)
A127 Corridor Improvements	Working collaboratively with TfL, Essex County Council, Basildon, Southend, Brentwood and Thurrock District Councils examining the A127	5-10 years	Transport for London (TfL), Essex County

Transport Scheme	Scheme Description	Delivery Timescales	Key Partners
	Corridor from Gallows Corner in Havering out to Southend. This work will look at the aspirations that various authorities have for improvements along this key route with the long term aim of producing a "lobbying" document for external funding.		Council, Southend Borough Council.
M25/J28 Improvement scheme	Junction 28 of M25 improvement scheme to provide dedicated loop road for vehicles heading northbound on M25 wishing to head east bound up the A12. This scheme is aimed at increasing capacity at this junction and reducing accident rates. This scheme is being promoted by Highways England and is currently expected to be completed by 2023 depending on which option is chosen.	5-10 years	Highway's England, Transport for London
Highway Improvement schemes	Delivery of a variety of measures to improve Havering's highways network including, carriageway resurfacing, dropped kerbs, footway improvements, bridge strengthening, and delivery of physical measures on the highway to reduce casualty rates including 20 mph zones.	on going	Transport for London (TfL)
School Travel Planning	Through the Local Implementation Plan (LIP) Programme the Council will continue to work closely with schools across the borough to deliver and monitor their School Travel Plans. The Council offer support in the form of external funding, guidance together with suggested activities and initiatives, including provision of cycle training, theatre in education and curriculum materials to promote active, healthy, safe and sustainable travel to/from school as an alternative to using the car.	on-going	Schools, Developers
Residential Travel Planning	Travel plans submitted as part of planning applications will be reviewed and monitored to ensure appropriate objectives and targets are set for achieving modal shift.	on-going	Developers
Workplace Travel Planning	The Council will continue to engage with key trip generators in the borough (such as Queens Hospital) in developing and monitoring workplace travel plans. The Council offers workplace grants to businesses to spend on infrastructure that supports sustainable travel such as shower facilities and lockers.	on-going	Businesses
Reviewing and improving local parking restrictions	Continual programme of reviewing local parking restrictions to protect local resident parking provision, discourage commuter 'rail-heading', support local businesses and help encourage more sustainable travel choices.	on-going	Transport for London, developers

10.2 Parking provision and design

Policy 24

Parking provision and design

The Council will require all development to provide sufficient parking provision in accordance with the maximum parking standards in the London Plan.

In areas of the borough that have low public transport accessibility levels (PTAL 0-2), the minimum residential parking standards set out in Table 4 will apply.

In the most accessible parts of the borough (where a standard in the London Plan of up to 1 space per unit applies) the Council will expect a minimum of 0.5 parking spaces per unit.

In all areas the Council will support proposals that:

i. Consider the location and layout of parking provision at the earliest stage and as an integral part of the design process;
ii. Locate parking close to people's homes and in areas with natural surveillance;
iii. Provide intensive and durable planting in regular intervals that visually screens the continuity of car parking to the front of dwellings and provides a green street scene; and
iv. Include car club membership and provide car club parking spaces.

Where a development proposal would result in a net loss of car parking spaces the applicant will be required to robustly demonstrate that there is no need for these spaces.

Planning conditions and legal agreements may be used to restrict eligibility for on-street residential and commercial parking permits, irrespective of the amount of parking spaces provided off street as part of the development.

Parking provision in new shopping and leisure developments should serve the area/centre as a whole and not be reserved solely for use in connection with the development proposed and provided as short stay parking. Disabled parking and cycle parking should be located closest to town centres and the entrance of the facilities and should include provision for long and short stay use.

The Council will support development proposals that provide adequate off street servicing arrangements for commercial vehicles and general servicing.

10.2.1 Car parking for development should aim to strike an appropriate balance between meeting the essential parking needs of the site whilst neither acting as a discouragement to using public transport nor adding to demand for on-street parking. Discussion of the appropriate balance should form a key part of Transport Assessments. Travel Plans should be developed to minimise the need for car-based access. Developments should seek to provide the minimum realistic amount of car parking for the scheme, without undue risk of overspill parking onto surrounding streets. The allocation of car parking should consider the needs of disabled people, both in terms of quantity and location.

10.2.2 Developments will be supported that comply with the London Plan parking standards for all other forms of parking including for cycles, motor-cycles, cars for disabled people, electric vehicle charging points and coaches;

10.2.3 The Council's approach to off-street car parking standards is to ensure that parking is not over-provided at destinations served by good public transport (maximum levels of provision), but to recognise and respect the decision many residents make to continue to own a car and ensure that adequate levels of off-street parking are provided in new residential development in areas with lower levels of accessibility to public transport.

10.2.4 The London Plan Parking Standards clearly outline the need for more sustainable travel. The parking standards for outer London boroughs allow for additional parking in comparison to central London boroughs. This is determined by the access to public transport, as identified by the TfL's Public Transport Accessibility Levels (PTAL).

10.2.5 The Council's Residential Car Parking Standards Report (2017) draws together a range of evidence to help inform the car parking standards for Havering. The report demonstrates that a significant proportion of the borough has a PTAL of 0-2 reflecting the lack access to rail or underground stations. Havering also has one of the highest levels of car ownership which is above the average for outer London boroughs. Unsurprisingly, the highest levels of car ownership per household are in the areas with the poorest public transport accessibility. In accordance with the London Plan the Council considers it appropriate to set minimum car parking standards for those areas with the lowest levels of public transport accessibility (see Table 4 below).

Table 4 Minimum Parking Standards - PTAL 0-2

1 bedroom	2 bedrooms	3 bedrooms +
1 parking space per unit	1.5 parking spaces per unit	2 parking spaces per unit

10.2.6 Some areas of the borough (such as central Romford and Upminster) have good or very good access to public transport. In areas well served by public transport and therefore with high PTAL levels, the Council has an obligation under the London Plan to reduce private car use and provide fewer parking spaces in comparison to other parts of the borough. The Residential Car Parking Standards Report (2017) found that in Havering, even areas with high PTALs can have higher car ownership levels than the outer London average.

10.2.7 The report also concluded that areas in Havering with higher PTAL scores, which generally lie on the main rail routes, have achieved those scores largely due to the ease of access to and from London rather than because of good local public transport provision in the borough. Driver trips are predominantly locally focused and without the availability of alternative options there is a demand to own and use cars. A key priority is therefore to increase public transport connections and sustainable travel options as detailed in Policy 23. A balance also needs to be struck between the provision of residential parking spaces and wider objectives such as reducing congestion and improving air quality and the use of parking controls to protect the amenity of existing residents. The Council consider it appropriate to set a minimum requirement of 0.5 spaces per unit in areas that would be captured by the London Plan policy as having a standard of less than 1 space per unit.

10.2.8 Car clubs and pool car schemes are becoming increasingly popular as a means of reducing the need for people to own a car, particularly in areas of good public transport accessibility where there may only be occasional need to use a car. The Council will expect the inclusion of a publicly accessible car club scheme where the scale of development would support the provision of such a scheme.

10.2.9 The London Plan has also set out a requirement for electric vehicle charging point parking spaces to be included within a development. Therefore, developments will need to include the minimum required electric vehicle parking spaces as required at the time of the application.

10.2.10 The Council will expect parking provision to be provided on site, however it is recognised that this may not always be sufficient. In situations where in-curtilage parking is required, it should be located close to the home to avoid inconvenience and increase natural surveillance. Large, isolated car parks should be avoided. Whilst parking will be provided within private areas, it should be recognised that people will wish to park where they consider convenient and this is often on the existing or proposed street. This should be taken into consideration, and parking designed to be convenient for residents so that streets are not dominated by cars.

10.2.11 The design and layout of new residential development should take account of the needs of people wishing to cycle through the provision of safe, accessible and secure cycle parking. Developers should aim to make cycle storage as convenient as access to car parking to encourage cycling as a sustainable mode of transport. New flatted development should provide some space either inside the building in a cycle store-room or provide a separate, secure and accessible bike shed within the overall development.

10.2.12 To reinforce the need for sufficient off-street parking provision and to encourage occupiers to use the available on-site parking, restrictions to eligibility for on-street parking permits can apply to existing and any future parking restrictions.

10.2.13 The Council will use informatives and legal agreements to ensure that future occupants are aware they are not entitled to apply for on-street parking permits.

10.3 Digital connections

Policy 25

Digital connections

The Council seeks to promote the enhanced connectivity of Havering by supporting the delivery of physical infrastructure capable of delivering high-speed broadband services and improved telecommunications coverage.

The Council will therefore support major development which future-proofs developments to accommodate high speed broadband infrastructure.

Developments should aim to keep the numbers of radio and telecommunications masts and the sites for such installations to a minimum consistent with the efficient operation of the network. Existing masts, buildings and other structures should be used, unless the need for a new site has been justified.

Applications for telecommunications equipment will be considered against the requirements of the National Planning Policy Framework. The Council will support proposals that:

i. Utilise existing masts, buildings and other structures unless the need for a new site can be robustly justified;
ii. Integrate successfully with the scale, character and appearance of the building on which or space in which the equipment is located, and the surrounding area; and
iii. Do not have an unacceptable adverse impact upon the borough's heritage assets or the natural environment.

10.3.1 The Council recognises the growing importance of the need for modern, effective communications systems to serve local residents and businesses and their crucial role in both the national and local economy.

10.3.2 The benefits of enhanced digital connectivity are far reaching, with wider access to broadband not only encouraging local enterprise, but also paving the way for flexibility for residents to work from home, save on transport costs and reduce congestion. These are principles of sustainable economic growth and development that align well with the guiding principles of the NPPF (paragraph 42). Benefits of wider broadband access are also conveyed to local authorities, with enhanced communications networks providing opportunity to improve health, education and public service provision across the borough.

10.3.3 As technology continues to advance and new ways to better deliver communications infrastructure constantly sought, it is important that developers take the necessary steps to 'future proof' their developments, incorporating into design the latest construction methods and in-built physical infrastructure necessary to enable the delivery of high-speed broadband services. This includes the installation of direct fibre optic cable access and the provision of ducting from the buildings access point to the public highway.

10.3.4 In regards telecommunications infrastructure, the Government has issued Permitted Development rights to a variety of minor forms of telecommunications development. Part 24 of the General Permitted Development Order (1995) (as amended) “Development by Telecommunications Code System Operators” allows telecommunications operators to install and replace certain types of telecommunications equipment, provided certain criteria are met without the need for planning permission. Although the Council cannot object to the principle of development, in some instances, it can exercise control over the siting and appearance of telecommunications equipment in the interests of protecting amenity. Therefore, Policy 25 seeks to ensure the appropriate balance between providing essential telecommunications infrastructure and protecting the environment and local amenity is struck, particularly in areas of nature conservation, open space, and historic townscape that are more likely to be sensitive to the installation of new masts and structures than other land uses.

10.3.5 With continual advances in technology and a subsequent increase in demand for higher speed telecommunications equipment expected, it is essential that the proliferation of new telecommunications structures is controlled, their visual impact appropriately mitigated, and opportunities for the rationalisation or screening of equipment already installed on existing masts, buildings and associated street cabinets provided. Consequently, planning applications must be accompanied by detailed supplementary information which provides the technical justification for the proposed development, including the area of search, details of any consultation undertaken, the proposed structure and measures to minimise its visual impact.

11 High Quality Places

11.1 Urban design

Policy 26

Urban design

The Council will promote high quality design that contributes to the creation of successful places in Havering by supporting development proposals that:

i. Are informed by, respect and complement the distinctive qualities, identity and character of the site and local area;
ii. Are of a high architectural quality and design;
iii. Provide creative, site specific design solutions;
iv. Respect, reinforce and complement the local streetscene;
v. Provide active streets, good sight lines and natural surveillance;
vi. Are designed in accordance with the principles of Secured by Design;
vii. Respond to distinctive local building forms and patterns of development and respect the visual integrity and established scale, massing, rhythm of the building, frontages, group of buildings or the building line and height of the surrounding physical context;
viii. Fully integrate with neighbouring developments, existing path and circulation networks and patterns of activity particularly to accommodate active travel;
ix. Provide well-defined public realm with defensible private spaces;
x. Are built of high quality, durable, robust, low maintenance materials that integrate well with surrounding buildings;
xi. Provide a high standard of inclusive access for all members of the public;
xii. Demonstrate adequate on-going maintenance and management arrangements; and
xiii. Make use of design competitions or other creative processes that can improve the design quality.

Development proposals of a strategic nature will be subject to an Urban Design Review Panel.

11.1.1 This policy sets out the design criteria that must be incorporated and addressed within developments. The policy is detailed in order to support the delivery of high quality design in the borough. The Council consider that high quality design and the on-going maintenance and management of development is critical to the delivery of successful places and cohesive communities where people choose to live and settle. Where appropriate, national, regional and local level design guidance and best practice standards should be applied in the design of all development. To this end, the Council will support a culture of continued improvement in quality, design and performance of new development. It will keep under review the need for specific planning policy guidance documents to be prepared to promote and secure its commitment to high quality places.

11.1.2 New development provides the opportunity to enhance the character of an area to create a positive sense of place by reinforcing, repairing and adding to the positive aspects of the built environment. It should seek to optimise the distinctive character of the existing buildings, landscape and topography, and incorporate the principles of 'Secured by Design'. Respecting local character does not necessarily mean replicating it. However, great care should be taken when incorporating contemporary design into the existing urban fabric. New and old buildings can coexist without negatively influencing the character of the area.

11.1.3 The design of large strategic schemes must adopt a rigorous design and impact approach involving detailed local area analysis of the site characteristics and the fabric of the surrounding environment and views. Account must also be taken of the adequacy of on-going management and maintenance arrangement. Given that large strategic schemes can be transformative, the Council wants to ensure that they are particularly well designed and focused on optimising the benefits to Havering residents and businesses. The Council understands that big schemes are complex to design, and so wants to work with developers at all stages of the design process to ensure that their brief aligns with the polices of Local Plan. In this regard, applicants are encouraged to engage with the Council as early as possible and throughout the design stages to ascertain and confirm the requirements of the Local

Plan policies. By agreeing the development brief at an early stage (RIBA Stage 0) [7] the design process can get off to the best start and by working together through subsequent RIBA Stages, the Council's Planning and Regeneration services and the developers will have the best chance of producing a high quality schemes that existing and future generations will enjoy.

11.1.4 Urban Design London has published "The Design Companion For Planning And Placemaking (2017)". This guidance supplements the NPPF and PPG and developers are encouraged to use this to shape the design process and outcomes.

11.1.5 Some areas may be considered to have poor, mediocre or no distinctive character. In these instances, where it can be robustly evidenced, good planning and urban design may justify a development that departs from its context for particularly high quality innovative proposals.

11.1.6 Applicants will need to explain how the development proposal responds to the character of the site and wider area through a Design and Access Statement, as required by relevant Article 8 of the Development Management Procedure Order. General features to consider include distinctive building styles, established scale, massing, height, materials, layout, access, trees, landscape features, open spaces, landmarks, views and heritage assets at statutory and local level.

11.1.7 The access to and circulation through a development should integrate with and improve the existing movement patterns of the wider area, and wherever possible, also seek to repair fragmented urban form and the pattern of a block or locality. A network of well-connected streets should be provided that offers a choice of routes with easy access to local amenities, open space, the public transport network and established routes.

11.1.8 Streets should be designed as public spaces with the needs of all users considered. Well designed streets with safe, direct, convenient and clear pedestrian and cycle routes helps to maximise the transport choices of residents, and can influence people to use more active modes of travel. Residential layouts designed solely to meet the requirements of vehicular traffic are not acceptable. New routes and connections should provide integrated routes for pedestrians, cyclists and vehicular traffic.

11.1.9 Infill developments should pay particular attention to the way they link together the areas that surround the site to avoid creating isolated enclaves of development. However, the need for permeability should still maintain safety, security and privacy. Routes into and through a development should minimise areas where the private activities of residents are visible to the public, and all access points should be clearly visible and should contribute to mixed, sociable communities and avoid isolation.

11.1.10 Most of Havering's streets are grid based, characterised by a framework of interconnected routes that define street blocks, as is typical of outer London suburban locations. In most cases, new developments should respond to the traditional street pattern that exists in the borough. Because the layout of housing within these blocks can range from terraces to detached homes, new developments should take account of the block size and structure of the area surrounding the site.

11.1.11 Active frontages, characterised by frequent doors and windows, help to avoid blank walls facing the public realm and provide natural surveillance. Primary access to dwellings should be from the street wherever possible, and direct rather than communal entrances are preferred to support active frontages and contribute to the legibility of an area. Where communal entrances are required (for example to stair and lift lobbies) the entrances should be prominent, generous and have secure access for residents.

11.1.12 Scale, massing and height refer to the arrangement, volume, shape and size of a building or a group of buildings in relation to other buildings and spaces; and their combined visual impact. It is these aspects of the built form which determine views, vistas and skylines. New development should reflect the existing building lines and rhythm of the street. Where uniform building heights form a distinctive character, major variations will not normally be appropriate. It is important to ensure that new buildings are well laid-out internally and do not lead to cramped layouts.

7 Royal Institute of British Architects Plan of Work: www.ribaplanofwork.com

11.1.13 Development should be designed to use building materials and systems that minimise building operation and maintenance costs, and environmental impact, for the lifetime of the development. Use of durable and high quality materials is fundamental to creating robust and sustainable residential development. Materials should be chosen to withstand their environment and likely abuse with minimal maintenance. Poor quality materials that are hard to maintain will wear badly and will not be acceptable.

11.1.14 High quality contemporary materials can create an attractive and distinctive character, however, care should be taken to ensure that all materials respond to the site context and design objectives. Thought should be given to the sourcing, energy efficiency and life cycle of the materials chosen. Permeable paving should be used where possible for hard surfacing.

11.1.15 Ensuring inclusive access in development proposals will enable everyone, regardless of disability, gender or age, to access the development. In Havering, it is particularly important that careful consideration is given to the developing an environment suitable for an ageing population. Accessibility is a significant issue because of the high proportion of older people in the borough, the relatively high number of households containing someone with physical disability, and the forecast increase in the numbers of very young and very old.

11.1.16 The Council supports the use of Urban Design Review Panels and will expect development proposals of a strategic nature to be subject to such as review. Development proposals of a strategic nature are those that have potential to significantly impact or alter the character of an area. This will include large development schemes within the Romford and Rainham and Beam Park Development Area.

11.2 Landscaping

Policy 27

Landscaping

The Council will support development proposals that incorporate a detailed and high quality landscape scheme which:

i. Takes full account of the landscape character of the site and its wider setting;
ii. Retains and enhances existing landscape features that contribute positively to the setting and character of the local area;
iii. Demonstrates how existing landscape features will be protected during the construction phase;
iv. Maximises opportunities for greening, through the planting of trees and other soft landscaping;
v. Provides strong boundary treatment that integrates with and is sympathetic to the local landscape character and street scene; and
vi. Supports natural habitats and opportunities for enhancing biodiversity.

All proposals will be required to demonstrate that adequate arrangements have been made for future maintenance and management and major development proposals should be supported by a comprehensive Management Plan.

11.2.1 Landscape refers to the character, design and appearance of all of the spaces between buildings. High quality landscapes can contribute positively to the streetscape and local character of an area, promote a sense of place, provide visual amenity, enhance security and safety, enhance the sustainability of the development, support natural habits and biodiversity an provide opportunities for recreation and relaxation. To ensure that new development both integrates with and enhances its surroundings, it is essential that the design and continued maintenance of the spaces around buildings is given equal consideration to the design of the buildings themselves.

11.2.2 Landscape schemes will be required for all development proposals. The level of detail provided as part of the planning application should be commensurate with the size, type and location of the new development and its impact on the local area.

11.2.3 Landscape design should be integrated with the building design from the earliest stage. The scale of the landscape elements within the scheme should be appropriate to the development as a whole. Landscape elements should be appropriate to the space actually available, and elements should not

be forced into areas where they do not fit or are overly crowded. Equally, it is important that landscaped areas are of adequate size and scale to become established as well as allowing space for necessary maintenance to take place.

11.2.4 Landscape schemes should contribute to sense of place and local distinctiveness. Opportunities to enhance the landscape character or appearance of an area through, for example, planting locally native species, harnessing the topographical character of the site and retaining existing landscape features and trees are encouraged.

11.2.5 Areas of the borough with an undistinguished or poorly defined landscape character provide the opportunity to bring forward landscape schemes with their own distinct character which improve the amenity and appearance of the wider area through, for example, the planting of ornamental trees and shrubs and use of high quality contemporary hard landscaping.

11.2.6 It is important to clearly define the boundary between public, private and communal spaces in order to provide clear ownership and responsibility for all open areas around new development and increase privacy and security. Landscaping features should avoid screening areas that would otherwise benefit from natural surveillance. Boundary treatments are particularly important for the integration of new development into the local area, and should be sympathetic to the local landscape character and street scene. Front boundaries should reinforce the prevailing character of the streetscape, especially where a continuous uniform treatment forms a distinctive character. Boundary design should also complement the design materials and techniques used in the overall scheme.

11.2.7 Landscaping schemes should demonstrate a commitment to promoting biodiversity. Wherever possible, the opportunity to create new areas of wildlife habitat should be taken. Biodiversity can be incorporated into development through wildlife-friendly landscapes, careful choice of plant and tree species, installation of Sustainable Drainage Systems (SuDS), and features such as green walls, balconies and roofs, and nesting and roosting spaces. Such measures also contribute to the protection and promotion of habitat links with adjacent areas to extend wildlife corridors as defined in Policy 30.

11.2.8 In situations where development is planned to take place in an area where there are existing trees, particularly where the trees are identified as subject to a Tree Preservation Order (TPO), a site survey and arboricultural method statement will need to be conducted to ensure no harm comes to the roots or crown of the tree during construction. Guidance can be found in the British Standard document BS 5837:2012 (Trees in relation to design, demolition and construction. Recommendations) and any future replacement for this standard, on the minimum requirements which need to be adhered to.

11.2.9 A comprehensive management plan will be sought for all major applications including residential, commercial, industrial and mixed use development. The Management Plan should set out the on-going maintenance tasks, the long-term goals of the landscape scheme and how these will be achieved, typically covering the establishment (e.g. first 5 years), maturation (e.g. years 6 to 15) and long-term mature (e.g. year 16 onwards) periods.

11.2.10 The Council may attach conditions to the planning application or enter into a Section 106 agreement with the developer/ landowner to ensure the long-term management and maintenance of the landscaping on the site. Generally, the approved landscape scheme will be required to be maintained for a minimum of five years with replacement of any plants/trees which fail to survive.

11.3 Heritage assets

Policy 28

Heritage assets

The Council recognises the significance and value of Havering's heritage assets and will support:

i. Proposals that seek to sustain or enhance the significance of heritage assets at risk in the borough;
ii. The maintenance of up to date Conservation Area Appraisals and Management Plans;
iii. The identification, and maintenance, of a local list of non-designated heritage assets that meet agreed selection criteria;

iv. Well designed and high quality development in a Conservation Area, or its setting, which preserves, enhances or better reveals the character and appearance of the area and its significance, and which contributes to local character and distinctiveness, taking into account the Conservation Area Appraisal or Management Plan. Where a building (or other element) detracts from the significance of a Conservation Area, its removal will be supported when acceptable plans for redevelopment have been agreed;

v. Viable uses, alterations or extensions to a listed building, or development within its setting, which would not be harmful to the significance of the heritage asset, including its historic and architectural interest;

vi. Well designed and high quality development within a Registered Park or Garden of Historic Interest, Historic Park or Garden of Local Interest, Area of Special Townscape or Landscape Character, or within their setting, which sustains or enhances the significance of the heritage asset, including its special character and important views; and

vii. Proposals affecting the significance of a heritage asset with archaeological interest, including the contribution to significance made by its setting, where:

a. The proposals are supported by an appropriate assessment of the asset's significance;
b. Any harm is minimised, clearly justified and necessary to achieve public benefits that are substantial enough to outweigh loss or harm to the asset's significance; and
c. The significance of any asset or part of an asset to be lost is recorded and made publicly accessible.

Substantial harm to, or loss of, a Scheduled Monument or non-designated heritage asset with archaeological interest that is demonstrably of national importance, will only be considered in exceptional circumstances.

11.3.1 Havering's historic environment is central to its cultural heritage and is at the heart of its identity. It makes a significant contribution to the local economy and has a positive impact on the borough's communities, the well-being of individuals and their quality of life. The Council is committed to identifying, conserving and enhancing the significance of the borough's historic environment, and to seeking opportunities for people to access, enjoy and learn from its heritage assets, through sustainable development.

11.3.2 The Local Plan identifies a number of key growth areas in the borough which provide diverse development opportunities that can capitalise on Havering's unique historic environment. High quality design and heritage-led development that responds to the character and appearance of the historic environment in these and other areas of the borough, and which positively contributes to local character and distinctiveness, will be encouraged in order to help sustain the distinctive character and vitality of the borough's town centres and neighbourhoods.

11.3.3 The borough contains a wealth of designated heritage assets, including 140 listed buildings, 3 Scheduled Monuments, and 11 Conservation Areas that are afforded statutory protection, and Upminster Court Gardens, which is on Historic England's Register of Parks and Gardens of Historic Interest in England. The Council will contribute to the maintenance of a 'heritage at risk register' with a view to raising the profile of those designated heritage assets that are at risk in order to help secure development proposals that will conserve and enhance their significance, and secure an appropriate viable use. All development proposals affecting designated heritage assets will be dealt with in accordance with the relevant legislation and the NPPF.

11.3.4 In order to ensure the preservation of the significance of listed buildings in Havering, planning applications involving alterations, extensions, alternative viable uses, or changes to their setting, will be considered more favourably when the proposals are clearly justified and necessary, and have been designed to enhance and minimise their impact on the significance of the heritage asset, including through appropriate conservation and enhancement measures.

11.3.5 The borough's Conservation Areas each have their own special character and architectural and historic interest that contributes to their significance, which needs to be respected by new development within them, and within their setting. For example, the special interests and significance of the Gidea Park Conservation Area, with its individually architect designed 'Arts and Crafts' style Competition and Exhibition houses, are very different to that of Romford Conservation Area, which are based on its historic significance rather than a defined architectural character. Proposals for new and replacement

buildings and features within a Conservation Area or its setting, will be expected to be of a high quality design that responds to the important characteristics of the Conservation Area, and which will preserve, enhance or reveal its character and appearance, and significance. For this reason, the Council will not normally accept applications for outline planning permission within Conservation Areas or their setting, and demolition will only be considered where the building, or other element, fails to make a positive contribution to the character or appearance, and significance of the Conservation Area. Where the exercise of permitted development rights would erode the character or appearance of a Conservation Area, or other heritage asset, the council will seek to sustain their significance, including the contribution to significance provided by their setting, through the use of Article 4 directions.

11.3.6 In order to manage development in a way that conserves and enhances the borough's historic areas, the Council will undertake its duty to review the identification and designation of Conservation Areas against its agreed criteria for special architectural or historic interest. It will support the maintenance of the borough's Conservation Areas through the preparation of up to date appraisals and management plans. The Romford Conservation Area Appraisal is the first to be reviewed due to its 'at risk' status and its location within a Strategic Development Area, and this process is underway. The forthcoming review of the Gidea Park Conservation Area Appraisal will include a review and appraisal of the area previously designated as the Gidea Park Special Character Area within the 2008 Local Development Framework.

11.3.7 Not all of Havering's heritage assets are designated. There are also many non-designated heritage assets that contribute to the character and distinctiveness of the borough's historic environment including historic parks and gardens of local interest and locally important historic buildings. In order to ensure that these elements of the historic environment are conserved in a manner appropriate to their significance, the Council will work with local communities to promote the identification and maintenance of a list of non-designated heritage assets when these meet its agreed criteria. Development proposals affecting non-designated heritage assets will be dealt with in accordance with the NPPF.

11.3.8 To enable the Council to determine a the potential impact of a development proposal on the historic environment, it will require applications affecting a heritage asset, or its setting, to be accompanied by either a Design & Access Statement that includes both an assessment of the assets significance and impact statement, or a separate Heritage Statement. Proposals that affect a site which includes, or has the potential to include, heritage assets with archaeological interest, will need to be accompanied by an archaeological desk-based assessment, and may also require field evaluation in order to determine its significance. All proposals affecting heritage assets should be informed by consultation with the Historic Environment Record and assessed using appropriate expertise. The level of assessment needed should be proportionate to the significance of the asset affected and the impact of the proposal. In order to ensure opportunities for people to access and learn from the borough's historic environment, where the loss of the whole, or a part of a heritage asset's significance is necessary and clearly justified, the Council will require the developer to record and advance public understanding of the significance of the heritage asset by making the results publicly accessible.

12 Green Places

12.1 Green infrastructure

Policy 29

Green infrastructure

The Council will seek to maintain and expand the network of green spaces and natural features in Havering and optimise the benefits of green infrastructure to the environment, economy and community.

The Council will support development which includes green infrastructure on-site which is multifunctional and integrates into the wider green infrastructure network.

Developers are expected to work with existing partnerships to support and enhance green infrastructure provision including:

- The All London Green Grid
- Thames Chase Community Forest
- Rainham Wildspace
- Land of the Fanns Landscape Partnership
- Roding, Beam & Ingrebourne Catchment Partnership

12.1.1 Green infrastructure is a network of green spaces and natural features that provide multiple benefits for the environment, economy and community. The benefits of green infrastructure include enhancing biodiversity, alleviating flood risk, providing opportunities for recreation, physical activity and education.

12.1.2 Havering has an extensive green infrastructure network comprising of many natural and semi-natural spaces, parks and gardens, woodland, rivers and their corridors. Policy 29 seeks to maintain and enhance Havering's position as one of London's greenest boroughs and ensure that development proposals are realising opportunities to integrate green infrastructure on site. Green infrastructure may include public rights of way in the form of bridleways and footpaths. These provide an opportunity for informal recreation such as horse-riding and walking and may provide scope for longer routes where they link up with similar features in adjoining areas.

12.1.3 Many developments have the potential to incorporate elements of green infrastructure. Examples of green infrastructure include green walls and roofs, water sensitive urban design and Sustainable Drainage Systems (SuDS), new planting and landscaping, enhancement of river corridors. Policy 29 therefore links with other policies in the Local Plan which set out requirements on the integration of types of green infrastructure into developments including policies on residential design and amenity, Open space, sports and recreation, Nature conservation, Landscaping, Rivers and river corridors, Heritage assets and Air quality (Policies 7, 18, 30, 27, 31, 28 and 33 respectively).

12.1.4 The London-wide framework to deliver green infrastructure is the All London Green Grid which is embedded in the London Plan and its supplementary guidance, of which the 'Thames Chase, Beam & Ingrebourne Area Framework' is specifically applicable to Havering. The key objectives and priorities for the Thames Chase Community Forest are outlined in the Thames Chase Plan (2014). The objective of the Rainham Wildspace is to deliver the London Riverside Conservation Park, as set out in London Riverside Conservation Park: WildSpace for a World City (2005). The Land of the Fanns Landscape Partnerships is a recently established partnership focusing on key heritage components. The Roding, Beam & Ingrebourne Catchment Partnership has been established to improve the rivers within the catchment and bring direct on-the-ground benefit to people and wildlife as set out in the Roding, Beam & Ingrebourne Catchment Plan.

12.2 Nature conservation

Policy 30

Nature conservation

The Council will protect and enhance the rich biodiversity and geodiversity in Havering by:

i. Protecting Sites of Specific Scientific Interest, Local Nature Reserves and Sites of Importance for Nature Conservation.
ii. Conserving and, where possible, extending wildlife corridors;
iii. Preserving 'veteran' trees and ancient woodland outside protected areas;
iv. Protecting recognised priority species and habitats; and
v. Supporting development that provides appropriate new biodiversity features on site.

12.2.1 Havering's natural environment is important for the residents in the borough and the wider region. Many research studies have highlighted the importance of nature and access to the natural environment on people's health, wellbeing and development.

12.2.2 Havering's historic parks, river valleys and Thames-side marshland hold a significant proportion of London's entire resource of a number of priority habitats including hedgerows, wet woodland, lowland mixed deciduous woodland, lowland meadows, coastal and floodplain grazing marsh, lowland fens, reedbeds, rivers and ponds. These habitats are also important for a number of protected and priority animal and plant species. The Havering Nature Conservation and Biodiversity Strategy (2014) sets out how the Council and its partners will promote, protect and enhance biodiversity in the borough.

12.2.3 The Council is committed to the protection of the most important areas of semi-natural habitat. Within Havering there are three Sites of Specific Scientific Interest (SSSIs), seven Local Nature Reserves (LNRs) and 89 Sites of Importance for Nature Conservation. These sites are identified on the Proposals Map and in Annex 7.

12.2.4 SSSIs are the principal designation of sites and habitats of high national nature conservation importance. The Inner Thames Marshes SSSI forms the largest remaining expanse of wetland bordering the upper reaches of the Thames and supports large numbers of overwintering and breeding wetland birds, rare plant and invertebrate species, and diverse marine wildlife. The Ingrebourne Valley SSSI supports the largest. and most diverse coherent areas of freshwater marshland in Greater London and includes extensive areas of reed-sweet grass. Hornchurch Cutting is a geological SSSI with glacial deposits containing Jurassic-age rocks and fossils.

12.2.5 The function of LNRs is principally to preserve features and areas of special interest and to provide opportunities for the study and enjoyment of their natural interest. Local Authorities have the power to acquire, declare and manage land as LNRs. The Council also has a duty to further the conservation and enhancement of such sites.

12.2.6 In addition, there are a number of Sites of Importance for Nature Conservation (SINCs). These are based on a hierarchy from sites of metropolitan importance to sites of borough and local importance. In line with the London Plan, sites of metropolitan importance will be given the strongest protection, with sites of borough and local importance given the level of protection commensurate with their importance. The SINCs in the borough have been reviewed following close working with Havering Wildlife Project and the London Wildlife Board, which has lead to one site being promoted to metropolitan level and extended and newly designated sites of borough importance. In addition, the recommendations of the GLA SMI SINC review (2016) have been take non board followin in the promotion of a site to metropolitan level.

12.2.7 Wildlife corridors are linear features which connect significant areas of wildlife habitat and, in so doing, moderate some of the adverse ecological effects of habitat fragmentation. Havering has a concentration of sites of high biodiversity value across the northern ridge and, in the south of the borough, the high-value Ingrebourne and Inner Thames Marshes SSSIs and the corridor of the River Thames. Wildlife corridors should have a minimum continuous band of natural vegetation of 10 m by 30 m

wide. Conditions may be used for development adjacent to wildlife corridors, to make sure adverse impacts are prevented. Wildlife corridors are indicated on Map 2 'Havering Wildlife Corridors'. The table below highlights the type of corridor and the desired vegetation.

Table 5 Corridor type and vegetation requirements

Corridor	Vegetation
All corridors	Rough grassland / low scrub
Corridors running north from the Thames	Open grassland on south facing slopes of river / stream valleys, where possible with exposed gravel
Rivers and streams	Continuity of bankside vegetation, ideally 15m wide
Thames corridor	Continuity of open habitat - foreshore and rough grassland / low scrub - at least 30m wide

12.2.8 Havering is the 6th most wooded borough in London[8]. Trees make a valuable contribution to the quality of life in Havering. Veteran trees and ancient woodland outside designated areas are particularly valuable for biodiversity and their loss should be avoided.

12.2.9 Development must demonstrate that the impact of proposals on protected sites and species has been fully assessed when development has the potential to impact on such sites or species. Appropriate mitigation and/or compensation measures will also need to be identified where necessary. The Council will offer early advice and will require protected species surveys to be carried out where occurrence of protected species is either confirmed or likely, including derelict or vacant land and buildings.

12.2.10 In addition to legally protected species such as bats, great crested newts, badgers, reptiles and water voles, Havering has important populations of other species listed in National, London or Havering Biodiversity Action Plans (BAP). Development is expected to identify appropriate measures to extend favourable conditions for protected species on land and in buildings, e.g. through landscaping or by providing bird or bat boxes. Policy 27 sets out how this can be achieved. Major developments are expected to demonstrate how biodiversity is promoted on site via ecological management plans and strategies.

12.3 Rivers and river corridors

Policy 31

Rivers and river corridors

Havering's rivers and river corridors fulfil important biodiversity, recreation, placemaking, amenity, freight transport and flood management functions which the Council will seek to optimise.

The Council will seek to enhance the river environment by requiring developments in close proximity to a river to investigate and, where feasible, secure opportunities to restore and enhance rivers and their corridors in line with the Thames River Basin Management Plan (RBMP). This should, wherever possible, include the integration of flood defences into new developments. Where enhancements or restoration are financially viable but not feasible a financial contribution will be sought.

To protect and enhance the biodiversity and amenity value of river corridors while accommodating future adaptations to flood defences, the Council will require development to be set back by 8 metres from main rivers, ordinary watercourses and other flood assets, and 16 metres from tidal rivers or defence structures.

In the Thames Policy Area(as identified on the Proposals Map) the Council will support development which:

i. Establishes a link with the river, preserves and enhances views to and from the river and creates a high quality built and natural environment;
ii. Contributes towards the enhancement and extension of a riverside path to enable local communities to enjoy the riverside;
iii. Facilitates and acts on the recommendations of the Thames Estuary 2100 Plan;
iv. Contributes to the safeguarding of Halfway Wharf and Phoenix Wharf from redevelopment for other purposes which would prejudice their use for river based freight related purposes.

12.3.1 Havering's rivers and river corridors are important elements of the green infrastructure network, providing multiple benefits for the community, environment and economy. Policy 31 should be read alongside the 'Blue Ribbon Network' policies in the London Plan, which relate to London's strategic network of waterspaces. Further requirements for development regarding flood risk management are contained in Policy 32.

12.3.2 All the rivers in Havering (Beam, Ravensbourne, Rom, Ingrebourne and Southall Sewer and Runningwater Brook) are currently at ‘moderate’ status under the Water Framework Directive and will need to achieve 'good' ecological status or potential by 2027. There are a wide range of measures that have been identified to improve the waterbodies such as re-naturalisation, de-culverting, re-connecting rivers to their floodplains, in-channel enhancements, creating wetlands and reedbeds, tackling domestic plumbing misconnections, improving fish passage with the removal or notching of weirs and eradicating and managing non-native species.

12.3.3 The Thames River Basin Management Plan sets out measures to improve water quality and the ecological status of water bodies in the borough and the wider catchment. Pollution and poor water quality from urban and agricultural run-off are identified as particular issues for Havering. Key actions identified applicable for Havering include:

- To improve water quality from urban diffuse pollution
- To re-naturalise the River Ravensbourne through Harrow Lodge Park
- To restore the Beam through the Washlands Flood Storage Area
- To investigate methods for improving fish passages through tidal sluices

12.3.4 In addition, the Council has the ambition to enhance the River Rom as part of its development aspirations in the Romford SDA. The Council is engaging with the Environment Agency to explore possible measures. Policy 1 sets out the requirement for developers to facilitate and contribute towards these enhancements.

12.3.5 For development in river corridors and areas affected by tidal flood risk developers should work in partnership with the Environment Agency and the Council to obtain advice on necessary improvement measures, integrating improvements to flood defences in the design of development and creating an attractive riverside. There is potential to improve the riverside both when defences are raised and when they are repaired or replaced. Only when it can be demonstrated that on-site improvements are not feasible, will a financial contribution for off-site provision be considered.

12.3.6 Developments that cause further deterioration of the watercourse or prevent future improvement measures from taking place will not be permitted. In certain circumstances, it may be necessary for the developer to undertake a Water Framework Directive assessment particularly if there are direct works to a river.

12.3.7 Policy 31 sets out the minimum requirements for development to be set back from the top bank of rivers. An appropriate buffer is required to maintain and improve access to existing flood defences, safeguard land for future flood defence raising and landscape, amenity and habitat improvements. A different appropriate distance may be agreed by the Council or the Environment Agency to achieve biodiversity, amenity or flood management objectives.

12.3.8 The London Plan requires Thames-side boroughs to define a Thames Policy Area (TPA), to highlight the strategic importance of the River Thames. The boundaries of the TPA in Havering have been identified in consultation with neighbouring boroughs. Development within the TPA provides the opportunity to enhance and expand the existing pedestrian and cycle path that stretches along the Thames.

12.3.9 The Thames Estuary 2100 (TE2100) Plan sets out the Environment Agency's recommendations for flood risk management for London and the Thames estuary and includes a range of short, medium and long-term actions. New land will be required for new defences, enlarged defences, new barriers, new areas of habitat creation, and in some cases flood storage. Developments in the Thames area are expected to have regard to these actions and recommendations to assure they remain possible, and where possible contribute to their delivery.

12.3.10 Halfway Wharf (formerly Tilda Rice) and Phoenix Wharf are both subject to existing safeguards. In line with London Plan policy on increasing the use of the Blue Ribbon Network for freight transport, the increased use of the borough's wharves will be encouraged.

12.3.11 As a tidal river, the Thames is part of the South East Inshore Marine Plan area. The Marine Plan for this area is currently being prepared by the Marine Management Organisation. Until the South East Marine Plan has been adopted, developments affecting the River Thames should take account of the UK Marine Policy Statement.

12.4 Flood management

Policy 32

Flood management

The Council will support development that seeks to avoid flood risk to people and property and manages residual risk by applying the Sequential Test and, if necessary, the Exception Test as set out in the NPPF.

The Council's Strategic Flood Risk Assessment should be used as a starting point regarding local flood risk guidance.

In addition to the requirements set out in the NPPF, the Council will require site-specific flood risk assessments for development on:

i. Sites where drainage problems have been identified by the Council;
ii. The Washlands Flood Storage Area (FSA); and
iii. Sites deemed necessary by the Council as a Lead Local Flood Authority.

The Council will seek to reduce the risk from surface water flooding by requiring development proposals to:

iv. Reduce surface water runoff by providing sustainable drainage systems (SuDS), unless there are practical reasons for not doing so; and

v. Ensure that proposals for SuDS apply the London Plan drainage hierarchy achieving greenfield run-off rates, where feasible, and include clear arrangements for ongoing maintenance over the lifetime of the development.

The Council will expected developments to identify reasonable opportunities for flood risk reduction measures and resilient design and construction and not increase the risk of flooding.

The Council will seek financial contributions towards the anticipated costs of flood risk management infrastructure required to protect the proposed development over its lifetime.

12.4.1 Havering has a large proportion of London's floodplains. In addition to the areas of the borough at risk of flooding from rivers, other areas may also be at risk from flooding from groundwater, surface water runoff, ordinary watercourses and/or culvert blockage. The Havering Local Flood Risk Management Strategy provides information on all types of flooding in the borough and explains the powers and responsibilities regarding flood risk.

12.4.2 The requirements for the Sequential and Exception Tests are set out in the NPPF. The aim of the Sequential Test is to steer development to areas with the lowest probability of flooding. If development cannot be located in zones with lower probability of flooding development will need to apply the Exception Test, demonstrating that wider sustainability benefits outweigh the flood risk and including a site-specific flood risk assessment.

12.4.3 Policy 32 has been informed by the recommendations of the Strategic Flood Risk Assessment (2016) (SFRA), which should be used by developers as a starting point regarding flood risk guidance. The SFRA identifies the areas at risk of flooding in the borough and sets out when developers need to submit site-specific flood risk assessments.

12.4.4 Apart from the requirements in the NPPF and London Plan, site-specific flood risk assessments will also be required where drainage problems are identified by the Council. This specifically includes development in the Havering Critical Drainange Areas (HCDAs) as identified in the SFRA. Site-specific flood risk assessments are particularly important as these HCDAs have known localised flooding problems which can cause significant damage. No Critical Drainange Areas have been identified in Havering by the Environment Agency. Site-specific flood risk assessments will also be required on other sites with potential flooding issues known by the Council. Early engagement with the Council as the Lead Local Flood Authority is therefore recommended.

12.4.5 The Washlands is a Flood Storage Area (FSA) for the River Beam. Due to the significant amount of development being proposed in, and nearby, the Washlands FSA as part of the Rainham and Beam Park Strategic Development Area, developments within the FSA will need to submit a site-specific flood risk assessments. This should specifically demonstrate resilience measures, safe access and egress or places of refuge as well as the potential of increasing flood risk elsewhere.

12.4.6 Developers should utilise the Government's Site-Specific Flood Risk Assessment Checklist in preparing site-specific flood risk assessments. The Council will consider the information in the Government's Flood Risk Assessments Checklist [(9)], the PPG and the SFRA in evaluating planning applications and accompanying site-specific flood risk assessments.

12.4.7 Sustainable Drainage Systems (SuDS) should be designed appropriately for the local site characteristics. The Council's SuDS Developer Guide (2015) provides detailed guidance on the optimal integration of SuDS in the design of developments. The Havering Local Flood Risk Management Strategy (2015) sets out what runoff rates are expected to be achieved by implementing SuDS.

12.4.8 Developers should consult the Council as the Lead Local Flood Authority at an early stage in the design process to create a clear understanding of site-specific design requirements and constraints. Measures to make development resilient to flooding should be included in the development of design proposals, dependent on the likely level of flood risk at a site. This will permit a quick recovery

9 http://planningguidance.communities.gov.uk/blog/guidance/flood-risk-and-coastal-change/site-specific-flood-risk-assessment-checklist/

post-flooding. The Council has specific guidance available to appropriately consider flood resilient development. Developers are also expected to include proposals for future maintenance and operation, including continued realisation of any non-drainage related benefits.

12.5 Air quality

Policy 33

Air quality

The Council is committed to improve air quality in Havering to improve the health and wellbeing of Havering's residents. The Council will support development which:

i. Is at least air quality neutral;
ii. Optimises the use of green infrastructure to reduce pollution concentrations and exposure (see Policy 29);
iii. Delivers measures to support active travel to reduce emissions (see Policy 23)
iv. Meets the targets for carbon dioxide reduction in the London Plan (see Policy 36); and
v. Minimises emissions from construction (see Policy 34).

12.5.1 The whole of the borough is identified as an Air Quality Management Area on the basis of Nitrogen Dioxide (NO_2) levels. Although these levels are not breached in all areas of the borough it is acknowledged that activities which cause air pollution affect the wider area. The health effects of air pollution are serious and long-term exposure can affect lung function, breathing and asthma.

12.5.2 The Council is committed to improving air quality in the borough to improve the health and wellbeing of Havering's residents and is preparing an Air Quality Action Plan setting out how air quality in the borough can be improved and health benefits can be maximised. This includes the encouraging choices which include of sustainable and active travel, the use of green infrastructure and renewable energy.

12.5.3 In line with London Plan policy, development will be expected to be air quality neutral. The minimum benchmarks in the GLA's Sustainable Design & Construction SPG will need to be complied with. Where there is a risk of any negative air quality impacts associated with development proposals, an assessment and, if appropriate, mitigation measures will be required, to ensure that air quality has been adequately considered and any negative impacts are minimised. Developers are encouraged to contact the Council at an early stage in the design process to ensure information regarding the site correct.

12.6 Managing pollution

Policy 34

Managing pollution

The Council will support development proposals that:

i. Do not unduly impact upon amenity, human health and safety and the natural environment by noise, dust, odour and light pollution, vibration and land contamination;
ii. Do not pose an unacceptable risk to the quality of the water catchment, groundwater or surface water; and
iii. Optimise the design, layout and orientation of buildings and the use of green infrastructure to minimise exposure to the above pollutants.

12.6.1 The health and safety of residents and visitors to the borough can be affected by pollution of the air, water and land as well as light and noise pollution. The Council seeks to minimise the exposure to pollutants both during construction and over the lifetime of the development to ensure the creation of safe and healthy places to live, visit and work in the borough. This policy should be read in conjunction with Policy 33.

12.6.2 The Mayor's SPG on Sustainable Design and Construction provides detailed guidance on how exposure to pollutants could be addressed in the design of schemes, how adverse effects could be appropriately mitigated and sets out when detailed assessments will be required. Additional guidance to minimise adverse impacts during construction are set out in the Mayor's 'The control of dust and emissions during construction and demolition' SPG.

12.6.3 A different degree of exposure to pollutants may be acceptable for different types of land uses. In considering development proposals and accompanying detailed assessments, both the individual and cumulative adverse impacts of development will be taken into account. Development should also ensure that human health and the environment is protected during the cleaning up of any pollution or land contamination.

12.6.4 External lighting is often required to provide healthy and safe environments, to enhance the appearance of buildings and to extend the use of facilities, such as outdoor sports facilities. However, inappropriate lighting can negatively affect residents' quality of life, significantly change the character of the locality, adversely affect wildlife and use unnecessary amounts of energy. Care should be taken to ensure lighting only illuminates intended areas and does not affect or impact on its surroundings. The Institute of Lighting Engineers Guidance Note [10] provides additional guidance on the design of light installations.

12.6.5 Where there is a potential for land contamination, a staged process of risk assessment will be required to demonstrate that land contamination has been effectively considered and addressed and that the land is suitable for its intended use, in accordance with the Council's Contaminated Land Inspection Strategy. The Environment Agency should be consulted when the proposed development poses a potential risk to controlled waters due to land contamination. The Council's leaflet titled 'Land Contamination and the Planning Process' provides information on what the Council requires in order to assess if a development is suitable for the proposed use on land which is potentially affected by contamination.

12.7 On-site waste management

Policy 35

On-site waste management

The Council will support residential, commercial and mixed use development proposals that:

i. Provide adequate internal storage space within their premises to enable the occupiers to separate, store and recycle their waste;
ii. Provide adequate, secure, external or communal storage facilities on site which allow for the separate storage and collection of waste, reusable items, recyclable materials and compostable waste;
iii. Include on-site waste management, which minimises the need for waste transfer, where it is feasible to do so;
iv. Allow for convenient and safe access to manage waste, including for older persons or persons with disabilities;
v. Allow for convenient and safe access for waste collection services;
vi. Implements high quality design solutions to minimise the adverse visual impact of waste facilities on site;
vii. Enable waste from mixed-use schemes to be segregated in separate secured areas; and
viii. Provide innovative solutions to reduce waste at source.

All major development proposals must be accompanied by a Waste Management Plan which demonstrates how the criteria set out above will be achieved.

12.7.1 The Council follows the waste hierarchy approach and is committed to firstly minimising the production of waste (waste prevention) and then maximising the re-use and recycling or composting of waste and minimising the use of landfill with disposal seen as the final option.

10 http://darkskies4ni.co.uk/how-can-i-make-a-difference/ile/

12.7.2 Havering adopted the Joint Waste Development Plan (DPD) for East London in 2012 alongside the East London waste authority boroughs of Barking & Dagenham, Newham and Redbridge. The Joint Waste Plan sets out a planning strategy to 2021 for sustainable waste management and has regard to the London Plan's Borough level apportionment of household, commercial and industrial waste, as well as construction excavation and demolition waste. The Joint Waste DPD forms part of Havering's Development Plan alongside the Local Plan. Policy 35 therefore does not seek to deal with the wider issues of strategic waste management and focuses on waste, re-use and recycling facilities within developments.

12.7.3 In order to facilitate the sustainable management of waste in the future it is essential that all developments provide adequate facilities for the separation of waste and recyclables and for its satisfactory storage prior to collection. The Council's Waste Management Planning Practice Guidance for Architects and Developers sets out the minimum requirements for the storage and collection of waste and recyclable materials. Consideration should be given to the need for separate communal storage facilities for the re-use and recycling of bulky items.

12.7.4 To help residents to actively move towards a culture of re-use and recycling wherever possible, development proposals should provide space (typically in the kitchen area of each property) for residents to be able to separate out waste.

12.7.5 All major mixed use, residential, commercial, and industrial development proposals must provide a waste management plan which clearly identifies the type and volume of waste expected, and size location and design of the waste and recycling storage.

12.7.6 The provision of adequate storage facilities on site is essential but they can be unsightly and can have adverse impacts on the appearance and quality of development proposals. The location and design of waste facilities should be considered at the earliest stage and as an integral part of the design process to ensure any impacts are minimised and mitigated.

12.7.7 Consideration should be given to the provision of on-site waste management in order to facilitate the re-use and recycling of waste generated by the development. On-site waste management can have the added benefit of reducing transport trips.

12.8 Low carbon design, decentralised energy and renewable energy

Policy 36

Low carbon design, decentralised energy and renewable energy

The Council will seek to optimise the energy efficiency of buildings and support low carbon and renewable energy developments including energy efficiency improvements to existing buildings.

The Council requires major development proposals to include a detailed energy assessment to demonstrate how the targets for carbon dioxide emissions reduction set out in the London Plan will be met. The Council will require a cash in lieu contribution to the Council's Carbon Reduction Fund on any shortfall to secure the delivery of carbon dioxide savings elsewhere.

The Council will require major development to prioritise connection to any existing or planned decentralised energy networks and, where feasible, integrate combined heat and power systems on site.

All stand-alone renewable energy developments should be located and designed to minimise any adverse impacts. Applicants are required to address the following issues in their proposals: impacts on landscape, biodiversity, historic environment, residential amenity, aviation activities, air quality, highway safety and fuel/energy security, including their cumulative and visual impacts.

The Council will support proposals for wind turbines, in addition to the above criteria for renewable energy developments, where:

i. They are located within an 'Area Suitable for Wind Energy Development' as designated on the Proposals Map;
ii. The proposal has been subject to meaningful pre-application consultation with the affected local community and the application is supported by a consultation statement;

iii. There is no unacceptable impact on residential amenity in terms of noise, shadow flicker, vibration and visual dominance;
iv. A noise impact assessment, which considers all relevant National and Local guidance, must be conducted, and identify appropriate noise mitigation measures where required to reduce the impacts on the surrounding occupants; and
v. It is in compliance with the Ministerial Written Statement (HCWS42) or subsequent national policy.

12.8.1 Renewable energy supplies and achieving energy efficiency are crucial to meeting the Council's ambition of reducing carbon emissions, and generating cleaner power locally. Specific requirements relating to minimising carbon dioxide emissions, sustainable design and construction and decentralised energy are set out within the London Plan and will be applied by the Council.

12.8.2 The Rainham and Beam Park Strategic Development Area has been identified as a potential opportunity for the deployment of a district heating network. Therefore, development proposals should seek to connect to existing or planned decentralised energy networks for the area.

12.8.3 If it is not possible to link to an existing decentralised energy system, the feasibility of combined heat and power (CHP) needs to be considered on a site-wide basis connecting different uses and/or group of buildings or an individual building. Investment in heat and cooling distribution infrastructure should be considered in all developments. CHP systems must be designed to run efficiently and be optimally sized to maximise carbon dioxide savings.

12.8.4 A Local Plan Wind Resource study (2016) has been prepared in response to Written Ministerial Statement (HCWS42) and identified a number of potentially suitable locations for wind turbines in the borough. These have been reflected in the Areas Suitable for Wind Energy Development designated on the Proposals Map. The study identifies what areas are suitable for large, medium or small turbines. Smaller turbines would not normally be allowed on sites suitable for larger wind turbines as this could reduce the potential for wind energy production.

12.8.5 To demonstrate compliance with the Written Statement (HCWS42) dated (18 June 2015) the proposal should be accompanied by a consultation statement, which sets out how the proposal has been subject to meaningful pre-application consultation with the affected local community. Thereby, following statutory consultation as part of the planning application process, the applicant should be able to demonstrate that the planning impacts identified by affected local communities have been addressed in full.

13 Minerals

13.1 Mineral reserves

Policy 37

Mineral reserves

The Council recognises the strategic need for the supply of aggregates and will safeguard mineral reserves in Havering from other forms of development that would sterilise the resource and/or prejudice future mineral extraction. Minerals Safeguarding Areas are designated on the Proposals Map.

Non-mineral development in safeguarded areas will only be considered where the applicant can demonstrate that:

i. The development will not sterilise the mineral resource;
ii. The mineral concerned is no longer of any value or potential value;
iii. The minerals can be extracted prior to the development taking place and this would not render the site unsuitable for the proposed surface development;
iv. It is not practicable or economically viable to extract the minerals prior to the development taking place;
v. The development is required for agriculture, forestry or nature conservation or for open air recreation and would be otherwise acceptable; or
vi. There is an overriding need for the incompatible development.

13.1.1 London needs a reliable supply of construction material to support continued growth including land-won sand and gravel, crushed rock, marine sand and gravel and recycled and alternative materials. There are relatively small resources of workable land-won sand and gravel in London however resource is known to exist in Havering, Redbridge, Hillingdon and Hounslow. The Council will seek to maintain an appropriate landbank as per the apportionment for the borough set out in the London Plan.

13.1.2 Datasets obtained from the British Geological Survey (BGS) show that the highest quality mineral reserves are located in the south of the borough. The data also revealed the potential for existence of minerals (superficial streams of clay, silt, sand and gravel) in the north-east of the borough. Given the requirements placed upon the borough by the London Plan for a sand and gravel landbank apportionment, these areas will continue to be safeguarded.

13.1.3 The Council seeks to ensure that the known reserve within Havering is not adversely impacted or unduly sterilised by non-mineral bearing development. Applications for non-mineral development coming forward in identified Mineral Safeguarding Areas will be considered on their individual merits with an assessment of need being made in context of the current landbank position and the benefits the development would result in from an economic, social or environmental perspective.

13.2 Mineral extraction

Policy 38

Mineral extraction

The Council will seek to maintain a seven year aggregate landbank, as per the apportionment within the London Plan. In this regard, mineral extraction within Mineral Safeguarding Areas will be supported when proposals in isolation and cumulatively would not unacceptably impact on:

i. Public health and safety;
ii. The amenity and quality of life of nearby communities;
iii. The natural, built and/or historic environment;
iv. The efficient and effective operation of the road network, including safety and capacity.

Appropriate mitigation measures, to ensure the that criteria i.-iv. will be secured as part of any proposed development by planning condition or legal agreement.

A Transport Statement or Transport Assessment will be required with all applications to determine the potential impacts the proposal may have on the road network and ensure reasonable contributions from the developers are received to maintain the roads.

With regards to site operations and restoration, proposals will be expected to be worked in a phased manner with agreed mitigation measures in place to ensure that the local environment and amenity value is maintained or improved throughout the lifetime of the development. Restoration should be undertaken in accordance with an approved scheme and on a progressive basis and seek to:

v. Reduce the reliance on the use of landfill materials;
vi. Provide beneficial after-use(s) that secure long lasting community and environmental benefits; and
vii. Protect the best and most versatile agricultural land.

All restoration proposals will be subject to a five year aftercare period.

Any ancillary development including processing plant necessary to facilitate the development should be essential, positioned on-site and of a design to limit adverse landscape impact it must be removed from the site as soon as no longer required for the purpose for which it was installed.

In the event of a sufficient landbank, the Council will consider applications on their individual merits. Such applications will, however, generally be resisted unless the applicant can demonstrate:

viii. An overriding justification or benefit for the proposed extraction;
ix. The scale of the extraction is no more than the minimum essential for the purpose of the proposal; and
x. The proposal meets criteria i-iv above.

13.2.1 Within the Mineral Safeguarding Areas it is important that mineral-led development is appropriately assessed to ensure that the site can be worked in a sustainable manner to ensure it will not give rise to any significant adverse impacts and the site can be restored to an equivalent quality or an after use of particular community or environmental benefit.

13.2.2 Mineral extraction by its very nature is physically intrusive on the land. Accordingly, mineral extraction can give rise to a number of environmental and amenity impacts. The extraction process itself, for example, can result in changes to geological, hydrological, ecological, archaeological and landscape conditions and the action working/ operations further more can give rise to transport related, health and amenity (noise, air quality and vibration) and visual impacts. The Council, with any application for mineral development, will seek to to ensure full assessment of any potential impact both in the short and long term. Mitigation measures will be expected to be proposed and/ or contributions achieved through appropriate legal agreements to ensure impacts are managed throughout the life of the development. In this regard, the Council are particularly aware of the road infrastructure in the more rural areas of the borough and will closely engage with the Highway Authority to ensure any impact from HGV movements is appropriately addressed.

13.2.3 The Mineral Safeguarding Areas includes areas within close proximity to a number of residential areas and sensitive uses, and whilst being mindful of the need to plan for mineral extraction, the Council is also keen to ensure local communities are not adversely impacted by such development coming forward. The Council is also aware of the potential for cumulative impacts from multiple sites within close proximity of each other, because whilst minerals can only be worked where they are naturally found this can put significant pressure on particular communities and infrastructure.

13.2.4 The Council will seek to ensure that there are no significant adverse impacts arising from proposed mineral development to public health and safety, amenity, quality of life or nearby communities and/ or the environment. Planning conditions will be imposed, where appropriate, to mitigate the adverse impacts of development.

13.2.5 Ensuring high quality restoration at the earliest opportunity is considered to be fundamental to the overall acceptability of a mineral-bearing development. The Council, through conditions, legal agreements and active on-site monitoring will seek to ensure the development is undertaken in accordance with the approved details and the suggested restoration is completed on-time, to a good standard and also managed for five years, post completion as part of the aftercare period.

13.2.6 Havering has an apportioned landbank and seeks to ensure that a steady and adequate supply of aggregate is provided. The Council will provide information to the Greater London Authority to assist in the production of the annual London-wide Local Aggregate Assessment. This process, which required the Council to gather data from all active sites in the borough will provide an accurate picture of the landbank, allow particular trends within the industry to be identified and enable informed decisions to be made about the need for new sites/ developments going forward. The Council will resist extraction activities where a sufficient landbank exists unless there are specific circumstances that justify the development. Such proposals will be assessed on a case by case basis.

13.3 Secondary aggregates

Policy 39

Secondary aggregates

The Council will require applicants to minimise the quantity of primary aggregate and resources necessary to facilitate a development and the amount of waste generated through:

i. Appropriate design;
ii. Good practices; and
iii. The recycling of construction materials containing minerals.

In respect of the above, maximum possible rates of recovery from construction, demolition and excavation waste will be encouraged through the re-use and recycling of materials on-site.

The Council will support applications for temporary aggregate recycling facilities at development sites and quarries, subject to compliance with the other relevant policies of the Local Plan and the use ceasing and all plant being removed once the development is complete and/or restored.

13.3.1 The London Plan sets targets for levels of recycling and reuse of construction, excavation and demolition waste. Whilst the Council's Waste Development Plan seeks to ensure sustainable waste management and elaborates on general considerations with regard to waste proposals, the benefits of a high production level of secondary aggregate is considered important in context of contribution to the land-won mineral landbank.

13.3.2 Minerals are a finite resource and to aid continued prosperity in the borough, and London, effective use and high levels of recycling are considered vital. The Council seeks to ensure that developers are considering the resources necessary to facilitate a development and furthermore reusing or recycling any existing resource on-site. Construction management plans and statements on practices proposed for major developments will be required in respect of demonstrating compliance.

14 Delivery and implementation

Overview

14.0.1 Growth in homes, jobs and services that will deliver the Council's vision and the objectives and policies of the Local Plan will be welcomed.

Working with partners

14.0.2 The Council recognises that much of the development identified in the Local Plan, particularly the investment in new homes and jobs, will be delivered by the private sector. Additionally, Government agencies and bodies such as the Department of Transport, Highways England, TfL, the GLA, Crossrail, Network Rail, and Train operating companies will have a key role to play in delivering the transport improvements which will be necessary for the full delivery of the spatial strategy.

14.0.3 The Council recognises that effective partnership working will be crucial to the successful implementation of the Havering Local Plan. The Council is committed to encouraging dialogue between developers and service providers including those provided by the Council itself to ensure effective delivery of the growth and development set out in its Local Plan.

The Council taking the lead

14.0.4 The Council is committed to working collaboratively and constructively, and from the outset, with landowners, developers, investors, infrastructure providers, adjoining boroughs, the Mayor of London and other key stakeholders in the private, voluntary and community sectors across the borough to deliver the growth and development that is set out in this Local Plan. The Council will continue to work with all its partners and use all its relevant powers and programmes to ensure that, as far as possible, conditions exist to deliver the strategy in the Havering Local Plan.

14.0.5 The Council knows that its role and that of other public bodies as land owners is important through direct investment in the provision of land for new homes and infrastructure. To this end, the Council has established its own housing company and an ambitious estates regeneration programme and is working proactively with other public sector bodies and private developers to bring forward sites in public and private ownership to increase the supply of housing in the borough.

14.0.6 As a land owner, the Council will promote and encourage specific development on its land as this will assist in addressing its priorities as well as in securing investor confidence. In appropriate circumstances, the Council may seek to enter into partnership agreement with private investors to encourage specific uses on land in Council ownership or on land adjacent to Council's land.

14.0.7 The Council's preferred approach towards land assembly will be through proactive and positive negotiation. Where necessary, appropriate and justified the Council may facilitate development by exercising its Compulsory Purchase Powers to acquire and assembly land in the public interest.

14.0.8 Havering has established a private sector focussed Housing Company, Mercury Land Holdings, to bring forward residential homes for market rent and sale. Also Havering's Housing Department is ready to meet the challenge by investing in new Council Housing. Bridge Close, Angel Way, and Waterloo Road estate are the three sites where Havering are seeking HZ financial intervention as the market on its own would be unable to deal with a number of the complex issues to bring these sites forward.

14.0.9 As necessary, the Council will prepare appropriate strategies and guidance to set out measures and initiatives involved in the delivery of the Local Plan's programmes and projects.

The Infrastructure Delivery Plan

14.0.10 Ensuring that physical, social and community infrastructure needed for development is in place at the optimum time is essential to support the delivery of the vision, objectives and policies of the Local Plan. It is essential that the necessary community and transport infrastructure needed to support local communities and make development work is provided, particularly in those parts of the borough that will experience the most growth in the Plan Period.

14.0.11 The Council will maintain its close working with service providers to ensure the timely delivery of new and improved infrastructure needed to support Havering's development.

14.0.12 In recognition of the fact that a wide range of stakeholders are involved in infrastructure planning, funding and implementation, the Local Plan is underpinned by a robust Infrastructure Delivery Plan (IDP) which sets out the infrastructure needs to support the level of growth planned for in the Local Plan. The Council will encourage service providers to take this into account in the preparation of their own strategies and business plans. The IDP has also informed the preparation of the Havering Community Infrastructure Levy.

14.0.13 The Council will monitor the Infrastructure Delivery Plan and revise it where necessary so that it remains a good fit with the infrastructure requirements and provision of Havering.

Delivering new homes and communities through Havering's Housing Zones

14.0.14 The building of a significant number of new homes in the Strategic Development Areas of Romford and Rainham and Beam Park is identified in the Local Plan and will be supported by means of a range of planning and financial measures through the Mayor of London's Housing Zone Programme.

14.0.15 Havering is one of only a few London boroughs with two Housing Zones and the Council considers that this will be an important element in its ability to deliver the new homes that the borough needs over the plan period because it provides a high degree of certainty that the new homes will come forward. This is a key component of the Local Plan's approach to housing delivery.

14.0.16 The Rainham and Beam Park Housing Zone was established in 2015 followed by the Romford Housing Zone in 2016. The Housing Zone Programmes are funded by a combination of local authority funding, GLA direct and recoverable grant, and external funding. Housing Zone finance will be used predominantly to deliver physical infrastructure in advance or in parallel to developments.

14.0.17 The Romford Strategic Development Area and the Rainham and Beam Park Strategic Development Area are anticipated to deliver over 5,000 and 3,000 homes respectively over a ten year period, with the new increased number of economically affluent residents living in well-designed homes in Romford and Rainham and Beak Park centres.

Funding secured from developer contributions

14.0.18 Various policies in the Local Plan contain requirements for developers to make financial contributions to make the development acceptable in planning terms. The Council will use Section 106 planning obligations funding (in accordance with paragraphs 203 – 205 of the National Planning Policy Framework) to address or mitigate potential unacceptable impacts associated with developments.

14.0.19 In due course, the Havering Community Infrastructure Levy (CIL) will enable the Council to secure funding towards the cost of infrastructure to meet the needs arising from new developments.

14.0.20 Funds secured through CIL will be used to deliver key community infrastructure as such as education, health facilities, libraries, community care, community facilities, and transport projects (except certain site specific works).

14.0.21 The Council acknowledges however that CIL, on its own, will be insufficient to fund big new capital projects and it will remain necessary for other funding sources and regimes to be explored and considered.

Development Management

14.0.22 The Local Plan and the London Plan will be the main basis for decision making and managing development in the borough. The Council will seek to facilitate new development through working proactively and positively with developers to ensure proposals come forward in a timely manner.

14.0.23 The Council will, through its pre-application process, seek to ensure that developers are fully aware of the requirements of the Local Plan's expectations and objectives. The Council will seek to ensure that development proposals that accord with the Local Plan will be approved without delay.

14.0.24 In appropriate circumstances, it is envisaged that the delivery of the Local Plan may provide an opportunity for the Council to develop positive engagement with the local community and prospective developers to establish the desired outcomes for sites and to explore the approach to be adopted on significant matters such as urban design.

14.0.25 To reflect a growing priority on securing high quality schemes which will have a beneficial impact in uplifting the perception of Havering within and outside the borough, it is expected that Design Review Panels may be set up and key sites and schemes may be the subject of design / architectural competitions.

14.0.26 In parallel, the Council will review how it deals with planning applications and ensure that Members take full account of the strategic objectives behind proposals. It is intended that these several initiatives will help the Council and its partners deliver better places.

Monitoring the Local Plan

14.0.27 The Council recognises that it will be very difficult to anticipate all the ways in which change will happen in a borough as dynamic as Havering within a wide Metropolitan London and sub- regional context.

14.0.28 The Local Plan took account of the best possible evidence and research information available when it was prepared. Whilst this gives a sound basis for the Plan's overall direction and policies, it is acknowledged that over the Plan Period circumstances may change. In this circumstance, the Council may wish to adjust the Plan's direction or policies.

14.0.29 The Council will, therefore, monitor the effectiveness of its Local Plan in delivering its objectives by regularly assessing its performance against a series of identified key indicators. The Council will publish the results of these assessments via its Authority Monitoring Report on an annual basis. The monitoring indicators listed in Table 9 of Annex 8 will be used to monitor the delivery of each local plan policy. The indicators have specifically been selected to address every policy as far as possible.

14.0.30 Another key task will be to keep under review the need for other documents to be brought forward to support the Local Plan and to help deliver the Council's priorities which are linked to it. These may come forward as statutory or non-statutory documents and may be topic or area based.

14.0.31 The Council at this stage does not wish to be prescriptive about this. In all cases it will consider carefully the need for the item and such factors as the most appropriate means of securing its preparation and delivery and its available resources.

A Annexes

A.1 Related planning policy documents

A.1.1 The Havering Local Plan is accompanied by a number of other planning documents:

- Local Development Scheme – this lists and describes all planning policy documents and the timetable for preparing them;
- Statement of Community Involvement – sets out how we will consult the public in preparing planning policies;
- Supplementary Planning Documents (SPDs) – sets out in more detail how some of the Local Plan's policies will be applied;
- Community Infrastructure Levy (CIL) (in preparation) – a charge on new developments to help fund infrastructure;
- Authority Monitoring Report – published annually and contains information on the implementation of the Local Development Scheme, the progress and effectiveness of the Local Plan, and the extent to which the planning policies set out in the Local Plan documents are being achieved;
- Joint Waste Development Plan for East London 2012 – jointly prepared by Barking and Dagenham, Havering, Newham and Redbridge.

Neighbourhood Development Plans

A.1.2 Neighbourhood Development Plans are a new part of the planning system introduced by the Localism Act 2011. They enable members of a local community to develop planning policies to guide developments for their local area. The Plans are managed and written by members of the community and are not prepared by the Council.

A.1.3 Subject to conforming to national policies, as well as Local Plan policies and gaining support through a referendum of the local area, Neighbourhood Development Plans will be a formal part of the Development Plan for Havering and will be taken into account by the Council when determining planning applications in that area. Neighbourhood Development Plans cannot restrict the level of development set out in this Local Plan but can guide and shape development.

A.1.4 There are currently no Neighbourhood Development Plans in Havering.

A.2 Policy Context

The National Planning Policy Framework 2012

A.2.1 The National Planning Policy Framework set out the Governments Planning policies for England and how these are expected to be applied. The Havering Local Plan is required to be consistent with the framework.

A.2.2 The core principle of the NPPF is a 'presumption in favour of sustainable development', which should be seen as a 'golden thread' running through both plan-making and decision-taking. There are three dimensions to sustainable development: economic, social and environmental and it is the role of the planning system to balance these dimensions.

A.2.3 The NPPF sets out detailed guidance in relation to key planning principles including building a strong economy; ensuring the vitality of town centres; promoting sustainable transport; delivering a wide choice of affordable homes; good design; promoting healthy communities; protecting open space and the built environment; conserving the historic environment; and meeting the challenge of climate change.

A.2.4 The NPPF is supported by Planning Practice Guidance (PPG) which adds further context to the Framework. It is intended that the two documents should be read together.

The London Plan (Consolidated with Alterations Since 2011)

A.2.5 The London Plan 2015 is the Spatial Development Strategy produced by the Mayor of London setting out the integrated social, economic and environmental framework for the future development and growth of the city.

A.2.6 The Havering Local Plan is required to be in general conformity with the London Plan. The London Plan is also part of the statutory Development Plan for the borough and has to be taken in account in the determination of planning applications.

A.2.7 The London Plan contains detailed policies which must be considered alongside the Local Plan. The London Plan recognises the unique characteristics of outer London and in appropriate cases it is possible for locally specific policy provisions to be made through Local Plans.

A.2.8 Specifically in relation to Havering the London Plan:

- Sets a minimum housing target of 11,700 new homes between 2015 – 2025;
- Identifies London Riverside (including Rainham and Beam Park) as an Opportunity Area (an opportunity area has significant potential for new residential and economic development);
- Identifies Romford as a metropolitan centre and Hornchurch, Upminster, Collier Row, Harold Hill, Rainham and Elm Park as district centres;
- Identifies Rainham Employment Area, Harold Hill Industrial Estate and King George Close Estate, Romford as Strategic Industrial Locations (protected for industrial use);
- Set an annual indicative benchmark of 185 specialist housing units for older people between 2015 - 2025;
- Identifies Havering as one of four minerals boroughs and sets a land back apportionment.

A.2.9 Following the election of a new London Mayor in 2016, a review of the London Plan is underway. At this stage it is anticipated that a new London Plan will be adopted in late 2018. The Local Plan can be reviewed in part if the new London Plan has significant implications on the local planning context. At this early stage in the preparation of the London Plan it is not possible to anticipate its significance. The Council will work closely with the Mayor of London to ensure that Havering's priorities and aspirations are reflected in a new Plan.

A.3 Spatial Portrait and Key Issues

A.3.1 The Spatial Portrait provides a summary of the key characteristics of Havering as it is now and identifies the key issues to be addressed by the Local Plan.

Havering's Location

A.3.2 Havering is an outer London borough in North East London, situated just 13 miles from the City of London. Havering is also London's third largest borough, extending to approximately 43 square miles and home to an increasingly diverse and vibrant population of more than 249,000 people.

A.3.3 Located on the London/Essex border, the borough is adjoined by the London Boroughs of Redbridge and Barking and Dagenham to the west, Epping Forest to the north, Bexley to the south beyond the river Thames and by the Essex Districts of Thurrock and Brentwood to the east.

Havering's Places

A.3.4 Romford is the largest town centre in Havering, a designated metropolitan centre, it is home to an extensive retail offer that serves a wider catchment which extends into several neighbouring boroughs and even into parts of the wider South East region. As one of outer London's major growth and regeneration areas, the area offers exciting development and regeneration opportunities over the next 15 years and will accommodate a significant level of housing and economic growth alongside new and enhanced supporting infrastructure.

A.3.5 There are smaller but significant retail centres at Hornchurch, Upminster, Rainham, Elm Park, Harold Hill and Collier Row. Hornchurch is the borough's cultural centre, home to the Queens Theatre and Fairkytes Art Centre. Hornchurch and Neighbouring Upminster are the two largest centres outside of Romford.

A.3.6 A.4.6 Rainham and Beam Park in the south of the borough is a further major growth and regeneration area and provides the opportunity to establish an exciting new residential neighbourhood linked to the delivery of a new railway station on the existing Essex Thameside line at Beam Park.

Havering's Population and Households

A.3.7 Havering is currently home to a population of over 249,000 and is expected to grow significantly to over 290,000 by 2031.[11]. The number of households is forecast to grow in the same period, reflecting the trend of households becoming smaller in size. Compared to London as a whole, Havering has a low proportion of one person households and a low proportion of households comprising of married couples with no dependent children. Conversely, Havering has the highest proportion in London of households comprising couples with dependent children. In term of the age composition of the population, Havering has the highest proportion of older people of any London borough [12]. This projected increase in the borough's share of the elderly represents a key issue for the Council. The Local Plan must therefore address the needs of an increasingly ageing population, in particular demands on extra care accommodation, and the need to create accessible environments and homes adapted to the exigencies of life which are equally important for households with very young children.

A.3.8 Within the same plan period there are forecast increases in the proportion of the very young, with the share of under 4's in the borough currently at 6.1% and rapidly growing [13]. This too represents a key issue for the Council to address, with demand for school places, recreational and leisure facilities, health centres and suitable family accommodation to soon outstrip current provision. The Local Plan therefore must ensure that increasing needs for such social infrastructure are placated.

A.3.9 There are currently 100,660 households in Havering [14], with the composition of the households changing due in part to changing social trends. The period to 2031 is likely to see an increase in one person households particularly among the elderly, as well as increasing demand for larger family dwellings as the share of married couples with dependent children proliferates. The population/household figures reflect the results of the 2013 London Housing Capacity Study. This estimates that there is potential for 1,170 homes per year to be built in Havering for the ten year period 2015 - 2025. A key issue for the Local Plan to address will therefore be to ensure the right mix of new housing is provided with regard to Havering's changing population composition whilst maintaining and enhancing the borough's residential character. As well as ensuring that the types and sizes of new housing meets forecast demand, the Local Plan needs to address the issue of housing 'affordability'. In 2016, the estimated average gross earned household income was £44,430, whilst the average house price was £394,000, far outstripping average household income by more than 8 times [15]. A key issue for the Local Plan will be to ensure an appropriate level and type of affordable housing is provided for those on low and intermediate incomes to help address increased incidences of homelessness, ensure everyone has access to a decent home, whilst having regard to the economics of supply.

A.3.10 Although 70% of the population in Havering are home owners, which is one of the highest proportions across all London boroughs, the provision of new housing in the borough represents a considerable issue for the Council to resolve. This is in part due to a failure in recent years to meet housing delivery targets and as such, there is now a supply and demand issue to contend with. This has impacted across all facets of the housing market, with affordable family housing (3-4 bed) in particular need. This issue is further compounded by the considerable lack of available and sufficient brownfield land in the borough. With over half of the borough classified as Green Belt, the Council must focus delivery on a finite number of brownfield sites. As a result, the Plan must strike a careful balance, between the provision of new homes, and ensuring land is available for the many other competing land uses.

A.3.11 With the borough's population set to increase significantly over the lifetime of the plan,the Council must ensure the sufficient delivery of high quality homes to meet the increasing need as well as delivering on affordable housing commitments as set out in the Local Plan.

13 Havering Demographic and Diversity Profile Jan 2015
14 GLA, 2015
15 Havering JSNA 2016 p6

Education

A.3.12 Of Havering's 82 state funded schools, 61 are Primary, 18 are Secondary and 3 are Special Schools. There are also six Independent Schools and one Alternative Provision Academy. However, there is a growing need for school places in the borough as the borough's population continues to grow and consequently, ensuring the needs of existing and future residents are met remains a key issue for the Council.

A.3.13 Further education is provided in Havering through 'Havering College of Further and Higher Education', 'Havering Adult College' and 'Manor Park College', as well as a series of libraries and other centres.

A.3.14 A key issue for the Local Plan will be to seek to remedy the existing deficiencies in service and facility provision, especially spatial inequalities in the distribution and availability of facilities in different parts of the borough, especially in those areas with poor educational attainment.

Health

A.3.15 Havering belongs to the Barking, Havering and Redbridge University Hospitals NHS Trust, with Queen's Hospital in Romford the borough's principle Hospital. Queens continues to serve an ever growing catchment and plays an increasingly significant role in the provision of care for Havering residents. One of the main issues affecting quality of life however is access to local doctors and medical services, and this is governed mainly by lengthy GP lists. There are currently 52 GP practises covering a total of 256,731 patients and consequently, this has led to long GP waiting times.

A.3.16 Havering is a relatively affluent borough, however, there are pockets of deprivation to the north (Gooshays and Heaton wards) and south (South Hornchurch), which has led to the existence of health inequalities in the borough. While life expectancy overall is above national average for people living in Havering, (84.1 years for women, and 79.1 years for men), there remains significant inequality in life expectancy across the borough, impacted by where people live and the circumstances of their upbringing. Currently, the disparity in life expectancy between the most deprived and least deprived in Havering stands at 6.9 years for men, and 3.6 years for women [(16)].

A.3.17 A key issue for the Local Plan therefore will be ensuring that the needs of existing and new households are met, that existing spatial inequalities particularly in healthcare are remedied, and that local deprivation is tackled at source.

Business Growth and Economic Activity

A.3.18 The key employment sectors in Havering are Human Health and Social Care Work, Retail, Administrative and Support Service Activities, Education and Construction. The overall employment rate in Havering is high, with around 76.5% of working age residents in Havering in employment between January 2015 and December 2015[(17)].

A.3.19 Havering has a high number of micro and small businesses, with Havering's Employment Land Review (2015) reporting that over 90% of businesses in the borough are micro companies with up to nine employees and a further 7% as small enterprises with between 10 and 49 employees. However, the Council's business survey indicates that the costs of rents and poor availability of suitable affordable premises are the main factors in driving businesses out of the borough and consequently, presents a key issue for the Local Plan to address. As a result, the provision and preservation of affordable and suitable workspaces should be actively encouraged to increase the opportunities for small businesses which are both a catalyst for regeneration and essential to Havering's economic vitality.

A.3.20 Although employment rates are stable, there is however a lower proportion of Havering residents in high skilled jobs compared to other outer London boroughs, reflected in the average gross income - £44,430 compared to the London average of £51,770. This places Havering within the lowest third of all London boroughs[(18)]. While Havering has good schools, academic qualifications are low; 35% aged 16 and over have no qualifications in the most deprived areas and 35% have qualifications at Level 1 or 2 (Level 2 is equivalent to a GCSE grade A*-C). [(19)]This is further compounded by evidence

16 Public Health England, Borough Health Profile 2016
17 Nomis, 2015
18 Havering JSNA 2016 p6
19 A research study into skills and employment in Havering - Renaisi 2014

to suggest that just 26% of the borough's population are graduates, in stark contrast to the Greater London and National averages of 50% and 37% respectively [20]. Resolving the attainment gap is a clearly a key issue for the borough, as a highly skilled workforce attracts enterprise and development, higher wages and consequently, increases in the prosperity of the borough. Improving access to training will help increase employment opportunities for Havering residents, reduce the mismatch between available skills and skills required and help alleviate spatial inequalities in the borough, and is a key issue the Local Plan should seek to promote.

Town Centres

A.3.21 Havering's town centres are a focus for retailing, services, employment and increasingly a place to live. Romford is Havering's main centre, serving Essex, East London and the Thames Gateway. It has benefited hugely from major new developments and major regeneration works are currently underway. The borough is also served by six district centres, at Upminster, Hornchurch, Elm Park, Collier Row, Rainham and Harold Hill, with Upminster and Hornchurch the largest of the district centres. There is also a diffuse network of local centres which provide day to day shops and services for residents, especially the borough's elderly and those less mobile.

A.3.22 Retailing is the main function of Havering's town centres and is, by far, the main source of employment in the borough. Whilst the future viability of the town centres will depend on securing the right mix of shops, services, cultural and community facilities and housing, retail will continue to be their raison d'etre.

A.3.23 Havering's close proximity to nearby shopping malls like Lakeside, Bluewater and Westfield Stratford does however place its centres in a vulnerable position and consequently, enhancing the vitality and viability of the borough's town centres by planning for future retail growth and increasing their attractiveness by facilitating a diversity of different uses remains a key issue for the Council.

Transport

A.3.24 Havering has good access to Greater London, Essex, Kent, and the rest of the South East via its strategic transport connections and routes. These include road links such as the M25, A12, A13 and A127 and rail links such as the Great Eastern Mainline railway (GEML), TfL Rail, Essex Thameside line, London Overground, and the London Underground District Line. However, while east-west connections through the existing transport network are good, north-south connectivity is extremely limited. Significantly, improved transport connections between Rainham, and Romford are needed to support the two emerging Housing Zones, but also to improve access to Crossrail and the new station to be built at Beam Park. Resolving the historically poor north-south links across the borough remains a key issue for the Council to resolve, and is currently the subject of talks regarding a key transport intervention scheme to remedy such concerns.

A.3.25 Population growth over the lifetime of the Plan provides additional transport related issues within the borough, relating specifically to congestion at peak times via its strategic road network and rail services, as well as pollution along key transport interchanges. Consequently, a key issue for the Local Plan will be to aim to minimise the need to travel through the location and design of new development and its relationship to transport links and users. Where travel is necessary, to promote sustainable forms of transport whilst recognising that people will continue to use their cars. This is a major issue in London Riverside where future growth particularly housing and tourism is predicated on significant improvements to public transport.

A.3.26 Car use and car ownership levels in the borough, the second highest in London presents a further issue for the Plan to contend with. The 2011 census revealed that 77% of households in Havering have access to at least one car and of households with access to 2 or more cars, Havering likewise holds the second highest proportion of any London borough, reflecting its location as an outer London borough. Car use is linked to issues of congestion and air quality and consequently, providing Havering residents with the options to walk, cycle and use public transport that is accessible will be important factors in trying to deliver modal shift in peoples behaviour.

20 Annual Population Survey, 2014

Environment

A.3.27 Havering is one of London's greenest boroughs, with half its 43 square miles designated as green belt land. Furthermore, Havering has an extensive and varied network of open space and parks including the Thames Chase Community Forest, 93 Sites of Importance for Nature Conservation, 3 Countryside Conservation Areas and seven local nature reserves. Havering also contains several large rivers and 7 wildlife corridors that run through the borough.

A.3.28 Of Havering's extensive green space offer, 11 of its parks and recreational open spaces hold the prestigious Green Flag status. There are also a series of protected species home to Havering, with a list that includes bats, the brown owl, great crested newts, water voles, badgers, harvest mice, the brown hare, stag beetle and other Biodiversity Action Plan (BAP) species. Evidently the borough's open spaces and waterways support a wealth of wildlife and biodiversity and consequently, a key issue for the Local Plan to address will be ensuring the right balance is struck between continuing protection and expansion of the borough's existing network of green spaces and accommodating investment and development.

A.3.29 Air quality however remains a further issue, with the borough formally declared an Air Quality Management Area (AQMA) for both Nitrogen Dioxide (NO_2) and Particulate Matter (PM_{10}), with issues arising particularly at key transport interchanges[21]. Consequently, a key issue for the Local Plan will be how best to further improve Havering's air quality and reduce the need to travel by promoting a more sustainable pattern of development and sustainable forms of transport.

Climate Change

A.3.30 The biggest contributors of carbon emissions in the borough are domestic, industry and commercial uses, however, evidence is beginning to show an overall improvement in the borough's total CO_2 emissions. This may be due in part to a general increase in the amount of renewable energy generated in the borough. Havering currently has the fifth highest number of solar photovoltaic installations on buildings of all London boroughs [22], and this is further supported by three large wind turbines, energy-from-waste facilities and future renewable energy projects in the pipeline.

A.3.31 A key issue for the Local Plan will therefore be how best to enhance and protect the environment and plan for and minimise the causes of climate change, whilst planning for adaptation and mitigation of its effects through the development process. It would need to focus on reducing the borough's carbon footprint and increasing the share of energy generated through local renewable means and promoting sustainable forms of construction.

Heritage

A.3.32 Havering has a diverse range of important heritage sites and areas. There are currently 6 Grade I and 15 Grade II* listed buildings located within Havering, as well as 11 designated conservation areas including; Corbets Tey, Cranham, Gidea Park, Havering-atte-Bower, Langtons, North Ockendon, RAF Hornchurch, Rainham, Romford, St Andrews and St Leonards.

A.3.33 Special townscape or landscape character areas are areas that have a special and unique character which adds to the townscape and landscape quality of Havering, of which Havering currently has two; Emerson Park, which is typified by large and varied dwellings set in spacious, mature, well landscaped grounds, and the Hall Lane Policy Area typified by large detached and semi-detached dwellings set in large gardens with considerable tree and shrub planting. All of the areas have unique characters which add considerable value to the borough's environment.

A.3.34 There is just one listed garden in Havering - Upminster Court Gardens, 11 sites on the Heritage in Risk register, including 7 grade II and 2 grade II* listed buildings and just 1 scheduled monument which can be found within the Romford conservation area.

A.3.35 A key issue for the Local Plan will therefore be how best to preserve and enhance the borough's heritage assets without constraining new development and to consider the role they can play in regeneration.

21 London Borough of Havering - Air Quality Action Plan 2017 - 2022
22 DECC, 2014

Waste and Minerals

A.3.36 Havering is a member of the East London Waste Authority (ELWA) alongside the London Boroughs of Redbridge, Barking and Dagenham and Newham, who share collective responsibility for the disposal of waste produced by each local authority. The ELWA, since its inception in 1986, has strived to implement waste hierarchy principles to recycle and reuse as much waste as possible, limiting the amount sent to landfill which is both costly and environmentally damaging. In 2015/16, 32% of household waste in Havering was either recycled, re-used or composted, and this figure has been increasing steadily year upon year since 2011.

A.3.37 A key issue now for the borough is to continue building upon recent successes in recycling and re-using of waste materials and continuing to implement measures to reduce waste sent to landfill.

A.3.38 In terms of minerals, the London Plan identifies Havering as one of four areas with the potential to maintain an aggregate apportionment that can make a significant contribution to the future provision of materials for building. In this regard, Havering is required to plan for a seven year sand and gravel landbank of at least 1.75 million tonnes. The Council has a mineral safeguarding area in respect of this, noting minerals can only be worked where they are naturally found and seeks to protect known resources from undue sterilisation. In recent years, planning permission has been granted for two new quarries in the Rainham and Wennington Area: East Hall Farm which opened in 2016 and Wennington Hall Farm which was granted permission in 2017 but has yet to commence. Factoring the reserve at these two sites, as of the start of May 2017, the landbank in Havering is estimated at 8.7 years with over 2.1 million tonnes of reserve with planning permission.

A.3.39 A key issue for the Council is to ensure that after such extractive activity has concluded, quality phased restoration is carried out that secures long lasting community and environmental benefits.

A.4 Previous Consultation

Previous consultation

Regulation 18 consultation

A.4.1 The Council undertook consultation on the priorities for the Local Plan (Regulation 18 consultation) between February and March 2015. A total of 69 responses to the consultation were received. A further 4 responses were received after the consultation window closed.

A.4.2 The Council has also received 80 representations from landowners and their agents asking the Council to consider removing sites from the Green Belt. A number of these representations were submitted during the formal consultation period. However, the majority of these sites have been submitted to the Council during the Local Plan process but outside of the formal consultation period.

Direction of Travel consultation

A.4.3 In November 2016 the Council published a Local Plan Direction of Travel (DoT) document as a way of engaging with and keeping stakeholders up to date on the progress of the Local Plan, its timeframe for delivery, as well as the emerging vision, strategic objections and spatial strategy. A total of 20 responses were received.

A.4.4 The Direction of Travel document does not form part of the statutory plan making process and was not subject to formal consultation. However, it was felt important to provide additional opportunities for further comments to be submitted as part of on-going engagement.

A.4.5 Further details on previous consultation, including all of the responses received and how they have been addressed by the Council can be found in the Local Plan Consultation Statement.

A.5 Supporting Documents

Duty to Co-operate Statement

A.5.1 The Local Plan has been prepared in accordance with the 'Duty to Co-operate' that places a legal duty on local authorities and other public bodies to engage constructively, actively and on an on-going basis to maximise the effectiveness of Local Plan preparation on strategic matters. The 'Duty' is set

out in Section 33A of the Planning and Compulsory Purchase Act 2004 (as amended by Section 110 of the Localism Act). The Council has prepared a separate statement which sets out how the Duty to Co-operate has been fulfilled for the preparation of the Local Plan.

Sustainability Appraisal

A.5.2 Development Plan Documents must be subject to Sustainability Appraisal (SA) which is an integral part of the plan preparation process. SA involves identifying and evaluating a plan's impacts having regard to social, environmental and economic impacts and helps to ensure that the plan accords with sustainable development principles. Sustainability appraisals incorporate the requirements of the European Directive 2001/42/EC on the 'assessment of effects of certain plans and programmes on the environment' (SEA Directive).

Equalities Impact Assessment

A.5.3 An Equalities Impact Assessment (EIA) was carried out as part of the Local Plan process to assess the likely (or actual) effects of policy on the seven protected characteristics, including age, disability, gender, race, religion, sexual orientation and marital status. The process provided the opportunity to better utilise policy to further promote equality that had otherwise been missed as well as removing or amending negative or adverse impacts where possible. Although a legal requirement, fundamentally, the production of an equalities impact assessment was deemed an effective way of improving policy development and service delivery by ensuring the Council always considered the needs of their communities above all else, identified potential steps to promote equality and does not discriminate.

Health Impact Assessment

A.5.4 A Health Impact Assessment (HIA) was carried out during the preparation of the Local Plan to help ensure that health and wellbeing were fully considered. The HIA assesses the potential effects of the Local Plan policies on the health of Havering's residents and recommends actions to mitigate any negative impacts.

A.6 Town Centres

Table 6 Metropolitan centre

Metropolitan Centre	Type of frontage	Properties/land included
Romford	Primary frontage	South Street, 2-116 (evens), 1-129 (odds) Eastern Road, 2 (evens) Western Road, 1-13 (odds) North Street, 8-56 (evens) 7-9 (odds), 21-23 (odds) High Street, 2-4 (evens), 3, 7-13 (odds) Market Place, 1-19 (odds), 25-49 (odds), 20, 24, 28-42 (evens), 56-78 (evens), 82-96 (evens), Arcade Place, 1 (odds) Exchange Street, 1-2

A.7 Biodiversity and geodiversity sites

A.7.1 This annex provides an overview of the statutory and non-statutory nature conservation sites in the borough. The grid square reference of each site is included. The sites listed are also shown on the Proposals Map.

Sites of Specific Scientific Interest

- Ingrebourne Marshes TQ 538 842
- Inner Thames Marshes TQ 528 804
- Hornchurch Cutting (Geological SSSI) TQ 547 873

Local Nature Reserves

- The Chase (jointly managed with London Wildlife Trust) TQ 512 863
- The Manor TQ 550 930
- Ingrebourne Valley TQ 538 842
- Cranham Brickfields TQ 580 881
- Cranham Marsh TQ 565 854
- Bedfords Park TQ 518 923
- Rainham Marshes TQ 528 804

Sites of Importance for Nature Conservation

Sites of Metropolitan Importance

- M014 Cranham Marsh TQ 565 854
- M031 River Thames and tidal tributaries TQ 167 754
- M039 Rainham Marshes TQ 528 804
- M090 The Chase and Eastbrookend Country Park TQ 512 863
- M108 Ingrebourne Valley TQ 538 842
- M150 Bedfords Park TQ 518 923
- M151 Dagnam Park and Hatters Wood TQ 550 930
- M152 Belhus Woods TQ 568 825
- M153 Havering Country Park TQ 505 928
- North Ockendon Pit TQ 591 844 (former HVBII38)
- Beam Valley South TQ 506 836 (former HvBI17)

Sites of Borough Importance

Grade I sites:

- HvBI01 Mudlands TQ 510 824
- HvBI02 Frank's Wood and Cranham Brickfields TQ 580 881
- HvBI03 Fields south of Cranham Marsh TQ 573 852
- HvBI04 Codham Hall Wood West TQ 582 886
- HvBI05 Hornchurch Country Park TQ 532 842 (inc Southern Grasslands of St George's Hospital)
- HvBI06 Tylers Common TQ 566 905
- HvBI07 Tomkyns East Pastures TQ 571 897
- HvBI08 Upminster Lodge Farm Horse Field TQ 556 891
- HvBI09 Fairplay Farm TQ 601 862
- HvBI10 Warwick Wood TQ 558 830
- HvBI11 Bellvue TQ 528 921

A.8 Monitoring

A.8.1 Monitoring is a vital tool in ensuring the Local Plan is being implemented as intended. Havering Council produces an Authority Monitoring Report on an annual basis which will report on the progress of the indicators below. The Authority Monitoring Report will be published by the end of December each year and will cover the previous financial year. All indicators in the table will be monitored on this basis unless otherwise stated.

Table 9 Local Plan monitoring framework

Policy	Strategic Objective	Indicators	Source of Data
Successful Places to Live			
Housing Supply	SOi, SOii, SOiv, SOxvi	Net additional dwellings	London Development Database
		Net additional dwellings over the previous five year period or since the start of the relevant Local Plan period, whichever is longer	
		Net additional dwellings in: i. Romford Strategic Development Area ii. Rainham Strategic Development Area iii. Each District dentre iv. Council Housing Estates	
		Percentage of dwellings built on previously developed land	
		Number of dwellings lost to other uses (without re-provision)	
		Projected net additional dwellings up to the end of the Local Plan period	
Affordable Housing	SOi, SOiii	Net affordable housing completions (number and as a percentage of net housing completions)	London Development Database
		Net affordable housing completions by tenure type (number and as a percentage of net affordable housing completions)	
Housing Mix	SOi, SOiii	Net completions by housing size and type	London Development Database
Specialist Housing	SOi	Net additional specialist housing completions	London Development Database

Policy	Strategic Objective	Indicators	Source of Data
Successful Places to Live			
Residential Design and Amenity	SOi	Number and proportion of housing completions achieving the Lifetime Homes Standards	London Development Database
		Number and proportion of housing completions that meet Building Regulation Requirement M4(2) and M4(3)	
		Number and proportion of housing completions that meet the National Space Standards	
Houses in Multiple Occupancy	SOi SOiii	Net additional HMO completions	London Development Database
Conversions and Sub-divisions	SOii, SOiii	Net additional completions arising from: i. Conversions of existing non-residential buildings ii. Sub-division of residential developments	London Development Database
Garden and Backland Development	SOii	Net additional housing completions on garden and backland	London Development Database
Gypsy and Traveller Accommodation	SOiii	Net additional gypsy and traveller pitches and travelling showpersons plots	London Development Database
Thriving Communities			
Healthy Communities	SOv	Percentage of major applications submitted with a Health Impact Assessment	LBH
Town Centre Development	SOvi	Position of Havering's town centres in the London strategic town centre network	GLA
		Amount of completed retail floorspace in Havering's metropolitan and district centres	London Development Database
		In Havering's primary and secondary frontages, the number and percentage of: i. Vacancies ii. A1 and A2 units iii. A5 units iv. betting shops v. payday loan shops	LBH
Eating and Drinking	SOvi	Net additional A3 and A4 units and floorspace in Havering's metropolitan and district centres	LBH London Development Database
Culture and creativity	SOvii	Net additional arts, cultural and leisure floorspace in town centres and out of town centres.	LBH London Development Database

Policy	Strategic Objective	Indicators	Source of Data
Successful Places to Live			
Social infrastructure	SOv, SOviii	Net additional floorspace for social infrastructure facilities	London Development Database
		Average size of GP patient lists	LBH
Education and Early Years Provision	SOviii	School places vs demand for school places	LBH
		Net additional floorspace for educational purposes	London Development Database
Open Space, Leisure and Recreation	SOxv	Net loss/gain of public open space, playing fields and leisure floorspace	London Development Database
		Number of open spaces with Green Flag Awards	LBH
Opportunities to Prosper			
Business Growth	SOix, SOx	Amount of designated and non-designated industrial floorspace lost to non-industrial uses	London Development Database
		Net additional office floorspace	London Development Database
		Net additional employment floorspace by type	London Development Database
		Births, deaths, and survival of enterprises	National Statistics
Loss of Industrial Land	SOix	Amount of employment land lost to residential and/or commercial developments	London Development Database
Affordable workspace	SOix, SOx	Number of affordable workspace units delivered	LBH
		Net additional affordable workspace floorspace	LBH
Skills and Training	SOx	Percentage of local labour used in the construction of new developments and end user phase where applicable	LBH
Transport and Digital Connections			
Transport Connections	SOxi, SOxii	Proportion of journeys made by Havering school pupils to school by walking and cycling	LBH
		Car use and car ownership across the borough	LBH
		Number of road accidents (collisions) by age and by Ward	LBH
		Progress on the delivery of key transport infrastructure projects as set out in Policy 23	LBH

Policy	Strategic Objective	Indicators	Source of Data
Successful Places to Live			
Parking provision and design	SOxi	Percentage of completed development schemes meeting the required parking standards	LBH
Digital Connections	SOxi	Percentage of new developments with access to high speed broadband	LBH
High Quality Places			
Urban Design	SOxiv	Number of schemes nominated for and/or awarded a design award	LBH
		Number and proportion of major applications reviewed by a Design Review Panel	LBH
Landscaping	SOxiii, SOxiv	Number of proportion of major applications approved without a detailed landscape scheme	LBH
Heritage Assets	SOxiv	Number of heritage assets on the Heritage at Risk Register	Historic England
		Number of Conservation Areas with up-to date Appraisals and Management Plans	LBH
Green Places			
Green Infrastructure	S0xiv	Progress on the key green infrastructure projects as set out in Policy 29	LBH and external partners
Nature Conservation	SOxv	Changes in areas and populations of biodiversity importance, including: i. Changes in priority habitats and species (by type); and ii. Changes in areas designated for their intrinsic environmental value; including sites of international, national, regional, sub-regional or local significance	LBH Natural England
Rivers and River Corridors	SOxiv, SOxx	Percentage of main rivers of good or fair chemical and biological quality	Environmental Agency
Flood Management	SOxxi	Number of planning permissions granted contrary to the advice of the Environmental Agency	Environmental Agency
		Number and proportion of developments which incorporate Sustainable Drainage Systems (SuDS)	LBH
Air Quality	SOxviii,	Concentrations of two main air pollutants (NO2 & PM10) at monitoring stations	LBH
Pollution	SOxviii, SOxx	Percentage of main rivers of good or fair chemical and biological quality	Environmental Agency
On-site waste management	SOxvii	Percentage of household waste recycled/re-used/composted	LBH

Policy	Strategic Objective	Indicators	Source of Data
Successful Places to Live			
Low Carbon design and renewable energy	SOxix	Number of developments where on-site renewable energy generation is integrated	LBH
		Percentage of energy generation by type from renewable sources	LBH
Minerals			
Mineral Reserves	SOxxii	Loss of mineral safeguarded land to development	LBH
Mineral Extraction	SOxxii	Production (tonnes) of primary land won aggregates	LBH
Secondary Aggregates	SOxxii	Production (tonnes) of secondary/recycled aggregates	LBH
		Use of primary won materials	LBH

A.9 Glossary

A.9.1 This glossary does not repeat any terms that are already defined within the National or Regional Planning Policy. For further information please refer to the glossaries within the London Plan, National Planning Policy Framework and Planning Policy for Traveller Sites.

Table 10

	Definition
Affordable Workspace	A workspace provided where rent and service charges, excluding business support services, are on average at least 20% less than comparable local market rates for the duration of a lease (although it is noted that, for some sectors and locations, much reduced rents may be needed to render them affordable to target occupiers).
Authority Monitoring Report (AMR)	The Localism Act 2011 requires Local Planning Authorities to produce monitoring reports on at least an annual basis. The Report monitors the implementation of the Council's Local Development Scheme. It also assesses the extent to which the policies in Local Plan Documents are being implemented and the effects that they are having.
Biodiversity Action Plan (BAP)	An internationally recognised program addressing threatened species and habitats and is designed to protect and restore biological systems.
Building Research Establishment (BRE)	A private organisation that carries out research, consultancy and testing for the construction and built environment sectors in the UK. Among the BRE's areas of interest are participation in the preparation of national and international standards and building codes, including the UK building regulations.
Character	A term relating particularly to Conservation Areas or Listed Buildings, but also to the appearance of any location in terms of its landscape or the layout of streets and open spaces and the design of its buildings, often giving places their own distinct identity.
Community Use Agreements (CUA)	Are in place to secure community access for 'pay & play' opportunities for the general public and community club use. Community use agreements outline

	Definition
	hours of availability, management arrangements, pricing policies and sports development plans.
Conservation Area	An area of special architectural or historic interest, the character or appearance of which it is desirable to preserve or enhance, designated under S69 of the Planning (Listed Buildings and Conservation Areas) Act 1990.
Contaminated Land	Land that has been polluted or harmed in some way, making it unfit for safe development and usage without first being cleaned up.
Density	A measure of the amount of residential accommodation on any given site. It can be measured by calculating the number of habitable rooms per hectare, or by calculating the number of dwellings per hectare. In either case, the net site area is the appropriate unit of measurement.
Gypsy and Traveller Pitch	A pitch is defined as accommodating a household, and in Havering generally includes a large static trailer, touring caravan, amenity building and parking and turning space.
Gypsy and Traveller Site	A site that can be made up of one or more pitches.
Health Impact Assessment (HIA)	A tool to assess the potential effects of a proposal on the health of a population, and the distribution of those effects within the population.
Housing Zones	Housing Zones are designated by the Mayor of London and will bring accelerated housing development to areas across London with high potential for growth. The building of homes in these areas will be supported by a range of planning and financial measures.
Infrastructure Delivery Plan (IDP)	The Infrastructure Delivery Plan (IDP) identifies the borough's infrastructure requirements including social, physical and green infrastructure. The IDP sets out what is needed, where it is needed and when it is needed.
Killed/Seriously Injured (K.S.I)	The defined severity of the casualty in road traffic accidents on the Strategic Road Network reported by the police where the casualty has sustained either a fatal or serious injury.
Lifetime Homes Standards	Lifetime Homes are ordinary homes designed to incorporate 16 design criteria that can be universally applied to new homes at minimal cost. Each design feature adds to the comfort and convenience of the home and supports the changing needs of individuals and families at different stages of life.
London Plan	Spatial Development Strategy prepared by the Greater London Authority (GLA) for the strategic planning of the Greater London Area. Forms part of the Development Plan for Havering.
Major development	For dwellings: where 10 or more are to be constructed (or if number not given, area is more than 0.5 hectares). For all other uses: where the floor space will be 1000 sq metres or more (or the site area is 1 hectare or more). The site area is that directly involved in some aspect of the development. Floor space is defined as the sum of floor area within the building measured externally to the external wall faces at each level. Basement car parks, rooftop plant rooms, caretakers' flats etc. should be included in the floor space figure.
Multi-use game areas (MUGAs)	Hard-surfaced, fenced areas that enable use for a variety of sports including basketball, football, hockey and netball.

	Definition
National Planning Policy Framework (NPPF)	The NPPF sets out the Government's planning policies for England and how these are expected to be applied at local level.
Proposals map	A type of Development Plan Document which illustrates on an Ordnance and Survey map base, individual sites or geographical areas to which adopted planning policies and proposals relate.
Secured by Design	Secured by Design focuses on crime prevention of homes and commercial premises and promotes the use of security standards for a wide range of applications and products.
Strategic Flood Risk Assessment (SFRA)	An assessment of the likelihood of flooding in a particular area so that the location and design of development and mitigation measures can be carefully considered.

CABINET MEETING
19th JULY 2017

HAVERING LOCAL PLAN

PROPOSALS MAP CHANGES BOOKLET

Havering
LONDON BOROUGH

PROPOSALS MAP CHANGES BOOKLET

1 Purpose of this Document

1.1 The National Planning Policy Framework requires Local Plans to indicate land use designations on a proposals map. Planning Practice Guidance states that the map should illustrate geographically the policies in the Local Plan and be reproduced from, or based on, an Ordnance Survey map. The Guidance goes on to state that if the adoption of a Local Plan would result in changes to a previously adopted policies map, when the plan is submitted to the Planning Inspectorate for examination, an up to date submission policies map should also be submitted, showing how the adopted policies map would be changed as a result of the new plan.

1.2 In accordance with the requirements above, this booklet sets out the changes that are proposed to Havering's 2008 Local Development Framework Proposals Map reflecting the policies in the Proposed Submission Version of the Havering Local Plan.

1.3 The subsequent sections of this document contain tables and maps illustrating the proposed changes to the Proposals Map. The 2008 LDF Proposals Map must still be referred to for boundaries of sites that remain unchanged, sites that have been deleted, and for sites that have had a name change without boundary amendments. This booklet should therefore be viewed alongside the current 2008 Local Development Framework Proposals Map for clarity.

1.4 A full version of the Proposals Map incorporating any changes will be produced on adoption of the Local Plan.

2. Summary of Amendments to existing LDF designations

The changes listed in the tables below include proposed additions, deletions and amendments to the existing Local Development Framework 2008 Proposals Map. All other designations on the 2008 LDF Proposals Map remain unchanged.

2.1 Designations to be added to the Proposals Map

Proposed Additions to the Local Plan Proposals Map	Relevant Local Plan Policy (as set out in the Proposed Submission Local Plan)	Map Reference
Rainham and Beam Park Strategic Development Area	Policy 2	Map 1
Romford Strategic Development Area	Policy 1	Map 2
Beam Park Station Due for completion 2020	Policy 2	Map 3
Gypsy and Traveller Sites	Policy 11	Maps 4-12
Local Nature Reserves	Policy 30	Maps 13-17
Land suitable for Small, Medium and Large wind energy developments (see Annex x for larger scale map)	Policy 36	Maps 18-20
Flood Zones 2, 3a & 3b (see Annex X for larger scale map)	Policy 32	Maps 21-23
Thames Policy Area	Policy 31	Map 24
Primary and Secondary Frontages	Policy 13	Maps 25-31

2.2 Designations to be deleted from the Proposals Map

Proposed deletions from the 2008 LDF Proposals Map
Common Land
Major Developed Sites (These sites remain in the Green belt)
Public Transport Accessibility Level 5-6: Romford Central
Public Transport Accessibility Level 5-6: Romford – Urban/ Suburban

Public Transport Accessibility Level 3-4: Urban
Public Transport Accessibility Level 3-4: Suburban
Housing Supply (higher Density Redevelopment)
Public Transport Accessibility Level 5-6: Romford Central
Havering Ridge
Gidea Park Special Character Area (to be reviewed as part of the Gidea Park Conservation Area)

2.3 Amendments to existing 2008 LDF Designations

Current Designation (As it appears on the 2008 LDF Proposals Map)	Proposed Changes to the Designation	Proposed Name Change	Map Reference
Secondary Employment Areas (SEA's)	Amendment to Crow Lane Site 3 boundary	Locally Significant Industrial Sites (LSISs)	Map 32
Strategic Industrial Locations (SILs)	Addition of the Freightmaster Estate, Rainham	N/A	Map 33
Protected Wharves	N/A	Safeguarded Wharves	N/A
Major and Minor Local Centres	De-designation and deletion of 2 Minor Local Centres: - 28. Fitzilian Avenue - 37. Mawney Road South Addition of 2 Local Centres: - Beam Park - North Street, Romford Re-numbering of Local Centres from 1-75	Local Centres	N/A Maps 34-35 N/A

Major and Minor District Centres	Amendment to Harold Hill Town Centre Boundary	District Centres	Map 36
Retail Core	N/A	Primary Frontage	N/A
Retail Fringe	N/A	Secondary Frontage	N/A
Conservation Areas	Addition of Langtons and St. Andrews Conservation Areas		Maps 37-38
Gidea Park Conservation Area		Conservation Area	N/A
Burial Space	Addition of key Burial Sites		Maps 39-42
Open Space, Parks, allotments and Recreation Facilities	Addition of 19 Open Space Designations Amendments to 3 existing Open Space Designations De-designation and deletion of existing Whitworth Centre Open Space Designation		Maps 43-61 Maps 62-64 N/A
Sites of Nature Conservation Importance (SINC)-Borough	Addition of 6 Sites of Nature Conservation Importance (SINC)-Borough Amendment to Ingrebourne Hill and Bonnetts Wood SINCs		Maps 65-70 Maps 71-72
Sites of Nature Conservation Importance (SINC)-Metropolitan	Upgrade of North Ockendon Pit and The Beam Valley SINC's from Borough to Metropolitan status		Maps 73-74

2.4 Amendments to Romford Area Action Plan Designations

Current Designation (As it appears on the 2008 LDF Proposals Map)	Proposed Changes to the Designation	Proposed Name Change	Map Reference
Area Action Plan Boundary	Boundary amended, leading to creation of new Local Centre (75) on North Street beyond the Ring Road	Romford Metropolitan Centre	Map 75
Romford Conservation Area	Retain	Conservation Area	N/A
Retail Core		Primary Frontage	N/A
Retail Fringe		Secondary Frontage	N/A
The Brewery	Deleted		N/A
Romford Office Quarter	Deleted		N/A
Housing Supply	Deleted		N/A
Sites of Nature Conservation Importance	Retain		N/A
River Rom	Retain		N/A

3. Site Specific Allocations

Existing Site Allocation designations within the 2008 Site Specific Allocations Development Plan Document and Romford Area Action Plan will remain in place until the delivery of a new Site Specific Allocations Local Plan.

5. MONITORING AND REVIEW..... 8

APPENDICES 9

1. INTRODUCTION

Purpose of the LDS

Local planning authorities are required to prepare and maintain a Local Development Scheme (LDS) under the Planning and Compulsory Purchase Act 2004.

The purpose of the LDS is to set out the plans and policy documents that will be prepared by the London Borough of Havering and a timetable for their delivery.

This LDS replaces the most recent Havering LDS (2016) and sets out:

- The planning policy documents that Havering have already prepared
- The planning policy documents that Havering intend to produce
- The subject matter and geographical area of each of the proposed documents
- The timetable for the preparation of the documents over the next three years
- The opportunities for the local community and stakeholders to be involved in preparing planning policies by setting out an indicative timetable for the preparation of each document.

The plan making system

The Planning and Compulsory Purchase Act 2004, together with related regulations and Government guidance, introduced a revised planning system based around the Local Development Framework. This has been subsequently amended by the Localism Act, revised Regulations and the National Planning Policy Framework which, amongst other things, refer to Local Plans rather than Local Development Frameworks.

Planning Policy

In March 2012 the Government published its National Planning Policy Framework (NPPF) which sets out the planning policies for England and how these are expected to be applied. Alongside the NPPF, Planning Policy for Traveller Sites was published in 2012 which sets out specific planning policies in relation to Local Plan making and determining planning applications.

The London Plan 2015 (consolidated with alterations since 2011) is the statutory spatial development strategy for London and it forms part of the Development Plan for Havering.

As set out above, Local Development Frameworks are now being replaced with Local Plans. Havering's planning policy documents will include:

- The Havering Local Plan
- Supplementary Planning Documents
- Statement of Community Involvement
- Authority Monitoring Report
- Community Infrastructure Levy

2. HAVERING'S PLANNING POLICY FRAMEWORK

2.1 The Local Development Framework

LB Havering has made good progress in bringing forward a number of important policy documents which form Havering's Local Development Framework (LDF). This includes Development Plan Documents and Supplementary Planning Documents as listed below and set out in further detail in Appendix 1.

DEVELOPMENT PLAN DOCUMENTS

- Core Strategy (and Proposals Map) 2008
- Development Control Policies 2008
- Site Specific Allocations 2008
- Romford Area Action Plan 2008
- East London Joint Waste Development Plan 2012 (prepared jointly with LBs Barking and Dagenham, Newham and Redbridge who are members of the East London Waste Authority with Havering).

SUPPLEMENTARY PLANNING DOCUMENTS

- Shop Front Design 2013
- Planning Obligations 2013
- Landscaping 2011
- Heritage 2011
- Residential Extensions and Alterations 2011
- Residential Design 2010
- Designing Safer Places 2010
- Protecting and Enhancing the Borough's Biodiversity 2010
- Protection of Trees During Development 2009
- Sustainable Design and Construction 2009
- Hall Lane Policy Area 2009
- Emerson Park Policy Area 2009

OTHER PLANNING DOCUMENTS

- Statement of Community Involvement 2015
- Authorities Monitoring Report (AMR) 2015/16 (latest version)
- Conservation Area Character Appraisals and Management Plans for each of the Boroughs Conservation Areas.
- Planning Advice Note: Proposals for Business and Employment within Industrial Areas (2013)
- Planning Advice Note : Commuted Sums and Affordable Housing (2017)

3. SCHEDULE OF PLANNING DOCUMENTS TO BE PREPARED

3.1 Overview of documents to be produced

LB Havering was one of the first local authorities to take its borough-wide planning policies through to adoption as part of its LDF (Local Development Framework). The Core Strategy, Development Control Policies, Proposals Map, and Site Specific Allocations were all adopted in 2008. As set out in section 2, Local Development Frameworks have now been replaced with Local Plans.

The Council is now taking forward a new Local Plan which will guide future growth and development within the borough over the next 15 years up to 2031 and will help deliver the Council's new vision 'Havering – Making a Greater London'.

Initial (Regulation 18) consultation was undertaken in early 2015 and a Local Plan Direction of Travel document was published in late 2016.

A number of evidence base documents have been produced to support the development of the Local Plan. These are listed within section 3.2.

The Council is also progressing:

- a Site Specific Allocations Local Plan which will identify individual sites for specific uses that are intended to assist in delivering the priorities, objectives and strategy set out the overarching Local Plan; and
- a Community Infrastructure Levy which will set the rates for developer contributions towards the cost of supporting infrastructure.

The Council is in the process of reviewing existing Supplementary Planning Documents (SPDs) to determine which ones will need to be retained and updated, those which are no longer needed and any new SPDs that are needed.

The Localism Act introduced Neighbourhood Plans that can be produced by designated community forums. The Council has not received any applications to create a community forum and is unaware of any local communities seeking to produce a neighbourhood plan.

An indicative timetable for all document preparation / review is set out in Appendix 3.2.

3.2 Document Schedules

HAVERING LOCAL PLAN

Subject and Scope: The Local Plan will set out policies which guide how and where development should take place up to 2031.

Reason for preparation: The key LDF documents were adopted in 2008 and are due for review. The Government has published the National Planning Policy Framework (2012) and the London Mayor published a London Plan in 2015 (consolidated with alterations since 2011).

Status: Development Plan Document

Chain of Conformity: Consistent with National Planning Policy (NPPF) and in general conformity with the London Plan

Geographical Coverage: Borough-wide

Production Milestones:

- Evidence Gathering: currently on-going
- Public consultation on issues and priorities (Regulation 18): Spring 2015
- Local Plan Direction of Travel document published: Winter 2016
- Public consultation on Proposed Submission version (Regulation 19): Summer 2017
- Submission: Autumn – Winter 2017
- Examination in Public: Winter 2017/18
- Formal Adoption: Spring 2018

Evidence Base:

The following evidence base and supporting documents have been prepared to support the Local Plan.

- Strategic Flood Risk Assessment – Level 1 (2016)
- Retail and Commercial Leisure Needs Assessment (2015)
- Employment Land Review (2015)
- Outer North East London Strategic Housing Market Assessment (SHMA) and Update for Havering (2016)
- Open Space, Allotments, Sport and Recreation Needs Assessment (2016)
- Infrastructure Delivery Plan (2017)
- Viability Assessment (2017)
- Gypsy and Traveller Accommodation Assessment (2017)
- Sustainability Appraisal and Habitats Regulation Assessment (2017)
- Green Belt Study (2016)
- Local Plan Wind Resource Evidence Base (2016)
- Housing and Land Supply Position Statement (2017)
- Equalities Impact Assessment (2017)
- Health Impact Assessment (2017)

- Town Centre Position Paper (2017)
- Residential Car Parking Standards (2017)
- Transport Position Statement (2017)
- Havering Sites of Importance for Nature Conservation (SINC) Review (2017)

Note: This list is not necessarily exhaustive. Other documents and strategies prepared by the Council and other stakeholders may also be used as part of the evidence base for the Local Plan.

HAVERING SITE SPECIFIC ALLOCATIONS LOCAL PLAN

Subject and Scope: This document will allocate specific development sites for particular uses.

Reason for preparation: The current Site Specific Allocations document was adopted in 2008 as part of the Local Development Framework and will need to be reviewed in light of the London Plan 2015, the National Planning Policy Framework and new Planning Regulations.

Status: Development Plan Document

Chain of Conformity: Consistent with National Planning Policy (NPPF) and in general conformity with the London Plan

Geographical Coverage: Borough-wide

Production Milestones:

- Public consultation on issues and priorities (Regulation 18): Autumn 2017
- Public consultation on Proposed Submission version (Regulation 19): Spring/ Summer 2018
- Submission: – Summer/Autumn 2018
- Examination in Public: – Autumn/Winter 2018
- Formal Adoption: Winter 2018

COMMUNITY INFRASTRUCTURE LEVY

Subject and Scope: The Havering Community Infrastructure Levy (CIL) will set the rates for developer contributions that the Council will charge on new developments towards the cost of infrastructure.

***Status*:** Local Development Document

Chain of Conformity: National Planning Policy and Planning Regulations and the Mayoral Community Infrastructure Levy

***Geographical Coverage*:** Borough-wide

Production Milestones:

- Evidence gathering: 2013 onwards
- Preliminary Draft Charging Schedule document preparation: Summer / Autumn 2014
- Public consultation on Preliminary Draft Charging Schedule (PDCS): Spring 2015
- Public consultation on the Draft Charging Schedule (DCS): Summer 2017
- Submission to the Secretary of State: Autumn 2017
- Examination in Public: Winter 2017/18
- Adoption: Spring 2018

5. MONITORING AND REVIEW

The Localism Act 2011 requires local authorities to prepare and publish an Authority Monitoring Report containing information on the implementation of the Local Development Scheme and the extent to which the policies set out in the Local Development Framework or Local Plan are being achieved. This report was previously known as the Annual Monitoring Report and is published in January each year.

The Council will continue to prepare an Authorities Monitoring Report each year.

APPENDICES

APPENDIX I: ADOPTED DOCUMENTS AND REVIEW DATE

Document	Status	Description	Geographical Coverage	Chain of conformity/	Adoption date	Review
Core Strategy	Development Plan Document	Establishes the Council's vision, objectives and spatial strategy for the future development of the Borough and contains strategic policies.	Borough-wide	National Planning Policy, The London Plan and Havering's Sustainable Community Strategy	July 2008	Will be reviewed as part of the new Local Plan (see page 6 for more details)
Development Control Policies	Development Plan Document	Provides detailed guidance on the criteria against which planning applications will be determined.	Borough-wide	National Planning Policy, The London Plan and Havering's Sustainable Community Strategy	October 2008	Will be reviewed as part of the new Local Plan (see page 6 for details)
Proposals Map	Development Plan Documents	Provides a spatial representation of the policies in the Core Strategy and Development Control Policies DPDs	Borough-wide	National Planning Policy, The London Plan and Havering's Sustainable Community Strategy	October 2008	Will be reviewed as part of the new Local Plan (see page 6 for details)
Site Specific Allocations	Development Plan Document	Sets out the specific allocations for individual sites across the borough except for sites in Romford Town Centre which are identified in the Romford Area Action Plan and sites for waste management which are identified in the Joint Waste Development Plan Document.	Borough-wide	Core Strategy and Development Control Policies DPD and Proposals Map	July 2008	Will be reviewed and replaced by a new Site Specific Allocations Local Plan (see page 7 for more details)
Romford Area Action Plan	Development Plan Document	Provides the planning framework for the future development and regeneration of Romford town centre up to 2020. It includes specific policies	Romford Town Centre – as defined on the Proposals Map 2008.	Core Strategy and Development Control Policies DPD	October 2008	Will be reviewed as part of the new Local Plan and the Site Specific Allocations Local Plan (see page 7 for more details)

		and site allocations relevant to Romford.				
Joint Waste Development Plan	Development Plan Document	The Joint Waste DPD sets proposals and policies for sustainable waste management for the four East London Waste Authority boroughs.	London Borough of Havering and the adjoining Boroughs of Barking and Dagenham, Newham and Redbridge	Core Strategy and Development Control Policies DPD and the Proposals Map 2008.	February 2012	No review currently planned
Statement of Community Involvement	Local Development Document	Sets out how the community and other stakeholders will be involved in the preparation of future planning policy documents such as the Local Plan and in decision regarding planning applications.	Borough-wide		February 2015	No review currently planned
Shop Front Design	Supplementary Planning Document	Provides guidance to businesses, developers and the public on shop front and signage schemes and key issues to be considered in developing an appropriate design.	Borough-wide	Core Strategy and Development Control Policies DPD and Romford Area Action Plan DPD.	June 2013	SPD will be reviewed following adoption of the Local Plan
Planning Obligations	Supplementary Planning Document	Sets out the Council's approach to planning obligations and sets a 'standard charge' for new residential development to ensure that development contributes financially towards the provision of required infrastructure and services.	Borough-wide	Core Strategy and Development Control Policies DPD	February 2013	Will be replaced by the Havering Community Infrastructure Levy (see pages 7 for more details)
Landscaping	Supplementary Planning Document	Provides guidance on the implementation of those Core Strategy and Development Control policies which seek to promote and facilitate the creation of high quality landscapes as part of all developments and conserve and enhance the quality of Havering's landscape.	Borough-wide	Core Strategy and Development Control Policies DPD	July 2011	SPD will be reviewed following adoption of the Local Plan
Heritage	Supplementary Planning Document	Seeks to ensure appropriate identification, protection, enhancement and management of Havering's heritage assets by	Borough-wide	Core Strategy and Development Control Policies DPD	April 2011	SPD will be reviewed following adoption of the Local Plan

		providing additional guidance on the implementation of those Core Strategy and Development Control policies relating to heritage.				
Residential Extensions and Alterations	Supplementary Planning Document	Provides design guidance to ensure householder development is sympathetic to the existing property and the street scene and does not detrimentally affect the living conditions of neighbouring properties.	Borough-wide	Core Strategy and Development Control Policies DPD	March 2011	SPD will be reviewed following adoption of the Local Plan
Residential Design	Supplementary Planning Document	Provides design guidance on the implementation of those Core Strategy and Development Control Policies relating to new residential development in order to improve the quality of new residential schemes.	Borough-wide	Core Strategy and Development Control Policies DPD	April 2010	SPD will be reviewed following adoption of the Local Plan
Designing Safer Places	Supplementary Planning Document	Provides guidance on the implementation of Core Strategy and Development Control Policies setting out how crime prevention measures can be incorporated into a scheme from the start of the design process to create positive places where people are safe and feel safe.	Borough-wide	Core Strategy and Development Control Policies DPD	February 2010	SPD will be reviewed following adoption of the Local Plan
Protecting and Enhancing the Borough's Biodiversity	Supplementary Planning Document	Provides guidance on how to protect and enhance existing biodiversity and seize opportunities for creating new biodiversity where opportunities arise particularly in new development proposals.	Borough-wide	Core Strategy and Development Control Policies DPD	May 2009	SPD will be reviewed following adoption of the Local Plan
Protection of Trees During Development	Supplementary Planning Document	Providing guidance to ensure that the amenity and biodiversity value afforded by trees and woodland will be protected and improved. In particular, it seeks to ensure that adequate measures are put in place when	Borough-wide	Core Strategy and Development Control Policies DPD	April 2009	SPD will be reviewed following adoption of the Local Plan

		granting planning permission to protect trees during construction works.				
Sustainable Design and Construction	Supplementary Planning Document	Provides further detail on the implementation of those Core Strategy and Development Control Policies focused on ensuring that new developments are built to a high standard of sustainable construction and design.	Borough-wide	Core Strategy and Development Control Policies DPD	April 2009	SPD will be reviewed following adoption of the Local Plan
Hall Lane Policy Area	Supplementary Planning Document	Provides further detail on the implementation of Development Control Policy DC69 (Other Areas of Special Townscape or Landscape Character) which aims to maintain or enhance the special character of the Hall Lane Policy Area.	Hall Lane Policy Area as shown on the Proposals Map 2008.	Core Strategy and Development Control Policies DPD	February 2009	SPD will be reviewed following adoption of the Local Plan
Emerson Park Policy Area	Supplementary Planning Document	Provides further detail on the implementation of Development Control Policy DC69 (Other Areas of Special Townscape or Landscape Character) which aims to maintain or enhance the special character of the Emerson Park Policy Area.	Emerson Park Policy Area as shown on the Proposals Map 2008.	Core Strategy and Development Control Policies DPD	February 2009	SPD will be reviewed following adoption of the Local Plan

APPENDIX II. GLOSSARY

Adoption – The final confirmation of a Development Plan or Local Development Document status by a local planning authority.

Authority Monitoring Report (AMR) – The Localism Act 2011 requires local authorities to prepare and publish an Authority Monitoring Report containing information on the implementation of the Local Development Scheme (LDS) and the extent to which the policies set out in the Local Development Framework (LDF) or Local Plan documents are being achieved (previously known as Annual Monitoring Report).

Conservation Area – an area of special architectural or historic interest, the character or appearance of which is desirable to preserve or enhance.

Community Infrastructure Levy (CIL) – A new levy that allows local authorities in England and Wales to raise funds from developers undertaking new building projects in their area.

Core Strategy – A Development Plan Document setting out the spatial vision and strategic objectives of the planning framework for an area, having regard to the Community Strategy

Development Plan – A document setting out the local planning authority's policies and proposals for the development and use of land and buildings in the authority's area. This includes adopted Local Plans, neighbourhood plans and the London Plan.

Development Plan Document – Statutory documents within the Local Development Framework which are subject to specified consultation periods and are subject to independent examination.

Evidence Base – The information and data gathered by local authorities to justify the "soundness" of the policy approach set out in Local Development Documents, including physical, economic, and social characteristics of an area.

Independent Examination – The process by which a planning inspector may publicly examine a Local Plan before issuing a binding report.

Inspector's Report – A report issued by a planning inspector regarding the planning issues debated at the independent examination of a development plan or a planning inquiry.

Local Development Framework (LDF) – A 'folder' of documents, which includes all the local planning authority's Local Development Documents.

Local Development Scheme (LDS) – The local planning authorities scheduled plan for the preparation of Local Development Documents.

Local Plan – The plan for the future development of the local area, drawn up by the local planning authority in consultation with the community

London Plan – The Spatial Development Strategy prepared by the Greater London Authority (GLA) for the strategic planning of the Greater London area. The London Plan forms part of the Development Plan for the Borough.

National Planning Policy Framework – (replaces previous Planning Policy Statements and Planning Policy Guidance)

Statement of Community Involvement – The Statement of Community Involvement sets out the processes to be used by the local authority in involving the community and other stakeholders in the preparation, alteration and continuing review of all Local Development Documents and Development Control decisions.

Supplementary Planning Documents (SPD) – Documents which add further detail to the policies in the Local Plan. They can be used to provide further guidance for development on specific sites, or on particular issues, such as design. Supplementary Planning Documents are capable of being a material consideration in planning decisions but are not part of the Development Plan.

Havering
LONDON BOROUGH

CABINET MEETING
19th JULY 2017

HAVERING LOCAL PLAN

EVIDENCE BASE AND PROCEDURAL DOCUMENTS

Annex 4 – Summary of Evidence Base and Procedural Documents

- Consultation Statement - sets out how the Council considers it has fulfilled its statutory duty to consult and engage with the public on the preparation of the new Local Plan. (Annex 5);

- Duty to Co-operate Statement 2017 - sets out how the Havering Local Plan has been prepared in accordance with the Duty to Co-operate (DtC). The DtC places a legal duty on local authorities and other public bodies to engage constructively, actively and on an on-going basis to maximise the effectiveness of Local Plan (Annex 6);

- Health Impact Assessment 2017 - evaluates the health impacts of the Local Plan policies and provides recommendations for enhancing positive health impacts and for minimising negative impacts (Annex 7);

- Equalities Impact Assessment 2017 - assesses the likely (or actual) effects of Local Plan policies on the seven protected characteristics, including age, disability, gender, race, religion, sexual orientation and marital status (Annex 8);

- Sustainability Appraisal 2017 - identifies and evaluates the plan's impacts having regard to social, environmental and economic impacts and helps to ensure that the plan accords with sustainable development principles. (Annex 9);

- Habitats Regulation Assessment 2017 - identifies any aspects of the Local Plan that would cause an adverse effect on the integrity of Natura 2000 sites, otherwise known as European sites an advises on appropriate policy mechanisms for delivering mitigation where such effects were identified (Annex 10);

- Outer North East London Strategic Housing Market Assessment and Update for Havering 2016 - undertaken with the London Boroughs of Barking and Dagenham and Redbridge. This SHMA outlines the objectively assessed need for private and affordable housing within the housing market area for the outer north east London area. Updated population and household projections have since published by the GLA and a separate update report has been prepared to take account of these projections (Annexes 11 and 12);

- Housing Position Statement 2017 – provides further detail and justification for the approach to housing delivery (Annex 13);

- Retail and Commercial Leisure Needs Assessment 2015 - considers the current retail and leisure provision within the borough's town centres, as well assessing the need for new retail and leisure floorspace over the Plan period (Annex 14);

- Employment Land Review 2015 - considers the current quantity, quality and viability of the borough's employment land as well as future need (Annex 15);

- Open Space, Allotments and Sport and Recreation Needs Assessment 2016 - provides a comprehensive assessment of the borough's existing supply of and future need for open spaces, allotments and sports facilities and comprises of:
    - Open Space Assessment Report (Annex 16)
    - Open Space Standards Paper 2016 (Annex 17)
    - Indoor Sport and Leisure Facilities Assessment Report 2016 (Annex 18)
    - Indoor Sport and Leisure Facility Strategy 2016 (Annex 19)
    - Playing Pitch Strategy Assessment Report 2016 (Annex 20)
    - Playing Pitch Strategy and Action Plan 2016 (Annex 21);

- Infrastructure Delivery Plan 2017 - identifies the infrastructure needed to support the population and housing growth over the plan period. The Study covers transport, water supply, wastewater and its treatment, energy, telecommunications, utilities, waste, health, social care, education and burial space throughout the Borough (Annex 22);

- Gypsy and Traveller Accommodation Assessment 2017 - provides a robust assessment of current and future need for Gypsy, Traveller and Travelling Showpersons accommodation within the Borough (Annex 23);

- Gypsy and Traveller Position Statement 2017 - provides further detail and justification for the approach to the provision of gypsy and traveller sites (Annex 24);

- Town Centre Position Statement 2017 - provides an up to date understanding of the uses and vacancies within each town centre and the justification for the approach to town centre uses (Annex 25);

- Wind Resource Evidence Base 2016 - identifies areas within the borough which are potentially suitable for the development of wind turbines. This is in response to the Written Ministerial Statement (HCWS42) on the 18th of June 2015 and the subsequent amendments to the Planning Practice Guidance, which state that Local Planning Authorities should only grant planning permission for wind turbines if the development site is in an area identified as suitable for wind energy development in a Local Plan (Annex 26);

- Green Belt Study 2016 - assesses Havering's Green belt against the purposes of green belt as set out in the National Planning Policy Framework (Annex 27);

- Residential Car Parking Standards 2017 – draws together a range of evidence to help to inform the residential parking requirements in Havering (Annex 28);

- Viability Assessment 2017 - determines the likely impact that the policies and standards in the Local Plan will have on the viability of developments within the borough, and shows (in general terms) that the cumulative impact when considering the Plan as a whole does not put the implementation of the Plan at risk (Annex 29);

- Strategic Flood Risk Assessment 2016 - informs the location of future development and provides recommendations for planning policies to appropriately manage flood risk in the borough (Annex 30);

- Transport Position Statement 2016 - sets out Havering's transport context, challenges and strategic transport aspirations the Council believes are needed to deliver its Vision and to support the growth and development expected over the next 15 years (Annex 31);

- Havering Strategic Modelling Technical Note 2016 - provides a high level analysis of the performance of the highway network over the lifetime of the Local Plan up to a forecast year of 2031 including distribution of traffic growth and locations of delays across Havering paying particular attention to the TLRN (Annex 32); and

- Havering Sites of Importance for Nature Conservation Review 2017 - Provides an overview of the proposed changes to Sites of Importance for Nature Conservation including a detailed justification (Annex 33).

1 Introduction

1.1 This consultation statement, prepared in accordance with the Town and Country Planning (Local Development) (England) (Amendment) Regulations 2012, sets out how the Council considers it has fulfilled its statutory duty to consult and engage with the public on the preparation of the new Local Plan.

1.2 The Havering Local Plan will replace the 2008 Havering Local Development Framework and will outline plans for how the Council will deliver its Vision- Making a Greater London and the management of future development in the borough until 2031, whilst outlining clear policies on the type and standard of development that should take place.

1.3 The Council is aware of the vital role of public engagement in the plan making process and is committed to ensuring that the Local Plan has support from all stakeholders including residents.

1.4 The Council's Statement of Community Involvement (SCI) sets out how the Council will involve local people when preparing planning documents. In undertaking the consultation on the Local Plan the Council has followed the principles of the SCI.

1.5 Havering's Consultation process has included; an initial Regulation 18 consultation (completed in 2015), and the publication of the Havering Local Plan 'Direction of Travel' Document in December of 2016. The Council has also taken a positive and open approach to comments and sites submitted throughout the preparation of the Local Plan. Additionally, Havering Council has been in the process of fulfilling its on-going statutory 'Duty to Co-operate' commitments, further details of which are set out in the Council's Duty to Co-operate Statement.

2 Consultation Process

2.1 Regulation 18 Consultation

2.1.1 Initial consultation ran for a six week period from the 9th February until the 23rd March 2015. The Council specifically consulted with the organisations, bodies and groups identified in Appendix B in order to gather their views on the issues facing the borough and preferred and alternative options for tackling these issues. The document was made available online on the planning policy pages of the Havering website and was also sent to 704 stakeholders held on the Local Plan Consultation Database (LPCD) which included statutory bodies, local amenity and residents' groups, businesses and individual residents.

2.1.2 There were 73 separate consultee responses raising 494 comments. The Consultation responses have been collated to form a brief overview of the responses

received towards each question and how the Council have addressed these concerns.

2.1.3 The key points that arose from consultation are summarised in section 3 of this document.

2.1.4 The table below outlines the consultation methods adopted throughout the initial stages of the development of the new Local Plan to satisfy the requirements of a Regulation 18 Consultation.

Table 1: Regulation 18 consultation procedure

Requirements of Regulation 18 Consultation Statement in accordance with Town and Country Planning (Local Development) Regulations 2012	**How the Council satisfied the requirement**
Which bodies and persons the local planning authority invited to make representations under regulation 18.	Local Plan Consultation Database (LPCD) consultees were notified on the opportunities to participate in preparation of the new Local Plan. The LPCD consisted of residents and organisations who had consulted on previous policy matters, those that had contacted the planning department directly for inclusion on the database and statutory bodies for which the council must satisfy commitments to engage in ongoing duty to co-operate obligations.
How those bodies and persons were invited to make representations under regulation 18.	Consultation ran for a period of 6 weeks from 9th February 2015 to 23rd March 2015. This included a period of publicity across the Borough, with public notice regarding the Local Plan placed in 'The Romford Recorder,' (a local newspaper) on Friday 13th February 2015. A press release was also publicised on: http://www.hornchurchlife.co.uk/havering-2/havering-holds-consultation-on-new-havering-local-plan/. This can be viewed in Appendix 4. Such publicity was prepared in an attempt to raise awareness of the upcoming Local Plan Consultation and the opportunity for

	inclusion on the LPCD. Emails were sent to 602 residents and organisations stored on the Local Plan Consultation Database (LPCD), with a further 102 letters delivered to participants without access to email. Copies of the consultation questionnaire were made available at the Romford Public Advice and Service Centre and all Libraries in the borough. See Appendix 2 & 3 for details.
A summary of the main issues raised by the representations made pursuant to regulation 18.	The main issues raised in the representations are summarised in section 3 of this document. Summary paragraphs were generated through identifying general themes within the responses which allowed them to be grouped together. However, it should be noted that the Council has considered and taken account of every comment individually (see below).
How any representations made pursuant to regulation 18 have been taken into account.	The Council has responded to each comment submitted to the Council following the period of consultation. Replies also outlined how the comments have informed the Local Plan. These can be found in a separate Annex.

2.2 Direction of travel

2.2.1 The publication of the Havering Local Plan Direction of Travel (DoT) document in November 2016 was not a statutory requirement; however the Council was committed to continue to engage with stakeholders and provide them with an update on the progress of the Local Plan, its timeframe for delivery as well as the emerging vision, strategic objectives and spatial strategy. The Council also welcomed comments on the progress of the Local Plan work to date.

2.2.2 The DoT document was sent to an expanded Local Plan Consultation Database of 3814 stakeholders, ranging from residents & public bodies, to developers, neighbouring boroughs and planning consultancies, this included any stakeholders that had previously commented on the initial Regulation 18

consultation. The Local Plan consultation database had expanded as a result of the publicity around the Regulation 18 Consultation as well as a wider Council initiative to connect with local residents.

2.2.3 The Direction of Travel asked for comments to be submitted between the 28th November 2016 and the 30th December 2016. The table below outlines the consultation methods the council adopted.

Table 2: Direction of Travel Procedure

Method	**How**
Emails and Letters to Local Plan Consultation Database	LPCD consultees notified on opportunities to participate in preparation of the new Local Plan. Emails sent to 3,711 residents and organisations on the database. Letters sent to a further 103 recipients who did not have access to email, with hard copies provided on request. This can be found in Appendix 5.
Internet	Documents available to download from: www.havering.gov.uk

2.2.4 Although not a statutory requirement, this statement will provide a summary of the representations received in response to the Direction of Travel document and a summary of how these have neem taken into account will be provided, similar to the Regulation 18 Consultation.

2.3 Sustainability Appraisal Scoping Report

2.3.1 Consultation on the draft Local Plan Sustainability Appraisal Scoping Report took place between Monday 24 November 2014 and Monday 12 January 2015. The responses are summarised in a separate statement that can be found on the Council's website.

2.4 Duty to Co-operate

2.4.1 The 'Duty to Co-operate' was introduced in the Localism Act 2011 an. It places a legal duty on local authorities and other public bodies to engage constructively, actively and on an on-going basis to maximise the effectiveness of Local Plan preparation in the context of strategic cross-boundary matters.

2.4.2 A separate Duty to Co-operate Statement has been prepared, outlining how the Duty has been satisfied for the preparation of the Local Plan.

2.5 Submitted sites

2.5.1 During the preparation of the Local Plan landowners and developer and have submitted details of specific sites to be considered for development. These sites have been submitted throughout the following stages:

- Havering call for sites 2014 undertaken as part of the Havering Employment Land Review 2015
- Havering Local Plan Regulation 18 consultation 2015
- Havering Local Plan Direction of Travel publication 2016
- Green Belt sites submitted outside of a consultation or call for sites periods

Havering Call for Sites 2014

2.5.2 Alongside the preparation of the Havering Employment Land Review (2015) the Council ran a Call for Sites in accordance with the Government's Planning Practice Guidance (PPG). This included housing sites that are capable of delivering five or more dwellings or economic land uses (retail, leisure, cultural and community facilities, offices, warehousing or industrial uses) of 0.25ha or 500sq m of floorspace and above. Sites were able to be submitted until 6 October 2014. A total of 39 sites were submitted during the Call for Sites. 34 of these sites were submissions for potential release from the Green Belt.

Havering Local Plan Regulation 18 consultation 2015

2.5.3 Initial consultation on the Local Plan (Regulation 18) ran in early 2015 (refer to section 2.1 for further information). A total number of 27 sites were submitted during the consultation.

Havering Local Plan Direction of Travel publication 2016

2.5.4 The Council published the Havering Local Plan Direction of Travel document in late 2016 (refer to section 2.2 for further information). Members of the public and stakeholders were invited to comment on this document. 1 site was submitted, which was located in the Green Belt.

Sites submitted outside of a formal consultation or call for sites stage

2.5.5 The Council has maintained an open dialogue with landowners, planning agents and developments throughout the preparation of the Local Plan with regards to the submission of potential development sites. The Council has therefore accepted the submission of sites within outside of the consultation and Call for Sites periods. 38 sites have been submitted to the Council after the Regulation 18 consultation all of which were in the Green Belt.

2.5.6 Sites known to the Council prior to the start of the Local Plan process have also been considered during the preparation of the Local Plan.

Objections to submitted sites

2.5.7 In addition to the sites submitted to the Council for potential development, the Council has also received a number of representations from individuals and resident groups objecting to the development of certain sites within the Green Belt. This included a petition against any development of the Mardyke Farm site. The Council has taken these comments seriously, and considered them in the approach to sites in the Local Plan. The objections against sites have been taken into consideration in the responses to sites as set out in section 3 of this statement.

3 Summary of main issues

3.1 Regulation 18 Consultation Responses

3.1.1 The Regulation 18 public consultation followed a questionnaire format with 17 questions. There were 73 separate consultee responses raising 494 comments. This included 4 consultee responses received outside of the formal consultation period yielding 4 comments. The consultation responses have been collated to form a brief overview of the responses received towards each question and how the Council have addressed these concerns.

3.1.2 The key points that arose from consultation are summarised below. However, given the diversity of stakeholders who responded and the breadth of comments made it is not possible to fully reflect all of the comments that were made.

3.1.3 All comments received and the Council's responses to the representations are set out in full in Appendix 6 and should be referred to for further detail.

Q1 – Do you agree that these are the right priorities for the new Havering Local Plan?

RESPONSES	***45/73***
Consultants & Developers	*17*
Residents	*16*
Public Bodies	*12*

Key themes from the responses:

- General high level support for the priorities
- Greater detail sought

Q2 – *How should the Local Plan support business growth, training opportunities and a strong local economy?*

RESPONSES	***35/73***
Residents	*13*
Consultants & Developers	*13*
Public Bodies	*7*

Key themes from the responses:

- General support for business growth

- There is a need to ensure sufficient land is available for employment uses
- Requests for an updated Employment Land Review
- Support for apprenticeships, training and skills
- There is a need for supporting transport infrastructure
- Some support for release of the Green Belt for economic benefit

Q3 - What do you think the Local Plan priorities for housing should be?

RESPONSES	***43/73***
Consultants & Developers	*20*
Residents	*15*
Public Bodies	*8*

Key themes from the responses:

- The need to meet and exceed the minimum London Plan housing target
- Prioritise sustainable locations for new housing development
- The need to provide a mix of homes
- To meet the need for gypsy and traveller accommodation
- Support for high quality housing
- Support for affordable housing
- Support for extra care housing
- The need to ensure supporting infrastructure alongside new homes
- Some support for the Green Belt to be used for housing development
- Some concern about new housing in areas that have already seen development such as Romford

Q4 - Where do you think new homes should be located?

RESPONSES	***45/73***
Consultants & Developers	*22*
Residents	*16*
Public Bodies	*7*

Key themes from the responses:

- Support from landowners and agents for development in the Green Belt, particularly using low quality green belt
- Requests for a Green Belt Review

- Support for development in sustainable locations such as town centres
- Support for development of brownfield land
- Support from residents to protect the Green Belt and open space from Development

Q5 - How do you think the Local Plan should continue to support the protection, improvement and growth of the Borough's town centres?

RESPONSES	***30/73***
Residents	*15*
Consultants & Developers	*11*
Public Bodies	*4*

Key themes from the responses:

- Support from landowners and agents for development in the Green Belt, particularly using low quality green belt
- Requests for a Green Belt Review
- Support for development in sustainable locations such as town centres
- Support for development of brownfield land
- Support from residents to protect the Green Belt and open space from Development

Q6 - What do you think the transport priorities in Havering are and how should the Plan address them?

RESPONSES	***37/73***
Residents	*16*
Consultants & Developers	*11*
Public Bodies	*10*

Key themes from the responses:

- Recommendation to take account of other strategic transport projects in the sub-region
- Requests for public transport improvements across the borough, particularly to essential services
- Support for the promotion of sustainable transport modes
- Support for measures to tackle congestion

Q7 - How do you think the plan should address the need for community facilities and services including schools and health provision?

RESPONSES	***31/73***
Residents	*15*
Consultants & Developers	*10*
Public Bodies	*6*

Key themes from the responses:

- Request for the Local Plan to be supported by evidence concerning the provision of infrastructure
- To plan for sufficient school places
- To provide health centres
- To use developer contributions to fund for community infrastructure

Q8 - How do you think the Plan should support the culture and leisure offer within Havering?

RESPONSES	***29/73***
Residents	*15*
Consultants & Developers	*11*
Public Bodies	*3*

Key themes from the responses:

- To retain existing cultural and leisure facilities
- To promote facilities in accessible locations
- To enhance the beneficial use of the Green Belt
- Need to modernise facilities

Q9- How do you think the Local Plan should protect and enhance the Borough's Green Belt

RESPONSES	***44/73***
Consultants & Developers	*19*
Residents	*15*
Public Bodies	*10*

Key themes from the responses:

- To protect the Green Belt from development
- To make the underperforming areas of the Green Belt available for development
- To enhance the beneficial use of the Green Belt for recreation and biodiversity
- Requests for a Green Belt Review
- To provide for Gypsy and Traveller sites in the Green Belt to meet local needs
- To continue to support mineral extraction in the Green Belt

Q10- Do you have any revisions to the Green Belt boundary?

RESPONSES	***33/73***
Consultants & Developers	*18*
Residents	*12*
Public Bodies	*3*

Key themes from the responses:

- The submission of 24 sites by landowners and developers for potential Green Belt release, the majority for housing development
- Support from residents to protect the Green Belt from development
- Requests for a Green Belt Review

Q11- How do you think the Local Plan should seek to address Climate Change and sustainability?

RESPONSES	***33/73***
Consultants & Developers	*15*
Residents	*14*
Public Bodies	*4*

Key themes from the responses:

- Support for renewable energy provision, energy efficiency and recycling
- Need to address air quality issues
- To promote development in sustainable locations
- To minimise emissions and address flood risk

Q12- How do you think the Local Plan should manage the natural environment?

RESPONSES	***32/73***
Residents	*14*
Consultants & Developers	*11*
Public Bodies	*7*

Key themes from the responses:

- To ensure management and maintenance of parks, rivers and green spaces
- To make sure development does not impact on nature conservation sites and protected species

Q13- How do you think the Local Plan should seek to address the production and management of waste?

RESPONSES	***22/73***
Residents	*13*
Consultants & Developers	*5*
Public Bodies	*4*

Key themes from the responses:

- To minimise the production of waste and promote the use of secondary aggregates
- To encourage recycling
- Support for the protection of existing waste management facilities

Q14 - How do you think the Local Plan should address the provision of minerals?

RESPONSES	***18/73***
Residents	*11*
Consultants & Developers	*4*
Public Bodies	*3*

Key themes from the responses:

- Acknowledgement of the need to meet the London Plan apportionment

- To promote the restoration of quarries
- Support for continued mineral extraction in the Green Belt

Q15 – How do you think the Local Plan should ensure high quality design?

RESPONSES	***23/73***
Residents	*14*
Consultants & Developers	*6*
Public Bodies	*3*

Key themes from the responses:

- Support for high quality design which is in keeping with the local area
- To consider density on a site-by-site basis

Q16 - How do you think the Local Plan should protect and enhance Havering's heritage assets?

RESPONSES	***17/73***
Resident	*11*
Public Bodies	*5*
Consultants & Developers	*1*

Key themes from the responses:

- Support for the protection of Havering's heritage assets including Conservation Areas and Listed Buildings
- Support for the protection of valuable landscapes

Q17 – Do you have any additional comments?

RESPONSES	***43/73***
Consultants & Developers	*19*
Public bodies	*13*
Resident	*11*

Key themes from the responses:

- Acknowledgements and commitments to co-operate from local authorities and public bodies
- Additional justification regarding the submitted sites

3.2 Direction of Travel Responses

3.2.1 The Direction of Travel document yielded responses from 20 recipients. These responses have been divided into key themes that were identified to form a brief overview of responses received in reference to the document. The key points that arose from consultation and the Council's responses are summarised below.

TOTAL RESPONSES	***20***
Public bodies	*8*
Residents	*7*
Consultants & Developers	*5*

Key themes from the responses:

- To retain green and open spaces
- Support to retain the Green Belt
- The need to plan for Traveller sites
- Need for town centres to adapt to changing
- Support for improved transport links
- Support for comprehensive development in the borough's Housing Zones
- Requests for a Green Belt Review
- To safeguard land for the provision of new schools
- Request for evidence base regarding sports facilities
- Request for transport evidence
- To set out a robust framework for sustainable development while enhancing the historic environment

4 Council's response to sites submitted

4.1 Section 2.5 sets out how specific sites have been submitted throughout the preparation of the Local Plan. The details of these sites are listed in Appendix 8 and additional information that has been submitted in support of these sites is set out in Appendix 9.

4.2 Majority of the sites put forward are within the Green Belt and the Council's response to these is set out below.

4.3 The Council's response to non-Green Belt sites is set out in Appendix 8.

Green Belt Sites

4.2 Over the course of the preparation of the Local Plan 81 sites located within the Green Belt have been submitted to the Council for potential release. One site has been withdrawn, making the total number of Green Belt sites at 80.

4.3 The National Planning Policy Framework (NPPF) is clear that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of a Local Plan.

4.4 The Council has prepared a Green Belt study which found that all of the Green Belt in the borough makes a contribution towards the purposes of the Green Belt identified in the NPPF. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Local Plan.

4.5 Green Belt boundaries therefore remain unchanged within the Local Plan. Please refer to the Green Belt Study and Housing Position Statement for further information.

Havering

Havering holds consultation on new Havering Local Plan

The London Borough of Havering is in the process of preparing a new Local Plan, which will plan for and manage development in Havering up until 2031 and set out clear policies on what will or will not be permitted and where.

The borough is giving a list of strategic priorities that they believe the Local Plan should be addressing and giving you the chance to comment on these priorities. The priorities they have listed are:

- Business growth and economic activity
- New housing provision
- Town centre development
- Transport Infrastructure
- Social Infrastructure including schools and health provision
- Culture and leisure provision
- Protecting and enhancing the Green Belt
- Environmental management and climate change
- Waste management and minerals extraction
- Delivering high quality design
- Protecting and enhancing Havering's heritage assets

For more information about all of the above priorities please take a look at the document online here

Representations must be made online here, or in writing, to the Council **by 5.00pm on Monday 23 March 2015.**

Written responses should be sent by email to Development Planning or by post to:

Development Planning, London Borough of Havering, Town Hall, Main Road, Romford, RM1 3BD

Further information and a questionnaire is available on the Council's website

The Questionnaire and Response form are available to download. Copies of the Questionnaire are also available at the Romford Public Advice and Service Centre between 9am and 5pm, and all Libraries in the borough. Alternatively you may request a copy from: developmentplanning@havering.gov.uk or 01708 432522.

Date: 29th November 2016

www.havering.gov.uk

Dear Sir or Madam;

Re: Local Plan Direction of Travel

The London Borough of Havering is in the process of preparing a new Local Plan which will set out the Council's planning policies to guide future development and land use within the Borough over the next 15 years.

The Council has now published a Local Plan Direction of Travel document which provides an update on the progress of the Local Plan and the timeframe for its delivery. It also sets out further details on the emerging vision, objectives and spatial strategy for the Local Plan that will be reflected in the Pre-Submission Local Plan in due course. This document can be viewed on the Council's website;

https://www3.havering.gov.uk/Pages/Services/Current-consultations.aspx

Alternatively if you require a hard copy of the Direction of Travel Document please contact the development planning team on the telephone number provided.

Subject to Member approval, formal consultation on the Pre-Submission version of the Local Plan (under Regulation 19) is scheduled to commence in early 2017, followed by submission to the Planning Inspectorate in spring 2017.

The Direction of Travel is not a formal part of the Local Plan process and is not subject to statutory consultation. However, it is important that the Local Plan reflects issues that are important to our stakeholders and we welcome comments during the preparation of the Plan.

If you have any comments that you would like to be taken into consideration as the Local Plan progresses please send them to us by 30th December 2016. Comments can be sent to developmentplanning@havering.gov.uk or The Development Planning Team, London Borough of Havering, Town Hall, Main Road, RM1 3BD.

If you have previously submitted comments, there is no need to resubmit these as they are already being considered.

The Local Plan pages of the Council's website contain up to date information about the progression of the Plan and stakeholders are advised to check these pages to keep abreast of progress.

Kind regards
Development Planning Team

Havering

1. Introduction

1.1 Initial (regulation 18) consultation on the Local Plan ran for a six week period from Monday 9th February until Monday 23rd March. The consultation material included a questionnaire comprising of 17 questions on different planning policy issues. 73 responses were received and are set out in this document. This includes 4 responses received outside of the formal consultation period.

1.2 Section 2 provides a list all of the individuals and organisations that responded to the consultation. Each consultation response has been allocated a 'response number'. This is for clarity and identification purposes.

1.3 Section 3 sets out the responses received to each of the 17 questions within the consultation questionnaire. The responses are included in full and as submitted, they have not been summarised or edited.

1.4 Where respondents did not identify which questions or 'policy topics' they were referring to, their responses have been included under question 17 (additional comments).

1.5 Section 4 includes supplementary (largely non text based) information that was submitted as part of the responses such as maps and diagrams.

1.6 Section 5 provides a summary table of who responded to each question.

Question 1: Do you agree that these are the right priorities for the new Havering Local Plan

Response Number	Respondent Name	Response to Q1	Council's response
REG18.1	AECOM	We would have welcomed more detailed priorities for the Plan to deliver, rather than a series of topics that are generalist.	Noted. The Proposed Submission version of the Local Plan provides further details on the local priorities issues being tackled.
REG18.2	Adams Family (Bidwells)	We agree, but in seeking to protect and enhance the Borough's Green Belt the Council should take account of the other priorities identified and whether or not the current Green Belt boundary is still suitable. In doing so, the Council should consider changes in the character of land within and adjoining the Green Belt and whether or not all of the land currently designated still performs a valuable function. Land which no longer serves the purposes of the Green Belt could be better utilised to address other Local Plan priorities, including the need for new housing. The Council will clearly need to take account of significant pressure for new development during the Plan period and balance competing demands for a limited land resource. At the same time, many areas of Green Belt offer opportunities for enhanced access and recreation, including the land owned by my client, and limited new development may enable its beneficial use.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.3	Anonymous	No	Noted.
REG18.8	Brett Aggregates Limited (MJCA)	We agree that the priorities raised are suitable as they cover a range of economic, social and environmental issues and acknowledge and include the need to address mineral extraction.	Support noted.
REG18.9	C. Cole	Yes, need to include police and safety.	Support noted. The Proposed Submission version of the Local Plan includes policies referencing police and safety.
REG18.11	Clive Narrainen	Yes	Support noted.

Response Number	Respondent Name	Response to Q1	Council's response
REG18.12	D. Campbell	The culture and leisure of the community should reflect existing residents lifestyle, liaising directly with residents will help understand what is best for the town. To update local buildings to simply make buildings a bit contemporary but not change the Rainham look too drastically.	The Proposed Submission version of the Local Plan supports a diverse leisure and culture offer to meet the needs of residents. The Design policies in the Proposed Submission version of the Local Plan seek to ensure that positive local character is enhanced.
REG18.13	D.K.Symes Associates	Yes	Support noted.
REG18.14	Edward Gittins & Associates	Yes. However, rather than the adopted 'topic' approach – with segregated analysis, proposals and policies for each subject area (Housing, Employment etc.), we would wish to see a more holistic approach based on a clear Vision Statement.	Support noted. The Proposed Submission version of the Local Plan contains a vision, detailed spatial strategy as well as specific subject areas.
REG18.19	Gidea Park and District Civic Society	We agree with the priorities as listed although not necessarily in that order. It is of great importance that Havering's Heritage Assets are protected and wherever appropriate enhances, because the result, if neglected would be an everlasting loss to the Borough	Support noted. The order of the priorities does not reflect an order of significance. The Proposed Submission version of the Local Plan recognises the importance of Havering's historic environment and contains a policy which seeks to preserve and enhance heritage assets.
REG18.20	Greater London Authority	GLA officers agree that the key priorities set out for the new Local Plan are appropriate as they broadly reflect the strategic priorities contained with the relevant chapters of the London Plan.	Support noted.
REG18.21	Havering College of Further and Higher Education (Iceni Projects)	HCFHE are very supportive of the Borough's strategic priorities and objectives as defined on page 3 of the Local Plan questionnaire. In particularly HCFHE is pleased to see 'Social Infrastructure' as a key priority for the Borough over the next 15 years. However, HCFHE note that 'social infrastructure' as defined in this document refers to 'schools' and 'health provision', and as such, HCFHE encourages LBH to broaden the scope of social infrastructure to include higher and further education provision. Creating a greater focus on higher and further skills and education will also	Support noted The definition of social infrastructure in the Proposed Submission version of the Local Plan is expanded to include Higher and further education. Provision is also considered as part of the Infrastructure Delivery Plan. The Proposed

Response Number	Respondent Name	Response to Q1	Council's response
		help to contribute to LBH's key priority surrounding business growth and economic activity.	Submission version of the Local Plan contains a policy requiring major developers to provide a proportion of apprenticeships positions as part of their Employment and Skills Plan.
REG18.23	Heine Planning	NO. These do not read as priorities, merely general headings common to most plans. Disappointing to not find clearer idea as to what the actual priorities are in Havering as opposed to general themes. There would appear to be nothing of particular importance in Havering to be addressed in which case why bother with a local plan –NPPF covers all these issues. What is missing is any consideration of Gypsy Traveller issues which is a priority for this district	Noted. The Proposed Submission version of the Local Plan sets out the priorities for the Borough as opposed to general themes. With regards to Gypsy and Traveller issues, the Council has undertaken a Gypsy and Traveller Accommodation Assessment and seeks to address identified needs within the Proposed Submission version of the Local Plan.
REG18.24	Higgins Homes (Nathaniel Lichfield & Partners)	Yes	Support noted
REG18.26	Ian Weatherley	Yes – but health provision should be a priority	Support noted. The need for new Health provision is addressed within the Infrastructure Delivery Plan and the Proposed Submission version of the Local Plan contains policies to deliver the identified need.
REG18.27	Janet Davy	Yes	Support noted.
REG18.28	Joe Coogan	I agree with the general principles, though it is important to consider every site on its own merits, in particular what it contributes currently and what it could contribute.	Support noted.
REG18.29	John Peterson	In general yes	Support noted.
REG18.30	London Borough of	The priorities should say something about who new houses are for. A commitment to new housing provision alone doesn't give any indication	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the

Response Number	Respondent Name	Response to Q1	Council's response
	Barking and Dagenham	about how meeting local needs will be balanced with meeting wider London housing needs.	London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met.
REG18.31	London Borough of Bexley (officer response)	This is an officer level response to the consultation. The London Borough of Bexley is in general agreement that the broad strategic priorities identified in this consultation document are right for the London Borough of Havering and accord with national guidance (NPPF, paragraph 156).	Support noted.
REG18.32	Lee Clements	Yes	Support noted.
REG18.34	Margaret Whippy	I agree that better employment in the area will mean also that the community will have more to spend locally.	Support noted.
REG18.36	Moody Homes and Mr John Wakeling (Bidwells)	We agree, but in seeking to protect and enhance the Borough's Green Belt the Council should take account of the other priorities identified and whether or not the current Green Belt boundary is still suitable. In doing so, the Council should consider changes in the character of land within and adjoining the Green Belt and whether or not all of the land currently designated still performs a valuable function. Land which no longer serves the purposes of the Green Belt could be better utilised to address other Local Plan priorities, including the need for new housing. The Council will clearly need to take account of significant pressure for new development during the Plan period and balance competing demands for a limited land resource.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.

Response Number	Respondent Name	Response to Q1	Council's response
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	Agree	Support noted.
REG18.39	Mrs S J Ellis (Bidwells)	We agree, but in seeking to protect and enhance the Borough's Green Belt the Council should take account of the other priorities identified and whether or not the current Green Belt boundary is still suitable. In doing so, the Council should consider changes in the character of land within and adjoining the Green Belt and whether or not all of the land currently designated still performs a valuable function. Land which no longer serves the purposes of the Green Belt could be better utilised to address other Local Plan priorities, including the need for new housing. The Council will clearly need to take account of significant pressure for new development during the Plan period and balance competing demands for a limited land resource. At the same time, many areas of Green Belt offer opportunities for enhanced access and recreation, including the land owned by my client, and limited new development may enable its beneficial use.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.40	Ms M Blackman	Yes, however requires good financial management	Support noted.
REG18.41	National Grid Property (Carter Jones)	It is agreed that new housing provision is one of the most important priorities for Havering. The Local Plan must support the delivery of new homes, particularly on brownfield sites located in close proximity to town centres.	Support noted. A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on

Response Number	Respondent Name	Response to Q1	Council's response
			housing mix and tenure to ensure need is met. The Proposed Submission Local Plan supports the use of brownfield land and housing development in well-connected locations such as town centres.
REG18.43	Omega After Alpha Ltd (Bidwells)	We agree, but in seeking to protect and enhance the Borough's Green Belt the Council should take account of the other priorities identified and whether or not the current Green Belt boundary is still suitable. In doing so, the Council should consider changes in the character of land within and adjoining the Green Belt and whether or not all of the land currently designated still performs a valuable function. Land which no longer serves the purposes of the Green Belt could be better utilised to address other Local Plan priorities, including the need for new housing. The Council will clearly need to take account of significant pressure for new development during the Plan period and balance competing demands for a limited land resource.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.44	Persimmon Homes Essex	Persimmon Homes agrees that the document identifies the right priorities that will need to be considered as part of the new Havering Local Plan.	Support noted.
REG18.47	R. Watt and Partners (Phillips Planning Services)	Yes-Priorities highlighted appear to reflect likely key spatial planning issues.	Support noted.
REG18.48	R.A.Montague	Yes, but the starting point for a Local Plan should not be an externally imposed housing target. To be a local plan the borough should decide for itself what the pace of development is going to be and whether the quality of life for existing residents will be impacted by an unsustainably high indefinite growth.	Support noted. A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in

Response Number	Respondent Name	Response to Q1	Council's response
		For a system to be sustainable there should be an element equilibrium not externally imposed targets which take no account of resources or impact on the existing local community	line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met. The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 - 2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The trajectory and quality of the built environment has been addressed in the Proposed Submission version of the Local Plan Housing and Social Infrastructure Delivery policies. This is informed by the Strategic Housing Market Assessment to assess housing need. The aim of the Proposed Submission version of the Local Plan is to balance a range of issues and ensure sustainable development.
REG18.50	Rainham Preservation Society	Yes, but make mineral extraction and waste management number 1 in view of the abuse Rainham has, and is, suffered for centuries.	Support noted. The Council is committed to minimising the production of waste, maximising the re-use and recycling of waste and minimising the use of landfill. Havering seeks to address waste

Response Number	Respondent Name	Response to Q1	Council's response
			management by using the waste hierarchy principle, which requires waste prevention and reuse measures be employed as much as possible. Where waste cannot be prevented or reused, only then should recycling/composting be considered, with disposal seen as the final option for dealing with waste. Policy 36 in the Proposed Submission version of the Local Plan underpins such commitments, with developments now required to provide suitable facilities for the management, storage and sorting of waste for recycling as a matter of course. The Council's current waste strategy is outlined within the adopted Joint Waste Development Plan Document for East London prepared by the four east London Waste authority boroughs, signed with the London Boroughs of Barking and Dagenham, Havering, Newham and Redbridge. Within the Joint Waste Plan is Policy 'W2' which seeks to safeguard the capacity of existing waste management.
REG18.51	Ray Whitehouse	Yes, but I consider some of them to be sort of do your job anyway priorities. In fact if you delete environment, waste, green belt and design then you end up with the ones which need extra effort to do well.	Support noted. The Proposed Submission version of the Local Plan provides further detail on how these priorities will be delivered
REG18.52	Romford Civic Society	Yes	Support noted.
REG18.53	Romford Golf Club (Joe Coogan)	I agree with the general principles, though it is important to consider every site on its own merits, in particular what it contributes currently and what it could contribute.	Support noted.

Response Number	Respondent Name	Response to Q1	Council's response
REG18.54	Romford YMCA	Romford YMCA agrees with the key priorities which have been set out by the Council.	Support noted.
REG18.56	S.D. Olney	Yes, the local plan covers nearly all the aspects of the development of Havering.	Support noted.
REG18.57	Sheila Clements	Havering Council have always ignored resident's wishes on where priorities lie and it will not be any different this time.	Noted.
REG18.58	Sport England	Sport England is encouraged to note the inclusion of cultural and leisure facilities in the list of key priorities. The terms 'leisure' should include all sports facilities, including built facilities and playing fields.	Support noted. The term 'leisure' incorporates playing pitches, sport courts and leisure centres etc. including ancillary provision such as changing rooms.
REG18.60	Thames Water Utilities Ltd (Savills)	In commenting on planning consultations Thames Water's key considerations are to ensure that adequate water supply and waste water infrastructure is in place to serve new development, as well as to provide for existing customers. Water and sewerage undertakers have limited powers under the Water Industry Act to prevent connection ahead of infrastructure upgrades and therefore rely heavily on the planning system to ensure that where necessary essential infrastructure is provided ahead of development, either through phasing or the use of planning conditions. Thames Water therefore relies heavily on the planning process to ensure that water and waste water infrastructure is in place to serve new development. If sufficient infrastructure is not provided, capacity problems possibly leading to sewer flooding for example, could occur in some cases if we have not been given the opportunity, either through advance planning or through conditional planning approvals, to provide additional capacity prior to development. Thames Water would therefore recommend the inclusion of the following as a priority for the new Havering Local Plan: "The provision of utilities infrastructure, including water and waste water services, to support development and growth."	Ensuring that sufficient and adequate infrastructure facilities to support the quantum of proposed development are a key priority of the Proposed Submission version of the Local Plan. The need for utilities infrastructure including water and waste water infrastructure is assessed as part of the Infrastructure Delivery Plan (IDP). The Proposed Submission version of the Local Plan includes policies to manage water and waste water and these were drafted in co-operation with Thames Water.

Response Number	Respondent Name	Response to Q1	Council's response
REG18.62	Theatres Trust	The Theatres Trust agrees with culture being included as a key priority. Sustainable communities rely on a range of accessible cultural and community facilities to ensure their social and cultural wellbeing. The function of community facilities is to provide services and access to venues for the health and wellbeing, social, educational, spiritual, recreational, leisure and cultural needs of the community. Your cultural facilities include theatres, cinema, concert halls, music venues (usually in pubs), museums, libraries, public art installations and art galleries.	Support noted. The Proposed Submission version of the Local Plan sets out a positive strategy for the protection and diversification of the cultural offer in the borough.
REG18.66	Trinity Hall (Bidwells)	We agree, but in seeking to protect and enhance the Borough's Green Belt the Council should take account of the other priorities identified and whether or not the current Green Belt boundary is still suitable. In doing so, the Council should consider changes in the character of land within and adjoining the Green Belt and whether or not all of the land currently designated still performs a valuable function. Land which no longer serves the purposes of the Green Belt could be better utilised to address other Local Plan priorities, including the need for new housing. The Council will clearly need to take account of significant pressure for new development during the Plan period and balance competing demands for a limited land resource.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no land will be released from Green Belt and the Green Belt boundary will be retained as it is currently.
REG18.67	Veolia ES (UK) Ltd	The strategic priorities would appear to be appropriate.	Support noted
REG18.68	Woodland Trust	Yes	Support noted.
REG18.69	Wyevale Garden Centres (Gregory Gray	Yes	Support noted

Response Number	Respondent Name	Response to Q1	Council's response
	Associates)		
POST18.4	V. Rajan and Associates	Yes. Internal security should be added.	Support noted. Safety and security are covered in the Local Plan via the Urban design policy.

Question 2: How should the Local Plan support business growth, training opportunities and a strong local economy?

Response Number	Respondent Name	Response to Q2	Council's response
REG18.1	AECOM	Havering's emerging Local Plan should consider its role and geography as a London borough. The strong inter-reliance between the boroughs, and beyond into Essex, offers the opportunity for co-operation and joint working on employment and business growth. Collaboration between the boroughs, the GLA and the London Enterprise Panel has the potential to drive growth nationally and locally, capitalising on London's global city status and strong existing business base. A new garden village would present an opportunity to deliver a mixed use community that includes new businesses and jobs and a range of housing types and tenure. This should be considered as a growth option by Havering in the draft Plan, with new employment opportunities necessary to attract and support the residents of a new settlement.	The Proposed Submission version of the Local Plan considers Havering's role and geography as a London Borough given that it is being drafted in joint working and strong co-operation between Havering Council and other adjoining boroughs, including beyond into Essex to ensure that the potential to drive growth nationally and locally, capitalising on London's global city status and strong business base is enhanced and maximised for the benefit of Havering. Consequently, the Rainham and Beam Park Area is identified as a major growth and regeneration area where an exciting new residential neighbourhood incorporating mixed use community that includes retail and commercial units linked to the delivery of a new railway station on the existing C2C line at Beam Park is being established within the London Riverside Opportunity Area, as it has the capacity to provide significant number of new homes and jobs. Whilst seizing this opportunity to deliver this new garden community the Proposed Submission version of the Local Plan strategy also seeks to assure the protection of employment and Green Belt areas and direct the delivery of the majority of new

Response Number	Respondent Name	Response to Q2	Council's response
			homes to appropriate sustainable locations within the borough.
REG18.2	Adams Family (Bidwells)	The Local Plan should ensure that sufficient land is allocated and protected for employment purposes throughout the Plan period, and not unnecessarily lost to residential development, particularly if such land is previously developed. There is an urgent need for a more up-to-date and robust evidence base on the suitability and demand for existing employment land within the Borough to inform forthcoming decisions on the allocation of previously developed land for new uses. We understand that a new Employment Land Review (ELR) is to be published in due course, as an update to the Council's current ELR which is now nearly ten years old (published 2006). The Council should use the new ELR to support continuing growth of the local economy. Under no circumstances should decisions be made on the loss of existing employment sites in favour of other uses without first having thoroughly assessed demand and suitability via published evidence that can be subject to independent scrutiny. Sites may have remained vacant during the economic downturn, but demand for employment land is likely to continue to improve during the Plan period. It would be short-sighted to support the loss of vacant sites simply to avoid the need to undertake a review of other potential sources of land supply, including a review of the Green Belt.	The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect employment land on the basis of the ELR.
REG18.3	Anonymous	They shouldn't support business growth. They should support apprenticeships though.	Noted. The Proposed Submission version of the Local Plan supports apprenticeship by requiring major developers to provide a proportion of apprenticeships positions as part of their Employment and Skills Plan.
REG18.8	Brett Aggregates Limited (MJCA)	The new Local Plan should recognise that a diverse and wide range of businesses are required to support sustainable growth and a strong local economy including the mineral production industry sector which provides essential materials for the construction and maintenance of buildings and	The Council is committed to minimising the production of waste, maximising the re-use and recycling of waste and minimising the use of landfill. Havering seeks to address

Response Number	Respondent Name	Response to Q2	Council's response
		infrastructure in the Borough and Greater London. The NPPF confirms (Para 142) that minerals are essential to support sustainable economic growth and the quality of life. The Plan should recognise that the principles of sustainable development enshrined in the NPPF encourage the minimisation of the use of raw materials including aggregates and encourage the use of recovered materials such as secondary aggregates from wastes. The Plan should support the development of secondary aggregate production facilities, particularly as ancillary development at quarry sites. Quarries which also provide suitable land for ancillary activities create a number of direct and indirect employment opportunities as well as demand for local goods and services.	waste management by using the waste hierarchy principle, which requires waste prevention and reuse measures be employed as much as possible. Where waste cannot be prevented or reused, only then should recycling/composting be considered, with disposal seen as the final option for dealing with waste. Policy 36 in the Proposed Submission version of the the Local Plan underpins such commitments, with developments now required to provide suitable facilities for the management, storage and sorting of waste for recycling as a matter of course. The Council's current waste strategy is outlined within the adopted Joint Waste Development Plan Document for East London prepared by the four east London Waste authority boroughs, signed with the London Boroughs of Barking and Dagenham, Havering, Newham and Redbridge. Within the Joint Waste Plan is Policy 'W2' which seeks to safeguard the capacity of existing waste management. The Joint Waste Plan sets out a strategy for sustainable waste management until 2021 and outlines preferred sites for waste management facilities (including disposal) moving forward. This will ensure that residential amenity is preserved.
REG18.9	C. Cole	– Support fewer business properties of very high quality	The Proposed Submission version of the

Response Number	Respondent Name	Response to Q2	Council's response
		– Introduce high quality residential property in town centre. – See if councils can have apprentices.	Local Plan supports the delivery of high quality business properties in line with the recommendations of Employment Land Review (2015) to meet the needs of a variety of businesses. The delivery of high quality residential units in Romford and other town centres is also supported and promoted. The Proposed Submission version of the Local Plan contains a policy requiring major developers to provide a proportion of apprenticeships positions as part of their Employment and Skills Plan.
REG18.12	D. Campbell	To build relevant resources to help unemployment in the area. To not overcrowd the area with large buildings which can over populate or overcrowd a lovely calm area	The Proposed Submission version of the Local Plan contains policies encouraging business growth and skills and training opportunities to help unemployment in the area. The Proposed Submission version of the Local Plan strategy supports the delivery of well-designed development that responds to local context and seeks to balancing development with protecting valued assets such as open spaces, green spaces, heritage assets, etc.
REG18.14	Edward Gittins & Associates	We consider that new housing and employments should, wherever possible, be planned together. This can be achieved through mixed use developments, by geographically close but separate residential/employment allocations, or by focusing residential development along the principal transportation/public transport routes to encourage ease of access to the main employment hubs.	The Proposed Submission version of the Local Plan supports new housing and employments being planned together, wherever possible and located in the most well connected areas of the borough as exemplified in the Romford Strategic Development Area, where mixed use developments incorporating residential on upper floors is promoted in town centres.
REG18.18	Essex	LB Havering may wish to consider relevant links to the Economic Plan for	Havering's Proposed Submission version

Response Number	Respondent Name	Response to Q2	Council's response
	County Council	Essex 2014 (EpfE) and 'A127 Corridor for Growth' an Economic Plan 2014, for context and to identify cross boundary projects, issues and opportunities which require co-investment. The EpfE identifies a range of projects which require co-investment with Government to secure sustainable growth across the county. ECC is therefore looking to Ministers to shape national policy and practice to help enable local government and in so doing, secure an economic return for the UK as a whole. The following projects are identified within close proximity to the LB Havering to bring forward transport investments and are funded through Network Rail, Highways Agency and other national budgets, – the Lower Thames Crossing; – a comprehensive solution to the lack of capacity at Junction 30/31 of the M25; – corridor improvements on the A12, A120 and M11 (including Junction 7a); – works at Brentwood and Shenfield Stations to support Crossrail development; – capacity improvements and integrated transport initiatives on the Great Eastern Mainline (GEML); – Exploring a smart card travel system for rail and bus travel in Essex, Southend and Thurrock; and – Upgrading stretches of the A13 in neighbouring Thurrock and in Essex to serve the new deep sea container port at London Gateway. (EpfE paragraph(s) 57) The EpfE expands on the proposals for the heart of Essex corridor for growth (A12 and Great Eastern mainline – GEML) which runs through the centre of Essex, linking London to the Haven ports, and onwards to Norfolk and Suffolk. The A12 and the GEML rail services link the key urban centres of Brentwood, Chelmsford, Colchester and Maldon. The corridor has strong links with the London labour market, supporting substantial commuter flows	of the Local Plan has been prepared in the context of growth and development within London and the wider south east region in recognition of the fact that the entire region is experiencing significant development pressure to meet the needs of its growing population. In light of this, the London Borough of Havering have been working co-operatively with neighbouring boroughs in Essex and London to identify and address cross boundary projects, issues and opportunities to ensure that its Proposed Submission version of the Local Plan has regards to these matters and is aligned to the emerging local plans of the surrounding respective Essex authorities. The Duty to Co-operate Statement sets out in greater detail how this co-operation has been taking place to address emerging strategic issues. Havering recognises the concerns Essex CC have regarding capacity constraints along the A127 and welcomed being invited in July 2016 to attend discussions with Essex and neighbouring authorities on the work that has been progressed to date on A127 Corridor for Growth project. There is an acknowledgement on all sides that tackling capacity constraints along the A127 needs to be tackled at a sub-regional

Response Number	Respondent Name	Response to Q2	Council's response
		to and from the capital. These links will grow and strengthen as Crossrail is completed, when new services will stop at Brentwood and Shenfield, both of which will benefit from planned improvement works to facilitate these new services. Additional investment in rail and road infrastructure is essential for unlocking the full economic potential of the corridor, and a package of investment is proposed to address bottlenecks on the A12 to support growth. An A13/A127 South Essex Growth Corridor has been identified. Within this growth corridor are the districts of Basildon, Castle Point and Rochford which, along with the unitary authorities of Thurrock and Southend, form South Essex. Along this corridor the A13 links the key port infrastructure of Tilbury and London Gateway with London, while the A127 corridor connects the capital to the manufacturing hub of Basildon, and to Rochford, Southend, London Southend Airport and surrounding employment areas. Development is constrained by the limited capacity of the strategic road network, particularly J30/31 of the M25 and the dual carriageway stretch of the A13. The A127 also carries a volume of traffic comparable to a motorway in other parts of the country and has significant capacity issues which need to be addressed, particularly around Basildon, London Southend Airport and the Southend central area. Southend Borough Council and ECC have developed a joint "A127 Corridor for Growth" economic plan to identify, plan and coordinate investment decisions and manage the asset. Furthermore, the potential impact of the additional Thames River crossing would be significant on transport routes in this corridor, with one of the two short-listed options being to connect the M2 in Kent with the A13 and the M25 between junctions 29 and 30. (EpfE paragraph(s) 133-136) These projects cover South Essex, the Heart of Essex and West Essex, and the emerging Havering Local Plan should have regard these projects and to the emerging local plans in the respective Essex authorities, especially	level and most recent discussions between the authorities have focussed on looking at the A127 from Gallows Corner in LB Havering out to Southend. Havering is committed to continue to work with Essex and other neighbouring authorities on addressing such issues.

Response Number	Respondent Name	Response to Q2	Council's response
		Brentwood Borough Council and Epping Forest District Council.	
REG18.21	Havering College of Further and Higher Education (Iceni Projects)	As noted within the Local Plan questionnaire, key to promoting business growth and economic activity is to ensure that local people have access to training and skills development to enable them to take advantage of, and compete for future jobs in Havering. HCFHE clearly takes a leading role on this issue as the College's existing facilities provide a number of opportunities to develop training and skills in a number of academic and vocational areas. As such, HCFHE believe that as the Local Plan evolves, it should include details on how LBH intends to support local educational institutions within the Borough. The existing college facilities seek to ensure that both young adults and those returning to education gain the necessary skills which enable them to access jobs within Havering. This process helps to strengthen the local economy.	The Proposed Submission version of the Local Plan contains a policy requiring major developers to provide a proportion of apprenticeships positions as part of their Employment and Skills Plan. The Proposed Submission version of the Local Plan sets out a positive strategy supporting education, employment and skills development opportunities for local residents. Outlining details of how LBH intends to support local educational institutions within the borough is outside the scope of the Proposed Submission version of the Local Plan. However, the needs for HCFHE are addressed through the Infrastructure Delivery Plan.
REG18.26	Ian Weatherley	By utilising and developing the existing open spaces for housing and local shopping (not shopping centres) for local communities. Health care and schools must feature more in these plans as our community gets older.	Planning is about meeting the varied needs of the community (the need for homes, business, local shops and shopping centres, access to good quality open spaces, recreation and leisure facilities, community use with the necessary infrastructure supporting these) and balancing these with competing demands for their land uses. The Proposed Submission version of the Local Plan

Response Number	Respondent Name	Response to Q2	Council's response
			recognises that health care and schools should be planned for as the society gets older by incorporating policies which support proposals that provide opportunities for healthy lifestyles and for the extension and expansion of schools. Access to good quality open space and sports facilities also play important roles in promoting healthy lifestyles as well.
REG18.27	Janet Davy	Keep rates low for local small businesses. Hornchurch has lost many specialist shops (Art, Sewing, Lighting, Curtains etc.) in recent years, presumably because they are not economically viable. The money could be recouped by increasing rates for larger business e.g. Boots and McDonalds.	The Proposed Submission version of the Local Plan supports small businesses through protecting employment sites/floor space for employment use, and through encouraging the development of affordable and flexible business spaces. Keeping rates low for small businesses is outside the scope of the Proposed Submission version of the Local Plan.
REG18.28	Joe Coogan	The Council needs to leverage the opportunities the local plan presents to unlock underused land than can contribute to the economy and improve the lives of local people. The council, especially in times of austerity, should ensure underused land that is currently contributing little or no value be considered for development. There are examples of waste land that is classified as 'Green belt' next to major roads that in reality offer no recreational value and no support to the economy.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.

Response Number	Respondent Name	Response to Q2	Council's response
REG18.29	John Peterson	Reduce parking controls outside shops	The introduction or reduction of parking controls is outside the scope of the Proposed Submission version of the Local Plan.
REG18.31	London Borough of Bexley (officer response)	In addition to supporting business growth and training opportunities within the Borough, it is suggested that the Local Plan should also support opportunities for 'larger than local' economic growth which could be realised as a result of increased transport connectivity to boroughs south of the River Thames. A potential river crossing, currently under consideration by Transport for London, between the London Boroughs of Havering and Bexley would directly connect businesses and economically active workforces on either side of the river – bringing with it the prospect of joint strategic business growth, training opportunities and the strengthening of local economies across two London Plan Opportunity Areas. This increased connectivity would support and encourage innovation and investment to the area.	Havering supports the principle of additional river crossings which improves connectivity and provides opportunities for sustainable economic growth. Havering continues to lobby and work collaboratively with Transport for London, the Highway Agency, the DfT and other relevant agencies for better transport services within the borough and between the borough and other adjoining local authorities. The Proposed Submission version of the Local Plan contains policies for improving connectivity within the borough as well as cross borough connectivity.
REG18.32	Lee Clements	By: ensuring transport infrastructure is in place to allow workers and customers to easily reach businesses; Cutting traffic congestion; Supporting small and medium sized businesses more; Investing in education and training for all ages.	The Council continues to lobby relevant bodies including DfT, TfL, and other partners to ensure transport infrastructure is in place to improve connectivity within the borough to allow workers and customers to easily reach businesses. The Proposed Submission version of the Local Plan contains policies for tackling traffic congestion 'hotspots'; and encouraging active travel and modal shift away from the car including through the School Travel Planning process, and business

Response Number	Respondent Name	Response to Q2	Council's response
			engagement activities. The Proposed Submission version of the Local Plan also contains policies for supporting small and medium sized businesses by requiring major developments to provide flexible affordable workspaces, and for supporting development proposals delivering education facilities in accordance with the Council's agreed Commissioning Plan for Education Provision and the Schools Expansion Programme, and for requiring a proportion of apprenticeships positions from major developers as part of their Employment and Skills Plan to support training opportunities.
REG18.34	Margaret Whippy	More training and skills in relevant job opportunities are essential to fit in a modern workforce for the future. Apprenticeships and more practical skills training in recent years have been decidedly lacking and encouraging employers to come to the area and contribute to this will go some way to fill the gaps in employment in areas such as engineering and/or manufacturing left out while encouraging graduates to go into IT.	The Proposed Submission version of the Local Plan contains a policy requiring major developers to provide a proportion of apprenticeships positions as part of their Employment and Skills Plan.
REG18.36	Moody Homes and Mr John Wakeling (Bidwells)	The Local Plan should ensure that sufficient land is allocated and protected for employment purposes throughout the Plan period, and not unnecessarily lost to residential development, particularly if such land is previously developed. There is an urgent need for a more up-to-date and robust evidence base on the suitability and demand for existing employment land within the Borough	The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect

Response Number	Respondent Name	Response to Q2	Council's response
		to inform forthcoming decisions on the allocation of previously developed land for new uses. We understand that a new Employment Land Review (ELR) is to be published in due course, as an update to the Council's current ELR which is now nearly ten years old (published 2006). The Council should use the new ELR to support continuing growth of the local economy. Under no circumstances should decisions be made on the loss of existing employment sites in favour of other uses without first having thoroughly assessed demand and suitability via published evidence that can be subject to independent scrutiny. Sites may have remained vacant during the economic downturn, but demand for employment land is likely to continue to improve during the Plan period. It would be short-sighted to support the loss of vacant sites simply to avoid the need to undertake a review of other potential sources of land supply, including a review of the Green Belt.	employment land on the basis of the ELR.
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	New and support infrastructure required.	Noted. The Council has assessed infrastructure needs for the Proposed Submission version of the Local Plan and set these out in the Infrastructure Delivery Plan.
REG18.39	Mrs S J Ellis (Bidwells)	The Local Plan should ensure that sufficient land is allocated and protected for employment purposes throughout the Plan period, and not unnecessarily lost to residential development, particularly if such land is previously developed. There is an urgent need for a more up-to-date and robust evidence base on the suitability and demand for existing employment land within the Borough to inform forthcoming decisions on the allocation of previously developed land for new uses. We understand that a new Employment Land Review (ELR) is to be published in due course, as an update to the Council's current ELR which is now nearly ten years old (published 2006). The Council should use the new ELR to support continuing growth of the	The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect employment land on the basis of the ELR.

Response Number	Respondent Name	Response to Q2	Council's response
		local economy. Under no circumstances should decisions be made on the loss of existing employment sites in favour of other uses without first having thoroughly assessed demand and suitability via published evidence that can be subject to independent scrutiny. Sites may have remained vacant during the economic downturn, but demand for employment land is likely to continue to improve during the Plan period. It would be short-sighted to support the loss of vacant sites simply to avoid the need to undertake a review of other potential sources of land supply, including a review of the Green Belt.	
REG18.40	Ms M Blackman	Encourage greater development and business enterprise and aspiration. Create a strategy to develop specific use zones where complementary business can develop. More focus at primary/junior school age children having basic skills in place to enable them to be educated with skills potential employers actually need. Need young people to have the potential to work or earn for themselves across a long life span. This requires skills that have adaptability	The Proposed Submission version of the Local Plan protects suitable employment land to encourage greater business development and employment creation. The Proposed Submission version of the Local Plan contains a policy requiring major developers to provide a proportion of apprenticeships positions as part of their Employment and Skills Plan. Equipping primary/junior school age children to have basic skills potential employers actually need is outside the scope of the Proposed Submission version of the Local Plan.
REG18.41	National Grid Property (Carter Jones)	There must be realistic assumptions for employment-allocated land and provisions to regularly review such allocations. This may include reassessing non-residential site allocations which clearly have the potential and capability to deliver a significant number of new homes in sustainable locations (e.g. near town centres) through a revised 'Employment Land Review'. Employment policies must also have sufficient flexibility to allow new housing. Where there is a compelling case to deliver new housing on employment-allocated land, there must be policy provisions to allow sites to be re-allocated for housing.	The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect employment land on the basis of the ELR.

Response Number	Respondent Name	Response to Q2	Council's response
REG18.43	Omega After Alpha Ltd (Bidwells)	The Local Plan should ensure that sufficient land is allocated and protected for employment purposes throughout the Plan period, and not unnecessarily lost to residential development, particularly if such land is previously developed. There is an urgent need for a more up-to-date and robust evidence base on the suitability and demand for existing employment land within the Borough to inform forthcoming decisions on the allocation of previously developed land for new uses. We understand that a new Employment Land Review (ELR) is to be published in due course, as an update to the Council's current ELR which is now nearly ten years old (published 2006). The Council should use the new ELR to support continuing growth of the local economy. Under no circumstances should decisions be made on the loss of existing employment sites in favour of other uses without first having thoroughly assessed demand and suitability via published evidence that can be subject to independent scrutiny. Sites may have remained vacant during the economic downturn, but demand for employment land is likely to continue to improve during the Plan period. It would be short-sighted to support the loss of vacant sites simply to avoid the need to undertake a review of other potential sources of land supply, including a review of the Green Belt.	The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect employment land on the basis of the ELR.
REG18.47	R. Watt and Partners (Phillips Planning Services)	It is highlighted in the consultation document that "The new Local Plan will set out where employment land and businesses are going to be located" and it is assumed that it is also proposed that there would be associated policies which would enable their growth. It is however considered that the allocation/designation of land, sites and buildings for various 'employment generating uses' (be it either existing or proposed sites) must be carefully balanced against the ever evolving demands of the market to ensure that the council is in a position to approve and support the promotion of developments which will actually deliver jobs and associated training opportunities within the borough. The provision/protection of land alone will not guarantee employment growth if the finalised policy approach provides	The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect employment land on the basis of the ELR.

Response Number	Respondent Name	Response to Q2	Council's response
		no flexibility to react to market demand.	
REG18.50	Rainham Preservation Society	We were promised high quality industry in Ferry Lane and Beam Reach, which never materialised. Priority should be given to Rainham Riverside an area designated for regeneration by LTGDC. Havering paid £50,000 for a feasibility study which confirmed the Covington's Site, Coldharbour Lane, as an ideal area for a jetty/mooring. This area, with its riverside path and walks to the RSPB is ideal for tourism and river transport.	The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect employment land on the basis of the ELR. The Proposed Submission version of the Local Plan supports better use of industrial sites in this area designated as a Strategic Development Area for major growth and regeneration to accommodate significant number of jobs and housing.
REG18.51	Ray Whitehouse	By improving access to the town centres and local shopping facilities with less reliance on hypermarkets and "express supermarkets" then it would do wonders for the local businesses and local communities. Possible more emphasis on the creation of accessible offices and light industry with supporting job creation would be great.	The Proposed Submission version of the Local Plan supports initiatives (e.g. working with partners to improve accessibility into town centres for active travel users, tackling congestion "hotspots", improving road safety and the public realm within town centres, etc.) which improve access to town centres. The Proposed Submission version of the Local Plan also encourages provision of a wider retail offer and the delivery of more accessible offices and light industry space for a variety of businesses.
REG18.52	Romford Civic Society	It should promote the resilience of Romford by promoting a varied offer in the Romford economy. Is it intended that the plan should control the ability to convert office space to residential space?	The Proposed Submission version of the Local Plan promotes a varied offer in Romford economy by encouraging mix-use schemes incorporating residential on upper floors over commercial units on the ground

Response Number	Respondent Name	Response to Q2	Council's response
			floor. Controlling the ability to convert office space to residential is outside the scope of the Proposed Submission version of the Local Plan. The conversion from office to residential is controlled via Permitted Development Rights.
REG18.53	Romford Golf Club (Joe Coogan)	The Council needs to leverage the opportunities the local plan presents to unlock underused land than can contribute to the economy and improve the lives of local people. The council, especially in times of austerity, should ensure underused land that is currently contributing little or no value be considered for development. There are examples of waste land that is classified as 'Green belt' next to major roads that in reality offer no recreational value and no support to the economy.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.54	Romford YMCA	The Local Plan should support business growth through an increase in inward investment into the borough. It should: – Initiate a regular review of employment land and, where appropriate, policies to protect existing employment sites; – Work with partners, such as the London LEP, the Mayor of London, the Chamber of Commerce, Federation of Small Businesses and the voluntary sector to identify strategic employment areas – Recognise and support the borough's local strengths, its proximity to London and key transport links	The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect employment land on the basis of the ELR. The Proposed Submission version of the

Response Number	Respondent Name	Response to Q2	Council's response
		Businesses key assets are its staff, so Romford YMCA would like to see opportunities for young people to access relevant training courses, which lead onto employment in the borough. Romford YMCA sees the further education sector as being key to address some the shortfall with the gap in skills.	Local Plan contains a policy requiring major developers to provide a proportion of apprenticeships positions as part of their Employment and Skills Plan.
REG18.56	S.D. Olney	By promoting business to locate in Havering, this will develop both training and a buoyant economy.	The Proposed Submission version of the Local Plan strategy promotes business to locate in Havering through protecting employment land, and through encouraging delivery of flexible affordable business units of various unit sizes to meet the varied needs of small, medium and large enterprises that want to set up or expand in the borough.
REG18.57	Sheila Clements	We should not support supermarkets such as Tescos, Sainsburys, etc. and other large businesses that can easily afford to pay a decent wage for a good days work. Their staff get a pittance from these companies and our taxes should not be used to top up wages just to get people back into work. They make billions in profits, expand all over Britain until they knock all the smaller shops out and then find that they have over-reached themselves and we step in with taxpayers money. It is not right or fair.	A Retail and Leisure Needs Assessment (2015) has been published with recommendation for a net additional need of 7,500sqm convenience goods floorspace, increasing to an indicative requirement of 13,200sqm net by 2031. The Proposed Submission version of the Local Plan encourages the provision of a wider retail offer and choice from all kind of retailers. Matters relating to competition and pricing are outside the scope of the Proposed Submission version of the Local plan. .
REG18.64	Thurrock Council	Thurrock Council supports a strategy that focuses on economic growth and jobs in the town centres and key employment locations identified by the London Plan and Havering Local Plan. It is assumed that Havering supports the approach set out by the Mayor for London in the London Riverside	Support is noted. The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic

Response Number	Respondent Name	Response to Q2	Council's response
		Opportunity Area and there is no conflict with the approach between the new Local Plan and draft proposals in the Mayor's London Riverside Opportunity Area Planning Framework. The London Plan also identifies Havering as a potential Strategic Outer London Develop Centre for logistics and this should be clarified in the local plan policies. A difference is noted between the draft London Riverside Opportunity Area Planning Framework which identifies the retention and allocation of the Freightmaster Industrial Estate at Rainham as a new Strategic Industrial Land (SIL) location and the current adopted Havering Site Allocations Plan Policy SSA 12 proposal to incorporate the site as part of the London Riverside Conservation Park. The Site Allocation Plan states that retention of employment uses generate a level of vehicle movements which would conflict with enjoyment of the park. It is considered it would be necessary to understand how the continued activity and operation of Freightmaster site for employment would not have an adverse impact on the amenity and biodiversity value of the Rainham Marshes and London Riverside Conservation Park.	Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect employment land on the basis of the ELR. Consequently, the Proposed Submission version of the Local Plan's strategy supports economic growth and jobs in both town centres and key employment locations identified by the London Plan, as well as clarify the Council's support for the Mayor of London's proposed identification and designation of the borough as a Strategic Outer London Development Centre for logistics. The Proposed Submission version of the Local Plan contains policies which would ensure that adverse impacts of developments are mitigated.
REG18.66	Trinity Hall (Bidwells)	The Local Plan should ensure that sufficient land is allocated and protected for employment purposes throughout the Plan period, and not unnecessarily lost to residential development, particularly if such land is previously developed. There is an urgent need for a more up-to-date and robust evidence base on the suitability and demand for existing employment land within the Borough to inform forthcoming decisions on the allocation of previously developed land for new uses. We understand that a new Employment Land Review (ELR) is to be published in due course, as an update to the Council's current ELR which is now nearly ten years old (published 2006). The Council should use the new ELR to support continuing growth of the	The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect employment land on the basis of the ELR.

Response Number	Respondent Name	Response to Q2	Council's response
		local economy. Under no circumstances should decisions be made on the loss of existing employment sites in favour of other uses without first having thoroughly assessed demand and suitability via published evidence that can be subject to independent scrutiny. Sites may have remained vacant during the economic downturn, but demand for employment land is likely to continue to improve during the Plan period. It would be short-sighted to support the loss of vacant sites simply to avoid the need to undertake a review of other potential sources of land supply, including a review of the Green Belt.	
REG18.67	Veolia ES (UK) Ltd	The plan should provide support for and a positive approach to new and innovative industries particularly those that support the circular economy. The plan should provide support for the retention of all existing areas used for industrial and commercial purposes and provide support for the redevelopment of these areas. (Such areas would include the Freight master Estate and the Veolia Integrated Waste Management Facilities off Coldharbour Lane).	The Havering Employment Land Review (ELR) 2015 provides a robust evidence to support the protection of the Borough's Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs). The Proposed Submission version of the Local Plan includes policies to protect employment land on the basis of the ELR.
REG18.69	Wyevale Garden Centres (Gregory Gray Associates)	By supporting the sustainable growth of existing businesses including those in rural areas in accordance with para. 28 of the NPPF.	The Proposed Submission version of the Local Plan contains policies supporting the sustainable growth of existing businesses including those in rural areas.
POST18.4	V. Rajan and Associates	1. Bank finance 2. Business support 3.Training 4. Skill development 5. Innovation	Bank finance is beyond the scope of the Local Plan. The Local Plan sets out a positive approach towards skills development and training. The Business Growth policy also seeks to optimise the environment for a range of businesses in the borough.

Question 3: What do you think the Local Plan priorities for housing should be?

Response Number	Respondent Name	Response to Q3	Council's response
REG18.1	AECOM	The requirement by Local Planning Authorities to prioritise development in the most sustainable locations needs to be made upfront and clear in the plan. Clearly, the Council is faced with a higher housing need than the previous Core Strategy had planned for, and so, the new Local Plan must demonstrate how it's going to meet its objectively assessed housing need (OAHN). The Further Alterations to the London Plan (FALP) were adopted by the GLA on 10th March 2015 which includes a minimum ten year target of 11,701 for Havering between 2015-2025. This represents an annual housing target of 1,170 units, greater than the previous target of 970 units a year. When compared to the delivery of 396 net additional dwellings completed in 2012-2013 and the 464 dwellings per year in the preceding five years (2007-2008 to 2011-2012), this previous under provision of housing is an issue that must be considered by the Plan. Havering must demonstrate how they have met the Duty to Co-operate on strategic cross boundary matters with their neighbouring local planning authorities, in producing effective and deliverable policies. In this regard, meeting the Duty to Co-operate will be paramount in securing the delivery of sufficient homes; this must be reflected in the emerging Plan. Further representation is provided under the response to question 10.	The Spatial Strategy of the Proposed Submission version of the Local Plan sets out the Council's prioritisation of development in the most sustainable locations, whilst the policy on Housing supply demonstrates the proactive approach of how the Council would be seeking to increase the supply of housing in Havering. The new allocated housing target by the London Plan to the borough is acknowledged in the Proposed Submission version of the Local Plan, which also recognises that there is a significant need for new housing to meet both local need and sub regional housing need the Council forms a part of. To meet this need the Council has sought to identify additional capacity in order to close the gap between its allocated housing target and its Objectively Assessed Housing Need. In recognising that meeting both local and sub-regional housing need is a strategic matter the Council worked co-operatively with the London Boroughs of Barking and Dagenham and Redbridge with whom it forms the outer north east London sub housing market area and prepared a Strategic Housing Market Assessment.

Response Number	Respondent Name	Response to Q3	Council's response
			Consequently, a Strategic Housing Market Assessment (SHMA) 2016 has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA).
REG18.2	Adams Family (Bidwells)	The Local Plan should prioritise three key aspects: (a) achieving the London Plan's minimum targets for new housing delivery; (b) exceeding the London Plan's minimum targets to address objectively assessed housing needs and (c) ensuring that the Plan enables the provision of a suitable mix of homes in accordance with local needs. These are explained in detail below. <u>The need to achieve the London Plan's minimum targets for new housing delivery</u> The Local Plan will clearly need to conform to the requirements of the London Plan (published March 2015, consolidated with alterations since 2011), including the annualised target for Havering to deliver at least 1,170 dwellings per annum. We would strongly contend that the Council should identify and allocate additional sites to seek to significantly exceed this target, including a proportion of greenfield land, to ensure that the Local Plan is sufficiently flexible to ensure delivery. The Borough's London Plan housing target is identical to the capacity of sites identified as having potential to come forward for development during the London Plan period (2015 – 2025) in the London-wide Strategic Housing Land Availability Assessment 2013 (SHLAA). There is clearly very little margin for error in the anticipated delivery of these sites if the London Plan's objectives for Havering are to be achieved, unless additional sites are	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met. The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 - 2025 with a proviso that the annual

Response Number	Respondent Name	Response to Q3	Council's response
		identified and allocated for development to provide a sufficient buffer for non-delivery. Indeed, we would contend that there is a very real risk that not all of the sites identified in the SHLAA will be delivered as anticipated, primarily because its estimate of capacity is based entirely on a supply of previously developed, brownfield sites. We understand that any land currently located within the Green Belt was automatically discounted as unsuitable for development when assessed by the SHLAA. By their very nature, previously developed sites are generally less deliverable than greenfield land due to complications such as availability, existing use values and abnormal costs such as contamination. As a consequence, it would appear that relying entirely on brownfield land to seek to achieve the London Plan's housing target would present a very real risk of not delivering minimum targets. Havering's history of under delivery against London Plan targets compounds these concerns. Table 3.20 of the SHLAA (p86) confirms that the Borough delivered an average of only 367 dwellings between 2008 and 2012. This compares with an average London Plan target of 644 dwellings per annum during the same period and follows an average of 1,109 dwellings being granted planning permission every year between 2004 and 2012. This is an alarming pattern of undersupply that needs to be redressed. At present, there is a lack of any robust, locally derived evidence demonstrating that the supply of suitable brownfield land identified in the SHLAA will come forward as anticipated. The conclusions of the SHLAA were supported by a Viability Assessment, but this is a very broad, high level study covering the whole of London. It provides a qualitative assessment of the current housing market across the capital, but due to its very broad approach this Assessment does not provide a sound basis to conclude that sites proposed for allocation in Havering's Local Plan will come forward as anticipated. Two key weaknesses supporting this contention are highlighted below:	average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA). The Council is aware of the potential risk that not all of the sites identified in the 2013 GLA SHLAA could be delivered as anticipated. To offset this risk the Council has reviewed the supply of housing and has taken a positive and proactive approach to identify and enable development opportunities for housing use of a combination of policy tools such as optimising housing output for different types of location within the relevant London Plan density range on brownfields sites, resisting the net loss of housing, positively and proactively enabling housing intensification in Council estates, in town and district centres, along transport corridors and prioritising all non-designated land for housing when it becomes available, and supporting initiatives to bring

Response Number	Respondent Name	Response to Q3	Council's response
		– Due to the scale of the area that it needed to cover, the methodology employed by the Assessment was based on the appraisal of 40 case study sites drawn from 8 boroughs across the capital. None of these sites were located in Havering and therefore the particular issues affecting the local market were not fully examined. – Boroughs providing case study sites were selected where they were expected to make a significant contribution to overall housing land supply in London but had shown significant undersupply compared to London Plan targets in the three years to 2011/124. Havering was initially selected as a case study on this basis, highlighting concerns about the Borough amongst the authors of the report, but it was later rejected in favour of Hounslow to provide greater geographical spread. The concerns about viability in Havering where therefore never properly analysed. The SHLAA Viability Appraisal does not provide sufficient information to enable a definitive, or even a reasonable, conclusion to be reached in respect of local policy making. We would urge the Council to ensure that additional sites are identified and allocated to provide flexibility for non-delivery and to prepare additional, locally specific evidence to provide greater certainty about delivery. Without such evidence, the Local Plan would be vulnerable to a significant risk of non-delivery and would be unsound. In addition to the above, it is also pertinent to highlight that the National Planning Policy Framework (the "Framework" published 2012) requires local authorities to identify and update annually a supply of specific deliverable sites with an additional 5% buffer moved forward from later in the Plan period5 to ensure choice and competition in the market for land. This reaffirms the need to allocate sufficient sites to maintain flexibility. The Council's latest publicly available Annual Monitoring Report (AMR)6 suggests that it has a 5 year housing land supply with an additional 5%	back empty residential properties into use. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more the purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan It should, be noted that, irrespective of the inherent limitation of the broad approach in the qualitative assessment of the current housing market across London, the GLA SHLAA supported by a Viability Assessment has always been the accepted approach to identifying capacity for housing supply in London. Nonetheless, its output has always been accepted at EiPs as the basis for estimating capacity and allocating housing targets to London boroughs. A number of sites identified through the SHLAA process have already come forward for development.

Response Number	Respondent Name	Response to Q3	Council's response
		buffer as required by the Framework when assessed against the previous (2011) London Plan target. If, under a brownfield-only approach, the Council were to bring forward allocations from later in the Plan period to provide a 5% buffer and ensure flexibility in the short term, it would still be necessary to allocate further land (potentially Green Belt) to meet the displaced development requirements from the later stages of the Plan period. This could be undertaken through a partial review of the Local Plan process at that time, but such an approach carries risk because the certainty of delivery of such subsequent sites would not be known until that review process commences, contrary to the Framework. The Framework also urges local planning authorities to identify a supply of specific, developable sites or broad locations for growth for years 6-10 and, where possible, for years 11-15 of the Plan period. Without an understanding of broad locations for growth (which could be realised through a Green Belt review), the Council would not have sufficient evidence to determine how it will deliver the development required in the latter stages of the Plan period, and the Plan would be unsound. We therefore consider that the time for the Council to consider such an approach, by commissioning a Green Belt review for the consideration of such suitable sites for housing, is now. Failure to take account of any of the above would result in an inflexible and non-deliverable Plan that would be unsound. The only reasonable solution is to consider the release of Green Belt land in the preparation of the Local Plan. This is why housing delivery should be a priority in the Local Plan. <u>The need to exceed the London Plan's minimum targets to address objectively assessed housing needs</u> The Framework requires local planning authorities to significantly boost the supply of housing. It requires authorities to use their evidence base to ensure that their Local Plans meet their objectively assessed housing	

Response Number	Respondent Name	Response to Q3	Council's response
		needs. The new London Plan targets, taken as a whole, are 6,600 dwellings per annum short of meeting the objectively assessed housing needs of the capital. Nevertheless, it confirms that Boroughs should use their housing supply targets as minima, augmented by additional housing capacity to reduce the gap between local and strategic housing need and supply. This underlines the need for the Council to take full account the potential contribution of Green Belt sites which no longer serve a valuable Green Belt function. <u>Housing Mix</u> In addition to a sufficient quantum of new development, the Local Plan will also need to ensure that it enables the provision of a suitable mix of homes in accordance with local needs. The London Plan and its supporting evidence do not provide a breakdown of the mix and tenure of dwellings that should be provided in order to meet local need but a forthcoming update to the East London Strategic Housing Market Assessment (SHMA) will provide clarity on this matter. The Local Plan should therefore ensure that it adequately provides for the needed mix of housing as identified through the SHMA. It is likely that the mix of units required will include a good proportion of family homes with their own reasonably sized private amenity spaces, together with specialist accommodation, flats and affordable housing to cater for the needs of the community as a whole, to deliver mixed and balanced communities as required by the Framework. Not all types of site will be capable of delivering the mix of units required, with town centres and brownfield sites in other urban areas less likely to be capable of delivering family housing with private amenity areas and access to open space. To overcome this, the Local Plan should allocate a range of types of sites, including greenfield Green Belt land. To help illustrate this point, we are aware of a resolution by the Council's	

Response Number	Respondent Name	Response to Q3	Council's response
		planning committee in 2014 to grant permission for 497 new dwellings on the former Somerfield depot in Rainham. No affordable housing was proposed because it would have been unviable to provide it. This was a brownfield site and it is likely that many of the viability constraints apply to other previously delivered land in the Borough. If Council were to adopt a brownfield-only approach, this example indicates that the Plan may be incapable of delivering sufficient affordable housing, which would be unsustainable and therefore contrary to wider objectives. We therefore consider that the Local Plan should ensure that a suitable range of sites, including Green Belt land, are made available and allocated in the Plan in order to facilitate a suitable mix of homes.	
REG18.3	Anonymous	It is good to have mostly small developments but the prices should be much, much, much lower.	Noted.
REG18.9	C. Cole	– Small properties but top quality – Including in town centres – Develop leisure use in town centres	Noted. The Local Plan promotes high quality homes with appropriate mix and tenure that meet local needs in sustainable locations including town centres. It also supports development of leisure use in town centres.
REG18.12	D. Campbell	People who work and have families will benefit from this.	Noted.
REG18.13	D.K.Symes Associates	The Government and London Plan targets should be viewed as an absolute minimum. Priority should be given to starter homes as well as providing a mix of housing types to satisfy a range of demand.	The Local Plan seeks to meet and exceed its London Plan target as well as provide a mix of housing types, tenures and size mix including starter homes to meet the local needs.
REG18.14	Edward Gittins & Associates	The priority should be to plan to meet Havering's housing needs in full in line with the NPPF.	The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as

Response Number	Respondent Name	Response to Q3	Council's response
			informed by the Outer North East London Strategic Housing Market Assessment (SHMA). The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement
REG18.21	Havering College of Further and Higher Education (Iceni Projects)	HCFHE believe that housing should be provided across the Local Plan period to accommodate the demands of existing residents wishing to stay within the Borough, but also to provide new homes for those looking to move into the Borough.	The Proposed Submission version of the Local Plan will provide housing across the Local Plan period to accommodate the demands of existing residents wishing to stay within the borough and provide for those looking to move into the borough. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement
REG18.23	Heine Planning	To assess the need and identify suitable sites for Travellers including show persons.	The Council has undertaken a Gypsy and Traveller Accommodation Assessment and seeks to address identified needs within the Proposed Submission version of the Local Plan.
REG18.24	Higgins Homes (Nathaniel Lichfield & Partners)	Ensuring that the Borough has sufficient housing allocations to meet and exceed the latest FALP target – and the likely increase in the housing requirement following the London Plan Review; Ensuring the 'delivery' of housing, in sustainable locations across the Borough as a whole, at sites where a 'range' of sizes of new homes can be provided. Sites within the urban area alone are not 'delivering' the new homes and range of sizes required; Releasing Green Belt land for housing, where it forms a natural extension to existing urban areas, where there are clearly defined boundaries and where none of the purposes of the Green Belt are met; and,	The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA). The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing

Response Number	Respondent Name	Response to Q3	Council's response
		Maximising the density of sites where they are well served by existing services and public transport.	Position Statement The Proposed Submission version of the Local Plan promotes sustainable development and prioritises the delivery of housing in sustainable locations across the Borough at sites where a range of dwelling sizes and types can be provided. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. The Proposed Submission version of the Local Plan will seek to optimise residential output and densities consistent with the London Plan.
REG18.26	Ian Weatherley	The plans should be for high quality houses – not flats! – For families to move into and make a move into a home for a full family. This borough needs houses – not flats.	The Proposed Submission version of the Local Plan supports a mix of homes (both flats and houses) including 3+ bed properties for families.

Response Number	Respondent Name	Response to Q3	Council's response
REG18.27	Janet Davy	Given that a certain number of new homes must be provided in Havering, ensure developers must a) not delay building on sites which have planning permission, and b) include affordable housing.	Ensuring that developers do not delay building on sites which have planning permission is outside the scope of the Proposed Submission version of the Local Plan. The Proposed Submission version of the Local Plan does however seek to secure the highest level of affordable housing contribution from developers to ensure Havering residents have access to affordable homes.
REG18.28	Joe Coogan	Development of homes should be evenly spread throughout the borough. The majority of working families in Havering do not want to live in flats in Romford town centre or at Riverside. Opportunities for quality family homes to be developed in popular areas should be sought out. Areas like Upminster/Cranham and Gidea Park should be considered if underused sites can be unlocked for housing. Some housing should be affordable. It is important to build key worker specific accommodation to ensure public services can attract and retain good nurses, teachers and social workers to support the community. The development of extra care housing can also unlock family homes and help balance out Havering's ageing population. It would be interesting to see how many family homes were freed up by older persons choosing to move into Dreywood Court.	With two housing zones, an ambitious estates regeneration programme and support for appropriate development of infill, under-utilised and vacant sites throughout the borough, the Local Plan aims to spread housing development throughout the borough to ensure provision of a range of housing types and tenures, including affordable housing and extra care homes, in different locations, to meet local needs.
REG18.29	John Peterson	The current developments appear to import more people than help residents	The Proposed Submission version of the Local Plan aims to deliver the Council's new vision which focuses on four cross-cutting priorities of **Communities**, **Places**, **Opportunities** and **Connections** which is about embracing the best of what Havering has to offer and how the borough can play an active role in the success of the whole

Response Number	Respondent Name	Response to Q3	Council's response
			of London. In light of this vision, the Proposed Submission version of the Local Plan aims to promote, support and encourage balanced development which helps meet residents' needs for housing, employment, education, open space and leisure facilities, community facilities, etc., taking into account the need to minimise their adverse effects on residents and on the local environment. The expected outcome is that Havering will see significant levels of growth in the form of high quality, well managed sustainable development which will further enhance the borough as a highly desirable, attractive, safe and clean place to live, offering residents a high quality of life.
REG18.30	London Borough of Barking and Dagenham	As a borough with a relatively low proportion of affordable housing it's important that Havering helps meet London's housing need for affordable housing particularly for those on low to middle incomes.	The Proposed Submission version of the Local Plan commits to securing the highest level of affordable housing contributions as the rise in average house prices has made housing unaffordable for many of the Borough's low to middle income households.
REG18.32	Lee Clements	Ensuring that: there is sufficient infrastructure and facilities alongside new housing (not just housing estates with little else); new homes are more sustainable and well-designed; more social housing is available to local people; new homes are in-keeping with their surroundings; there are restrictions on the number of HMOs in an area; natural spaces (gardens/green spaces) are included in all developments.	The Council has worked co-operatively with a wide range of infrastructure providers, in the process of the Proposed Submission version of the Local Plan preparation, to ensure that the quality and capacity of needed infrastructure are sufficient for the proposed quantum of development; the Proposed Submission version of the Local Plan policies require

Response Number	Respondent Name	Response to Q3	Council's response
			new homes to be well-designed and be more sustainable and to provide high quality amenity space, and to secure the highest level of affordable housing contribution, with a 10% restriction threshold of properties per street being allowed to become HMOs in order to ensure mixed use communities.
REG18.33	Mr Leslie Budge (Andrew Martin Planning)	In light of the Inspector's conclusions and recommendations following the examination in public of the Further Alterations to the London Plan document, Boroughs are expected, as a minimum, to be allocating sufficient housing land to meet their housing supply targets as outlined in Table 3.1 in the FALP. For LB Havering, this means allocating land that is suitable and deliverable in sustainable locations that can provide 11,701 dwellings over the period 2015 – 2025. LB Havering conducted their Strategic Housing Land Availability Assessment 'Call for Sites' process during August / September 2014, the information from which will inform the housing strategy within the new Local Plan. The National Planning Policy Framework (NPPF) and Planning Practice Guidance (PPG) acknowledge the sustainability benefits associated with brownfield land and consequently encourage the prioritisation of previously developed land for new residential development. It is widely recognised, however, that previously developed land is a finite resource and thus, to meet identified objectively assessed housing needs, local planning authorities are accepting that a degree of development will need to be delivered on greenfield and green belt land where this complies with sustainability objectives. In light of this, LB Havering should conduct a review of their Green Belt boundaries in line with the preparation of a new Local Plan (paragraph 83 of the NPPF), in order to identify areas of land that no longer fulfil the five purposes of the Green Belt and are thus not necessary to keep permanently open.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.34	Margaret	One area has to be housing which is affordable for families some of which	The Proposed Submission version of the

Response Number	Respondent Name	Response to Q3	Council's response
	Whippy	could be low income. It is decidedly difficult for young families to save for a deposit as the costs keep rising for new houses. Funding for part rent/part buy schemes would be one way, providing enough homes with up to 3 bedrooms could be incorporated in those schemes. Schemes which give preference to local families would be an advantage as well, thereby preventing homes being advertised abroad before developers sell them locally.	Local Plan aims to securing the highest level of affordable housing contribution from development with the provision of family sized 3 bedroom or more units prioritised to meet the needs of local residents. The delivery of a variety of affordable housing products to meet the varying needs of local low to medium income households will be promoted. However, the allocation of affordable homes including schemes which give preference to local families is outside the scope of the Proposed Submission version of the Local Plan.
REG18.36	Moody Homes and Mr John Wakeling (Bidwells)	The Local Plan should prioritise three key aspects: (a) achieving the London Plan's minimum targets for new housing delivery; (b) exceeding the London Plan's minimum targets to address objectively assessed housing needs and (c) ensuring that the Plan enables the provision of a suitable mix of homes in accordance with local needs. These are explained in detail below. <u>The need to achieve the London Plan's minimum targets for new housing delivery</u> The Local Plan will clearly need to conform to the requirements of the London Plan (published March 2015, consolidated with alterations since 2011), including the annualised target for Havering to deliver at least 1,170 dwellings per annum. We would strongly contend that the Council should identify and allocate additional sites to seek to significantly exceed this target, including a proportion of greenfield land, to ensure that the Local Plan is sufficiently flexible to ensure delivery. The Borough's London Plan housing target is identical to the capacity of sites identified as having potential to come forward for development during	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met. The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The

Response Number	Respondent Name	Response to Q3	Council's response
		the London Plan period (2015 – 2025) in the London-wide Strategic Housing Land Availability Assessment 2013 (SHLAA). There is clearly very little margin for error in the anticipated delivery of these sites if the London Plan's objectives for Havering are to be achieved, unless additional sites are identified and allocated for development to provide a sufficient buffer for non-delivery. Indeed, we would contend that there is a very real risk that not all of the sites identified in the SHLAA will be delivered as anticipated, primarily because its estimate of capacity is based entirely on a supply of previously developed, brownfield sites. We understand that any land currently located within the Green Belt was automatically discounted as unsuitable for development when assessed by the SHLAA. By their very nature, previously developed sites are generally less deliverable than greenfield land due to complications such as availability, existing use values and abnormal costs such as contamination. As a consequence, it would appear that relying entirely on brownfield land to seek to achieve the London Plan's housing target would present a very real risk of not delivering minimum targets. Havering's history of under delivery against London Plan targets compounds these concerns. Table 3.20 of the SHLAA (p86) confirms that the Borough delivered an average of only 367 dwellings between 2008 and 2012. This compares with an average London Plan target of 644 dwellings per annum during the same period and follows an average of 1,109 dwellings being granted planning permission every year between 2004 and 2012. This is an alarming pattern of undersupply that needs to be redressed. At present, there is a lack of any robust, locally derived evidence demonstrating that the supply of suitable brownfield land identified in the SHLAA will come forward as anticipated. The conclusions of the SHLAA were supported by a Viability Assessment, but this is a very broad, high level study covering the whole of London. It provides a qualitative assessment of the current housing market across the capital, but due to its	London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 - 2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA). The Council is aware of the potential risk that not all of the sites identified in the 2013 GLA SHLAA could be delivered as anticipated. To offset this risk the Council has reviewed the supply of housing and has taken a positive and proactive approach to identify and enable development opportunities for housing use of a combination of policy tools such as optimising housing output for different types of location within the relevant London Plan density range on brownfields sites, resisting the net loss of housing, positively and proactively enabling housing intensification in Council estates, in town

Response Number	Respondent Name	Response to Q3	Council's response
		very broad approach this Assessment does not provide a sound basis to conclude that sites proposed for allocation in Havering's Local Plan will come forward as anticipated. Two key weaknesses supporting this contention are highlighted below: – Due to the scale of the area that it needed to cover, the methodology employed by the Assessment was based on the appraisal of 40 case study sites drawn from 8 boroughs across the capital. None of these sites were located in Havering and therefore the particular issues affecting the local market were not fully examined. – Boroughs providing case study sites were selected where they were expected to make a significant contribution to overall housing land supply in London but had shown significant undersupply compared to London Plan targets in the three years to 2011/12. Havering was initially selected as a case study on this basis, highlighting concerns about the Borough amongst the authors of the report, but it was later rejected in favour of Hounslow to provide greater geographical spread. The concerns about viability in Havering where therefore never properly analysed. The SHLAA Viability Appraisal does not provide sufficient information to enable a definitive, or even a reasonable, conclusion to be reached in respect of local policy making. We would urge the Council to ensure that additional sites are identified and allocated to provide flexibility for non-delivery and to prepare additional, locally specific evidence to provide greater certainty about delivery. Without such evidence, the Local Plan would be vulnerable to a significant risk of non-delivery and would be unsound. In addition to the above, it is also pertinent to highlight that the National Planning Policy Framework (the "Framework" published 2012) requires local authorities to identify and update annually a supply of specific deliverable sites with an additional 5% buffer moved forward from later in the Plan	and district centres, along transport corridors and prioritising all non-designated land for housing when it becomes available, and supporting initiatives to bring back empty residential properties into use. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more the purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan It should, be noted that, irrespective of the inherent limitation of the broad approach in the qualitative assessment of the current housing market across London, the GLA SHLAA supported by a Viability Assessment has always been the accepted approach to identifying capacity for housing supply in London. Nonetheless, its output has always been accepted at EiPs as the basis for estimating capacity and

Response Number	Respondent Name	Response to Q3	Council's response
		period to ensure choice and competition in the market for land. This reaffirms the need to allocate sufficient sites to maintain flexibility. The Council's latest publicly available Annual Monitoring Report (AMR) suggests that it has a 5 year housing land supply with an additional 5% buffer as required by the Framework when assessed against the previous (2011) London Plan target. If, under a brownfield-only approach, the Council were to bring forward allocations from later in the Plan period to provide a 5% buffer and ensure flexibility in the short term, it would still be necessary to allocate further land (potentially Green Belt) to meet the displaced development requirements from the later stages of the Plan period. This could be undertaken through a partial review of the Local Plan process at that time, but such an approach carries risk because the certainty of delivery of such subsequent sites would not be known until that review process commences, contrary to the Framework. The Framework also urges local planning authorities to identify a supply of specific, developable sites or broad locations for growth for years 6-10 and, where possible, for years 11-15 of the Plan period. Without an understanding of broad locations for growth (which could be realised through a Green Belt review), the Council would not have sufficient evidence to determine how it will deliver the development required in the latter stages of the Plan period, and the Plan would be unsound. We therefore consider that the time for the Council to consider such an approach, by commissioning a Green Belt review for the consideration of such suitable sites for housing, is now. Failure to take account of any of the above would result in an inflexible and non-deliverable Plan that would be unsound. The only reasonable solution is to consider the release of Green Belt land in the preparation of the Local Plan. This is why housing delivery should be a priority in the Local Plan. <u>The need to exceed the London Plan's minimum targets to address objectively assessed housing needs</u>	allocating housing targets to London boroughs. A number of sites identified through the SHLAA process have already come forward for development.

Response Number	Respondent Name	Response to Q3	Council's response
		The Framework requires local planning authorities to significantly boost the supply of housing. It requires authorities to use their evidence base to ensure that their Local Plans meet their objectively assessed housing needs. The new London Plan targets, taken as a whole, are 6,600 dwellings per annum short of meeting the objectively assessed housing needs of the capital. Nevertheless, it confirms that Boroughs should use their housing supply targets as minima, augmented by additional housing capacity to reduce the gap between local and strategic housing need and supply. This underlines the need for the Council to take full account of the potential contribution of Green Belt sites which no longer serve a valuable Green Belt function. <u>Housing Mix</u> In addition to a sufficient quantum of new development, the Local Plan will also need to ensure that it enables the provision of a suitable mix of homes in accordance with local needs. The London Plan and its supporting evidence do not provide a breakdown of the mix and tenure of dwellings that should be provided in order to meet local need but a forthcoming update to the East London Strategic Housing Market Assessment (SHMA) will provide clarity on this matter. The Local Plan should therefore ensure that it adequately provides for the needed mix of housing as identified through the SHMA. It is likely that the mix of units required will include a good proportion of family homes with their own reasonably sized private amenity spaces, together with specialist accommodation, flats and affordable housing to cater for the needs of the community as a whole, to deliver mixed and balanced communities as required by the Framework. Not all types of site will be capable of delivering the mix of units required, with town centres and brownfield sites in other urban areas less likely to be capable of delivering family housing with private amenity areas and access to open space. To

		overcome this, the Local Plan should allocate a range of types of sites, including greenfield Green Belt land. To help illustrate this point, we are aware of a resolution by the Council's planning committee in 2014 to grant permission for 497 new dwellings on the former Somerfield depot in Rainham. No affordable housing was proposed because it would have been unviable to provide it. This was a brownfield site and it is likely that many of the viability constraints apply to other previously delivered land in the Borough. If Council were to adopt a brownfield-only approach, this example indicates that the Plan may be incapable of delivering sufficient affordable housing, which would be unsustainable and therefore contrary to wider objectives. We therefore consider that the Local Plan should ensure that a suitable range of sites, including Green Belt land, are made available and allocated in the Plan in order to facilitate a suitable mix of homes.	
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	Mix of private and PRS (Private Rented Sector) homes and social units integrated.	The Proposed Submission version of the Local Plan supports the provision of a balanced mix of homes reflecting varied types and tenures.
REG18.38	Mr T Clemence (DHA Planning)	Provide homes to meet the Boroughs objectively assessed housing needs; look for opportunities for housing in not only the urban areas but also sustainable locations in rural areas. For example development that makes efficient use of a site located within green belt, on the edge of an existing residential area, with good access to a range of local services and public transport should be promoted. Ensure not only that homes meet the boroughs quantitative need but the qualitative need. Ensure new residential development reflects the layout, form and grain of surrounding development.	The Proposed Submission version of the Local Plan will aim to address the borough's objectively assessed housing needs and will encourage and optimise housing development and output in opportunity sites in both urban and sustainable rural locations where access to a range of local services and public transport is available. New housing will be required to be of high architectural quality and design that respects and responds to the distinctive local building form, layout and patterns of development taking into account the scale, massing, building line

Response Number	Respondent Name	Response to Q3	Council's response
			and height of the surrounding physical context.
REG18.39	Mrs S J Ellis (Bidwells)	The Local Plan should prioritise three key aspects: (a) achieving the London Plan's minimum targets for new housing delivery; (b) exceeding the London Plan's minimum targets to address objectively assessed housing needs and (c) ensuring that the Plan enables the provision of a suitable mix of homes in accordance with local needs. These are explained in detail below. <u>The need to achieve the London Plan's minimum targets for new housing delivery</u> The Local Plan will clearly need to conform to the requirements of the London Plan (published March 2015, consolidated with alterations since 2011), including the annualised target for Havering to deliver at least 1,170 dwellings per annum. We would strongly contend that the Council should identify and allocate additional sites to seek to significantly exceed this target, including a proportion of greenfield land, to ensure that the Local Plan is sufficiently flexible to ensure delivery. The Borough's London Plan housing target is identical to the capacity of sites identified as having potential to come forward for development during the London Plan period (2015 – 2025) in the London-wide Strategic Housing Land Availability Assessment 2013 (SHLAA). There is clearly very little margin for error in the anticipated delivery of these sites if the London Plan's objectives for Havering are to be achieved, unless additional sites are identified and allocated for development to provide a sufficient buffer for non-delivery. Indeed, we would contend that there is a very real risk that not all of the sites identified in the SHLAA will be delivered as anticipated, primarily because its estimate of capacity is based entirely on a supply of previously developed, brownfield sites. 		development when assessed by the SHLAA. By their very nature, previously developed sites are generally less deliverable than greenfield land due to complications such as availability, existing use values and abnormal costs such as contamination. As a consequence, it would appear that relying entirely on brownfield land to seek to achieve the London Plan's housing target would present a very real risk of not delivering minimum targets. Havering's history of under delivery against London Plan targets compounds these concerns. Table 3.20 of the SHLAA (p86) confirms that the Borough delivered an average of only 367 dwellings between 2008 and 2012. This compares with an average London Plan target of 644 dwellings per annum during the same period and follows an average of 1,109 dwellings being granted planning permission every year between 2004 and 2012. This is an alarming pattern of undersupply that needs to be redressed. At present, there is a lack of any robust, locally derived evidence demonstrating that the supply of suitable brownfield land identified in the SHLAA will come forward as anticipated. The conclusions of the SHLAA were supported by a Viability Assessment, but this is a very broad, high level study covering the whole of London. It provides a qualitative assessment of the current housing market across the capital, but due to its very broad approach this Assessment does not provide a sound basis to conclude that sites proposed for allocation in Havering's Local Plan will come forward as anticipated. Two key weaknesses supporting this contention are highlighted below: – Due to the scale of the area that it needed to cover, the methodology employed by the Assessment was based on the appraisal of 40 case study sites drawn from 8 boroughs across the capital. None of these sites were located in Havering and therefore the particular issues affecting the local market were not fully examined. – Boroughs providing case study sites were selected where they were expected to make a significant contribution to overall housing land	the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA). The Council is aware of the potential risk that not all of the sites identified in the 2013 GLA SHLAA could be delivered as anticipated. To offset this risk the Council has reviewed the supply of housing and has taken a positive and proactive approach to identify and enable development opportunities for housing use of a combination of policy tools such as optimising housing output for different types of location within the relevant London Plan density range on brownfields sites, resisting the net loss of housing, positively and proactively enabling housing intensification in Council estates, in town and district centres, along transport corridors and prioritising all non-designated land for housing when it becomes available, and supporting initiatives to bring back empty residential properties into use. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of

Response Number	Respondent Name	Response to Q3	Council's response
		supply in London but had shown significant undersupply compared to London Plan targets in the three years to 2011/12. Havering was initially selected as a case study on this basis, highlighting concerns about the Borough amongst the authors of the report, but it was later rejected in favour of Hounslow to provide greater geographical spread. The concerns about viability in Havering where therefore never properly analysed. The SHLAA Viability Appraisal does not provide sufficient information to enable a definitive, or even a reasonable, conclusion to be reached in respect of local policy making. We would urge the Council to ensure that additional sites are identified and allocated to provide flexibility for non-delivery and to prepare additional, locally specific evidence to provide greater certainty about delivery. Without such evidence, the Local Plan would be vulnerable to a significant risk of non-delivery and would be unsound. In addition to the above, it is also pertinent to highlight that the National Planning Policy Framework (the "Framework" published 2012) requires local authorities to identify and update annually a supply of specific deliverable sites with an additional 5% buffer moved forward from later in the Plan period to ensure choice and competition in the market for land. This reaffirms the need to allocate sufficient sites to maintain flexibility. The Council's latest publicly available Annual Monitoring Report (AMR) suggests that it has a 5 year housing land supply with an additional 5% buffer as required by the Framework when assessed against the previous (2011) London Plan target. If, under a brownfield-only approach, the Council were to bring forward allocations from later in the Plan period to provide a 5% buffer and ensure flexibility in the short term, it would still be necessary to allocate further land (potentially Green Belt) to meet the displaced development requirements from the later stages of the Plan period. This could be undertaken through a partial review of the Local Plan process at that time, but such an approach carries risk because the certainty of delivery	the Green Belt in the borough makes a contribution towards one or more the purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan It should, be noted that, irrespective of the inherent limitation of the broad approach in the qualitative assessment of the current housing market across London, the GLA SHLAA supported by a Viability Assessment has always been the accepted approach to identifying capacity for housing supply in London. Nonetheless, its output has always been accepted at EiPs as the basis for estimating capacity and allocating housing targets to London boroughs. A number of sites identified through the SHLAA process have already come forward for development.

Response Number	Respondent Name	Response to Q3	Council's response
		of such subsequent sites would not be known until that review process commences, contrary to the Framework. The Framework also urges local planning authorities to identify a supply of specific, developable sites or broad locations for growth for years 6-10 and, where possible, for years 11-15 of the Plan period. Without an understanding of broad locations for growth (which could be realised through a Green Belt review), the Council would not have sufficient evidence to determine how it will deliver the development required in the latter stages of the Plan period, and the Plan would be unsound. We therefore consider that the time for the Council to consider such an approach, by commissioning a Green Belt review for the consideration of such suitable sites for housing, is now. Failure to take account of any of the above would result in an inflexible and non-deliverable Plan that would be unsound. The only reasonable solution is to consider the release of Green Belt land in the preparation of the Local Plan. This is why housing delivery should be a priority in the Local Plan. <u>The need to exceed the London Plan's minimum targets to address objectively assessed housing needs</u> The Framework requires local planning authorities to significantly boost the supply of housing. It requires authorities to use their evidence base to ensure that their Local Plans meet their objectively assessed housing needs. The new London Plan targets, taken as a whole, are 6,600 dwellings per annum short of meeting the objectively assessed housing needs of the capital. Nevertheless, it confirms that Boroughs should use their housing supply targets as minima, augmented by additional housing capacity to reduce the gap between local and strategic housing need and supply. This underlines the need for the Council to take full account the potential contribution of Green Belt sites which no longer serve a valuable Green Belt function.	

Response Number	Respondent Name	Response to Q3	Council's response
		Housing Mix In addition to a sufficient quantum of new development, the Local Plan will also need to ensure that it enables the provision of a suitable mix of homes in accordance with local needs. The London Plan and its supporting evidence do not provide a breakdown of the mix and tenure of dwellings that should be provided in order to meet local need but a forthcoming update to the East London Strategic Housing Market Assessment (SHMA) will provide clarity on this matter. The Local Plan should therefore ensure that it adequately provides for the needed mix of housing as identified through the SHMA. It is likely that the mix of units required will include a good proportion of family homes with their own reasonably sized private amenity spaces, together with specialist accommodation, flats and affordable housing to cater for the needs of the community as a whole, to deliver mixed and balanced communities as required by the Framework. Not all types of site will be capable of delivering the mix of units required, with town centres and brownfield sites in other urban areas less likely to be capable of delivering family housing with private amenity areas and access to open space. To overcome this, the Local Plan should allocate a range of types of sites, including greenfield Green Belt land. To help illustrate this point, we are aware of a resolution by the Council's planning committee in 2014 to grant permission for 497 new dwellings on the former Somerfield depot in Rainham. No affordable housing was proposed because it would have been unviable to provide it. This was a brownfield site and it is likely that many of the viability constraints apply to other previously delivered land in the Borough. If Council were to adopt a brownfield-only approach, this example indicates that the Plan may be incapable of delivering sufficient affordable housing, which would be unsustainable and therefore contrary to wider objectives.	

Response Number	Respondent Name	Response to Q3	Council's response
		We therefore consider that the Local Plan should ensure that a suitable range of sites, including Green Belt land, are made available and allocated in the Plan in order to facilitate a suitable mix of homes.	
REG18.40	Ms M Blackman	Housing should be where there are work and enterprise opportunities, and suitable for the kind of people that will need to work there. If employment opportunities are more appropriate for younger people, then build more flats and starter homes. Similarly housing suitable for able elderly residents should be considered.	The Proposed Submission version of the Local Plan supports new housing to be where work and enterprise opportunities are, wherever possible, as exemplified in the Romford Strategic Development Area and the Rainham and Beam Park Strategic Development Area, where mixed use developments are promoted in town centres with new flatted residential units above ground floor commercial floor space focussed along the principal transportation/public transport routes to encourage ease of access to work and enterprise opportunities hubs consistent with the NPPF and the London Plan. The Proposed Submission version of the Local Plan supports affordable housing and the delivery of homes suitable for older people.
REG18.41	National Grid Property (Carter Jones)	There is a clear need to deliver new homes in London. Given the pressure to develop greenfield sites, the best use of brownfield sites must be utilised. In view of the abnormal costs usually associated with remediating some brownfield land, there must be sufficient flexibility in the Local Plan to respond to challenges in viability, otherwise there is a risk that housing redevelopment may not come forward. The Local Plan must also prioritise maximising residential density to ensure the best use of brownfield land.	The Proposed Submission version of the Local Plan recognises the clear need to deliver new homes and so prioritises the best use of brownfield land and includes policies to optimise residential density with some flexibility to respond to challenges in viability.
REG18.43	Omega After Alpha Ltd	The Local Plan should prioritise three key aspects: (a) achieving the London Plan's minimum targets for new housing delivery; (b) exceeding the London	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the

Response Number	Respondent Name	Response to Q3	Council's response
	(Bidwells)	Plan's minimum targets to address objectively assessed housing needs and (c) ensuring that the Plan enables the provision of a suitable mix of homes in accordance with local needs. These are explained in detail below. <u>The need to achieve the London Plan's minimum targets for new housing delivery</u> The Local Plan will clearly need to conform to the requirements of the London Plan (published March 2015, consolidated with alterations since 2011), including the annualised target for Havering to deliver at least 1,170 dwellings per annum. We would strongly contend that the Council should identify and allocate additional sites to seek to significantly exceed this target, including a proportion of greenfield land, to ensure that the Local Plan is sufficiently flexible to ensure delivery. The Borough's London Plan housing target is identical to the capacity of sites identified as having potential to come forward for development during the London Plan period (2015 – 2025) in the London-wide Strategic Housing Land Availability Assessment 2013 (SHLAA). There is clearly very little margin for error in the anticipated delivery of these sites if the London Plan's objectives for Havering are to be achieved, unless additional sites are identified and allocated for development to provide a sufficient buffer for non-delivery. Indeed, we would contend that there is a very real risk that not all of the sites identified in the SHLAA will be delivered as anticipated, primarily because its estimate of capacity is based entirely on a supply of previously developed, brownfield sites. We understand that any land currently located within the Green Belt was automatically discounted as unsuitable for development when assessed by the SHLAA. By their very nature, previously developed sites are generally less deliverable than greenfield land due to complications such as availability, existing use values and abnormal costs such as contamination. As a consequence, it would appear that relying entirely on brownfield land to seek to achieve the London Plan's housing	London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met. The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 - 2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment

Response Number	Respondent Name	Response to Q3	Council's response
		target would present a very real risk of not delivering minimum targets. Havering's history of under delivery against London Plan targets compounds these concerns. Table 3.20 of the SHLAA (p86) confirms that the Borough delivered an average of only 367 dwellings between 2008 and 2012. This compares with an average London Plan target of 644 dwellings per annum during the same period and follows an average of 1,109 dwellings being granted planning permission every year between 2004 and 2012. This is an alarming pattern of undersupply that needs to be redressed. At present, there is a lack of any robust, locally derived evidence demonstrating that the supply of suitable brownfield land identified in the SHLAA will come forward as anticipated. The conclusions of the SHLAA were supported by a Viability Assessment, but this is a very broad, high level study covering the whole of London. It provides a qualitative assessment of the current housing market across the capital, but due to its very broad approach this Assessment does not provide a sound basis to conclude that sites proposed for allocation in Havering's Local Plan will come forward as anticipated. Two key weaknesses supporting this contention are highlighted below: – Due to the scale of the area that it needed to cover, the methodology employed by the Assessment was based on the appraisal of 40 case study sites drawn from 8 boroughs across the capital. This underlines the need for the Council to take full account the potential contribution of Green Belt sites which no longer serve a valuable Green Belt function.	

Response Number	Respondent Name	Response to Q3	Council's response
		Housing Mix In addition to a sufficient quantum of new development, the Local Plan will also need to ensure that it enables the provision of a suitable mix of homes in accordance with local needs. The London Plan and its supporting evidence do not provide a breakdown of the mix and tenure of dwellings that should be provided in order to meet local need but a forthcoming update to the East London Strategic Housing Market Assessment (SHMA) will provide clarity on this matter. The Local Plan should therefore ensure that it adequately provides for the needed mix of housing as identified through the SHMA. It is likely that the mix of units required will include a good proportion of family homes with their own reasonably sized private amenity spaces, together with specialist accommodation, flats and affordable housing to cater for the needs of the community as a whole, to deliver mixed and balanced communities as required by the Framework. Not all types of site will be capable of delivering the mix of units required, with town centres and brownfield sites in other urban areas less likely to be capable of delivering family housing with private amenity areas and access to open space. To overcome this, the Local Plan should allocate a range of types of sites, including greenfield Green Belt land. To help illustrate this point, we are aware of a resolution by the Council's planning committee in 2014 to grant permission for 497 new dwellings on the former Somerfield depot in Rainham. No affordable housing was proposed because it would have been unviable to provide it. This was a brownfield site and it is likely that many of the viability constraints apply to other previously delivered land in the Borough. If Council were to adopt a brownfield-only approach, this example indicates that the Plan may be incapable of delivering sufficient affordable housing, which would be unsustainable and therefore contrary to wider objectives.	

Response Number	Respondent Name	Response to Q3	Council's response
		We therefore consider that the Local Plan should ensure that a suitable range of sites, including Green Belt land, are made available and allocated in the Plan in order to facilitate a suitable mix of homes.	
REG18.44	Persimmon Homes	The Local Plan must ensure that it meets the housing need as identified in the Further Alterations London Plan (March 2015). This document is currently out for public consultation and sets out the London Borough's housing targets. The emerging London Plan requires Havering Borough Council to deliver 11,701 new homes over a 10 year period (2015-2025) or 1,170 dwellings per annum. Havering Borough Council adopted their Core Strategy in 2008 which sought to deliver 535 new homes a year. The adoption of the new London Plan in 2011 increased this provision to 970 new homes a year. Havering Council's latest Housing Trajectory demonstrates that the council have under delivered on this figure since 2009/2010. The new Local Plan must ensure that it takes account of any shortfall accumulated over the Core Strategy plan period. The housing shortage in London is having an effect on the neighbouring Local Planning Authorities (LPAs) in the South East with the need to take account of any potential shortfall in the London Boroughs. Housing should be focused towards areas in which there is high demand, this will minimise the need to travel and maintain an affordable housing market. To minimise the pressure on neighbouring LPAs, London Borough Council's must demonstrate through the Local Plan process that they have considered all reasonable alternatives and have supporting background studies to sustain their policies. The London Plan is not required to conform with the Duty to Cooperate but Local Plans are and, as such, Havering Council must demonstrate this through the Plan process.	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met. The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 - 2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to

Response Number	Respondent Name	Response to Q3	Council's response
			Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA).
REG18.46	Planning Potential Rep 2.	We support the Council's emphasis on ensuring that there are enough high quality homes in Havering to meet local need. We also support the Council's acknowledgment that the new London Plan (2015) sets out the revised housing targets for each Borough, which should be carried forward in the Plan process. The Borough's housing target has increased from 535 new dwellings per annum (dpa) as set out in Havering's Core Strategy and Development Control Policies Document Development Plan Document (2008), to 970 dpa in the London Plan (2008 – consolidated with Alterations since 2004), to 1,170 per year in The London Plan (2015), which should be the figure Havering adopts moving forward. It is our view that this significant increase in housing need within Havering may have an impact upon the Council's ability to demonstrate a five year housing land supply. Therefore, the Council should be looking into the potential to redevelop alternative sites, outside of those broad locations for residential development, namely Romford Town Centre and London Riverside, where the sites' redevelopment would constitute sustainable development. It is our opinion also that the Council should not limit development to small infill sites. In order for the Council to deliver housing that is of a mix and type suitable to meet varying needs, including affordable housing, the Council should be looking at larger sites capable of delivering such housing and	Support noted. A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met. The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 -

		allocating them through the local plan process.	2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA).
REG18.47	R. Watt and Partners (Phillips Planning Services)	During the course of this consultation, 'Further Alterations' to the London Plan have been adopted and have increased the borough's minimum housing delivery target from 970 dwellings per year to 1,170 dwellings per year. In noting that this target is expressed as a minimum and that there is a national planning policy objective to significantly increase the supply of housing, it is considered that the key priority of the Local Plan should be to exceed the target. It is of course also considered that type, size, form and mix of new dwellings should be reflective of the needs of the borough.	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met. The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period

Response Number	Respondent Name	Response to Q3	Council's response
			2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 - 2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA).
REG18.48	R.A.Montague	The number should be set locally otherwise how can it be a Local Plan if the number of houses are imposed from outside the borough by the Mayor. This is not a local plan but a centralised plan.	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met.

Response Number	Respondent Name	Response to Q3	Council's response
			The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 - 2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA).
REG18.50	Rainham Preservation Society	Gated single storey communities for the elderly, where they feel safe, should be given priority, also more family homes with gardens and high quality flatted developments of not above 3 storeys.	The Proposed Submission version of the Local Plan aims to deliver high quality mix of homes with a range of types, tenures and sizes including family homes, and homes for older peoples that meet local need and optimises housing output from a given site.
REG18.51	Ray Whitehouse	I just don't agree with more housing in Romford. There is poor infrastructure, no schools, not enough doctors etc. In fact the ring road is a major obstruction to access to the town centre. For example the pedestrian, cycling, mother with pushchair and disabled routes from the new houses on the old hospital site are basically disgusting. The only option is to have to	Romford town centre and Rainham and Beam Park will be the main growth areas in Havering for housing as a result of their development potential.

Response Number	Respondent Name	Response to Q3	Council's response
		walk through unpleasant alleyways and underpasses. The council has missed an enormous opportunity with that development to make Romford more accessible for none car users, but have failed. The ring road is a major barrier to the town centre and until this is resolved more housing is just a waste of time, never mind a major lack of other facilities. Riverside is a good example of an opportunity to create a wonderful place to live, work and play as long as Havering gets its act together.	The Proposed Submission version of the Local Plan aims to ensure that the quantum of proposed development is matched with supporting infrastructure. Provision of infrastructure is planned for in the Infrastructure Delivery Plan.
REG18.52	Romford Civic Society	Flats should have high-quality amenity space. Housing should be greener in terms of energy generation and use and biodiversity. Policy DC 50 from the current LDF should be transferred into the new document. High quality design of housing should be required in Romford, as this is a key determiner of the quality and visual appeal of the urban environment. The Mayor of London's Housing Design Guide should be adhered to.	The Proposed Submission version of the Local Plan aims to deliver high quality homes, whether flats or houses which are greener in terms of energy efficiency and biodiversity, and so includes policies on design, amenity space, energy and biodiversity.
REG18.53	Romford Golf Club (Joe Coogan)	Development of homes should be evenly spread throughout the borough. The majority of working families in Havering do not want to live in flats in Romford town centre or at Riverside. Opportunities for quality family homes to be developed in popular areas should be sought out. Areas like Upminster/Cranham and Gidea Park should be considered if underused sites can be unlocked for housing. Some housing should be affordable. It is important to build key worker specific accommodation to ensure public services can attract and retain good nurses, teachers and social workers to support the community. The development of extra care housing can also unlock family homes and help balance out Havering's ageing population. It would be interesting to see how many family homes were freed up by older persons choosing to move into Dreywood Court.	With two housing zones, an ambitious estates regeneration programme and support for appropriate development of infill, under-utilised and vacant sites throughout the borough, the Local Plan aims to spread housing development throughout the borough to ensure provision of a range of housing types and tenures, including affordable housing and extra care homes, in different locations, to meet local needs.
REG18.54	Romford YMCA	Housing is an issue of significant importance to the borough with the provision of appropriate housing. We would like to see the borough offer housing for all types of housing to meet the needs and demands of different people in our community. This includes young people, families, older	The Proposed Submission version of the Local Plan aims to deliver all types of high quality housing (houses and flats of varying sizes and tenures) which adhere to

Response Number	Respondent Name	Response to Q3	Council's response
		people, people with disabilities, and students. We suggest that any new housing developments must take account of local need to create a balanced and sustainable community, which gives a genuine choice in housing. Romford YMCA would like to see a flexible housing stock that helps meet the wide range of accommodation needs. New homes should support the changing needs of individuals and families, and the communities in which they live and at their different stages of life. In regard to affordable homes, Romford YMCA would like developments to provide the required amount of affordable housing. Young people find it increasingly difficult to access the housing market. A solution to this would be an increase in the availability of social housing in the borough. Romford YMCA hope that the borough will continue with its programme of council house building, and would as a result offer local young people the opportunity to gain apprenticeships in building. Romford YMCA would like to add that to encourage social housing developments to come forward across the borough and to meet the demand of local people for affordable housing, Romford YMCA would like to see some flexibility in the council's Section 106 policy, regarding the contribution social housing providers have to make. Unrealistic Section 106 agreements can be an obstacle to house building, at a time when the government is seeking to provide more homes to meet a growing population and to promote construction and economic growth.	'Lifetime Homes Standards' to meet the demands and needs of Havering's local need taking into account the need to create a balanced and sustainable community, and give a genuine choice in housing, as well as support the changing needs of individuals and families, and the community in which they live, at their different stages of life. The Proposed Submission version of the Local Plan aims to secure the highest level of affordable housing contributions by supporting a transparent approach to viability and information submission, in order to provide the required amount of affordable housing needed in the borough. The Proposed Submission version of the Local Plan contains policies on the Council's estates regeneration and skills development opportunities which support apprentices that will offer local young people the opportunity to gain apprenticeship in building. The Council will implement a Community Infrastructure Levy which is set at a rate which keeps development viable.
REG18.56	S.D. Olney	This is dependent on the number of houses in the council proposal. Additional schools, shops, doctors surgeries, transport links etc.	The Proposed Submission version of the Local Plan aims to ensure that the quantum of proposed development is matched with supporting infrastructure.

Response Number	Respondent Name	Response to Q3	Council's response
			Provision of infrastructure is planned for in the Infrastructure Delivery Plan.
REG18.57	Sheila Clements	People moving into the borough should not be allowed to turn housing into multi occupation residencies where every room is used as a bedroom just for mattresses. This has happened in other boroughs over the last 30 years and these places just begin to go downhill with the way people live in them and the rubbish produced around the areas they live in. Housing should be using up empty houses and places that we already have not necessarily building more and more until we are at saturation point. Offices have been built in Romford where they have never been rented out and are standing empty. Why is this allowed? When these were built there were already enough office, but planning still gives the go ahead. Planning never takes the wishes of the residents into account. It is a fact that the Council have never taken notice of one single protest in Havering when residents do not want something to be built. Planning just goes ahead and does what it wants and probably always will regardless of this questionnaire.	The Proposed Submission version of the Local Plan contains policies to control HMOs and bring back empty residential property into use.
REG18.60	Thames Water Utilities Ltd (Savills)	As set out above, it is crucial that policies within Local Plans ensure the adequate provision of water and waste water infrastructure to provide for new and existing development. Thames Water therefore recommends the inclusion of the following policy within the new Local Plan: "*<u>PROPOSED POLICY – WATER AND SEWERAGE INFRASTRUCTURE CAPACITY:</u>* Planning permission will only be granted for developments which increase the demand for off-site service infrastructure where: 1. sufficient capacity already exists or 2. Extra capacity can be provided in time to serve the development which will ensure that the environment and the amenities of local residents are not adversely affected. When there is a capacity problem and improvements in off-site infrastructure	The requirement for wastewater infrastructure is sufficiently covered by London Plan Policy 5.14, which is also part of the Council's Development Plan. There is, therefore, no need to repeat the policy in the Proposed Submission version of the Local Plan. The Council has engaged with Thames Water for the preparation with of the Infrastructure Delivery Plan.

Response Number	Respondent Name	Response to Q3	Council's response
		are not programmed, planning permission will only be granted where the developer funds appropriate improvements which will be completed prior to occupation of the development." It is considered that text along the following lines should be added to the Local Plan to support the above proposed Policy: "*PROPOSED NEW POLICY SUPPORTING TEXT:* The Council will seek to ensure that there is adequate water supply, surface water, foul drainage and sewerage treatment capacity to serve all new developments. Developers will be required to demonstrate that there is adequate capacity both on and off the site to serve the development and that it would not lead to problems for existing users. In some circumstances this may make it necessary for developers to carry out appropriate studies to ascertain whether the proposed development will lead to overloading of existing infrastructure. Where there is a capacity problem and no improvements are programmed by the water company, the Council will require the developer to fund appropriate improvements which must be completed prior to occupation of the development.	
REG18.61	The Crown Estate (Amec Foster Wheeler)	The Crown Estate considers the New Plan will have to provide a positive framework to tackle the significant housing need in the Borough and within the wider London region. The priority for the new Local Plan should be to significantly boost housing supply to address the housing needs within the Borough in line with NPPF, paragraph 14, which states that local planning authorities should "use their evidence base to ensure that their Local Plan meets the full objectively assessed needs for market and affordable housing." The adopted Core Strategy sets a target to deliver a minimum of 535 new dwellings per annum. The London Borough of Havering is covered by the London Plan. In March 2015, Further Alterations to the London Plan (FALP)	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on

Response Number	Respondent Name	Response to Q3	Council's response
		were adopted. This sets a minimum ten year target of 11,701 dwellings (1,170 dwellings p.a) in Havering between 2015 and 2025. The Council's base date for the revised Local Plan is likely to be 2015 with the plan period running to 2030/31. Over the plan period this will equate to an overall housing requirement of around 18,000 dwellings. In the previous five years (2007-08 – 2011-12), a total of 2,321 dwellings (464 dwellings p.a) were completed in Havering. This figure is well short of the new London Plan target. The latest 2012 based household projections also show significant upward pressure on housing need with a projected increase from 101,000 households in 2015 to 131,000 households by 2037. This equates to over 1,300 new households per year in that period. This evidence highlights the need to provide a step change in housing delivery in line with the emphasis of NPPF including the need to ensure local plans are positively prepared (paragraph 182) and significantly boost housing supply (paragraph 47). In addition, local plans should be sufficiently flexible to adapt to rapid changes (paragraph 14). NPPF (paragraph 47) also requires local planning authorities to identify a specific supply of developable sites or broad locations for years 6-10 and, where possible, for years 11-15 and update this annually. The level of housing required in the Borough over the full 15 year period will inevitably require additional greenfield sites and the release of Green Belt land. Sites and development should be focussed on sustainable locations that can deliver the Plan's Spatial Strategy, such as Collier Row (see response to question 10 below). Furthermore, Paragraph 182 of NPPF states that in examining local plans an Inspector will assess whether the plan has been prepared in accordance with the Duty to Cooperate, legal and procedural requirements, and whether it is therefore sound. This includes the test of 'effective' in which it should be demonstrated that the plan is deliverable over its period and based on effective joint working on cross-boundary strategic priorities. In November	housing mix and tenure to ensure need is met. The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 - 2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA). The Proposed Submission Local Plan takes a positive and proactive approach to housing delivery through a combination of policy tools such as optimising housing output for different types of location within the relevant London Plan density range on brownfields sites, resisting the net loss of housing, positively and proactively

Response Number	Respondent Name	Response to Q3	Council's response
		2014 London Mayor Boris Johnson announced plans to hold a summit with Home Counties council leaders in 2015, to discuss cooperation on managing the capital's housing growth. Recent research by AECOM looked at the London city-region housing need (including the 127 councils representing London and the Home Counties, within 90km of the capital). AECOM compiled data on the housing capacity identified in the Strategic Housing Land Availability Assessments (SHLAAs) of these local authorities, and compared this to population growth as projected by the Office for National Statistics (ONS) and GLA. The study found that, if current building trends continue, there would be a million-home deficit in the region by 2036. In order to meet London's substantial housing needs, there is a need for cooperation between London boroughs to manage the capital's housing growth. In line with guidance in NPPF and Planning Practice Guidance, local planning authorities should make every effort to secure the necessary cooperation on strategic cross boundary matters before they submit their Local Plan for examination. Therefore in arriving at a housing target in the New Local Plan, the Council will need to consider how it can meet the development needs of the Borough and the wider region.	enabling housing intensification in Council estates, in town and district centres, along transport corridors and prioritising all non-designated land for housing when it becomes available, and supporting initiatives to bring back empty residential properties into use. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement. Further details on the duty to-cooperate are set out in the Local Plan Duty to Co-operate Statement.
REG18.63	Thomas Bates and Son Ltd. (Andrew Martin Planning)	In light of the Inspector's conclusions and recommendations following the examination in public of the Further Alterations to the London Plan document, Boroughs are expected, as a minimum, to be allocating sufficient housing land to meet their housing supply targets as outlined in Table 3.1 in the FALP. For LB Havering, this means allocating land that is suitable and deliverable in sustainable locations that can provide 11,701 dwellings over the period 2015 – 2025. LB Havering conducted their Strategic Housing Land Availability Assessment 'Call for Sites' process during August / September 2014. This will inform the housing strategy within the new Local Plan. The National Planning Policy Framework (NPPF) and Planning Practice Guidance (PPG) acknowledge the sustainability benefits associated with brownfield land and consequently encourage the prioritisation of previously	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met.

Response Number	Respondent Name	Response to Q3	Council's response
		developed land for new residential development. It is widely recognised, however, that previously developed land is a finite resource and thus, to meet identified objectively assessed housing needs, local planning authorities are accepting that a degree of development will need to be delivered on greenfield and Green Belt land where this complies with sustainability objectives. In light of this, LB Havering should conduct a review of their Green Belt boundaries in line with the preparation of a new Local Plan (paragraph 83 of the NPPF), in order to identify areas of land that no longer fulfil the five purposes of the Green Belt and are thus not necessary to keep permanently open.	The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 - 2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA). The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a

Response Number	Respondent Name	Response to Q3	Council's response
			contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.64	Thurrock Council	Thurrock Council supports the approach of the London Plan and Havering Council to focus housing development on key town centres and the London Riverside area in the south of the Borough. This approach also reflects the current strategy of the adopted Local Plan. The London Plan with alterations (published March 2015) sets a target of 1171 dwellings a year for Havering to 2025 which is above the current adopted Local Plan (2008) target of 535 dwellings a year to 2020. It is understood that based on the current SHLAA technical work that most if not all of the housing requirement for Havering to meet its target in the newly published London Plan with alterations can be met on brownfield land. The London Plan only sets the target to 2025 and is subject to an early review. However Policy 3.3 of the London Plan does state that where Local plans are to be adopted before the London Plan Review the current annual figure for the borough should be rolled forward. Does Havering have sufficient sites identified on brownfield land or other to cover this as an annual requirement through the proposed new Local Plan period to 2031? Havering Council along with other North East London Boroughs is commencing a Strategic Housing Market Assessment (SHMA) in order to inform the preparation of Local Plans. The North East London SHMA would be consistent with the London Plan approach and also focus on requirements to identify tenure and type of housing. Further clarification on	Support noted. A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met. The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new

Response Number	Respondent Name	Response to Q3	Council's response
		the approach for SHMAs to be undertaken at local level is expected to be provided in a update to the London Plan Housing SPG. Thurrock Council supports this approach and welcomes the opportunity to be engaged and kept informed of the progress of the North East London Housing Market. The recently published London Plan with alterations (March 2015) sets a target of 1170 dwellings per annum for Havering as a minimum and only covers the period to 2025 based on assessment from the GLA SHLAA. If the North East London SHMA identifies an Objectively Assessed Need (OAN) figure higher the SHLAA capacity-derived figure of 1170 dwellings per annum from the London Plan what are the implications for the Havering new Local Plan in terms of a higher housing number? As previously highlighted is there sufficient land identified to meet the London Plan or a higher SHMA derived OAN figure for Havering for the period 2031? It is unclear at this stage if Havering Council identified sufficient brownfield land to accommodate a higher housing requirement and or whether this can this realistically be met by a further increase of density on brownfield sites in key development of other locations or here will be some requirement for Green Belt release. The London Plan with alterations suggests that further capacity to exceed the current minimum targets in the plan should be brought forward from intensification on sites, opportunity and other policy areas and further residential development in town centres and mixed use development. Thurrock Council along with other South Essex local authorities have commenced a further review of the Thames Gateway South Essex SHMA. Whilst the North East London and TGSE SHMAs may both remain self-contained for the purposes of the assessment it will be helpful to understand the key issues and challenges that impact on both housing market areas and support the exchange of any relevant information, data and understanding of methodologies as part of the technical work preparation and to support Duty to Co-operate on strategic planning issues.	homes over a ten year the period 2015 - 2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as informed by the Outer North East London Strategic Housing Market Assessment (SHMA). The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement. The Council has engaged with Thurrock under the Duty to Co-operate and has shared a working draft of the Proposed Submission Local Plan for informal engagement. Housing supply was also discussed at our most recent meeting on 24th May 2017.

Response Number	Respondent Name	Response to Q3	Council's response
REG18.66	Trinity Hall (Bidwells)	The Local Plan should prioritise three key aspects: (a) achieving the London Plan's minimum targets for new housing delivery; (b) exceeding the London Plan's minimum targets to address objectively assessed housing needs and (c) ensuring that the Plan enables the provision of a suitable mix of homes in accordance with local needs. These are explained in detail below. <u>The need to achieve the London Plan's minimum targets for new housing delivery</u> The Local Plan will clearly need to conform to the requirements of the London Plan (published March 2015, consolidated with alterations since 2011), including the annualised target for Havering to deliver at least 1,170 dwellings per annum. We would strongly contend that the Council should identify and allocate additional sites to seek to significantly exceed this target, including a proportion of greenfield land, to ensure that the Local Plan is sufficiently flexible to ensure delivery. The Borough's London Plan housing target is identical to the capacity of sites identified as having potential to come forward for development during the London Plan period (2015 – 2025) in the London-wide Strategic Housing Land Availability Assessment 2013 (SHLAA). There is clearly very little margin for error in the anticipated delivery of these sites if the London Plan's objectives for Havering are to be achieved, unless additional sites are identified and allocated for development to provide a sufficient buffer for non-delivery. Indeed, we would contend that there is a very real risk that not all of the sites identified in the SHLAA will be delivered as anticipated, primarily because its estimate of capacity is based entirely on a supply of previously developed, brownfield sites. We understand that any land currently located within the Green Belt was automatically discounted as unsuitable for development when assessed by the SHLAA. By their very nature, previously developed sites are generally less deliverable than greenfield land due to	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met. The 2016 SHMA indicates that Havering's full Objectively Assessed Need (OAN) is for 30,052 new homes over the period 2011 – 2033 or 1,366 per annum. The London Plan sets the borough a target of delivering a minimum of 11,700 new homes over a ten year the period 2015 - 2025 with a proviso that the annual average (1,170) should be rolled forward for the remainder of the Local Plan period. The proposed Submission Local Plan aims to achieve the London Plan's minimum target for new housing delivery allocated to Havering and will seek to exceed the London Plan's minimum targets to close the gap between this and Havering's Objectively Assessed Housing Need as

Response Number	Respondent Name	Response to Q3	Council's response
		complications such as availability, existing use values and abnormal costs such as contamination. As a consequence, it would appear that relying entirely on brownfield land to seek to achieve the London Plan's housing target would present a very real risk of not delivering minimum targets. Havering's history of under delivery against London Plan targets compounds these concerns. Table 3.20 of the SHLAA (p86) confirms that the Borough delivered an average of only 367 dwellings between 2008 and 2012. This compares with an average London Plan target of 644 dwellings per annum during the same period and follows an average of 1,109 dwellings being granted planning permission every year between 2004 and 2012. This is an alarming pattern of undersupply that needs to be redressed. At present, there is a lack of any robust, locally derived evidence demonstrating that the supply of suitable brownfield land identified in the SHLAA will come forward as anticipated. The conclusions of the SHLAA were supported by a Viability Assessment3, but this is a very broad, high level study covering the whole of London. It provides a qualitative assessment of the current housing market across the capital, but due to its very broad approach this Assessment does not provide a sound basis to conclude that sites proposed for allocation in Havering's Local Plan will come forward as anticipated. Two key weaknesses supporting this contention are highlighted below: – Due to the scale of the area that it needed to cover, the methodology employed by the Assessment was based on the appraisal of 40 case study sites drawn from 8 boroughs across the capital. None of these sites were located in Havering and therefore the particular issues affecting the local market were not fully examined. – Boroughs providing case study sites were selected where they were expected to make a significant contribution to overall housing land supply in London but had shown significant undersupply compared to	informed by the Outer North East London Strategic Housing Market Assessment (SHMA). The Council is aware of the potential risk that not all of the sites identified in the 2013 GLA SHLAA could be delivered as anticipated. To offset this risk the Council has reviewed the supply of housing and has taken a positive and proactive approach to identify and enable development opportunities for housing use of a combination of policy tools such as optimising housing output for different types of location within the relevant London Plan density range on brownfields sites, resisting the net loss of housing, positively and proactively enabling housing intensification in Council estates, in town and district centres, along transport corridors and prioritising all non-designated land for housing when it becomes available, and supporting initiatives to bring back empty residential properties into use. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more the

Response Number	Respondent Name	Response to Q3	Council's response
		London Plan targets in the three years to 2011/124. Havering was initially selected as a case study on this basis, highlighting concerns about the Borough amongst the authors of the report, but it was later rejected in favour of Hounslow to provide greater geographical spread. The concerns about viability in Havering where therefore never properly analysed. The SHLAA Viability Appraisal does not provide sufficient information to enable a definitive, or even a reasonable, conclusion to be reached in respect of local policy making. We would urge the Council to ensure that additional sites are identified and allocated to provide flexibility for non-delivery and to prepare additional, locally specific evidence to provide greater certainty about delivery. Without such evidence, the Local Plan would be vulnerable to a significant risk of non-delivery and would be unsound. In addition to the above, it is also pertinent to highlight that the National Planning Policy Framework (the "Framework" published 2012) requires local authorities to identify and update annually a supply of specific deliverable sites with an additional 5% buffer moved forward from later in the Plan period5 to ensure choice and competition in the market for land. This reaffirms the need to allocate sufficient sites to maintain flexibility. The Council's latest publicly available Annual Monitoring Report (AMR)6 suggests that it has a 5 year housing land supply with an additional 5% buffer as required by the Framework when assessed against the previous (2011) London Plan target. If, under a brownfield-only approach, the Council were to bring forward allocations from later in the Plan period to provide a 5% buffer and ensure flexibility in the short term, it would still be necessary to allocate further land (potentially Green Belt) to meet the displaced development requirements from the later stages of the Plan period. This could be undertaken through a partial review of the Local Plan process at that time, but such an approach carries risk because the certainty of delivery	purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan It should, be noted that, irrespective of the inherent limitation of the broad approach in the qualitative assessment of the current housing market across London, the GLA SHLAA supported by a Viability Assessment has always been the accepted approach to identifying capacity for housing supply in London. Nonetheless, its output has always been accepted at EiPs as the basis for estimating capacity and allocating housing targets to London boroughs. A number of sites identified through the SHLAA process have already come forward for development.

Response Number	Respondent Name	Response to Q3	Council's response
		of such subsequent sites would not be known until that review process commences, contrary to the Framework. The Framework also urges local planning authorities to identify a supply of specific, developable sites or broad locations for growth for years 6-10 and, where possible, for years 11-15 of the Plan period. Without an understanding of broad locations for growth (which could be realised through a Green Belt review), the Council would not have sufficient evidence to determine how it will deliver the development required in the latter stages of the Plan period, and the Plan would be unsound. We therefore consider that the time for the Council to consider such an approach, by commissioning a Green Belt review for the consideration of such suitable sites for housing, is now. Failure to take account of any of the above would result in an inflexible and non-deliverable Plan that would be unsound. The only reasonable solution is to consider the release of Green Belt land in the preparation of the Local Plan. This is why housing delivery should be a priority in the Local Plan. <u>The need to exceed the London Plan's minimum targets to address objectively assessed housing needs</u> The Framework requires local planning authorities to significantly boost the supply of housing. It requires authorities to use their evidence base to ensure that their Local Plans meet their objectively assessed housing needs. The new London Plan targets, taken as a whole, are 6,600 dwellings per annum short of meeting the objectively assessed housing needs of the capital. Nevertheless, it confirms that Boroughs should use their housing supply targets as minima, augmented by additional housing capacity to reduce the gap between local and strategic housing need and supply8. This underlines the need for the Council to take full account the potential contribution of Green Belt sites which no longer serve a valuable Green Belt function.	

Response Number	Respondent Name	Response to Q3	Council's response
		Housing Mix In addition to a sufficient quantum of new development, the Local Plan will also need to ensure that it enables the provision of a suitable mix of homes in accordance with local needs. The London Plan and its supporting evidence do not provide a breakdown of the mix and tenure of dwellings that should be provided in order to meet local need but a forthcoming update to the East London Strategic Housing Market Assessment (SHMA) will provide clarity on this matter. The Local Plan should therefore ensure that it adequately provides for the needed mix of housing as identified through the SHMA. It is likely that the mix of units required will include a good proportion of family homes with their own reasonably sized private amenity spaces, together with specialist accommodation, flats and affordable housing to cater for the needs of the community as a whole, to deliver mixed and balanced communities as required by the Framework. Not all types of site will be capable of delivering the mix of units required, with town centres and brownfield sites in other urban areas less likely to be capable of delivering family housing with private amenity areas and access to open space. To overcome this, the Local Plan should allocate a range of types of sites, including greenfield Green Belt land. To help illustrate this point, we are aware of a resolution by the Council's planning committee in 2014 to grant permission for 497 new dwellings on the former Somerfield depot in Rainham. No affordable housing was proposed because it would have been unviable to provide it. This was a brownfield site and it is likely that many of the viability constraints apply to other previously delivered land in the Borough. If Council were to adopt a brownfield-only approach, this example indicates that the Plan may be incapable of delivering sufficient affordable housing, which would be unsustainable and therefore contrary to wider objectives.	

Response Number	Respondent Name	Response to Q3	Council's response
		We therefore consider that the Local Plan should ensure that a suitable range of sites, including Green Belt land, are made available and allocated in the Plan in order to facilitate a suitable mix of homes.	
REG18.67	Veolia ES (UK) Ltd	As a business with a large workforce in the LBH plan priority should be to ensure that there is supply of affordable property within the Borough.	The Proposed Submission version of the Local Plan aims to secure the highest level of affordable housing contributions by supporting a transparent approach to viability and information submission, in order to provide the required amount of affordable housing needed in the borough.
REG18.68	Woodland Trust	The proximity of woodland to a proposed development site also needs to be acknowledged at some point with land going to be put forward for housing development. This should also be part of enhancing biodiversity and nature conservation, and also as a sustainable design principle for surface water run-off. The Woodland Trust would wish to see the view taken that proximity and access to woodland is an important contributor to creating healthy communities and 'place making'. As highlighted in Government policy by the Public Health White Paper (Healthy Lives, Healthy People; Nov 2010), there are currently tremendous opportunities for native woodland to contribute positively towards delivering improved mental and physical health. Research shows that woodland can provide benefits for air quality, urban heat island cooling, physical exercise provision and relief from mental illness. The White Paper states that: "*Access to green spaces is associated with better mental and physical health across socioeconomic groups*." and that "*Defra will lead a national campaign to increase tree planting throughout England, particularly in areas where tree cover would help to improve residents' quality of life and reduce the negative effects of deprivation, including health inequalities*."	Havering's natural environment covers a wide range of natural assets, open spaces and designated nature conservation sites. The Proposed Submission version of the Local plan acknowledges the multiple benefits of Green Infrastructure and sets out how it requires development to provide for this. The Proposed Submission Version of the Local Plan seeks, informed by the Open Space Assessment Report and Standards Paper, to optimise proximity to open space for all development, rather than woodland specifically. This approach follows the requirements in the NPPF.

<table>

<tr><td></td><td></td><td>
Recognising these policy linkages, the Woodland Trust has researched and developed the Woodland Access Standard (WASt) for local authorities to aim for, encapsulated in our Space for People publication. We believe that the WASt can be an important policy tool complimenting other access standards used in delivering green infrastructure for health benefits.

Woodland Trust Woodland Access Standard recommends:

– that no person should live more than 500m from at least one area of accessible woodland of no less than 2ha in size
– that there should also be at least one area of accessible woodland of no less than 20ha within 4km (8km round-trip) of people's homes.

Applying this standard in Havering, with a comparison against all the authorities in London as a whole, gives the following figures (see table below). It shows that although Havering has more access to woodland within 500m than the London average, for an outer London borough there is potential to do more.

The data used can be supplied free of charge by the Woodland Trust both in map and in numerical/GIS form.

Accessibility to Woodland in Havering using the Woodland Trust Woodland Access Standard
<table>
<tr><td></td><td></td><td>Havering</td><td>All London</td></tr>
<tr><td>Accessible woods</td><td>% population with access to 2ha+ wood within 500m</td><td>14.7%</td><td>12.9%</td></tr>

		'Space for People' is the first UK-wide assessment of any form of greenspace – the full 'Space for People' report can be found at http://www.woodlandtrust.org.uk/en/about-us/publications/key-publications/space-for-people/Pages/space-for-people.aspx. We would be pleased for *Space for People* and the WASt to be used to inform the development of your new Local Plan for Havering.	
POST18.4	V. Rajan and Associates	Demand based	A Strategic Housing Market Assessment (SHMA) has been prepared jointly with the London Boroughs of Barking and Dagenham and Redbridge as part of the evidence base for the Proposed Submission version of the Local Plan in line with the requirements of the National Planning Policy Framework. The SHMA assesses housing need within the Outer North East London Housing Market Area (HMA). The Proposed Submission version of the Local Plan contains policies on housing mix and tenure to ensure need is met.

Question 4: Where do you think new homes should be located?

Response Number	Respondent Name	Response to Q4	Council's response
REG18.1	AECOM	We believe the best option of accommodating a significant proportion of the borough's housing growth is a garden village at Bush Farm. The site would provide a significant portion of much needed housing, with employment and community uses for the borough whilst minimising the spread of sporadic development. This would alleviate the challenges to existing town and village infrastructure from having to provide increased services to accommodate small piecemeal developments. A new settlement would present a significant opportunity that must be realised, through: – Providing community open space as part of a new settlement, and not placing any strain on provision; – Providing sufficient economies of scale to deliver new infrastructure and services, including schools, again placing no additional strain on existing provision; – Providing the flexibility to locate a new town in an area of low landscape / biodiversity sensitivity, and to incorporate any significant features as part of the development; – Avoiding any negative impact on historic character by locating the majority of development away from existing historic towns and villages; and – Delivering mixed use development, creating a community that includes new shops and services, rather than locating homes on the periphery of existing towns, away from the existing town centre and services. Land at Bush Farm in Corbets Tey has the potential to deliver approximately 1,186 homes. This figure would significantly contribute to meeting the housing requirements of the authority as well as supporting economic	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.

Response Number	Respondent Name	Response to Q4	Council's response
		growth and sustainable development over a 15 year period.	
REG18.2	Adams Family (Bidwells)	The Council should seek to allocate a balance of brownfield and Green Belt land for new homes across the Borough. This approach would mean that suitable Green Belt sites which do not contribute to the function of the Green Belt, as well as brownfield sites, could accommodate new homes. A balanced approach to the location of new housing is the only way the Plan would be able to provide sufficient flexibility to be able to deliver the scale and mix of housing needed to meet the Borough's minimum target as prescribed by the London Plan, and to address housing needs as informed by the SHMA. As an absolute minimum the Council should conduct a Green Belt review to help determine what Green Belt land is the least sensitive to new development. We commend the approach taken by London Borough of Redbridge which identifies that some Green Belt release is needed to meet its significant local housing needs; furthermore this approach is supported by evidence. We would urge the Council to take a similar approach. In conclusion, we consider that new homes should be located on a range of carefully selected sites including Green Belt land, in order to provide sufficient flexibility that the Plan is deliverable. The Council should commission a Green Belt Review to assist in this process.	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.
REG18.3	Anonymous	There should be individual planning applications for approximately five houses at a time. All developments should only be tiny.	This approach would not be consistent with the NPPF or in general conformity with the London Plan.
REG18.8	Brett Aggregates Limited (MJCA)	The Local Plan should make provision for a range of housing requirements in the Borough in keeping with local needs however the provision of new homes should not result in the sterilisation of mineral resources. There are only four boroughs in Greater London that are capable of producing London's aggregates and the majority of the aggregate demand of the capital is met by importing aggregates from outside the capital by	The Local Plan aims to deliver a range of high quality new high quality housing of varying types, tenures and sizes in keeping with local needs on brownfield sites in sustainable locations across the borough that will not result in the sterilisation of mineral resources. The Proposed

Response Number	Respondent Name	Response to Q4	Council's response
		waterway, rail or road. It is therefore important to safeguard, maintain and make use of local sources of aggregates for use in the construction and maintenance of housing stock, building and infrastructure in the local area as well as the wider area of Greater London in accordance with The London Plan. The Minerals Safeguarding Areas included in the current Havering Local Plan should be preserved and continued in the new Local Plan in order to safeguard mineral reserves from being sterilised by non-mineral development. Through the Plan development process information should be sought and obtained actively to identify any further areas of mineral reserves which should be subject to safeguarding. The Plan should recognise that suitably located mineral extraction sites can be restored by backfilling with suitable materials to specified standards to recover the land to a form suitable for subsequent built development including housing.	Submission version of the Local Plan aims to maintain an appropriate landbank of mineral resources by safeguarding mineral reserves in Havering.
REG18.9	C. Cole	– Town centres – In fill anywhere (gardens)	The Council's approach to housing is to deliver new high quality homes on brownfield sites including town centres and appropriate infill development in sustainable locations across the borough. Support is also given for residential development on garden and backland sites subject to detailed design, amenity and access considerations.
REG18.11	Clive Narrainen	Harold Hill	The Local Plan aims to deliver a range of high quality new high quality housing of varying types, tenures and sizes in keeping with local needs on brownfield sites in sustainable locations across the borough
REG18.12	D. Campbell	Factories and unused buildings would be a sufficient place to rebuild homes. Not on our green.	The Council's approach to housing is to deliver new high quality homes on brownfield sites, including sites released from industrial use, in sustainable locations

Response Number	Respondent Name	Response to Q4	Council's response
			across the borough
REG18.13	D.K.Symes Associates	Generally through the reuse of land within the existing developed areas. However, in view of the strong levels of demand the Green Belt boundaries need to be reviewed to see if there are acceptable areas that can be developed.	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Proposed Submission version of the Local Plan Housing Position Statement.
REG18.14	Edward Gittins & Associates	We consider that in order to meet the housing needs in full, in addition to redevelopment at higher densities and brownfield sites, carefully selected sites within the Green Belt will need to be identified on the edge of the existing built-up area.	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the

			Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.
REG18.21	Havering College of Further and Higher Education (Iceni Projects)	HCFHE believe that new homes should be delivered proportionally across the Borough. Existing brownfield land in the Borough should be utilised for residential development. However, HCFHE encourages LBH to recognise the importance and fundamental role that previously developed sites in the Green Belt play in accommodating residential development incorporating a number of family sized dwellings. This is important on sites such as the College's Quarles campus at Tring Gardens, Harold Hill – further details are provided in response to Question 10.	The Council recognises the importance and fundamental role that previously developed sites in the Green Belt can play in accommodating residential development, and will, in the specific instance of the College's Quarles campus at Tring Gardens, Harold Hill, support redevelopment.
REG18.24	Higgins Homes (Nathaniel Lichfield & Partners)	Within or at the boundary of existing settlements – Given the need to meet the increased housing requirements outlined in the London Plan, consideration should be given to releasing areas of the Green Belt for residential development which are in a sustainable location as extensions to existing settlements, where there are clearly defined boundaries and where none of the purposes of the Green Belt are met.	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.

Response Number	Respondent Name	Response to Q4	Council's response
			For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.
REG18.26	Ian Weatherley	The beam reach area is a good example where space exists to build high-quality homes and social infrastructure for a thriving community to live and grow. There are also many brown-field sites on the outskirts of Havering where new developments can be built for high quality homes – where wealthier Havering residents could move to – freeing up existing homes and flats within the borough.	Rainham and Beam Park is identified within the Proposed Submission Local Plan as a major growth area where an exciting new residential neighbourhood linked to the delivery of a new railway station on the existing C2C line at Beam Park will be established. The Council's approach to housing is to deliver high quality new homes on brownfield sites in sustainable locations across the borough.
REG18.27	Janet Davy	On brownfield sites, not green belt, public open spaces or school playing fields. Preferably houses (possibly bungalows for sheltered housing) – restrict flats to areas near stations – better for commuters and reduction in car use. New 'luxury' housing not required.	The Council's approach to housing is to deliver new high quality homes on brownfield sites. The Proposed Submission version of the Local Plan supports the delivery of a range of high quality housing types, tenures and sizes to meet the varying needs of local residents.
REG18.28	Joe Coogan	Where sites allow, even development across the borough should be sought. Opportunities to expand existing estates should be considered if underused greenbelt land can be reclassified and brought into use.	The Council's approach to housing is to deliver new high quality homes on brownfield sites including the redevelopment of Council housing estates. The Council has undertaken a Green Belt

Response Number	Respondent Name	Response to Q4	Council's response
			study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.
REG18.29	John Peterson	Away from town centres already too crowded. The slums of tomorrow	The Council's approach to housing is to deliver new high quality homes on brownfield sites in sustainable locations across the borough including in town centres. The Proposed Submission Local Plan includes policies on urban design, residential amenity and infrastructure provision to create places where residents wish to live.
REG18.30	London Borough of Barking and	As partners with Havering in the London Riverside Opportunity Area we support the strategy set out in the draft London Riverside Opportunity Area and we hope this will be taken forward in the review of the Local Plan.	Support noted.

Response Number	Respondent Name	Response to Q4	Council's response
	Dagenham		
REG18.32	Lee Clements	Only on brownfield land.	The Council's approach to housing is to deliver new high quality homes on brownfield sites in sustainable locations.
REG18.33	Mr Leslie Budge (Andrew Martin Planning)	The site lies to the north of Shepherds Hill, a local road running in an east-west direction and linking the site to Romford in the southwest and Brentwood in the northeast. The site is centred within a triangular shaped area of land bounded by three principal routes – the M25 (2.8 miles), the A12 (1 mile) and A127 (0.8 miles). Harold Wood railway station lies some 0.64 miles to the northwest of the site and is on the main line into London Liverpool Street station. Notably Harold Wood station is also proposed to serve Crossrail, once it has been extended from Stratford to Shenfield. Services are expected to commence in 2018 and will introduce 12 high capacity trains at peak times in each direction between central London and Shenfield. Other services and facilities within close proximity of the site, including Harold Wood neighbourhood centre, are shown on the local services plan that accompanies the enclosed sustainability appraisal. The site is currently in use predominantly as pasture for grazing horses. In the southwest, the site has continuous frontage with Shepherds Hill. Further to the southeast it is separated from the road by a line of existing housing in a ribbon form along both sides of the road. There has also been some backland development. There are two main vehicular access points to the site from Shepherds Hill; one in the centre of the site leads to the property known as Little Paddocks and its associated land. The site is visually contained by existing housing to the south and vegetation along the field boundaries and the flood plain of the River Ingrebourne to the west and north-west. The northern boundary of the site is in close proximity to the railway line, which is set on an embankment. To the north-east lies Harold Court Woods, a dense area of woodland in the ownership of the Forestry Commission. A private access road to Harold Court Woods forms the eastern edge of the site and is bounded along its	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.

Response Number	Respondent Name	Response to Q4	Council's response
		length by existing vegetation. Existing vegetation within the site along field boundaries provides further screening. The overall total site area, as shown on the enclosed site location plan, extends to 33.5 hectares. Much of the site is capable of accommodating new residential-led development. The remainder of the site could accommodate open space and / or an extension to the adjoining Harold Court Woods recreation area, together with a network of new footpaths and buildings for public enjoyment, including a new riverside walk adjacent to the River Ingrebourne, which could form a new link to Harold Court Woods. The landowners confirm that this site is 'deliverable'. Consistent with paragraph 47 of the NPPF, this means the site is: – available now (the site has no current use that would delay development, and if necessary, prior mineral extraction could take place while an application for housing development is being prepared); – offers a suitable location for development (the site is well connected and contained as outlined above and the enclosed sustainability appraisal recognises that the site performs well against key sustainability objectives); and – is achievable with a realistic prospect that housing will be delivered within five years (any workable minerals could be extracted prior to development and the first 100 dwellings could be completed by the end of 2019) and that development will be viable (the landowners do not envisage any viability issues here). This site could accommodate in excess of 500 dwellings, which is based on	

Response Number	Respondent Name	Response to Q4	Council's response
		a modest density in view of the site's constraints and the sensitivity of the boundaries, i.e. the adjoining Harold Court Woods to the north-east. There is scope to provide new public green space, a riverside walk adjacent to the River Ingrebourne and / or an extension to the adjoining Harold Court Woods recreation area, in the more environmentally sensitive parts of the site. An indicative master plan accompanies this submission and this illustrates how residential development can be accommodated on this site, whilst having consideration for the site's constraints and surrounding context.	
REG18.34	Margaret Whippy	As more than half of Havering is green belt there is plenty of space around existing towns where housing could be developed. Holding land purely for green belt when not all of it is prime agricultural land makes no sense, especially as a nation we need to build more homes for our own people. Filling pockets of land between existing housing needs to be encouraged, also towns need to expand so allowing for that makes sense.	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.
REG18.36	Moody Homes and	The Council should seek to allocate a balance of brownfield and Green Belt land for new homes across the Borough.	The Council has undertaken a Green Belt study as part of the evidence base for the

		In conclusion, we consider that new homes should be located on a range of carefully selected sites including Green Belt land, in order to provide sufficient flexibility that the Plan is deliverable. The Council should commission a Green Belt Review to assist in this process.	Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.
REG18.40	Ms M Blackman	See Q3	N/A
REG18.41	National Grid Property (Carter Jones)	It is sensible for sites located within very close proximity to town centres (e.g. Romford Town Centre) to be utilised for the delivery of new homes. Making the best use of brownfield land must be supported by the Local Plan e.g. appropriate remediation in order to deliver new homes.	The Council's approach to housing delivery is to optimise housing output from brownfield sites in sustainable locations including those in close proximity to town centres.
REG18.42	Natural England	We note that the London Borough of Havering is looking to find suitable locations for new housing development within the Borough and we comment that it would be advisable if new housing in the Borough is not located within a 1km radius from the boundaries of either the Inner Thames Marshes or Ingrebourne Marshes. These are designated Sites of Special Scientific Interest (SSSIs) and are protected under UK legislation. For large scale housing applications or those affecting water courses, it is preferable if the radius from the SSSIs within which housing is not located is increased to 2km. The National Planning Policy Framework (NPPF) outlines the importance of the protection of SSSIs and any proposed development not having adverse impacts on SSSIs at paragraph 118 as follows: "...(any) proposed development on land within or outside a Site of Special	The Council has engaged with Natural England in the drafting of the Proposed Submission version of the Local Plan policies, which include policies seeking to ensure that developments do not have adverse impacts on SSSIs.

Response Number	Respondent Name	Response to Q4	Council's response
		Scientific Interest likely to have an adverse effect on a Site of Special Scientific Interest (either individually or in combination with other developments) should not normally be permitted. Where an adverse effect on the site's notified special interest features is likely, an exception should only be made where the benefits of the development, at this site, clearly outweigh both the impacts that it is likely to have on the features of the site that make it of special scientific interest and any broader impacts on the national network of Sites of Special Scientific Interest." The following link on our website provides access to details of individual SSSIs – http://www.sssi.naturalengland.org.uk/Special/sssi/search.cfm.	
REG18.43	Omega After Alpha Ltd (Bidwells)	The Council should seek to allocate a balance of brownfield and Green Belt land for new homes across the Borough. This approach would mean that suitable Green Belt sites which do not contribute to the function of the Green Belt, as well as brownfield sites, could accommodate new homes. A balanced approach to the location of new housing is the only way the Plan would be able to provide sufficient flexibility to be able to deliver the scale and mix of housing needed to meet the Borough's minimum target as prescribed by the London Plan, and to address housing needs as informed by the SHMA. As an absolute minimum the Council should conduct a Green Belt review to help determine what Green Belt land is the least sensitive to new development. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.

Response Number	Respondent Name	Response to Q4	Council's response
REG18.44	Persimmon Homes	New homes should be located in the most sustainable locations. This will ensure homes are delivered and minimise any impact on the local community and environment. The location of Havering in relation to Greater London means that development is predominately low density housing. Romford Town Centre and Neighbouring Centres of Hornchurch, Upminster, Collier Row, Elm Park, Harold Hill and Rainham provide higher density development. The new Local Plan should seek to maintain and enhance this development pattern within the borough. The release of Green Belt land for development receives more political and public opposition. National Planning Policy encourages the effective use of land by reusing land that has been previously development. Persimmon Homes agrees that council's should seek to achieve this requirement but argues that the development of brownfield land is not always achievable as they are often deemed unviable, due to site remediation costs. The Council should also therefore seek the allocation of greenfield land for development so that it can guarantee the timely delivery of these sites and thus maintain a 5 year housing land supply. The allocation of large strategic sites will enable the council to provide a steady supply of housing over a longer period of time.	Noted. The Council's approach to housing is to optimise the delivery of new high quality homes output including providing residential development consistent with the London Plan density range on brownfield sites in the most sustainable locations across the borough including in town centres. The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement..

Response Number	Respondent Name	Response to Q4	Council's response
REG18.46	Planning Potential Rep 2.	The London Plan (2015) identified broad locations for residential development in Romford, including Romford Town Centre and London Riverside. Given the significant increase in housing requirements to 1,170 new dpa, it is our view that the Council will need to identify areas for housing outside of these locations. It is understood that one of the core planning principles of the NPPF (Para 17) is to encourage the effective use of land by reusing land that has been previously developed. However, given the significant increase in housing need, we consider it highly likely that the Council will need to look at potential greenfield and Green Belt sites within the Borough, where development would constitute sustainable development in accordance with the 3 planning roles, social, environmental and economic. There is an acceptance, nationally, that the full objectively assessed housing need, is unlikely to be accommodated purely on previously developed land. It is also accepted that not all sites perform the function of Green Belt. On this basis, with regard to Havering, appropriate greenfield and Green Belt sites, should be reviewed and considered in relation to the need for housing. As part of this, we encourage the Council to investigate the potential for reviewing the Green Belt boundaries, which is supported by paragraphs 83-85 of the NPPF, as it is possible that some sites continue to be given this high level of protection where indeed its redevelopment would be more sustainable than that of greenfield sites, which do not have the same level of protection. Paragraph 83 states "Local planning authorities with Green Belts in their area should establish Green Belt boundaries in their Local Plans which set the framework for Green Belt and settlement policy. Once established, Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. At the time, authorities should consider the Green Belt boundaries having regard to their intended permanence in the long term, so that they should be capable of enduring beyond the plan period". We provide further detailed comments in our representations relating to Question 10.	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.

Response Number	Respondent Name	Response to Q4	Council's response
REG18.47	R. Watt and Partners (Phillips Planning Services)	It is considered that new homes should be located in accessible locations which are or have the potential to be well linked to services, facilities and places of work.	Noted. The Council's approach to housing is to deliver new high quality homes on brownfield sites in sustainable locations across the borough with adequate supporting infrastructure.
REG18.48	R.A.Montague	Brownfield and Greenfield locations but not in the Green Belt and not concentrated in one location.	Romford town centre and Rainham and Beam Park will be the main growth areas in Havering for housing as a result of their development potential. However the Council's approach to housing is to deliver new high quality homes on brownfield sites in sustainable locations across the borough.
REG18.50	Rainham Preservation Society	Spread fairly across the borough and not targeting Rainham and South Hornchurch for high density 'affordable' or housing association properties.	Romford town centre and Rainham and Beam Park will be the main growth areas in Havering for housing as a result of their development potential. However the Council's approach to housing is to deliver new high quality homes of various types, sizes and tenures including affordable homes across the borough.
REG18.51	Ray Whitehouse	Riverside together with improved infrastructure. Not Romford and not Harold Hill.	Noted. Rainham and Beam Park in Riverside is identified as a Strategic Development Area providing an opportunity where an exciting new residential neighbourhood will be established. Romford town centre and Rainham and Beam Park will be the main growth areas in Havering for housing as a result of their development potential. However the Council's approach to housing is to deliver

Response Number	Respondent Name	Response to Q4	Council's response
			new high quality homes of various types, sizes and tenures including affordable homes across the borough.
REG18.52	Romford Civic Society	We support the principle of town centre development, but it requires an increase in amenity space and green space in the town centre to be socially sustainable.	Support noted. The Proposed Submission version of the Local Plan contains policies requiring development to provide high quality amenity space. The Plan also supports development which contributes to the 'greening' of Romford.
REG18.53	Romford Golf Club (Joe Coogan)	Where sites allow, even development across the borough should be sought. Opportunities to expand existing estates should be considered if underused greenbelt land can be reclassified and brought into use.	The Proposed Submission version of the Local Plan contains policies supporting intensification and renewal of Council's estates. The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing

Response Number	Respondent Name	Response to Q4	Council's response
			housing supply is set out in further detail in the Local Plan Housing Position Statement.
REG18.54	Romford YMCA	Romford YMCA suggests that the council explores all options to exhaust the brownfield sites within the borough. However, it is also understandable that the borough may need to review the Green Belt land, and Romford YMCA has on Upper Rainham Road which could be used to that effect. Romford YMCA also suggests that any new development, takes in the factors of schools, transport, leisure and health amenities.	Noted. The Council's approach to meet its housing supply target has been through the adoption and use of a combination of policy tools such as optimising housing output for different types of location within the relevant London Plan density range on brownfields sites, resisting the net loss of housing, positively and proactively enabling housing intensification in Council estates, in town and district centres, along transport corridors and prioritising all non-designated land for housing when it becomes available, and supporting initiatives to bring back empty residential properties into use. The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the

Response Number	Respondent Name	Response to Q4	Council's response
			NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing.
REG18.55	Rowley Cardrome Ltd (Montagu Evans)	Core Strategy CP1 of the London Borough of Havering's (LBH) current Core Strategy (2008) states that the Council will build a minimum of 535 new homes per annum by prioritising the development of brownfield land and ensuring it is used efficiently. The recently published London Plan (Consolidated with Alterations since 2011) has set LBH a target of providing a minimum of 1,170 new homes per annum. The current Authority Monitoring Report (2012-2013) notes that the Borough has a five year projected completion figure of 5,676 new residential dwellings between 2013/14 to 2017/18. This falls short of the new annual requirement set out in the London Plan (5,850). In accordance with the NPPF, a 5% buffer should also be added to the annual requirement of 1,170, equating to a target of 6,143. Consequently, LBH must identify additional locations for housing provision to meet the increased strategic target both in the short term and across the Plan period. New homes should be located in sustainable locations, close to good public transport links, local amenities and other development that would not affect the residential amenity of the future occupiers. Residential development should be concentrated on previously developed land, preferably within or adjacent to existing residential areas to reduce the need to build on undeveloped greenfield land. The Site represents a previously developed site as established by its current allocation as a Major Developed Site in the Green Belt. Under the current	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. It is recognised that as the site was previously designated as a Major Developed site in the Green Belt there may be some potential for re-development in line with green belt policy set out in the National Planning Policy Framework.

Response Number	Respondent Name	Response to Q4	Council's response
		allocation a certain amount of redevelopment is therefore already established under Core Strategy Policy DC46. Given the established need to release some Green Belt land it is logical that first focus should be on those Green Belt sites that are already identified for development. Optimisation of such sites can only serve to enhance the sustainability credentials of such sites on which some development In response to the advice provided by Montagu Evans' in terms of Planning Policy, Formation Architects were asked to prepare a masterplan for the site. A copy of the illustrative masterplan can be found at Appendix 2. This masterplan demonstrates that the redevelopment of the site has the potential to provide circa 250 residential units that would go towards the Council's existing and future housing targets. The delivery of a significant number of units on this previously developed site should be given significant weight by the Council. In addition, the site's location within a suburban area lends itself to proposing a residential led scheme of this scale, density and design proposed. With this provision there will also be significant allocation of affordable housing.	
REG18.56	S.D. Olney	In areas where less dense properties are situated, but no high rise development.	Romford town centre and Rainham and Beam Park will be the main growth areas in Havering for housing as a result of their development potential. However, the Council's approach to housing is to optimise site output in delivering new high quality homes on brownfield sites in sustainable locations across the borough.
REG18.57	Sheila Clements	In places lying empty already, not building more and more. This should only be done in an emergency. Also it is not affordable housing that is being built. One developer in Rainham, when the financial downturn began, asked the Council if he could be let off from building affordable housing on his site because prices were low and he would not make the profit he had hoped	The Proposed Submission version of the Local Plan aims to secure the highest level of affordable housing contributions by supporting a transparent approach to viability and information submission, in

Response Number	Respondent Name	Response to Q4	Council's response
		for. What did the Council do, they gave him the go ahead to just build high cost housing instead. He must be laughing all the way to the bank now.	order to provide the required amount of affordable housing needed in the borough.
REG18.58	Sport England	The location for new homes should not result in the loss of open space sport and recreation land and buildings in accordance with paragraph 74 of the NPPF. The Local Plan should reflect this.	The Proposed Submission version of the Local Plan contains policies to preserve open space.
REG18.60	Thames Water Utilities Ltd (Savills)	Thames Water would not object in principle to the allocation of any sites for housing development; however it is considered that development should not increase the risk or frequency of sewer flooding.	Noted, sewer capacity has been addressed by the London Plan.
REG18.61	The Crown Estate (Amec Foster Wheeler)	The key theme running through NPPF is a presumption in support of sustainable development (paragraph 14). Other guidance provided in NPPF seeks to ensure that sustainable development is delivered through a number of steps including managing patterns of growth to ensure development takes place in locations which are or can be made sustainable (paragraph 17) and facilitate the use of sustainable modes of transport. To contribute to the aims of achieving sustainable patterns of development as per the requirement of NPPF, the Plan should ensure that housing is developed in suitable locations which offer a range of community facilities and with good access to jobs, key services and infrastructure. The Crown Estate believes that it can contribute towards delivering housing in sustainable locations through its extensive land ownership in Havering including land at Collier Row (see question 10). To save placing total reliance on brownfield sites which often have more constraints to bringing them forward for development, the Plan should allocate a mix of brownfield and greenfield sites, including a range of options such as The Crown Estate's land to provide flexibility in supply and allow the Council to respond quickly to fluctuations in delivery. Additional allocations, including The Crown Estate's sites (see question 10) can assist in planning for the longer term needs, including delivering affordable housing, rather than persisting with the piecemeal approach provided by an over reliance on brownfield sites and windfalls. We consider that there are a number of	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.

Response Number	Respondent Name	Response to Q4	Council's response
		benefits in identifying a supply of greenfield sites. These include: – It can help with the delivery of market and affordable housing. It is far easier to bring forward affordable housing on planned greenfield allocations compared to brownfield sites; thereby reducing net migration of the economically active population and help to retain and attract a younger population. – Greenfield sites often have fewer constraints and can therefore make a greater contribution towards community facilities through CIL and s.106 contributions. – It reduces pressure on employment land being lost to housing which, risks undermining growth in the economy and creating dormitory settlements where people commute to larger centres outside for work. – It would save placing reliance on previously developed sites to deliver which may have more constraints such as contamination.	
REG18.63	Thomas Bates and Son Ltd. (Andrew Martin Planning)	As illustrated on the attached Site Location Plan, Land off Wingletye Lane, Hornchurch comprises a broadly square shaped plot of level scrubland bounded by existing housing to the south (rear of Wych Elm Road) and to the west (on the opposite side of Wingletye Lane), Lillyputts Farm to the north and agricultural fields to the east. The site extends to approximately 2.7 hectares (6.67 acres). Located on the outskirts of the existing Emerson Park settlement to the north east of Hornchurch town centre, the site is well linked in terms of community infrastructure, services and facilities. The site is located within a 20 minute walk from educational establishments catering for all age groups (primary through to sixth form). Emerson Park School is only a 5 minute walk from the site. In addition, well-established transportation links adjacent to the site, would ensure that schools further afield are also accessible. In addition to nearby existing bus routes, Emerson Park train station is a 20 minute walk from the site or, for a direct route into central London, Upminster station is a half an hour walk away (1.5 miles) and is served by	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing.

Response Number	Respondent Name	Response to Q4	Council's response
		the District line. Furthermore, Hornchurch station is a short bus ride away and is also served by District line. The site is therefore accessible to those who work in central London, in addition to those who work and/or shop more locally in Hornchurch, Romford or Upminster town centres. Highway access to the strategic road network (A127 – 0.8 miles and M25) is provided via Wingletye Lane. The landowner confirms that the site is 'deliverable', consistent with paragraph 47 of the NPPF, which means the site is: – available now (the site has no current use that would delay development); – offers a suitable location for development (the site is well connected and contained); and – is achievable with realistic prospect that housing will be delivered within five years and that development will be viable (the landowners do not envisage there being any issues regarding viability). This site could accommodate approximately 68 dwellings, based on a modest density of 25 dwellings per hectare, as shown on the master plan accompanying this submission. The master plan is indicative in nature and illustrates how residential development could be accommodated on site, allowing for the sensitive treatment of design in a Countryside Conservation Area. This density could be varied if deemed necessary by London Borough of Havering.	The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.
REG18.66	Trinity Hall (Bidwells)	The Council should seek to allocate a balance of brownfield and Green Belt land for new homes across the Borough. This approach would mean that suitable Green Belt sites which do not	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes

Response Number	Respondent Name	Response to Q4	Council's response
		contribute to the function of the Green Belt, as well as brownfield sites, could accommodate new homes. A balanced approach to the location of new housing is the only way the Plan would be able to provide sufficient flexibility to be able to deliver the scale and mix of housing needed to meet the Borough's minimum target as prescribed by the London Plan, and to address housing needs as informed by the SHMA. As an absolute minimum the Council should conduct a Green Belt review to help determine what Green Belt land is the least sensitive to new development. We commend the approach taken by London Borough of Redbridge which identifies that some Green Belt release is needed to meet its significant local housing needs; furthermore this approach is supported by evidence. We would urge the Council to take a similar approach. In conclusion, we consider that new homes should be located on a range of carefully selected sites including Green Belt land, in order to provide sufficient flexibility that the Plan is deliverable. The Council should commission a Green Belt Review to assist in this process.	a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.
REG18.69	Wyevale Garden Centres (Gregory Gray Associates)	The Local Plan should be consistent with the NPPF by encouraging the reuse of previously developed (brownfield) land. Our client's site, Upminster Garden Centre, was submitted in response to the Council's 2014 call for sites. It is currently highly developed and benefits from good access arrangements. It would provide a suitable location for new residential (or employment) development which could be achieved in accordance with para. 89 of the NPPF.	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.

Response Number	Respondent Name	Response to Q4	Council's response
			For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.
POST18.4	V. Rajan and Associates	Romford Town Centre	Romford is one of the two main areas for growth in the Local Plan. Support noted.

Question 5: How do you think the Local Plan should continue to support the protection, improvement and growth of the Borough's town centres?

Response Number	Respondent Name	Response to Q5	Council's response
REG18.2	Adams Family (Bidwells)	The continued protection, improvement and growth of the Borough's town centres should be supported by a balanced approach to development that allocates suitable sites within the Green Belt for residential development. The Plan says that Havering's town centres are important to the economy because they provide shops, services and jobs as well as places to live. Indeed, the Framework recognises that town centre needs are dependent upon a range of uses to support their vitality. It is therefore critical for the new Local Plan to ensure that sufficient town centre sites are allocated for main town centre uses. The Framework states (in the same paragraph) that "needs for retail, leisure, office and other main town centre uses are met in full and are not compromised by limited site availability". Proliferation of residential development on brownfield sites in existing town centre locations is one potential contributor towards limited site availability. Allocating additional sites for residential development in town centres may exacerbate the issues caused by the office to residential permitted development rights. These have successfully accelerated the delivery of residential development on viable sites but in a way that reduces the scope for local planning authorities to appropriately manage land use development in town centre locations. The Council should therefore seek to plan as best that it can for an appropriate balance between residential uses and main town centre uses, rather than an imbalanced mix focussed in maximising residential densities on brownfield land. We would highlight that the Inspector's Report on Further Alterations to the London Plan published last year expressed deep concerns about whether	The Proposed Submission version of the Local Plan supports the continued protection, improvement and growth of the Borough's town centres through adopting a balanced approach to development that allocates suitable sites within the town centres for main town centre uses whilst allowing other complementary uses such as residential uses within mixed use schemes to optimise development output and ensure an effective and efficient use of brownfield sites for commercial and residential development in its town centres. In conformity to the National Planning Policy Framework, the Proposed Submission version of the Local Plan promotes mixed use developments in town centres Residential development will underpin and support the vitality and viability of town centres, secure sustainable development objectives and ensure an effective and efficient use of scarce brownfield sites in town centres.

Response Number	Respondent Name	Response to Q5	Council's response
		higher densities can or should be sought or achieved in order to find additional sources of supply. It would be inappropriate for local context and character, transport capacity, access to social infrastructure and open space (all factors relevant to the optimisation of housing potential) to be compromised if the Council were to seek to meet its London Plan housing target through the provision of new development on brownfield land alone. The Local Plan should therefore ensure that the degradation of town centre function does not occur through the loss of established town centre uses through an imbalanced mix containing too many new homes. Allowing residential development in suitable Green Belt locations would relieve the significant and mounting pressure on town centre brownfield sites to enable the protection, improvement and sustainable growth of the Borough's town centres.	The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.3	Anonymous	Town centres shouldn't be allowed to grow. Should keep out national and multi-national companies. Encourage independent retailers and stop internet shopping.	The Proposed Submission version of the Local Plan encourages a wide range of diversified retail offer from independent, national and multi-national companies in order to ensure the vibrancy of town centres. The stopping of internet shopping is an action outside the scope of the Proposed Submission version of the Local Plan.
REG18.9	C. Cole	– Get rid of un-let retail and business premises, convert them to commuter and residential use – Create a coach park and have a big marketing drive with shopping trips	The Proposed Submission version of the Local Plan promotes a change of use of proven unlet retail and business premises to other complementary town centre uses, subject to meeting clearly defined criteria.

Response Number	Respondent Name	Response to Q5	Council's response
REG18.12	D. Campbell	To update the local town centre a little just to make it a bit contemporary.	The Proposed Submission version of the Local Plan supports public realm improvements schemes including the provision of high quality shop front design, that enhance the character and appearance of town centres.
REG18.15	Ellandi (Savills)	By way of context, Ellandi acquired the Mercury Shopping Centre in Romford Metropolitan Town Centre in December 2014. Ellandi was formed in 2008 by Morgan Garfield and Mark Robinson and is the UK's leading specialist shopping centre investment and asset manager. The Mercury Centre is an enclosed shopping centre in Romford Metropolitan Town Centre. It currently comprises of circa 21,430 sq m of retail floorspace across two levels and includes convenience and comparison operators such as ASDA (including George), Blue Inc, Bonmarche, Game, McDonald's, Peacocks, Poundland, Superdrug and Wilko. A third level forms an integrated leisure offer including an independently run cinema and bingo hall while the forth level is the former Pulse nightclub that closed in 1995. Ellandi's approach is to proactively help transform the towns in which they invest by working with occupiers and other stakeholders to ensure that their shopping centres perform a successful and vibrant role for the local communities that they serve. The work of Ellandi is pioneering a new form of shopping centres that are referred to as 'Community Shopping Centres'. Accordingly, Ellandi look forward to proactively working alongside the Council as a town centre stakeholder within the Local Plan process. We welcome the identification of Romford as the main town centre within the Borough of Havering which will see it remain as the focus for investment over the emerging Local Plan period. We note that the background evidence to the Core Strategy is to be updated	Support noted. The Council has undertaken a Retail and Commercial Leisure Needs Assessment study for the borough as part of the evidence base for the Proposed Submission version of the Local Plan. The study identified a quantitative need for the borough for comparison goods of up to 49,500sqm, for convenience goods of up to 13,200sqm and for commercial leisure floorspace (A3, A4, and A5 uses) of up to 21,000sqm by 2031. The identified capacity is allocated in accordance with the hierarchy of the borough's town centres with the largest amount accommodated within Romford as the Borough's largest town centre. The Proposed Submission version of the Local Plan policies comply with the requirements of the NPPF and the London Plan in applying a sequential test to

Response Number	Respondent Name	Response to Q5	Council's response
		in support of the new Local Plan. Updating of evidence should extend to the 2006 Retail and Leisure Study as this is now out of date. In addition to updating the study to reflect the lasts objectively assessed needs for the Borough, we would recommend that a new shopper survey is also prepared as it is now 10 years since the last survey was completed and retailing has changed significantly in that time. Once the retail evidence base has been updated, any capacity for new convenience or comparison goods floorspace identified within the Borough should respect the settlement hierarchy for Havering with Romford being the focus for substantial Town Centre improvements. Lower order centres such as Hornchurch, Upminster and Rainham should consolidate their role in the hierarchy by providing local convenience and niche comparison goods floorspace only. In addition to the above, we would stress the importance of complying with National planning policy which seeks to promote retail development in "town centre" locations first and at a scale appropriate to the role of settlements within a defined hierarchy. Paragraph 23 of the NPPF states that planning policies should be positive, promote competitive town centre (our emphasis) environments and set out policies for the management and growth of centres over the plan period. NPPF paragraph 24 continues to state that Local Planning Authorities should require applications for main town centre uses to be located in town centres, then in edge of centre locations and only if suitable sites are not available should out of centre sites be considered. When considering edge of centre and out of centre proposals, preference should be given to accessible sites that are well connected to the town centre. The Local Plan is the opportunity for objectively assessed development requirements to be spatially planned, which includes identifying appropriate growth for different centres. This must be undertaken with full consideration of the role of each centre within the retail hierarchy, the market implications	applications for main town centre uses requiring them to be located first in town centres, then in edge-of-centre locations and only if suitable sites are not available should out-of-centre sites be considered. The Proposed Submission version of the Local Plan policy also makes clear that when considering edge-of-centre and out-of-centre proposals, preference would be given to accessible sites that are well connected to the town centre. The Proposed Submission version of the Local Plan contains policies setting out the borough's town centre hierarchy, and the role and function of each centre within the hierarchy. The Council will prepare a detailed masterplan for Romford which will be taken forward as a Supplementary Planning Document. The Proposed Submission version of the Local Plan contains policies for the management of uses within Primary and Secondary Frontages which reflect the Council's approach to securing the vitality and viability of its town centres.

Response Number	Respondent Name	Response to Q5	Council's response
		of diverting retail growth to alternative centres and the infrastructure requirements that would be required. Without doing this then the plan cannot be effective. To facilitate this, and to effectively focus redevelopment opportunities on a town centre's first basis we would advocate the adoption of an overarching vision or strategy for Romford Metropolitan Town Centre. We acknowledge the adoption of an Area Action Plan for Romford in 2008 but consider that this would benefit from being refreshed. This could take the form of a Town Centre Masterplan / Vision document which actively looks to engage key town centre stakeholders such as Ellandi in sourcing and implementing redevelopment opportunities. There are a number of substantial opportunities at the Mercury Centre which should be recognised within an updated Area Action Plan and / or the new Local Plan. On this basis Ellandi and Savills would welcome the opportunity to meet and discuss these with Havering Borough Council. The Council's approach to encouraging vibrant town centres with a choice of shops and a mix of uses to enhance the visitor experience reflects Paragraph 23 of the NPPF and we actively support a strategy that adheres to this requirement. Policies for the management of uses in the Primary Shopping Area and Secondary and Primary Shopping Frontages should reflect this flexible approach and not be overly prescriptive. The ability to undertake a balanced consideration of complementary town centre uses in the Primary and Secondary Shopping Frontages at the time they are proposed, where this does not undermine the predominance of A1 retail, is the preferred approach of the NPPF to securing the vitality and viability of town centres	
REG18.26	Ian Weatherley	By ensuring all town centres have a mix of residential, commercial, retail, healthcare and night-time economy opportunities to generate and maintain a balanced economy and economic growth of these areas/centres.	Noted. The Proposed Submission version of the Local Plan encourages mixed use development in town centres to generate and maintain a balanced economy and

Response Number	Respondent Name	Response to Q5	Council's response
			economic growth.
REG18.27	Janet Davy	Support for local retail businesses – reduction in fast food outlets and 'takeovers' such as Boots in Hornchurch.	The Proposed Submission version of the Local Plan supports a diversified retail offer from both independent and national multiple retailers in order to widen choice for consumers and a restriction on the concentration of fast food outs and certain other non-retail uses in defined frontages of town centres.
REG18.28	Joe Coogan	Balanced development across the borough will help town centres. Too many flats concentrated in one area can lead to buy-to-let ghettos with transient populations that can damage communities. Opportunities to develop high quality family homes should be sought to ensure town centres are supported by balanced population growth.	The Proposed Submission version of the Local Plan promotes a balanced development which includes mixed use development across the borough in sustainable locations. The Proposed Submission version of the Local Plan also supports the delivery of a dwelling mix of types, sizes and tenures with priority for provision of family units wherever possible, to achieve balanced communities.
REG18.29	John Peterson	Support Romford market without it Romford shopping will collapse	The Proposed Submission version of the Local Plan recognises Romford Market as vital to Romford shopping and contains policies for its transformation to act as a catalyst for the town's future growth.
REG18.30	London Borough of Barking and Dagenham	Many borough residents use Romford Town Centre yet bus links between Chadwell Heath and in particular Dagenham are poor mainly due to congestion along Rush Green Road. The Council intends to apply for bus priority funding for bus priority measures along route 5 and would support bus priority measures along the Havering section of the route too.	Support noted. The London Borough of Havering supports the London Borough of Barking and Dagenham's proposed application for a bus priority funding to tackle congestion along Rush Green Road to ease movement of residents using Romford Town Centre.
REG18.32	Lee Clements	By: supporting small and medium sized business; ensuring easy access for workers and customers; cutting car parking charges; a better police	The Proposed Submission version of the Local Plan supports small and medium

Response Number	Respondent Name	Response to Q5	Council's response
		presence in order to keep crime low; planting more trees and plants to combat air pollution and make the areas more pleasant;	sized businesses, public realm improvement schemes including tree planting and improvement to connectivity within the borough to ensure easy access for workers and customers. Cutting car parking charges and a better police presence are outside the scope of the Proposed Submission version of the Local Plan.
REG18.34	Margaret Whippy	Despite the increase in internet shopping, town centre shopping is as important as ever. Improvements in those centres encourage shoppers to them as against allowing them to deteriorate, which has the opposite effect. Perhaps encouraging flats in the centres will bring more vibrancy using existing redundant blocks which may not be renting well.	The Proposed Submission version of the Local Plan encourages mixed use development with flats above shops and promotes public realm improvements to enhance character and appearance including vibrancy of its town centres.
REG18.36	Moody Homes and Mr John Wakeling (Bidwells)	The continued protection, improvement and growth of the Borough's town centres should be supported by a balanced approach to development that allocates suitable sites within the Green Belt for residential development. The Plan says that Havering's town centres are important to the economy because they provide shops, services and jobs as well as places to live. Indeed, the Framework recognises that town centre needs are dependent upon a range of uses to support their vitality. It is therefore critical for the new Local Plan to ensure that sufficient town centre sites are allocated for main town centre uses. The Framework states (in the same paragraph) that "*needs for retail, leisure, office and other main town centre uses are met in full and are not compromised by limited site availability*". Proliferation of residential development on brownfield sites in existing town centre locations is one potential contributor towards limited site availability. Allocating additional sites for residential development in town centres may exacerbate the issues caused by the office to residential permitted development rights. These have successfully accelerated the delivery of	The Proposed Submission version of the Local Plan supports the continued protection, improvement and growth of the Borough's town centres through adopting a balanced approach to development that allocates suitable sites within the town centres for main town centre uses whilst allowing other complementary uses such as residential uses within mixed use schemes to optimise development output and ensure an effective and efficient use of brownfield sites for commercial and residential development in its town centres. In conformity to the National Planning Policy Framework, the Proposed Submission version of the Local Plan promotes mixed use developments in town

Response Number	Respondent Name	Response to Q5	Council's response
		residential development on viable sites but in a way that reduces the scope for Councils to appropriately manage land use development in town centre locations. The Council should therefore seek to plan as best that it can for an appropriate balance between residential uses and main town centre uses, rather than an imbalanced mix focussed in maximising residential densities on brownfield land. We would highlight that the Inspector's Report on Further Alterations to the London Plan published last year expressed deep concerns about whether higher densities can or should be sought or achieved in order to find additional sources of supply. It would be inappropriate for local context and character, transport capacity, access to social infrastructure and open space (all factors relevant to the optimisation of housing potential) to be compromised if the Council were to seek to meet its London Plan housing target through the provision of new development on brownfield land alone. The Local Plan should therefore ensure that the degradation of town centre function does not occur through the loss of established town centre uses through an imbalanced mix containing too many new homes. Allowing residential development in suitable Green Belt locations would relieve the significant and mounting pressure on town centre brownfield sites to enable the protection, improvement and sustainable growth of the Borough's town centres.	centres Residential development will underpin and support the vitality and viability of town centres, secure sustainable development objectives and ensure an effective and efficient use of scarce brownfield sites in town centres. The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	Ensure accessibility and connectivity to all development.	The Proposed Submission version of the Local Plan promotes planning policies that ensure accessibility and connectivity to all development.
REG18.39	Mrs S J Ellis (Bidwells)	The continued protection, improvement and growth of the Borough's town centres should be supported by a balanced approach to development that allocates suitable sites within the Green Belt for residential development. The Plan says that Havering's town centres are important to the economy because they provide shops, services and jobs as well as places to live.	The Proposed Submission version of the Local Plan supports the continued protection, improvement and growth of the Borough's town centres through adopting a balanced approach to development that allocates suitable sites within the town

Response Number	Respondent Name	Response to Q5	Council's response
		Indeed, the Framework recognises that town centre needs are dependent upon a range of uses to support their vitality. It is therefore critical for the new Local Plan to ensure that sufficient town centre sites are allocated for main town centre uses. The Framework states (in the same paragraph) that "*needs for retail, leisure, office and other main town centre uses are met in full and are not compromised by limited site availability*". Proliferation of residential development on brownfield sites in existing town centre locations is one potential contributor towards limited site availability. Allocating additional sites for residential development in town centres may exacerbate the issues caused by the office to residential permitted development rights. These have successfully accelerated the delivery of residential development on viable sites but in a way that reduces the scope for Councils to appropriately manage land use development in town centre locations. The Council should therefore seek to plan as best that it can for an appropriate balance between residential uses and main town centre uses, rather than an imbalanced mix focussed in maximising residential densities on brownfield land. We would highlight that the Inspector's Report on Further Alterations to the London Plan published last year expressed deep concerns about whether higher densities can or should be sought or achieved in order to find additional sources of supply. It would be inappropriate for local context and character, transport capacity, access to social infrastructure and open space (all factors relevant to the optimisation of housing potential) to be compromised if the Council were to seek to meet its London Plan housing target through the provision of new development on brownfield land alone. The Local Plan should therefore ensure that the degradation of town centre function does not occur through the loss of established town centre uses through an imbalanced mix containing too many new homes. Allowing residential development in suitable Green Belt locations would relieve the significant and mounting pressure on town centre brownfield	centres for main town centre uses whilst allowing other complementary uses such as residential uses within mixed use schemes to optimise development output and ensure an effective and efficient use of brownfield sites for commercial and residential development in its town centres. In conformity to the National Planning Policy Framework, the Proposed Submission version of the Local Plan promotes mixed use developments in town centres Residential development will underpin and support the vitality and viability of town centres, secure sustainable development objectives and ensure an effective and efficient use of scarce brownfield sites in town centres. 		sites to enable the protection, improvement and sustainable growth of the Borough's town centres.	NPPF and London Plan. Allowing residential development in Green Belt locations would be contrary to current national and regional planning policies.
REG18.40	Ms M Blackman	Encourage wider variety of people to live and remain in area – decent housing, education and jobs /business enterprise & ensure connectivity to key commercial centres.	The Proposed Submission version of the Local Plan contains policies that create and maintain a mix of balanced communities that ensure that a wider variety of people live and remain in the area.
REG18.41	National Grid Property (Carter Jones)	The Local Plan must support the redevelopment of sites near town centres which can provide a residential 'critical mass'. High-density residential redevelopment must be supported and good pedestrian links provided to and from town centres.	The Proposed Submission version of the Local Plan supports the redevelopment of sites near town centres for residential development and the optimisation of housing output for different types of location within the relevant London Plan density range, including providing for good pedestrian links to and from town centres.
REG18.43	Omega After Alpha Ltd (Bidwells)	The continued protection, improvement and growth of the Borough's town centres should be supported by a balanced approach to development that allocates suitable sites within the Green Belt for residential development. The Plan says that Havering's town centres are important to the economy because they provide shops, services and jobs as well as places to live. Indeed, the Framework9 recognises that town centre needs are dependent upon a range of uses to support their vitality. It is therefore critical for the new Local Plan to ensure that sufficient town centre sites are allocated for main town centre uses. The Framework states (in the same paragraph) that "needs for retail, leisure, office and other main town centre uses are met in full and are not compromised by limited site availability". Proliferation of residential development on brownfield sites in existing town centre locations is one potential contributor towards limited site availability.	The Proposed Submission version of the Local Plan supports the continued protection, improvement and growth of the Borough's town centres through adopting a balanced approach to development that allocates suitable sites within the town centres for main town centre uses whilst allowing other complementary uses such as residential uses within mixed use schemes to optimise development output and ensure an effective and efficient use of brownfield sites for commercial and residential development in its town centres. In conformity to the National Planning

Response Number	Respondent Name	Response to Q5	Council's response
		Allocating additional sites for residential development in town centres may exacerbate the issues caused by the office to residential permitted development rights. These have successfully accelerated the delivery of residential development on viable sites but in a way that reduces the scope for Councils to appropriately manage land use development in town centre locations. The Council should therefore seek to plan as best that it can for an appropriate balance between residential uses and main town centre uses, rather than an imbalanced mix focussed in maximising residential densities on brownfield land. We would highlight that the Inspector's Report on Further Alterations to the London Plan published last year expressed deep concerns about whether higher densities can or should be sought or achieved in order to find additional sources of supply10. It would be inappropriate for local context and character, transport capacity, access to social infrastructure and open space (all factors relevant to the optimisation of housing potential11) to be compromised if the Council were to seek to meet its London Plan housing target through the provision of new development on brownfield land alone. The Local Plan should therefore ensure that the degradation of town centre function does not occur through the loss of established town centre uses through an imbalanced mix containing too many new homes. Allowing residential development in suitable Green Belt locations would relieve the significant and mounting pressure on town centre brownfield sites to enable the protection, improvement and sustainable growth of the Borough's town centres.	Policy Framework, the Proposed Submission version of the Local Plan promotes mixed use developments in town centres Residential development will underpin and support the vitality and viability of town centres, secure sustainable development objectives and ensure an effective and efficient use of scarce brownfield sites in town centres. The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.44	Persimmon Homes Essex	The allocation of sites for residential development, as well as sites for employment and retail, in the Borough's town centres will make the areas more prosperous and encourage the use of town's centres day and night.	Noted. The Proposed Submission version of the Local Plan policies ensure that sufficient land is available for both residential and employment uses over the plan period.
REG18.47	R. Watt and Partners	It is considered that there should be a flexible policy approach which facilitates and encourages usage of town centres so that they are able to	The Proposed Submission version of the Local Plan contains flexible planning

Response Number	Respondent Name	Response to Q5	Council's response
	(Phillips Planning Services)	provide a diverse set of facilities and services to the borough and remain viable. Ensuring accessibility and connection from new development should also encourage and maintain viability.	policies that facilitate and encourage a wide range of uses within town centres to provide a diverse set of facilities and services to underpin the town centres' vitality and viability.
REG18.48	R.A.Montague	By ensuring that they are pedestrianized as much as possible and have covered walkways wherever possible.	The Proposed Submission version of the Local Plan contains policies that encourage improvement to public realm including pedestrianized schemes.
REG18.50	Rainham Preservation Society	By offering free parking after 10am, throughout the borough. This is the only way we can compete with Lakeside, Bluewater and Westfield.	The offering of free parking at any time is outside the scope of the Proposed Submission version of the Local plan.
REG18.51	Ray Whitehouse	To make them more accessible for people without cars, make them more friendly to move around in, slow traffic to less than 20mph. Romford is dead after 18:00 except for the pub trade. The market place would make a wonderful leisure facility if only someone could work out how to make it happen. It's just dead space. Hornchurch on the other hand has far too many restaurants, these should be encouraged to spread around other centres of Havering.	The Proposed Submission version of the Local Plan contains policies that encourage public realm improvements. The Proposed Submission version of the Local Plan also contains policies for the transformation of the Market Place
REG18.52	Romford Civic Society	Heritage conservation and design policies in the current LDF should be transferred over to the new Local Plan. Conservation Area Appraisals and the borough's current Heritage SPD should be retained and transferred over to the new Local Plan. The new Local Plan should identify how nature corridors will be developed running through town centres to prevent urban areas being detrimental to ecosystems. The borough's current Shop Front SPD should be retained and transferred to the new Local Plan. The River Rom should be opened up in central Romford and enhanced as a nature corridor in the centre of the town. Design and quality of materials in new housing should be high. More trees should be planted. Cultural and social infrastructure should be prioritised, the amount of green space within Romford Ring Road should be increased.	Since the adoption of the LDF the NPPG and revised versions of the Local Plan have been published. In addition, a substantial evidence base has been prepared to inform policies. In the light of the above, the policies have been revised in the Proposed Submission version of the Local Plan. However, the Council has made sure that issues previously covered by SPD's including design and heritage are sufficiently covered by the policies in the Proposed Submission version of the Local Plan.

Response Number	Respondent Name	Response to Q5	Council's response
			The Proposed Submission version of the Local Plan contains policies which encourage extending wildlife corridors which includes new corridors developed running through town centres to prevent urban areas being detrimental to ecosystems with conditions imposed on development to make sure adverse impacts are prevented. The Proposed Submission version of the Local Plan promotes the important roles the River Rom and other rivers play as a nature corridor in central Romford. The Proposed Submission version of the Local plan requires high design quality development and use of quality materials for new housing, and for more tress to be planted and for cultural and social infrastructure to be prioritised.
REG18.53	Romford Golf Club (Joe Coogan)	Balanced development across the borough will help town centres. Too many flats concentrated in one area can lead to buy-to-let ghettos with transient populations that can damage communities. Opportunities to develop high quality family homes should be sought to ensure town centres are supported by balanced population growth.	It is accepted that balanced development across the borough will help town centres. The Proposed Submission version of the Local Plan promotes a balanced sustainable development including achievement of a mixed and balanced community. This involves development of high quality family homes in town centres to ensure that town centres are supported by balanced population growth.
REG18.56	S.D. Olney	This is critical to Romford's development but must support the towns' heritage. Nearly all shops that become vacant re-open as fast food outlets.	The Proposed Submission version of the Local Plan contains policies that seek to

Response Number	Respondent Name	Response to Q5	Council's response
			control the number and location of fast food outlets within specified frontages of town centres in order to limit their proliferation.
REG18.57	Sheila Clements	I think it is too late for Romford. You have ruined it with the various developments and now you plan to take the market away to South Street. It cannot survive like that. Many years ago you tried moving the market before and many stalls gave up and left. Then you had the cheek to put up a sign telling people it was a market town, but it was too late, the Council had already ruined it. Now you want to do that again. When you look at other market towns around Britain with the facades of old shops surrounding them, it makes you think what Romford could have looked like, but no, the Council just pulled all the old building down and put up monstrosities instead.	The Local Plan supports transformation of Romford Market Place.
REG18.64	Thurrock Council	It is considered that the new local plan strategy should continue to support town centre as a focus for economic activity and development for jobs, retail and other services as well as places for people to live and have access to good transport connections. The new local plan policies should also recognise the need to diversify the role of town centre and enhance the public realm. The council should consider the further potential that town centres offer for sustainable development including additional provision for housing and mixed use development in order to meet the objectives of the London Plan. Thurrock Council is progressing its proposal to transform Lakeside into a regional Town centre and will continue to consult and engage with Havering on this strategic matter. Thurrock Council also welcomes the opportunity to discuss with Havering Council the wider issue of retail provision in the Thames Gateway and beyond as part of the ongoing Duty to Cooperate process on cross boundary planning matters.	The Proposed Submission version of the Local Plan Strategy supports Havering's town centres as the foci for economic activity and development for jobs, retail and other services as well as places for people to live and have access to good transport connections, in conformity with national and regional planning policies. The Proposed Submission version of the Local Plan encourages diversification of the role of the Borough's town centres through promoting and encouraging provision of a wide range of retail offer including encouraging mixed-use development and provision of additional housing and enhancement of their public realm, to sustain and support their vitality and viability. The Proposed Submission

Response Number	Respondent Name	Response to Q5	Council's response
			version of the Local Plan encourages effective and efficient use of town centre sites to optimise development activity. The London Borough of Havering will continue to consult and engage with Thurrock Council and other neighbouring boroughs on all cross boundary planning matters as part of the ongoing Duty to Cooperate process.
REG18.66	Trinity Hall (Bidwells)	The continued protection, improvement and growth of the Borough's town centres should be supported by a balanced approach to development that allocates suitable sites within the Green Belt for residential development. The Plan says that Havering's town centres are important to the economy because they provide shops, services and jobs as well as places to live. Indeed, the Framework recognises that town centre needs are dependent upon a range of uses to support their vitality. It is therefore critical for the new Local Plan to ensure that sufficient town centre sites are allocated for main town centre uses. The Framework states (in the same paragraph) that "*needs for retail, leisure, office and other main town centre uses are met in full and are not compromised by limited site availability*". Proliferation of residential development on brownfield sites in existing town centre locations is one potential contributor towards limited site availability. Allocating additional sites for residential development in town centres may exacerbate the issues caused by the office to residential permitted development rights. These have successfully accelerated the delivery of residential development on viable sites but in a way that reduces the scope for Councils to appropriately manage land use development in town centre locations. The Council should therefore seek to plan as best that it can for an appropriate balance between residential uses and main town centre uses, rather than an imbalanced mix focussed in maximising residential densities on brownfield land.	The Proposed Submission version of the Local Plan supports the continued protection, improvement and growth of the Borough's town centres through adopting a balanced approach to development that allocates suitable sites within the town centres for main town centre uses whilst allowing other complementary uses such as residential uses within mixed use schemes to optimise development output and ensure an effective and efficient use of brownfield sites for commercial and residential development in its town centres. In conformity to the National Planning Policy Framework, the Proposed Submission version of the Local Plan promotes mixed use developments in town centres Residential development will underpin and support the vitality and viability of town centres, secure sustainable development

Response Number	Respondent Name	Response to Q5	Council's response
		We would highlight that the Inspector's Report on Further Alterations to the London Plan published last year expressed deep concerns about whether higher densities can or should be sought or achieved in order to find additional sources of supply. It would be inappropriate for local context and character, transport capacity, access to social infrastructure and open space (all factors relevant to the optimisation of housing potential) to be compromised if the Council were to seek to meet its London Plan housing target through the provision of new development on brownfield land alone. The Local Plan should therefore ensure that the degradation of town centre function does not occur through the loss of established town centre uses through an imbalanced mix containing too many new homes. Allowing residential development in suitable Green Belt locations would relieve the significant and mounting pressure on town centre brownfield sites to enable the protection, improvement and sustainable growth of the Borough's town centres.	objectives and ensure an effective and efficient use of scarce brownfield sites in town centres. The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.69	Wyevale Garden Centres (Gregory Gray Associates)	Town Centres should provide the focus for new retail development in accordance within the NPPF however the Council's attention is drawn to the fact that para. 23 also requires Local Plans to "set policies for the consideration of proposals for main town centre uses which cannot be accommodated in or adjacent to town centres". This would apply to specialist retail uses such as garden centres which have large requirements for internal/external sales display and whose revenue per floor space cannot secure a town centre site.	The Proposed Submission version of the Local Plan identifies sites outside town centres which may accommodate main town uses that cannot be accommodated in or adjacent to town centres.
POST18.4	V. Rajan and Associates	1. Shopping mall 2. Tourism 3. Interlinking of cities	The Local Plan sets out a positive strategy for its town centres preserving the main shopping function and allowing for

Response Number	Respondent Name	Response to Q5	Council's response
			divarication of uses making it a place that people want to visit. Havering builds on its connections with other parts of London and beyond in the Local Plan.

Question 6: What do you think the transport priorities in Havering are and how should the Plan address them?

Response Number	Respondent Name	Response to Q6	Council's response
REG18.1	AECOM	In line with the NPPF, all plans should "protect and exploit opportunities for the use of sustainable transport modes for the movement of goods or people". Developments should be located and designed where practical to ensure there is viable infrastructure necessary to support it. This should feed into any assessment of development potential during the Sustainability Appraisal of growth options.	Noted. The Local Plan contains a balanced suite of policies taking account of Havering's position as an Outer London borough. These promote sustainable transport modes and require development to avoid or mitigate adverse impact on the transport network as well as improving the connectivity in the borough.
REG18.3	Anonymous	As a casual bus user – I have stopped using buses due to the way you have to pay for them now. Double rail service Upminster – Romford. Should be half price on rail to Emerson Park only.	Noted. TfL are responsible for setting payment methods for using bus services and London Overground services. This is outside the scope of the Proposed Submission version of the Local Plan.
REG18.9	C. Cole	Keep up the good work on good car parking. Awful mess outside stations.	Noted.
REG18.11	Clive Narrainen	Cycling	Noted. The Local Plan contains a balanced suite of policies taking account of Havering's position as an Outer London borough. These promote sustainable transport modes and require development to avoid or mitigate adverse impact on the transport network as well as improving the connectivity in the borough.
REG18.12	D. Campbell	I find the transport flow is good.	Noted. The Local Plan contains a balanced suite of policies taking account of Havering's position as an Outer London borough. These promote sustainable transport modes and require development to avoid or mitigate adverse impact on the transport network, as well as improving the

Response Number	Respondent Name	Response to Q6	Council's response
			connectivity in the borough.
REG18.13	D.K.Symes Associates	The Plan needs to recognise that many, if not most goods, products, minerals and waste are generally carried by road vehicles. Encouragement should be given to alternative transport modes (rail and water) where both practicable and appropriate.	This is beyond the remit of the Local Plan. The Proposed Submission version of the Local Plan contains policies promoting sustainable transport modes.
REG18.18	Essex County Council	ECC, as a neighbouring highway authority, will need to be satisfied with the approach to highway modelling given the strategic location of the LB of Havering to the county of Essex. The LB of Havering's new local plan should take into account any likely impact on key transport corridors on the A12 Corridor and A127 Corridor and the key strategic junctions and transport corridors, which need to be considered in any modelling, namely M25 junctions 28 and 29. Despite recent improvements there are still a number of locations on the local strategic road network where journeys are unreliable or improvements will be required to support significant numbers of new homes. ECC will continue to identify measures to tackle the causes of unreliable journeys and work with local planning authorities to identify investment needs to support growth. The highways modelling should also have regard to a number of other national, sub—regional and local highway infrastructure projects and investment commitments surrounding the borough including: – A12 M25 to Chelmsford (D17) – raising section from M25 to Chelmsford to 3 lanes to help address congestion problems and inconsistent standards in the next road period (next 5 years) – Strategic M25 Junction 28 & 29 improvements. Especially J28 (E12) – upgrading the interchange with the A12 to provide dedicated left turn slip lanes and improvement of gyratory system – Late Road Period (2021). – potential impact of the approved Lower Thames Crossing route especially Option C; – the A127 which is already operating at over capacity and the identified cumulative housing growth along the A127, as outlined in the "A127 Corridor for Growth –an Economic Plan" 2014; and	Noted. The London Borough of Havering has prepared a Transport Position Statement to support the Local Plan. Additionally, the Council has engaged extensively with Essex authorities regarding the A127 Growth Corridor and implications for transport and land use planning. Highways England and Transport for London are also supporting this work. A Statement of Common Ground expressing shared commitment to further work is being progressed to support the Local Plan.

Response Number	Respondent Name	Response to Q6	Council's response
		– impact on the neighbouring local road network, including the A128, and the A13 in neighbouring Thurrock. As part of any highway modelling it will be necessary to involve the Highways Agency given the proximity to the A12 and M25, and to ensure their support for any underlying parameters to modelling, and their views of the impact of strategic sites on their network. It is recommended that the emerging evidence base for the new Local Plan has regard to the following transportation plans, strategies and priorities, which are expanded upon below: – Essex Transport Strategy, the Local Transport Plan for Essex (June 2011); and – A127 Corridor for Growth – An Economic Plan (April 2014). <u>Essex Transport Strategy, the Local Transport Plan for Essex (June 2011)</u> The strategy sets the vision for transport, the outcomes ECC aim to achieve over a 15 year period, our policies for transport and the broad approach to implementing the policies. The following priorities are considered relevant to the LB Havering, Strategic transport priorities, – Identifying an agreed and deliverable solution to address congestion at the Thames crossing and adjacent M25 junction 30/31; – Lobbying Government for enhancements to the A12, and onwards to the A120, Harwich Port and London Stansted Airport; and – Lobbying Government for additional capacity on the Great Eastern Main Line and West Anglia mainline to accommodate growing commuter demand, the provision of competitive journey times for Essex Thameside services, and an enhanced local role in the rail franchise process.	

Response Number	Respondent Name	Response to Q6	Council's response
		Countywide priorities – Working with partners to promote a safe and secure travelling environment; – Maintaining the Essex highway network and other transport assets; – Keeping the transport network safe and operational; and – Managing the impact of planned works on the highway network. Heart of Essex priorities: – Delivering transport improvements to support growth, including the North Chelmsford railway station; – Providing for, and promoting, sustainable forms of travel; – Maintaining and improving public transport links; – Tackling congestion and improving journey-time reliability; – Improving access to railway stations and improving station facilities; – Extending and upgrading the Chelmsford cycle network and promoting its use – Improving the attractiveness of streets and public spaces; – Improving journey time reliability on key routes including the A130; – Developing long-term solutions to resolving gaps within the strategic network. South Essex priorities, – Providing and promoting sustainable modes of travel to new development areas; – Improving public transport links within and between the South Essex towns (including the A13 Passenger Transport Corridor and South Essex Rapid Transport (SERT) schemes); – Improving the availability of sustainable travel choices and raising public awareness through travel planning; – Addressing maintenance, signing and broken links in the cycle network to improve conditions and create a safer atmosphere for cycling;	

Response Number	Respondent Name	Response to Q6	Council's response
		– Improving the attractiveness and ease of use of public spaces to support regeneration; – Improving journey time reliability on strategic inter-urban routes including the A127, A129, A130 and the A13; and – Improving access to London Gateway port and London Southend Airport. West Essex priorities – Improving access to and from the M11 corridor;; – Providing the transport improvements needed to support housing and employment growth; – Improving the attractiveness of bus services; – Improving cycling networks and walking routes and encouraging their greater use; – Working with Transport for London to improve the journey experience of Essex residents using the Central Line underground services; – Improving access to Stansted Airport by low carbon forms of trans <u>A127 Corridor for Growth – An Economic Plan, March 2014</u> This joint strategy between ECC and Southend-on-Sea BC makes a case for the corridor, demonstrating its essential economic importance and the measures needed to ensure that South Essex remains a thriving economic engine of growth. The A127 corridor is a vital artery to economic competitiveness of the South Essex sub-region and indeed to the economy of Essex and beyond. It has been adopted to provide greater journey time reliability along the length of the corridor to sustain the economic advantage of the A127, as well as to facilitate future growth and prosperity in the region.	
REG18.21	Havering College of Further and Higher	HCFHE would like to see improvements made to public transport infrastructure across the Borough – including safe pedestrian and cycle routes and improvements to the local bus services. HCFHE would like the Local Plan to focus on improving access by public transport to its	Noted. The Local Plan contains a balanced suite of policies taking account of Havering's position as an Outer London borough. These promote sustainable

Response Number	Respondent Name	Response to Q6	Council's response
	Education (Iceni Projects)	educational facilities in the Borough – particularly the Rainham campus where significant investment is planned in the new Construction Infrastructure and Skills Innovation Centre ('CISIC').	transport modes and require development to avoid or mitigate adverse impact on the transport network, as well as improving the connectivity in the borough.
REG18.22	Havering Friends of the Earth	More bus lanes are needed to cut congestion and improve air quality. Every train/bus stop connection should have a bus expectancy time panel. (There is not one at Hornchurch Station for example.) Connections from train to bus to reach outlying areas need to be better integrated. Huge bus stop queues at Harold Wood Station in rush hour with travellers wanting to reach Harold Hill. Better integration and transport information in outlying areas like Wennington.	The Proposed Submission version of the Local Plan contains policies setting out that the Council will work with partners (including TfL and bus operators) to improve bus travel experience in the borough.
REG18.24	Higgins Homes (Nathaniel Lichfield & Partners)	Ensuring that all new residential developments are adequately served by existing or proposed public transport services.	Noted. The Local Plan contains a balanced suite of policies taking account of Havering's position as an Outer London borough. These promote sustainable transport modes and require development to avoid or mitigate adverse impact on the transport network, as well as improving the connectivity in the borough.
REG18.25	Highways Agency	Thank you for your email of 9th February 2015 regarding the above Consultation process for the new Havering Local Plan. Thank you for inviting the Highways Agency to be involved in your consultation process. As you are aware, on behalf of the Secretary of State for Transport, the Highways Agency is responsible for managing and operating a safe and efficient Strategic Road Network (SRN), i.e. the Trunk Road and Motorway Network in England, as laid down in Department for Transport (DfT) Circular 02/2013 (Planning and The Strategic Road Network). Our interest in local plans is specifically focussed on the council's approach to highway and transport matters in relation to regeneration and new development. We are keen to understand how local authorities initially	Havering initially identified sites for development through a range of means including a 'Call for Sites' exercise inviting land owners to put forward their sites and proposed uses for the sites, identification of sites with unimplemented planning permission, potential sites that have been brought forward to the Council's attention through enquiries, sites identified through studies, e.g. Strategic Housing Land Availability Assessment (SHLAA), Opportunity sites (large brownfield land with significant potential for development

Response Number	Respondent Name	Response to Q6	Council's response
		identify sites within their boundaries and set and implement policy to manage the resultant trip demands and how these might affect the safe and efficient operation of the Strategic Road Network for which we are responsible. In relation to your consultation questionnaire we are pleased to see that Transport Infrastructure is a key priority of the council and recommend that this remains a key priority. We note that in identifying new development sites, those that are well served or will be well served by public transport will of most interest to the council which we consider is a sensible approach to new development. It is also pleasing to note that in dealing with new development travel impact will be minimised by improving infrastructure to reduce congestion but impact will also be reduced by improving public transport services. In particular it is noted that the council will promote the use of more sustainable forms of transport such as cycling and walking this being useful in reducing the number and therefore environmental impact of car trips resulting from development. I trust that our initial comments are of assistance and thank you again for involving us in your consultation process. We look forward to further involvement as the plan develops.	and Intensification sites (built-up areas which can accommodated further development) nominated by the Council, and the estimation of their capacity for preferred uses on the basis of their surrounding context and uses and potential transport improvement programmes. The local plan identifies a number of key strategic transport infrastructure improvements needed to support the delivery of the Council's vision. The Council's approach recognises its position as an Outer London borough and the implications of this for transport. It seeks to deliver a balanced suite of transport policies to support a sustainable pattern of development that reduces the need to travel but offers a choice of transport modes to residents and businesses. The Council is statutorily required to set out how it will deliver the Mayor's Transport Strategy at a local level through its Local Implementation Plan which is effectively Havering's transport strategy. It contains a series of objectives for managing trip demand through delivering sustainable travel choices. The Council assesses the implications of major developments on the highway network at the planning application stage.

Response Number	Respondent Name	Response to Q6	Council's response
			Conditions may be applied to an application where planning permission is granted. Travel Plans are reviewed for Major planning applications to ensure opportunities for non-motorised car residents are provided and achievable targets for modal shift are set.
REG18.26	Ian Weatherley	By fully integrating all forms of transport (including cars) into a combined scheme to offer a mix of transit options for the community to travel into town centres – and so ensure growth and prosperity	The Proposed Submission version of the Local Plan contains a balanced suite of transport policies supporting a mix of transport modes.
REG18.27	Janet Davy	Improvements required for cyclists – this could lead to reduced car use and better air quality.	The Proposed Submission version of the Local Plan contains a balanced suite of transport policies. Policies supporting cycling infrastructure improvements are included within an overall approach to transport that seeks to improve movement and connectivity for all residents and businesses.
REG18.28	Joe Coogan	Every opportunity to improve public transport infrastructure should be sought. Havering's good transport links in and out of London are key to its success as a viable and pleasant suburb.	The Proposed Submission version of the Local Plan contains policies promoting improvements to all transport infrastructure including measures that will benefit public transport.
REG18.29	John Peterson	All seem ok	Noted.
REG18.30	London Borough of Barking and Dagenham	Havering has engaged Barking and Dagenham on proposals for improving the A1306 New Road and it is important that we continue to work together on transport infrastructure improvements within London Riverside which affect both boroughs.	The London Council will continue to work with Barking and Dagenham on strategic planning issues including the transport related issues. Additionally, both boroughs support the work of Transport for London

Response Number	Respondent Name	Response to Q6	Council's response
			and the Sub-Regional Transport Panel.
REG18.31	London Borough of Bexley (officer response)	In addition to those priorities for transport as identified in the consultation document (i.e. minimising the impact of travel, locating new development where it will be well served by public transport), the London Borough of Bexley would also suggest that reference is made to the improvement of the strategic north south transport links to adjoining boroughs; specifically the potential for a future river crossing between Bexley and Havering, as promoted by Transport for London (TfL). As a strategic transport priority, this river crossing would significantly benefit both London Boroughs by improving connectivity and providing opportunities for sustainable economic growth and development – a key focus of the NPPF (see also, response to question 2). Additionally, the importance of ensuring good quality public transport links using the river crossing should be highlighted as a priority, as this would offer genuine alternative sustainable travel options to the north and south of the river.	Noted. The Council supports the principle of additional river crossings to improve connectivity and provide opportunities for sustainable economic growth. It continues to discuss these issues with other stakeholders including the Highways England, the London Mayor (through Transport for London) and other boroughs.
REG18.32	Lee Clements	Reducing traffic congestion; lobbying the government for a better train service on the Greater Anglia line and a better station at Romford; lobbying TfL for faster introduction of new trains on the District Line and improvements to Gallows Corner and the A12 from Gallows Corner to Brook Street Roundabout.	Noted. The Proposed Submission version of the Local Plan sets out the key strategic transport aspirations for the borough. The Council continues to lobby relevant bodies including the Department for Transport for better train services along the Greater Anglia line. The Proposed Submission version of the Local Plan sets out policies for improved public transport including the aspiration for longer and more frequent trains stopping at Romford station.
REG18.33	Mr Leslie Budge (Andrew Martin Planning)	The NPPF directs, at paragraph 29, that transport policies have an important role to play in facilitating sustainable development. Therefore local planning authorities should support a pattern of development that facilitates the use of sustainable modes of transport, where it is possible to do so. London Borough of Havering is well connected, by rail and road, to the rest	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards

Response Number	Respondent Name	Response to Q6	Council's response
		of London and the South East via its strategic connections and routes. Consequently the Borough's growth and housing strategies should be developed in accordance with these established links, so that residents are encouraged to utilise the public transport system in favour of private vehicle use. As has been mentioned above, the site is situated some 0.64 miles from Harold Wood railway station, which is on a main line into London Liverpool Street. This station is proposed to serve Crossrail once it has been extended from Stratford to Shenfield and services are expected to commence in 2018. The nearest bus stops to the site are: – Shepherds Hill (along the southern boundary of the site) – this stop is served by the 347 service (includes stops at Ockendon Station, Upminster Station, Harold Wood Neighbourhood Centre, Harold Wood Station, Gallows Corner and Romford Station). – Gubbins Lane (500 metres to the east) – this stop is served by the 256 service (stops include St Ursula's School, Hilldene Avenue Shopping Centre, Harold Hill Community Centre, Harold Wood Station, Havering College, Emerson Park Station, Hornchurch Town Centre, Hornchurch Station and St George's Hospital), the 294 service (stops include Central Park leisure Centre, Harold Wood Station, Gidea Park Station, Romford Station, Romford Market, Parklands School and Havering Park), the 347 service (see above), the 646 service (stops include Upminster Station, Hornchurch Town Centre, Emerson Park Station, Havering College and Harold Wood Station) and the 656 service (includes stops at Gallows Corner, Harold Wood Station, Havering College and Emerson Park School). A number of train stations, both under and over ground, are accessible via these bus links, as well as numerous schools / colleges and service centres,	one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.

Response Number	Respondent Name	Response to Q6	Council's response
		i.e. Upminster, Hornchurch and Romford. Furthermore the site is well situated with regard to the strategic highways network, as it is centred between the A127 (0.8 miles), the A12 (1 mile) and the M25 (2.8 miles). This site is therefore highly sustainable in terms of its proximity to services, facilities and various modes of public transport.	
REG18.34	Margaret Whippy	Having a transport system that allows for all age groups is essential, from a school service to one that allows for the needs of workers and families, but also the elderly. Reduced fares for students should be encouraged, as well as cycle ways for all age groups. Cutting fares for families by cycling. Improving pavements encourages more walking, which has health benefits. People need good accessible transport at all times.	Noted. The Proposed Submission version of the Local Plan contains policies supporting road safety improvements for all and including within the vicinity of schools. TfL are responsible for setting fares and this is outside the scope of the Proposed Submission version of the Local Plan.
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	Utilise and improve existing routes and new arterial links.	Noted. The Proposed Submission version of the Local Plan includes a number of key strategic transport infrastructure improvements to enhance connectivity in Havering. The Proposed Submission version of the Local Plan aims to improve connectivity in the borough by supporting partnership working between the Council and other partners.
REG18.38	Mr T Clemence (DHA Planning)	Encourage sustainable transport and public transport. Promote development in locations that are within close proximity to a range of services, facilities and public transport to minimise the use of private car travel.	The Proposed Submission version of the Local Plan supports improvements to public transport networks including maximising the benefits from Crossrail in Havering. Additionally , it encourages a sustainable pattern of development to reduce the need to travel and offer a choice of transport modes to local businesses, residents and visitors..
REG18.40	Ms M Blackman	See Q5 answer – encourage more central London connectivity and fewer confusing one way/roundabout systems	Noted. The Proposed Submission version of the Local Plan contains policies seeking

Response Number	Respondent Name	Response to Q6	Council's response
			improvements to public transport infrastructure including the aspiration for longer and more frequent trains into central London.
REG18.42	Natural England	We note that the London Borough of Havering wishes to minimise the impact of travel by improving local infrastructure and by promoting a range of high quality, convenient and environmentally friendly transport options. These include cycling and walking and we confirm that we are in favour of such improvements, providing that they do not impact adversely on the environment or on protected sites. The NPPF emphasises the importance of ensuring that development: " ... actively manage(s) patterns of growth to make the fullest possible use of public transport, walking and cycling, and focus(es) significant development in locations which are or can be made sustainable" (para 17). It also states that "transport policies should: – contribute to wider sustainability and health objectives – and encourage solutions which support reductions in greenhouse gas emissions". (NPPF paras 29 and 30).	Support noted.
REG18.44	Persimmon Homes	Havering Borough Council must continue to improve the public transport networks in the Borough. This will encourage the use of public transport, making households less dependent on the use of cars. The introduction of Cross Rail in 2018/2019 goes somewhat towards making these improvements and will open up Havering to Central London and the West.	Noted. The Proposed Submission version of the Local Plan supports improvements to public transport networks including maximising the benefits from Crossrail in Havering. Additionally, it encourages a sustainable pattern of development to reduce the need to travel and offer a choice of transport modes to local businesses, residents and visitors.
REG18.47	R. Watt and Partners	Integration of all developments into transport networks and careful consideration of potential impacts on capacity.	The Proposed Submission version of the Local Plan contains policies which support

Response Number	Respondent Name	Response to Q6	Council's response
	(Phillips Planning Services)		integration of all developments into the transport network with a requirement for proposals to demonstrate that adverse impacts on the transport network are avoided or mitigated.
REG18.48	R.A.Montague	Mainly by improvements to bus services for travel within the borough	The Proposed Submission version of the Local Plan supports the enhancement of bus services within the borough. It highlights the importance of securing better bus services to / from Queen's Hospital in Romford.
REG18.50	Rainham Preservation Society	A bus route is needed from Rainham to Upminster via Corbets Tey Crematorium (residents who don't drive currently use two buses and a train or three buses to visit the graves of their loved ones.) All buses should stop at Rainham Station Interchange.	The Proposed Submission version of the Local Plan supports the enhancement of bus services within the borough. Determining where buses should specifically stop is outside the scope of the Proposed Submission version of the Local Plan. The Local Plan does though highlight the importance of enhancing accessibility to / from Romford Station including for buses. The Council will continue to work closely with Transport for London and bus operators to ensure that bus services and their facilities are well located, safe and convenient.
REG18.51	Ray Whitehouse	Significantly improve public transport to the riverside area. Improve public transports to Harold Hill Slower vehicular traffic to make the roads safer for all other users. Stop rat runs. Make schools safe to get to.	The Proposed Submission Version of the Local Plan includes several key transport infrastructure improvements. These recognise the importance of improving north-south connectivity in Havering as this would make it easier for journeys to be made to / from London Riverside.

Response Number	Respondent Name	Response to Q6	Council's response
			The Local Plan contains policies seeking improvement to road safety in the vicinity of schools and for cyclists and pedestrians in the borough.
REG18.52	Romford Civic Society	A more attractive and greener environment in Romford and on its pedestrian approaches would encourage people to walk into the town more and feel safe doing so. Pedestrian permeability of the Ring Road needs addressing and improving. The underpasses leading into Romford from the areas just outside the centre of the town need dramatic improvement to encourage people to walk into the town more.	Noted. The Proposed Submission version of the Local Plan contains policies supporting a more attractive and greener environment in Romford. Policies also support the delivery of a new east-west shared use link from the railway station across the River Rom to the residential areas west, and improving the active travel links between Romford Station, Waterloo Road and Bridge Close and the quality and setting of the River to provide continuous, safe and accessible links alongside the river. This will assist in promoting active travel and improve north-south connectivity.
REG18.53	Romford Golf Club (Joe Coogan)	Every opportunity to improve public transport infrastructure should be sought. Havering's good transport links in and out of London are key to its success as a viable and pleasant suburb.	The Proposed Submission version of the Local Plan contains policies seeking improvements to the public transport infrastructure to improve connectivity within the borough particularly between north and south Havering. The Local Plan also seeks to improve connectivity to / from areas beyond Havering.
REG18.56	S.D. Olney	Adequate, but must stop parking in main roads to stop continued congestion at pin-points in the borough.	The control of on street parking is beyond the remit of the Proposed Submission version of the Local Plan.
REG18.57	Sheila Clements	For a start Hornchurch High Street was ok as it was. The Council and Boris Johnson had this great idea to make it into a rat run, where even ambulances have to go up on the middle walking section when cars are	The Proposed Submission version of the Local Plan contains policies to improve road safety in the borough including for

Response Number	Respondent Name	Response to Q6	Council's response
		going through. Pedestrians have to jump in the road, to let the ambulance pass You could not make it up. I would not trust the Council with the transport priorities. The traffic light signs are badly positioned so that you cannot see whether it is safe to cross if somebody is standing in front of the wait sign. God knows what mess you will make with the rest of the borough if you are let loose.	pedestrians and cyclists and for tackling congestion "hotspots". Matters relating to traffic light signs are outside the scope of the Local Plan.
REG18.63	Thomas Bates and Son Ltd. (Andrew Martin Planning)	The NPPF directs, at paragraph 29, that transport policies have an important role to play in facilitating sustainable development. Therefore local planning authorities should support a pattern of development that facilitates the use of sustainable modes of transport, where it is possible to do so. London Borough of Havering is well connected, by rail and road, to the rest of London and the South East via its strategic connections and routes. Consequently the Borough's growth and housing strategies should be developed in accordance with these established links, so that residents are encouraged to utilise the public transport system in favour of private vehicle use. As mentioned above, Emerson Park train station is a 20 minute walk from the site or, for a direct route into central London, Upminster station is a 30 minute walk (1.5 miles) and is served by the District Line. Furthermore, Hornchurch station is a short bus ride away and is also served by the District line. The nearest bus stops to the site are: – Wingletye Lane (adjacent to the site) – this stop is served by the 193 service (includes stops at Essex Gardens, Havering Sixth Form College, Hornchurch Station, Romford Station and Queen's Hospital). – Parkstone Avenue (150m to the east) – this stop is served by the 650 service (includes stops at Romford Bus Garage, Romford Station, Gidea Park Station and Emerson Park School) and the 656 service (includes stops at Gallows Corner, Harold Wood Station, Havering College and Emerson Park School).	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt land in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to make any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release green belt land for housing. The Council's approach to increasing housing supply is set out in further detail in the Local Plan Housing Position Statement.

Response Number	Respondent Name	Response to Q6	Council's response
		A number of train stations, both under and over ground, are accessible via these bus links, as well as numerous schools / colleges and service centres, i.e. Romford and Hornchurch. Furthermore, the site is well situated with regard to the strategic highways network, with the A127 within 0.8 miles and the M25 within 3 miles. This site is therefore highly sustainable in terms of its proximity to services, facilities and various modes of public transport.	
REG18.64	Thurrock Council	It is acknowledged that Havering Council support further river crossings in the Thames Gateway in order to promote economic development and growth and to provide enhanced connectivity in this key national and regional regeneration area. However it is noted that Havering Council strongly objected to a Belvedere Bridge crossing of the river Thames being the first bridge crossing as part of any new proposals for river crossings in London. In particular, strong concerns were expressed regarding the impact on housing and employment proposals in the Havering riverside area; the traffic impact on the strategic and local highway network and the implications of the route and any new junctions on the environment and planning of the area. If an announcement by the Government and TfL support a Belvedere Bridge crossing of the Thames and its early opening how will this impact on the Havering New Local Plan? It has been suggested during previous consultation by the TfIL that such a scheme could be built and open in a timescale that would be during the period covered by the Havering new Local Plan. How would Havering Council seek to address such a scheme in the programme and preparation of the Local Plan? As stated by Havering Council the proposal could have implications for the mix and scale of development on Havering riverside and how would this be addressed? Havering Council has also stated its preferred support for new Lower Thames Crossing being Option A which is at the current Dartford crossing. It is recognised that a new Lower Thames Crossing will have economic and	Noted In October 2016 the Mayor of London announced he was prioritising additional crossing points at Silvertown as well as a cycling and walking crossing in the vicinity of Canary Wharf – Rotherhithe and a DLR extension to Thamesmead, amongst others. Havering supports the principle of improved provision of river crossings in east London. It will wish to ensure that any crossings have a satisfactory impact on the borough. The Council are working with Highways England following the announcement by the Minister for Roads of the preferred option for a Lower Thames Crossing. The Lower Thames Crossing will be a regular agenda item at future inter-borough liaison meetings between Havering and District and Unitary authorities in Essex.

Response Number	Respondent Name	Response to Q6	Council's response
		environmental impacts on Havering as well as implications for the strategic and local highway networks. Havering Council have stated their concern that Option C also has a more negative environmental and Green Belt impact and in Havering where a new motorway junction is proposed. The Government is currently giving further consideration to Options A and C for the future Lower Thames Crossing. This includes assessing options within a wider corridor for the route of Option C. An option for a northern path for the route of option C could extends along a M25/A127/A128 corridor before crossing the river Thames. The announcement of the route of the Lower Thames Crossing will have a range economic, and transport implications for the new Havering local Plan and direct environmental and Green Belt implications if an Option C route requires a new junction on the M25 in Havering. If the Government announces an Option C route this would significant implications for Thurrock as well as Havering. Depending on the nature of the crossing options and junctions it could create both positive and negative development pressures on the boroughs adjoining the route. Both authorities may wish to consider the future implications of the Lower Thames Crossing following the Government's announcement of the draft options.	
REG18.65	Transport for London	*Please note that these comments represent the views of Transport for London (TfL) officers and are made entirely on a "without prejudice" basis. They should not be taken to represent an indication of any subsequent Mayoral decision in relation to a planning application based on the proposed scheme. These comments also do not necessarily represent the views of the Greater London Authority (GLA). Any views or opinions are given in good faith and relate solely to transport issues.* Thank you for the opportunity to comment on the above mentioned plan. Comment from TfL is outlined in the correspondence below, TfL welcomes	Noted. Crossrail is specifically mentioned in the Proposed Submission version of the Local Plan. It will be a key factor in helping achieve the objectives for Romford set out in the Local Plan. The Council continues to work closely with TfL and is looking at options for improving bus services in the south of the borough and to improve bus capacity at Queens

Response Number	Respondent Name	Response to Q6	Council's response
		further dialogue with the Council during the next stages of consultation. <u>Crossrail</u> There is an existing National Rail corridor that will be served by Crossrail from 2019. There will be 12 trains per hour at peak times in each direction between central London and Shenfield. It should be clarified in the document that Crossrail will open in 2019, not 2018/2019. TfL would require improved bus, walking and cycle links to improve access to the local centres, District line, National Rail and Crossrail stations. This will enable more people to benefit from the opportunities and facilities in and around London. The plan should make reference to maximising the arrival of Crossrail in terms of economic growth. <u>Public transport and growth</u> TfL would particularly support new development and growth areas in areas of good existing public transport accessibility, while any new growth areas would need to be supported by adequate improvements to walking, cycling, public transport and highway networks to maintain capacity. Conversely the section titled "Business Growth and Economic Productivity" should make reference to public transport improvements as a key enabler for economic growth. TfL is supportive of the Plan's aspiration to improve public transport provision. A key component of public transport provision in the London borough of Havering is buses, which falls under the responsibility of TfL. TfL would welcome further discussions with the Council on bus service enhancement and bus infrastructure together with opportunities for funding. Improvements to mitigate the impact of development would need to be funded from the Council's CIL charging schedule and Section 106 contributions and other non-TfL sources as there is no specific provision within the TfL Business Plan. Improvements to serve existing demand would	Hospital. The importance of London Riverside is addressed in the Rainham and Beam Park Strategic Development Area policy in the Local Plan. The Local Plan highlights the importance of the Beam Park station and the improvements being secured through working with Transport for London on the A1306 project. The Proposed Submission version of the Local Plan brings forward a balanced suite of policies including those for transport. It recognises that Havering is an Outer London borough where there is likely to be greater use of private cars for journeys because the public transport network is less 'dense' than in Inner and Central London. The preparation of the Local Plan has encompassed transport studies to evidence this particularly in regard to implications for parking provision. The Local Plan recognises the adverse implications from congestion in terms of reduced air quality and includes a specific policy aimed at improving air quality linked to transport. The Council is exploring options for car

Response Number	Respondent Name	Response to Q6	Council's response
		need to be assessed and prioritised against TfL's standard criteria within the context of the funding available for bus services and infrastructure. The plan should also make specific reference to aspirations outlined in the London Riverside Opportunity Area Planning Framework (OAPF), which is currently undergoing public consultation. Funding should be secured in the future for Beam Park station and improvements to the A1306 New Road in particular. <u>Walking and cycling</u> TfL is supportive of the Council's aspiration to encourage the uptake of walking and cycling. Part of the challenges associated with this uptake is creating a legible walking and cycling environment. The Local Plan, in further iterations, would benefit from making reference to wayfinding and a clear and consistent signage strategy. Legible London is an easy-to-use signage system that presents information in a range of ways, including maps and directional information, to help people find their way. The maps would be integrated with the local railway stations and recreational sites to enable pedestrians to promptly identify the route to their destination. TfL would like to work with developers and Havering Council to expand this scheme. The scheme would need to be predominately funded through CIL and Section 106 contributions. <u>Car parking and congestion</u> There are multiple ways to address congestion and parking matters at local and regional levels, however, given the growth pressures facing London—and in particular east London—it is important to continue efforts to reduce car use. The National Planning Policy Framework (NPPF) sets out 12 core land-use	club provision in the borough and this is referenced in the Proposed Submission version of the Local Plan. The Council has undertaken a health impact assessment to support the preparation of the Local Plan and a specific policy on healthy communities identifies the linkages between health and travel and transport

Response Number	Respondent Name	Response to Q6	Council's response
		planning principles. These include supporting the transition to a low carbon future, reducing pollution and actively managing patterns of growth to make the fullest possible use of public transport, walking and cycling. The NPPF provides further detail on promoting sustainable transport, stating that the transport system needs to be balanced in favour of sustainable transport modes and that encouragement should be given to solutions which support reductions in greenhouse gas emissions and reduce congestion. London is already the most densely populated part of the UK and is growing at a very fast rate, with 1.3% population growth between 2011 and 2012, compared to 0.7% across the UK. This growth poses major challenges in terms of the scale and density of development required to accommodate it. Over the last ten years in London we have succeeded in facilitating a move away from car use and towards public transport and active modes. In order for London's continued success, this mode shift must continue. London's rapidly growing population and increasing densities place a premium on space, both in terms of developable land and on the road network. The economic cost of congestion in London is already estimated to be £4bn per year and a restraint based approach to parking is considered vital to making more efficient use of space and mitigating the impacts of development on traffic and congestion. Congestion is now seen outside of the weekday peaks, with evening and weekend congestion worsening as the population grows. Measures to mitigate the impacts of growth on the road network include Controlled Parking Zones, limiting the number of parking permits per household, provision of car club memberships and parking bays as well as car free developments in areas with good access to public transport. The London Plan (2015) highlights the housing shortage in the Capital, and sets new, ambitious targets for growth. To meet the housing need in London while at the same time remaining a liveable city for existing residents, it is	

Response Number	Respondent Name	Response to Q6	Council's response
		important to consider wider impacts of creating additional parking spaces in new developments. Public Health Following the Health & Social Care Act 2012 local authorities have taken on new public health responsibilities in 2014 and TfL, along with other agencies, have a role in supporting them to deliver improvements in the health of Londoners. TfL has prepared the document via the link, which might be useful to help link to transport and health and could perhaps become part of any evidence base for further work. http://www.tfl.gov.uk/info-for/media/press-releases/2014/february/tfl-publishes-worldsfirst-transport-health-action-plan	
REG18.67	Veolia ES (UK) Ltd	As a business operating within the Borough which relies on the movement of waste and recycled materials primarily using the road network it is important that an efficient and sustainable road network is maintained within the Borough and that roads are managed to ensure that there is sufficient capacity and that local congestion issues are relieved.	Noted. The Proposed Submission version of the Local Plan contains a balanced suite of policies promoting sustainable transport modes and for development to avoid or mitigate adverse impact on the transport network.
POST18.1	V.Rajan and Ssociates	The respondent identified the following : 1. Road 2. Rail 3. Metro rail 4. Shipping	Noted. The Local Plan sets out the transport priorities for the borough across a range of transport modes.

Question 7: How do you think the plan should address the need for community facilities and services including schools and health provision?

Response Number	Respondent Name	Response to Q7	Council's response
REG18.1	AECOM	We have no comment to make, only to suggest that a comprehensive approach to planning through the provision of a garden village would provide community facilities and services.	Noted. The Proposed Submission version of the Local Plan seeks to provide sufficient social infrastructure needed to match the quantum and location of proposed new development. The Local Plan is underpinned b a robust Infrastructure Delivery Plan.
REG18.2	Adams Family (Bidwells)	The Plan should address the need for community infrastructure arising from new development via a combination of the Community Infrastructure Levy and site specific planning obligations. The biggest opportunities in this respect are likely to arise from the development of greenfield sites which are likely to be subject to significantly fewer abnormal costs compromising viability.	Noted. The Council is in the early stages of preparing its Community Infrastructure Levy. The Infrastructure Delivery Plan which supports the Local Plan refers to funding for infrastructure facilities and sets out the various funding sources. The Proposed Submission version of the Local Plan seeks to ensure that sufficient community infrastructure is provided to match the quantum and location of proposed new development. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries.

Response Number	Respondent Name	Response to Q7	Council's response
			No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason, the Council will not be seeking development of greenfield sites to deliver community infrastructure facilities.
REG18.3	Anonymous	Should have real police in Havering. Stop outsiders travelling to our schools.	Noted. These issues are outside the scope of the Proposed Submission version of the Local Plan.
REG18.9	C. Cole	I have not felt the need for any changes on these.	Noted.
`	D. Campbell	NHS building and other public sector buildings can be modernised but NOT too eccentric like London with skyscrapers, Havering does NOT need skyscrapers – they are depressing.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that the design of new buildings responds to distinctive local building forms and respects the scale, massing, building line and height of the surrounding physical context.
REG18.18	Essex County Council	ECC as a neighbouring statutory authority and service provider will continue to work with the LB Havering on cross boundary issues regarding current provision and future requirements for social Infrastructure including schools and health provision. ECC recommend that the emerging local plan is supported by further investigation and evidence concerning the provision, commitment and timing of social infrastructure, to support the viability and deliverability of the Local Plan, and to determine any cross boundary impacts.	Noted. The Proposed Submission version of the Local Plan is supported by an Infrastructure Delivery Plan which presents evidence concerning the provision, commitment and timing of social infrastructure supporting the Proposed Submission version of the Local Plan. The Council will continue to work closely with other stakeholders involved in infrastructure provision and keep these matters under review.
REG18.21	Havering College of	This term of 'social infrastructure' includes facilities which are needed to serve existing and new residents and to ensure social inclusion, health	The Proposed Submission version of the Local Plan considers the provision of

Response Number	Respondent Name	Response to Q7	Council's response
	Further and Higher Education (Iceni Projects)	and wellbeing and an improved quality of life. The provision of higher and further education should be considered within the context of social infrastructure as the opportunities that training and further qualifications present can contribute to an improved quality of life through better job prospects. Therefore in light of the comment above, the forthcoming Local Plan should include provision for further and higher education and an allowance for institutions such as the HCFHE to grow and change in line with the requirements of an increasing population. This includes such provisions as the protection of existing educational sites as well as the ability to take advantage of opportunities to expand at appropriate locations.	higher and further education within the context of social Infrastructure. The Local Plan has been prepared in the light of a robust Infrastructure Delivery Plan and close working with other Council departments including education. The Proposed Submission version of the Local Plan seeks to safeguard existing education provision and supports proposals for further or higher education where they contribute to the delivery of the Council's agreed Commissioning Plan for Education Provision and the Schools Expansion Programme.
REG18.24	Higgins Homes (Nathaniel Lichfield & Partners)	These should be planned for, having regard to the housing requirements in the London Plan for the Borough.	Noted. The Local Plan is supported by a robust Infrastructure Delivery Plan. The quantum and location of community facilities necessary to support the growth envisaged in the Local Plan will be assessed in the light of housing delivery.
REG18.26	Ian Weatherley	By rationalising and standardising the different primary and secondary schools intakes from other boroughs, e.g. there are so many secondary schools that have many students from Barking and Dagenham – Why? Shouldn't Havering schools be for Havering Residents?	Havering Council works with other neighbouring statutory authorities and service providers on cross boundary issues regarding current provision and future requirements for schools, and other social infrastructure needs. On the basis of the requirement of Duty to Co-operate Havering Council must ensure that the needs of other adjoining boroughs are accommodated where it has the capacity, and they don't. The same principle applies

Response Number	Respondent Name	Response to Q7	Council's response
			to other neighbouring boroughs meeting the needs of Havering where they have the capacity and Havering doesn't.
REG18.27	Janet Davy	Encourage use of local school(s) – at present many students are travelling unnecessary distances to school – which is not good for them or the environment.	The Proposed Submission version of the Local Plan seeks to provide sufficient school places in local areas to avoid the 'need' to travel long distances. Encouraging the use of local schools by Havering residents is outside the scope of the Proposed Submission version of the Local Plan. The Local Plan addresses issues around the journeys to and from schools and seeks to ensure that these are undertaken safely, conveniently and with minimal adverse impact on the environment.
REG18.28	Joe Coogan	Opportunities to secure sites through creative discussions with landowners should be sought out as a priority. It is essential that the borough can cater for needs of children who need good school places, both now and in the future. Some Greenfield and Greenbelt sites could provide a solution, at little or no cost the council if planning obligations/sct 106 powers are used creatively.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. The Local Plan says that proposals for education use in the Green Belt may be considered as very special circumstances

Response Number	Respondent Name	Response to Q7	Council's response
			where it can be robustly demonstrated that there are no suitable alternative sites within the relevant area and there is a demonstrable need for additional school places.
REG18.29	John Peterson	Support more walk in health centres and open longer hours	Health provision is addressed in the Infrastructure Delivery Plan which has been prepared to support the Local Plan. Support for more walk in health centres and health facilities being open for longer hours is outside the scope of the Proposed Submission version of the Local Plan.
REG18.30	London Borough of Barking and Dagenham	Barking and Dagenham is experiencing an unprecedented growth in children of school age not only from new housing but from existing households. The Council has prioritised the use of S106 contributions to fund new school places and has secured new schools in new developments such as Academy Central, Barking Riverside and Lymington Fields. It is understood that Havering is now facing similar pressures and therefore it is essential that sufficient new school places are planned in parallel with the delivering of new housing. Barking and Dagenham continues to press for bus route 5 to serve Queen's Hospital and would welcome Havering's support in this regard.	The Proposed Submission version of the Local Plan supports the expansion of educational facilities to provide sufficient school places necessary for the additional new housing development identified in the Local Plan. The Local Plan is underpinned by a robust Infrastructure Delivery Plan. The Council is working closely with a wide range of stakeholders to improve access to / from Queens Hospital. The transport policies of the Local Plan highlight the importance of improved public transport links to / from the hospital.
Reg18.32	Lee Clements	By lobbying the government to allow the Council to build new schools rather than expanding existing ones or allowing free schools. Education provision is likely to be negatively impacted by making schools too large. The Council should also be trying to stop the further closure of NHS hospitals and other health centres in the Borough. If the Council wants to welcome more residents, the area needs more	The Proposed Submission version of the Local Plan supports the expansion of educational facilities to provide sufficient school places necessary for the additional new housing development identified in the Local Plan. The Local Plan is underpinned by a robust

Response Number	Respondent Name	Response to Q7	Council's response
		facilities not less.	Infrastructure Delivery Plan. Lobbying the government to stop the further closure of NHS hospitals and other health centres in Havering is outside the scope of the Proposed Submission version of the Local plan.
REG18.34	Margaret Whippy	Consideration needs to be given to the health centres of excellence covering GP, Dental clinics (Such as walk-in) conveniently located at regular intervals within Havering. Thus smaller sites can be utilised and their needs changed according to need. This will add to local hospital complexes giving expansion where needed.	Noted. The Proposed Submission version of the Local Plan supports the co-location of complementary services within multi-use adaptable buildings that are accessible by public transport and active travel.
Reg18.36	Moody Homes and Mr John Wakeling (Bidwells)	The Council should address the need for community infrastructure arising from new development via a combination of the Community Infrastructure Levy and site specific planning obligations. The biggest opportunities in this respect are likely to arise from the development of greenfield sites which are likely to be subject to significantly fewer abnormal costs compromising viability.	Noted. The Council is in the early stages of preparing its Community Infrastructure Levy. The Infrastructure Delivery Plan which supports the Local Plan refers to funding for infrastructure facilities and sets out the various funding sources. The Proposed Submission version of the Local Plan seeks to ensure that sufficient community infrastructure is provided to match the quantum and location of proposed new development. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any

Response Number	Respondent Name	Response to Q7	Council's response
			modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason, the Council will not be seeking development of greenfield sites to deliver community infrastructure facilities.
Reg18.37	Mr Barrie Stone and Miss Eleanor Stone	New facilities and improved structures to represent new and changing population.	Noted. The Local Plan is underpinned by a robust Infrastructure Delivery Plan. The Proposed Submission version of the Local Plan seeks to provide sufficient community infrastructure needed to match the quantum and location of development proposed.
Reg18.39	Mrs S J Ellis (Bidwells)	The Council should address the need for community infrastructure arising from new development via a combination of the Community Infrastructure Levy and site specific planning obligations. The biggest opportunities in this respect are likely to arise from the development of greenfield sites which are likely to be subject to significantly fewer abnormal costs compromising viability.	Noted. The Council is in the early stages of preparing its Community Infrastructure Levy. The Infrastructure Delivery Plan which supports the Local Plan refers to funding for infrastructure facilities and sets out the various funding sources. The Proposed Submission version of the Local Plan seeks to ensure that sufficient community infrastructure facilities required for the quantum and location of proposed new development is provided. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF

Response Number	Respondent Name	Response to Q7	Council's response
			and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason, the Council will not be seeking development of greenfield sites to deliver community infrastructure facilities.
Reg18.40	Ms M Blackman	Can only do this when needs of local people regularly assessed. Some boroughs have a system of road or area ambassadors who enjoy interacting with their neighbours. Never going to keep everyone happy as funds are always under pressure. Focus on bringing in the business and people – money will follow.	Noted. The Local Plan is underpinned by a robust Infrastructure Delivery Plan. The Proposed Submission version of the Local Plan seeks to provide sufficient community infrastructure needed to match the quantum and location of proposed new development.
Reg18.43	Omega After Alpha Ltd (Bidwells)	The Council should address the need for community infrastructure arising from new development via a combination of the Community Infrastructure Levy and site specific planning obligations. The biggest opportunities in this respect are likely to arise from the development of greenfield sites which are likely to be subject to significantly fewer abnormal costs compromising viability.	Noted. The Council is in the early stages of preparing its Community Infrastructure Levy. The Infrastructure Delivery Plan which supports the Local Plan refers to funding for infrastructure facilities and sets out the various funding sources. The Proposed Submission version of the Local Plan seeks to ensure that sufficient community infrastructure required for the quantum and location of proposed new development is provided. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the

Response Number	Respondent Name	Response to Q7	Council's response
			Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason, the Council will not be seeking development of greenfield sites to deliver community infrastructure facilities.
Reg18.44	Persimmon Homes Essex	Havering Borough Council are currently preparing their Community Infrastructure Levy (CIL) alongside the new Local Plan. The adoption of a CIL will enable the council to take financial contributions from all residential development delivered in the LPA. The allocation of large strategic sites can also provide and help to deliver much needed social infrastructure.	Noted. The Council is in the early stages of preparing its Community Infrastructure Levy. The Infrastructure Delivery Plan which supports the Local Plan refers to funding for infrastructure facilities and sets out the various funding sources. The policies in the Local Plan for the Strategic Development Areas in Romford and Rainham and Beam Park refer to the social and community infrastructure needed to support development in these areas.
REG18.47	R. Watt and Partners (Phillips Planning Services)	Inclusion of suitable/required facilities as part of sufficiently scaled allocations and are suitably accessible from other developments. Policy framework should also provide flexibility to ensure that facilities and services are reflective of need to enable them to remain viable.	Noted. The Proposed Submission version of the Local Plan seeks to provide sufficient social infrastructure necessary for the quantum of proposed new development. The Local Plan is underpinned by a robust Infrastructure

Response Number	Respondent Name	Response to Q7	Council's response
			Delivery Plan.
REG18.48	R.A.Montague	Free Schools Academies and at least one Grammar School for social mobility.	Noted. The Proposed Submission version of the Local Plan supports provision of sufficient school places necessary for the quantum of development planned.
REG18.50	Rainham Preservation Society	Rainham desperately needs a new health centre as all our doctors are providing an excellent service in cramped and inadequate conditions. We were promised a new school and health centre and got neither. This disproportionate spending within this borough must stop!	The policy in the Proposed Submission version of the Local Plan for the Rainham and Beam Park Strategic Development Area includes reference to the provision of a new health centre and new school places in this area.
Reg18.51	Ray Whitehouse	Build schools where they are needed and create more spaces at schools which are overloaded. Don't move the people, move the schools closer to the people.	Noted. The Proposed Submission version of the Local Plan seeks to provide sufficient school places in the appropriate areas of Havering..
REG18.52	Romford Civic Society	We support the words relating to this in the consultation document.	Support noted.
Reg18.53	Romford Golf Club (Joe Coogan)	Opportunities to secure sites through creative discussions with landowners should be sought out as a priority. It is essential that the borough can cater for needs of children who need good school places, both now and in the future. Some Greenfield and Greenbelt sites could provide a solution, at little or no cost the council if planning obligations/sct 106 powers are used creatively.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason, the Council will not

Response Number	Respondent Name	Response to Q7	Council's response
			be seeking to allocate some Greenfield and Greenbelt sites to provide for school places for children. The Local Plan says that proposals for education use in the Green Belt may be considered as very special circumstances where it can be robustly demonstrated that there are no suitable alternative sites within the relevant area and there is a demonstrable need for additional school places.
Reg18.54	Romford YMCA	Yes, the Local Plan should address the need for community facilities, which should reflect the communities in which they are based. Development of new homes must be seen in tandem with new health and educational facilities.	Noted. The Local Plan is underpinned by a robust Infrastructure Delivery Plan. The Proposed Submission version of the Local Plan seeks to provide sufficient social infrastructure needed to match the quantum and location of proposed new development.
Reg18.56	S.D. Olney	In Rainham, for instance, a multi practice doctor's clinic has been tabled for approaching 13 years but as yet no development has ever been agreed – why?	The policy in the Proposed Submission version of the Local Plan for the Rainham and Beam Park Strategic Development Area includes reference to the provision of a new health centre in this area. The Local Plan itself cannot require the provision of such a facility by its health service partners.
Reg18.57	Sheila Clements	There isn't any money for any of this if the Conservatives get in again as we are told we are again going into more austerity measures.	Noted. It is recognised that the funding climate for many matters including social and community infrastructure is challenging. The Proposed Submission version of the Local Plan seeks to provide sufficient social infrastructure needed to match the

Response Number	Respondent Name	Response to Q7	Council's response
			quantum of proposed new development. It is likely that this will encompass exploring options for funding from a wide range of potential sources.
Reg18.66	Trinity Hall (Bidwells)	The Council should address the need for community infrastructure arising from new development via a combination of the Community Infrastructure Levy and site specific planning obligations. The biggest opportunities in this respect are likely to arise from the development of greenfield sites which are likely to be subject to significantly fewer abnormal costs compromising viability.	Noted. The Council is in the early stages of preparing its Community Infrastructure Levy. The Infrastructure Delivery Plan which supports the Local Plan refers to funding for infrastructure facilities and sets out the various funding sources. The Proposed Submission version of the Local Plan seeks to ensure that sufficient community infrastructure facilities needed to match the quantum of proposed new development is provided. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason, the Council will not be seeking development of greenfield sites to deliver community infrastructure facilities.

Response Number	Respondent Name	Response to Q7	Council's response
POST18.1	V. Rajan and Associates	The respondent commented : 1. Schools based on demand 2.Hospitals	Noted. The Proposed Submission version of the Local Plan seeks to provide sufficient social infrastructure needed to match the quantum of proposed new development. The Infrastructure Delivery Plan sets out the quantity of community facilities planned for. This includes health and education facilities.

Question 8: How do you think the Plan should support the culture and leisure offer within Havering?

Response Number	Respondent Name	Response to Q8	Council's response
REG18.1	AECOM	We have no comment to make, only to suggest that a comprehensive approach to planning through the provision of a new garden village would have the potential to provide culture and leisure facilities as well as contributing towards improving current culture and leisure facilities.	Noted. The Proposed Submission version of the Local Plan supports the increase of culture and leisure facilities as well as the enhancement of existing facilities.
REG18.2	Adams Family (Bidwells)	The Framework requires local planning authorities to plan positively to enhance the beneficial use of the Green Belt, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land (para 81). Taking account of the important position of the Borough on the outer fringes of Greater London, the Plan should view the Green Belt as a cultural and leisure resource to be optimised for the benefit of the residents. To preserve the Green Belt in aspic would miss the opportunity to enhance its beneficial use. There are many areas of Green Belt which are inaccessible and of little value to residents of the Borough. The Local Plan process offers the opportunity to explore the potential to enhance these sites. We would urge the Council to take the opportunities presented to provide greater access to the Green Belt for recreation and to enable ecological enhancements, which would in turn improve prospects for healthier lifestyles and access to nature. This would significantly enhance the leisure and cultural offer within Havering.	Noted. The Proposed Submission version of the Local Plan supports proposals that improve the quality of and access to existing open space, sports and recreation facilities in order to enhance the leisure and recreational beneficial use of the Green Belt within the borough.
REG18.3	Anonymous	Stop destroying what little culture we have in Havering.	Noted. The Proposed Submission version of the Local Plan sets out a positive strategy protecting culture and leisure facilities within Havering.
REG18.9	C. Cole	Must give extra support to Queens Theatre. I think sports centres are	Noted. The provision of extra support to

Response Number	Respondent Name	Response to Q8	Council's response
		under-used – close one?	Queens Theatre is outside the scope of the Proposed Submission version of the Local Plan. The Proposed Submission version of the Local Plan seeks to protect existing sports and recreation facilities unless it can be demonstrated that better or replacement provision will be made in a suitable location or the need for the development involves alternative sports and recreation provision which outweighs the loss of the existing facility.
REG18.12	D. Campbell	The Plan should support existing residents and relate to what would help with their planned lifestyle, gym leisure walk through a well-lit walkway through the marshes park exercise equipment.	Noted. The Proposed Submission version of the Local Plan sets out a positive strategy for the enhancement of leisure, sports, and recreational facilities.
REG18.13	D.K.Symes Associates	There is an increasing demand on leisure facilities and encouragement should be given to proposals that increase the range and facilities that can be provided. This includes facilities that may be located in the Green Belt.	Noted. The Proposed Submission version of the Local Plan sets out a positive strategy protecting culture and leisure facilities within Havering.
REG18.26	Ian Weatherley	Culture and leisure opportunities should be retained – but with council funding reduced to a minimum. These facilities will need to be funded by the people that use them – as these are not basic needs – such as schooling and healthcare.	The Proposed Submission version of the Local Plan sets out a positive strategy protecting culture and leisure facilities within Havering. Issues linked to the fees for the use of facilities are outside the scope of the Proposed Submission version of the Local Plan.
REG18.27	Janet Davy	By maintaining libraries and grants e.g. to the Queens Theatre. This is more important than spending on fancy street paving.	Noted. The decision on relative spending priorities is outside the scope of the Proposed Submission version of the Local plan. Notwithstanding that, the Local Plan seeks to ensure that Havering has a very

Response Number	Respondent Name	Response to Q8	Council's response
			high quality public realm as this can enhance the quality of life for residents and provide a more positive climate for business investment.
REG18.28	Joe Coogan	Opportunities to bring underused land up to a standard that can be used for recreational purposes should be considered. Planning obligation powers could release some Greenfield sites for new parks if other parts of sites are freed up for considerate development.	Noted. The Proposed Submission version of the Local Plan encourages developer contributions to enhance recreational facilities.
REG18.29	John Peterson	Do not charge for parking in parks	This matter is outside the scope of the Proposed Submission version of the Local Plan.
REG18.32	Lee Clements	By: preserving our parks and not allowing development to encroach on them; supporting the Queen's theatre, libraries and other cultural and arts facilities;	Noted. The Proposed Submission version of the Local Plan includes policies to protect parks. The Local Plan seeks to protect cultural facilities such as the Queen's Theatre and arts and facilities.
REG18.34	Margaret Whippy	Cultural and leisure facilities need to change according to local residents. Accessible gyms in town centres as well as sports centres; kiddies activity centre in town centre complexes; sporting centres in larger areas on the edge of towns. Encouragement of more physical activities in schools and ceasing the sale of school playing fields for development.	Noted. The Proposed Submission version of the Local Plan includes a policy to ensure the provision of a wide range of facilities for culture and recreation.
REG18.36	Moody Homes and Mr John Wakeling (Bidwells)	Please refer to our answer to Question 7 – the same principle applies; development on greenfield land offers greater opportunities than brownfield land to fund improvements to the cultural and leisure offer in the Borough.	Noted. See response to Question 7.
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	More flexible approach required.	Noted. The Proposed Submission version of the Local Plan will be assessed by an Inspector to ensure that it provides a reasonable amount of flexibility to deal with changing circumstances over the Plan Period.
REG18.39	Mrs S J Ellis	The Framework requires local planning authorities to plan positively to	Noted. The Proposed Submission version

Response Number	Respondent Name	Response to Q8	Council's response
	(Bidwells)	enhance the beneficial use of the Green Belt, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land (para 81). Taking account of the important position of the Borough on the outer fringes of Greater London, the Council should view the Green Belt as a cultural and leisure resource to be optimised for the benefit of the residents. To preserve the Green Belt in aspic would miss the opportunity to enhance its beneficial use. There are many areas of Green Belt which are inaccessible and of little value to residents of the Borough. The Local Plan process offers the opportunity to explore the potential to enhance these sites. We would urge the Council to take the opportunities presented to provide greater access to the Green Belt for recreation and to enable ecological enhancements, which would in turn improve prospects for healthier lifestyles and access to nature. This would significantly enhance the leisure and cultural offer within Havering.	of the Local Plan supports proposals that improve the quality of and access to existing open space, sports and recreation facilities in order to enhance the leisure and recreational beneficial use of the Green Belt within the borough, in line with the NPPF.
REG18.40	Ms M Blackman	See Q2 & Q7. If there are plenty of businesses where people can live and work, they will make use of local facilities, and will drive demand for better facilities. If there is demand then entrepreneurs can be encouraged to service this demand. All of this ultimately contributes to the local economy, and helps fund wider services.	Noted. The Proposed Submission version of the Local Plan supports increase of culture and leisure facilities as well as the enhancement of existing facilities to support sustainable development.
REG18.43	Omega After Alpha Ltd (Bidwells)	The Framework requires local planning authorities to plan positively to enhance the beneficial use of the Green Belt, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land (para 81). Taking account of the important position of the Borough on the outer fringes of Greater London, the Council should view the Green Belt as a cultural and leisure resource to be optimised for the benefit of the	Noted. The Proposed Submission version of the Local Plan supports proposals that improve the quality of, and access to, existing open space, sports and recreation facilities in order to enhance the leisure and recreational beneficial use of the Green Belt within the borough, in line with the NPPF.

Response Number	Respondent Name	Response to Q8	Council's response
		residents. To preserve the Green Belt in aspic would miss the opportunity to enhance its beneficial use. There are many areas of Green Belt which are vacant, degraded, inaccessible and of little value to residents of the Borough. The Local Plan process offers the opportunity to explore the potential to enhance these sites. We would urge the Council to take the opportunities presented to provide greater access to the Green Belt for recreation and to enable ecological enhancements, which would in turn improve prospects for healthier lifestyles and access to nature. This would significantly enhance the leisure and cultural offer within Havering.	
REG18.47	R. Watt and Partners (Phillips Planning Services)	Cultural/Leisure facilities should be supported/promoted in accessible locations and open spaces should be reviewed to ensure that they facilitate the purposes behind their designation.	Noted. The Proposed Submission version of the Local Plan sets out a positive strategy promoting cultural/leisure facilities in accessible locations. The preparation of the Local Plan has encompassed a review of all open spaces.
REG18.48	R.A.Montague	By preserving the green belt and open spaces and by supporting organisations such as Scouts/Cadets.	Noted. The Proposed Submission version of the Local Plan sets out a positive strategy to protect Green Belt and Open Spaces. Supporting organisations such as Scouts/Cadets is outside the scope of the Proposed Submission version of the Local plan.
REG18.50	Rainham Preservation Society	We need sailing facilities and a yacht club at Rainham Riverside. The boroughs greatest asset, the River Thames, should be used to its fullest potential.	Noted. The provision of sailing facilities and a yacht club is outside the scope of the Proposed Submission version of the Local plan. The Proposed Submission version of the Local plan sets out a positive strategy for river corridors.
REG18.51	Ray	Make them more accessible without having to have a membership. It is	The Proposed Submission version of the

Response Number	Respondent Name	Response to Q8	Council's response
	Whitehouse	just not Havering but sports centres and leisure centres to me are not very inviting. They all seem to consist of a reception desk (which always has a queue) and then a barrier to facilities which could be made available free. By this I mean, for example, that Harrow lodge could open its doors to the cafe and toilets to all comers to make it more inviting and then have the barrier between that and the sports facilities which need paying for. Think how great it would be if these facilities could be used by everyone who just want a walk and a cup of tea. So make them more accessible to the public as a whole.	Local Plan requires developments to enable inclusive access for all in the community.
REG18.52	Romford Civic Society	Current LDF policies CP57 and DC1725 should be retained and transferred into the new Local Plan. CIL money should be used to support cultural infrastructure.	Noted. The preparation of the Proposed Submission version of the Local Plan has encompassed reviewing current planning policies as set out in the Local Development Framework. Where necessary and appropriate, the thrust of these policies is included within the new policies in the Local Plan. The preparation and delivery of the Havering Community Infrastructure Levy will be the appropriate mechanism to consider if cultural infrastructure should be funded through these monies.
REG18.53	Romford Golf Club (Joe Coogan)	Opportunities to bring underused land up to a standard that can be used for recreational purposes should be considered. Planning obligation powers could release some Greenfield sites for new parks if other parts of sites are freed up for considerate development.	Noted. The Proposed Submission version of the Local Plan sets out a positive strategy protecting or enhancing existing culture and leisure facilities and providing new facilities within Havering.
REG18.56	S.D. Olney	Overall culture and leisure is at present catered for.	Noted.
REG18.57	Sheila Clements	It won't. After The Queens Theatre got a grant last year, the Council took away their support. Apparently there isn't any money.	Noted. Decisions on financial support for the Queens Theatre is outside the scope of this Proposed Submission version of the Local plan.
REG18.58	Sport England	The Plan should support sports facilities by according with paragraph 70	Noted. The Proposed Submission version

Response Number	Respondent Name	Response to Q8	Council's response
		of the NPPF which states: To deliver the social, recreational and cultural facilities and services the community needs, planning policies and decisions should: – Plan positively for the provision and use of shared space, community facilities (such as local shops, meeting places, sports venues, cultural buildings, public houses and places of worship) and other local services to enhance the sustainability of communities and residential environments; – Guard against the unnecessary loss of valued facilities and services, particularly where this would reduce the community's ability to meet its day-to day needs; – Ensure that established shops, facilities and services are able to develop and modernise in a way that is sustainable, and retained for the benefit of the community; and – Ensure an integrated approach to considering the location of housing, economic uses and community facilities and services. The Plan should set out clearly what the sporting needs of the Borough are and how they are to be delivered, allocating land as appropriate and being explicit about where new provision should be delivered in kind onsite as part of housing development and where S106 contributions and CIL will be sought.	of the Local Plan has been prepared in accordance with the National Planning Policy Framework including paragraph 70.
REG18.62	Theatres Trust	Under the title 'Culture and Leisure Facilities', the Local Plan document should include policies that protect and enhance existing facilities as well as encourage new ones. We therefore recommend policy wording along the lines of: 1. The council will safeguard existing cultural and leisure facilities by resisting their loss or change of use unless replacement facilities are provided on site or within the vicinity which meets the need of the local population, or it has been demonstrated that there is no demand for another similar use on site.	Noted. The Proposed Submission version of the Local Plan sets out a positive strategy to protect and enhance access to existing culture and leisure facilities and encourages the provision of new facilities within Havering.

Response Number	Respondent Name	Response to Q8	Council's response
		2. Developments that result in additional need for cultural and leisure facilities will be required to contribute towards enhancing existing facilities, or provide/contribute towards new facilities. This contribution will be addressed through CIL and/or section 106 obligations, as appropriate. 3. The council will encourage the provision of new cultural and leisure facilities in appropriate locations which are convenient to the communities they serve and accessible by a range of sustainable transport modes, including walking, cycling and public transport, and buildings that are inclusive, accessible, flexible and sited to maximise shared use of the facility. This reflects guidance in item 70 in the NPPF states that to deliver the social, recreational and cultural facilities and services that the community needs, planning policies and decisions should plan for the use of shared space and guard against unnecessary loss of valued facilities. Also to ensure that established facilities and services are retained and able to develop for the benefit of the community.	
REG18.66	Trinity Hall (Bidwells)	Please refer to our answer to Question 7 – the same principle applies; development on greenfield land offers greater opportunities than brownfield land to fund improvements to the cultural and leisure offer in the Borough.	Noted. See response to Question7.
REG18.67	Veolia ES (UK) Ltd	We support the development of cultural and leisure activities within the Borough. However, this should not be to the detriment of the needs of local businesses and the economic wellbeing of the area.	Support noted. The Proposed Submission version of the Local Plan sets out a balanced strategy to achieve sustainable development in Havering without detriment to a particular land use type.
POST18.4	V. Rajan and Associates	The respondent commented : 1. Sports Complex	Noted. The Local Plan sets a positive strategy for sport and leisure including a policy for open space, sports and leisure. It identifies support for improvements to

Response Number	Respondent Name	Response to Q8	Council's response
			several sports facilities such as Chaffords and Hornchurch.

Question 9: How do you think the Local Plan should protect and enhance the Borough's green belt?

Response Number	Respondent Name	Response to Q9	Council's response
REG18.1	AECOM	We believe that the Council should actively manage its Green Belt land and identify areas within it which serve its intended purpose and should be retained, as well as those areas where development would be suitable to meet the borough's housing need.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in the Green Belt in accordance with NPPF and London Plan policies.
REG18.2	Adams Family (Bidwells)	The Local Plan process provides the opportunity to review the Green Belt boundary and determine whether the targeted release of sites which do not serve any of the five Green Belt purposes would be appropriate. Specifically as part of this process, the development of some Green Belt	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a

Response Number	Respondent Name	Response to Q9	Council's response
		sites offers the prospect of enabling the enhancement and beneficial use of other land that serves a more valuable Green Belt function, as encouraged by the Framework. Such opportunities for Green Belt enhancement include accessibility, outdoor sport and recreation and the enhancement of landscapes, visual amenity and biodiversity. Providing new or extended Country Parks or enhancements to the Thames Chase Community Forest are examples of the opportunities presented by greater access to Green Belt land, funded by the release of sites that no longer serve Green Belt purposes. In light of our serious concerns in respect of the deliverability of the Borough's housing requirement on brownfield sites alone (as explained in our response to Question 3), we would seek to reassure the Council that Hundal v South Buckinghamshire DC [2012] demonstrates that housing need is capable of justifying a change in the Green Belt boundaries. This approach is in accordance with the most recent update to relevant National Planning Practice Guidance (PPG) guidance. Taking this point into practice, St Albans City and District Council (another Green Belt authority) is preparing its Local Plan to meet its housing requirements including Green Belt release on the basis that 'exceptional circumstances' do exist because there is likely to be insufficient brownfield capacity and no alternative locations beyond the Green Belt. In conclusion, development of some Green Belt land offers the prospect of funding the enhancement for the beneficial use of other parts of the Green Belt that serves a more important function. This Local Plan review process should be seen as an opportunity to enable this to happen. The release of some Green Belt land for residential development, in light of exceptional circumstances, is in accordance with the Framework and PPG guidance	contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect the Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.3	Anonymous	Protect the green belt, including stopping road and pedestrian traffic increases.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that

Response Number	Respondent Name	Response to Q9	Council's response
			all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in the Green Belt in accordance with NPPF and London Plan policies.
REG18.8	Brett Aggregates Limited (MJCA)	The new Local Plan should, in line with the aims and objectives of the NPPF recognise that certain types of development such as mineral extraction are not inappropriate in the Green Belt. Minerals can only be worked where they occur and can be accessed which can often include land in Green Belt surrounding urban areas. The ancillary facilities such as mineral processing plant, offices and weighbridges are essential to facilitate the extraction and processing of minerals and so should also not be considered inappropriate in the Green Belt. Minerals development and ancillary facilities are considered as temporary development, with full restoration schemes for such sites required as a prerequisite of planning permission. To reduce the distance over which mineral is transported it is common to locate ancillary production facilities such as a concrete batching plant to make use of the aggregate at quarries where the mineral arises. The permitted life of these facilities is often linked to the permitted life of the quarry and should not be considered inappropriate development in the	The Proposed Submission version of the Proposed Submission version of the Local Plan contains a positive policy on mineral extraction which requires proposals to be environmentally suitable, sustainable and consistent with other relevant policies. Mineral extraction are recognised as not inappropriate in the Green Belt providing they preserve the openness of the Green Belt and do not conflict with the purposes of including land in Green Belt. All applications for mineral extraction will be assessed in accordance with the NPPF and the London Plan.

Response Number	Respondent Name	Response to Q9	Council's response
		Green Belt where the facility does not contravene the purpose and objectives of the Green Belt. In some cases it is necessary to make use of imported waste to restore a quarry to original ground levels in order to return the land to a beneficial after use. As a result waste disposal should also not be considered to be inappropriate in the Green Belt. To minimise the use of raw materials and maximise the use of secondary aggregate, aggregate production plants at mineral extraction sites which treat suitable materials to recover and generate secondary aggregate should be considered as not inappropriate in the Green Belt where the purpose and objectives of the Green Belt are not compromised. Furthermore, where quarry sites are being restored using imported material, in order to minimise the disposal of waste which could be put to a more beneficial use, it is in accordance with the principles of sustainability to allow processing including the crushing and screening of waste prior to deposit in the quarry void to recover usable materials which can be used to produce secondary aggregates. The activities and plant involved are similar to the activities and plant associated with mineral extraction and processing and result in the recovery of materials which can be reused with only residual wastes being subject to final disposal to achieve restoration of the quarry void. This accords with the principles of the waste hierarchy set out in the Waste Framework Directive as well as the principles of sustainability which are embedded throughout national planning policy in the NPPF. The appropriate restoration of quarries can enhance the Green Belt by returning land to productive agricultural use and also by providing enhanced biodiversity or areas of public amenity such as allotments and footpaths around new lakes.	
REG18.9	C. Cole	Continue the good work with parks. Well Done.	Support noted.
REG18.12	D. Campbell	Do not build too many new builds on the green and do build homes for	Noted. The Council has undertaken a

Response Number	Respondent Name	Response to Q9	Council's response
		working families.	Green Belt study as part of the evidence base for the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in the Green Belt in accordance with NPPF and London Plan policies. Nonetheless, the Proposed Submission version of the Proposed Submission version of the Local Plan supports the delivery of a range of dwelling types, sizes and tenures to meet the housing needs of local people including working families, and will assess applications in Green Belt in accordance with the NPPF.
REG18.13	D.K.Symes Associates	There are areas within the Green Belt that have been damaged or degraded by past activities. There needs to be positive encouragement for these areas to be improved so that they can play their full role in contributing to the Green Belt objectives. This will include public access, increased leisure / access opportunities, linked greenways, etc.	The Proposed Submission version of the Local Plan supports and encourages improvements to the accessibility and beneficial use of the Green Belt where proposals are compliant with national policy.
REG18.14	Edward Gittins & Associates	In association with housing sites requiring the release of Green Belt land, provision should be made for a better use or improved appearance of the	The Council has undertaken a Green Belt study as part of the evidence base for the

Response Number	Respondent Name	Response to Q9	Council's response
		adjoining Green Belt via S106 Agreements.	Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will not be seeking to release Green Belt land for housing development. So there would be no need for provision to be made for a better use or improved appearance of the adjoining Green Belt via s106 Agreements.
REG18.18	Essex County Council	ECC is committed to working closely with local authorities who adjoin Essex to ensure housing and infrastructure requirements meet the needs of residents, drive economic prosperity, and protect and enhance the local environment. ECC's preference is for any implications of development on the Metropolitan Green Belt to be progressed through the local plan process. This will ensure a consistent, sound and robust approach in accordance with the National Planning Policy Framework (NPPF). It is recommended that the LB Havering ensure engagement and consultation through the duty to cooperate takes place with the adjoining Essex authorities of Epping Forest and Brentwood which contain significant areas of Green Belt land.	The Council has been committed in working closely with all neighbouring authorities on Green Belt matters and other strategic issues. The Duty to Co-operate statement sets out in detail how engagement has taken place to fulfil the Duty to Co-operate.
REG18.21	Havering College of Further and Higher Education	HCFHE recognises the importance of the Green Belt in the Borough and the requirement to protect the Green Belt from inappropriate development. However, HCFHE encourages LBH to review certain areas of land within the Green Belt which are no longer performing the five key functions of the Green Belt as defined by the National Planning Policy Framework. As	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a

Response Number	Respondent Name	Response to Q9	Council's response
	(Iceni Projects)	such, areas of the Green Belt that have been previously developed and now comprise large areas of hardstanding should be considered for potential development to assist the Borough in delivering its necessary housing targets. Sites such as this should be considered as part of an independent Green Belt Assessment as the Local Plan preparation evolves – in accordance with the National Planning Policy Framework.	contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. The opportunity for potential development at the Quarles Campus in Harold Hill is acknowledged in the Local Plan in the policy on housing supply and in the Housing Position Paper supporting the Local Plan.
REG18.23	Heine Planning	There is an urgent need to identify sites for Travellers. This should consider insetting existing sites from the Green Belt, making better use of existing sites and granting permanent consent for the many sites with temporary consent so that the general appearance and living conditions can be addressed by meaningful conditions.	The Council has undertaken a Gypsy and Traveller Needs Assessment to support the preparation of the Proposed Submission version of the Local Plan. It identifies a need for 33 pitches over the Plan Period for gypsies and travellers who meet the planning definition set out in the Government policy. No need was identified for pitches for travelling show people. The Proposed Submission version of the Local Plan has allocated 33 pitches.
REG18.24	Higgins Homes (Nathaniel Lichfield & Partners)	The Borough should protect and enhance the Green belt by proactively releasing the parts of it which do not contribute to its five purposes. By releasing development pressure at selected locations the council will be able to better focus on the protection and enhancement of the more defensible areas of the Green Belt, which serve the five purposes of the Green Belt and make a vital contribution to the health and well-being of the	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes

Response Number	Respondent Name	Response to Q9	Council's response
		Borough.	of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.26	Ian Weatherley	Some encroachment of the Green Belt should be allowed for careful planning and development for high-quality housing developments.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.27	Janet Davy	By not building on it.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version

Response Number	Respondent Name	Response to Q9	Council's response
			of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.28	Joe Coogan	High quality greenbelt land that is useable for recreation or farming should be protected. Land classified as greenbelt that is in effect 'waste land' should not be protected. Other uses should be considered that help improve Havering through better homes, recreation space or schools/infrastructure.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
REG18.29	John Peterson	Improve facilities in green belt	Noted. The Proposed Submission version of the Local Plan supports and encourages improvements to the accessibility and beneficial use of the Green Belt where

Response Number	Respondent Name	Response to Q9	Council's response
			proposals are compliant with the NPPF.
REG18.30	London Borough of Barking and Dagenham	Barking and Dagenham will be undertaking a Green Belt review as part of its Local Plan review. Since we share the Dagenham Corridor we would welcome early engagement around any significant changes to the Green Belt that Havering intend to make.	Havering Council has engaged with the London Borough of Barking and Dagenham on the preparation of Havering's Green Belt study. The Proposed Submission version of the Local Plan does not propose any significant changes to the Green Belt.
REG18.32	Lee Clements	By NOT allowing ANY development in the Green Belt. It is there to stop urban sprawl and allow residents relatively easy access to nature.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.33	Mr Leslie Budge (Andrew Martin Planning)	Paragraphs 79 and 80 outline the fundamental purposes for including land within the Green Belt, which includes: 1)to check the unrestricted sprawl of large built-up areas; 2)to prevent neighbouring towns merging into one another;	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF

Response Number	Respondent Name	Response to Q9	Council's response
		3)to assist in safeguarding the countryside from encroachment; 4)to preserve the setting and special character of historic towns; and 5)to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The NPPF directs, at paragraph 83 that once established Green Belt boundaries should only be altered in exceptional circumstances and these alterations should take place in conjunction with a review, or preparation of, a new Local Plan. When reviewing, altering or defining Green Belt boundaries, in accordance with paragraph 85 of the NPPF, local planning authorities should: – ensure consistency with the Local Plan strategy for meeting identified requirements for sustainable development; – not include land which is unnecessary to keep permanently open; – where necessary, identify in their plans areas of 'safeguard land' between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period; – make clear that the safeguarded land is not allocated for development at the present time. Planning permission for the permanent development of safeguarded land should only be granted following a Local Plan review which proposes the development;	and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.

Response Number	Respondent Name	Response to Q9	Council's response
		– satisfy themselves that Green Belt boundaries will not need to be altered at the end of the development plan period; and – define boundaries clearly, using physical features that are readily recognisable and likely to be permanent. A review of Green Belt boundaries is necessary where sufficient land cannot be identified within the existing urban areas to accommodate the required level of housing. This Green Belt review will secure a justified balance between meeting housing need and protecting the Green Belt.	
REG18.34	Margaret Whippy	Ad hoc protection of green belt land without consideration of local housing needs is not sensible. People must come first. Green belt that people cannot access or grow crops on is of little use, so more consideration needs to be directed to a joined-up policy that upholds beautiful areas of countryside for leisure and/or agricultural use, but allows for pockets of housing for local people.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.

For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.

Response Number	Respondent Name	Response to Q9	Council's response
REG18.44	Persimmon Homes Essex	Havering Borough Council do not appear to have undertaken a Green Belt Review when preparing their Core Strategy. Therefore Persimmon Homes would argue that there is no substantial evidence to support the areas designated as Green Belt, and the functions that they play, in the adopted Core Strategy. It is recommended that the council carry out a Green Belt review as part of the new Local Plan process to ensure that the rights sites are protected and those not fulfilling a number of the functions of Green Belt land are released for development. It should also be noted that in some circumstances the release of this land for development can help to enhance the function of the Green Belt through the provision of usable open space. The creation of definitive boundaries or use of existing physical characteristics such as rivers and transport networks can provide defensible boundaries to prevent urban sprawl.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.47	R. Watt and Partners (Phillips Planning Services)	As part of the preparation of the new Local Plan and in accordance with the National Planning Policy Framework, it is considered that the borough's Green Belt should be carefully reviewed to ensure that all land subject to the designation is effective and required to fulfil the objective of preventing urban sprawl.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and

Response Number	Respondent Name	Response to Q9	Council's response
			consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.48	R.A.Montague	By supporting local communities in their efforts to enhance Green Belt facilities and restore unattractive green belt to attractive open space as a community recreational facility and a wildlife habitat. This can be done by protecting rather than threatening the green belt with continuous revisions and by supporting local groups to achieve these goals.	Noted. The Proposed Submission version of the Local Plan supports and encourages improvements to the accessibility and beneficial use of the Green Belt where proposals are compliant with national policy. Furthermore, the Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.50	Rainham Preservation Society	It can't be enhanced while Havering continue to grant permission for the rape of our green belt by gravel extraction and landfill.	Noted. The Proposed Submission Local Plan recognises the importance of minerals and that they can only be worked where they occur. It has been prepared in line with the NPPF and the London Plan and, as such, sets out areas to be safeguarded

Response Number	Respondent Name	Response to Q9	Council's response
			for mineral extraction subject to the detailed requirements of the Plan..
REG18.51	Ray Whitehouse	Don't use it for anything else but look into providing more facilities such as refreshments and toilets.	Noted. Provision of more facilities such as refreshments and toilets is outside the scope of the Proposed Submission version of the Local Plan.
REG18.52	Romford Civic Society	There should be strict adherence to Green Belt policy.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.53	Romford Golf Club (Joe Coogan)	High quality greenbelt land that is useable for recreation or farming should be protected. 			NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.58	Sport England	The role of the Green belt in delivering sporting opportunities where other form of development would be considered inappropriate should be acknowledged. The NPPF is much more positive the now superseded PPG2 in that in advocates that local planning authorities should: "…plan positively to enhance the beneficial use of the Green Belt, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land."	Noted. The Proposed Submission version of the Local Plan supports and encourages improvements to the accessibility and beneficial use of the Green Belt in line with the NPPF.
REG18.61	The Crown Estate (Amec Foster Wheeler)	In order for the new Local Plan to provide a sustainable development strategy, the desire to protect the Green Belt will need to be balanced against the need to deliver homes. NPPF requires that Local Plans are prepared to deliver the three dimensions of sustainable development outlined in paragraph 7 (these include meeting housing and economic development needs). In addition, paragraph 158 of NPPF requires that Local Plans are prepared on the basis of an 'adequate, up-to-date, and relevant evidence base about the economic, social and environmental characteristics and prospects of the area.' The current Green Belt boundaries were defined in the 2008 Core Strategy and are afforded protection from development by current development plan policies. Whilst, Paragraph 83 of NPPF states that Green Belt	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the

Response Number	Respondent Name	Response to Q9	Council's response
		Boundaries "should only be altered in exceptional circumstances through the preparations and review of the Local Plan", in order to accommodate sustainable development needs, the Council will need to consider some release of Green Belt land to provide for the requisite housing growth over the Plan Period. It is considered in light of the significant housing need in the Borough over the plan period and beyond that evidence justifies 'exceptional circumstances' for revisions to the Green Belt (as noted above Further Alterations to the London Plan identify a minimum 10 year target of 11,701 dwellings to be delivered in Havering between 2015 and 2025). Accordingly, in line with paragraph 85 of NPPF, Green Belt boundaries should be reviewed with a consideration of how sustainable development needs will be met (see our response to questions 3 and 4). Given the extent of the Green Belt in the District (around half of the Borough's land area), an assessment of Green Belt boundaries is an essential piece of evidence to support the Local Plan preparation. This assessment will need to identify areas that make less of a contribution than others to the five purposes of including land within the Green Belt. It is likely that the release of land in the Green Belt will be required and priority should be given to areas which are less significant in Green Belt terms (see also our response to question 10 below). The need for a Green Belt review is supported by the recent publication of 'The Green Belt: A Place for Londoners' 1 which recommends that local planning authorities should review their Green Belt and consider how land within it can be used most effectively. The report argues that brownfield sites alone will not be able to meet the housing need and land will be need to be released from the Green Belt. The findings of this report echoes a recent recommendation by the Communities and Local Government Committee report2 which states "we encourage all Councils, as part of the local planning process to review the size and boundaries of their green belts."	NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.

Response Number	Respondent Name	Response to Q9	Council's response
REG18.63	Thomas Bates and Son Ltd. (Andrew Martin Planning)	Paragraphs 79 and 80 of the NPPF outline the fundamental purposes for including land within the Green Belt. These include: 1. to check the unrestricted sprawl of large built-up areas; 2. to prevent neighbouring towns merging into one another; 3. to assist in safeguarding the countryside from encroachment; 4. to preserve the setting and special character of historic towns; and 5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The NPPF directs, at paragraph 83, that once established Green Belt boundaries should only be altered in exceptional circumstances and these alterations should take place in conjunction with a review, or preparation of, a new Local Plan. When reviewing, altering or defining Green Belt boundaries, in accordance with paragraph 85 of the NPPF, local planning authorities should: – ensure consistency with the Local Plan strategy for meeting identified requirements for sustainable development; – not include land which is unnecessary to keep permanently open; – where necessary, identify in their plans areas of 'safeguard land' between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period;	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.

Response Number	Respondent Name	Response to Q9	Council's response
		– make clear that the safeguarded land is not allocated for development at the present time. Planning permission for the permanent development of safeguarded land should only be granted following a Local Plan review which proposes the development; – satisfy themselves that Green Belt boundaries will not need to be altered at the end of the development plan period; and – define boundaries clearly, using physical features that are readily recognisable and likely to be permanent. A review of Green Belt boundaries is necessary where sufficient land cannot be identified within the existing urban areas to accommodate the required level of housing. This Green Belt review will secure a justified balance between meeting housing need and protecting the Green Belt.	
REG18.64	Thurrock Council	It is recognised that Havering Council seek to protect and enhance the Green Belt from inappropriate development and Thurrock supports this approach. National policy also states Green Belt boundaries should only be altered in exceptional The London Plan continues to support the current extent of the Green Belt with no review or proposed alterations to the boundary proposed. It is noted that Havering council propose to review the current Green Belt boundary as part of the preparation of the new Local Plan to determine if any changes are needed. Thurrock Council supports the aim to review the current Green Belt Boundary as part of the local plan preparation and requests to be consulted and engage with Havering Council on this review and in particular to consider any cross boundary implications.	The Council has worked closely with Thurrock Council on the preparation of the Green Belt Study, as detailed in the report and in the Duty to Co-operate Statement. The Council will continue to engage with Thurrock Council on Green Belt matters and other strategic issues.

Response Number	Respondent Name	Response to Q9	Council's response
		Thurrock Council will be undertaking its own Green Belt review in the future as part of the emerging local plan process and would wish to engage with Havering to ensure that both reviews are coordinated and protect and enhance the purposed of the Green Belt in accordance with national policy. Both Councils together with other local authorities will also have to consider the commencement of the full review of the London Plan and any implications this may possibly have on the function and role of the Green Belt in this area.	
REG18.65	Transport for London	With respect to any revisions of the Green Belt boundary, TfL would have concerns on transport grounds if parcels of green belt were to be developed and which were not mitigated accordingly, in particular given lack of public transport provision and a potential reliance on the private motor vehicle. TfL would welcome further discussions in this regard.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF policies.
REG18.66	Trinity Hall (Bidwells)	The Local Plan process provides the opportunity to review the Green Belt boundary and determine whether the targeted release of sites which do not serve any of the five Green Belt purposes would be appropriate. Specifically as part of this process, the development of some Green Belt	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a

Response Number	Respondent Name	Response to Q9	Council's response
		sites offers the prospect of enabling the enhancement and beneficial use of other land that serves a more valuable Green Belt function, as encouraged by the Framework. Such opportunities for Green Belt enhancement include accessibility, outdoor sport and recreation, retention and enhancement of landscapes, visual amenity and biodiversity. Providing new or extended Country Parks or enhancements to the Thames Chase Community Forest are examples of the opportunities presented by greater access to Green Belt land, funded by the release of sites that no longer serve Green Belt purposes. In light of our serious concerns in respect of the deliverability of the Borough's housing requirement on brownfield sites alone (as explained in our response to Question 3), we would seek to reassure the Council that Hundal v South Buckinghamshire DC [2012] demonstrates that housing need is capable of justifying a change in the Green Belt boundaries. This approach is in accordance with the most recent update to relevant National Planning Practice Guidance (PPG) guidance. Taking this point into practice, St Albans City and District Council (another Green Belt authority) is preparing its Local Plan to meet its housing requirements including Green Belt release on the basis that 'exceptional circumstances' do exist because there is likely to be insufficient brownfield capacity and no alternative locations beyond the Green Belt. In conclusion, development of some Green Belt land offers the prospect of funding the enhancement for the beneficial use of other parts of the Green Belt that serves a more important function. This Local Plan review process should be seen as an opportunity to enable this to happen. The release of some Green Belt land for residential development, in light of exceptional circumstances, is in accordance with the Framework and PPG guidance.	contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF and London Plan policies.
REG18.68	Woodland Trust	All new site allocations should seek to enhance Green Infrastructure provision and well used local community green assets. New development opportunities should continue to be focussed within existing settlements, where they can contribute a lot to local characters and distinctiveness,	The Proposed Submission version of the Local Plan contains a set of monitoring indicators that seek to cover all of the Local Plan's strategic objectives.

Response Number	Respondent Name	Response to Q9	Council's response
		whilst also achieving sustainable patterns of development across Havering Borough. Currently, your Local Plan consultation does not acknowledge the value of monitoring. As a Local Planning Authority you are required to publish an Annual Monitoring Report (AMR) to assess the effectiveness of polices and guidance that forms part of the local development plan. The National Planning Policy Framework (NPPF) supports the need for more habitat creation by stating that: `*Local planning authorities should: set out a strategic approach in their Local Plans, planning positively for the creation, protection, enhancement and management of networks of biodiversity and green infrastructure',* (DCLG, March 2012, para 114). Also para 117 states that: `*To minimise impacts on biodiversity and geodiversity, planning policies should:….promote the preservation, restoration and re-creation of priority habitats, ecological networks and the protection and recovery of priority species populations, linked to national and local targets, and identify suitable indicators for monitoring biodiversity in the plan'*. Whilst monitoring is being taken into account with your adopted Core Strategy and Development Control Policies (2008), effective monitoring also needs to be put in place with your new Local Plan so as to highlight any effective delivery. Maintaining a high quality natural environment should be defined as a measurable objective of your SPD, and currently there is no proposed indicator of biodiversity, or any other environmental targets such as woods and trees and canopy cover. Local Planning Authorities should identify suitable indicators for monitoring the plan, but 'net gain' is not identified as something that should be measured. Therefore, measuring indicators such as: development within the Green Belt; planning decisions that affect climate change; and the impact of a development on the landscape; should also be taken into account with the	

Response Number	Respondent Name	Response to Q9	Council's response
		monitoring of your planning policy guidance relating to sustainable building and places in Havering Borough. Maintaining a high quality natural environment should be defined as a measurable objective of your SPD, and currently there is no proposed indicator of biodiversity, or any other environmental targets such as woods and trees and canopy cover. Local Planning Authorities should identify suitable indicators for monitoring the plan, but 'net gain' is not identified as something that should be measured. Therefore, creating sustainable buildings and place in Havering London Borough and measuring development proposed, created, restored or managed as a result of local planning decision, against the area of habitat lost, damaged or declining as result of a planning decision, should also be taken into account with more effectively with the Monitoring of your detailed guidance on the implementation of policies in your Local Plan.	
REG18.69	Wyevale Garden Centres (Gregory Gray Associates)	The Green Belt will be protected provided that maximum use is made of brownfield sites which can be developed in accordance with Green Belt policy. By meeting local housing and employment requirements on such sites, the pressure to develop on existing greenfield Green Belt land will be reduced.	Noted. The Proposed Submission version of the Local Plan seeks to optimise development on brownfield sites consistent with ensuring that new development meets the design requirements set out in the Local Plan.
POST18.1	V. Rajan and Associates	Trees. Plant more trees	Noted. The Local Plan sets out a positive strategy towards trees and biodiversity.

Question 10: Do you have any suggestions for revisions to the green belt boundary?

Response Number	Respondent Name	Response to Q10	Council's response
REG18.1	AECOM	Havering's previous housing, as set out in the Core Strategy (2008) was 535 dwellings per year which has only been met by the delivery of 2,717 units at a rate of 453 dwellings per year under the Core Strategy and Development Control Policies DPD, Site Specific Allocations DPD and Romford Area Action Plan. The London Plan (2011) included a housing target of 970 units over a ten year period (2011 – 2021). Since the adoption of the FALP Havering's new yearly target has increased to 1,170 units. Havering's current five year supply, as identified in the 2012-2013 AMR, is 5,093 units (which includes an additional 5% buffer to ensure choice and competition in the market for land). As Havering are unable to demonstrate a sufficient 5 year supply they should increase the buffer to 20% to provide a realistic prospect of achieving the planned supply. When reviewing Havering's expected delivery of homes within the next five years, it is clear that their assumptions around the 5 year supply are incorrect and out of date. Their five year supply should amount to 7,513 to sufficiently meet their yearly FALP target (including 20%), plus their backlog from 2008. The above suggests that Havering has a chronic land supply issue with uncertain deliverability. Paragraph 47 of the NPPF stipulates that new Local Plans must allocate land both for a five year supply of 'deliverable sites' and enough 'developable' sites for years 6-15. Within this context Havering's emerging Local Plan will need to be tested for viability to ascertain they have a robust five year supply and are not promoting unviable brownfield sites. We would encourage Havering to share their latest SHMA findings and wonder whether they have yet considered how the new household	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will protect Green Belt and consider applications in Green Belt in accordance with NPPF policies.

Response Number	Respondent Name	Response to Q10	Council's response
		projections have impacted their full OAHN and by how far they diverge from the FALP target. If Havering's neighbouring boroughs are unable or unwilling to commit to taking any of Havering's residual OAHN then they must look within their own boundary to identify sufficient supply, through a review of Green Belt. Case law stipulates that the review of Green Belt must follow a two-step process: 1) Review the need for housing and employment land; and 2) Review supply including Green Belt land where supply cannot be met on brownfield land. Paragraph 83 of the NPPF states that once established, Green Belt boundaries should only be altered in 'exceptional circumstances', through the preparation of the Local Plan. It is evident that these circumstances exist to alter the Green Belt boundaries in Havering due to chronic housing need and the limited capacity and viability of brownfield sites in the borough. Having regard to Havering's Employment Land Review (2006) and employment land identified in Havering's current Local Plan it is considered that the majority of brownfield sites are clustered in distinct areas, with a large clustering in Rainham. We would suggest that a significant number of these sites would be unsuitable for a housing allocation given their designation for employment use (SIL or Secondary Employment Area), likely contamination and incompatible adjacent land uses that would create bad neighbour issues. We acknowledge that a portion of the borough's housing delivery can be accommodated on brownfield land, however the scale of the borough's housing need will require a strategic housing allocation on Green Belt land. We believe that this justifies a review of Havering's Green Belt at the earliest opportunity, especially as their current SHLAA cannot demonstrate	

Response Number	Respondent Name	Response to Q10	Council's response
		a healthy supply of deliverable and developable sites to meet their new London Plan target. <u>The case for Green Belt release at Bush Farm</u> This parcel of land forms a square site divided by Sunnings Lane. Logically, and based on the shortfall in identified capacity across the borough against the targets set out in the London Plan (2015), it would be suitable for the red-line boundary in Figure 1 to form a housing allocation in the emerging Plan. The site is capable of delivering 1,186 dwellings with the potential to maximise community benefit by including a new school and/or other community facilities. As such, our representation proposes using the red-line boundary as a basis for considering the portion of land that could be released from the Green Belt. This boundary, which encompasses 79.74 hectares in total, is under the single ownership of our client and is readily available should the land be released from the Green Belt. The site currently comprises a collection of underused agricultural fields with several ancillary farm buildings. The surrounding land uses include: – To the east, Stubbers Adventure Centre and lake; – To the north, Sullens Farm and residential properties along Sunnings Lane; – To the west, Delta Force paintballing facility and agricultural fields; – To the south, agricultural fields. We would recommend the assessment of Bush Farm against nationally-applicable Green Belt criteria as listed in paragraph 80 of the NPPF: – To check the unrestricted sprawl of large built-up areas; – To prevent neighbouring towns merging into one another; – To assist in safeguarding the countryside from encroachment;	

Response Number	Respondent Name	Response to Q10	Council's response
		– To preserve the setting and special character of historic towns; and – To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. <u>Criterion 1: To check the unrestricted sprawl of large built-up areas</u> Through review of historical mapping it is difficult to see how Bush Farm can be said to meet this criterion, as there is significant urbanisation of the area despite Green Belt being designated here after the Second World War, particularly northwards of the site's boundary. It is noted that Green Belt designation has not stopped the following developments taking place, all of which could be said to contribute to the unrestricted sprawl of a large built-up area (i.e. Greater London): – Extensive housing development of 100-120 units forming the present day southern edge of Corbets Tey (the whole of Huntsmans Drive, The Glade, Ockenden Road, Meadowside Road, Londons Close and partial development of Corbets Tey Road); – The construction of Corbets Tey School; – The Derham House care home facility has been developed, including a car park; – Corbets Tey Crematorium (while this is in itself acceptable development in the Green Belt, the cumulative impact of this with other development on the Green Belt should be acknowledged); and – New blocks being added to the buildings at Oakfields Montessori School. We have reproduced, in Figure 2 below, the historic map from 1951 next to the present day to allow for easy comparison between the two. This shows the extent of the incursion into the Green Belt in this location over the last sixty years. Figure 2 demonstrates that if the first Green Belt criterion had been strictly	

Response Number	Respondent Name	Response to Q10	Council's response
		applied in this location, the aerial view would be identical to the historical map. It is considered that removing this site from the Green Belt in favour of a housing allocation would not affect in any way the performance of remaining Green Belt land on this criterion. Development at this location would effectively comprise a sustainable extension to Corbets Tey, with a strongly defensible boundary of Dennises Lane to the south. The nearest settlement south of Corbets Tay is South Ockenden, some 2km south east of the site, and so development here would have little or no impact on the risk of coalescence between settlements. Building on the land at Bush Farm would likely reduce the pressure to build on alternative sites elsewhere in the Green Belt that may not perform as well on this criterion. <u>Criterion 3: To assist in safeguarding the countryside from encroachment</u> We consider that the site is currently failing on this criterion on the basis of the extensive development that has taken place since the designation of the Green Belt, as detailed under Criterion 1 above. Encroachment on the Green Belt can be defined as the visual impact and the footprint of the development. The combined visual impact of the series of development schemes as listed under Criterion 1 contributes to the failure of Bush Farm to meet this criterion. <u>Criterion 4: To preserve the setting and special character of historic towns</u> This criterion is not applicable in the context of the site as no historical towns exist in this location. <u>Criterion 5: To assist in urban regeneration, by encouraging the recycling of derelict and other urban land</u>	

Response Number	Respondent Name	Response to Q10	Council's response
		It is acknowledged that the site itself remains largely undeveloped and that the Green Belt designation can be assumed to have been a factor in this lack of development. As a result, the site has likely made a contribution to encouraging the recycling of derelict and other urban land and assisting urban regeneration by directing development into the existing urban area. However, the previously mentioned urban sprawl that has occurred since Green Belt designation means that its performance on this criterion, though effective to an extent, has been relatively ineffective. <u>Conclusions on performance of site against Green Belt criteria</u> Of the five purposes for which land is designated as or retained as Green Belt, Bush Farm appears to be failing completely on Criteria 1 and 3, partially failing on Criterion 5, and Criteria 2 and 4 are not relevant. It is therefore very difficult to see how this site could be considered as meeting the five criteria for which it should be retained as Green Belt.	
REG18.2	Adams Family (Bidwells)	Yes. The owners of Land North of New Road, Rainham, strongly believe that it represents a suitable option to assist the Council to achieve their demanding London Plan housing delivery target and to address objectively assessed housing needs whilst providing new opportunities for ecological enhancement, outdoor recreation, public open space and beneficial use of Green Belt land. The owners of the site recognise the importance of the beneficial use of Green Belt land and of maintaining the openness of land adjacent to the Ingrebourne River. As a consequence, it is proposed to leave a large proportion of the site undeveloped and use it to create publically accessible open space managed to support biodiversity. The site currently falls within private ownership and is not subject to any public rights of way. Partial development for housing would enable the restoration of the remaining land, which is subject to limited areas of contamination, and the creation of a new area of public open space in Rainham. This would offer new opportunities for increased access to open space for outdoor recreation	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land North of New Road, Rainham will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		and to enhance the landscape features, visual amenity and biodiversity value of the site, entirely in accordance with the objectives of paragraph 81 of the Framework. The undeveloped portion of the site could lend itself to the creation of a new country park, or an enhancement to the existing Hornchurch Country Park which sits to the north. It may also provide the opportunity to extend the Thames Chase Community Forest, a project which aims to develop a connected network of links and accessible, vibrant greenspaces throughout the Borough, further supporting the objectives of the Framework. The site includes wetlands which form part of the Ingrebourne Marshes SSSI, a 78ha site extending to the north and west. It is noted for its importance as one of the largest and most diverse areas of freshwater marshland in Greater London. The variety of habitat within the SSSI includes extensive areas of reed sweet-grass Glyceria maxima and common reed Phragmites australis swamp; wet neutral grassland, and tall fen. These wetland habitats support a rich assemblage of associated invertebrates and breeding birds but none of the land within the site is in any way managed to support biodiversity. The majority of the site has a ground level significantly higher than the adjoining wetlands and is predominantly scrubland of considerably less ecological value. The site is of such a scale that the development of some of the higher land would present the opportunity to facilitate enhancements to the habitats within and adjacent to the SSSI and support their ongoing management – delivering significant biodiversity gain. Appropriate enhancement of the retained open space and the provision of public access to it, if managed to avoid compromising the integrity of the adjoining habitats, may also increase opportunities for education and community involvement in the management of the SSSI. The broad extent of the area proposed for removal for the Green Belt is shown on the Site Location Plan at Appendix 1. This area is located	

Response Number	Respondent Name	Response to Q10	Council's response
		between existing development to the north and south and broadly seeks to join up the existing building line in either direction, recognising that this would have a limited impact of the openness of the Green Belt or the Ingrebourne Marshes. The Adams Family is willing to discuss proposals for the site in more detail with the Council to seek to agree an appropriate redefinition of the Green Belt boundary in this location as the Local Plan process progresses, taking account of the constraints of the site. The proposals for the site have been assessed against the five purposes of the Green Belt, as set out in paragraph 80 of the Framework. The assessment suggests that the release of land adjacent to the existing built-up area for residential development and the creation and protection of public open space on the remainder of the site, adjacent to the Ingrebourne River, would be consistent with these objectives, as described below: – To check the unrestricted sprawl of large built up areas: • The development of a proportion of the site as indicated on the Site Location Plan would fill a gap between two areas of existing development and not extend any further into the Ingrebourne Valley than existing housing. A large proportion of the site would remain undeveloped and uncontrolled urban sprawl will not occur. The site is capable of delivering much needed new homes whilst securing public access to new public open space within the Green Belt and biodiversity gain. The public open space could be designated and protected in the Local Plan. This will create a new physical, defensible boundary for the Green Belt. – To prevent neighbouring towns from merging into one another: • The development of a proportion of the site would allow an existing sustainable neighbourhood to grow in a controlled manner but the provision a new area of publicly accessible open space alongside the Ingrebourne River valley would maintain and protect a substantial gap between South Hornchurch and Rainham. Further	

Response Number	Respondent Name	Response to Q10	Council's response
		separation will always be provided by Hornchurch Country Park and the flood plain to the north. – To assist in safeguarding the countryside from encroachment: • The site occupies part of a wider gap within the existing built up area – it is not located in the open countryside. The delivery of a publicly accessible open space or country park will ensure that the open space is maintained and safeguarded. The River Ingrebourne and its associated marshes provide a further barrier to encroachment, – To preserve the setting and special character of historic towns: • The nearest development to the site is relatively modern and there are few (if any) designated heritage assets in the surrounding area. The site serves no purpose in preserving the setting and special character of historic towns. – To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: • The site is currently derelict, inaccessible scrub land. The development of a proportion of the site will deliver much needed new homes adjacent to an existing urban area and enable the restoration and beneficial use of the remainder for outdoor recreation. The demanding housing delivery target stipulated by the London Plan and the scale of objectively assessed housing needs in London indicate that the release of a small portion of the site is unlikely to inhibit the recycling of brownfield sites elsewhere in the Borough. The assessment establishes that the careful development of the site will not materially impact on the Green Belt nor will it impede its purposes and functionality. It can therefore be considered reasonable to remove a portion of the site from the Green Belt for inclusion in Havering's housing land	

Response Number	Respondent Name	Response to Q10	Council's response
		supply. The Framework states that when defining boundaries, local planning authorities should ensure consistency with the Local Plan strategy for meeting identified requirements for sustainable development. Development of a proportion of the site ensure Havering's Green Belt boundaries are altered in a sensitive manner that will ensure that the new boundary: – Is consistent with the Local Plan's wider strategy; – Does not include land which is unnecessary to keep permanently open; – Meets longer-term development needs; – Will not need to be altered at the end of the plan period; and – Is defined using physical features that are readily recognisable and likely to be permanent.	
REG18.3	Anonymous	Keep it.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing development.
REG18.9	C. Cole	In general I am happy for lots of green in suburbs to be swapped for land on the edge and built on – in filling.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded

Response Number	Respondent Name	Response to Q10	Council's response
			that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the green in suburbs or Green Belt land will be swapped for land on the edge and built on for housing development.
REG18.14	Edward Gittins & Associates	Land to the south of Squirrels Heath Road, Harold Hill has been put forward earlier for residential development associated with open space to the east and north within the Ingrebourne Valley. We confirm the continuing availability of all of this land.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land to the south of Squirrels Heath Road, Harold Hill will be released for housing development.
REG18.21	Havering College of	HCFHE believe that there are areas within the Borough that require revisions to the Green Belt boundary, specifically in relation to its	The Council has undertaken a Green Belt study as part of the evidence base for the

Response Number	Respondent Name	Response to Q10	Council's response
	Further and Higher Education (Iceni Projects)	landholding at the Quarles Campus on Tring Gardens, Harold Hill. The site measures approximately 3.8 hectares (9.3 acres) and is located within the Havering Metropolitan Green Belt (Policy DC46), however the full extent of the Site is allocated as a 'Major Developed site in the Green Belt' ('MDS') (Policy DC45). The MDS status relates to Annex C of Planning Policy Guidance Note 2; however we appreciate that this policy document was replaced in March 2012 by the publication of the National Planning Policy Framework ('NPPF), this does not include any reference to MDS. For reference, a site location plan is enclosed at Appendix A1. It is proposed that the existing facilities at the Quarles campus will eventually be relocated to alternative locations in Harold Hill or elsewhere in Havering. The site currently comprises large areas of hardstanding and built form, as such it should be considered as a previously developed site in the Green Belt. Its former allocation as a Major Developed Site in the Green Belt also supports future development at the site. HCFHE therefore encourages LBH to review the Green Belt boundary in this location and to release the land from the Green Belt for future residential development. Any capital secured through the future sale of this site with enable the development of a new college facility. HCFHE and Iceni met with senior officers at Havering Council (incl. Patrick Keyes and Martyn Knowles) in mid-September to discuss the potential future role of the Quarles campus. HCFHE also responded to the LBH Call for Sites consultation on 6th October 2014 in relation to its landholding at the Quarles Campus on Tring Gardens, Harold Hill. HCFHE highlighted that it wished to promote the site for residential development following the future relocation of activities from the Quarles Campus to their new location in Havering. At this stage, detailed Masterplanning has not yet been carried out for the site; however, on initial review of the site we believe that the land has	Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason the Council will not release from Green Belt the Quarles Campus on Tring Gardens, Harold Hill site. The opportunity for potential development at the Quarles Campus in Harold Hill is acknowledged in the Local Plan in the policy on housing supply and in the Housing Position Paper supporting the Local Plan.

Response Number	Respondent Name	Response to Q10	Council's response
		potential to accommodate c.125 residential dwellings.	
REG18.23	Heine Planning	As above. Need to consider insetting Traveller sites in accordance with guidance in NPPG for defensible boundaries.	Noted. The Proposed Submission version of the Local Plan proposes to make provision for the needs identified in the GTAA (33 pitches) at the existing sites. It is considered inappropriate to 'inset' traveller sites.
REG18.24	Higgins Homes (Nathaniel Lichfield & Partners)	We have previously submitted a letter (dated 15 January 2015) outlining a site which satisfies the criteria referred to above and which sets out case for its removal from the Green Belt. A copy of this letter is attached at Appendix 1 for your consideration in allocating sites. <u>Appendix 1</u> – Proposed site for removal from the Green Belt: Land north of Ockenden Road, Upminster, RM14 2DJ <u>Site and Surrounding Area</u> The site, as identified on the attached Site Location Plan, comprises an area of 4.97ha to the north of Ockenden Road between Huntsmans Drive and Upminster Cemetery. At present the site is owned by Dagenham Landscapes who use the land for growing trees and plants for private sale. The site adjoins the defined urban area of Upminster. It is bounded to the north by the Gaynes Secondary School and residential uses beyond and to the east by the Upminster Cemetery and Crematorium. It is abutted to the west by a residential area and buildings associated with Dagenham Landscapes. The southern boundary of the site comprises a 92m frontage onto Ockenden Road with site specific vehicular access. The site is located in a sustainable location within walking distance of a range of services and facilities: – Neighbourhood shops and post office – 250m; – Corbets Tey Primary School – 0.53km and Gaynes Secondary School	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land north of Ockenden Road, Upminster, RM14 2DJ will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		– 1.18km; and – Bus Stop on primary frontage (Rail/Tube Station – 2.25km/2.5km) – Upminster Town Centre is 1.95km from the site which is accessible by cycle and bus. <u>Proposal – Green Belt Change and Housing Allocation</u> We consider that the site should be removed from the Green Belt and allocated for housing to assist in meeting the Borough's housing requirement. In the Further Alterations to the London Plan this has increased from 970 to 1170 pa. Further, the Inspector considering the FALP has stated that "*The evidence before me strongly suggests that the existing London Plan strategy will not deliver sufficient homes to meet objectively assessed need. The Mayor has committed to a review of the London Plan in 2016 but I do not consider that London can afford to wait until then and recommend that a review commences as soon as the FALP is adopted in 2015. In my view, the Mayor needs to explore options beyond the existing philosophy of the London Plan*. *Non adoption of the FALP would result in the retention of the existing housing targets in the London Plan (32,210 dpa39) which are woefully short of what is needed".* It is, therefore, inevitable that the Borough will need to find and deliver more housing sites to meet requirements. Paragraph 83 of the NPPF states that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation or review of the Local Plan. It adds, in paragraph 84, that when reviewing Green Belt boundaries local planning authorities should take account of the need to	

Response Number	Respondent Name	Response to Q10	Council's response
		promote sustainable patterns of development and that when defining boundaries you should: *Ensure consistency with the Local Plan strategy for meeting identified requirements for sustainable development (paragraph 85 of NPPF).* The purposes of the Green Belt are to: – to check the unrestricted sprawl of large built-up areas; – to prevent neighbouring towns merging into one another; – to assist in safeguarding the countryside from encroachment; – to preserve the setting and special character of historic towns; and – to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. The entirety of the site is located within the Metropolitan Green Belt, but importantly is located on the border with the defined urban area of Upminster and as such is abutted by residential uses to the west. Both the school site to the north and the cemetery to the east of the site, whilst partially preserving the openness of the Green Belt, cannot be considered as open sites due to the presence of buildings and fences and do not possess the character or appearance of open countryside. Given this context, and the high level of sustainability offered by the site, we do not consider that the site fulfils a meaningful Green Belt role and there are clearly defined physical boundaries for any revised Green belt boundary. The above is considered to be a robust case to justify its removal from the Green Belt to provide additional housing in the Borough. We are, therefore, proposing that the site be removed from the Green Belt and that the site be identified for residential development. The site has the potential to accommodate approximately 175 dwellings at a density of 35 dwellings per hectare (in keeping with the surrounding residential area). <u>Site Suitability</u>	

Response Number	Respondent Name	Response to Q10	Council's response
		As stated above the site is in a sustainable location. It is not located within an area of flood risk and there is not considered to be any overriding contamination being present. The site is relatively flat and has an existing vehicular access off a main road. It is not adjacent to any 'bad neighbour' uses. There are existing commercially grown trees on the site but these would need to be 'harvested' prior to the commencement of works on site. Given that Dagenham Landscapes cultivated these with the intention that they would be felled and sold privately this does not present an issue to the deliverability of the site. <u>Site Availability</u> There are no legal/ownership constraints that might prohibit or delay development of the site. The current owners/occupiers have indicated a willingness to leave the site when required. The site would therefore be available in the short term. <u>Site achievability</u> Given the positive context, suitability and availability of the site for residential development it is considered that there is a good prospect that the site would come forward for residential use. There are not considered to be any significant abnormal development costs associated with any development and the site would not require any significant new infrastructure investment. <u>Planning Policy Context</u> The site is located within a Minerals Safeguarding Area but it is not	

Response Number	Respondent Name	Response to Q10	Council's response
		considered that it is sufficiently large to provide a viable reserve of sand and gravel. This could, however, potentially provide some on site construction material. The North West corner of the site is designated as a Site of Nature Conservation Importance and as such the proposals will be designed to ensure that the impact on the site is appropriately mitigated.	
REG18.26	Ian Weatherley	Nil.	Noted.
REG18.28	Joe Coogan	Site at Moor Lane in Cranham. The landowner is willing to consider any scenario that can bring this waste land into use. This includes use for a new school to meet need in the area, housing (including affordable housing), high quality family homes or a mixed use. This could generate a significant planning obligation/sct 106 windfall for the council, depending on the details of scheme.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Site at Moor Lane in Cranham will be released for a new school or mixed use or housing development.
REG18.29	John Peterson	Keep as is.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough

Response Number	Respondent Name	Response to Q10	Council's response
			makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason Green Belt land will be kept as it is.
REG18.32	Lee Clements	The Green Belt boundary should NOT be revised.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing development and the Green Belt boundary will not be revised.
REG18.33	Mr Leslie Budge (Andrew Martin Planning)	Land at Little Paddocks Farm, Shepherds Hill, Harold Wood currently forms part of the Metropolitan Green Belt. With existing vegetation and established field boundaries to the east, the site is well contained and could be released from the Green Belt without compromising the five purposes of including land within the Green Belt – as set out in paragraph 80 of the National Planning Policy Framework. In particular the release of	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes

Response Number	Respondent Name	Response to Q10	Council's response
		the site would: – prevent unrestricted sprawl of a large built-up area – the site is bound on three sides by existing development and the railway line. The established field boundaries to the east and the existing Harold Court Woods to the north-east would form a clear boundary against further urban development; – prevent neighbouring towns merging into one another – existing ribbon housing along Shepherds Hill already extends further towards Great Warley (to the east) than development at the site would, as does existing residential development north of the railway line that borders this site; – safeguard against encroachment into the countryside – the site is well contained and as stated existing housing extends further into the countryside than development a the site would; – preserve the setting and special character of historic towns – there is no particular historic urban setting to maintain in this area, but new public green space and / or an extension to the adjoining Harold Court Woods recreating area would enhance the wider rural setting and character of the area; and – assist in urban regeneration – by accommodating new residents who will bring additional expenditure to the local economy (including at Harold Wood neighbourhood centre).	of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land at Little Paddocks Farm, Shepherds Hill, Harrow Wood will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		The potential for sensitive design and screening could ensure that housing development here does not detract from the character of appearance of the wider Green Belt to the east. As mentioned above, only a finite amount of previously developed land exists and it is inevitable that some greenfield releases will be required to accommodate the Borough's housing needs over the plan period. Little Paddocks Farm is situated on the western edge of the Green Belt, is in close proximity to community infrastructure, services and facilities and is bound by existing residential development on two sides and by the London Liverpool Street to Ipswich / Norwich railway line to the north. With this is mind, the site is well suited to being one of the first greenfield sites in Havering to be released from its Green Belt designation.	
REG18.34	Margaret Whippy	The present boundaries have historically remained unchanged, even though through two world wars local agriculture lives and modern day lives are no longer the same. Farms no longer dot the countryside. Local green belt boundaries NEED expanding; London is encroaching as never before. New local housing for local people between Harold Wood and Hornchurch would address this problem. Cross Hatched site for 2 homes attached on unused land.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including land for new local housing for local people between Harold Wood and Hornchurch will be released for housing development.
REG18.36	Moody Homes and Mr John Wakeling	My clients' are willing to enable the release of Land at Lincoln Close from Green Belt to assist the Council to address the housing objectives that the new Local Plan will need to deliver.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local

Response Number	Respondent Name	Response to Q10	Council's response
	(Bidwells)	The characteristics of the site and the surrounding area illustrate that it no longer serves any of the purposes of including land within the Green Belt. As a consequence, a new Green Belt boundary should be redrawn along the southern and eastern boundaries of the site, as shown on the plan above. Alternatively, the Council could also remove the proliferation of existing development which has built up over recent years to the south and north by redefining the boundary along the route of Hubbards Close to join up with the A127 to the north. The amount of existing development within this area and its location adjacent to the wider urban extent of Hornchurch clearly justifies re-designation of the Green Belt boundary in this part of the Borough. The following points are pertinent to the consideration of the merits of my clients' site: – The land is available for development now. – Access could be achieved via Lincoln Close. – The site is currently vacant scrubland, enclosed by the A127 (Southend Arterial Road) and existing residential development on Hubbards Close, Lincoln Close and Berkshire Way. Thick established hedgerows around the site provide further separation from the wider countryside and Green Belt. – The site is situated within close proximity to a range of local amenities including schools, shops and excellent transport links. The site is in a sustainable location and therefore the development and delivery of the site for housing would represent sustainable development. – The site is not subject to any statutory environmental designations (except being a nitrate vulnerable zone which is irrelevant to its consideration for development). The site is in a low risk flood zone (Flood Zone 1). – The site lies at the western extremity of an area identified by the current	Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land at Lincoln Close will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		Havering Local Development Framework as safeguarded for minerals extraction but initial investigations by the land owners suggest that it does not contain significant mineral deposits. – The Council's adopted Proposals Map (2008) suggests that the site is of nature conservation importance but the site owners are not aware of any evidence supporting this contention. It is anticipated that the biodiversity value of the site could be maintained and enhanced as part of a carefully planned development. This site has been assessed against the five purposes of the Green Belt, as set out in paragraph 80 of the Framework. The assessment, as set out below, shows that the site currently serves none of the purposes of including land within the Green Belt and is well placed for release. 1. To check the unrestricted sprawl of large built up areas: This site is surrounded by existing development in all directions, as shown below. It is limited in size and serves no function in preventing unrestricted sprawl. 2. To prevent neighbouring towns from merging into one another: As above, the site is surrounded by existing development in all directions. It does not serve to separate neighbouring towns or settlements. 3. To assist in safeguarding the countryside from encroachment: The countryside surrounding this site has already been encroached upon by existing development. The site is surrounded by existing residential and commercial uses. It is derelict scrub land and does not serve to protect the wider countryside. 4. To preserve the setting and special character of historic towns: Development surrounding the site is all relatively modern. The land does not form part of the setting of any historic towns. 5. To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: The site is currently derelict scrub land but it is capable of delivering	

Response Number	Respondent Name	Response to Q10	Council's response
		much needed new homes in an area that is already surrounded by existing residential and commercial development. The demanding housing delivery targets stipulated by the London Plan and the acute ongoing need for new housing across London mean that the release of the site is unlikely to inhibit the recycling of brownfield sites elsewhere in the Borough that will also be required to deliver much needed housing. Taking account of above, we would urge the Council to consider the benefits of releasing the land from the Green Belt as part of the emerging Local Plan process.	
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	Bush Farm, Corbets Tey. 200 acres 223omford. Damians Air Strip etc. 120 acres 223omford. 5000 homes + together.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Bush Farm, Corbets Tey, 200 acres 223omford.. land or Damians Air Strip 120 acres 223omford. site will be released for housing development.
REG18.38	Mr T Clemence (DHA	LONDON BOROUGH OF HAVERING LOCAL PLAN REPRESENTATION FOR LAND AT COPTHORNE GARDENS, WINGLETYE LANE, HORNCHURCH, RM11 3DL.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local

Response Number	Respondent Name	Response to Q10	Council's response
	Planning)	I write in response to the consultation of the new London Borough of Havering Local Plan which will plan for and manage development in Havering until 2031. Question 10 of the London Borough of Havering Local Plan Representation questionnaire states: do you have any suggestions for revisions to the green belt boundary? In light of the local plan consultation and in accordance with question 10 of the local plan questionnaire; we take this opportunity to suggest a revision to the Green Belt boundary and for reasons sets out in this letter promote land at Copthorne Gardens, Hornchurch on behalf of our client Mr T Clemence as being a sustainable and appropriate site for additional residential development within the Borough. The site in question is currently a Greenfield site enclosed by a boundary of mature trees located within the Metropolitan Green Belt. It is a relatively rectangular shaped parcel of land, approximately 1.56 hectares, situated to the south of Copthorne Gardens and to the east of Tyrsal Close on the urban periphery of Hornchurch. The site frontage comprises the as yet undeveloped section of Copthorne Gardens, a residential street comprising 2 storey semi-detached properties. To the east and south the site borders agricultural fields with a farm located to the southeast of the site. The western boundary of the site lies on the settlement confines boundary backing on to residential development along Tyrsal Close. In terms of topography the site is relatively flat and according to the Environment Agency flood risk map the site does not lie within a flood risk zone. Figure 1: Aerial View of Site Courtesy of Google Maps Figure 2: Site Location Plan showing Public Open Space area (green)	Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including land at Copthorne Gardens, Hornchurch will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		Although the site is currently located in the Green Belt, paragraph 84 of the NPPF states Green belt boundaries can be revised during the Local Plan process to 'take account of the need to promote sustainable patterns of development' and 'not to include land which is unnecessary to keep permanently open.' Paragraph 85 of the NPPF states when defining boundaries, local planning authorities should: – Ensure consistency with the Local Plan strategy for meeting identified requirements for sustainable development; – Not include land which it is unnecessary to keep permanently open; – Where necessary, identify in their plans areas of 'safeguarded land' between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period; – Make clear that the safeguarded land is not allocated for development at the present time. Planning permission for the permanent development of safeguarded land should only be granted following a Local Plan review which proposes the development; – Satisfy themselves that Green Belt boundaries will not need to be altered at the end of the development plan period; and – Define boundaries clearly, using physical features that are readily recognisable and likely to be permanent. This site is a prime candidate for development and an obvious extension to residential development to the north and west. The site has an unbuilt and incomplete road frontage and is well defined by a strong line of boundary vegetation clearly separating it from open land to the east and south. At a density of 30 dwelling per hectare it is envisaged that the site could accommodate approximately 30 – 40 dwellings. In the wider view of the site in its local context residential development surrounds the site to the	

Response Number	Respondent Name	Response to Q10	Council's response
		north and west, north of the site is a linear development of residential development along Essex Gardens, curving along Hubbards Chase. Essex Gardens residential development visually continues through the site following a tree boundary. New development would reflect the surrounding grain and layout of development in Copthorne Gardens and Tyrsal Close, creating a development that would not be intrusive or out of character. A combination of residential development and public open space is proposed – 0.87 hectares to the west allocated for residential and the remaining 0.69 hectares to the east dedicated for public open space. Public open space would maintain the openness nature of green belt land, whilst the residential aspect of the site would reflect the surrounding residential character. As an enclosed site, with 0.69 hectares dedicated as public open space, the development would have a minimal adverse impact in openness, landscape and visual terms. <u>Sustainability</u> The NPPF contains a presumption in the favour of sustainable development. It identifies this as meeting the development needs of an area and achieving development in sustainable locations. The proposed site is located on the edge of Hornchurch, immediately adjacent to residential development along Copthorne Gardens. Hornchurch has been identified as a Major District, offering a diverse mix of uses with a high quality retail offer and convenient local services. We concur with this view given the provision of local shops, post office, bank, schools and healthcare services. The site is well serviced in terms of public transport and community infrastructure. Hubbards Chase bus stop is located on Wingletye Lane adjacent to the site, bus number 193 passes through this regularly providing access to Hornchurch and Romford. Emerson Park Railway	

Response Number	Respondent Name	Response to Q10	Council's response
		Station, Harold Wood Railway Station, and Upminster Railway Station are all located within walking distance from the site (all within 1.2 miles), providing easy access to London. The site has an unbuilt and incomplete road frontage and is well defined by a strong line of boundary vegetation clearly separating it from open land to the east and south. Development on site is a logical extension of residential development to the north, that if continued would follow an existing boundary. The resultant development would provide 30 to 40 new homes in an obvious and sustainable location that would be energy efficient and attractive, respecting the context, pattern and density of surrounding development. It would also provide public open space, which in line with paragraph 73 of the NPPF can make an important contribution to health and wellbeing of communities. In addition to being sustainable and developable the site is also considered to be deliverable; it is in a single ownership with an intention by the owners to develop the land and with no viability issues, legal or third party constraints present. In terms of constraints, apart for the location within the Green Belt, the site is not protected for any conservation, heritage or agricultural reasons. There are no statutory listed buildings on site or within the locality, the site is relatively level and does not fall within a flood risk area. Given this context it is a prime site for the adjustment of the green belt so as to incorporate the site in the urban area using the strong outer boundary feature as the new MGB boundary. For the above reasons it is recommended to you that the site be considered and included within any further local plan draft, to assist with	

Response Number	Respondent Name	Response to Q10	Council's response
		not only meeting the quantitative need within the District, but also the qualitative need.	
REG18.39	Mrs S J Ellis (Bidwells)	The acute housing need and demanding housing targets that the Borough must address represent exceptional circumstances justifying and requiring the Council to undertake a review of Green Belt boundaries as part of the emerging Local Plan review process. The owners of the Site would be willing to enable its release for development to assist the Council to address its Local Plan objectives. The following points are pertinent to the consideration of the merits of the land: – The land is available for development now. – Access could be achieved from Wingletye Lane. – Sites 1, 2 and 3 (shown at Appendix 1) from part of a single landholding east of Wingletye Lane. They are currently in use as agricultural grazing land and believed to be of low ecological value. All three sites are bordered to some extent by existing hedgerows and woodland that provide enclosure from the wider countryside and Green Belt. – It is recognised that site 3, to the east of Lillyputts Farm and west of the River Ingrebourne, has more sensitive landscape, environmental and Green Belt constraints. It is anticipated that this land could be released for largely recreational or other uses that would maintain the openness of the Green Belt and provide for its beneficial use – as specifically encouraged by the Framework. This would complement a predominantly residential development of sites 1 and 2. – Sites 1 and 2 are enclosed by existing residential development to the north (Copthorne Gardens), south (Wych Elm Road) and west (Wingletye Lane) and a residential care home complex to the east (Lillyputts Farm). The development of this land would have little impact on the openness of the Green Belt. – The owners of the submitted sites and the adjacent third party land at	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		Lillyputts Farm are willing to co-operate with the Council to bring their respective land forward for development. – All three sites are available for development now and have a realistic prospect of coming forward for development within the next five years to assist the Council in meeting its demanding housing development targets. – The three sites are situated within close proximity to a range of local amenities including schools, shops and excellent transport links. This is a sustainable location and the development and delivery of new housing and recreational uses would represent sustainable development. – None of the sites are subject to any statutory environmental designations (except a nitrate vulnerable zone which is irrelevant to its consideration for development). Sites 1 and 2 are in a low risk flood zone (Flood Zone 1). The majority of site 3 is also at low risk of flooding (Flood Zone 1) however the eastern boundary borders the River Ingrebourne which is partly within EA Flood Zone 3. – All three sites lie at the western extremity of an area identified by the current Havering Local Development Framework as safeguarded for minerals extraction but investigations by the land owner suggests that it does not contain significant mineral deposits. <u>Controlled release from the Green Belt</u> The sites have been assessed against the five purposes of including land within the Green Belt (set out at paragraph 80 of the Framework). We would strongly contend that they are well placed for release, as described below. <u>1) To check the unrestricted sprawl of large built up areas:</u> The development of sites 1 and 2 for predominantly residential use would represent a natural infill of the existing residential areas to the north, south	

Response Number	Respondent Name	Response to Q10	Council's response
		and west. In addition, both sites are well contained by established woodland and hedgerows. Their development would not lead to urban sprawl or indeed the eastward extension of existing development beyond the current building line to the north and south. Indeed, we would contend that the pattern of existing development to the east of Wingletye Lane means that the release of a broader area of land between Copthorne Gardens and Hubbards Close (to the north) and Wych Elm Road (to the south) could be enabled to deliver Local Plan requirements without compromising the principal objectives for the Green Belt, as illustrated below. This area includes land promoted by adjoining land owners and could come forward for comprehensive development. Site 3, further to the east, is more sensitive but it is anticipated that the majority could be retained as Green Belt and used for recreation or other beneficial uses to compliment the development of sites 1 and 2 and other land to the west. <u>2) To prevent neighbouring towns from merging into one another:</u> As previously highlighted the development of sites 1 and 2 would provide a logical infill of existing residential development to the north, south and west. Sensitively planned development would not lead to the existing built up areas either side of the Ingrebourne Valley merging or, potentially, the gap between them becoming any narrower. <u>3) To assist in safeguarding the countryside from encroachment:</u> The same considerations apply in this respect – sites 1 and 2 are enclosed by existing development and their development could enable a predominantly recreational use of site 3. In addition, the established	

Response Number	Respondent Name	Response to Q10	Council's response
		woodland and hedgerows surrounding all three sites will act as a natural buffer between future uses and the surrounding countryside. 4) To preserve the setting and special character of historic towns: Development surrounding the site is all relatively modern. The land does not form part of the setting of any historic towns. 5) To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: The demanding housing delivery targets stipulated by the London Plan mean that the release of the site is unlikely to inhibit the recycling of brownfield sites elsewhere in the Borough that will also be required to deliver much needed housing. The assessment establishes that the careful development of the sites would not unduly impact on the purposes of the Green Belt allocated in the Borough. It is therefore reasonable to consider the release of some or all of the land to enable a valuable contribution towards the Council's housing land supply and enhanced recreational opportunities within the Borough.	
REG18.40	Ms M Blackman	A perfect example is in Rainham, on the north side Wennington Road, between no's 296 and 312 – adjacent to the junction with Eastwood Drive – see site map attached. The greenbelt boundary ends at Eastwood Drive. This strip of land fronting Wennington Road is in greenbelt, yet is developed with detached and semi-detached housing, leaving one small plot of vacant land, suitable for a modest size house. All the houses back on to farmland which rightly is in greenbelt – as is the farm opposite. There is public transport directly in front of the plot, and a range of facilities nearby, therefore the relevant infrastructure is already in place, the impact of 1 household on this is minimal and the development therefore sustainable. The size of the plot precludes any major development.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local

Response Number	Respondent Name	Response to Q10	Council's response
		I propose the boundary in this location is re-assessed and re-arranged so this strip of housing can be removed from greenbelt, so that for example a self-builder can build a home – a policy the Government is actively encouraging. There are other more appropriate planning mechanisms available to control/limit development on isolated sites like on this strip, such as Conservation Area or Article 4 status. Further, a review is undertaken across the borough of areas within greenbelt but which are developed.	Plan following the approach set out in the NPPF and London Plan. The strip of land fronting Wennington Road with detached and semi-detached housing including the small plot of vacant land is part of the Green Belt. No modifications will be made to the Green Belt in the Local Plan following the approach set out in the NPPF and London Plan to release land for housing. For these reasons the Council will not release this strip of Green Belt land for housing, but will retain the Green Belt boundary in its current state in line with advice contained in the NPPF.
REG18.43	Omega After Alpha Ltd (Bidwells)	The owners of the Site are willing to enable its release for development to assist the Council to meet its Local Plan objectives, including the delivery of housing to meet London Plan targets and objectively assessed local housing needs. The following points are pertinent to the consideration of the merits of the site: – The land is available for development now. – There is an existing care home complex accommodated in the former farm house and farm yard buildings. It is the landowner's intention to retain the care home complex and associated buildings on site but also to enable residential development on surplus land to the north and south. Access to the existing care home complex on the site is achieved via Wingletye Lane – This land lies at the centre of a three other parcels of land owned by a third party (Mrs S J Ellis) which has also been put forward for development. Both landowners are willing to work co-operatively with the Council to put forward the wider land areas for development.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For these reasons the Council will not be seeking to release any Green Belt land for housing, but will retain the Green Belt boundary in its current state in line with

Response Number	Respondent Name	Response to Q10	Council's response
		– The site is situated within close proximity to a range of local amenities including schools, shops and excellent transport links. The site is considered to be situated in a sustainable location, therefore the development and delivery of the site for housing represents sustainable development. – The site is not subject to any statutory environmental designations (except being a nitrate vulnerable zone which is irrelevant to its consideration for development). – The site lies at the western extremity of an area identified by the current Havering Local Development Framework as safeguarded for minerals extraction but on-site investigations suggest that it does not contain significant mineral deposits. – Taking into account its location and characteristics in respect of the five purposes of including land within the Green Belt, established by paragraph 80 of the National Planning Policy Framework, the site is considered to be a favourable option for Green Belt release to address the objectively assessed housing needs of London and the Borough of Havering. The acute housing need and demanding housing targets that the Borough must address represent exceptional circumstances justifying and requiring the Council to undertake a review of Green Belt boundaries as part of the emerging Local Plan review process. This site has been assessed against the five purposes of the Green Belt, as set out in paragraph 80 of the Framework, and can be found below. The assessment shows that the site currently serves none of the purposes of including land within the Green Belt and is well placed for release. 1) To check the unrestricted sprawl of large built up areas: The site is already partially developed and is operating as a residential care home complex. This community facility is to be retained in full and the	advice contained in the NPPF.

Response Number	Respondent Name	Response to Q10	Council's response
		surrounding land area to the north and south is put forward for residential development. Due to the close proximity of the site to existing residential development east of Wingletye Lane and south of Hubbards Close, this land would act as a natural extension to existing development and the development of land to the west put forward by the adjoining landowner (Mrs S J Ellis) but would be contained so as not to produce urban sprawl. Indeed, we would contend that the pattern of existing development to the east of Wingletye Lane means that the release of a broader area of land between Copthorne Gardens and Hubbards Close (to the north) and Wych Elm Road (to the south) could be enabled to deliver Local Plan objectives without compromising the purpose of the Green Belt, as illustrated below. This area includes land promoted by adjoining land owners and could come forward for comprehensive development. 2) To prevent neighbouring towns from merging into one another: The development of the site would provide a logical extension to an already urban residential area and is well contained. The site is not within close proximity of other towns to the east. Development would not lead to the eastward extension of existing development beyond the current building line to the south and north. Sensitively masterplanned development would not lead to the existing built up areas either side of the Ingrebourne Valley merging or, potentially, the gap between them becoming any narrower. 3) To assist in safeguarding the countryside from encroachment: The site is well contained by an established tree buffer and is located between by existing residential and commercial uses. Therefore it would not represent significant encroachment into the countryside. The properties who face onto the proposed site are screened by an extensive tree buffer which would further assist in containing any residential development thus	

Response Number	Respondent Name	Response to Q10	Council's response
		safeguarding the countryside form encroachment. 4) To preserve the setting and special character of historic towns: Development surrounding the site is all relatively modern. The land does not form part of the setting of any historic towns. 5) To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: The demanding housing delivery targets stipulated by the London Plan mean that the release of the site is unlikely to inhibit the recycling of brownfield sites elsewhere in the Borough that will also be required to deliver much needed housing. The assessment establishes that the careful development of the site would not unduly impact on the purposes of the Green Belt allocated in the Borough. It is therefore reasonable to consider the release of some or all of the land to enable a valuable contribution towards the London Borough of Havering's housing land supply.	
REG18.44	Persimmon Homes Essex	As previously discussed in Question 4 and 9, development should be allocated to the most sustainable locations. A Green Belt review will determine if land is suitable for development, and therefore should be released through the Local Plan process or should continue to be protected.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the

Response Number	Respondent Name	Response to Q10	Council's response
			NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing development.
REG18.46	Planning Potential Rep 2.	We reiterate our comments made under Question 4, which support this particular response. In addition paragraph 84 of the NPPF states that "When drawing up or reviewing Green Belt boundaries local planning authorities should take account of the need to promote sustainable patters of development. They should consider the consequences for sustainable development of channelling development toward urban areas inside the Green Belt boundary, toward towns and villages inset within the Green Belt or towards locations beyond the outer Green Belt boundary". Paragraph 85 continues that "When defining boundaries, local planning authorities should: – Ensure consistency with the Local Plan strategy for meeting identified requirements for sustainable development; – Not include land which it is unnecessary to keep permanently open; – Where necessary, identify in their plans areas of 'safeguarded land' between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period; – Make clear that the safeguarded land is not allocated for development at the present time. Planning permission for the permanent development of safeguarded land should only be granted following a Local Plan review which proposes the development; – Satisfy themselves that Green Belt boundaries will not need to be altered at the end of the development plan period; and – Define boundaries clearly, using physical features that are readily recognisable and likely to be permanent." We attach details of Land at Risebridge Chase, Romford to be considered as a potential allocation for residential development. The Site is located to the north of Romford, approximately 4km from Romford Town Centre. The site is 5.175ha in size and is located in Flood Zone 1, albeit it is located	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land at Risebridge Chase, Romford will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		adjacent to a water course (east) and an area contained within Flood Zone 3. The site is designated as Green Belt (GB) and is located between a golf course and existing housing. Should the Council discover that in order to meet their housing targets and demonstrate a five year housing land supply, revisions to the Green Belt are needed, we consider that the redevelopment of Land at Risebridge Chase would constitute sustainable development and is an obvious extension to Romford. The site currently has some building on it, being two residential properties and associated out-buildings located in the east and north east corner. The site is contained, by means of the golf course to the east, residential properties to the west and the Lower Bedfords Road to the north (containing ribbon development of housing along the site's northern boundary to the road). On the basis that this site is a contained entity, we would consider that it should be identified as a suitable site for release from the Green Belt. In addition, it is considered that the site does not meet the five purposes of the Green Belt. Its removal from the Green Belt would not result in the unrestricted sprawl of large built-up areas; it would not lead to towns merging into one another; it does not assist in safeguarding the countryside from encroachment and is not included within the Green Belt to preserve the setting and special character of historic towns. As such, its removal from the Green Belt should be supported. Land at Risebridge Chase provides a real opportunity to deliver much needed private and affordable housing, and is of a size capable of providing a suitable mix, whilst meeting the policy requirements for private and public amenity space. We therefore urge the Council to review the Green Belt boundary in this area and remove the site from its current designation.	
REG18.47	R. Watt and Partners	Although the council's current consultation is purely seeking initial views on the potential priorities for the new plan and that a 'formal' strategy has yet	The Council has undertaken a Green Belt study as part of the evidence base for the

Response Number	Respondent Name	Response to Q10	Council's response
	(Phillips Planning Services)	to be defined, our clients wish to promote the inclusion and consideration of their land for development through the Local Plan preparation process. Our clients' site is comprised of Land at Hill Farm, Noak Hill on both the northern and southern sides of Church Road. It covers an area of approximately 68.3 hectares is predominately formed of arable agricultural land. The land effectively sits around the existing built form of the village of Noak Hill which itself is directly to the north of Romford (Please see submitted Site Location Plan). It is noted that the current Development Plan identifies that Noak Hill is entirely washed over by the 'Green Belt' and that parts of our clients' land are also subject to the landscape designations; 'Havering Ridge Area of Special Character' and 'Countryside Conservation Area'. Although it is accepted that such designations would generally preclude development, it is considered that the site's location directly adjacent to north of Romford would provide an opportunity for a strategic expansion of the town should a release of 'Green Belt' land be required by the Local Plan to deliver its required provision of housing and employment land. Accordingly, we would be grateful for your consideration of the promoted site, should such a strategy be progressed. Our clients would also be happy to promote smaller parcels of the wider site, should the council identify that this be preferable and reflect the ultimately progressed development strategy.	Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land at Hill Farm, Noak Hill will be released for housing development.
REG18.48	R.A.Montague	Yes – to stop threatening the permanence of the green belt. For example, the boundaries were reviewed in 2007 and now less than 7 years on they are being reviewed again and then in a few years the Mayor will want more houses and there will be yet another Local Plan and another review and so it will go on.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF

Response Number	Respondent Name	Response to Q10	Council's response
			and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing development.
REG18.50	Rainham Preservation Society	No further encroachment on the green belt and continue the use of allotments.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt will be released for housing development. The Proposed Submission version of the Local Plan supports the continued use and expansion of allotments.
REG18.53	Romford Golf Club (Joe Coogan)	Please see the attachment detailing a site between the A12 and Romford Golf Club. The land in question is shaded in orange on the plan. The site is waste ground that is classified as greenbelt. The site has no recreational value and become a problem to the local community and has been used by	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a

Response Number	Respondent Name	Response to Q10	Council's response
		criminal gangs as a hideaway. Links to two newspaper articles can be found below that highlight the extent of the problems. Many more minor issues have gone unreported in the press but it presents a security risk to lone golfers or those jogging/walking along the A12. http://www.romfordrecorder.co.uk/news/crimecourt/240omford240_robbery_gang_who_stole_1m_lived_rough_in_romford_woods_1_2000470 http://www.romfordrecorder.co.uk/news/body_found_in_romford_1_1068700 The land is owned by Romford Golf Club and could be accessed by the popular cul-de-sac Links Avenue. Romford Golf Club would like to see the land brought into a positive use, preferably as high quality family homes. It is estimated that the land could accommodate 30-40 high quality 3 or 4 bedroom homes. Any income from developing the land would be used to improve the golf club/course and secure its future as a premier golf club that provides an excellent resource and recreational space for local people (both golfers and dog walkers). Romford Golf Club is a not for profit organisation owned by its members. The golf club are open to discussions about any usage that can bring the land back into use and meet the needs of local people (for housing, education, employment etc). The site may also generate a significant sct 106/Planning Obligation income for the Council in these times of austerity.	contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including the site between the A12 and Romford Golf Club will be released for housing, education, employment, etc. development.
REG18.54	Romford YMCA	Whilst it is understandable for the need to focus on brownfield sites, there is a compelling need to review the Green Belt boundary, to allow for sustainable development. This is not to create an inferior Green Belt, but to address the changing needs of the borough. As indicated previously and in our site submission to the council, Romford	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes

Response Number	Respondent Name	Response to Q10	Council's response
		YMCA has land on Upper Rainham Road, which is close to other residential properties.	of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land on Upper Rainham Road will be released for housing development.
REG18.55	Rowley Cardrome Ltd (Montagu Evans)	The fundamental aim of Green Belt policy, as set out in Chapter 9 of the NPPF, is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence. To protect the openness of the Green Belt, LBH should ensure they have sufficient land allocated for housing within existing residential areas and on previously developed land. In particular, paragraph 80 of the NPPF states that the Green Belt serves five purposes: – to check the unrestricted sprawl of large built up areas; – to prevent neighbouring towns merging into one another; – to assist in safeguarding the countryside from encroachment; – to preserve the setting and special character of historic towns; and – to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. We consider that the Site contributes very little to the function and purposes of including land within the Green Belt as set out above for the following reasons: – The site borders a modern residential housing development to the north, and is bounded by the River Beam to the west; the A125 (Upper	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		Rainham Road) to the east; and a private road to the south. These physical boundaries mean there would be no subsequent encroachment into the countryside; – The thick vegetation that runs along the western border separates the site from the undeveloped Green Belt land to the west, therefore already naturally limiting any potential impact arising from the residential development of the site; – The Chase Nature Reserve is located to the west, across the River Beam, consequently, the release of the site from the Green Belt would not result in the merging of neighbouring towns; and – The site is brownfield land and already benefits from a designation as a Major Developed Site in the Green Belt within the LBH Core Strategy and Development Control Policies Development Plan Document (2008). This status indicates that is already envisaged that some development will occur onsite and would therefore be classed as the redevelopment of brownfield land, a national, regional and local policy objective. In considering the above, we consider that the Site, already allocated as a Major Developed Site should be released from the Green Belt as such release will not harm the remaining Green Belt. As noted above, Formation Architects have produced an initial masterplan for the residential development of the site (Annex 2). Importantly, whilst maximising the development potential of the site, the masterplan also allows for the provision of a defendable Green Belt boundary. An additional benefit of the site is the ability to enhance public linkages into the adjoining Green Belt land for the wider public benefit.	
REG18.56	S.D. Olney	Not knowing the full extent of the green belt land. I cannot make a sensible response to the question asked.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough

Response Number	Respondent Name	Response to Q10	Council's response
			makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing development.
REG18.57	Sheila Clements	It will not matter what I think, the Council will do what it wants.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt will be released for housing development.
REG18.59	Stephen Saggers	The proposal is to have the residential properties and gardens of Gaynesborough and The Lodge, Little Gaynes Lane, redesignated out of the Green Belt. The exceptional circumstances in this case are as follows: Gaynesborough is a modest 3 bedroom residential bungalow situated in Little Gaynes Lane, a suburban road in Upminster. Of the 95 properties	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes

Response Number	Respondent Name	Response to Q10	Council's response
		situated in Little Gaynes Lane, only Gaynesborough and the next door property, The Lodge, are located within the Green Belt. The properties are both situated on a busy stretch of the main road, opposite The Optimist public house and back onto open green space (also designated as Greenbelt land). To the SouthEast of the properties in the neighbouring roads the Grove and Parkland Avenue there are a further 80 residential properties that back onto the same open Green Belt land however none of these properties fall within the Green Belt boundary themselves. To have a consistent approach to how suburban residential properties which back onto the same open Greenbelt land are designated in relation to the Green Belt and to have a logical defensible Green Belt boundary, these two properties should be taken out of the Green Belt. This same consideration was given previously by Havering Council when altering the Green Belt boundary to take out the gardens of two residential properties in Tay Way. In addition to the need to have a logical and defensible Green Belt boundary there are other clear reasons why Gaynesborough, should not fall within a Green Belt boundary relative to the aims of the Green Belt as defined in section 9 of the National Planning Policy Framework. These reasons are as follows: – NPPF 79 The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence Gaynesborough has since construction in 1957, been a residential property with a fenced garden and has never been open and. As a residential property with permitted development rights, approximately half of the rear garden could be covered with outbuildings so being in the Green Belt offers no protection to the gardens openness and there is no permanence to its openness. – NPPF80 Green Belt serves five purposes:	of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including the residential properties and gardens of Gaynesborough and The Lodge, Little Gaynes Lane will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		○ to check the unrestricted sprawl of large builtup areas; ○ to prevent neighbouring towns merging into one another; ○ to assist in safeguarding the countryside from encroachment; ○ to preserve the setting and special character of historic towns; and ○ to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Having Gaynesborough in the Greenbelt does nothing to contribute to the five purposes listed – NPPF81 Once Green Belts have been defined, local planning authorities should plan positively to enhance the beneficial use of the Green Belt, such as looking for opportunities to provide access; to provide opportunities for outdoor sport and recreation; to retain and enhance landscapes, visual amenity and biodiversity; or to improve damaged and derelict land – As a residential property Gaynesborough can never be enhanced as per the policy directive. – NPPF85 When defining boundaries, local planning authorities should: ○ not include land which it is unnecessary to keep permanently open; Gaynesborough has since construction in 1957, been a residential property with a fenced garden and has never been open land. As a residential property with permitted development rights, approximately half of the rear garden could be covered with outbuildings so being in the Green Belt offers no protection to the gardens openness and there is no permanence to its openness. As per NPPF 83, when considering the potential alteration of	

Response Number	Respondent Name	Response to Q10	Council's response
		Green Belt boundaries; "authorities should consider the Green Belt boundaries having regard to their intended permanence". Given the above, it is clear that even if the property could be considered "open" there is no permanence due to permitted development rights. This clearly demonstrates the exceptional circumstance as to why the Green Belt boundary should be altered to remove the property. Appendix Gaynesborough.1 shows the proposed Green Belt boundary revision having the boundary behind the gardens of Gaynesborough and The Lodge.	
REG18.61	The Crown Estate (Amec Foster Wheeler)	When reviewing which areas of land around the settlement edges to release, the Local Plan will need to be consistent with guidance in the NPPF. The basis of a Green Belt review is to assess the contribution made by land to the purposes of including land within the Green Belt. The degree to which land makes a contribution to the Green Belt will influence whether it should be considered for release. The Crown Estate submitted four sites in response to the Council's Call for Sites in October 2014, these include: – Land at Gobions Farm, Collier Row Road; – Land between Collier Row Road and Hog Hill Road; – Land between Marlborough Road and the A12, Mawneys; and – Land between London Road and the A12, Mawneys A site location plan for each of these sites is attached in Appendix A. The Crown Estate considers each of these locations should be considered as a revision to the Green Belt boundary as part of a wider review. A review of the Green Belt will demonstrate that these areas of land perform well against NPPF criteria and are not important to the function and purposes of the Green Belt and subsequently should be considered for release. This point is emphasised when considering the sites against the five purposes	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land at Gobions Farm, Collier Row Road, Land between Collier Row Road and Hog Hill Road, Land between Marlborough Road and the A12 Mawneys and Land between London Road and the A12 Mawneys will

Response Number	Respondent Name	Response to Q10	Council's response
		of Green Belts included in NPPF, Paragraph 80: – To check the unrestricted sprawl of large built up areas The sites have a limited function in this respect as all have clear containing boundaries in the form established hedgerows and roads (including the A12). The sites would essentially infill gaps to round off the settlement boundaries. – To prevent neighbouring towns merging into one another The sites have no real function in this respect given that they would essentially round off the settlement edges and would not lead to the encroachment towards neighbouring settlements. – To assist in safeguarding the countryside from encroachment Although development would extend the limits of the settlement(s), visually their impact would be modest because of the existing landscape framework and boundaries such as strategic roads. Development would be visually well contained by the existing landscape framework/development and would not therefore significantly encroach into open countryside. – To preserve the setting and special character of historic towns There are no environmental assets on or adjacent to the sites that might be impacted on by development in these locations. – To assist in urban regeneration, by encouraging the recycling of derelict and other urban land. Gobions Farm provides a brownfield opportunity with potential to	be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		enhance the openness and appearance of this Green Belt location. Other Brownfield options are limited. It is likely that growth will require greenfield land and the revision of Green Belt boundaries. The sites are well located to local amenities and provide highly sustainable locations for development. Paragraph 83 of NPPF states that through a review of a Local Plan, regard should be given to Green Belt boundaries and "their intended permanence in the long term so that they are capable of endurance beyond the plan period." As noted above, The Crown Estate's sites have strong boundaries and provide a natural infill to accommodate housing growth. These would provide defensible boundaries on which to revise the Green Belt. These sites make a limited contribution to Green Belt purposes and therefore should be considered for Green Belt release as part of a wider Green Belt Review to assist in meeting the substantial housing needs across Havering and the wider London region.	
REG18.63	Thomas Bates and Son Ltd. (Andrew Martin Planning)	The land off Wingletye Lane, Hornchurch currently forms part of the Metropolitan Green Belt. The site is located on the western fringe of the Green Belt and is bound on two sides by existing residential areas – to the south and west. The previously overgrown orchard was cleared more than 55 years ago and the land has remained barren and unfarmed ever since. The site is well contained by virtue of the mature tree lined field boundaries to the north and east and could be released from the Green Belt without compromising the five purposes of including land within a Green Belt – as identified above. In particular the release of this site for residential development would: – prevent unrestricted sprawl of a large built-up area – the mature field boundaries to the north and east would form a clear boundary against further urban development; – prevent neighbouring towns merging into one another – existing	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including the Land off Wingletyle Lane, Hornchurch will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		housing off Wych Elm Road already extends further towards Upminster (to the east) than development at the site would; – safeguard against encroachment into the countryside – the site is well contained and as stated existing housing extends further into the countryside than development at the site would; – preserve the setting and special character of historic towns – there is no particular historic setting or character to maintain in this area; – assist in urban regeneration – by accommodating new residents who will bring additional expenditure to the local economy (including the shops in Hornchurch town centre). Development along and south of Wych Elm Road / Wych Elm Close / Bourne End extends far beyond the boundary of the submission site. In particular the Emerson Park School buildings are located some 200 metres beyond the eastern boundary of the site. Moreover, agricultural buildings associated with Lillyputts Farm, which adjoins the submission site to the north, extend beyond the eastern boundary of the submission site. Therefore the site is largely enclosed by existing development that extends further to the east than any proposed residential development should this site be allocated, and in comparison this site could not be considered as an encroachment into the countryside. Given that the site is currently enclosed on three sides by existing development, land off Wingletye Lane would represent an appropriate and natural stop line for development.	

Response Number	Respondent Name	Response to Q10	Council's response
REG18.66	Trinity Hall (Bidwells)	Yes. The owners of the submitted land, Trinity Hall, are willing to enable its release for development to assist the London Borough of Havering to address objectively assessed local housing needs and the demanding housing delivery targets stipulated by the London Plan. The following points are pertinent to the consideration of the merits of the land: – The land would be available for development within five years. – The landowner is willing to work co-operatively with the Council when considering possible uses and the particular parcels of land which may come forward. – Access could be achieved via Hall Lane, Bird Lane, Tomkyns Lane or, potentially, the A127 Southend Arterial Road. – The site lies within the Green Belt. It is predominantly agricultural land and of relatively low ecological value. It is comprised of several parcels which are enclosed by thick established hedgerows, adjoining areas of woodland and existing roads, including Bird Lane, Tomkyns Lane and the A127 Southend Arterial Road. These features provide separation from the wider countryside and Green Belt. – The land to the south of the A127 adjoins north Upminster and appears particularly well suited to the provision of new housing. A significant tree buffer is provided between existing dwellings and this site which would serve to protect the amenity and outlook of existing residents in the event of development coming forward. – 1.8ha of the land to the west of Hall Lane benefits from a Certificate of Lawful Use for a commercial horse livery yard comprising stables, indoor school, storage in association with the livery business and land used as outdoor exercise arenas (planning ref: E0001.14). The Site Location Plan at Appendix 3 identifies the extent and location of this land. It is located opposite existing residential development on the opposite side of Hall Lane and a range of commercial buildings and a yard which comprises previously developed land.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Trinity Hall will be released for housing development.

Response Number	Respondent Name	Response to Q10	Council's response
		– All of the land is situated within close proximity to a range of local amenities including schools, shops and excellent transport links. The site is situated in a sustainable location. – The site is not subject to any statutory environmental designations (except being a nitrate vulnerable zone which is irrelevant to its consideration for development).The vast majority of the land is at low risk from flooding (EA Flood Zone 1). – Taking into account its location and characteristics in respect of the five purposes of including land within the Green Belt, established by paragraph 80 of the National Planning Policy Framework, the site is considered to be a potential option for Green Belt release to address London Plan targets and objectively assessed housing needs. The characteristics of the site have been assessed against the five purposes of the Green Belt, as set out in paragraph 80 of the Framework. The assessment and can be found below. – To check the unrestricted sprawl of large built up areas: o The distinct parcels of land comprised within this site are contained by a variety of existing physical features, including existing trees and woodland, the A127, Bird Lane and existing residential development. Land to the south of the A127, east of Hall Lane is particularly well enclosed by existing development, roads and planting. Development of some or all of the land would not represent uncontrolled sprawl. – To prevent neighbouring towns from merging into one another: o As highlighted above, the site is contained and its development would not lead to coalescence of any existing settlements. – To assist in safeguarding the countryside from encroachment: o All of the land is contained by established trees and hedges, existing development and the A127. Development of some or all	

Response Number	Respondent Name	Response to Q10	Council's response
		of the parcels would not encroach into otherwise entirely undeveloped areas of countryside. – To preserve the setting and special character of historic towns: o Development surrounding the site is all relatively modern. The land does not form part of the setting of any historic towns. – To assist in urban regeneration, by encouraging the recycling of derelict and other urban land: o The demanding housing delivery targets stipulated by the London Plan and the need for a continuing housing land supply mean that the release of land at Chapman's Farm is unlikely to inhibit the recycling of brownfield sites elsewhere in the Borough that will also be required to deliver much needed housing. The assessment helps to establish that the careful development of this site may not unduly impact on the purposes of the Green Belt allocated in the Borough. It is therefore reasonable to consider the release of some or all of the land to enable a valuable contribution towards the London Borough of Havering's housing land supply or other development needs.	
POST18.1	V. Rajan and Associates	Green Belt environment should be protected.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the

Response Number	Respondent Name	Response to Q10	Council's response
			NPPF and London Plan. For this reason no parts of the Green Belt will be released for housing development.

Question 11: How do you think the Local Plan should seek to address climate change and sustainability?

Response Number	Respondent Name	Response to Q11	Council's response
REG18.2	Adams Family (Bidwells)	Sustainability, and in particular "sustainable development" balances a number of different and often competing aims and objectives. It is the role of the planning system – and in this context the role of the Local Plan, to balance environmental protection with economic growth and the needs of the community. This should ensure that a sufficient variety of land is available to support the Borough's growth needs. The Council should take into account the benefits of releasing Green Belt land that no longer serves a Green Belt function in the context of the need to balance competing demands for land in the Borough in a sustainable manner.	Noted. The Proposed Submission version of the Local Plan supports sustainable development as defined in the NPPF.
REG18.3	Anonymous	Only allow solar panels on non-houses, not private residences. Return buses to be used by everyone. Return to near 100% ban on Sunday and bank holiday trading.	Noted. This is outside the scope of the Proposed Submission version of the Local Plan.
REG18.8	Brett Aggregates Limited (MJCA)	Minerals and aggregates should be sourced locally where possible to reduce the distance over which these materials are transported for use. The London Plan acknowledges that most aggregates used in the capital come from outside London and the Plan supports the supply of locally sourced land won aggregate. Sources of land won aggregate available should be safeguarded for future use in the Borough and the Capital to reduce the distance over which	Noted. The Proposed Submission version of the Local Plan contains policies that safeguard and manage minerals, consistent with the London Plan and NPPF. This includes the safeguarding of land and making sure transport impacts are mitigated.

Response Number	Respondent Name	Response to Q11	Council's response
		aggregate is transported and the associated emissions. To further reduce the transportation of aggregates, mineral processing plants or bagging plants should be located in or directly adjacent to the quarry. Where there is already an established mineral processing plant located in close proximity to a new quarry and where that plant is in a suitable location the Plan should specify that mineral from surrounding extraction areas should be taken to the existing processing plant site to make use of the existing plant, infrastructure and mitigation such as established landscaping and screening instead of erecting new plant. Facilities such as concrete batching plants which make use of the aggregate should also be located at mineral producing sites to reduce transportation distances. As explained in the response to Question 9, during the restoration of a quarry with imported materials such as inert waste, there are sustainability benefits associated with locating waste recycling facilities at the quarry to recover the usable portion of the waste to produce secondary aggregates for use in construction projects and to reduce the consumption of primary aggregates. This approach also ensures that only residual materials with no other form of beneficial use are deposited to restore quarry voids. This can commonly involve the use of a mobile crusher and screen to recover secondary aggregates from inert waste. Such plant and machinery and material processing is not dissimilar to the activities that take place during mineral extraction.	
REG18.9	C. Cole	Encourage wind and sun power I can't be bothered with recycling. It's a big thing!	The Proposed Submission version of the Local Plan supports renewable energy developments.
REG18.12	D. Campbell	More recycling points glass plastic etc. old clothes sites more cycle lanes.	The Proposed Submission version of the Local Plan contains policies to manage waste. It requires developments to include facilities to separate, store and recycle waste. It seeks to encourage active travel

Response Number	Respondent Name	Response to Q11	Council's response
			including cycling as part of a balanced approach to travel and transport in Havering.
REG18.14	Edward Gittins & Associates	The valley land at Squirrels Heath Road is important for its biodiversity and provision for the management of the areas north and south of Cockabourne Bridge can be secured via the release of the proposed housing land.	Noted. The Proposed Submission version of the Local Plan sets out a positive strategy for biodiversity.
REG18.22	Havering Friends of the Earth	More diverse/extended measurement of air pollution needed – for example outside schools near to busy roads. This information should be publicised to parents. More energy conservation in public buildings. Staff training on how to conserve energy in public places. Solar panels in schools to be a targeted focus. Make this easier to implement.	The Council is preparing an Air Quality Action Plan and this is identified in the Proposed Submission version of the Local Plan. The Council will promote energy efficiency in public buildings. This will encompass its own premises (including schools).
REG18.24	Higgins Homes (Nathaniel Lichfield & Partners)	By seeking to allocate new sites for residential development in sustainable locations in order to reduce the reliance on transport by private car and to consider sustainable drainage strategies.	Noted. The strategy of the Proposed Submission version of the Local Plan seeks to direct development towards sustainable locations. The Proposed Submission version of the Local Plan contains policies which support the use of sustainable drainage.
REG18.26	Ian Weatherley	By re-enforcing and enhancing the borough's sea defences to protect the communities from the rising sea levels and also to review the clearance of debris and weeds from the boroughs rivers to ensure a fast egress of rain water to controlled river outlets.	The Proposed Submission version of the Local Plan contains policies to protect development against flooding in line with the recommendations from the Strategic Flood risk Assessment.
REG18.28	Joe Coogan	New developments should be as sustainable as possible and planning obligations should be used to secure investment in other schemes that will make a positive contribution.	The Proposed Submission version of the Local Plan sets out policies to optimise the sustainability of development including energy efficiency.
REG18.29	John Peterson	Improve movement of traffic	The Proposed Submission version of the Local Plan contains a balances suite of

Response Number	Respondent Name	Response to Q11	Council's response
			policies for transport. These include measures to address traffic movement including tackling congestion. The policies include specific items to address traffic movements at key locations such as Gallows Corner and the Romford Ring Road. Additionally, the Local Plan includes proposals for major new transport infrastructure such as better north-south connectivity which have the potential to assist traffic movements across Havering.
REG18.32	Lee Clements	By: encouraging low energy homes and ensuring all new housing is as sustainable as possible through use of planning regulations; reducing traffic congestion; planting more trees and not removing existing ones except where absolutely necessary (not just because a new pavement is being put in); putting solar panels on all council buildings where possible.	The Proposed Submission version of the Local Plan contains polices on energy efficiency, optimising transport and green infrastructure to optimise sustainability.
REG18.34	Margaret Whippy	It is hard to believe in climate change given recent research. Sustainable development also needs to cover local needs, which must be explained to meet local families' requirements, not just developers. Flooding would not be an issue in the area marked.	The effects of climate change are widely accepted and the Proposed Submission version of the Local Plan seeks to address these in a Havering context. The Local Plan is intended to provide guidance on development to all in the community including local families (not just developers). The Local Plan includes policies to ensure that development is located appropriately in regard to flood risk.
REG18.36	Moody Homes and Mr John Wakeling (Bidwells)	Sustainability, and in particular "sustainable development" balances a number of different and often competing aims and objectives. It is the role of the planning system – and in this context the role of the Local Plan, to balance environmental protection with economic growth and the needs of the community. This should ensure that a sufficient variety of land is available to support the Borough's growth needs. The Council should take into account the benefits of releasing Green Belt land that no longer serves	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF

Response Number	Respondent Name	Response to Q11	Council's response
		a Green Belt function in the context of the need to balance competing demands for land in the Borough in a substantial manner.	and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land will be released in the context of the need to balance competing demands for land in the Borough.
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	New development should be low carbon. More tree planting etc.	The Proposed Submission version of the Local Plan promotes low carbon design and expects development to meet London Plan energy efficiency standards. Policies to secure landscaping and green infrastructure are included.
REG18.39	Mrs S J Ellis (Bidwells)	Sustainability, and in particular "sustainable development" balances a number of different and often competing aims and objectives. It is the role of the planning system – and in this context the role of the Local Plan, to balance environmental protection with economic growth and the needs of the community. This should ensure that a sufficient variety of land is available to support the Borough's growth needs. The Council should take into account the benefits of releasing Green Belt land that no longer serves a Green Belt function in the context of the need to balance competing demands for land in the Borough in a sustainable manner.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land will be released

Response Number	Respondent Name	Response to Q11	Council's response
			in the context of the need to balance competing demands for land in the Borough.
REG18.40	Ms M Blackman	The London Plan, Code for Sustainable Homes, BREAAM and Building Regulations already address this comprehensively for new development, particularly for developers. Any further requirements should be proportionate and add value, rather than just tick a box. More importantly, however it is the residents and occupiers (particularly older generation) that need to be educated further/encouraged to modify their habits and their mind-set. It is the existing older properties which emit the greater proportion of greenhouse gas emissions. It is the people who insist on driving rather than walking to the shop at the top of the road, and who don't recycle. It's people's appetite for 'stuff' with a limited lifecycle that contributes most to the problem. More needs to be done to educate better, and to facilitate change (people are lazy). Check out video called the Story of Stuff - http://storyofstuff.org/	Noted. The Proposed Submission version of the Local Plan will have an important role in the promotion and delivery of good sustainable development in Havering including opportunities for more active travel choices and the promotion of good practice linked to energy strategy and conservation.
REG18.41	National Grid Property (Carter Jones)	The Local Plan must recognise that whilst sustainable development and energy consumption is important, growth and the provision of new homes is also important. Therefore, the Local Plan must be sufficiently flexible to balance conflicting priorities.	The Proposed Submission version of the Local Plan sets out a balanced suite of policies to address land use planning issues in Havering. Ensuring the development and provision of new homes is a key priority. The Examination into the 'soundness' of the Local Plan will consider its flexibility to address different circumstances and priorities.
REG18.42	Natural England	We agree that development should be carried out in a sustainable way. The NPPF paragraph 94 states that: ""Local planning authorities should adopt proactive strategies to mitigate and adapt to climate change, taking full account of flood risk, coastal change and water supply and demand considerations" (para 94).	Noted. The Proposed Submission version of the Local Plan has been prepared to be consistent with the NPPF. It includes policies to address climate change, flooding and water supply. The Local Plan is underpinned by a robust Infrastructure Delivery Plan.
REG18.43	Omega After	Sustainability, and in particular "sustainable development" balances a	The Council has undertaken a Green Belt

Response Number	Respondent Name	Response to Q11	Council's response
	Alpha Ltd (Bidwells)	number of different and often competing aims and objectives. It is the role of the planning system – and in this context the role of the Local Plan, to balance environmental protection with economic growth and the needs of the community. This should ensure that a sufficient variety of land is available to support the Borough's growth needs. The Council should take into account the benefits of releasing Green Belt land that no longer serves a Green Belt function in the context of the need to balance competing demands for land in the Borough in a sustainable manner.	study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land will be released in the context of the need to balance competing demands for land in the Borough.
REG18.44	Persimmon Homes Essex	The consultation document stipulates that the Local Plan will set out standards and expectations the Council has on developers. The council must ensure that these standards do not render sites unviable as higher standards often entail higher costs to deliver them. This can be achieved through on-going discussion with landowners, agents and developers.	The Proposed Submission version of the Local Plan has been tested in regard to viability. The delivery and implementation of the Local Plan will include engagement with developers and their advisers.
REG18.47	R. Watt and Partners (Phillips Planning Services)	Support the provision of sustainable renewable energy production resources.	The Proposed Submission version of the Local Plan supports renewable energy provision.
REG18.48	R.A.Montague	Equilibrium is the only route to long term sustainability and indefinite continuous growth at the pace currently proposed is unsustainable and bound to destroy the quality of life, the environment and the climate.	Noted. The Proposed Submission version of the Local Plan aims to ensure the delivery of sustainable development in line with the NPPF.
REG18.50	Rainham Preservation	No further incinerators, auto-cla and bio-mrf's should be permitted.	The Council's strategy for waste is set out in the Joint Waste Development Plan for

Response Number	Respondent Name	Response to Q11	Council's response
	Society		the East London Waste Authority Boroughs (2012).
REG18.51	Ray Whitehouse	Yes, but that's part of your job	Noted.
REG18.52	Romford Civic Society	Reduce emissions. Particularly focus on improving air quality in central Romford and on reducing emissions in central Romford.	The Proposed Submission version of the Local Plan contains policies to manage and improve air quality.
REG18.53	Romford Golf Club (Joe Coogan)	New developments should be as sustainable as possible and planning obligations should be used to secure investment in other schemes that will make a positive contribution.	The Proposed Submission version of the Local Plan sets out policies to optimise the sustainability of development including energy efficiency.
REG18.56	S.D. Olney	Yes, definitely, and stop fly tipping with heavier fines.	This is beyond the remit of the Local Plan.
REG18.57	Sheila Clements	Well, knowing the Councillors views that Climate Change does not exist, I don't think anything will be done.	The Proposed Submission version of the Local Plan contains policies to address climate change.
REG18.60	Thames Water Utilities Ltd (Savills)	Thames Water is concerned about any increase in surface water flows resulting from development and the effect of such flows further down the sewerage catchment, particularly with respect areas where there is a known risk of sewer flooding. It is the responsibility of the developer to make proper provision for drainage to ground or a watercourse. It is important to minimise the quantity of surface water entering the wastewater system in order to maximise the capacity for foul sewage and to reduce the risk of sewer flooding. Thames Water supports the approach in the London Plan Section 5.13 (Sustainable Drainage) and the Mayor's sequential approach to surface water run-off. When all other options set out in the drainage hierarchy have been exhausted and discharge to surface water sewer is the only option for disposal of surface water developers should aim to achieve greenfield run-off rates. Thames Water recognises the environmental and economic benefits of surface water source control, and encourages its appropriate application,	The Proposed Submission version of the Local Plan is consistent with London Plan policies and promotes the use of sustainable drainage. The Council has engaged with Thames Water during the preparation of the Infrastructure Delivery Plan to make sure appropriate infrastructure is in place to support the development envisaged in the Local Plan.

Response Number	Respondent Name	Response to Q11	Council's response
		where it is to the overall benefit of our customers. Accordingly, in the disposal of surface water, Thames Water will: – Seek to ensure that new connections to the public wastewater network does not pose an unacceptable threat of surcharge, flooding or pollution; – Check the proposals are in line with industry best practice which encourages, wherever practicable, disposal 'on site' without recourse to the public wastewater network; for example in the form of soakaways or infiltration areas on free draining soils; and – Require the separation of foul water and surface water on all new development. The water companies investment programmes are based on a 5 year cycle known as the Asset Management Plan (AMP) process. The AMP6 period will begin on 31st March 2015 and cover the period up to 31st March 2020. As part of our five year business plan Thames Water advise OFWAT on the funding required to accommodate growth in our networks and at all our treatment works. As a result Thames Water bases its investment programmes on development plan allocations, which form the clearest picture of the shape of the community. Where the infrastructure is not available we may require an 18-month to three-year lead in time for provision of extra capacity to drain new development sites. If any large engineering works are needed to upgrade infrastructure the lead in time could be up to five years. Implementing new technologies and the construction of new treatment works could take up to ten years.	
REG18.66	Trinity Hall (Bidwells)	Sustainability, and in particular "sustainable development" balances a number of different and often competing aims and objectives. It is the role of the planning system – and in this context the role of the Local Plan, to balance environmental protection with economic growth and the needs of	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the

Response Number	Respondent Name	Response to Q11	Council's response
		the community. This should ensure that a sufficient variety of land is available to support the Borough's growth needs. The Council should take into account the benefits of releasing Green Belt land that no longer serves a Green Belt function in the context of the need to balance competing demands for land in the Borough in a substantial manner.	Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land will be released in the context of the need to balance competing demands for land in the Borough.
REG18.67	Veolia ES (UK) Ltd	Existing and proposed development which reduces our reliance on fossil fuels or recovers materials for reuse and recycling, and industries which manufacture new products from recycled materials should be supported and encouraged. New development should adopt the principles of sustainable design and use of recovered and recycled materials wherever possible.	The Proposed Submission version of the Local Plan contains policies to make sure future development is energy efficient and sustainably designed.
REG18.68	Woodland Trust	Whilst your 2008 adopted Core Strategy does take flood risk into account with environmental management, and how it needs to be addressed when planning new development, currently flooding is only acknowledged once as a key priority for your Local Plan, with climate change and sustainability. Therefore, as your Local Plan is being developed, all of the development sites being put forward should take this into account as this would enable tree planting to be specifically highlighted as a green infrastructure option to reduce the rate of surface water discharge from new proposed development across your Borough. The Woodland Trust believes that trees and woodlands can also deliver a major contribution to resolving a range of water management issues, particularly those resulting from climate change like flooding and the water	The Proposed Submission version of the Local Plan contains policies on flooding. The benefits of Green Infrastructure are recognised including climate change adaptation, flooding and improving air quality. The landscaping policy specifically encourages the use of trees in schemes.

Response Number	Respondent Name	Response to Q11	Council's response
		quality implications caused by extreme weather events. They offer opportunities to make positive water use change whilst also contributing to other objectives, such as biodiversity, timber & green infrastructure – see the Woodland Trust publication *Stemming the flow* – the role of trees and woods in flood protection – https://www.woodlandtrust.org.uk/publications/2014/05/stemming-the-flow/. Trees are very important elements, greatly contributing to the value of green infrastructure regarding landscape quality, amenity and the environment. Retention of trees and tree planting, together with other green space, can help to combat climate change and flooding, by absorbing CO2 and moisture and reducing excessive run off. Trees and woodlands offer opportunities to make positive water use change whilst also contributing to other objectives, such as biodiversity, timber & green infrastructure – see the Woodland Trust publication *Woodland actions for biodiversity and their role in water management* (pdf) – https://www.woodlandtrust.org.uk/mediafile/100263208/rr-wt-71014-woodland-actions-for-biodiversity-and-their-role-in-water-management.pdf?cb=001108c3a78944299140a996b2cd7ee8. In addition, a joint Environment Agency/Forestry Commission publication *Woodland for Water: Woodland measures for meeting Water Framework objectives* states clearly that: *'There is strong evidence to support woodland creation in appropriate locations to achieve water management and water quality objectives'* (Environment Agency, July 2011 http://www.forestry.gov.uk/fr/woodlandforwater). The Government's Independent Panel on Forestry *(*Defra, Final Report, July 2012*)* has emphasised these benefits by stating that: *'One of the many benefits of woods and trees is their ability to help us respond to a changing climate, better enabling us to adapt to future temperature increases. We know that trees, in the right places, help us to*	

Response Number	Respondent Name	Response to Q11	Council's response
		adapt to climate change by reducing surface water flooding; reducing ambient temperature through direct shade and evapo-transpiration; and by reducing building heating and air-conditioning demands. A landscape with more trees will also help increase the resilience of our rural areas, by reducing soil erosion and soil moisture loss. Improving the condition of existing woodlands, and the creation of a more resilient ecological network of associated habitats, will help wildlife adapt to climate change and other pressures'. This has been endorsed by the response in the Government Forestry Policy Statement (Defra Jan 2013) with the key objective (p.23) '*Work with other organisations and initiatives to support the further development of markets in forest carbon and other ecosystem services such as water and biodiversity'*, together with a Cumbria case study (p.22 – ScaMP) on water benefits from woodland creation. Woodland can help adaptation strategies cope with the high profile threats to water quality and volume resulting from climate change. The Forestry Commission's publication, *The Case for Trees in development and the urban environment* (Forestry Commission, July 2010), explains how: *'the capacity of trees to attenuate water flow reduces the impact of heavy rain and floods and can improve the effectiveness of Sustainable Urban Drainage Systems'.* Trees can reduce the likelihood of surface water flooding in urban situations too, when rain water overwhelms the local drainage system, by regulating the rate at which rainfall reaches the ground and contributes to run off. There is a positive role here for the use of trees with SuDS initiatives (Measure 4.9, p.42). Slowing the flow increases the possibility of infiltration and the ability of engineered drains to take away any excess water. This is particularly the case with large crowned trees. Research by the University of Manchester has shown that increasing tree cover in urban areas by 10 % reduces surface water run-off by almost 6%. (*Using green infrastructure to alleviate flood risk, Sustainable Cities – www.sustainablecities.org.uk/water/surface-water/using-gi/).* The Woodland	

Response Number	Respondent Name	Response to Q11	Council's response
		Trust has also produced a policy paper illustrating the benefits of trees for urban flooding – *Trees in Our Towns – the role of trees and woods in managing urban water quality and quantity* (https://www.woodlandtrust.org.uk/mediafile/100083915/Trees-in-our-towns.pdf). The Woodland Trust has produced a further paper – *Planting Trees to Protect Water – The role of trees and woods on farms in managing water quality and quantity* – that shows how trees and woodland can help mitigate peak flood flows. The report is available at – https://www.woodlandtrust.org.uk/mediafile/100083903/Planting-trees-to-protect-water-RBC-Bluewater-farming-report-evidence.pdf. Also, the Woodland Trust has carried out a number of partnership riparian planting projects across the country, particularly along the Rivers Frome & Piddle in Dorset. Examples of using trees for flood mitigation can be found in our *WoodWise* publication – https://www.woodlandtrust.org.uk/mediafile/100091022/9-Wood-Wise-Winter-2013.pdf. The Government's new agri-environment Countryside Stewardship scheme specifically targets woodland creation towards water benefits and it is therefore likely that this will represent a new funding resource for flood mitigation. The National Flood Forum too (http://www.nationalfloodforum.org.uk/about-us/.) is supporting community action for flooding that can link in to community tree planting schemes. Finally, we note that the Environment Agency's published – *Flood and Coastal erosion risk management – Long Term Investment Scenarios (LTIS) 2014* (Environment Agency 2014) specifically states – "*10.2 Other options to reduce risk There is scope for alternative approaches to reducing risk in areas where community level defences are not available, although we are not yet able to quantify their potential*	

Response Number	Respondent Name	Response to Q11	Council's response
		benefits within the LTIS analysis. Some examples are: – *Natural flood management. The risk of flooding and coastal erosion cannot be managed solely by hard defences due to cost and sustainability. Alternative approaches, working with natural processes and rural land-use options can contribute to a more sustainable approach. We work with natural processes to reduce flood risk by protecting, restoring and emulating the natural regulating function of catchments, rivers, flood plains and coasts. These can reduce the risk of flooding by reducing run-off from catchments, and natural sediment behaviour can provide resilience to coastal flooding and erosion. These measures are usually used together with hard-engineering measures. They can also provide wider benefits to people and wildlife by making traditional defences more resilient to climate change, creating or restoring habitats, improving biodiversity, capturing and storing carbon, reducing sedimentation and improving water quality*". – Therefore, the Woodland Trust would like to see trees and woodland, which have been proven to have a significant effect on flood amelioration, acknowledged accordingly in your new Local Plan for Havering. Whilst the risk of flooding is acknowledged as a strategic priority which has to be taken into account with your Local Plan, as various themes where development can address climate change issues are going to be taken into account, for example, with green infrastructure, trees specifically as well as other green space, should also be acknowledged with your Local Plan as being able to help combat climate change and flooding.	

Question 12: How do you think the Local Plan should manage the natural environment?

Response Number	Respondent Name	Response to Q12	Council's response
REG18.2	Adams Family (Bidwells)	The Local Plan should manage the natural environment by ensuring that new development supports the on-going management and maintenance of open spaces and natural environments. The Local Plan should also explore opportunities for new development to deliver ecological enhancements within the Borough. Limited release of derelict Green Belt sites without beneficial use offers particularly promising opportunities in this respect.	Noted. The Proposed Submission version of the Local Plan contains policies that seek to ensure adequate management and maintenance of open spaces and natural environment. Regarding limited release of derelict Green Belt sites, the Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason there is no part of the Green Belt land that is considered derelict without beneficial use that could be released for other development.
REG18.3	Anonymous	Protect what we have, clean up waterways. Declare war on private motor cars. Better foot paths. Return buses to way they were before. Stop crowds of new people coming.	Noted. The Proposed Submission version of the Local Plan contains policies that safeguard and manage the natural environment consistent with the NPPF. The Proposed Submission version of the

Response Number	Respondent Name	Response to Q12	Council's response
			Local Plan contains a balanced suite of transport policies encouraging provision of safe paths for pedestrians and cyclists and transport measure to promote active travel. 'Stopping crowds of new people coming into Havering and declaring war on private cars' is outside the scope of the Proposed Submission version of the Local Plan.
REG18.8	Brett Aggregates Limited (MJCA)	The policies, aims and objectives of the new Local Plan should set out to preserve and enhance the natural environment but also to recognise that certain types of development such as mineral extraction can only take place where minerals occur and through high quality restoration can benefit the natural environment by improving biodiversity, enhancing the landscape or improving the agricultural quality of land. The restoration of a quarry provides an opportunity to create new water bodies and carry out planting to create new or improved habitats to enhance the biodiversity of the land. Such restoration schemes have the potential to improve the landscape and visual appearance of the land and can provide new areas of public amenity or outdoor recreation.	Noted. The Proposed Submission version of the Local Plan contains policies that safeguard and manage minerals including requirement for high quality restoration works consistent with the London Plan and NPPF.
REG18.9	C. Cole	Let nature care for itself. Focus on animal welfare, kindness to foxes, squirrels and pets.	Noted, Focusing on animal welfare and kindness to animals is outside the scope of the Proposed Submission version of the Local Plan.
REG18.12	D. Campbell	To have regular litter picking along the new road	Noted. Regular litter picking is outside the scope of the Proposed Submission version of the Local plan.
REG18.13	D.K.Symes Associates	Much of the Natural Environment is within the Green Belt so the comments at Q.9 are relevant to this question. There should be positive encouragement to improve the Natural Environment, which may require some temporary short-term impacts to achieve permanent benefits (i.e. the repair of damaged land).	Noted. The Proposed Submission version of the Proposed Submission version of the Local Plan supports and encourages improvements to the accessibility and beneficial use of the Green Belt where proposals are compliant with national

Response Number	Respondent Name	Response to Q12	Council's response
			policy.
REG18.18	Essex County Council	ECC as a neighbouring Lead Local Flood Authority and notes the preparation of a LB Havering Strategic Flood Risk Assessment (2014) and the Havering Flood Risk Management Strategy (2015). ECC acknowledges and supports the following statement within the Havering Flood Risk Management Strategy 2015, 'Additional liaison with the Essex areas of Brentwood and the Unitary Authority of Thurrock is essential in order to maintain a 'joined up' approach to flood risk management and this strategy. It is recommended that further consideration and evidence should be given to the 'context' of these documents with regard to any cross boundary issues. ECC as a Lead Local Flood Authority welcome the opportunity to explore cross boundary issues and to provide advice should any sites in the borough come forward where there may be opportunities to alleviate existing flooding.	The Council has engaged with Essex County Council on strategic issues as detailed in the Duty to Co-operate statement.
REG18.21	Havering College of Further and Higher Education (Iceni Projects)	HCFHE is supported of LBH's objective to seek to protect and enhance existing open space and biodiversity.	Support noted.
REG18.22	Havering Friends of the Earth	Water quality. Pursue the polluters of our waterways. Plant native species of trees and wildflowers in our parks. Reduce pesticide use. Protect the Green Belt from industrial exploitation in Havering.	Noted. The Proposed Submission version of the Local Plan contains policies that safeguard and manage water quality. The landscaping policy specifically encourages the use of trees in schemes. The Proposed Submission version of the Local Plan supports the protection of the Green Belt in line with national policy.
REG18.26	Ian Weatherley	By careful and planned management of all the boroughs parks, open spaces and waterways – to avoid retention and 'pooling' of rainwater and	Noted. Flood risk is addressed in the Proposed Submission version of the Local

Response Number	Respondent Name	Response to Q12	Council's response
		thus ensure effective drainage and so avoid flooding.	Plan.
REG18.27	Janet Davy	By supporting (financially if possible) local conservation volunteer groups.	The Proposed Submission version of the Local Plan and the Green Infrastructure Strategy support partnership working to deliver green infrastructure.
REG18.28	Joe Coogan	Land inside the M25 is at a premium, under used Greenfield sites that offer no recreational benefit should be considered for sensitive development.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land is considered to be of no recreation value for release to uses.
REG18.32	Lee Clements	By: not allowing development or mineral extraction to encroach on natural areas; recognising the importance of nature everywhere, not just in parks and in the Green Belt; ensuring landscaping schemes in new developments are beneficial to pollinators and other wildlife and also that current habitats are sufficiently protected; ensuring greater protection for sites from which minerals are extracted (e.g. by use of bonds).	Noted. The Proposed Submission version of the Local Plan recognises that minerals can only be worked where they are found. It safeguards minerals reserves from other forms of development that would sterilise them. The impact of mineral working on the natural, built and historic will be taken into account. Appropriate measures such as planning conditions and legal agreements will be used to safeguard sites.

Response Number	Respondent Name	Response to Q12	Council's response
			The Landscaping policy specifically encourages the use of trees in schemes.
REG18.34	Margaret Whippy	There are many open spaces and parks already, Havering is well served by them.	Noted. Havering's parks and open spaces are an essential part of its character and appearance. The Proposed Submission version of the Local Plan contains policies that safeguard and manage open spaces and enhance access to them.
REG18.36	Moody Homes and Mr John Wakeling (Bidwells)	The Local Plan should manage the natural environment by ensuring that new development supports the on-going management and maintenance of open spaces and natural environments. The Local Plan should also explore opportunities for new development to deliver ecological enhancements within the Borough. Limited release of derelict Green Belt sites without beneficial use offers particularly promising opportunities in this respect	Noted. The Proposed Submission version of the Local Plan contains policies that safeguard and manage the natural environment in line with the NPPF. With regard to limited release of derelict Green Belt sites, the Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land is considered to be without beneficial use for release to other uses.
REG18.37	Mr Barrie Stone and	Make available allotment space and improve the natural environment.	The Proposed Submission version of the Local Plan contains policies to enhance the

Response Number	Respondent Name	Response to Q12	Council's response
	Miss Eleanor Stone		natural environment and supports the provision of allotments.
REG18.39	Mrs S J Ellis (Bidwells)	The Local Plan should manage the natural environment by ensuring that new development supports the on-going management and maintenance of open spaces and natural environments. The Local Plan should also explore opportunities for new development to deliver ecological enhancements within the Borough limited release of derelict Green Belt sites without beneficial use offers particularly promising opportunities in this respect.	Noted. The Proposed Submission version of the Local Plan contains policies that safeguard and manage the natural environment in line with national policy. With regard to limited release of derelict Green Belt sites, the Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land is considered to be without beneficial use for release to other uses.
REG18.40	Ms M Blackman	No comment other than needs to be considered alongside the above	Noted.
REG18.42	Natural England	We agree that the Local Plan should seek to protect and enhance the natural environment, including open spaces and waterways. However, please note our comments above concerning SSSIs.	The Proposed Submission version of the Local Plan contains policies to protect and enhance the Natural Environment in line with the NPPF and the London Plan. The Council has engaged with Natural England in the preparation of the Local Plan.

Response Number	Respondent Name	Response to Q12	Council's response
REG18.43	Omega After Alpha Ltd (Bidwells)	The Local Plan should manage the natural environment by ensuring that new development supports the on-going management and maintenance of open spaces and natural environments. The Local Plan should also explore opportunities for new development to deliver ecological enhancements within the Borough limited release of derelict Green Belt sites without beneficial use offers particularly promising opportunities in this respect.	Noted. The Proposed Submission version of the Local Plan contains policies that safeguard and manage the natural environment in line with national policy. With regard to limited release of derelict Green Belt sites, the Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land is considered to be without beneficial use for release to other uses.
REG18.47	R. Watt and Partners (Phillips Planning Services)	Provide policy framework which provides adequate protection for important habitats and protected species.	The Proposed Submission version of the Local Plan contains policies to protect and enhance biodiversity and the natural environment.
REG18.48	R.A.Montague	By standing firm and positively promoting the quality of life in the Borough through enhancing natural habitat, open space and waterways.	The Proposed Submission version of the Local Plan contains policies to protect and enhance biodiversity and the natural environment.
REG18.50	Rainham	By ensuring the duty bodies maintain the boroughs progress to the highest	The Council is working in partnership with

Response Number	Respondent Name	Response to Q12	Council's response
	Preservation Society	possible standard.	neighbouring local authorities and other organisations to assure the natural environment is protected and enhanced.
REG18.51	Ray Whitehouse	Yes, but that's part of your job	Noted.
REG18.52	Romford Civic Society	Romford town centre should be identified as a priority area for the strengthening and enriching of the natural environment, to improve the environment of the town, improve health outcomes in the town, strengthen nature corridors and prevent to urban area having a detrimental impact on the quality of ecosystems.	The Proposed Submission version of the Local Plan requires the inclusion of Green Infrastructure in all developments and contains specific proposals for Romford town centre. The Local Plan includes measures to enhance the River Rom and to ensure it is incorporated in development schemes.
REG18.53	Romford Golf Club (Joe Coogan)	Land inside the M25 is at a premium, under used Greenfield sites that offer no recreational benefit should be considered for sensitive development.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land is considered to offer no recreation benefit that warrants its release for other uses.
REG18.56	S.D. Olney	Keep creating woodlands in areas where land has been neglected.	Noted. The Proposed Submission version of the Local Plan contains policies that safeguard and manage the natural

Response Number	Respondent Name	Response to Q12	Council's response
			environment in line with national policy.
REG18.57	Sheila Clements	By not building or encroaching on it in the future.	Noted. The Proposed Submission version of the Local Plan contains policies that safeguard and manage the natural environment in line with national policy.
REG18.64	Thurrock Council	Thurrock Council supports the development of the London Green Infrastructure Networks and Strategy and this approach should continue to be reflected in the Havering new Local Plan through with enhancement and protection of existing sites and proposed new schemes and sites. Thurrock has developed its own Green Infrastructure Strategy and Green Grid network as part of the adopted Core Strategy of 2011 and would welcome further discussion with Havering Council and other stakeholders on this matter. It is recognised that the Land of the Fann Landscape Partnership is a successful Heritage lottery fund pilot project which is being led by Thames Chase Community Forest. This partnership seeks to enhance the understanding and quality of the landscape which crosses the boundary between Havering and Thurrock. Thurrock Council would wish to consider with Havering Council any Cross boundary benefits or implications of the project and wider context in respect of: - Better connections to the Mardyke River; - The fens and coastal marsh landscape enhancement; - extending woodland coverage as part of the Aveley forest - Strategic Green links.	The Council will continue to engage with Thurrock Council as part of the Land of the Fanns Landscape Partnership to deliver Green Infrastructure initiatives across borough boundaries.
REG18.66	Trinity Hall (Bidwells)	The Local Plan should manage the natural environment by ensuring that new development supports the ongoing management and maintenance of open spaces and natural environments. The Local Plan should also explore opportunities for new development to deliver ecological enhancements within the Borough limited release of derelict Green Belt sites without beneficial use offers particularly promising opportunities in this respect.	The Proposed Submission version of the Local Plan contains policies that safeguard and manage the natural environment in line with the NPPF. With regard to limited release of derelict Green Belt sites, the Council has

Response Number	Respondent Name	Response to Q12	Council's response
			undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land is considered to be without beneficial use for release to other uses.
REG18.67	Veolia ES (UK) Ltd	The Local Plan should identify those areas of importance requiring protection from development.	The Proposed Submission version of the Local Plan includes a policy to protect Havering's rich biodiversity and geodiversity.
REG18.68	Woodland Trust	The natural environment is currently acknowledged as being a significant network in Havering Borough, however, currently trees and woods are not acknowledged as being as asset which can be used to help deliver the natural environment. Failure to cover this effectively within your Local Plan is against one of the central principles of the NPPF's approach to biodiversity. Also, we are pleased to see the references to 'Biodiversity', 'Green Belt' being taken into account as strategic priorities for Havering Borough. However, trees & hedges, as well as ancient woodland and ancient trees should also be acknowledged as being part of your natural environment.	The Proposed Submission version of the Local Plan contains policies related to trees in development.

Response Number	Respondent Name	Response to Q12	Council's response
		The Woodland Trust supports the work, and is a member of, the Trees and Design Action Group – a unique multi-disciplinary group of professionals and organisations from both the private and public sectors that is seeking to promote the benefits of trees within the built environment. A South West TDAG group published `Trees in Townscape' (TDAG June 2012) – which contains 12 principles of best practice aimed at designers, developers and planners to encourage integrated, joined up thinking, strategies, policies and implementation relating to trees in the urban realm. `Trees in Townscape' is endorsed by a number of local authorities; therefore, we recommend that Havering Borough Council considers this guidance in developing its Local Plan. The *England Biodiversity Strategy which* makes it clear that expansion of priority habitats like native woodland remains a key aim - `*Priority action: Bring a greater proportion of our existing woodlands into sustainable management and expand the area of woodland in England',* (*Biodiversity 2020: A strategy for England's wildlife and ecosystems services*, DEFRA 2011, p.26)*.* A reading of policies in the NPPF together with the Trees and Design Action Group and the England Biodiversity Strategy indicates that habitat expansion, like native woodland creation, should form a high priority for your Local Plan and the natural environment.	
POST18.4	V. Rajan and Associates	Plant more trees/create forests	Noted. The Proposed Submission version of the Local Plan sets out a positive strategy towards green infrastructure.

Question 13: How do you think the Local Plan should seek to address the production and management of waste?

Response Number	Respondent Name	Response to Q13	Council's response
REG18.3	Anonymous	Should pay heavy tax on people who produce or sell very environmentally disgusting products. More recycling points.	Noted. Tax rates and the manufacture of products are outside of the scope of the Proposed Submission version of the Local Plan. The Plan includes a policy that requires developments to include suitable facilities for managing, storing and sorting waste for recycling.
REG18.8	Brett Aggregates Limited (MJCA)	The production of waste should be minimised where possible and waste that is produced should be managed at the highest possible level in the waste hierarchy as set out in the Waste Framework Directive and national policy. The new Local Plan should recognise that the importation and deposit of waste is a suitable means for restoring back to ground level the void space following mineral extraction. Inert waste such as soil and rubble is often used for the purpose of restoring quarries which should not be considered inappropriate at mineral sites including those in the Green Belt. As explained in the response to Question 9, during the restoration of a quarry with imported materials such as inert waste, there are sustainability benefits associated with locating waste recycling facilities at the quarry to recover the usable portion of the waste to produce secondary aggregates for use in construction projects and to reduce the consumption of primary aggregates. This can commonly involve the use of a mobile crusher and screen to recover secondary aggregates from inert waste. Such plant and machinery and material processing is not dissimilar to the activities that take place during mineral extraction. This approach also ensures that only	Noted. The Joint Waste Plan addresses waste management and the waste hierarchy. The Proposed Submission version of the Local Plan will require proposals to provide high quality restoration of sites worked for minerals. The Proposed Submission version of the Local Plan includes a policy on secondary aggregates. It addresses the scope for temporary aggregate recycling facilities at quarries.

Response Number	Respondent Name	Response to Q13	Council's response
		residual materials with no other form of beneficial use are deposited to restore quarry voids. The Plan should recognise that suitably located mineral extraction sites can be restored by backfilling with suitable materials to specified standards to recover the land to a form suitable for subsequent built development including housing.	
REG18.9	C. Cole	I would be happy to incinerate my waste.	Noted.
REG18.12	D. Campbell	More information of managing and disposing of waste. No building on the green.	Noted. The Council's recycling strategy is outlined in the Joint Waste Plan.
REG18.13	D.K.Symes Associates	It is very important to recognise that there are major differences between municipal / commercial waste (i.e. biodegradable) and inert waste. There is a consistent high volume of inert material that is very suitable to be used for land / mineral reclamation. This waste stream is divided into material principally suitable for recycling (to make construction aggregate) and that principally for reclamation (i.e. has a very limited quantity of material that can be recovered). The use of this latter waste stream should be encouraged where improvement can be achieved (i.e. restoring mineral workings, repairing damaged land).	Noted. The Council's waste strategy is outlined n the Joint Waste Plan. The Proposed Submission version of the Local Plan promotes high quality restoration.
REG18.18	Essex County Council	ECC as Waste Planning Authority will continue to work with LB of Havering under the duty to co-operate on strategic waste planning matters. ECC recommend further consideration and evidence should be given to exploring the potential to integrate the need for waste management with other spatial concerns in the preparation of Local Plan, in accordance with the National Planning Policy for Waste (October 2014); the NPPF and the Further Alterations of the London Plan (2015). ECC as Waste Planning Authority is currently reviewing the timetable for the preparation of the Joint Essex and Southend on Sea Replacement Waste Local Plan. The next key stage will be a Further Preferred Approach consultation to reflect changes in national policy and evidence since the	Noted. Havering welcomes the opportunity to continue to engage with Essex County Council on strategic waste planning matters under the Duty to Co-operate.

Response Number	Respondent Name	Response to Q13	Council's response
		2011 Preferred Approach consultation.	
REG18.22	Havering Friends of the Earth	More plastics can, and should, be recycled. Initiate Food Waste schemes like most other boroughs have now.	Noted.
REG18.26	Ian Weatherley	By finding other boroughs to find open areas to take their own rubbish and waste. Stop using Rainham and the south of the borough as a dumping ground for London's waste.	Noted. The Council's waste strategy is outlined n the Joint Waste Plan. The Rainham landfill site is currently being operated under planning permission reference: P1566.12. Under this permission landfill operations, including restoration, are required to be completed by the end of 2026
REG18.27	Janet Davy	Start with the supermarkets – address the issue of unnecessary packaging. Organise recycling better: - at present we use orange sacks (paper, cardboard, plastic bottles, cans) Sainsbury's car park (glass, plastic pots, drinks cartons) Sainsbury's shop (batteries and plastic bags) and Gerpins Lane Recycling Centre (garden waste, foil, wood, metal, electrical items, books, textiles/shoes).	Noted.
REG18.29	John Peterson	Introduce wheelie bins	Noted. This falls outside of the scope of the Proposed Submission version of the Local Plan
REG18.32	Lee Clements	By: encouraging a greater level of recycling both by residents and businesses; introducing separate food waste collection; not allowing landfill of any kind in parks.	The Proposed Submission version of the Local Plan has a policy on waste management which seeks to ensure adequate provision of storage space for waste and recycling facilities. The introduction of food waste collection is outside the remit of the Proposed Submission version of the Local Plan. The Joint Waste Plan and the Local Plan will provide the planning policy context waste for considering proposals for waste

Response Number	Respondent Name	Response to Q13	Council's response
			disposal.
REG18.34	Margaret Whippy	Waste management centres already available.	Noted.
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	Improve recycling and reduce landfill.	Noted. The Proposed Submission version of the Local Plan has a policy for waste and recycling facilities.
REG18.42	Natural England	As regards the allocation of sites for new waste and mineral extraction facilities, please note our comments above, Question 4 Housing concerning development on or near to SSSI's.	Noted. The Proposed Submission version of the Local Plan includes a policy to protect sites of nature conservation importance.
REG18.47	R. Watt and Partners (Phillips Planning Services)	Allocation of sufficient waste management facilities well linked into the existing transport network. Facilities should also be carefully sited to ensure protection of the amenity of the borough's residents (e.g. not harmed by way of noise, odour etc.).	Noted. The Joint Waste Plan sets out a strategy for sustainable waste management until 2021.It identifies sites for waste management facilities.
REG18.48	R.A.Montague	Mainly by managing our own waste and not importing waste from other areas.	Noted. The Council's waste strategy is in the Joint Waste Plan
REG18.50	Rainham Preservation Society	No further mineral/landfill sites should be allowed in Rainham as much of our farmland is flooding due to rainwater run-off from the many hills created by unauthorised and unmonitored landfill.	Noted. The London Plan apportions sand and gravel requirements to those boroughs in London with sand and gravel reserves including Havering. The Proposed Submission version of the Local Plan identifies those areas in Havering where minerals are located. The Plan has a policy to ensure that proposals do not have unacceptable impacts
REG18.51	Ray Whitehouse	Yes, but that's part of your job	Noted
REG18.56	S.D. Olney	When the management plant in Rainham is fully operational it will be capable of dealing with the disposal of waste.	Rainham landfill is currently operated under planning permission reference: P1566.12.

Response Number	Respondent Name	Response to Q13	Council's response
			The waste management site at Frog Island does handle/treat/recycle municipal waste from Havering residents but it is not an energy from waste facility (incinerator). Refer to the Joint Waste Plan and the Council's Annual Monitoring Reports for further information and update on current recycling rates and end destinations for waste.
REG18.57	Sheila Clements	Leave it alone.	Noted.
REG18.64	Thurrock Council	Thurrock Council supports the London Plan alterations which seek the management with London of equivalent of 100% of its waste and with no London Waste apportioned for export after 2026. The London Waste Policies require Local Plans to provide capacity to manage waste apportioned to boroughs in the London plan and identify and protect existing sites. It is noted that the London Plan identified waste arisings in Havering rising from 2019,000 tonnes per annum in 2015 to 240,000 tonnes by 2036 but with an apportionment for Havering being higher at 329,000 tonnes per annum by 2036. However it is also recognised that the tonnages are lower than previous London Plan estimates. The New Havering Local Plan should set out the strategic approach to waste management for Havering and take into account the changes in the alterations in the London plan in terms of targets for waste appointment and time periods. Revisions will also be required to the East London Waste Plan in terms of waste management and sites identified to meet capacity. Waste matters will be an issue under Duty to Cooperate that Thurrock will wish engage with the Mayor for London and London Boroughs through the London Plan review, but also Local Plan reviews including waste plans.	Noted. The Council's waste strategy is outlined within the Joint Waste Plan. The London Borough of Havering welcomes the opportunity to continue to engage with Thurrock on strategic waste matters under the duty to co-operate.
REG18.67	Veolia ES	The protection of existing waste management capacity, particularly that	

Response Number	Respondent Name	Response to Q13	Council's response
	(UK) Ltd	which increases the recovery and recycling of waste, should be protected from loss to other uses. Where capacity is to be lost the Plan should clearly identify how that capacity is to be replaced.	The Council's waste strategy is outlined within the Joint Waste Plan.
POST18.1	V. Rajan and Associates	Burn the waste required	Noted. The Council's current waste strategy is outlined within the Joint Waste Plan.

Question 14: How do you think the Local Plan should address the provision of minerals?

Response Number	Respondent Name	Response to Q14	Council's response
REG18.3	Anonymous	Tighter controls on speed and volume of lorries going to and coming from sites.	Noted. The Proposed Submission version of the Local Plan has a policy to assess the impacts of potential mineral working proposals including those aspects linked to transport.
REG18.8	Brett Aggregates Limited (MJCA)	The London Plan (2011) acknowledges that the capital needs a reliable supply of construction materials to support continued growth and this includes land-won sand and gravel. The London Plan also recognises that most aggregates used in the capital come from outside London, including marine sand and gravel and land-won aggregates, principally crushed rock from other regions. The London Plan supports the objective of achieving an essential level of supply in the most sustainable fashion, which includes the provision of a good supply of locally sourced land-won aggregates. The new Local Plan should continue the Minerals Safeguarding Areas and associated policies from the adopted Local Plan. These policies and areas should be maintained and carried through to the new Local Plan to safeguard areas for future mineral extraction in the Borough to provide local sources of land won aggregate. Through the plan development process information should be sought and obtained actively to identify any further areas or mineral reserves which should be subject to safeguarding. This approach will assist Havering Borough Council to provide a sufficient level of permitted reserves of aggregate to meet the minimum apportionment of 250,000 tonnes per annum set out in the London Plan (2011). The new Local Plan should recognise that the apportionment is a minimum level for permitted reserves, and that permitting reserves in	Noted. The Proposed Submission version of the Local Plan recognises the planning policy context provided by the London Plan including the apportionment figures. The Plan identifies Minerals Safeguarding Areas. The Plan includes criteria regarding the siting of processing plant. The Plan supports temporary aggregate recycling facilities at development. The Plan seeks to ensure quality restoration and beneficial after-uses that secure long lasting community and environmental benefits.

Response Number	Respondent Name	Response to Q14	Council's response
		excess of the minimum apportionment may provide reserves that are distributed throughout the Borough. To further reduce the transportation of aggregates, mineral processing plants or bagging plants should be located in or directly adjacent to the quarry. Where there is already an established mineral processing plant located in close proximity to a new quarry and where that plant is in a suitable location the Plan should specify that mineral from surrounding extraction areas should be taken to the existing processing plant site to make use of the existing plant, infrastructure and mitigation such as established landscaping and screening instead of erecting new plant. Mineral reserves in the south of the Borough are located in close proximity and in some cases on adjacent land. Existing infrastructure such as the mineral processing plant at Rainham already benefits from suitable vehicular access, established screening and management controls for noise and dust. Therefore consideration should be given to the need and sustainability associated with the installation of new infrastructure such as mineral processing BGL_HALp17132 response to local plan consultation 7 plant at new quarries compared with the use of established suitable plant located in close proximity. Facilities such as concrete batching plants which make use of the aggregate should also be located at mineral producing sites to reduce transportation distances. In keeping with the NPPF, the new Local Plan should recognise that mineral extraction is not inappropriate development in the Green Belt. In keeping with the aim of achieving sustainable development set out in the NPPF the new Local Plan should recognise that it is beneficial to locate ancillary facilities such as concrete batching plants and secondary aggregate recycling facilities at quarries.	

Response Number	Respondent Name	Response to Q14	Council's response
		The new Local Plan should recognise that the restoration of a quarry can enhance the productivity, biodiversity, landscape and amenity value of the land. The Plan should recognise that suitably located mineral extraction sites can be restored by backfilling with suitable materials to specified standards to recover the land to a form suitable for subsequent built development including housing. The new Local Plan should recognise that mineral extraction and subsequent restoration can diversify the local economy, provide employment opportunities and demand for local goods and services and as a result can result in a positive socio economics impact.	
REG18.9	C. Cole	Eh?	Noted.
REG18.12	D. Campbell	No building on the green belt.	Noted. Mineral extraction is not an inappropriate form of development in the Green Belt.
REG18.13	D.K.Symes Associates	Minerals can only be worked where they occur. The Government places 'Great Weight' on the economic benefits of mineral extraction. Mineral development is deemed not inappropriate development in the Green Belt. Havering needs to recognise the important role that it will continue to play in ensuring a steady and adequate supply of minerals continues to be made available to the local and wider markets including London. In line with NPPF, the availability of minerals must be 'competitive' and the reserve should not be in the control of one operator.	Noted. The Proposed Submission version of the Local Plan recognises the planning policy context provided by the London Plan including the apportionment figures. The Plan identifies Minerals Safeguarding Areas.
REG18.18	Essex County Council	ECC as Minerals Planning Authority will continue to work with the LB of Havering under the duty to co-operate on strategic minerals planning matters. It is noted that the LB Havering Local Aggregate Assessment (LAA) was published in October 2014. It is recommended that a relevant evidence base for minerals planning is prepared in accordance with the NPPF. For your information ECC has produced two LAA's to date, and adopted the Essex Minerals Local Plan in July 2014.	Noted. The London Borough of Havering last produced a Local Aggregate Assessment (LAA) in 2014. Updated positions on the land-bank have been prepared alongside reports on planning applications for mineral working.. A London-wide LAA for 2015 is expected to be published in 2017.

Response Number	Respondent Name	Response to Q14	Council's response
REG18.22	Havering Friends of the Earth	Campaign against the London Plan for mineral extraction targets for Havering. More rigorous monitoring of land restoration when minerals have been extracted. Prosecute those who break agreements and insist on suitable escrow accounts for all mineral extraction schemes.	Noted. A revised London Plan is expected to be published in late 2017 / early 2018. It is expected to include updated minerals apportionment figures. The Proposed Submission version of the Local Plan addresses restoration of minerals sites.
REG18.26	Ian Weatherley	If the mineral extraction is really required then this should be priced at as such a rate so as to be beneficial to the borough and its residents. Careful control should be taken over the vehicle management and control in/out of these sites – in relation to traffic levels and mud on the road etc. Wheel washes are not enough!	Noted. The pricing of minerals is beyond the scope of the Local Plan. The Proposed Submission version of the Local Plan addresses transport issues linked to mineral working.
REG18.32	Lee Clements	By: not allowing mineral extraction unless absolutely necessary and not subjecting local residents to simultaneous mineral extraction from more than one site; ensuring greater protection for sites from which minerals are extracted (e.g. by use of bonds).	Noted. The Proposed Submission version of the Local Plan addresses the cumulative impacts of mineral working.
REG18.34	Margaret Whippy	Sites not known in this area.	Noted. The Proposed Submission version of the Local Plan designates Mineral Safeguarding Areas and includes policies on mineral extraction and land restoration.
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	Maximise extraction over short periods and ensure reinstatement/development of high quality.	Noted. The Proposed Submission version of the Local Plan addresses the implications of mineral working including restoration. The detailed arrangements for working will be addressed through development management.
REG18.47	R. Watt and Partners (Phillips Planning Services)	It is considered that in accordance with London Plan, that the borough should identify sufficient land to achieve the London Plan mineral extraction targets. As with waste facilities, the amenity of residents should be ensured protection from factors such as noise and dust.	Noted. The Proposed Submission version of the Local Plan recognises the planning policy context provided by the London Plan including the apportionment figures. The Plan identifies Minerals Safeguarding Areas. The Plan addresses the environmental implications of mineral

Response Number	Respondent Name	Response to Q14	Council's response
			working.
REG18.48	R.A.Montague	By ensuring that anyone extracting minerals has a viable and phased restoration plan.	Noted. The Proposed Submission version of the Local Plan addresses restoration.
REG18.50	Rainham Preservation Society	See Question 13.	Noted.
REG18.51	Ray Whitehouse	Yes, but that's part of your job	Noted.
REG18.56	S.D. Olney	No more creating sand and gravel pits as this blight the borough.	Noted. The Proposed Submission version of the Local Plan recognises the planning policy context provided by the London Plan including the apportionment figures. The Plan will identify Minerals Safeguarding Areas. The Plan will address the environmental implications of mineral working.
REG18.57	Sheila Clements	Leave it alone.	Noted.
REG18.64	Thurrock Council	The London Plan sets out the current apportionment of minerals for London Boroughs. Havering is identified as one of four London Boroughs to provide part of the London landbank of land won aggregates to 2031. Havering has an apportionment of at least 1.75 million tonnes. The figure for Havering is higher than set out in the current adopted Havering Local Plan and the new local plan will need to include mineral policy that sets out the approach borough intends to take on this matter. Thurrock Council has a LAA with Essex County Council that set out an agreed mineral apportionment as part of the sider East of England apportionment. Thurrock Council has no detailed comments to make regarding mineral extraction within Havering Borough at this stage.	Noted. The Proposed Submission version of the Local Plan recognises the planning policy context provided by the London Plan including the apportionment figures. The Plan will identify Minerals Safeguarding Areas. The Plan addresses the environmental implications of mineral working.
POST18.4	Rajan and Associates	There should be a separate area for mineral extraction	Noted. The Proposed Submission version of the Local Plan recognises the planning policy context provided by the London Plan

Response Number	Respondent Name	Response to Q14	Council's response
			including the apportionment figures. The Plan identifies Minerals Safeguarding Areas. The Plan addresses the environmental implications of mineral working.

Question 15: How do you think the Local Plan should ensure high quality design?

Response Number	Respondent Name	Response to Q15	Council's response
REG18.1	AECOM	We agree that planning policy should set requirements for housing density, affordable housing provision, standards and sizes. However, where the Plan contains strategic growth areas which are going to deliver a large proportion of housing over the life of the plan period, we suggest a more flexible policy approach is taken. Where this is the case, there is the potential for new developments to be design led setting their own density criteria therefore, delivering an increased amount of housing. This specific policy should be considered for the Council's growth areas, e.g. a garden village at Bush Farm could adopt this policy approach.	Noted. The Proposed Submission version of the Local Plan adopts the London Plan density requirements. It includes criteria to ensure development in the borough is of high quality design and responds to local character. In regard to the comment about Bush Farm, the Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason there is no opportunity for the Council to consider release of Green Belt land for a garden village at Bush Farm.
REG18.3	Anonymous	Don't re-design places that are O.K already. Don't waste money on environmental waste.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design.

Response Number	Respondent Name	Response to Q15	Council's response
			The Proposed Submission version of the Local Plan supports the waste hierarchy approach.
REG18.9	C. Cole	No concrete brutalism, stick to brick. I like post-modern and annex designs.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design.
REG18.12	D. Campbell	To liaise with existing residents face to face, letter through the door.	Noted. The Council's approach to engagement on planning matters is set out in the Statement of Community Involvement.
REG18.19	Gidea Park and District Civil Society	High quality design is important with due regard taken of surroundings and setting, so that any new buildings or alterations fit in and harmonise with the existing, otherwise the character of an area can change either dramatically or slowly over a period of time.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design.
REG18.24	Higgins Homes (Nathaniel Lichfield & Partners)	Design considerations, in particular the density of residential developments, should be site-specific and subject to the constraints and opportunities presented by the location, character and surroundings of each site.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design.
REG18.26	Ian Weatherley	Plan for high quality houses – not rabbit hutches! Make homes/houses with rooms that exceed the minimum spaces – and give people a house they will be pleased to make their home – in a community they WANT to live in with social and health and transport support for all.	Noted. The Proposed Submission version of the Local Plan seeks to deliver homes across a range of sizes and tenures along appropriate infrastructure to make sure strong and healthy communities.
REG18.28	Joe Coogan	It is important that any new development enhances the area and that developments are reasonable in appearance and density.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design.
REG18.29	John Peterson	Stop allowing development building not in keeping with local area i.e. Emerson park	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design.

Response Number	Respondent Name	Response to Q15	Council's response
			The importance of areas of special townscape and landscape character is recognised.
REG18.32	Lee Clements	By: putting conditions in planning approvals and ensuring they are stuck to; not allowing overdevelopment of sites; ensuring new developments include green spaces and habitats beneficial to nature.	Noted. The Proposed Submission version of the Local Plan will optimise development capacity while providing for community facilities and green infrastructure. Enforcement of planning conditions is beyond the scope of the Local Plan.
REG18.34	Margaret Whippy	Design should not only be high quality but be adequate for modern family life. Gardens that fit with existing sizes would be of benefit, rather than squashing too many houses into a space.	Noted. The Proposed Submission version of the Local Plan will optimise development capacity while providing for community facilities and green infrastructure.
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	Be sensitive to local areas style with mixed and varied styles of development.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design.
REG18.38	Mr T Clemence (DHA Planning)	Ensure new development adds to the overall quality of the area, responds to local character by respecting the form, pattern, density and appearance of existing development.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design.
REG18.40	Ms M Blackman	Encourage originality rather than conformity. Development, for example, is a speculative business – most design is created to reduce risk – particularly at the planning stage as this is currently the most unstable stage of any development process. Invest time with developers at the very early stages – make resources available to enable collaborative working rather than a 'them and us' attitude.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design. The Council will encourage developers to liaise with the Council as early as possible in the development process.
REG18.44	Persimmon Homes Essex	Persimmon Homes accepts that a high quality design should be adopted. However, this should not prevent the delivery of housing with unrealistic requirements that may deem a site unviable. Again active discussions with landowner's, agents and developers will enable that sites that take account of council policy can be delivered.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design. The Council will encourage developers to

Response Number	Respondent Name	Response to Q15	Council's response
			liaise with the Council as early as possible in the development process. A viability assessment has been prepared to accompany the Local Plan.
REG18.47	R. Watt and Partners (Phillips Planning Services)	Relevant planning policy on design should be supported by 'up-to-date' and regularly reviewed design guidance documents.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design. The Council will monitor and review the Plan and this will include its requirements regarding design to ensure that it remains up to date and appropriate.
REG18.48	R.A.Montague	Market forces dictate that high quality will always be a premium product that comes at a higher price than something which is more 'affordable'. So you would need to limit quantity in favour of quality.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design. A viability assessment has been prepared to accompany the Local Plan.
REG18.50	Rainham Preservation Society	No further high rise developments and including play areas and quality communal space within all future developments.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design. The Proposed Submission version of the Local Plan requires the appropriate provision of play and amenity space.
REG18.51	Ray Whitehouse	Yes, but that's part of your job	Noted.
REG18.52	Romford Civic Society	The central Romford environment in large part depends upon the quality and interest of building and spatial design and on the quality of building materials used. Design policies in the existing LDF should be retained and transferred to the new Local Plan. Policy DC50 (Sustainable Design and Construction) should be retained from the current LDF and transferred to the new Local Plan. The Mayor of London's Design Guide should be	Noted. The Proposed Submission version of the Local Plan includes a Strategic Development Area Policy for Romford. It addresses design and heritage issues. Policies from the Local Development Framework and more recent work have

Response Number	Respondent Name	Response to Q15	Council's response
		applied in Havering. The appearance of shops has a major impact on the quality of the environment in central Romford. The current Shop Fronts SPD should be retained and transferred over to the new Local Plan.	informed the preparation of the policy. The Council will review the current Supplementary Planning Documents supporting the Local Development Framework as it brings forward further items to support the Local Plan. If appropriate it will consider the preparation of further guidance.
REG18.53	Romford Golf Club (Joe Coogan)	It is important that any new development enhances the area and that developments are reasonable in appearance and density.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design. The Plan addresses density issues.
REG18.56	S.D. Olney	By ensuring that any development is not crammed together as some older schemes seemed to ignore. All properties to have off street parking.	Noted. The Proposed Submission version of the Local Plan seeks to ensure that new developments respect and enhance local character and are of high quality design. The Local Plan sets out the parking standards.
REG18.57	Sheila Clements	Leave it alone.	Noted.

Question 16: How do you think the Local Plan should protect and enhance Havering's heritage assets?

Response Number	Respondent Name	Response to Q16	Council's response
REG18.3	Anonymous	Should protect what have and buildings approximately 1920c or before should be protected. Don't build new Mill House by Upminster Windmill. Any heritage sites should only be restored at a fraction of the cost that you waste.	Noted. The Proposed Submission version of the Local Plan contains policies to conserve and enhance the significance of Havering's heritage assets.
REG18.9	C. Cole	More strongly than now, we don't have much heritage left – we must enhance what we've got and attract tourists.	Noted. The Proposed Submission version of the Local Plan contains policies which conserve and enhance the significance of Havering's heritage assets.
REG18.19	Gidea Park and District Civil Society	We support the main objectives of the statements on Havering's Heritage Assets and in furtherance of such would suggest the following having substantial experience of working in this area and within the borough and being aware of the practicalities of achieving the stated aims. Conservation Areas – In isolation these afford only limited protection "Article 4 directions" give the power to adequately control development therefore much greater use should be made of them. There should be periodic reviews to consider the creating additional Conservation Area and to enhance protection is required for existing. In furtherance of this SPD's should be produced for individual C.A.'s together with clear simple directions to assist applicants and planning officers. This is essential with the shortage and high turnover of Planning Officers very few having specialist knowledge of Heritage. It is therefore essential to have the services of highly experience specialist Conservation Officer and adequate data bases. Conservation Area Appraisals (Listed Buildings) –	Noted. Noted. 'Article 4 directions' give the power to adequately control development but instigating its use is outside the scope of the Proposed Submission version of the Local Plan. The Proposed Submission version of the Local Plan supports the maintenance of up to date Conservation Area Appraisals and Management Plans. Noted. Whilst SPDs could be prepared for individual CAs the work stream for their production is outside the scope of the preparation of the proposed Submission version of the Local Plan.

Response Number	Respondent Name	Response to Q16	Council's response
		Appraisals all incorporate Management Plans together with Havering council responses. For the Gidea Park CA in 2007 the response was "request E.H. To review statutory list throughout the C.A and provide additional/supporting information" "Action to be taken by (ES)" (The necessary information is readily available from the Civic Society but we have never been asked and assume that no action was taken). Listed Buildings – There should be periodic surveys to update the list and where appropriate extending, as recommended for both Rainham and Gidea Park in the 2007 appraisals. Monitoring – There should be regular monitoring of planning control in respect of Heritage Assets to ensure policies are being followed and also whether further guidance, amendment, additions to policy is required. Such monitoring should be undertaken by an independent party. Development Briefs – These are helpful as appropriate in heritage area providing much needed guidance for prospective developers and existing owners encouraging/prompting them to undertake works/development of unsatisfactory land/property that will enhance not only it but its surrounding area.	Noted. Noted. Whilst periodic surveys should be undertaken to update the list of Listed Buildings and where appropriate extend them, the work stream for the survey is outside the scope of the Proposed Submission version of the Local Plan. Regular monitoring of planning control is outside the scope of the Proposed Submission version of the Local Plan. The process and work stream for the preparation of Development Briefs is outside the scope of the preparation of the Proposed Submission version of the Local Plan.
REG18.21	Havering College of Further and Higher Education (Iceni Projects)	HCFHE is aware of the wealth of heritage in Havering including listed buildings, Conservation Areas and scheduled monuments. As such, HCFHE is supportive of LBH's objective to identify and understand the Borough's heritage assets, and to ensure that new development is appropriate within the historic context of the Borough.	Noted.
REG18.26	Ian Weatherley	By publicising these attractions and managing them to encourage visits by schools/colleges etc. and so to allow the community to have pride in these	Noted. Publicising heritage assets and managing them as attractions to

Response Number	Respondent Name	Response to Q16	Council's response
		locations and hopefully to increase visitors and so wealth into the area/borough.	encourage visits by schools/colleges etc. and so to allow the community to have pride in these locations is outside the scope of the Proposed Submission version of the Local Plan.
REG18.32	Lee Clements	By: not allowing inappropriate development close to or of heritage assets and ensuring nearby developments are in-keeping with their surroundings; putting conditions in planning approvals and making sure these are met.	Noted. The Proposed Submission version of the Local Plan contains policies which do not support inappropriate development close to heritage assets.
REG18.34	Margaret Whippy	All existing heritage sites need protecting, especially against neglect and decay.	Noted. The Proposed Submission version of the Local Plan contains policies which conserve and enhance the significance of Havering's heritage assets.
REG18.37	Mr Barrie Stone and Miss Eleanor Stone	Reinforce education links with local heritage through schools. Local history sense of place.	Noted. Reinforcing education links with local heritage through schools is outside the scope of the Proposed Submission version of the Local Plan.
REG18.40	Ms M Blackman	See Q15. Also need to engage local communities to assist & feel a connection. Possibly more awareness via school curriculum – history/geography/biology classes.	Noted. Engaging local communities to assist and feel a connection through possibly more awareness via school curriculum – history/geography/biology classes is outside the scope of the Proposed Submission version of the Local Plan.
REG18.48	R.A.Montague	By encouraging them to be self-sufficient through community activity and involvement.	Noted. Encouraging them to be self-sufficient through community activity and involvement is outside the scope of the Proposed Submission version of the Local Plan.
REG18.50	Rainham Preservation Society	By making all listed buildings within the borough open to the community at weekends and offering fetes and historic/cultural activities free of charge.	Noted. Making all listed buildings within the borough open to the community at weekends and offering fetes and historic/cultural activities free of charge is

Response Number	Respondent Name	Response to Q16	Council's response
			outside the scope of the Proposed Submission version of the Local Plan.
REG18.51	Ray Whitehouse	Identify them, improve them and then make sure they are accessible. Move the museum to a heritage site such as something similar to the Golden Lion. What a great place to talk about Brewing. I understand it is currently in the Brewery but that is now more like a modern block of flats.	Noted. The Proposed Submission version of the Local Plan contains policies that support the identification and maintenance of local heritage assets. Moving the museum to a heritage site is outside the scope of the Proposed Submission version of the Local Plan.
REG18.52	Romford Civic Society	Current LDF Heritage policies should be retained and transferred over to the new Local Plan. The Heritage SPD should be retained and transferred over to the new Local Plan. Conservation Area Appraisals and Management Plans should be retained and transferred over to the new Local Plan. Buildings on the Havering Local List of Buildings of Local Heritage Interest in the current Havering Heritage SPD should be given maximum protection. In centre of Romford the setting of the historic environment is in large part formed by shop fronts. The current Shop Front SPD should be retained and transferred over to the new Local Plan.	Noted. The Proposed Submission version of the Local Plan is a new plan that sets out its own new policies backed up by new robust evidence. The opportunity will be taken in due course to review the suite of Supplementary Planning Documents linked to the Local Development Framework and to assess the extent to which these need to be revised to complement the Local Plan.
REG18.55	Rowley Cardrome Ltd (Montagu Evans)	The NPPF requires LPA's to plan positively for the conservation and enjoyment of the historic environment, conserving heritage assets in a manner appropriate to their significance. In doing so, the contribution to wider social, cultural and environmental benefits as well as local character and distinctiveness should be considered. In addition, securing a viable use of listed buildings should be sought to continue the long term preservation. As noted above the site has a recently listed Grade II listed asset – this being the Rom Skatepark, located towards to the south eastern boundary. RCL have grave concerns that this listing has arisen without proper consideration of the long term maintenance if this asset. The Rom Skatepark is currently run as an independent business that has not in the past nor is it likely to in the future operate as a financially viable business. It is only with the goodwill of RCL that the current skatepark operation has been allowed to continue its presence on the site.	Noted.

Response Number	Respondent Name	Response to Q16	Council's response
		The listing that has now been imposed on my clients brings with it an on-going maintenance liability with no viable means of funding to pay for its upkeep at a level commensurate with its listing. This is particularly important given that it is clear from the listing that the concrete finished shaped surface of the skate park was considered an important part of why the listing was confirmed. By its very nature concrete has a limited life span and maintenance is very difficult and costly. RCL are currently having a concrete specialist assess the skatepark to establish what maintenance is required and we will be pleased to share this with the Council. What is clear however is that this will be a significant on-going liability. Revenue receipt from alternative forms of development across the site will therefore help ensure the long term protection of his recently designated heritage asset. The masterplan shows how the listed skate-park can be an intrinsic part of the residential redevelopment of the Site. In addition to all the other planning, community and sustainability benefits such development would bring it also affords opportunity for securing the skate park's long term future, together with its setting and usage being enhanced. We are in on-going discussions with both Havering Council and English Heritage on this issue and consider the outcome of such discussions to be highly material to the on-going Local Plan process. However, it is essential to understand that failure to take the opportunity afforded by the site now and its release can only serve to frustrate the best way of maximising the benefit and long term maintenance of this recently designated heritage asset.	
REG18.56	S.D. Olney	Yes, must be foremost when developing future building proposals.	Noted. The Proposed Submission version of the Local Plan contains policies supporting well designed and maintained

Response Number	Respondent Name	Response to Q16	Council's response
			buildings within Conversation Areas, a Registered Park or Garden of Historic Interest, Historic Park or Garden of Local Interest, Area of Special Townscape or Landscape Character, or within their setting.
REG18.57	Sheila Clements	Leave it alone.	Noted. The Council recognises the significance and value of Havering's heritage assets and supports proposals that seek to sustain or enhance the significance of heritage assets at risk.
REG18.68	Woodland Trust	Areas and landscapes of special architectural or historic importance should be preserved and enhanced, and this was acknowledged specifically with Policy CP18 (Heritage) with your adopted 2008 Core Strategy and should therefore also be taken forward with your new Local Plan as well. Ancient woodland around Upminster, Granham, Harold Hill and Belhus Woods Country Park are all designated Sites of Interest for Nature Conservation (SINC). There are also substantial areas of scrub, while on the Ingrebourne River there is a large concentration of Willow Carr in the area at Berwick Woods. Such important historical woodland landscapes should be considered with planning policy, so that it can be acknowledged specifically that ancient woodland and aged or veteran trees should be protected from development. Natural England note it is not possible to mitigate the damage to or destruction of ancient woodland and ancient trees. For example, in terms of compensatory measures, it is impossible to "replace" ancient woodland as it is impossible to replicate hundreds of years of ecological evolution by planting a new site or attempting to translocate it. Ancient woodland, together with ancient/veteran trees, represents an irreplaceable semi natural habitat that still does not benefit from full	Noted. The Proposed Submission version of the Local Plan is a new plan that sets out its own new policies backed up by new robust evidence. The opportunity will be taken in due course to review the suite of Supplementary Planning Documents linked to the Local Development Framework and to assess the extent to which these need to be revised to complement the Local Plan. The Proposed Submission version of the Local Plan recognises the valuable contribution 'veteran' trees and ancient woodland outside designated areas make to the quality of life in Havering and contains policies to preserve 'veteran' trees and ancient woodlands outside protected areas.

Response Number	Respondent Name	Response to Q16	Council's response
		statutory protection This is particularly relevant as ancient woodland is still facing considerable threats – research for instance confirms 86% of ancient woodland in England has no statutory protection and therefore the planning system must provide this (Making Space for Nature: A review of England's Wildlife Sites and Ecological Network, John Lawton Review, 2010). Research from the Woodland Trust also shows that in the last decade, 100 square miles (26,000 hectares or 5% of the total amount of ancient woodland remaining in the UK) of ancient woodland in the UK has come under threat from destruction or degradation. Also, *Trees in the Hard Landscape* is a guide for the delivery of adequate Green Infrastructure as it can offer multiple benefits and enhance public realm if applied to policy development effectively. (http://www.tdag.org.uk/uploads/4/2/8/0/4280686/tdag_trees-in-hard-landscapes_september_2014_colour.pdf) – The Government's Natural Environment White Paper – The Natural Choice: securing the value of nature (HM Government, July 2011, para 2.56) states that: 'The Government is committed to providing appropriate protection to ancient woodlands....' – The 'UK Forestry Standard' sets out the UK Government's approach to sustainable forestry. It states: "ancient semi-natural woods...are of special value." The Standard has a series of UK-wide aims for semi-natural woodland and clearly states: "the area occupied by semi-natural woodland should not be reduced. " (Forestry Authority, 1998, UK Forestry Standard: Standard Note 5, pp.41-43). – Under section 74 of the Countryside and Rights of Way Act 2000, the Government has a statutory duty to publish lists of priority conservation habitats. Under section 40 of the Natural Environment and Rural Communities Act 2006, all public authorities now have a statutory duty to conserve biodiversity. The UK BAP targets includes a Habitat Action	

Response Number	Respondent Name	Response to Q16	Council's response
		Plan for Native Woodland which specifies a clear 'maintenance' target of no more loss of ancient woodland – http://www.ukbap.org.uk/BAPGroupPage.aspx?id=98. It is therefore axiomatic that Havering Borough has a statutory obligation to protect ancient woodland. – Whilst the National Planning Practice Framework paragraph 118 states that: – '*planning permission should be refused for development resulting in the loss or deterioration of irreplaceable habitats, including ancient woodland and the loss of aged or veteran trees found outside ancient woodland, unless the need for, and benefits of, the development in that location clearly outweigh the loss*;' – Emerging national policy is increasingly supportive of absolute protection of ancient woodland and ancient trees. The Communities and Local Government (CLG) Select Committee published its report following its June 2014 inquiry into the 'Operation of the National Planning Policy Framework (NPPF)', in which it has specifically recognised the need for better protection for ancient woodland (Tues 16th Dec 2014). The CLG Select Committee report states: *'We agree that ancient woodland should be protected by the planning system. Woodland that is over 400 years old cannot be replaced and should be awarded the same level of protection as our built heritage. We recommend that the Government amend paragraph 118 of the NPPF to state that any loss of ancient woodland should be "wholly exceptional". We further recommend that the Government initiate work with Natural England and the Woodland Trust to establish whether more ancient woodland could be designated as sites of special scientific interest and to consider what the barriers to designation might be.'* http://www.publications.parliament.uk/pa/cm201415/cmselect/cmcomlo	

Response Number	Respondent Name	Response to Q16	Council's response
		c/190/190.pdf . This shows a clear direction of travel, recognising that the NPPF does not currently provide sufficient protection for ancient woodland. Until the NPPF is amended there is a clear role for Local Plans and associated documents to provide this improved level of protection and to ensure that irreplaceable habitats get the same level of protection as heritage assets enjoy under the NPPF. Therefore, we would like to see this being taken into account effectively again with the Havering Local Plan, with ancient woodland and ancient trees fully protected from development.	
POST18.4	V. Rajan and associates	The respondent commented : Protection of Historical monuments/ heritage buildings	Noted. The Council recognises the significance and value of Havering's heritage assets and includes policies to protect and enhance heritage assets in Havering.

Question 17: Do you have any additional comments?

Response Number	Respondent Name	Response to Q17	Council's response
REG18.1	AECOM	It is clear from the case presented above that the Council cannot adopt a 'do nothing' approach in terms of dealing with the pressure of housing growth and accommodating additional housing across the borough over the plan period. Our main issues can be summarised as follows: – Based on the requirement for Havering to deliver 11,700 net new homes between 2015-2025, and based on the capacity identified thus far by Havering in the 2012-2013 AMR, the borough is unable to sufficiently supply enough homes to meet its OAHN. – In order to meet even its minimum housing obligations, the borough will have to release some Green Belt land for housing in the emerging Plan. – In terms of Green Belt designation as set out in National Planning Policy Guidance, Bush Farm does not meet its intended purpose within the Green Belt. We are looking forward to working with the Council and its partners to secure the most appropriate and sustainable solution, and consider that Bush Farm will contribute towards meeting the borough's housing shortfall, for the reasons presented in this representation.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. It concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land including Bush Farm will be released for housing development.
REG18.2	Adams Family (Bidwells)	This Report provides our consolidated response to the questions in the Council's Local Plan questionnaire. Fundamentally, we consider that the Local Plan should take a balanced approach to new development, having regard to the need to accommodate acute and competing demands on a limited land resource. We believe that a review of Green Belt is essential to help the Council to ensure that the new Local Plan can deliver sufficient housing to meet the Borough's London Plan targets, address objectively housing needs and enable a range of house types to come forward to support mixed and balanced	Noted.The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any

Response Number	Respondent Name	Response to Q17	Council's response
		communities. A review of Green Belt boundaries may also help to ensure existing employment sites are not unnecessarily lost to residential use in a period of strong economic growth, it would help to avoid an imbalance of high density residential development and other commercial uses in town centres and the development of greenfield land offers the best opportunity of delivering the infrastructure required to support new development. Targeted development of some Green Belt land can also enable the enhancement for the beneficial use of other land serving a more important Green Belt function. The Council will need to identify through its evidence base how the Plan can deliver its development requirements in a way that does not compromise interlinked sustainability objectives. Failure to this would result in a Plan which is unsound. In light of this the Council should not make any decisions on the proposed location of new development until there is a clear understanding of the following, as yet unpublished, evidence base documents: – An Employment Land Review – in order to identify the extent of demand for employment land, to ensure that any changes of use to residential do not adversely affect economic growth; – A Havering Borough SHLAA Viability Appraisal – to quantify and validate the assumptions of the London Plan Viability Appraisal to provide a more robust assessment of the deliverability of the Borough's brownfield housing land supply. – An East London SHMA – to identify the likely mix, type and tenure of dwellings needed in the Borough, and linked to this, the range of site types (including Green Belt land) needed to viably deliver such a range; and – A Green Belt Review – to have, as a minimum, an understanding of the	modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land including Land at New Road, Rainham within the Green Belt will be released for housing development.

Response Number	Respondent Name	Response to Q17	Council's response
		Green Belt function offered by the sites promoted for development in the Local Plan and the potential benefits their development could bring. Alongside this evidence gathering, we would urge the Council to have full regard to the opportunities presented by Land at New Road, Rainham, which could deliver much needed new homes on derelict, vacant land which does not serve an important Green Belt function whilst enabling the beneficial use of other vacant, inaccessible Green Belt land adjacent to the Ingrebourne River and enhancements to the Ingrebourne Marshes SSSI.	
REG18.3	Anonymous	Should be proper local democracy. We don't trust Havering Council.	Noted.
REG18.4	Barratt London (GVA)	Refer to separate document	Noted.
REG18.5	Basildon Borough Council	Firstly, thank you for inviting Basildon Borough Council to provide comments as part of London Borough of Havering's consultation on its New Local Plan. Whilst Basildon Borough Council is not a neighbouring local planning authority (LPA) to Havering, there are a number of strategic issues, such as housing and infrastructure, which operate at levels greater than a single LPA area and which concern both Boroughs. It is important that such issues are addressed through collaborative working and meaningful discussions in accordance with legislation, the National Planning Policy Framework (NPPF), and the Planning Practice Guidance (PPG). Basildon Borough Council acknowledges that this consultation only seeks to identify the future issues for Havering and what priorities the Local Plan should address. It is acknowledged that the Local Plan consultation document does not identify options, in terms of policies and strategic growth areas, or identify the Borough's housing and employment needs. In view of this, Basildon Borough Council wishes to make a series of observations which Havering should take into consideration when it prepares the draft version of its Local Plan.	Noted. The Council has worked closely with Basildon Council regarding the strategic issues identified to fulfil the Duty to Co-operate and will continue to do so. An Outer north east SHMA has been undertaken in collaboration with the London Boroughs of Redbridge and Baking and Dagenham. The SHMA indicated that Havering's full Objectively Assessed Market Assessment Need is for 30,052 new homes over the period 2011 – 2033 or 1,366 homes per annum which is greater than the London Plan allocated housing target to Havering. The Council has undertaken a Local Needs Accommodation Assessment (LNAA) for its own Gypsy, Traveller and Travelling Show-people which identified the need for 33

Response Number	Respondent Name	Response to Q17	Council's response
		Housing Delivery and Meeting Need Whilst the London Plan (March 2015) sets a minimum annual housing target for each London Borough, every LPA should still plan to meet their own full objectively assessed need (OAN) for market and affordable housing in accordance with paragraph 47 of the NPPF. To be consistent with paragraph 47 of the NPPF, Havering should first look to meet this need within its own housing market area which is the Outer North East London Housing Market Area before looking beyond this, and engaging in discussions with LPAs in neighbouring strategic housing market areas to determine if they are able to meet any unmet need. It is noted that whilst the minimum annual housing target of 1,170 units has been set in the London Plan (March 2015), the evidence for identifying the Borough's OAN, namely the Strategic Housing Market Assessment is still forthcoming. Therefore, it is not known at this stage whether Havering's Local Plan will need to plan for a housing provision over and above what was set by the London Plan (March 2015). Furthermore, the Council feels it is important to note that there is already an assumption built into the trends that have informed Basildon Borough's OAN that annual net migration from Havering to Basildon Borough will continue and it has therefore already been built into Basildon Borough's OAN of 800 units per annum. The Council refers Havering to the Basildon Borough Housing Growth Topic Paper 2013 for the details as to how this has been derived, as well as the Thames Gateway South Essex Strategic Housing Market Assessment 2013 and the 2015 update currently underway. Basildon Borough Council understands that Havering is currently able to meet its minimum annual housing target over the next 10 year period on brownfield land. However, it is unclear how Havering will look to accommodate further housing provision across the remaining proposed	pitches for the Gypsy and Traveller community and no plot for the Travelling Show-people over the Proposed Submission version of the Local Plan period. Havering will meet current and future accommodation needs of its Gypsies and Travellers and Travelling Show-people by formalising existing private sites providing a maximum of 33 pitches for Gypsies and Travellers and by retaining and protecting the existing Travelling Show-people plot at Fairoakes, St Mary's Lane.

Response Number	Respondent Name	Response to Q17	Council's response
		plan period or plan to meet its OAN across the whole plan period should this be higher than the London Plan target. Paragraph 47 of the NPPF states that *"local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements [… and] identify a supply of specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15"*. During an officer led workshop within the consultation period London Borough of Havering proposed undertaking a Green Belt Review to inform the Local Plan preparation which Basildon Borough Council welcomes. As well as identifying land which is important to maintain the permanent openness of the Metropolitan Green Belt, the review may identify land that no longer serves the five Green Belt purposes, or is necessary to keep permanently open, which could potentially accommodate sustainable development. This could assist Havering in meeting its OAN locally and must be explored fully first. <u>Gypsy & Traveller Provision</u> During the preparation of the Basildon Borough Gypsy, Traveller and Travelling Showpeople Local Needs Accommodation Assessment 2014, the Mayor of London was invited to participate in the study, but declined and provided the following explanation *"Whilst the Mayor recognises that provision for Gypsies and Travellers is a strategic issues (see London Plan Policy 3.8 Bi, [then] Draft Revised Early Modifications to the London Plan paragraphs 3.56-3.57a), he considers that it is addressed most effectively by the boroughs. These are best placed to come to the view on how to accommodate what are individually small scale developments in light of local circumstances and national policy requirements."*	The Council has undertaken a Local Needs Accommodation Assessment (LNAA) for its own Gypsy, Traveller and Travelling Showpeople which identified the need for 33 pitches for the Gypsy and Traveller community and no plot for the Travelling Showpeople over the Proposed Submission version of the Local Plan period. Havering will meet current and future accommodation needs of Gypsies and Travellers and Travelling Showpeople by formalising existing private sites

Response Number	Respondent Name	Response to Q17	Council's response
		Basildon Borough Council is currently undertaking a Site Study to determine if it can meet the needs set out in its Local Needs Accommodation Assessment (LNAA), which is due to conclude in Summer 2015. Given the recognition that the Mayor has determined that boroughs are best placed to plan to meet the need for Gypsies and Travellers, the Council expects the London Borough of Havering to prepare alone, or jointly with others, its own LNAA as required by the NPPF and, through its Local Plan, safeguard existing local provision and identify new sites which will meet those additional needs. In addition, if it is unable to meet all of its own needs, Basildon Borough Council will seek the cooperation of other LPAs in Essex and London to help meet those needs. <u>Transport Infrastructure</u> Basildon Borough Council is aware that the radial highways, particularly the A127, and rail networks which serve the area between London and the South Essex area, which includes Basildon Borough, are already considered to be at or close to capacity, particularly at peak times. Whilst Transport for London is the primary agency managing London's transport infrastructure and not Havering, it is essential that meaningful collaborative engagement and continual working between local planning authorities, highway authorities relevant agencies and transport providers occurs to ensure that strategic transport links, termini, nodes and their respective transport services into London and South Essex are capable of accommodating the additional service pressures that are likely to arise as a result of future population growth in London and South Essex. <u>Evidence Base</u> Much of the evidence base which will inform and support the emerging Local Plan is noted to still be forthcoming. In the absence of this evidence, and in view of the light touch approach used in the Local Plan consultation document, it is not possible for the Council to comment on whether the	providing a maximum of 33 pitches for Gypsies and Travellers and by retaining and protecting the existing Travelling Showpeople plot at Fairoakes, St Mary's Lane. The Proposed Submission version of the Local Plan sets out policies for the key strategic transport aspirations for the borough and for improved public transport including the aspiration for longer and more frequent trains stopping at Romford station (particular service provision during the morning and evening peaks), and increasing capacity on services along the Essex Thameside line. Havering recognises the capacity constraints along the A127 and discussions have been taking place between Havering and neighbouring boroughs on tackling such issues along this key growth corridor.

Response Number	Respondent Name	Response to Q17	Council's response
		forthcoming evidence will be comprehensive and appropriate for what the Local Plan will cover. It is important that Havering identifies options, strategic growth areas and policies informed by up-to-date evidence including those which have been mentioned in this consultation response and through publication of a draft Local Plan invite further representations from LPAs. At examination Havering would need to show that the Local Plan has been prepared in accordance with the Duty to Cooperate, and other legal and procedural requirements, and that it complies with the test of soundness at examination. As stipulated in paragraph 182 of the NPPF, for a Local Plan to be found "sound" it should have been positively prepared, be effective including the plan's deliverability, be consistent with national policy and be justified insofar as being the most appropriate strategy, when considered against the reasonable alternatives, based on proportionate evidence. Basildon Borough Council welcomes further engagement with the London Borough of Havering to ensure that the observations raised in this response are duly considered and to continue working together on strategic planning priorities through the Duty to Cooperate.	The Duty to Co-operate Statement sets out in greater detail how this co-operation has been taking place to address emerging strategic issues. Havering continues to lobby and work collaboratively with Transport for London, the Highway Agency, the DfT and other relevant agencies for better transport services within the borough and between the borough and other adjoining local authorities. The evidence base underpinning the policies of the Proposed Submission version of the Local Plan is comprehensive and appropriate and is in line with advice set out in NPPF. The Proposed Submission version of the Local Plan identifies reasonable alternatives which were subjected to Sustainability Appraisal with the most appropriate alternative chosen as the preferred option. The Council considers that the Proposed Submission version of the Local Plan has been prepared in accordance with the Duty to Cooperate, and other legal and procedural requirements, and that it will comply with the test of soundness as set out at paragraph 182 of the NPPF.
			Noted. The Council has provided members

Response Number	Respondent Name	Response to Q17	Council's response
REG18.6	Bill England	I am surprised but pleased that the residents of Havering are to be given the chance to have their opinions considered and published by the Havering Council. The developments which have evolved over the past twenty years have in my opinion lacked any regard for attractive design, or preserving green spaces, or gardens. The rule in assessing a planning application that "views do not count" is an indication of the philistinism of our time. The drive for increased building developments are in order of priority the following:- 1. Market forces, which in this case are influenced by population expansion 2. Property developers influences on local council decisions. (Top companies contribute millions to the Conservative Party) 3. Central Government acceptance of increased building density. Nick Boles has earned the (Nick) name "bulldozer") The detrimental effects of this system which has already occurred in Havering are as follows:- 1. The building of high rise flats particularly in Romford. 2. The purchase of houses by developers in order to replace them with apartment buildings which are extended into the gardens. This has been a practice in Hornchurch and Upminster. 3. The sale of school playing fields to developers. 4. The sale and potential sale of green spaces to developers which have already happened around the borough 5. The resultant need for increased services due to increased population density. The planning systems around the country have all been under fire in a	of the public, organisations and other stakeholders opportunities to throughout the various stages in the preparation of the Proposed Submission version of the Local Plan. The Proposed Submission version of the Local Plan contains policies promoting attractive high design quality for developments including provision of usable amenity spaces or preservation of green spaces.

Response Number	Respondent Name	Response to Q17	Council's response
		similar fashion, and the last government changed some of the planning procedures in order to speed up decisions. The changing of our gardens to brownfield areas by the Blair government was an absolute travesty. Although the present government reversed this policy, developers are selecting houses which have relatively large garden spaces and offering the owners above market value payments to sell, in order to build flats over the whole area. One of the worst features of the whole system, is that councils do not declare openly to the population their overall future plans. So we have a system where redevelopment is performed on a gradual basis. It would be more democratic if central and local governments declared to their electorates that due to the rate of population expansion, occupation densities must be increased and therefore green spaces and gardens will be sacrificed. Would it be too optimistic to expect the council to publish an article in the Living magazine, signed by the Council Leader, stating that "despite population expansion *we will never allow* any further erosion of our green spaces", and to indicate which areas will never be allowed to be demolished and replaced by flats. I have observed that new developments in Colchester have no gardens, - just tiny back yards. Developers must look at Garden Suburbs such as Upminster and wonder how they can get to occupy all those large garden spaces. We live in a democracy. We should make the planning system more democratic.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no part of the Green Belt land will be released for housing development.
REG18.7	Brentwood Borough Council	– Brentwood Borough Council welcomes the opportunity to comment on the key issues and priorities for the London Borough of Havering as the Council prepares its emerging Local Plan.	The Council has constructively engaged with Brentwood Borough Council throughout the various stages in the

Response Number	Respondent Name	Response to Q17	Council's response
	(Officer response)	– Brentwood Borough Council supports the London Borough of Havering's commitment to progressing a Local Plan informed by a robust evidence base. The Council would support a Local Plan which seeks to meet the development needs of its area, as is consistent with the National Planning Policy Framework and Planning Practice Guidance. – As a neighbouring authority Brentwood Borough Council emphasises the importance of working together on cross boundary issues, such as potential development adjacent to Junction 28 & 29 of the M25, and will continue to engage with the London Borough, including in relation to the Outer North East London Strategic Housing Market Assessment.	preparation of the Proposed Submission version of the Local Plan and is looking forward to continuing this engagement.
REG18.9	C. Cole	I get a bit anxious about Junction Road. Litter strewn slumminess.	Noted. The Proposed Submission version of the Local Plan contains policies to tackle traffic congestion generally. The issue about litter being strewn is outside the scope of the Proposed Submission version of the Local Plan.
REG18.10	Chelmsford City Council	Thank you for consulting Chelmsford City Council (CCC) on a new Local Plan for Havering. CCC has no specific comments on the consultation document but would wish to maintain a constructive dialogue under the 'Duty to Co-operate' in respect to your emerging SHMA. CCC would welcome a Havering Local Plan that sought to meet its housing needs in full within its Borough	The Council has constructively engaged with Chelmsford City Council throughout the various stages of the Proposed Submission version of the Local Plan and is looking forward to continue this engagement.
REG18.12	D. Campbell	To modernise the buildings but not to change the ethnicity too much.	Noted. The Proposed Submission version of the Local Plan contains policies which support renewal and transformation of buildings including twelve Council estates. However, 'not to change the ethnicity too much is outside the scope of the Proposed Submission version of the Local Plan.
REG18.14	Edward Gittins & Associates	We consider that the Local Plan presents the right opportunity to review the Green Belt boundary.	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local

Response Number	Respondent Name	Response to Q17	Council's response
			Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing or any other type of development.
REG18.16	English Heritage (now Historic England)	Thank you for your consultation on the New Local Plan for Havering. As the Government's adviser on the historic environment English Heritage is keen to ensure that the protection of the historic environment is fully taken into account at all stages and levels of the local planning process. English Heritage welcomes the opportunity to comment upon this key planning document. Having considered the details of the New Local Plan we have the following headline comments to make: We support the inclusion of strategic priority that addresses management of the Borough's heritage. However, this priority should form the basis of the Council's approach to managing the historic environment in line with the National planning Policy Framework (NPPF) paragraph 126. This places an expectation upon local planning authorities to set out in their Local Plan a positive strategy for the conservation and enjoyment of the historic environment. Details of what should be included in that strategy is set out further in the NPPF – such as sustaining and enhancing the	The Council has taken these comments on board in the preparation of the heritage policies in the Proposed Submission version of the Local Plan. Further engagement has also taken place with Historic England under the Duty to Co-operate to make sure strategic issues are dealt with.

Response Number	Respondent Name	Response to Q17	Council's response
		significance of heritage assets, recognising the benefits that conservation of the historic environment can bring in terms of wider social, cultural, economic and environmental gains, and ensuring new developments make a positive contribution to the local character and distinctiveness of a place by understanding what is important to conserve and enhance. In short the strategic priority for the conservation of the historic environment should not be a passive exercise. As further explained in the National Planning Policy Guidance (NPPG) paragraph 004, local planning authorities should identify specific opportunities within their area for the conservation and enhancement of heritage assets. This could include the following issues: – Protect, enhance, manage and where possible, better reveal the character and appearance of landscapes, townscapes by maintaining and strengthening their local distinctiveness and sense of place. – Improve and broaden access to and understanding of local heritage, archaeology, historic sites, areas and buildings. – Foster heritage-led regeneration To support the development of a robust strategy for the conservation of the Borough's heritage, Local Plans need to be based on adequate, up-to-date and relevant evidence about the historic environment. When gathering evidence, it is important to bear in mind that this is not simply an exercise in setting out known sites but, understanding their value to society (i.e. their significance). Without this understanding some of the subtle qualities of the local distinctiveness and character of a local area could be easily lost. In addition we would advise that the details of the other subject areas such as Housing, Town Centres, Transport, Design, Green Belt, and Culture and Leisure, should consider how the proactive management of the historic environment can contribute towards the delivery of these priorities. For example, many of the Borough's town centres contain heritage assets or features of historic interest. Evidence shows that successful management	

Response Number	Respondent Name	Response to Q17	Council's response
		of heritage assets, including direct investment in its fabric, can help contribute towards improvements in the performance and attractiveness of town centres. To help in the further development of the New Local Plan we would advise you to consider English Heritage's draft Good Practice Advice Note 1: The Historic Environment in Local Plans (Please see the link: http://www.english-heritage.org.uk/content/imported-docs/f-j/gpa1-he-local-plans-consultation.pdf). This was consulted upon in July 2014, and is now in the closing stages of being finalised and published. In the meantime, we look forward to being engaged further in the next iteration of the New Local Plan, where we could offer further advice to help ensure a positive strategy for the management of the historic environment is embedded in the Plan. In the meantime we would strongly advise that the Borough's own conservation staff are closely involved throughout the preparation of the emerging new Local Plan and associated Sustainability Appraisal, as they are often best placed to advise on: local historic environment issues and priorities, sources of data and consideration of options relating to the historic environment. Finally, we should like to stress that this opinion is based on the information provided by you. To avoid any doubt, this does not affect our obligation to provide further advice and, potentially, object to specific proposals, which may subsequently arise where we consider that these would have an adverse effect upon the historic environment. However once you have considered our comments we would welcome a meeting to discuss any points raised.	
REG18.17	Epping Forest District Council	Thank you for consulting this Council on the above strategic document. This is an officer level response to meet the deadline of 23rd March. The comments are similarly strategic or general and are not therefore directly related to any of the specific questions, and are intended to be constructive. It is hoped that they will be of use when the next stages of the	The Council has engaged constructively with Epping Forest District Council and other strategic bodies in the preparation of the Proposed Submission version of the Local Plan. The Duty to Co-operate

Response Number	Respondent Name	Response to Q17	Council's response
		Local Plan are prepared for consultation. Mention is obviously made of the London Plan and, in relation to the Waste Plan, co-operation with adjoining London Boroughs. There is, however, no direct mention of Member and officer-level co-operation with adjoining Essex authorities on other strategic cross-boundary issues. It is increasingly apparent from the outcomes of several Examinations in Public throughout the country that a large number of authorities' Local Plans are being judged unsound because of a failure to meet Duty to Co-operate requirements. It may therefore be helpful if the next consultation stage included a more direct reference to such co-operation as one of the key priorities. The section on housing provision makes no mention of meeting the need for provision of sites or pitches for the travelling community. This is increasingly an issue of concern for this authority as the most recent GTAA for Essex identified a very challenging target for this Council, partly because of Green Belt constraints (the district is currently 92% Green Belt). One of the options that will be pursued by this Council in an attempt to meet the target is to seek some provision of sites and pitches within adjoining authorities, in line with para 9 I of Planning policy for traveller sites. This is likely to become a standing agenda item in future meetings with neighbouring authorities concerning Duty to Co-operate and other related issues.	statement sets out in detail how engagement has taken place and how this has influenced the Proposed Submission version of the Local Plan. The Council has been engaging with other local authorities on this issue, and like other neighbouring authorities, is looking to meet its own need. The Council has undertaken a Local Needs Accommodation Assessment (LNAA) for its own Gypsy, Traveller and Travelling Showpeople which identified the need for 33 pitches for the Gypsy and Traveller community and no plot for the Travelling Showpeople over the Proposed Submission version of the Local Plan period. Havering will meet current and future accommodation needs of its Gypsies and Travellers and Travelling Showpeople by formalising existing private sites providing a maximum of 33 pitches for Gypsies and Travellers and by retaining and protecting the existing Travelling Showpeople plot at Fairoakes, St Mary's Lane.

Response Number	Respondent Name	Response to Q17	Council's response
REG18.18	Essex County Council	1. Introduction Thank you for seeking Essex County Council (ECC) comments on the first consultation into the preparation of the Havering New Local Plan 'Issues and Priorities' consultation. In responding to this consultation, ECC acknowledges the need for the London Borough of Havering (LB Havering) as the Local Planning Authority to explore opportunities to meet its future economic growth, housing and infrastructure requirements. As an adjoining authority ECC will identify and assess impacts to ensure local plans provide a reliable basis for the provision of services and infrastructure for which it is responsible. ECC will use its best endeavours to assist cross-boundary matters under the duty to cooperate, including engagement and co-operation with other organisations for which those issues may have relevance. In accordance with the duty to cooperate, as established in the Localism Act 2011, ECC will contribute cooperatively to this consultation, and separately to the on-going preparation of the new local plan, particularly within the following broad areas, – ECC assets and services. Where relevant, advice on current status of assets and services and the likely impact and implications of proposals in emerging Local Plans for the future operation and delivery of ECC services. – Evidence base. Guidance with assembly and interpretation of the evidence base both for strategic/cross-boundary projects, for example, education provision and transport studies and modelling. – Policy development. Contributions on the relationship of the evidence base to structure and content of emerging policies and proposals. – Sub-regional and broader context. Assistance with identification of relevant information and its fit with broader strategic initiatives, for example, the Economic Plan for Essex, and the A127 Corridor for Growth, and assessments of how emerging proposals for the borough may impact on areas beyond and vice-versa. – Inter-relationship between Local Plans. Including the Essex Minerals	The Council has engaged constructively with Essex County Council on several strategic issues during the preparation of the Proposed Submission version of the Local Plan and will continue to do so. The Council has regularly updated a list of evidence base on its website, and informed stakeholders when evidence came available. The Council has also worked closely together with Essex County Council and other neighbouring local authorities during the production of several evidence base documents. The Duty to Co-operate statement sets out in detail how engagement has taken place with neighbouring authorities and other organisations. The Council considers that the SA Scoping Report forms an appropriate basis and is in line with the SA/SEA regulations. The Regulation 19 Local Plan is accompanied by a SA/SEA report.

Response Number	Respondent Name	Response to Q17	Council's response
		Local Plan and Essex and Southend-on-Sea Waste Local Plan. ECC is keen to inform and shape future spatial development strategies and policies delivered by adjoining Local Planning Authorities which could influence and affect economic growth and development throughout Essex. ECC also aims to ensure that local strategies and policies will provide the greatest benefit to deliver a buoyant economy for existing and future persons that live, work, visit and invest in Essex. Involvement is necessary because of the ECC role as, – a key partner within Essex promoting economic development, regeneration, infrastructure delivery and new development throughout the County; and – its functional role as the strategic highway and transport authority, including responsibility for the delivery of the Essex Local Transport Plan and as the local highway authority; local education authority; Minerals and Waste Planning Authority and local lead flood authority; and major provider of a wide range of local government services throughout the county of Essex. <u>1A. Strategic context and strategies</u> A range of strategies produced solely by ECC or in collaboration with the Essex borough, city and district councils, and Greater Essex unitary authorities Thurrock and Southend-on-Sea, provide the strategic context for our response to the Local Plan consultation. Relevant strategies are listed below and are referred to within section 2. • ECC Vision for Essex 2013 – 2017 • ECC Corporate Outcomes Framework 2014 – 2018, February 2014 • Economic Plan for Essex 2014 • ECC Sustainable Economic Growth for Essex Communities and Businesses, 2014 • ECC Economic Growth Strategy, 2014 • Essex Transport Strategy the Local Transport Plan for Essex, June 2011	

Response Number	Respondent Name	Response to Q17	Council's response
		• A127 Corridor for Growth – An Economic Plan, 2014 • ECC Developer's Guide to Infrastructure Contributions, 2015 Revision Consultation 2. <u>ECC RESPONSE TO THE ISSUES AND PRIORITIES CONSULTATION</u> The consultation is of relevance to ECC as the LB Havering adjoins Essex. There are potential impacts through highways, transport infrastructure, education, flooding and surface water management, and minerals and waste planning. ECC is the highway authority (and has responsibility for the delivery of the Essex Local Transport Plan); local education authority; Minerals and Waste Planning Authority; Local Lead Flood Authority; and a major provider of a wide range of local government services throughout the county of Essex, many of which are accessed by those who reside in adjoining authorities. ECC acknowledge the consultation but intends to hold back its support until key evidence is available to inform and shape the new Local Plan as indicated within the specific comments below. In addition there are procedural concerns with the consultation, and on-going local plan preparation as proposed by LB Havering. – There is a lack of supporting evidence to enable informed responses to be made to the consultation issues and questions. – Due to the high level nature of this consultation, ECC is concerned that it is not evident if, how or when we would be engaged under the duty to co-operate in an ongoing manner to inform the preparation of the new local plan. It is of particular concern how the preparation of the plan is to progress directly from this high level Regulation 18 'Issues and Priorities' consultation to the Proposed Submission Version (Regulation 19) scheduled for the end of 2015, especially given the absence of evidence and options at this stage. It is unclear how ECC will be able to comment and inform any reasonable options and emerging strategies between the proposed two consultation stages.	

Response Number	Respondent Name	Response to Q17	Council's response
		This Regulation 18 consultation does not appear to be supported by a Sustainability Appraisal / Sustainable Environmental Assessment (SA/SEA) contrary to the SA/SEA regulations on the preparation of policies, plans and programmes and to the legal compliance requirements in preparing a sound local plan. It is of concern that within the SA Scoping Report February 2015, that the "baseline" under Task A1 only focusses on the LB of Havering and the London Plan. There appears to be a lack of a wider context given that the borough adjoins Essex County Council; Epping Forest DC, Brentwood BC and the unitary authority of Thurrock Council. For example the baseline does not acknowledge or refer to their respective local plans (including minerals and waste) or the wider joint strategies including the Economic Plan for Essex (March 2014); the A127 Corridor for Growth (March 2014) and the South East Local Enterprise Partnership. 3. Conclusion ECC will cooperate with the LB Havering in considering the potential implications of its new Local Plan for Essex, but at this stage we do not provide our support until the publication of an adequate evidence base in inform the identification of spatial strategy options and a preferred strategy. ECC seeks clarification on the proposed procedural approach to local plan preparation and engagement with ECC under the duty to co-operate.	
REG18.20	Greater London Authority	Thank you for your letter consulting the Mayor of London on the early stage of Havering Council's new Local Plan document and for providing the GLA the opportunity to comment on the emerging document. As you are aware all development plan documents have to be in general conformity with the London Plan under section 24 (1)(b) of the Planning and Compulsory Purchase Act 2004. Given the very early stage of consultation there is not currently sufficient information in order for officers to provide detailed comments as to whether the emerging policy document is in general conformity with the London	The Council has engaged constructively with the GLA during the preparation of the Proposed Submission version of the Local Plan. As the London Plan is part of the development plan for Havering the Proposed Submission version of the Local Plan has been sought to conform to the London Plan.

Response Number	Respondent Name	Response to Q17	Council's response
		Plan. Notwithstanding this, in response to the opening question As a general guide at this early stage, the subsequent fifteen broad questions relating to each of the key priorities can be answered from a strategic planning policy perspective by referring to the relevant policies of the London Plan. Further engagement as the document progresses is strongly welcomed. The Mayor will issue his formal opinion on general conformity when requested at the proposed submission stage.	
REG18.21	Havering College of Further and Higher Education (Iceni Projects)	Iceni Projects Limited ('Iceni') is appointed by Havering College of Further and Higher Education ('HCFHE') to provide town planning advice relating to its land ownership and educational interests within the London Borough of Havering ('LBH'). HCFHE has four primary interests across the Borough, these include: – The Quarles campus – located on Tring Gardens, Harold Hill; – The Rainham Construction campus – located on New Road, Rainham; – The Ardleigh Green campus – located on Ardleigh Green Road, Hornchurch; and, – The future Harold Hill Learning Village – located at Settle Road, Harold Hill. In light of these educational facilities, and as a key stakeholder in the Borough, HCFHE welcome the opportunity to provide comments on the forthcoming LBH Local Plan. HCFHE note that this is the very early stages of the Borough's plan preparation and as such welcome the opportunity to comment on future stages of consultation. As a provider of further and higher education, and as a key stakeholder within the Borough, HCFHE is grateful of the opportunity to comment on the key objectives and strategic priorities of the emerging Local Plan for the Borough. HCFHE wish to continue to be involved the development of the	The Council has engaged constructively with HCFHE specifically for the preparation of the Infrastructure Delivery Plan, and looks forward to continued engagement.

Response Number	Respondent Name	Response to Q17	Council's response
		Local Plan.	
REG18.23	Heine Planning	Need to focus on what is special to Havering and let NPPF deal with the rest.	Noted. The Proposed Submission version of the Local Plan sets out policies which are specific to Havering with the NPPF / London Plan providing overarching policies and guidance on broad planning issues.
REG18.24	Higgins Homes (Nathaniel Lichfield & Partners)	Given the need to satisfy the updated annual target for housing supply in Havering (as identified in the FALP) and the likely increase through the London Plan Review, it is considered that the Plan needs to allocate housing sites both within the urban area and in the Green Belt at sustainable locations. Sites within the urban area alone are not delivering the new homes required. We have proposed one such site that is currently in the Green Belt. This should be taken out of the Green Belt and allocated for housing, as it provides the opportunity to 'deliver' residential development, providing a range of dwelling sizes, in a sustainable location on the edge of the existing urban area.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing development.
REG18.26	Ian Weatherley	Havering has long been a borough to be proud of, and for people to relish their quality of life due to the open spaces, parks and areas where families can play and relax. We MUST safeguard these open areas and guard against building on every piece of land – otherwise Havering faces being yet another densely populated London Borough and give rise to 'Ghetto' sites around the borough – which give rise to crime and ASB.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. 			Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing development.
REG18.27	Janet Davy	Thank you for sending this questionnaire. I hope you will take note of these and other people's comments.	Noted. The Council has taken account of the representations made in the preparation of the Proposed Submission Version of the Local Plan.
REG18.28	Joe Coogan	Havering's population has grown significantly and this will continue. The local plan should be used to creatively meet the needs of the population in a sensitive way. Local people want access to quality housing and good schools, if the local plan can unlock sites that are currently underused to meet this need the changes will be successful.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be unlocked for housing development.
REG18.29	John Peterson	No more charity shops in towns to many already	Noted. Limiting the number of charity shops in towns is outside the scope of the Proposed Submission version of the Local Plan.
REG18.33	Mr Leslie Budge (Andrew Martin	In September 2014 Andrew Martin – Planning (AM-P) submitted representations to a 'Call for Sites' by London Borough of Havering, in respect of Land at Little Paddocks Farm, Shepherds Hill, Harold Wood on behalf of the landowner, Mr Leslie Budge. We now submit our written	The Proposed Submission version of the Local Plan seeks to deliver the London Plan housing target as a minimum, and go beyond that where possible to meet the full

Response Number	Respondent Name	Response to Q17	Council's response
	Planning)	response to the latest consultation on the Local Plan that seeks to determine key strategic priorities for the Borough over the next 15 years. We attach a copy of the presentations and site location plan, submitted previously. In addition we have prepared an illustrative master plan to demonstrate that a form of residential-led development can be achieved on the site. <u>The London Plan</u> Mr Anthony Thickett, an independent planning inspector appointed by the Secretary of State, held an examination in public of the Draft Further Alterations to the London Plan from 1 September and 18 September 2014. The report setting out his findings and conclusions was published on 15 December 2014 and the Inspector's recommendations were adopted in early March 2015. The Further Alterations to the London Plan (FALP) document indicates that the London Boroughs collectively need to provide 49,000 dwellings per annum between 2015 and2036 in order to meet both market and affordable housing needs for London. In terms of supply the FALP has provided minimum housing supply targets for each of the Boroughs, which in total equates to 420,000 additional homes over the period 2015 to 2025, or 42,000 dwellings per annum. London Borough of Havering should be aiming to provide a <u>minimum</u> of 11,701 dwellings between 2015-2025, an annual target of 1,170 dwellings. The FALP introduces a requirement for the London Boroughs to meet their own housing target, as set out in Table 3.1 (i.e. 1,170 dpa in the case of LB Havering) and address any gap between supply and need by seeking to exceed this target where possible. The Inspector's report goes on to state at paragraph 33: *"However, in order to be in general conformity with Table 3.1, Boroughs need only meet their individual targets. In the absence of any clear guidance as to exactly how and where the additional 6,600 dpa will be*	OAN in the borough. The Council therefore believes that it is in general conformity with the London Plan and has engaged with the GLA on this matter.

Response Number	Respondent Name	Response to Q17	Council's response
		found it is difficult to see how a housing target in a local plan would not be in general conformity if it made provision for the figure in Table 3.1 and no more. *There is no mechanism in the FALP to indicate how the 6,600 dpa would be apportioned or distributed. Without this I do not see how the Mayor can guarantee the delivery of the additional 6,600 dpa necessary to meet the identified need."* On this basis, the Inspector has concluded that the housing targets in the FALP will not provide sufficient housing to meet the objectively assessed housing need in London and he is not convinced that the FALP ensures the additional 6,600 dpa, not allocated to specific Boroughs, will be delivered. On this evidence it is likely that the London Plan strategy will not deliver sufficient homes to meet housing needs, and so the Inspector has called for an early review of the Plan to commence once the FALP is adopted in 2015. Until this review is published, it is the responsibility of the London Boroughs and districts in the South East England to acknowledge this shortfall in supply and react to it by allowing new development in sustainable locations, in a bid to try and exceed their allocated housing targets and narrow the gap between need and supply. LB Havering should therefore be proactively seeking to exceed their target in the London Plan through the allocation of sustainable, deliverable and suitable sites for residential development. This may involve the strategic release of green belt land where it can be demonstrated, through a green belt review, that the five purposes of including land within the green belt are no longer being met.	
REG18.34	Margaret Whippy	The land adjacent to my plot (Cross-Hatched) has been fenced off and/or used illegally since the 1960's by various people and not put to any sensible use. It is not prime agricultural land, has been used variously as a dumping ground over the years and therefore calling it 'green belt' is hypocrisy. It originally had consent in the 1920's for housing use, however	The Proposed Submission version of the Local Plan supports improvements to Green Belt and resists inappropriate development in the Green Belt consistent with the NPPF. However, discouraging

Response Number	Respondent Name	Response to Q17	Council's response
		the onset of the 2nd World War and the development of the A127 road altered its planning. In the meantime, people have fenced off areas for their own use, without legally owning it, then laying claim to it. Surely Havering should be discouraging this kind of squatting.	squatters on the land adjacent to yours is outside the scope of the Proposed Submission version of the Local Plan.
REG18.35	Mobile Operators Association (Mono Consultants)	We would take this opportunity to comment that we consider it important that there is a specific telecommunications policy within the emerging Local Plan. We consider that the vital role that telecommunications play in both the economic and social fabric of communities merit the inclusion of a policy which refers specifically to telecommunications developments. National guidance recognises this through Section 5: "Supporting high quality communications infrastructure" of National Planning Policy Framework (March 2012) which provides clear guidance as to the main issues surrounding telecommunications development. The National Planning Policy Framework (NPPF) at paragraph 42 confirms that; "advanced, high quality communications infrastructure is essential for sustainable economic growth and play a vital role in enhancing the provision of local community facilities and services." Paragraph 43 of NPPF confirms that; "in preparing local plans, local planning authorities should support the expansion of telecommunications networks", but should also; "aim to keep the numbers of radio telecommunications masts and sites for such installations to a minimum consistent with the efficient operation of the network. Existing masts, buildings and other structures should be used, unless the need for a new site has been justified." As indicated above, the formulation of policy does not exist in isolation and there are numerous documents which will affect the formulation of any telecommunications policy, the most important of these being NPPF. On this basis we would suggest that a concise and flexible	Noted. The Proposed Submission version of the Local Plan contains policies promoting the enhanced connectivity of the borough through the expansion of electronic communications networks, including telecommunications and high speed broadband.

Response Number	Respondent Name	Response to Q17	Council's response
		telecommunications policy should be included within the emerging Local Plan. Such a policy should give all stakeholders a clear indication of the issues that telecommunications development will be assessed against. We would suggest a policy which reads; "Proposals for telecommunications development will be permitted provided that the following criteria are met: - i. the siting and appearance of the proposed apparatus and associated structures should seek to minimise impact on the visual amenity, character or appearance of the surrounding area; ii. if on a building, apparatus and associated structures should be sited and designed in order to seek to minimise impact to the external appearance of the host building; iii. if proposing a new mast, it should be demonstrated that the applicant has explored the possibility of erecting apparatus on existing buildings, masts or other structures. Such evidence should accompany any application made to the (local) planning authority. iv. If proposing development in a sensitive area, the development should not have an unacceptable effect on areas of ecological interest, areas of landscape importance, archaeological sites, conservation areas or buildings of architectural or historic interest. When considering applications for telecommunications development, the (local) planning authority will have regard to the operational requirements of telecommunications networks and the technical limitations of the technology." We would consider it appropriate to introduce the policy and we would suggest the following; "Mobile communications are now considered an integral part of the success of most business operations and individual lifestyles. With the growth of services such as mobile internet access, demand for new	

Response Number	Respondent Name	Response to Q17	Council's response
		telecommunications infrastructure is continuing to grow. The authority is keen to facilitate this expansion whilst at the same time minimising any environmental impacts. It is our policy to reduce the proliferation of new masts by encouraging mast sharing and siting equipment on existing tall structures and buildings."	
REG18.36	Moody Homes and Mr John Wakeling (Bidwells)	This Report provides our consolidated response to the questions in the Council's Local Plan questionnaire. Fundamentally, we consider that the Local Plan should take a balanced approach to new development, having regard to the need to accommodate acute and competing demands on a limited land resource. We believe that a review of Green Belt is essential to help the Council to ensure that the new Local Plan can deliver sufficient housing to meet the Borough's London Plan targets, address objectively housing needs and enable a range of house types to come forward to support mixed and balanced communities. A review of Green Belt boundaries may also help to ensure existing employment sites are not unnecessarily lost to residential use in a period of strong economic growth. It would help to avoid an imbalance of high density residential development and other commercial uses in town centres and the development of greenfield land offers the best opportunity of delivering the infrastructure required to support new development. Targeted development of some Green Belt land can also enable the enhancement for the beneficial use of other land serving a more important Green Belt function. The Council will need to identify through its evidence base how the Plan can deliver its development requirements in a way that does not compromise interlinked sustainability objectives. Failure to address this would result in a Plan which is unsound.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing development.

Response Number	Respondent Name	Response to Q17	Council's response
		In light of this the Council should not make any decisions on the proposed location of new development until there is a clear understanding of the following, as yet unpublished, evidence base documents: – An Employment Land Review – in order to identify the extent of demand for employment land, to ensure that any changes of use to residential do not adversely affect economic growth; – A Havering Borough SHLAA Viability Appraisal – to quantify and validate the assumptions of the London Plan Viability Appraisal to provide a more robust assessment of the deliverability of the Borough's brownfield housing land supply. – An East London SHMA – to identify the likely mix, type and tenure of dwellings needed in the Borough, and linked to this, the range of site types (including Green Belt land) needed to viably deliver such a range; and – A Green Belt Review – to have, as a minimum, an understanding of the Green Belt function offered by the sites promoted for development in the Local Plan and the potential benefits their development could bring. Alongside this evidence gathering, we would urge the Council to have full regard to the opportunities presented by Land at Lincoln Close, Hornchurch. This land does not serve any of the five purposes of including land within the Green Belt and is of no beneficial use. It should therefore be removed from the Green Belt so that it can help in delivering wider Local Plan objectives.	
REG18.39	Mrs S J Ellis (Bidwells)	This Report provides our consolidated response to the questions in the Council's Local Plan questionnaire. Fundamentally, we consider that the Local Plan should take a balanced approach to new development, having regard to the need to accommodate acute and competing demands on a limited land resource. We believe that a review of Green Belt is essential to help the Council to ensure that the new Local Plan can deliver sufficient housing to meet the Borough's	Noted. 		in a Plan which is unsound. In light of this the Council should not make any decisions on the proposed location of new development until there is a clear understanding of the following, as yet unpublished, evidence base documents: – An Employment Land Review – in order to identify the extent of demand for employment land, to ensure that any changes of use to residential do not adversely affect economic growth; – A Havering Borough SHLAA Viability Appraisal – to quantify and validate the assumptions of the London Plan Viability Appraisal to provide a more robust assessment of the deliverability of the Borough's brownfield housing land supply. – An East London SHMA – to identify the likely mix, type and tenure of dwellings needed in the Borough, and linked to this, the range of site types (including Green Belt land) needed to viably deliver such a range; and – A Green Belt Review – to have, as a minimum, an understanding of the Green Belt function offered by the sites promoted for development in the Local Plan and the potential benefits their development could bring. Alongside this evidence gathering, we would urge the Council to have full regard to the opportunities presented by Land at Lillyputts Farm	
REG18.44	Persimmon Homes Essex	Persimmon Homes has no further comments at this stage. As part of the next consultation, we would expect further details on the anticipated Local Plan period, housing numbers to be delivered and the potential opportunities and constraints as supported through the council's evidence base.	Noted. The Proposed Submission version of the Local Plan is a 15-year plan up to 2013 with a housing target of 17550 new dwellings to be delivered over the 15-year plan period.
REG18.45	Planning Potential	We understand that the Council is currently consulting on 'A New Local Plan for Havering', which includes a number of questions seeking to determine views on the key strategic priorities for the Borough over the next 15 years. This includes questions on where housing should be located	Noted. All sites submitted have been considered through the Proposed Submission version of the Local Plan process. Site allocations will be considered

Response Number	Respondent Name	Response to Q17	Council's response
		and suggestions for revisions to the Green Belt, including requesting the submission of sites that are suggested for release. Land at Crow Lane, Romford is not a Green Belt site. Notwithstanding this, we have been advised by the Council to submit the site through this process for consideration as a potential housing allocation. The details of the site are set out below. The site is located north of Crow Lane and is approximately 1.44 hectares in area as shown on the Site Location Plan enclosed. The site is a National Grid site with a section of land on the northern boundary currently occupied by Romford Self-Storage and is in B8 use. The remainder of the site is previously developed land and is currently vacant. The main access to the site is from Sandgate Close, which runs north from Crow Lane and along the eastern boundary of the site. There is also a second access directly off Crow Lane on the southern boundary of the site, which is currently overgrown and disused. The site is designated as a Secondary Employment Area and is identified as Safeguarded for Crossrail Land; however, we are of the understanding that the site is no longer safeguarded, by way of the Crossrail Safeguarding Directions issued in January 2008. The site is in Flood Zone 1 and is not considered to be at risk of flooding. It has a PTAL Rating of 1a. In terms of the site's context, to the north of Crow Lane the land use is a mixture of residential and industrial, and beyond is the railway line. To the south is Romford Cemetery, Romford and Gidea Park RFC, Crowlands Heath Golf Club, and Romford Football Club.	as part of the forthcoming Detailed Sites Local Plan.
REG18.49	Rainham & South Hornchurch Green Belt	We are a local community action group dedicated to the restoration and preservation of the Mardyke Farm and Mardyke Open Space Green Belt sites, and we played a significant role in the LDF Examination held in 2007.	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded

Response Number	Respondent Name	Response to Q17	Council's response
	Action Group	On Friday 27th February 2015 we had one of our regular meetings with Athorn consultants and Erith to review progress on the restoration of the Mardyke Farm Green Belt site, planning application P04432.10. We were informed that everything is going to schedule and the restoration of the site to form a public green open space amenity and nature habitat is on target to meet the "drop dead date" of April 2017. However we were also shocked at the meeting to learn from Athorn consultants that advisors to the Council had been in contact with them and had requested that they put forward the pros and cons for developing the site for housing. We checked on the Council websites and with our councillors to find out if anyone was aware that advisors were being used by the Council to determine the suitability of Green Belt sites for housing development but our Councillors were not aware and we could not find any information on the development planning website. As part of the 2015 Local Plan Consultation, we would like to express our strong support for keeping the existing Green Belt Boundaries in general, and the Mardyke Farm and Mardyke Open Space in particular. <u>Reasoned Justification</u> In 2007 the Council submitted their Core Strategy and Site Specific Allocations for examination by a Planning Inspector. The Core Strategy and SSAs contained proposals to remove the Mardyke Farm from the Green Belt and develop it for housing. These proposals had been kept confidential by the Council and the local community were not aware of them until the Examination stage. In	that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land at the Mardyke Farm Green Belt site will be released for housing development.

Response Number	Respondent Name	Response to Q17	Council's response
		particular they were not published at the preferred options stage. Consequently the Rainham and South Hornchurch Green Belt Action Group was formed at short notice to oppose the proposals and gained tremendous support within the local community. Meetings were held, demonstrations organised and newsletters published. An enormous amount of hard work was undertaken by the group which culminated in substantial submissions to the LDF Examining Inspector and the Council. We would like to submit our LDF submissions which are already in the Councils possession to inform the 2015 Local Plan Consultation. The LDF written submissions put forward to the Council and the Examination are: The Rainham and South Hornchurch Green Belt Action Group 051/155/156/CP14 Examination Statement and Appendix (Reasoned Justification) CP14 Mardyke Farm May 2007 The Rainham and South Hornchurch Green Belt Action Group 051/155/156/CP14 Response Statement and Response Appendix CP14 Mardyke Farm June 2007. We believe that these documents should form part of the consultation database as they inform the consultation about the history and local involvement in the Mardyke Farm and Mardyke Open Space Green Belt sites at the examination of the LDF and are relevant to the Local Plan consultation. They are also a testament to the enormous amount of work done by the action group in opposing the removal of Mardyke Farm and Mardyke Open Space from the Green Belt at the LDF examination. In this letter we shall not go into any LDF details relating to the site but will	

Response Number	Respondent Name	Response to Q17	Council's response
		rely on our submissions above to inform the consultation. The decision reached by the Planning Inspector in her report on the soundness of the Core Strategy was that the Mardyke Farm and Mardyke Open Space sites should remain in the Green Belt. She did not consider that there were exceptional circumstances to remove the site from the Green Belt and we believe that the same is true today. However it is important to note that the group did not just oppose the removal of Mardyke from the Green Belt it also researched ways and means of remediating and restoring the site to public use as envisaged in the original 1993 plan P0186.93. In this regard the Response Statement and Response Appendix are very relevant. After the LDF, the group held numerous meetings with Council officials and the Environment Agency and a new restoration plan P0432.10 was submitted by Athorn consultants acting for the owners Ebbcliff in 2010, This demonstrates that the group is not just a protest group but a force for good in that it has achieved the restoration of the site for public use and demonstrated how local involvement can achieve an objective where the Council had previously given up. Regular meetings between Athorn consultants, Erith and the Group have taken place and the restoration of the Mardyke Farm is due to be completed by the "drop dead date" of April 2017. These meeting have always been cordial and held in a spirit of mutual cooperation. The aims and objectives of the restoration were summarised for the local community in our newsletter of January 2013 a copy of which is attached to inform the consultation. By the drop dead date of April 2017 the project will have taken seven years	

Response Number	Respondent Name	Response to Q17	Council's response
		to reach fruition and this is a shining example of the local community getting involved in a long term Local Plan and seeing it through to completion. We hope that the Council advisors who have asked Athorn consultants to put forward the pros and cons of developing the site for housing will understand that the local community see the suggestion to develop the site for housing as a complete betrayal of all the hard work which the local community have demonstrably put into restoring the site. It would be a travesty of natural justice if this site is proposed to be taken out of the Green Belt just as the restoration which the local community have worked so hard to achieve is nearing completion. Local Plans should involve local people and no one can deny that the local community have not got behind this restoration. It would make a mockery of local planning involvement if this site was again proposed to be taken out of the Green Belt. The Havering LDF was adopted in 2008 and it is barely six years since the LDF Planning Inspector reported that the Mardyke Farm should remain in the Green Belt. The Core Strategy was supposed to run until 2020 by which time the restoration P0432.10 would be complete. As a result the local community supported P0432.10 particularly as the landfill contours respected the original plans P0186.93, and would result in a landscaped public green open space amenity and nature habitat. The restoration P00432.10 was not approved until 2010 and started in 2011. It was supposed to be completed in April 2015 but an extension to April 2017 was agreed as a drop dead date and the local community did not oppose this given the assurances from Athorn and Erith that it would be completed by then.	

Response Number	Respondent Name	Response to Q17	Council's response
		It makes a mockery of long term planning and community involvement if another revision of Green Belt boundary is considered before the existing plans are even completed. The Mardyke Farm is a former quarry and toxic landfill site. The agreed remediation involves 330,000 cubic metres of landfill raising the level up to 9 metres higher than the surrounding properties. This remediation is suitable for a public open space and was not intended to be for housing. The site is effectively an artificial hill which is contoured for a public open space and not for housing. The local community would never have agreed to an artificial hill if it had been known that the site might be proposed for housing. The landfill contouring and capping was undertaken to cap toxic waste deposits dumped over many years at the site. While a nine metre hill and dale topology is suitable for green belt open space, it is unacceptable for a housing development and no community in its right mind would have agreed to such proposal and nor would the Planning Inspector at the Public enquiry. Indeed at an LDF consultation with Development Planning, the Head of Development Planning stated that the topography was unsuitable in its present form and would need to be sympathetic with the current lie of the land for surrounding neighbourhoods. This would require the waste area to be scoured out and capped with a protective layer to bring it in line with local topography. As mentioned in the newsletter Athorn consulting on behalf of the owner have given assurances that the restoration will be completed and that it will	

Response Number	Respondent Name	Response to Q17	Council's response
		be managed properly with an included maintenance schedule through to at least 2027. When the question of building or development was raised at an earlier meeting, Athorn consultants reiterated that unrestricted public access to the space would be in perpetuity as agreed in the legally binding planning agreement entered into by the owners in the form a covenant on the land. The attached newsletter to the local community makes mention of this. At the public enquiry conducted by a Planning Inspector into the original plans for a public park P0186.93, the plans were opposed by the Council and by the Local Community on the basis that all previous landfill schemes had faltered and had been abandoned at some stage. The covenant for unrestricted public access was a unilateral proposal by Ebbcliff the site owners to win the Planning Inspectors approval for the site to be used for landfill and conversion to a public park. The covenant granting public access in perpetuity was submitted to allay the fears of the local community that the project would be abandoned. It was instrumental in the Inspector granting permission for the landfill to finance and produce a public park. Now that the current restoration is nearing completion in April 2017 no Court in the land would consider that the Local Community have been treated in a fair, ethical and just manner if the site was taken out of the Green Belt for housing development just at the point when the project is reaching fruition. The Mardyke Farm makes a valuable contribution to the Metropolitan Green Belt, forms an important part of the London Green Grid, the Dagenham Corridor and the Greening the Greenaway.	

Response Number	Respondent Name	Response to Q17	Council's response
		It fulfils the Government policy on protection for the green belt as set out in chapter 9 of the National Planning Policy Framework (NPPF). The Government's fundamental aim of green belt policy is to prevent urban sprawl by keeping land permanently open. The NPPF states that that the construction of new buildings should be regarded as "inappropriate" for the green belt. When completed it will enhance the ecological value of the site and provide a high quality open green space amenity with unrestricted public access for the local community to enjoy. Much of the Green Belt does not have public access but this site is an exception which is why the local community have worked so hard to restore the site. When complete the site will contribute to national, regional, and local conservation objectives We hope that this short letter has given some insight into the bitter disappointment which the local community felt when the Council advisors approached Athorn consultants to assess the site for housing development. We urge you to respect the local community involvement and the legally binding planning agreement entered into by the owners Ebbcliff to restore this Green Belt site for public use. In 2010 the owners Ebbcliff and the Council acted honourably by proposing, implementing, and monitoring a long term restoration plan. It would be a betrayal of trust with the local community, and make a mockery of local long term planning and covenants, to put this site forward for housing development. We trust that the restored site which the local community have been involved with since 1994 will remain in the Green Belt for use as a nature habitat and public open space.	

Response Number	Respondent Name	Response to Q17	Council's response
REG18.50	Rainham Preservation Society	Careful wording of all legal, planning and development documents so we don't leave ourselves vulnerable to 'clever' development e.g. in the past by using the word 'should' instead of 'must' allowed future development at Dovers Corner to be above 3-storey. All section 106 agreements and planning gains must be spent in the areas where developments are permitted.	Noted. The Policies of the Proposed Submission version of the Local Plan are worded in compliance with NPPF advising that policies should be flexible enough to accommodate needs not anticipated in the plan and to allow a rapid response to changes in economic circumstances.
REG18.51	Ray Whitehouse	Development of Riverside is a major opportunity, do not overload the rest of Havering's Infrastructure when you have the space and opportunity to do something wonderful.	Noted. The Proposed Submission version of the Local Plan recognises that the development of London Riverside is a major regeneration opportunity. The area has been formally identified in the London Plan as an Opportunity Area. It is identified in the Local Plan as the Rainham and Beam Park Strategic Development Area. It is programmed to deliver a new green neighbourhood providing over 3,000 new homes, 3500 – 4,000sqm commercial floorspace, new supporting infrastructure of schools (primary, secondary and tertiary), improved sport and leisure facilities and health centre, and transforming the New Road (the A1306) from a traffic dominated corridor into an attractive high quality green street.
REG18.53	Romford Golf Club (Joe Coogan)	Havering's population has grown significantly and this will continue. The local plan should be used to creatively meet the needs of the population in a sensitive way. Local people want access to quality housing and good schools, if the local plan can unlock sites that are currently underused to meet this need the changes will be successful.	Noted. The Proposed Submission version of the Local Plan seeks to meet the various identified needs of the growing population in brownfield sites in sustainable location without the release of Green Belt land.
REG18.54	Romford YMCA	At the heart of the work of Romford YMCA are young people and they are the future small business owners, teachers, health workers of the borough. To that effect it is vital that the Local Plan addresses their needs, so we	The Council encourages involvement of all parts of the community in the process of preparing its Local Plan and has produced

Response Number	Respondent Name	Response to Q17	Council's response
		suggest that in stage two of the consultation, young people are invited to submit their opinions of the future. We are happy to facilitate this.	an Equalities Assessment to assure the needs of all groups have been considered in the Proposed Submission version of the Local Plan.
REG18.55	Rowley Cardrome Ltd (Montagu Evans)	We are instructed by Rowley Cardrome Ltd (RCL), to submit representations to the Local Plan Review Issues and Options Report, February 2015 in respect of their property interests at Upper Rainham Road, Hornchurch, RM12 4EU (hereafter referred to as The Site) as identified by the Plan at Appendix 1. RCL acquired the freehold of the site in late 1995/early 1996. From the site RCL operates a driving school and driving centre along with the letting of its own commercial property which makes up the rest of the site. This commercial property consists of several car sales lots, motor trade related workshops and units, offices/classrooms, telecommunications sites & Rom skatepark. The main objectives of these representations areas follows. Firstly to provide a response to specific questions outlined in the Council's report, and to highlight the contribution our client's site can make to achieving the overarching goals of the proposed local plan, such as delivering its housing targets over the Plan period; identifying locations to deliver residential development; and lastly, to ensure decisions are made that make the best use of land. The representations are accompanied by a Masterplan Studies Brochure (hereafter referred to as the Masterplan) dated 20 March 2015 (Appendix 2). This should be reviewed in conjunction with these representations. <u>The Site</u> The site, extends to approximately 4.85 hectares and is currently designated as a Major Developed Site within the Green Belt by the London	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including land at Upper Rainham Road, Hornchurch will be released for housing or other development.

Response Number	Respondent Name	Response to Q17	Council's response
		Borough of Havering Core Strategy and Development Control Policies Document (2008). The majority of the site is currently used as an off road learner driving centre as can be seen by the aerial photo at Page 3 of the Masterplan Studies document. This shows that a large are of the site is covered by hardsurfacing. Elsewhere within the site are a number of commercial uses mainly related to the motor trade plus three mobile phone masts. The commercial units are predominantly located around the Petrol Filling Station that fronts onto Upper Rainham Road. The site is located within Floodzone 1 but has no other site specific statutory or Local Plan designations upon it. <u>Planning Policy Context</u> In preparing these representations significant weight has been given to national planning policy set by the National Planning Policy Framework (NPPF) (March 2012) and the National Planning Practice Guidance (NPPG) (March 2014). <u>*Plan Making*</u> Given this is the first round of consultation on the new Local Plan we feel it is important that in answering the specific questions asked at this stage in the process proper regard is given to policy guidance at the national level. This is particularly important as ultimately the Plan will be required to pass the test of soundness (NPPF Para 182). To fail to fully understand what soundness means can only serve to heighten the risk of a Plan being found unsound at the point of examination.	

Response Number	Respondent Name	Response to Q17	Council's response
		The first of seventeen core planning principles (NPPF Para 17) requires that planning should: *"be genuinely plan-led, empowering local people to shape their surroundings, with succinct local and neighbourhood plans setting out a positive vision for the future of the area. Plans should be kept up to- date, and be based on joint working and co-operation to address larger than local issues. They should provide a practical framework within which decisions on planning applications can be made with a high degree of predictability and efficiency"* At the heart of the NPPF is a presumption in favour of sustainable development. For plan making, paragraph 14 clarifies that this means that: – *"local planning authorities should positively seek opportunities to meet the development needs of their area;* – *"Local Plans should objectively meet assessed needs, with sufficient flexibility to adapt to rapid change, unless:* – *"any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole; or* – *"specific policies in the Framework indicate development should be restricted."* Policies in Local Plans should follow the approach of the presumption in favour of sustainable development so that it is clear that development which is sustainable can be approved without delay. All plans should be based upon, and reflect, the presumption in favour of sustainable development with clear policies that will guide how the presumption should be applied locally (NPPF paragraph 15). Local authorities should be aspirational but realistic. They should address the spatial implications of economic, social and environmental change. Local Plans should set out the opportunities for development and clear policies on what will or will not be permitted and where. Only policies that	

Response Number	Respondent Name	Response to Q17	Council's response
		provide a clear indication of how a decision maker should react to a development proposal should be included in the plan (paragraph 154). *Other Key Policy Considerations* Having regard to the NPPF in its entirety in so far as RCL's interests we consider that it is essential to have in mind the following policy from within the NPPF. *Delivering a wide choice of high quality homes* To boost significantly the supply of housing, local planning authorities should use an evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in the NPPF; including identifying key sites which are critical to the delivery of the housing strategy over the plan period (paragraph 47). Local plans must be prepared with the objective of contributing to the achievement of sustainable development. To this end, they should be consistent with the principles and policies set out in the NPPF including the presumption in favour of sustainable development (paragraph 151). The Local Plan should set out the strategic priorities for the area including the homes needed in the area (paragraph 156). Crucially paragraph 157 states that Local Plans should: – *"be drawn over an appropriate time scale, preferably a 15 year time horizon, take account of longer term requirements, and be kept up to date;* – *"indicate broad locations for strategic development on a key diagram and land use designations on a proposals map; and* – *"allocate sites to promote development and flexible use of land,*	

Response Number	Respondent Name	Response to Q17	Council's response
		bringing forward new land where necessary, and provide detail on form, scale, access and quantum of development where appropriate." Paragraph 158 states that plans should be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area. Local authorities should ensure that their assessment of and strategies for housing, employment and other uses are integrated and that they take full account of relevant market and economic signals. For housing, local authorities are required to have a clear understanding of housing needs in their area through preparation of a Strategic Housing Market Assessment (SHMA) and a Strategic Housing Land Availability Assessment (SHLAA) (paragraph 159). <u>Conclusions</u> The NPPF provides very clear and up-to-date national policy guidance promoting a Plan led system in order to, amongst other things boost significantly the supply of housing and secure the long term future of heritage assets. The Site in question is a previously developed site, already identified for some redevelopment as a Major Developed Site in the Green Belt. There is a clear question mark over the contribution this site plays to the function and purpose of including land in the Green Belt. We conclude that its release will in no way harm the remaining Green Belt. To the contrary it could be enhanced through careful landscaping. Furthermore, enhance public access to the adjoining Green Belt could increase the local communities enjoyment of it. It therefore represents a unique opportunity for Green Belt release in order	

Response Number	Respondent Name	Response to Q17	Council's response
		that other important planning objectives of the Local Plan can be met in a sustainable way. We appreciate that the Local Plan is at its earliest stage of formulation. It is however essential that this opportunity is taken and we welcome the opportunity of meeting with officers at the Council to discuss this further ahead of any further publication of Local Plan iterations. This would allow the full benefits from the site to be properly explored and ensure correct and fully informed decisions as to the Sites future are made.	
REG18.56	S.D. Olney	By making the borough a place to be proud to live in.	Noted. The Proposed Submission version of the Local Plan contains policies promoting significant levels of growth in the form of infrastructure and high quality, well managed development that enhances the borough as a highly desirable, attractive, safe and clean place that residents will be proud to live in and work.
REG18.58	Sport England	Sport England aims to ensure positive planning for sport, enabling the right facilities to be provided in the right places, based on robust and up-to-date assessments of need for all levels of sport and all sectors of the community. To achieve this our objectives are to seek to PROTECT sports facilities from loss as a result of redevelopment; to ENHANCE existing facilities through improving their quality, accessibility and management and to PROVIDE new facilities that are fi t for purpose to meet demands for participation now and in the future. We work with the planning system to achieve these aims and objectives, seeking to ensure that they are reflected in local plan policies, and applied in development management. The Government's National Planning Policy Framework (NPPF) is clear about the role that sport plays in delivering sustainable communities through promoting health and wellbeing. Sport England, working with the	In line with the requirements of paragraphs 73 and 74 of the NPPF the London Borough of Havering commissioned a study on the assessment of needs for open space, sports and recreation facilities and opportunities for new provision in the borough. The Findings of this study are contained in a series of Reports, the Open Space Assessment Report and Standards Paper, The Outdoor Playing Pitch Assessment Report and Playing Pitch Strategy, and the Indoor Sports and Leisure Facilities Assessment Report and the Indoor Sports and Leisure Facilities Strategy 2016. The various assessment

Response Number	Respondent Name	Response to Q17	Council's response
		provisions of the NPPF, wishes to see direct reference to sport in local planning policy to protect, enhance and provide sports facilities, as well as helping to realise the wider benefits that participation in sport can bring. Sound policy can only be developed in the context of objectively assessed needs, in turn used to inform the development of a strategy for sport and recreation. Policies which protect, enhance and provide for sports facilities should reflect this work, and be the basis for consistent application through development management. Sport England is not prescriptive on the precise form and wording of policies, but advises that a stronger plan will result from attention to taking a clearly justified and positive approach to planning for sport. Policies could be included in a separate chapter on sport and recreation or, following the NPPF, be part of a chapter on health and wellbeing. In all cases, however, policies for sport and active recreation must be properly justified, include criteria against which development proposals will be judged and be based on a robust and up-to-date assessment of need as required by paragraph 73 of the NPPF. In this way, planning authorities will be able to demonstrate that their plan has been positively prepared (based on objectively assessed needs), is consistent with national policy (reflecting the NPPF), is justified (having considered alternatives) and effective (being deliverable). Without such attention there is a risk that a local plan or other policy document could be considered unsound. The NPPF clearly recognises the role of sport and recreation as a fundamental part of sustainable development, and expects local authorities to plan positively for these needs and demands accordingly. The protection and provision of opportunities to participate in sport is seen as fundamental to the health and wellbeing of communities (NPPF, section 8), meaning	reports provide the quantitative and qualitative audit and analysis of the demand and supply assessment of the various types of facilities studied, whilst their Strategy reports set out actions and recommendations to be taken to protect, and enhance existing facilities or provide new ones and for the maintenance and management of facilities. The output of these studies underpins the emerging policies of the Proposed Submission version of the Local Plan. In light of this the Local Plan contains a policy which seeks to protect and enhance existing facilities and to provide new facilities including securing their maintenance and management regime.

Response Number	Respondent Name	Response to Q17	Council's response
		that local authorities must plan and provide accordingly through policy and development management. Without a robust and up-to-date assessment of need (as required by paragraph 73 of the NPPF), there is a risk that a local plan document could be considered unsound. Sport contributes to many complementary agendas Sport England advocates that planning for sport in communities should be based on a clear strategy for sport which sets out the case to protect, enhance and provide facilities. In doing so, it can be demonstrated how sport is important both for its own sake, but also how it contributes to complementary agendas including those illustrated below: – Improving the health of the Nation – Enhancing social and cultural wellbeing – Creating and supporting economic growth – Providing new opportunities for children and young people – Efficient use of resources – Improving Community safety	
REG18.60	Thames Water (Savills)	Thames Water is the statutory sewerage undertaker for most of London Borough of Havering and the following comments are made in this respect. Thames Water supports the preparation of the new Local Plan for Havering. <u>General Comments</u> A key sustainability objective for the preparation of the Local Development Framework / Local Plan should be for new development to be co-ordinated with the infrastructure it demands and to take into account the capacity of existing infrastructure. Paragraph 156 of the National Planning Policy Framework (NPPF), March 2012, states:	The Council has prepared an Infrastructure Delivery Plan to provide an overview of the infrastructure requirements over the plan period. Thames Water has been involved in the preparation of the Infrastructure Delivery Plan.

Response Number	Respondent Name	Response to Q17	Council's response
		"Local planning authorities should set out strategic policies for the area in the Local Plan. This should include strategic policies to deliver: … the provision of infrastructure for water supply and wastewater..." Paragraph 162 of the NPPF relates to infrastructure and states: "*Local planning authorities should work with other authorities to: assess the quality and capacity of infrastructure for water supply and wastewater and its treatment … take account of the need for strategic infrastructure including nationally significant infrastructure within their areas."* <u>Development Proposals – General</u> As set out above, it is crucial that any necessary additional waste water infrastructure is provided in time to service new development to avoid unacceptable impacts on the environment, which can include sewer flooding of residential and commercial property. In order to ensure that the drainage requirements of development proposals are understood and that any upgrade requirements are identified, developers should be encouraged to contact Thames Water Developer Services in advance of the submission of planning applications. Thames Water Developer services can be contacted either: – by post at: Thames Water Developer Services, Reading Mailroom, Rose Kiln Court, Rose Kiln Lane, Reading RG2 0BY; – by telephone on: 0845 850 2777; – by email: developer.services@thameswater.co.uk	
REG18.61	The Crown Estate (Amec Foster Wheeler)	<u>Introduction</u> On behalf of our client, The Crown Estate, Amec Foster Wheeler welcomes the opportunity to comment on 'A new Local Plan for Havering.' The Crown	The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the

Response Number	Respondent Name	Response to Q17	Council's response
		Estate has significant land interest within the Borough and our response will focus on the questions posed relating to housing and the Green Belt. We present a number of options in the response to question 10 which should be considered as revisions to the Green Belt boundaries as part of a wider Green Belt review to assist in meeting the significant development needs in the Borough over the Plan Period.	Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be released for housing development.
REG18.63	Thomas Bates and Son Ltd. (Andrew Martin Planning)	In September 2014 Andrew Martin – Planning (AM-P) submitted representations to a 'Call for Sites' by London Borough of Havering, in respect of land off Wingletye Lane, Hornchurch (previously referred to as 'Land at Lillyputts Farm') on behalf of Mr Michael Bates of Thomas Bates and Son Ltd. We now submit our written response to the latest consultation on the Local Plan that seeks to determine key strategic priorities for the Borough over the next 15 years. In addition we have prepared an illustrative layout plan to demonstrate that a form of residential development can be achieved on the site. <u>The London Plan</u> Mr Anthony Thickett, an independent planning inspector appointed by the Secretary of State, held an examination in public of the Draft Further Alterations to the London Plan from 1 September and 18 September 2014. The report setting out his findings and conclusions was published on 15 December 2014 and the Inspector's recommendations were adopted in early March 2015. The Further Alterations to the London Plan (FALP) document indicates that the London Boroughs collectively need to provide 49,000 dwellings per	The Proposed Submission version of the Local Plan seeks to deliver the London Plan housing target as a minimum, and go beyond that where possible to meet the full OAN in the borough. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land will be

Response Number	Respondent Name	Response to Q17	Council's response
		annum between 2015 and2036 in order to meet both market and affordable housing needs for London. In terms of supply the FALP has provided minimum housing supply targets for each of the Boroughs, which in total equates to 420,000 additional homes over the period 2015 to 2025, or 42,000 dwellings per annum. London Borough of Havering should be aiming to provide a minimum of 11,701 dwellings between 2015-2025, an annual target of 1,170 dwellings. The FALP introduces a requirement for the London Boroughs to meet their own housing target, as set out in Table 3.1 (i.e. 1,170 dpa in the case of LB Havering) and address any gap between supply and need by seeking to exceed this target where possible. The Inspector's report goes on to state at paragraph 33: *"However, in order to be in general conformity with Table 3.1, Boroughs need only meet their individual targets. In the absence of any clear guidance as to exactly how and where the additional 6,600 dpa will be found it is difficult to see how a housing target in a local plan would not be in general conformity if it made provision for the figure in Table 3.1 and no more.* *There is no mechanism in the FALP to indicate how the 6,600 dpa would be apportioned or distributed. Without this I do not see how the Mayor can guarantee the delivery of the additional 6,600 dpa necessary to meet the identified need."* On this basis, the Inspector has concluded that the housing targets in the FALP will not provide sufficient housing to meet the objectively assessed housing need in London and he is not convinced that the FALP ensures the additional 6,600 dpa, not allocated to specific Boroughs, will be delivered. On this evidence it is likely that the London Plan strategy will not deliver sufficient homes to meet housing needs, and so the Inspector has called for an early review of the Plan to commence once the FALP is adopted in 2015. Until this review is published, it is the responsibility of the London Boroughs and districts in the South East England to acknowledge this	released for housing development.

Response Number	Respondent Name	Response to Q17	Council's response
		shortfall in supply and react to it by allowing new development in sustainable locations, in a bid to try and exceed their allocated housing targets and narrow the gap between need and supply. LB Havering should therefore be proactively seeking to exceed their target in the London Plan through the allocation of sustainable, deliverable and suitable sites for residential development. This may involve the strategic release of green belt land where it can be demonstrated, through a green belt review, that the five purposes of including land within the green belt are no longer being met. <u>Master Plan</u> The indicative master plan submitted with these representations demonstrates how residential development can be accommodated on site. The master plan comprises 68 dwellings at a density of 25 dwellings per hectare, including 1 x 4 bed dwelling, 26 x 3 bed dwellings and 41 x 2 bed dwellings. The mix of housing illustrated on the indicative drawing is derived from findings in the latest East London Strategic Housing Market Assessment (SHMA) (2010), which indicates a need within the Borough for smaller dwellings. Open space and the access road have been located along the eastern boundary with Wingletye Lane in order to respect the views from the existing properties to the west of Wingletye Lane.	
REG18.64	Thurrock Council	<u>Havering Plan programme and timetable</u> Thurrock Council supports the preparation of a new Local Plan for Havering in order to be consistent with the changes in the Government approach to planning set out in the National Planning Policy Framework (NPPF) and the National Planning Guidance (PPG). Furthermore it is recognised that the new Local Plan will need to take account of the requirements of, and be in conformity with, the London Plan and its Further	The Council is working closely with the GLA on the preparation of the Proposed Submission version of the Local Plan and the new London Plan. At this point in time it is unclear if an early review would be necessary, as the Proposed Submission version of the Local Plan is being prepared in advance of the London Plan.

Response Number	Respondent Name	Response to Q17	Council's response
		Alterations. Included within the London Plan Further Alterations are new overall targets for London and specific minimum targets for the London Borough's including Havering. It is noted that Havering Council expect to adopt the new Local Plan in autumn 2016 and that the Mayor of London intends to undertake a full review of the London Plan with adoption anticipated in 2019/20. It is considered that both timetables for adoption are ambitious. On the basis of the proposed timetables the Havering new Local Plan will be adopted before the full review of the London Plan. However it is unclear at this stage as to how the emerging full review of the London Plan will impact on the new Havering Local Plan. Following adoption by the Mayor of the Full Review of the London Plan in 2019/20, is it the intention of Havering Council that the new Havering Local Plan would be the subject of an early review in order to ensure overall conformity of its Plan? Any delay or extension to the Havering Local Plan timetable may result in the requirements of the Full Review of the London Plan having to be taken into account. A change that increased the length of preparation of the Havering new Local Plan would also require the plan period for the Local Plan being extended beyond 2031 in order to maintain a fifteen year period for the Plan from the date of adoption.	
REG18.66	Trinity Hall (Bidwells)	These representations have been prepared on behalf of Trinity Hall in respect of land at Chapman's Farm, Upminster (the "Site"). Trinity Hall owns the Site as indicated by the Site Location Plan at Appendix 1 to this Report. This land was put forward for consideration to the 'Call for Sites' undertaken by the Council in 2014. This Report provides our consolidated response to the questions in the Local Plan questionnaire published for consultation. We provide responses to the questions of principal relevance to our clients' interests. Fundamentally, the premise of our representations is that the Plan should	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the

Response Number	Respondent Name	Response to Q17	Council's response
		build in sufficient flexibility to ensure certainty of delivery. To do so it must release Green Belt land for housing. Ignoring the potential contribution of many areas of Green Belt which do not perform a valuable function could have significant negative impacts upon the deliverability of the Plan's proposals and the achievement of its other objectives, most notably the need to support economic growth, support town centres and deliver environmental and wider sustainability objectives. This Report provides our consolidated response to the questions in the Council's Local Plan questionnaire. Fundamentally, we consider that the Local Plan should take a balanced approach to new development, having regard to the need to accommodate acute and competing demands on a limited land resource. We believe that a review of Green Belt is essential to help the Council to ensure that the new Local Plan can deliver sufficient housing to meet the Borough's London Plan targets, address objectively housing needs and enable a range of house types to come forward to support mixed and balanced communities. A review of Green Belt boundaries may also help to ensure existing employment sites are not unnecessarily lost to residential use in a period of strong economic growth, it would help to avoid an imbalance of high density residential development and other commercial uses in town centres and the development of greenfield land offers the best opportunity of delivering the infrastructure required to support new development. Targeted development of some Green Belt land can also enable the enhancement for the beneficial use of other land serving a more important Green Belt function. The Council will need to identify through its evidence base how the Plan can deliver its development requirements in a way that does not compromise interlinked sustainability objectives. Failure to this would result	Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. For this reason no parts of the Green Belt land including Land at Chapman's Farm, Upminster will be released for housing or other development types.

Response Number	Respondent Name	Response to Q17	Council's response
		in a Plan which is unsound. In light of this the Council should not make any decisions on the proposed location of new development until there is a clear understanding of the following, as yet unpublished, evidence base documents: – An Employment Land Review – in order to identify the extent of demand for employment land, to ensure that any changes of use to residential do not adversely affect economic growth; – A Havering Borough SHLAA Viability Appraisal – to quantify and validate the assumptions of the London Plan Viability Appraisal to provide a more robust assessment of the deliverability of the Borough's brownfield housing land supply. – An East London SHMA – to identify the likely mix, type and tenure of dwellings needed in the Borough, and linked to this, the range of site types (including Green Belt land) needed to viably deliver such a range; and – A Green Belt Review – to have, as a minimum, an understanding of the Green Belt function offered by the sites promoted for development in the Local Plan and the potential benefits their development could bring. Alongside this evidence gathering, we would urge the Council to have full regard to the opportunities presented by Land at Chapman's Farm, Upminster.	
POST18.1	Trevor Lawrence	Romford Conservation Area Boundary: This currently includes the eastern half of the North Street precinct,	Noted. The Council has prepared an updated appraisal of the Romford Conservation Area.

Response Number	Respondent Name	Response to Q17	Council's response
		between the relief road to where the precinct widens alongside Angel Way, opposite the pedestrian access to The Mews (between Nos 20 and 22 North Street). All the important buildings and character worthy of protection within this precinct are contained from there to the main junction with the High Road (ie. extending southwards). The remainder of the North Street precinct has, at best, an unprepossessing appearance; at worst, it forms a depressing entrance to the Town Centre on this main approach from the north. The buildings fronting both sides of this part of the precinct have little or no architectural or historical value; the precinct itself is dominated by North House, a bland 12-storey office block. Enclosing the western frontage (which is outside the Conservation Area), beyond the wider precinct alongside Angel Way, is a modern 6-storey block of flats, Rubicon Court, where a mechanised parking area now fronts this precinct at ground level. The older 2-storey frontage between it and the relief road has been demolished and replaced by the skeletal concrete frame of a potential 6- and 7-storey development. The demolished building was similar in appearance to the existing 2-storey terrace south of North House, enclosing the eastern frontage. This comprises two similar, but separate and abutting, 2-storey buildings, similar to those demolished on the western frontage but, according to English Heritage, who raised no objection to that demolition, the remaining eastern frontage buildings have even less value than those demolished. They are undistinguished and unremarkable – except for their particularly unattractive and depressing appearance at the rear, facing The Mews and forming part of the setting for the GII* listed Church of St. Edward the Confessor. Nor did English Heritage raise any objection when I contacted them in 2014 regarding the possible redevelopment of 22 – 28 North Street. The continued inclusion of this part of North Street within the Conservation Area discourages a comprehensive redevelopment of North Street, which could help create an attractive approach to the town from the north; make	

Response Number	Respondent Name	Response to Q17	Council's response
		the precinct more commercially successful and vibrant; encourage the formation of an attractive "square" alongside Angel Way as part of the precinct and improve the existing pedestrian linkage from there to the market place, through The Mews and alongside the Church; and improve the setting of the listed Church as well. Maintaining this part of North Street as part of the Conservation Area discourages such improvements.	
POST18.2	Philip Bowden	I am requesting that the land bordered by New Zealand Way, Queenstown Gardens and Gisborne Gardens,(Known as the Green) in South Hornchurch to be allocated the status of Local Green Space under the National Planning Framework paragraph 77 Local Green Space criteria 1. Reasonably close proximity to the community it serves There is no definition of this in the NPPF and it will be up to individual planning authorities to define. This may vary depending on the size of the community to which the green space relates, the size of the green space or the value placed on it by the community. The land must not be isolated from the community and would normally be within easy walking distance of the community served. We maintain that the land mentioned fulfils the criteria stipulated here and indeed is immediately surrounded by residents dwellings Further we say that this land fulfils the criteria of paragraph 2 2. Demonstrably special to a local community Evidence must be provided of the land's value to and use by the local community to show the land holds a particular local significance. The land must fulfil one or more of the following criteria:	A planning application has been submitted for residential development on this site and therefore it would not be appropriate to designate as a Local Green Space.

Response Number	Respondent Name	Response to Q17	Council's response
		We believe that the land qualifies under paragraph2 I Recreational value In respect that it is an important place for residents of Dovers Estate to socialise exercise, walk dogs, children playing. further we have historical evidence that the Council have organised events on the green. We are confident that the land also qualifies under paragraph 2 I Richness of wildlife. There are Bats that roost in certain trees surrounding the green. they have been identified as Crevice Roosting Bats. Bats are biodiversity indicators. Bats roosting in buildings or the surrounding area is a sign of a healthy green environment. Making space for Bats is an important conservation action. These same trees appear to support the growth of Lichen this is an indicator of the local air quality. Also every winter Canadian Geese visit the green. 3. Local in character, not an extensive tract of land The criteria may differ between settlements depending on their physical size and population. The areas would normally be fairly self-contained with clearly-defined edges. Blanket designation of open countryside adjacent to settlements will not be appropriate. There is a no minimum size limit for LGS. Again we believe that the land in question fits the criteria of, 'Local in character' We would like you to allocate this land as Local Green Space and remove the spectre of development threatening this local amenity enjoyed by residents for over 60 years as a De-facto green space.	

Response Number	Respondent Name	Response to Q17	Council's response
POST18.3	Nigel Teelan	I would just like to say I do not agree with the councils local plan for nowhere can I see any plans for gypsy and Traveller sites or accommodation of any kind in it	Noted. The Proposed Submission version of the Local Plan includes a policy dealing with gypsy and travellers. The Plan is supported by an up to date needs assessment.

SA Objective	Key Questions	Yes/No	Comments
Retain and enhance and conserve the biodiversity and character of the landscape.	Is the site within 100metres of any of the following sensitive receptors:		
	• SSSIs	**No**	
	• NNR	**No**	
	• LoWS	**No**	
	• Ancient Woodland	**No**	
	• Other sensitive designated	**No**	
	Will the development be located in areas noted for their high sensitivity to change (from Essex Landscape Character Assessment evaluations) or within 100metres?	**No**	
	Will any Tree Preservation Orders (TPOs) be affected as a result of development?	**?**	
	Is it a Greenfield site?	**Yes**	
	Is the site located within the Greenbelt?	**Yes**	
	Is the site located within the Countryside Protection Zone?	**No**	
	Will the site result in a loss of high quality agricultural land?	**No**	
	Will new development see a disruption in current field boundaries?		

SA Objective	Key Questions	Yes/No	
To maintain and enhance the districts cultural heritage assets and their suroundings	Is the site within 100metres of a (including its setting):		
	Scheduled Monument?	**No**	
	Listed Building?	**No**	
	Conservation Area?	**No**	
	Historic Park or Garden?	**No**	
	Other historic or cultural feature?	**No**	

SA Objective	Key Questions	Yes/No	
Reduce and control pollution	Is the site in or within 100 metres of any AQMA, or likely to exacerbate issues through access arrangements?	**No**	
	Is the site within 100 metres of any vulnerable waterbodies?	**No**	
	Is the site within a ground water protection zone?	**No**	
	Will the site be affected by noise?	**No**	
	Is the site on contaminated land?	**No**	

SA Objective	Key Questions	Yes/No	
To reduce the risk of flooding	Is the site within		
	flood risk zone2?	**Yes**	**Edge of site boundary**
	flood risk zones 3 a/b?	**Yes**	**Edge of site boundary**
	Is the site likely to increase flood risk elsewhere?	**No**	
	Is the site at risk of flooding from other sources?	**Yes**	
	Is there capacity on site for mitigation measures?	**No**	
	Does the site contravene any recommendations made in the SFRA?		

SA Objective	Key Questions	Yes/No	
To promote and encourage the use of sustainable methods of travel	Is the site within 800 metres of an existing public transport node?	**Yes**	**Bus Service**
	Is the site within walking and cycling distance (800m) of:		
	a school (Residential allocations only)	**No**	**Secondary School1km**
	convenience shopping (Residential allocations only)	**Yes**	**800m Local shops Gubbins Lane**
	primary health care facilities? (Residential allocations only)	**Yes**	**Harold Wood Clinic**
	residential areas? (not applicable to residential allocation proposals)	**Yes**	

SA Objective	Key Questions	Yes/No	
Promote accessibility	Is the site located in an area of high deprivation for Barriers to Services sub-domain?	**No**	
	Does the site provide safe highway access?	**?**	
	Is the site within a town centre?	**No**	

SA Objective	Key Questions	Yes/No	
To Improve the population's health and promote social inclusion	Will the site be located within 800 metres of healthcare facilities?	**Yes**	**Harold Wood Clinic**
	Will the site be within:		
	300m of accessible natural greenspace of at least 2ha in size?	**No**	**Pages Wood 400m**
	2km of a 20ha accessible natural greenspace?	**Yes**	
	5km of a 100ha accessible natural greenspace?	**Yes**	
	Will the site see a loss of recreation?	**No**	
	Is the site located within an area of high deprivation for the for the Health Deprivation and Disability IMD sub-domain?	**No**	
	Will the site be readily accessible on foot or by bicycle?	**Yes**	

SA Objective	Key Questions	Yes/No	
To improve the education and skills of the population	Will the site be located within 800 metres of a primary school?	**No**	**Harold Court Primary School 1.9 km**
	Will the site be located within 4.8km of a secondary school?	**Yes**	**Redden Court School**

Site to	Railway Station	- 0.64miles	1km
	Retail Park	- 1.8 miles	2.8km

Newsletter

Issue No 9 January 2013

Open Spaces are Vibrant Places

First, we would like to wish all our members and supporters a very happy and prosperous New Year. Our last newsletter was in March 2010, in which we announced that a Restoration Plan P0432.10 for the Mardyke Farm had been submitted to the Council. The plan was subsequently approved and work on restoring the site commenced early in 2011.

In This Issue

An Update On the Mardyke Farm Restoration Progress
A High Quality Open Green Space Amenity for Local People to Enjoy
The Cessation of Rubbish Tipping, Site Encroachment and Bonfires
Public Access Entry Points - Time to Have Your Say

Meeting to Discuss Restoration Progress

In December 2012 the Committee met with :

- Mary-Lee Athorn of Athorn Consultants, representing the owners of the site, Ebbcliff. Mary-Lee has been responsible for the design, submission and monitoring of the restoration project.
- Steve Martin the Project Director and Raj Patel the site manager, representing Erith, who are the contractors implementing the restoration.

Once the Council had approved the restoration plan, extensive work was undertaken to safeguard wildlife on the site. You may have noticed the fencing made from wooden stakes and black polythene sheeting, which provides safe havens for wildlife, away from all the machinery and operations on site.

Wildlife Safe Haven

Landscaping work on the site commenced in 2011, and initially large quantities of boulders, rocks and other materials had to be crushed screened and graded. Some was to be used on site for lorry access and pathways and the rest were taken off site for use elsewhere.

It was explained that the Restoration Project would abide by the original landform contours which were agreed in the original Park Plan P0186.93

To do this 330,000 cubic metres of soil needs to be brought on site representing 34,550 lorry loads. This started around May of 2011 and to date 14,619 loads, or 42% of the total, have come onto the site. Figures and graphs showing the progress were presented to the meeting by Raj, who added that the availability of material was less than had been hoped for, so they were slightly behind target. The Olympics and depressed market conditions were the two main factors affecting availability.

On average, the level of the site will be raised by approximately one metre except at the site boundaries. The committee agreed that good progress was being made and some slippage was to be expected if material was not always available.

Caterpillar D9T Leveler

Once the lorries have brought material onto site the large Caterpillar D9T leveller is used to shape the material to achieve the correct contours.

When the final level of the contours has been reached graded topsoil which has been produced using giant sieving and grading machines is brought to the finished area and placed in small mounds to await better weather.

The area adjacent to the new Orchard Village Development has been finished and a large number of topsoil mounds can be seen covering that area awaiting drier weather.

Top Soil Mounds

Once the top soil has been distributed planting of grass, flowers and meadow foliage will commence. The committee again requested that trees should be planted to replace those destroyed in the original landfill. The destruction of trees had been catered for in the original plans P0186.93 which showed woodland areas and they are proposed in the new P0432.10.

26 Thorogood Way, Rainham, Essex. RM13 7SJ Tel 07912301656 email: mardykefarm@gmail.com

A High Quality, Open, Green Space Amenity, for Local People to Enjoy

The objective of the restoration plan is to maintain and enhance the existing ecological value of the site while providing a high quality, open, green space, amenity for local people to enjoy.

Once contouring of the site and laying of topsoil is complete, habitats would be established comprising:

- Wildflower meadow
- Sparse grassland
- Mixed Native Scrub and wildflower grassland mosaic
- Mixed native scrub and trees
- Standing and running water

When complete, the site would contribute to national, regional, and local conservation objectives, by creating a Priority Habitat under the UK and Greater London Biodiversity Action Plan.

Provision is also being made for the establishment and maintenance of the created habitats through an initial Ten Year Conservation Management Plan.

The Cessation of Rubbish Tipping, Site Encroachment and Bonfires

The committee are aware that over the years local residents have seen the site change from industrial quarrying, to toxic waste dump, to abandoned derelict land.

In the past, the restoration of the site has been promised and plans have been approved several times, but they have always fallen by the wayside. As a consequence, local residents have become sceptical and not always treated the site with respect.

At the meeting, Mary-Lee acting for the owners, gave a firm assurance to the committee that the restoration will be completed and will be managed properly in the longer term. She also requested that local residents bordering the site should:

- Cease tipping rubbish, including garden waste, beyond their back fence onto the site. It is anti social, unsightly, and can encourage vermin.
- Stop extending their gardens onto the site, including the storage of equipment beyond their fence line. Regular surveys and photographs of site boundaries clearly show illegal encroachment onto the site.
- Refrain from having individual or communal bonfires on the site.

Mary-Lee added that with the residents support and help, the site can become a pleasant green space that is a haven for wildlife and a respected local amenity space. The committee fully agreed with her statement and look forward to your support.

Public Access Entry Points - Time to Have Your Say

The approved footpaths and five public access points are shown in black on the adjacent site plan.

At the meeting a discussion took place on whether the number of access points should be reduced from five to two, with one to the North and the other to the South side of the site.

It was felt that reducing the number of access points might help in controlling motorcycles, which have been a problem in the past. On the other hand access equipment similar to that used at the adjacent Beam Valley Country Park might be sufficient, as it is almost impossible to get a motorbike through them.

If you have a view on the number or type of access points, or anything else, have your say by email, text, letter, or phone, using the contact details at the bottom of the page.

The Public's Right of Access to the Mardyke Farm Open Space

One question which keeps coming up is the possibility of the site being built on. This was raised at the meeting and in answer to the question, Mary-Lee confirmed that public access to the site, as open space, would be in perpetuity i.e. forever.

This is because the owners, Ebbcliff, voluntarily entered into a legally binding planning agreement with the Council to covenant the land, so that the public had unrestricted access, in perpetuity, to the majority of the Open Space created by the restoration. A small part of the restoration will be designated as protected areas for nature conservation and endangered species.

This covenant applies to the land, irrespective of who owns the land. This basically means that if the land was sold, the new owner would also be bound by the covenant, and the public would continue to enjoy unrestricted access, in perpetuity.

In addition the Mardyke Farm is designated as Green Belt Metropolitan Open Land, and forms an important part of the East London Green Grid, and the Dagenham Corridor. It is also part of the East London Greening the Gateway Initiative.

Local Plan Consultation Statement Appendix 7

Direction of Travel: Representations and Council Responses

DIRECTION OF TRAVEL RESPONSES:

Response number	*Respondent Name*	*Response*	*Council's response*
DOT1	*Tracy Jennings/Dean Hudson*	*We would like to suggest to the Council that they find a way to re-direct the heavy duty traffic and busses that pass our home (230 Upminster Road South, Rainham)* *The damage to the road resulting in rutting to the highway has caused cracks and damage to our property over the years, and will continue to do so if the problem is not dealt with.*	Noted. TfL are responsible for setting bus routes. Any request for route changes would need to be considered by the Network Development Team at TfL. Regarding heavy duty traffic, the Council continues to monitor the carriageway network because it places a high priority on ensuring that the highways in Havering are in good condition. Resurfacing works are carried out based on the condition of the road network. Havering continues to lobby and work collaboratively with Transport for London, the Highway Agency, the DfT and other relevant agencies to mitigate adverse road transport impacts within the borough and between the borough and other adjoining local authorities.
DOT2	*Pauline Cockburn*	*Havering should retain its green space and wildlife otherwise the health of residents will diminish.* *Havering should also increase its focus on the arts, again for well-being and develop unused commercial and office premises*	Noted. The Proposed Submission version of the Local Plan contains a positive strategy towards open spaces, green infrastructure, arts and culture.

		into housing rather than selling off more public land, green and community space. *New buildings should have underground parking, including residential and retail premises.*	The conversion of offices into residential is covered by Permitted Development rights and the Proposed Submission version of the Local Plan contains additional policies regarding conversions. The Proposed Submission version of the Local Plan sets out requirements for the quantum and design of parking. The provision of underground parking is expensive. It adds to development costs and may impact on viability. As a result it may mitigate against other planning priorities being secured through development.
DOT3	*Nicky and Colin Gates*	*I would like to object to the inclusion of the land in Havering-atte Bower being considered in any consultation for having its Green Belt status removed. This area is one of the few locations in the borough to have retained its beauty and environmental balance and should be left as is for future generations to enjoy.*	Noted. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the

			approach set out in the NPPF and London Plan. The Proposed Submission version of the Local Plan strategy will maintain the Green Belt in its current extent.
DOT4	*David Mellows*	*The Council's stated commitment to preserving the Green Belt is welcomed, but I note from earlier consultations that there have been numerous requests from developers to release areas of green belt for residential development.* *Whilst I can understand the pressure on the Council to provide the opportunity for increased residential developments in the borough to provide for the increasing population, it is essential that these developments are focused on the many brown field sites in the Borough which are large enough to accommodate the boroughs housing needs going forward and have the infrastructure to support such expansion.*	Support noted. In line with national planning policy and the London Plan, the Proposed Submission version of the Local Plan seeks to address Havering's housing needs through the provision of new homes in the built up areas of the borough. In particular, development of new homes will be focussed in the two Strategic Development Areas of Romford Town Centre and Rainham and Beam Park and at other sustainable locations across the borough that have opportunities for housing development as well as the capacity to provide the necessary infrastructure. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No

			exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. The Proposed Submission version of the Local Plan strategy will maintain the Green Belt in its current extent.
DOT5	*Philip Thompson*	*I would like to see better public toilet facilities open 24/7 included in your plans.* *Upminster is particularly poor. Even the library has no public facilities and the Upminster Park toilets are frequently out of action and in need of an upgrade.* *Romford station has no facilities*	Noted. Toilet provision and operation is outside the remit of the Proposed Submission version of the Local Plan. The Council is engaged in discussions with Network Rail and other stakeholders about securing improved facilities at Romford station commensurate with its important role in delivering Crossrail services.
DOT6	*Nigel Teelan*	*I would just like to say that yet again there is very very little mention of sites for Travellers in the local plan. What are you going to do for travellers/gypsies as far as providing sites for us? Your last proposals were so out of touch the inspector advised you to withdraw it which I think was your goal. Havering council has done nothing the last 15 years plus in reference to providing sites for travellers and maybe that's the plan for the next 15. You have been offered numerous parcels of land for this kind of development and at no cost to the taxpayers and you ignored it, yet you will probably re-zone other green belt sites for housing- how ironic*	The Council has undertaken a Local Needs Accommodation Assessment (LNAA) for its own Gypsy, Traveller and Travelling Showpeople which identified the need for 33 pitches for the Gypsy and Traveller community and no plots for the Travelling Show-people in the Proposed Submission version of the Local Plan period. Havering will seek to meet current and future accommodation needs

		Please bring forward plans to accommodate our growing population of travellers/gypsies	of its Gypsies and Travellers and Travelling Showpeople by formalising existing private sites providing a maximum of 33 pitches for Gypsies and Travellers and by retaining and protecting the existing Travelling Showpeople plot at Fairoakes, St Mary's Lane.
DOT7	*Carole Morrad*	*No to Mardyke Farm being removed from the Green Belt. We want our Green Belt Public Park as promised.* *We were promised this and have put up with all the dumping on our doorstep thinking it would be worth it in the end. Now you are trying to double cross us. Put it back to the park like you promised. We have been unable to access this park for ages and now we want it back.*	Noted. There is no proposal in the Proposed Submission version of the Local Plan to delete the Mardyke Farm site from the Green Belt. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. The Proposed Submission version of the Local Plan strategy will maintain the Green Belt in its current extent.

DOT8	*Meghan Rossiter (Tetlow King Planning representing **Rentplus**)*	W*e recommend that the Council seek to update the housing evidence base by assessing how Rentplus homes can improve supply in Havering.* *It would also be useful for the Council to consider incorporating Rentplus within individual strategic site assessments to consider how the inclusion of Rentplus homes can both speed up overall delivery and improve supply across the Borough. The inclusion of this innovative model at this stage of the consideration of the Plan would help plan more effectively for the Borough's long term strategic approach to delivery, and enable developers to consider the full breadth of options available to them to deliver high quality affordable homes for households aspiring to home ownership in Havering.*	Noted. The Proposed Submission version of the Local Plan is underpinned by a robust Strategic Housing Market Assessment (SHMA). It establishes the Objectively Assessed Need for Housing in Havering to 2031, including the tenure, size mix and types of housing supply options for both market housing and affordable housing. This will provide an opportunity in which Rentplus will be able to operate to improve housing supply in Havering.
DOT9	*Gidea Park & District Civic Society*	***Heritage and Design**: We fully support your strong commitment to "Protect & Enhance" Heritage Assets as one of your priorities in the emerging vision and objectives for the Local Plan. Policies therefore should set this out in as clear and unambiguous a manner as possible with the form and wording of policies effectively guiding decision makers. The current LDF and accompanying documents unfortunately are less specific than previous guidance under UDP.* *There should also be a commitment to further enhance Heritage by additional/extensions to Conservation areas and listings of buildings where appropriate. For example the Council's consultants carrying out the "Character Appraisal and Management Proposals" for the Gidea Park Conservation Area advised that there were more houses worthy of listing this no doubt applies in other areas of the Borough.* ***Landscape and Environment**: The Green Belt is an essential*	Noted. The Proposed Submission version of the Local Plan includes policies to protect and enhance heritage assets. The policy sets out that Conservation Areas will be kept under review through the preparation of up to date appraisals and management plans. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No

		element in the character of Havering, any proposal to remove land from the Green Belt should be fiercely resisted. In addition, within the urban areas good quality open areas with plenty of greenery are essential to maintain an attractive area in which to live and work. Your commitment to "value and enhance" is welcome but perhaps you should be more positive in committing to additional open green spaces and planting, to counter the growing necessity for intensification of development. The Council's proposals for several thousand high rise flats in and around Romford Town Centre will destroy its suburban character. There needs to be a counter balance in the form of more open green spaces to avoid a concrete jungle, recent developments are hardly impressive in this respect or in building design, this needs to be written clearly into policy. ***Transport and Car Parking**: A strong commitment is required to improve the highway network as you accept that many people will continue to use private cars. The heavily congested Gallows Corner junction is a prime example where traffic avoiding the junction rat runs through surrounding residential areas are causing danger and disturbance. A firm commitment is needed to ensure there is a much upgraded public transport system to provide an alternative to the car. Primarily enhanced bus services, particularly on North -South routes. The North of the Borough not having a station needs better links to the Crossrail stations where currently commuters flood the areas around stations with their parked cars impacting upon quality of life for residents.* *Furthermore the Romford - Upminster railway line is grossly underused. In an increasingly congested Borough it affords a valuable congestion free, transport corridor across the centre of the Borough, passing through dense residential areas that*	exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. The Proposed Submission version of the Local Plan strategy will maintain the Green Belt in its current extent. The Proposed Submission version of the Local Plan includes policies for landscaping and securing new green spaces. The Proposed Submission version of the Local Plan strategy seeks to enable a sustainable pattern of development that reduces the need to travel and offers a choice of transport modes to residents and visitors other than use of private cars. It includes policies to secure strategic transport infrastructure improvements in Havering to improve connectivity and ease congestion. The Council will work with partners and other stakeholders to enhance connectivity and strategic transport links in the borough. The Local Plan recognises that in Outer London there is not the

		currently have no access to it! Feeding into the main rail links to London at each end - Crossrail, C2C and District Line, it links two of the most important town centres as well as passing close to Hornchurch Town/Cultural Centre and Havering 6th Form College. It should be considered for future upgrading, more frequent service and increased number of stopping points, perhaps change form of Transport e.g. Tram, Guided bus etc. also potential for adding a cycle route. Great potential for getting cars off the road and also reducing parking around stations. *Parking is a major issue for many residents particularly close to stations/ shopping areas etc. where commuters/shoppers etc. park in residential roads. When granting consent for new developments/extensions/conversions in these locations there tends to be a slap dash adoption of theoretical parking standards (rather than a commonsense approach) that are totally impractical in such places. Onsite parking should be carefully located to avoid the turning of front gardens purely into parking lots, creating a concrete jungle with an absence of greenery and vehicles obstructing view of the house, quite soul destroying. Similarly for commercial buildings just because an office building is close to a local suburban station does not mean that those working there will mainly be travelling by train. Indeed many find a car necessary to undertake their work. Overspill parking only adds to the existing problem and consequent control and enforcement issues. This needs to be addressed in policy and commonsense should rule.* ***Town Centers:*** Policy needs to be rethought. *The smaller centres such as our own at Gidea Park are struggling to survive (4 vacant units at present)- greater assistance is required particularly in the form of very cheap*	'dense' provision of public transport found in Inner and Central London. In line with the London Plan, the Local Plan acknowledges that this may justify more generous parking provision. e importance of parking facilities being necessary. The provision of 'cheap plentiful parking' is outside the scope of the Proposed Submission version of the Local Plan. The Local Plan policies recognise that a more flexible approach to the balance of uses in smaller centres may be appropriate and may assist in maintaining their viability and vitality.

		plentiful parking where possible, also a more flexible approach to uses can assist as standard A1 uses struggle from competition with ever growing major town centers and out of town retail. Local centers need to evolve to justify their retention. A more imaginative approach is required to keep shop units occupied, perhaps to allow a wider range of uses, providing services to the local community that will draw visitors, rather than requiring too strictly A1 Retail over minimum frontages.	
DOT10	*Leonie Oliva- (Deloitte Real Estate on behalf of* ***SEGRO plc)***	***Emerging strategic objectives and spatial strategy****: The emerging Local Plan should ensure that strong emphasis is placed on the importance of deliver*ing *economic growth and high quality business space. The promotion of successful employment sites in the Borough will be essential to ensure there is an appropriate balance between employment opportunities and the new residential communities promoted in the Borough and the wider London Riverside Opportunity Area.* *The London Riverside OAPF sets out an aspiration to release large amounts of industrial land for the delivery of housing and relocation of Strategic Industrial Land to the Dagenham Dock and Rainham Employment Areas. SEGRO therefore support the document's reference (para 3.4.4) to the continued protection and promotion of employment areas including London Riverside.* *Furthermore, given that the London Riverside Area, and in particular the Rainham Employment Area, benefits from excellent road transport links and a good supply of local labour, the location offers an attractive proposition for logistic occupiers. SEGRO therefore also supports the Document's reference (paras 3.3.2, 3.4.9) to the intensification of industrial*	Noted. The Proposed Submission version of the Local Plan is underpinned by robust evidence in the Employment Land Review study. In summary, it seeks to protect the most important employment land. The Council will engage with developers and other stakeholders such as SEGRO as part of the delivery mechanisms of the Local Plan. The Local Plan has policies to secure a wide range of transport improvements including the provision of a new station at Beam Park, Rainham and better connectivity within Havering (including north –south and to / from London Riverside. The Local Plan is underpinned by robust evidence on parking and it seeks to reflect the opportunities

		land in the Rainham Employment Area, which re-affirms the aspirations of the London Riverside OAPF (Section 3 of the OAPF). We would welcome future discussions with LB Havering as part of the emerging Local Plan process to consider options as to how best intensify the development of industrial sites in the area to meet the growing needs of the logistics sector and maximise employment opportunities. ***Transport and car parking (paras 1.6.8, 3.2.8 and 3.4.4)**:* *SEGRO, as a long term investor in the Borough, support the Document's emphasis on the need for new and improved transport links across the Borough (para 3.4.4). In particular, SEGRO support the delivery of a new rail station at Beam Park, which is due to be operational by 2020 (para 3.2.8) and will help serve new residents and businesses in the London Riverside area. However, the emerging Local Plan should ensure that sufficient flexibility is provided for higher levels of car parking associated with industrial sites in the Rainham Employment Area. Given long standing issues in the area surrounding 'Accessibility to Public Transport' and 'Flexibility for shift patterns', we believe a flexible approach to parking standards in this area will be essential to ensure that industrial sites meet the operational needs of future occupiers, and are ultimately attractive to the market.* ***Training and employment for local residents (para 3.3.2)**:* *SEGRO is committed to maximising training and employment opportunities for the local community by working with its contractor and their subcontractors and future occupiers to provide employment, training and work experience opportunities to local residents and young people. This is demonstrated by the comprehensive skills and employment*	provided by the London Plan in regard to more generous parking provision in areas of lower levels of public transport accessibility such as London Riverside. The Local Plan has a commitment to developing skills and training and the specific comments about some forms of construction are noted.

		initiative agreed as part of the forthcoming Beam Reach 5 development. However, local employment and training policies within the emerging Local Plan should recognise the unique employment model requirements for the construction of 'fast-track' industrial buildings, which means that it is not always possible to appoint new local labour during the construction phase.	
DOT11	*Romford Civic Society*	*We are concerned that the document makes no reference to Conservation Area Appraisals or the borough's Shop Fronts SPD.* *Regarding Romford Housing Zone at paragraphs 3.4.5 – 3.4.7 on page 19, we are concerned that there is no reference to a coherent and holistic approach to design throughout the housing zone, no reference to the relationship of Romford Housing Zone to the River Rom, no reference to a relationship between Romford Housing Zone and the urban form of Romford as a whole, and no reference to biodiversity and ecosystems opportunities arising from the development of Romford Housing Zone in the Direction of Travel document.* *At paragraph 3.2.3, page 16, we are concerned that the paragraph on Romford does not mention the River Rom as a key geographical, historic and ecosystems feature of the town, and makes no reference to ecosystems and biodiversity aspirations for the town, improving its relationship to green corridors and the landscape around it.*	Noted. There will be an opportunity in taking the Local Plan forward to review the existing documents supporting the existing Local Development Framework such as existing SPDs. The Proposed Submission version of the Local Plan recognises the significance of the River Rom in the policy for the Romford Strategic Development Area and a policy on rivers and river corridors.
DOT12	*Zoe Simmonds (Nathaniel Lichfield & Partners representing **Groveworld Beam Park Regeneration***	*GBPR welcome the Council's Vision for Rainham and Beam Park and its commitment to transform the area in a new green neighbourhood with modern residential accommodation. GBPR then supports the statement at paragraph 3.2.4 of the*	Noted. The Proposed Submission version of the Local Plan has been prepared in line with the approach in the London Plan and the London

	Co. LTD.)	*Direction of Travel document that "the new neighbourhood "will be structured around a new station and vibrant local centre at Beam Park" and its integration with the historic elements of Rainham village.* *The Direction of Travel document makes reference to the adopted Rainham and Beam Park Planning Framework, stating that it will be used to inform the preparation of the Local Plan alongside a wider range of evidence documents. Whilst GBPR do not contest this approach to planning policy making, they consider that account should also be taken of the area's designations and the need to meet London's acute housing shortage when drawing up policies for the area.* *In particular, GBPR questions whether the provision of 40-45% townhouses within the residential mix is an efficient use of land, particularly within an area identified as a Housing Zone and Opportunity Area. Providing this number of townhouses on a key housing site is an underutilisation of the land and is not reflective of the drastic need for housing in London. Similarly, GBPR queries whether the residential density (given as 60 - 80 dwellings per hectare for Beam Gardens) and the suggested building heights (set as 4 storeys fronting onto New Road and 2-3 storey townhouses within the main neighbourhood) will provide the optimum amount of residential development.*	Riverside Opportunity Area Planning Framework as well as the Council's own Masterplan and Development Framework. The Local Plan is also supported by an up to date Strategic Housing Market Assessment (SHMA) and this will inform the development of the area.
DOT13	*Marie-Claire Marsh (Nathaniel Lichfield and Partners representing* ***'Higgins Homes'****)*	*It is noted that the DoT states that a strategic objective of the Local Plan should be to "increase the supply of high quality housing in Havering by a minimum of 1,170 dwellings per annum over the Plan period".* *Paragraph 3.4.4 of the DoT states that in order to achieve this strategic objective, the spatial strategy is to ensure development is focussed in the most accessible and well*	Noted. The Proposed Submission version of the Local Plan aims to bring forward significant housing delivery in the most accessible and well connected areas – specifically, Romford and Rainham and Beam Park as well as other centres.

		connected areas of the borough: Romford Town Centre, Rainham and Beam Park SDA and the regeneration of Council owned housing estates. *Whilst these spatial strategies seek to ensure that the opportunities to increase residential development in town centres are maximised, the Council needs to also consider careful how these will all be delivered and at what stages. It is our view that it will take a long time to develop many of these sites/opportunities and that as a consequence, the required annual delivery rates will not be achieved, particularly in the short term when much needed new homes are required.* *In this regard, it is noted that paragraph 2.1.6 states that the priorities, reflected in the emerging visions and objectives for the Local Plan, includes protecting and enhancing the Green Belt. Whilst in principle this is a sound approach, it should be recognised that not all Green Belt land serves that purpose and that much is well located on the urban fringe, where sustainable development could be achieved and delivered.* *We would therefore, question whether the current strategy of protecting all Green Belt land is necessary and whether the current strategy will provide the housing numbers the Borough needs over the Plan period.* *Given the need to meet the increased housing requirements, we would strongly urge the Council to give greater consideration to releasing areas of the Green Belt for residential development which are in a sustainable location as extensions to existing settlements, where there are clearly defined boundaries and where none of the purposes of the Green Belt are met.*	Both Romford and Rainham and Beam Park have been identified as Housing Zones by the Mayor of London. These have funding programmes in place to accelerate housing delivery and to provide greater certainty for developers. The Local Plan is supported by a Housing Position Statement which sets out in more detail how the Council envisages housing delivery coming forward over the Plan Period. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan.
DOT14	*Suzy Wilson (CgMs on*	*<u>RESPONSE TO REGULATION 18 CONSULTATION</u>*	Noted.

	*behalf of **Taylor Wimpey Strategic Land**)*	*Question 3: What do you think the Local Plan priorities for housing should be?* - *Addressing the current shortfall and exceed the Council's current target by increasing and maximising housing numbers within the Borough.* - *Positively seek opportunities to do this and identify and seek to enable additional development capacity to be brought forward to supplement these targets.* - *Widen opportunities for home ownership and the creation of sustainable, inclusive and mixed communities in locations where people want to live.* *Question 4: Where do you think new homes should be located?* - *Houses should be located where people want to live and settle, taking account of the needs of the residential community. This is one of the aims the Council itself has identified as an aim within its Direction of Travel document.* - *Two new housing zones have been identified within Planning Frameworks. These zones are intended to deliver 6,554 homes. However, this provision is over a 20 year period; involves sites with existing occupiers/development; will require the delivery of associated infrastructure, and will require site amalgamation and a joined up approach to planning. As a result there is uncertainty over the delivery rates achievable from these sites over the first 5 years and therefore their contribution to achieving the Boroughs 5 year housing target.* - *In addition, the two housing zones are located to the*	The Proposed Submission version of the Local Plan is underpinned by a robust Strategic Housing Market Assessment. This will inform the delivery of housing. The Local Plan includes a policy to secure a wide range of housing types including different tenures. The Spatial Strategy of the Proposed Submission version of the Local Plan directs development including housing supply to the most accessible and well connected areas of the borough where there are existing concentrations of supporting infrastructure. The strategy of the Proposed Submission version of the Local Plan positively seeks opportunities to increase and maximise housing output through identifying and assessing land to enable additional development capacity to be brought forward to supplement the two housing zones. The Council has undertaken a Green Belt study as part of the evidence base for the Proposed Submission version of the Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one

		west of the Borough with no sites allocated within Upminster to serve the town itself. The allocation of an additional housing site in Upminster would assist by sharing the "burden" of the Borough's allocated housing target in a sustainable pattern of development which provides for local housing need and spreads infrastructure demand across the Borough. - *These Housing Zones do not reflect the local demand within the borough as required by the NPPF by such large sites being located within just two of the towns within the borough.* - *The site adjoins the built up area of Upminster on two boundaries and has direct road frontage on 3 boundaries. A suitable vehicle access point is located on the northern boundary of the site via Little Gaynes Lane, which is also the closest point and most direct succinct route to Upminster's town centre and train stations. There are also additional opportunities for pedestrian and cycle access points at the northern end of the site adjacent to existing housing.* - *The land to the South of Little Gaynes Lane, Upminster is considered to represent the best opportunity to meet the objectively assessed housing need for the settlement of Upminster in a sustainable location*. *Question 8: How do you think the Plan should support the Culture and Leisure offer within Havering?* - *The land to the South of Little Gaynes Lane, Upminster sits within the Thames Chase Community Forest, which is an area established in 1990 covering 40 square miles of East London and South Essex. The Vision for the Forest is that by 2030, it will be recognised as 'an*	or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. The Proposed Submission version of the Local Plan takes into account the requirements of the NPPF in Local Plan. The study concluded that all of the Green Belt in the borough makes a contribution towards one or more purposes of the Green Belt identified in the NPPF and is based on defendable boundaries. No exceptional circumstances have been identified to justify making any modifications to the Green Belt in the Proposed Submission version of the Local Plan following the approach set out in the NPPF and London Plan. The Green Belt Evidence Study therefore does not support any release of Green Belt land in Havering. The Local Plan recognises the opportunity provided by Thames Chase Community Forest. It has policies dealing with green

		inspirational example of landscape regeneration where enhanced connected woodland and green space has made a clear difference to wildlife and peoples' lives'. - *The site does not currently contain any forest or woodland. There is potential, with the development of the site, to incorporate environmental enhancements to this section of the Community Forest, such as tree planting and hedgerow and non-woodland habitat creation/ restoration, as well as improving public access to and through the site, including links between the Ingrebourne Valley Greenway to the north west of the site and Parklands Open Space to the south east, as part of a comprehensive green infrastructure strategy for the site.* - *This will enhance the Thames Chase Community Forest and will improve the recreational opportunities of the local population to enjoy the green spaces both within the site and beyond in line with the NPPF.* *<u>Question 10:</u> Do you have any suggestions for the revisions to the Green Belt Boundary?* - *The land to the South of Little Gaynes Lane, Upminster is a suitable site for release from the Green Belt to accommodate local housing need in Upminster. The site is partially enclosed by existing development to the north, north-west and east. The development of the site would not adversely impact the setting of Upminster and its distinct identity from Hornchurch to the north-west. The site is separated from Hornchurch by the Ingrebourne Valley and existing built development. Hacton Lane and Park Farm Road form a clear boundary to the site and a strong future boundary*	infrastructure, to protect and enhance nature conservation and to increase opportunities for informal countryside recreation..

		between the settlement of Upminster and the green belt. *Opportunities:* - *Creation of a sustainable urban extension to Upminster* - *Enhanced Recreation*	
DOT15	*Samantha Powell (Department for Education)*	*The EFA encourages LB Havering to safeguard land for the provision of new schools to meet government planning policy objectives as set out in paragraph 72 of the NPPF.* *In addition, there is a need to ensure that the education contributions made by developers are sufficient to cover the increase in demand for primary and secondary school places that is likely to be generated by new development. When new schools are developed, local authorities should seek to safeguard land for the future expansion of new schools where demand indicates this might be necessary*. *In developing policies for new schools, consideration should be given at an early stage in the site appraisal process as to how the use of public transport, cycling and walking can be encouraged to help reduce the number of car journeys to and from new schools. The inclusion of a well-developed green travel plan can help to ensure that new schools are better integrated with existing communities.* *The EFA also notes that LB Havering will use the Infrastructure Delivery Plan to inform the evidence for the Council's emerging CIL (para 2.2.7). There is a need to ensure that education contributions made by developers are sufficient to cover the increase in demand for school places that are likely to arise from major developments in the borough. Robust forecasting*	Noted. The preparation of the Proposed Submission version of the Local Plan was informed by close working across the Council with Council staff involved in the planning of new education facilities. It takes account of the latest Schools Commissioning Plan. The Council would look for proposed sites for schools to be well located and accessible by a range of travel modes.

		will also help to secure investment from other services and housing developers for infrastructure projects and new housing developments through Section 106 negotiations. *The EFA encourages collaborative working with local authorities during all stages of planning policy development to help guide the development of new school infrastructure and to meet the predicted demand for primary and secondary school places. As such, and in line with the Duty to Cooperate, and Havering's commitment to 'continue to engage with public bodies to inform the policy approach to the provision of strategic infrastructure' (para 2.3.4) please add the EFA to the list of infrastructure providers with which the Council consults and engages with for the next stage of this and other Local Plan documents*.	
DOT16	*Roy Burnett (Guys & St. Thomas' NHS Foundation Trust)*	Not quite sure what you are trying to achieve with this, but an obvious consideration is to open up all bus lanes to motorbikes. Thanks.	Noted. This is outside the scope of the Proposed Submission version of the Local Plan.
DOT17	*Sports England*	*Sport England acknowledges that paragraph 2.2.6 states an Open Space, Allotment and Sport and Recreation Needs Assessment will form the evidence base for the emerging Local Plan but question why the Playing Pitch Strategy (PPS), which is currently being developed, will not form the evidence base. The PPS will set out a clear strategy and action plan with delivery priorities for playing pitches within the borough and therefore should direct the objectives and policies of the Local Plan. Sport England also notes that the Council do not appear to have a specific Built Facility Strategy that assesses the needs and requirements for future provision of built sporting facilities. This strategy should be developed in order to provide a robust and*	Noted. The Proposed Submission version of the Local Plan is underpinned by a robust evidence base including a Space, Allotment and Sport and Recreation Needs Assessment Study. The Local Plan includes a policy to protect and enhance open space, sport and recreation and within this there is recognition of the role of playing pitches and support for bringing back into use playing fields which

		up-to-date evidence base for any emerging polices relating to built sport provision. *Sport England welcome that health and leisure provision will be reflected in the emerging vision and objectives for the Local Plan but are concerned that the Council are not seeking specific policies relating to playing pitch/outdoor and indoor sports facilities. Sport England recommend that such policies are incorporated within the emerging Local Plan so that sports facilities can be clearly planned and provided in the right places at the right time. These policies should fully reflect Sport England's objectives to protect, enhance and provide and should be based on an established and robust assessment of need and a clear strategy and action plan that fully reflects Sport England's Land Use Planning Policy Statement 'Planning for Sport Aims and Objectives.'* *Sport England has concerns relating to the evidence base and the intention to not provide specific policies relating to sport but would be happy to work alongside the Council in the development of the Local Plan so that sport within the borough can be positively planned.*	are disused.
DOT18	*James Stevens* *(Home Builders Federation Ltd.)*	*The London Plan has undertaken an OAN for London, treating London as a single housing market area. The overall OAN of 49,000 has then been apportioned among the 35 London local planning authorities (including the two development corporations) on the basis of capacity. Capacity for only 42,000 homes has been identified.* *We note in paragraph 3.4.3 that the emerging local plan will provide for 1,170 dwellings per annum (dpa). This reflects the minimum dwelling requirement in Table 3.1 of the London Plan.*	Noted. The Proposed Submission version of the Local Plan is underpinned by a Strategic Housing Market Assessment (SHMA). The Council has also prepared a Housing Position Statement to support the delivery of housing through the Local Plan. The Council recognises the importance of providing new

		The London Plan does require the London boroughs to undertake local assessments of need (SHMA) and local assessments of capacity (SHLAA) to augment the London Plan targets in order to try and close the gap between the need to provide 49,000 dpa – which represents the lower end of the OAN, and the capacity for 42,000 dpa. *We hope, therefore, that the Council will try and augment the minimum figure of 1,170 dpa in order to help address London's wider strategic unmet need of circa 7,000 dpa.*	homes and the policies in the Local Plan are intended to optimise housing delivery. They include policies for the Romford and Rainham and Beam Park Strategic Development Areas which have the potential to deliver significant housing.
DOT19	*Highways England*	*Our interest in local plans is specifically focussed on the council's approach to highway and transport matters in relation to regeneration and new development. Given the proximity of London borough of Havering to the M25, A13 and A12 that are all part of the SRN, we are keen to understand what impact the Havering Local Plan will have on the SRN for which we are responsible.* *We note that the evidence base for the Local Plan will include Transport Background Papers that are currently being prepared that will bring together a number of transport evidence base documents to support the Plan. It is important that the transport appraisals covered by these papers adequately assess the impact of the Local Plan on the SRN. This is necessary to ensure that any requirements for enhancements to the SRN triggered by the impact of the Local Plan are identified, including how they would be funded.*	Noted. The Proposed Submission version of the Local Plan is underpinned by a Transport Position paper and strategic modelling paper undertaken with the support of Transport for London.
DOT20	*Historic England*	*There is an expectation that local planning authorities should set out a positive strategy for the conservation and enjoyment of the historic environment, including heritage assets most at risk through neglect, decay or other threats (NPFF para 126).*	Noted. The emerging Proposed Submission version of the Local Plan includes policies to protect and enhance the historic

		This should be supported by a robust evidence base which clearly demonstrates an understanding of London's historic environment, the significance of its heritage assets and their contribution to the wider environment (NPPF para 169). In this context it is important to recognise that heritage assets are widely defined as any .building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in both plans and decision making. *Ultimately we would expect the emerging Local Plan to provide a robust framework that delivers sustainable development including net gains for the conservation and enjoyment of the historic environment.* ***Evidence Base**: On reviewing the evidence provided in the Direction of Travel and the council's web site, it is not possible to identify what evidence has been gathered on the Boroughs historic environment and how it has been used to inform the current consultation document.* *Reflecting national policy we would seek to ensure the evidence gathered and used is sufficiently robust, inclusive and not just focused on quantitative aspects, but includes details of condition and the positive contribution of the historic environment. Our advice as set out in 'The Historic Environment in Local Plans' (GPA1) provides helpful pointers on what evidence should be gathered and how it could be applied.* *A way forward which could help improve understanding of the Borough's historic and local character (as part of the local plan evidence base and inform both the Borough Portrait and distinctive local policies) could be to commission a Borough-wide characterisation Study. Historic England has just completed an audit of characterisation studies already*	environment of Havering and the heritage assets of the borough. The policies in the Local Plan have been informed by the Council's existing evidence base for heritage assets. This includes the Havering Heritage Assets Register and several Conservation Area Appraisals and Management Plan s for Havering's eleven Conservation Areas. The strategic objectives in the Local Plan include a specific objective dealing with heritage and it reflects the suggestions put forward by Historic England in their representation. The key elements of the Spatial Strategy identify the importance of heritage and the policies for the two strategic development areas in Romford and Rainham and Beam Park both identify heritage.

		undertaken and as a result identified a number of lessons to be learnt: Executive Summary via the following link: https://content.historicengland.org.uk/content/docs/get-involved/luc-characterisation-london -historic-environment-exec-summary.pdf *It is noted that reference is made to the associated Sustainability Appraisal as part of the evidence base. Paragraph 2.2.16 states that the Scoping Report has taken into account comments received following consultation in 2015 (response dated 12th January 2015) and as a result provides a link to the document. However it is not clear if views are being sought on this document (February 2015). If so, as a statutory consultee, we should receive a formal request to comment further.* ***Spatial Portrait**: We welcome the inclusion of designated heritage assets as part of the portrait. However, the level of detail is minimal and does not explain how the Borough's heritage positively contributes towards the distinctiveness of havering and its continuing changes. For example many of Havering's town and district centres have historic character that contributes to the distinctiveness of places. These places appear to be identified to accommodate further intensification and growth, yet in the Portrait this relationship is not recognised sufficiently.* ***The Emerging Strategic Objectives**: The Strategic Objective for the historic environment could be strengthened further, for example:* *'Proactively conserve, enhance, and ensure greater understanding of Havering's heritage assets, their settings and the wider historic environment.'*	

		Emerging Spatial Strategy*: It is with concern that heritage is not included as part of the spatial strategy. Heritage assets are by default spatial and through understanding their 'significance' can make a positive contribution to place making and managing change. An approach which should be used to help inform appropriate scales of development in the borough's District Centres, and intensification in Romford Town Centre.* *Intensification of development can potentially, if not planned and developed from a baseline of understanding the heritage interest, cause harm to the significance of heritage assets. It is noted that in Romford, emphasis is placed upon delivering high densities. This is not necessarily an issue, if the right tools and mechanisms with regards to conserving the significance of heritage assets are applied rigorously (as expressed by national policy and best practises). Otherwise inappropriately designed developments could result in a net loss to the conservation of the historic environment and be contrary to the achievement of sustainable development as clearly sought by national policy.*	

Havering
LONDON BOROUGH

CABINET MEETING
19th JULY 2017

HAVERING LOCAL PLAN

CONSULTATION STATEMENT 2017

Local Plan Consultation Statement Appendix 8

Submitted sites

Introduction

Table 1 lists all sites that that have been put forward for development during the preparation of the Havering Local Plan. The table provides a summary of the site and proposed land use as well as the Council's response.

The sites have come forward during the following stages:

1. Havering call for sites 2014 undertaken as part of the Havering Employment Land Review 2015
2. Local Plan Regulation 18 consultation 2015
3. Local Plan Direction of Travel publication 2016
4. Outside of a 'formal' consultation or call for sites stage
5. Pre-Local Plan – sites within the Green Belt that were known to the Council prior to the stages above

Where applicable, a site-specific response is given. Otherwise is referred to the main body of the Consultation Statement, which describes how sites have been considered.

Maps of the sites within the Green Belt have been provided after the table. This corresponds with the publication of Green Belt sites on the Council's website, which has been publically available and was regularly updated throughout the preparation of the Local Plan. This is followed by a section with additional material that has been submitted to the Council to support these submissions.

Table 1 – submitted sites

Site Address	Submission Stage	Current designation	Proposed use(s)	Council's Response	Additional material
Lillyputts Farm, Hornchurch	1 and 2	Green Belt (GB1)	Residential	Refer to main consultation statement	
Land off Heath Drive, Gidea Park, Romford, RM2 5QB	1	Green Belt (GB2)	Residential	Refer to main consultation statement	
Manor Fields, Rainham	1	Green Belt (GB3)	Mineral Extraction/ reclamation and restoration back to agriculture	Refer to main consultation statement	
Parcel A to the north of Squirrels Heath Road	1, 2 and 5	Green Belt (GB4)	Open space and parkland	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Parcel B to the south of Squirrels Heath Road, Harold Wood	1, 2 and 5	Green Belt (GB5)	Residential and open space and parkland	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land at Hill Farm, Noak Hill, Church Road	2	Green Belt (GB6)	Residential and employment	Refer to Appendix 6, Local Plan Regulation 18 responses	
Upminster Garden Centre, Nags Head Lane, RM14 1TS	1 and 2	Green Belt (GB7)	Residential, retail, office, leisure, warehousing, industrial, cultural and community	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
South Hall Farm, Wennington Road,	1	Green Belt	Residential and leisure	Refer to main consultation	

Rainham, Essex, RM13 9DQ		(GB8)		statement	
Berwick Ponds Farm, Berwick Ponds Road, Rainham, Essex, RM13 9EJ (This site has also been put for mineral extraction, refer to GB3)	1	Green Belt (GB9)	Residential and leisure	Refer to main consultation statement	
Great Sunnings Farm, Sunnings Lane, Upminster RM13 2DG	1	Green Belt (GB10)	Residential and leisure	Refer to main consultation statement	
Havering College of Further and Higher Education Quarles Campus, Tring Gardens, Harold Hill, Romford, Essex, RM3 9ES	1 and 2	Green Belt (GB11)	Residential and leisure	This site was identified in the 2008 Local Development Framework as a Major Developed Site in the Green Belt. The Council recognises the importance and fundamental role that previously developed sites in the Green Belt can play in accommodating residential development, and will, in the specific instance of the College's Quarles campus at Tring Gardens, Harold Hill, support redevelopment in accordance with the NPPF. Please refer to Appendix 6, Local Plan Regulation 18 responses	
Land between the A12 and Romford Golf Club	2	Green Belt (GB12)	Residential, education and employment	Refer to Appendix 6, Local Plan Regulation 18 responses	
Upper Rainham Road - Opposite Laburnum Avenue	1	Green Belt (GB13)	Residential	Refer to main consultation statement	
Doriston, Southend Arterial Road,	5	Green Belt	Residential	Refer to main consultation	

Cranham, Upminister, RM14 1TL		(GB14)		statement	
Plot 231, Prospect Road, Harold Wood	1 and 5	Green Belt (GB15)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land at Copthorne Gardens, Wingletye Lane, Hornchurch, RM11 3DL	1 and 2	Green Belt (GB16)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land east of Moor Lane, North of Moor Lane Church, Cranham, Upminister	1 and 2	Green Belt (GB17)	Mixed use, residential and cultural and community	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Redbrick Cottages, Warwick Lane, Rainham	5	Green Belt (GB18)	Residential	Refer to main consultation statement	
Wood Lane, Rush Green	1	Green Belt (GB19)	Residential	Refer to main consultation statement	
1	1	Green Belt (GB20)	Residential	Refer to main consultation statement	
Orange Tree Farm, Orange Tree Hill, Havering-atte-Bower	1	Green Belt (GB21)	Leisure, residential and cultural community	Refer to main consultation statement	
Orange Tree Hill, Havering-atte-Bower	1	Green Belt (GB22)	Leisure and cultural and community	Refer to main consultation statement	
Hall Lane, Upminster	1 and 5	Green Belt (GB23)	Residential	Refer to main consultation statement	
Little Paddocks Farm, Shepherds Hill, Harold Wood	1 and 2	Green Belt (GB24)	Residential, leisure, cultural and community, and public open space	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	

Lincoln Close, Hornchurch, RM11 3HD	1 and 2	Green Belt (GB25)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land to the East of Wingletye Lane , Hornchurch (Surrounding Lillyputts Farm)	1 and 2	Green Belt (GB26)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
New Road (A1306), Rainham	1 and 2	Green Belt (GB27)	Mixed use, residential, park and green space	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land at Lillyputts Farm, Hornchurch, RM11 3BL	1 and 2	Green Belt (GB28)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Chapmans Farm, Upminster (Site 1) RM14	1 and 2	Green Belt (GB29)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land at Chapmans Farm, Upminster (Site 2) RM14	1 and 2	Green Belt (GB30)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Chapmans Farm (Site 3), Upminster RM14	1 and 2	Green Belt (GB31)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land north of Ockendon Road, Upminister, RM14 2DJ	2 and 5	Green Belt (GB32)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18	

				responses	
Gaynesborough, Little Gaynes Lane, Upminster RM14 2JB	2 and 5	Green Belt (GB33)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land between Collier Row Road and Hog Hill Road, Collier Row, Romford, Essex	1 and 2	Green Belt (GB34)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Gobions Farm, Collier Row Road, Romford, Essex	1 and 2	Green Belt (GB35)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land between London Road and A12, Mawneys, Romford, Essex	1 and 2	Green Belt (GB36)	Residential, leisure	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land between Marlborough Road and A12, Mawneys, Romford, Essex	1 and 2	Green Belt (GB37)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Cardrome, Upper Rainham, Hornchurch, Essex, RM12 4EU	1 and 2	Green Belt (GB38)	Residential	This site was identified in the 2008 Local Development Framework as a Major Developed Site in the Green Belt. The Council recognises the importance and fundamental role that previously developed sites in the Green Belt can play in accommodating residential development. There may be	

				some potential for re-development in line with green belt policy set out in the NPPF.	
Bush Farm Corbets Tey, Upminster	1, 2 and 5	Green Belt (GB39)	Residential, education and community facilities	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Land at Mardyke Farm, South Hornchurch	1 and 2	Green Belt (GB40)	Residential, school, community facilities, and associated green infrastructure	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	
Wennington Road	2	Green Belt (GB41)	Residential	Refer to Appendix 6, Local Plan Regulation 18 responses	
Brookmans Park Drive	4	Green Belt (GB42)	Unknown	Refer to main consultation statement	
Land at Park Farm & Meadow Farm, Eastern Avenue East, Romford, RM3 7NR	4	Green Belt (GB43)	Residential	Refer to main consultation statement	
Land on the West side of Risebridge Chase, Romford	4	Green Belt (GB44)	Residential	Refer to main consultation statement	Y
Land adjacent Ivy Holt, North Road, Havering Atte Bower, RM4 1PS	4	Green Belt (GB45)	Residential	Refer to main consultation statement	Y
Land at North Road, Havering Atte Bower, RM4	2 and 4	Green Belt (GB46)	Residential	Refer to main consultation statement and Appendix 6, Local Plan Regulation 18 responses	Y
Risebridge Chase, Romford	4	Green Belt (GB47)	Withdrawn	Refer to main consultation statement	
178 /Rear of 188 Crow Lane Romford	4	Green Belt (GB48)	Industrial/Residential	Refer to main consultation statement	

Tudor Oak, Nags Head Lane	4	Green Belt (GB49)	Building and Residential use	Refer to main consultation statement	
Park Corner Farm Hacton, Upminster, Essex	4	Green Belt (GB50)	Affordable housing, School, Hospital, Medical Centre	Refer to main consultation statement	
Land north of Eastern Avenue East	4	Green Belt (GB51)	Residential, Leisure	Refer to main consultation statement	Y
Oak Royal Nurseries 355A Front Lane Upminster Essex RM14 1LW	4	Green Belt (GB52)	Residential	Refer to main consultation statement	Y
Tomkyns Manor, Tomkyns Lane, Upminster, Essex RM14 1TP	4	Green Belt (GB53)	Residential	Refer to main consultation statement	Y
Tomkyns Manor, Tomkyns Lane, Upminster, Essex RM14 1TP	4	Green Belt (GB54)	Residential, Leisure	Refer to main consultation statement	
Tomkyns Manor, Tomkyns Lane, Upminster, Essex RM14 1TP	4	Green Belt (GB55)	Residential, Leisure	Refer to main consultation statement	
Tomkyns Manor, Tomkyns Lane, Upminster, Essex RM14 1TP	4	Green Belt (GB56)	Residential, Leisure	Refer to main consultation statement	
Little Gaynes Lane, Upminster	4	Green Belt (GB57)	Residential	Refer to main consultation statement	
Rear of 74 Lower Bedfords Road, Romford, Essex, RM1 4DG	4	Green Belt (GB58)	Residential	Refer to main consultation statement	
Bramble Farm, Bramble Lane, Upminster, Essex, RM14 2XL	4	Green Belt (GB59)	Residential	Refer to main consultation statement	
Car Park White Hart House, Hacton Lane, Upminster	4	Green Belt (GB60)	No immediate plans to build / Residential x2 homes	Refer to main consultation statement	
Land at Hacton Lane, Upminster	4	Green Belt (GB61)	Mineral Extraction /Residential (flexible)	Refer to main consultation statement	
198 Crow Lane, Romford, RM7 0ES	4	Green Belt	Residential	Refer to main consultation	

		(GB62)		statement	
188a Crow Lane, Romford, RM7 0ES	4	Green Belt (GB63)	Residential	Refer to main consultation statement	
Land to the north of Crow Lane and adjacent Raven Close, Romford	4	Green Belt (GB64)	Residential	Refer to main consultation statement	
Damyns Hall Aerodrome	4	Green Belt (GB65)	Unknown	Refer to main consultation statement	
Home Farm, North Road, Havering-atte-Bower	4	Green Belt (GB66)	Residential	Refer to main consultation statement	
The Old Coach House, Ockendon Road, North Ockendon, Upminster, RM14 3QJ	4	Green Belt (GB67)	Residential	Refer to main consultation statement	
Orange Tree Kennels 1, Benskins Lane, Noak Hill, RM4 1LB	4	Green Belt (GB68)	Residential	Refer to main consultation statement	
Land to the south east of Lambs Lane North and to the north of the A1036 New Road, Rainham	4	Green Belt (GB69)	Residential	Refer to main consultation statement	
Old Gailey Park, Southend Arterial Road, Upminster, RM14 1TJ	4	Green Belt (GB70)	Residential	Refer to main consultation statement	
Great House, Hall Lane, Upminster, Essex, RM14 1TT	4	Green Belt (GB71)	Residential	Refer to main consultation statement	
Land west of Lodge Lane, Romford	4	Green Belt (GB72)	Residential (care village)	Refer to main consultation statement	Y
Long Meadow Farm, Hall Lane, Upminster, Essex, RM14 1TT	4	Green Belt (GB73)	Residential	Refer to main consultation statement	
Land lying to the North side of Bird Lane, Upminster. Site of former properties known as Dannys Bungalow and numbers 1, 2 and 3 Potkiln Cottages	4	Green Belt (GB74)	Residential	Refer to main consultation statement	
Land off St Mary's Lane (B187), North Ockendon, Upminster	4	Green Belt (GB75)	Residential	Refer to main consultation statement	
Land at Upper Bedfords Farm,	4	Green Belt	Residential	Refer to main consultation	Y

Romford		(GB76)		statement	
Land apart of Tylers Hall Farm, Nags Head Lane, Upminster, Essex, RM14 1TS	4	Green Belt (GB77)	Residential	Refer to main consultation statement	
Harwood Livery, Harwood Hall Lane, Upminster, Essex, RM14 2YG	4	Green Belt (GB78)	Any development	Refer to main consultation statement	
Land South of Little Gaynes Lane, Upminster	3	Green Belt (GB79)	Residential	Refer to Direction of travel Appendix 7	
Bush Farm, Bramble Lane, Upminster	4	Green Belt (GB80)	Residential or recreational	Refer to main consultation statement	
Portman House, 16-20 Victoria Road, Romford, London, RM12JT	1	Office	Mixed comprising office residential and retail	Mixed use supported in principle. Since this site was submitted to the Council Prior Approval has been granted for change of use from office to residential from the ground to fourth floor.	
Stafford Industrial Estate, Hornchurch	1	Industrial	Residential	The Havering Employment Land Review 2015 recommends retention of this industrial estate as a Local Significant Industrial Location. The Proposed Submission Local Plan reflects this.	
B&Q, Roneo Corner, Hornchurch, Romford, RM11 3SL	1	Retail	Residential	This site is within a designated Out of Town Centre location. The Proposed Submission Local Plan supports mixed use development in these areas.	

Land at: Coldharbour Lane Rainham	1	Former landfill site	Industrial	The Havering Employment Land Review recommends designation of the Freightmaster Estate as a Strategic Industrial Location. The Proposed Submission Local Plan reflects this.	
National Grid Land, Crow Lane, Romford, Essex	1	Industrial	Residential	The Havering Employment Land Review recommends the release of this site from industrial use. The Proposed Submission Local Plan reflects this. High quality, residential development is supported in principle.

Peter Atkin, Senior Planner: 020 7911 2189 (peter.atkin@gva.co.uk)

1. Introduction

1.1 This representation has been prepared by GVA on behalf of Barratt London in respect to the promotion of land at Mardyke Farm, South Hornchurch in the London Borough of Havering (LBH) (refer to site plan at Appendix A).

1.2 It is submitted in response to the current consultation on 'A new Local Plan for Havering' which seeks to identify the key strategic priorities for the Borough over the next 15 years and how these priorities should be addressed in the new Local Plan.

1.3 The purpose of this representation is to set out the case for a revision of the Green Belt boundary to exclude the Mardyke Farm site from the Green Belt alongside the provision of a strategic site specific policy that allocates the site for housing (and associated development) in the emerging plan. The site is deliverable (suitable, available and viable) in the short term and offers the opportunity to accommodate a high quality development of around 1,500 homes alongside a school, community facilities, and associated green infrastructure (including playing fields, parks, equipped children's play, and natural greenspaces).

1.4 The case focuses on setting out the exceptional circumstances necessary to justify a revision to the Green Belt boundary, which comprises the following:

i) The following development needs exist:
- There is a need to identify additional land for housing development in the borough in order to meet objectively assessed housing needs;
- There is a need to provide new social infrastructure (including a school) and to support the upgrade of other infrastructure (including transport) in the local area;
- There is a need for regeneration (physical, social, economic) of the local South Hornchurch/Beam Park area; and
- There is a need to secure a sustainable long term future (including management arrangements) for the site.

ii) The site makes a limited contribution to the purposes of including land within the Green Belt, therefore its value in Green Belt policy terms is limited (the release of the site from Green Belt is therefore not likely to give rise to significant harm). Similarly, the site is considered to have only limited value in Green Infrastructure terms (any loss/harm can be appropriately mitigated).

iii) The site is deliverable, with development able to address each of the development needs set out above and therefore realise significant planning benefits in terms of housing, infrastructure and regeneration:

- It will be available for development from early 2017 (with delivery expected in the early part of the plan period);
- It is suitable for housing development in environmental, technical, townscape, and infrastructure capacity terms; and
- Development is a viable proposition, with a willing landowner and developer in place.

1.5 The representation is structured as follows:

- **Section 2** describes the site and its surrounding context as part of the South Hornchurch/Beam Park neighbourhood;
- **Section 3** summarises the site's planning history;
- **Section 4** considers the strategic policy context that underpins the case for development;
- **Section 5** considers matters associated with its existing use;
- **Section 6** outlines the housing need case;
- **Section 7** assesses the harm of the proposal in Green Belt policy terms;
- **Section 8** demonstrates the site's suitability for development and its deliverability;
- **Section 9** sets out the likely regeneration benefits of the proposal; and
- **Section 10** concludes the representation by summarising the planning case and framing the development opportunity.

1.6 This main report is supported by the following appendices:

- **Appendix A –** Site Plan;
- **Appendix B –** Approved/Committed Landscape Plan;
- **Appendix C –** Development 'vision';
- **Appendix D –** Transport and Access Appraisal;
- **Appendix E –** Technical/environmental Appraisal; and
- **Appendix F –** Green Belt Assessment/Methodology Framework.

2. Site and Surroundings

2.1 The site extends to approx. 37ha and is located on the western edge of the London Borough of Havering (LBH), approximately 15 miles (24km) east of Central London.

2.2 The site is bound by the Beam River to the west (which forms part of the Beam Valley Country Park); Dagenham Road (A1112) to the north; the rear of existing residential properties fronting Rainham Road / Betterton Road / Frederick Road to the northeast, east and south east; and the Orchard Village housing development (former Mardyke Estate) to the south west.

2.3 The site comprises 2 separate landholdings:

i) 37 ha – A former aggregates and landfill site which is currently being restored following the cessation of operations. There are no permanent buildings/structures on the site. Currently the site is being restored; however public access is allowed in non-operational areas. This land is under single ownership (Ebbcliff Ltd).

ii) 4 ha – An area of public open space which includes an equipped children's play facility. We understand that this land is under single ownership (London Borough of Havering).

2.4 The site is set within a suburban context typical of outer London which is characterised by low density 2-3 storey housing built in the inter-war and post-war periods, interspersed with more recent (and typically denser) development such as the Orchard Village scheme to the south west. These residential areas sit within a broader context that includes extensive areas of open space and industrial land (much of which is derelict).

2.5 Rainham District Centre which provides retail, services and community facilities is located approximately 1 km to the south east of the site. There are a number of educational establishments situated within close proximity to the site within the surrounding neighbourhoods, including: Newtons Primary School, The Leys Primary School, Britons Academy (Technology College), Whybridge Junior School and La Salette Catholic Primary School, all within 1km of the site.

2.6 The nearest London Underground Station is Dagenham East (District Line, Zone 5) located approximately 1km to the north-west of the site. National rail services are available from Dagenham Dock and Rainham (both Zone 6 and approximately 1.5km to the south-west and south-east respectively) providing C2C services to London Fenchurch Street in around 25 minutes. There are proposals for a new national rail station at Beam Park (approximately 1 km to the south). The site has a Public Transport Accessibility Level (PTAL) rating of 1-2.

3. Planning History

Existing Use

3.1 The site has been the subject of localised ad hoc sand and gravel (Drift Flood Plain gravels) extraction since at least the 1860's. Ordnance survey maps from the 1930's show the presence of commercial gravel extraction in the central northern part of the site which extended across the entire site by the late 1950's. The resultant void was in-filled with general undefined waste materials between 1961 – 1969.

3.2 Planning permission was granted in 1994 (ref. 0186.93) and an Environment Agency waste management license issued to allow the site to be restored. The approved scheme involves extensive ground level raising (and re-contouring) with inert materials, which is to be seeded (grass) and supplemented with some limited tree planting. The scheme also includes the provision of an 'ecological corridor' that follows a surface watercourse along the eastern boundary. A copy of the approved Landscaping Plan is enclosed at Appendix B.

3.3 Conditions attached to the planning consent were amended in 2010 (ref. 0432.10) and again in 2014 (0455.14). The final phase of the site's restoration commenced in April 2011 and is due to be completed in 2017.

3.4 The s.106 legal agreement associated with the planning consent (as amended) requires public access to 75% of the site following the completion of restoration works (15% is to be reserved for nature conservation with limited public access and 10% with no public access).

3.5 The future management and maintenance of the site is limited to a 10 year aftercare obligation linked with the associated legal agreement.

Havering Local Plan

3.6 The site was subject to a proposed allocation in the LBH Site Specific Allocations DPD (Submission Draft) (2008), for comprehensive redevelopment (housing/public open space) including the removal of part of the site from Green Belt. The proposed allocation was removed by the Inspector appointed to examine the plan on the grounds that the benefits of allowing development to proceed were not considered to constitute the exceptional circumstances required to justify a review of the Green Belt. The decision was based upon the Inspector's conclusion that the borough had identified a sufficient supply of deliverable sites to meet housing needs/targets without having to rely on this site and consequently there was no 'need' argument to justify its release from Green Belt.

3.7 We note that historic housing delivery rates in the borough in the period since the Inspector's decision have consistently fallen short of London Plan annual monitoring targets. This confirms that the supply of sites carried forward in the adopted Local Plan were not sufficiently 'deliverable' to meet housing needs in full and therefore a need case to underpin the allocation of the Mardyke Farm site did in fact exist (contrary to the Inspector's decision at the time).

4. Strategic Policy Context

4.1 The starting point for determining the case for development at the site is the extant framework of national and London-wide planning policies, with which the new local plan should be in general accordance. We set out below an overview of the key pertinent policy considerations of relevance to the site (which we consider to be focussed on housing, Green Belt, and public open space matters).

National Planning Policy Framework

4.2 The National Planning Policy Framework sets out the Governments planning policies for England and how these are expected to be applied. It provides a framework to within which local people and their accountable councils can produce their own distinctive local plans, which reflect the needs and priorities of their communities. The NPPF must therefore be taken into account in the preparation of local plans and is a material consideration in planning decisions.

4.3 The NPPF establishes a firmly positive 'pro-development' national policy position, which is underpinned by a 'presumption in favour of sustainable development'. The Government has made it clear that the NPPF and its aforementioned presumption represent a significant step-change in national policy (which, notably, has come into force since the current Havering Local Plan was adopted).

4.4 The NPPF aims to proactively drive and support sustainable economic development to deliver the homes and infrastructure that the country needs. The framework states that every effort should be made to objectively identify and then meet the development needs of an area and respond positively to wider opportunities for growth. It continues that emerging plans should take account of market signals, such as land prices and housing affordability, and set out a clear strategy for allocating sufficient land which is suitable for development in their area, taking account of the needs of the residential and business communities. In order to achieve this goal, the NPPF encourages the effective use of land by reusing land that has been previously developed (brownfield land), provided that it is not of high environmental quality (paragraph 17).

Housing

4.5 A key objective of the NPPF is 'to boost significantly the supply of housing' (paragraph 47). In order to achieve this, Local Planning Authorities should "*Identify and update annually a supply of specific deliverable sites sufficient to provide five years' worth of housing against their housing requirements with an additional buffer of 5% (moved forward from later in the plan period) to ensure choice and competition in the market*

for land. Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply and to ensure choice and competition in the market for land".

4.6 As will be explained in Section 5 of this report, LBH does not have an up-to-date 5 year supply of housing land. The Council currently has a 4.04 year supply of housing land (against adopted FALP 2015 targets) and as such, falls short of the requirements set out in the NPPF.

Green Belt

4.7 With regards to the Green Belt, the NPPF seeks continued protection of Green Belts (paragraph 17) and states that *'the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open'* (paragraph 79). It continues to identify openness and permanence as essential characteristics of the Green Belt.

4.8 Paragraph 80 of the NPPF highlights that the Green Belt serves the following five purposes:

i) To check the unrestricted sprawl of large-built up areas;
ii) To prevent neighbouring towns from merging into one another;
iii) To assist in safeguarding the countryside from encroachment;
iv) To preserve the setting and special character of historic towns; and
v) To assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

4.9 The NPPF states that Green Belt boundaries should only be altered in exceptional circumstances, through the preparation of the Local Plan. At such time, authorities should consider Green Belt boundaries having regard to their intended permanence in the long term, so that they should be capable of enduring beyond the plan period (paragraph 83). The implication of this criteria being that where significant development pressure exists and exceptional circumstances are warranted to develop in the Green Belt, it is considered appropriate for local planning authorities to seek to remove such sites from the Green Belt through the Local Plan-making process in order that they can deliver sustainable development to meet their identified development needs.

4.10 The NPPF continues that when drawing up or reviewing Green Belt boundaries, local planning authorities should take account of the need to promote sustainable patterns of development (paragraph 84). Sustainable patterns of development are not defined in policy. However, this is considered to relate to taking into account a range of additional factors beyond the contribution towards Green Belt purposes. These

factors might include local development needs, transport issues and accessibility to local services and public open space. With regard to sustainability, it is necessary to recognise the wider and updated context of how sustainable development is defined in the NPPF as set out above. Updated policy states it should contribute towards social, economic and environmental objectives.

4.11 The NPPF reaffirms the definition of Green Belt boundaries, stating (paragraph 85) that when defining boundaries, local planning authorities should:

- Ensure consistency with the Local Plan strategy for meeting identified requirements for sustainable development;
- Not include land which it is unnecessary to keep permanently open;
- Where necessary, identify in their plans areas of 'safeguarded land' between the urban area and the Green Belt, in order to meet longer-term development needs stretching well beyond the plan period;
- Make clear that the safeguarded land is not allocated for development at the present time;
- Satisfy themselves that Green Belt boundaries will not need to be altered at the end of the development plan period; and
- Define boundaries clearly, using physical features that are readily recognisable and likely to be permanent.

4.12 In summary, the NPPF supports the long-standing principles of Green Belt protection, whilst acknowledging that the objectives of the planning system continue to evolve, reflecting current land use pressures and social trends. The Government's priority is to deliver growth and sustainable development through harmonising, wherever and whenever possible, the economic, environmental and social processes that deliver functioning places. Policy also reinforces the plan-led system which gives planning authorities the power to undertake Green Belt reviews to help inform emerging spatial strategies for Local Plans necessary in order to meet development needs. The role and function of the Green Belt therefore needs to be considered within this overarching context to assist in the delivery of sustainable development.

Public Open Space

4.13 There is a commitment under the extant planning consent for the site to revert to publicly accessible land following the completion of the restoration scheme (the future 'baseline' position), therefore policies relating to public open space and green infrastructure are relevant.

4.14 In this regard, the NPPF places a requirement on local authorities to set out a strategic approach in their Local Plans that plans positively for the creation, protection, enhancement and management of networks of green infrastructure.

London Plan

4.15 The Further Alterations to the London Plan (FALP) was adopted on 10th March 2015 and provides the overall strategic plan for London for the period to 2031. The policies of the FALP are now operative as formal alterations to the London Plan and therefore for part of the Development Plan for Greater London.

Housing

4.16 The Plan places significant policy priority on increasing the supply of new housing in London, and recognises that the capital is part of a global and national housing market as well as having its own, more local and acute housing market needs which places a unique challenge in reducing the gap between need and supply.

4.17 The former London Plan set an annual monitoring target of 32,000 net additional homes in London (Policy 3.3). However this target has been subject to a significant upward revision in the adopted FALP largely on account of revised population projections for London which suggest that London's population is likely to increase significantly more than was anticipated in the past (an increase of 2 million people in the period to 2036).

4.18 The FALP is based on an accepted 'need' to provide a minimum 49,000 net additional homes per annum in London in the period 2015-36 (with recognition that the need in the early part of the plan period is likely to be greater than this). It makes clear at paragraph 3.18 that for Local Plans to be found sound they must demonstrate that they have sought to boost significantly the supply of housing as far as is consistent with the policies of the NPPF, with particular emphasis placed on demonstrating deliverability.

4.19 Paragraph 3.19i establishes two requirements for boroughs to satisfy through their local plans:

i. Meet the relevant minimum housing supply target defined in Table 3.1. For Havering, this is 11,701 for the period 2015-25 (an annual monitoring target of 1,170); and

ii. Noting that the defined borough targets fall short of the 49,000 objectively assessed annual housing need figure, boroughs are also required to seek to exceed the target by identifying additional sources of supply.

4.20 The FALP housing target for Havering is an increase from 9,700 in the adopted 2011 London Plan.

Green Belt

4.21 The London Plan's policy position in respect to Green Belt is as per the NPPF (Policy 7.16).

Public Open Space

4.22 The site is not designated as Metropolitan Open Land, Local Green Space, or any other local open space designation in the Local Plan and therefore is not subject to protection under London Plan policies. Notwithstanding this, paragraph 7.58 requires that the value of such non-designated spaces should be considered as a material consideration that should be taken into account in the planning process, with Policy 2.18 setting out the strategic approach to Green Infrastructure across London.

4.23 Policy 2.18 places the onus on local authorities to plan strategically and positively for the creation, protection, enhancement and management of networks of green infrastructure through the production of a Green Infrastructure Strategy.

Conclusions – Implications for the New Local Plan

- The plan should identify (allocate) a supply of specific developable sites (or broad locations for growth) to accommodate a minimum 17,550 net additional homes (1,170 annual monitoring target over the 15-year period of the plan), and identify measures to exceed this minimum requirement. The preference is for development to be directed to brownfield land;
- In preparing the plan, the LPA should consider revising Green Belt boundaries in the context of achieving sustainable development (including the aim of significantly boosting the supply of housing) and the exceptional circumstances test; and
- The plan should include a Green Infrastructure strategy.

5. Existing Use

Aggregates/Waste Use

5.1 The site is not subject to any existing protective policy designations relating to minerals/waste in the current Local Plan. The site has fulfilled its functional life as an aggregates extraction and waste resource, and the completion of the site's restoration works will in effect mark the commencement of a new chapter in its planning history.

Green Infrastructure

5.2 The planning permission and S106 Legal Agreement dated 1993 (and updated in 2011 and 2014 respectively) requires general public access to be provided to 75% of the site following the completion of restoration works (with 15% reserved for nature conservation with limited public access and 10% with no public right of way). This is effectively the future 'baseline' position in terms of the site's use.

5.3 It is appropriate to reconsider whether this 'future baseline' use of the site is the most appropriate solution. The relevant considerations include the quality and type of provision; management arrangements; and whether there is a need for that type of space.

Quality of Provision

5.4 The approved landscaping scheme includes no 'formal' landscaping or recreation provision. Instead the majority of the site is to be simply seeded with grass, alongside some limited tree planting and protection of an 'ecological corridor' along the eastern boundary. Effectively it will mature into a 'natural greenspace' type of provision in Green Infrastructure (GI) terms.

5.5 The value of this space in GI terms should be considered in the context of other existing provision in the local area and associated needs (as considered below).

Future Management

5.6 The future management and maintenance of the site will be in accordance with the 10 year aftercare plan as required by the approved legal agreement.

Green Infrastructure Need

5.7 LBH undertook an assessment of open space provision in the borough as part of its evidence base to inform the 2008 Core Strategy. It is assumed that an up to date

assessment will be undertaken as part of the preparation of the new local plan, nonetheless at this point in time this remains the most up to date evidence base for GI matters.

5.8 The assessment identifies the site as is located within the 'South Hornchurch' ward which accommodates 12.98ha of open space, including, linear parks/open space, metropolitan parks, district parks, local parks, small local parks/open spaces and pocket parks. We note that this excludes the 74ha Beam Valley Country Park which is adjacent to the site (but falls within an adjacent ward). It also excludes the site (as committed future GI provision).

5.9 South Hornchurch is identified as where a significant proportion of homes are deficient in access to Local Parks and District Parks (having regard to the category hierarchy, and size/distance from homes guidelines set out in Table 7.2 of the London Plan). All of the borough's wards are within the 3.2km catchment area of at least one metropolitan park.

5.10 The study includes a qualitative and quantitative assessment of existing provision. In qualitative terms, the study concludes that GI provision in South Hornchurch ward is 'below average quality and value'. The quantitative assessment compares actual provision of numerous GI typologies against defined policy standards – Table 1 below summarises the position for South Hornchurch ward:

Table 1: Open Space Provision in South Hornchurch Ward Compared Against Policy Benchmark Standards (2005 Study)

Ward	Public Parks	Natural Greenspace	Playing Pitches	Allotments	Amenity Space Need
South Hornchurch	-0.81ha	+10.88ha	+0.74ha	+0.03	Low

5.11 As is evident form the table above, the study indicates that in quantitative terms there is an 'over-supply' of access to natural greenspace in the ward, however an under-supply of parks. This is compounded by the qualitative deficiencies outlined above. This suggests that there is limited value in providing additional natural greenspace on the Mardyke Farm site.

Conclusions – Implications for the New Local Plan

- The current restoration works will cease in April 2017.
- The future committed use as publicly accessible natural greenspace is the more relevant consideration. Existing evidence indicates that there is no need for additional natural greenspace in the local area, therefore non-provision would

not result in a significant harm in GI policy terms. Notwithstanding this, there is a pressing need for more formal public parks and qualitative improvements to existing provision across all GI typologies, which the Mardyke Farm site could effectively help satisfy.

- The new Local Plan should be informed by an up to date GI assessment and include a GI strategy.

6. Housing Matters

6.1 The relevant housing considerations for plan-making focus on objectively assessed need and land supply.

Need

6.2 The borough's objectively assessed need has been assessed at a strategic level in the London Strategic Housing Market Assessment (SHMA) and is defined in the FALP. As per Section 4, the new local plan is required to make provision for a minimum 17,550 net additional dwellings (with an expectation that this should be exceeded) (15 years x 1,170 per annum target).

Supply

6.3 The relevant supply side considerations are the London Strategic Housing Land Availability Assessment (SHLAA), historic delivery rates, and the Council's identified supply of deliverable housing land.

SHLAA

6.4 The London SHLAA was prepared in 2013 to inform the FALP. It identifies a supply of land within LBH with capacity to accommodate 11,700 net additional homes in the period 2015-25 (which is consistent with the minimum FALP housing target for 2015-25). Headline details are set out in the table below:

Table 2: LBH SHLAA Summary (LBH) (for the period 2015-25)

Overall Capacity (2015-25)	Large Site Capacity Timescales/Phasing (2015-25)	Large Site Capacity by Source (2015-25)	Longer Term Large Site Capacity (2025-35)
Large Sites: 9,936 units Small Sites: 1,505 units Vacant units: 260 units Total: 11,701	Phase 2 (2015-20): 4,765 units Phase 3 (2020-25): 5,171 units Total: 9,936 units	Allocation: 3,524 units Approval: 2,311 units Low probability: 345 units Potential: 3,756 units Total: 9,936 units	Phase 4 (2025-30): 1,212 units Phase 5 (2030-36): 1,183 units

6.5 As is demonstrated by Table 2, above, the SHLAA indicates that the borough is heavily dependent on large sites to meet its FALP targets. Identified large sites comprise a combination of allocations, approvals and 'potential' (the content of this source of supply is kept confidential by the GLA). We are aware that a number of the allocated and consented sites are subject to delivery constraints (including viability, site

availability, and technical issues) which may delay the delivery phasing anticipated in the table above and create a challenge for the LPA in meeting its housing targets particularly in the early part of the new local plan period.

Historic Delivery Rates

6.6 In considering the deliverability of identified land supply, it is appropriate to consider historic delivery trends.

6.7 The LBH Annual Monitoring Report (AMR) (2012-13) sets out the most up to date published details in respect to the borough's historic delivery rates (noting that 2012/13 data is somewhat out of date), as summarised in Tables 3 below. This confirms a consistent trend of under-delivery of new housing in LBH when assessed against London Plan requirements which reinforces the challenge that the borough is likely to face in meeting FALP targets in the early part of the plan period in particular.

Table 3: LBH Historic Housing Delivery Rates (LBH)

	London Plan Target	Completions	Balance
2008/09	535	628	+93
2009/10	535	420	-115
2010/11	535	263	-272
2011/12	970	407	-563
2012/13	970	396	-574
5-Year Total	3,545	2,114 (average 423/annum)	-1,431 (average -286/annum)

5-Year Housing Land Position

6.8 LBH's defined 5-year housing land supply provides a finer-grain position on deliverable short term land supply. The most recent data is published in the borough's 2012-13 AMR (which we recognise is now dated) and summarised in Table 4, below:

Table 4: 5-Year Housing Land Position (LBH)

	5-year Annual Monitoring Target	+20% Buffer (on account of persistent under-delivery)	Total Requirement	Identified Supply	Balance
London Plan (2011)	4,850 units (970/annum)	+970 units	5,820 units	5,676 units	-144 units
Proposed Further Alterations to London Plan	5,850 units (1,170/annum)	+1,170 units	7,020 units	5,676 units	-1,344 units

6.9 The above table indicates that the borough has an equivalent 5 year housing land supply position of 4.88 years and 4.04 years supply against adopted and emerging London Plan housing targets when taking into account a 20% buffer as required by the NPPF where there is a record of persistent under-delivery as is the case in LBH. As noted above, we note that a number of sites identified as part of the supply of 'deliverable' sites for the next 5-years comprise stalled consented schemes which indicates that much of the identified supply may be subject to deliverability constraints (this includes sites allocated in the Site Allocations DPD). This includes the examples set out in the table below:

Table 5: Examples of Stalled Schemes in LBH

Location	Application Reference	Status	Approved Units
Angel Way Retail Park	P2246.07	Not started	350
Mardyke Estate Phase 3	P0959.12	Not started	124
Dovers Corner	U.00002.08	Not started	746
Roneo Corner	P1918.11	Not started	141
Total Stalled Units			**1,361**

Conclusions – Implications for the New Local Plan

- The new local plan should identify (allocate) a supply of specific developable sites (or broad locations for growth) to accommodate a minimum 17,550 net additional homes (1,170 annual monitoring target over the 15-year period of the plan), and identify measures to exceed this minimum target;
- The London SHLAA identifies a land supply to meet this need for the first 10 years of the plan, however interrogation of this evidence suggests that much of this identified supply is subject to delivery constraints (this is particularly applicable to sites earmarked to come forward in the period 2015-20). It will be necessary to

thoroughly test the deliverability of identified supply as part of the plan preparation process, and to identify an additional supply of deliverable sites if there is not a reasonable prospect of overcoming these delivery constraints (which we anticipate will be the case);

- The London SHLAA does not identify a sufficient supply of land to meet housing needs in the latter part of the plan (2025 onwards). An additional supply of land will need to be identified to meet these needs (while the FALP targets only cover the period 2015-25, the new Local Plan is required to roll these forward for the full term of the plan period); and
- It will be necessary to identify a further supply of land in order to exceed the minimum targets set out in the FALP.

7. Green Belt Considerations

7.1 The key planning policy constraint against the redevelopment of this site is its Green Belt designation. The Green Belt designation carries significant weight as a material consideration in planning policy and development management. Government policy is explicit that changes to Green Belt designations should be made through the Local plan process, in the context of promoting sustainable development as set out in the NPPF.

7.2 It is our view that exceptional circumstances exist to warrant the release of this site from the Green Belt. The main purpose of this section is to set out an assessment of the value of the site in Green Belt terms in order that the 'harm' of its loss can be appropriately considered. The assessment criteria relates to the five national Green Belt purposes as set out in the NPPF:

i) To check the unrestricted sprawl of large built-up areas;
ii) To prevent neighbouring towns from merging into one another;
iii) To assist in safeguarding the countryside from encroachment;
iv) To preserve the setting and special character of historic towns; and
v) To assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

7.3 The assessment is based upon the application of a Green Belt assessment 'framework' which is enclosed at Appendix F.

(i) To check the unrestricted sprawl of large built-up areas

7.4 The original purpose of the Green Belt was to restrict the outward expansion of Greater London, which represents the 'large built-up area' of interest to this assessment. Consistent with best practice, the assessment of Mardyke Farm against this first purpose of including land within the Green Belt focuses on the strategic level, with 'Purpose 2' providing a more local context.

7.5 The site is located within the extent of Greater London and is encircled by associated built development in all directions. The development of this site would not result in the outward expansion of the large built-up area of Greater London and accordingly, the site cannot be reasonably considered to provide an effective barrier against outward sprawl, instead representing concentration of development within the Capital's existing built limits.

7.6 As such, the site cannot be considered to contribute to a wider Green Belt network that provides a strategic barrier against London's outward sprawl, and is therefore considered to provided limited or no contribution to the first Green Belt purpose.

(ii) To prevent neighbouring towns from merging

7.7 The site forms part of the outer eastern suburbs of Greater London which comprises a web of overlapping neighbourhoods without distinctive boundaries.

7.8 The site is bordered on three sides by existing (mainly) residential development which is considered to be 'typical' in terms of its suburban character (no notable different or unique characteristics to define any of the adjacent neighbourhoods/townscapes from the wider suburban context). While the names of these adjacent neighbourhoods change, in practice it is our view that the site comprises an area of non-residential land that sits within a single sprawling suburb (or 'place').

7.9 On this basis, the site is not capable of acting as a gap (or break) between 2 or more definable towns/places and therefore is not capable of having a meaningful contribution to the Green Belt objective of preventing neighbouring towns from merging.

(iii) To assist in safeguarding the countryside from encroachment

7.10 The 'countryside' can be defined as open land with an absence of built development and urbanising influences, and characterised by rural land uses including agriculture and forestry. Consideration of relevant landscape character or quality designations should also be taken into account in assessing the role of the Green Belt in safeguarding countryside in accordance with a 'functional' view of the countryside.

7.11 The site is not considered to fall within the definition of a 'countryside' location as set out above. The site does not display any rural/countryside characteristics and comprises a former aggregates site with associated industrial / urbanising features within the existing built suburban extent of Greater London. The A1112 is also a major urban influence which is audibly intrusive. Furthermore, the site forms part of a network of safeguarded mineral sites as opposed to typical agricultural land uses which defines the Green Belt uses to the east of the borough and also marks the easternmost extent of London's built form.

7.12 Environmental designations are important in relation to the third Green Belt purpose as aspects of biodiversity, forestry and wildlife conservation can be viewed as constituent ingredients of the 'countryside'. There are no statutory environmental designations that affect the site, the nearest being the Ingrebourne Marshes SSSI located approximately 1.5km to the east of the site.

7.13 The landscape character and quality of the site is considered to be poor as reflected by the absence of any landscape designation. The current restoration works associated with the former site operations are considered to detract significantly from

the landscape / aesthetic quality of the adjacent Country Park. However, it is recognised that the landowner is committed to a scheme of landscaping works which will improve this 'baseline' position in the future.

7.14 Overall, it is considered that the site cannot reasonably be considered to constitute a countryside location by virtue of its former aggregate / landfill uses and associated urbanising features and surrounding suburban context. It is therefore considered that the release of this site for development would not constitute an encroachment into the countryside which might otherwise harm the objectives of including this site within the Green Belt.

7.15 Accordingly, the site is not capable of contributing to third purpose of the Green Belts.

7.16 Furthermore, it is considered that the release of this site for development would in fact assist LBH to safeguard the countryside by directing new development to address identified needs towards previously developed sites within an established suburban context. Such principles are promoted by the NPPF which seek to encourage the effective reuse of previously developed (brownfield) land to help to promote the vitality of urban areas and conserve the intrinsic character and beauty of the countryside.

(iv) To preserve the setting and special character of historic towns

7.17 This purpose of the Green Belt is to perform a 'girdle' role, as a green ring around historic settlements and/or to provide the landscape context to historic features that preserves historic setting by keeping land open.

7.18 A review of the local area confirms few historic assets of interest within the vicinity of the site with no historic towns, conservation areas, scheduled monuments or historic parks and gardens identified as applicable to this assessment. Two Grade II Listed Buildings have been identified within the vicinity of the site, notably: Stoneford Cottage within the built up Dagenham area to the west of the Beam River Country Park (which therefore does not share any inter-visibility with or relate to the site); and the old Essex Water Sub-Station located to the north of the site on the opposite side of the A1112 which relates directly to the Weir overflow reservoir to the north.

7.19 Accordingly, it is considered reasonable to conclude that the site does not contribute towards the preservation of the setting and special character if historic towns nor any other heritage assets. Consequently, the site is not capable of contributing to the fourth purpose of the Green Belt.

(v) To assist in urban regeneration, by encouraging the recycling of derelict and other urban land

7.20 The objective of this purpose is to constrain the supply of development land in order to encourage the recycling of previously developed sites which would not otherwise be developed, and therefore assist with urban regeneration. This objective can only be realised if there is a supply of derelict and other urban land that is capable of being recycled and which is deliverable.

7.21 It is our view that in the long term, constraining development on this site is likely to encourage the recycling of derelict land elsewhere (due to market forces). However, as discussed in the previous section, much of the supply of derelict land in the borough is subject to significant delivery constraints and therefore in practice is unlikely to come forward in the short term (whether or not this site is removed from the Green Belt). On balance, we consider the site to make a contribution to this Green Belt purpose but in practice the value (or significance) of this contribution is limited.

7.22 Conversely, Section 9 of this representation makes the case that the release of this site from Green Belt would, in fact, be expected to support the regeneration of the surrounding area which would neutralise the potential policy harm in respect to this purpose.

7.23 The above should be considered in the context that the site itself comprises previously developed land which offers the opportunity for recycling.

Summary

7.24 The NPPF confirms that the fundamental aim of the Green Belt is to keep land permanently open as a means of achieving 5 key purposes. The contribution of the Mardyke to these purposes is limited, as summarised in Table 6 below:

Table 6: LBH Historic Housing Delivery Rates (LBH)

Green Belt Purpose	Assessed Contribution of the Mardyke Farm Site to the Purpose
(i) To check the unrestricted sprawl of large built-up areas	**Limited or no contribution**
(ii) To prevent neighbouring towns from merging	**Limited or no contribution**
(iii) To assist in safeguarding the countryside from encroachment	**Limited or no contribution**
(iv) To preserve the setting and special character of historic towns	**Limited or no contribution**
(v) To assist in urban regeneration, by encouraging the recycling of derelict and other urban land.	**Partial contribution**

Conclusions – Implications for the New Local Plan

- In preparing the new local plan, the LPA should consider revising Green Belt boundaries in the context of achieving sustainable development (including the aim of significantly boosting the supply of housing) and the exceptional circumstances test; and
- It is considered that the Mardyke Farm site makes a limited contribution to the purposes of including land within Green Belt, and that this limited contribution (assist in urban regeneration) could be more effectively achieved through the development of the site. As a consequence, the site has limited 'value' in Green Belt terms and therefore the removal of this site from the Green Belt would not give rise to significant 'harm' in Green Belt policy terms.

8. Deliverability

8.1 Critical to the case for development at the site is demonstrating deliverability in order to confirm that it is capable of meeting the development needs.

Site Suitability

Landscape/Townscape

8.2 An appraisal of the site's landscape and townscape setting has been undertaken to inform the 'Development Vision' (enclosed at Appendix C) which concludes that the site has limited landscape value and the approved landscaping scheme for the site offers minimal improvements. Furthermore, the surrounding townscape setting is not considered to be particularly sensitive to change.

8.3 Accordingly, the supporting appraisal demonstrates there are no insurmountable constraints to development at this site and the site presents the opportunity to deliver an exemplar scheme to the benefit of the local area.

Access and Transport

8.4 The site benefits from existing access onto the public highway (Rainham Road South/Dagenham Road) plus pedestrian connectivity to the south and west, and is an existing generator of a significant number of HGV movements.

8.5 The Transport and Access Appraisal (enclosed at Appendix D) confirms that satisfactory access to the site can be achieved to support the envisaged redevelopment, and that there are no insurmountable highway infrastructure capacity constraints to development. The appraisal indicates that there is a significant opportunity to meet the transport needs of future development at the site via sustainable modes through appropriate investment in walking, cycling and public transport infrastructure in line with area-wide strategic transport infrastructure plans.

Technical/Environmental

Flood Risk

8.6 A small proportion of the site falls within Environment Agency Flood Zone 3 where development would be subject to strict controls on flood risk terms. However, the majority of the site falls within flood risk Zone 1 and therefore is suitable in principle for residential development in flood risk terms. Any future planning application would need to be supported by a site specific flood risk assessment and surface water drainage strategy (incorporating SUDS).

Geo-environmental

8.7 The appended Geo-Environmental Appraisal (Appendix E) confirms the site to be readily available for redevelopment without the need for further remediation. The final phase of site restoration is scheduled for completion in 2017. Moreover, the deep thickness of restoration grade soils at the site will allow the site profile to be changed if required without implications on human health associated with ground gas or impacted groundwater.

8.8 The site therefore represents a 'blank canvas' ready for redevelopment.

Ecology

8.9 The appended Ecology Appraisal (Appendix E) confirms there are no overriding ecological constraints at the site to restrict future residential development.

8.10 The appraisal highlights the significant opportunities presented by the proposed redevelopment of the site to deliver enhanced wildlife habitats and ecological corridors to improve the function of the site as part of a wider ecological network.

Heritage Assets

8.11 The site is not designated as a Conservation Area, does not contain any listed buildings, and does not form part of the setting of any heritage assets. Accordingly the site is not constrained by any heritage assets

Social Infrastructure

8.12 We are aware that social infrastructure provision in the local area is under stress, particularly in respect to school provision which will be compounded by residential development on the site. This issue can be dealt with by increasing local provision, including on-site provision of a school.

8.13 To help inform the second stage in determining whether the site is suitable for residential development, a number of supporting studies have been commissioned to consider the environmental and technical constraints and opportunities presented by this site. These supporting studies are appended to this representation and the key messages drawn out and summarised below.

Utilities

8.14 We are aware that utilities infrastructure provision in the local area is under stress. This issue can be dealt with by increasing capacity.

Site Availability

8.15 The current restoration scheme is expected to be completed in early 2017 at which point the existing use will cease and the site will be available for development.

8.16 The future function of the site is limited to the obligations associated with the approved S106 agreement as set out above. This will require varying following established standard procedures as part of future planning application negotiations.

8.17 The majority of the site is under a single private sector ownership, with the balance owned by the local authority. The majority owner is willing to make the site available for development and has entered into an option agreement with a housebuilder to promote the site. The Council (as owner of the balance of the site) is able to make its land available.

Viability

8.18 The landowner and developer have confirmed that residential development on the site is a viable proposition.

Conclusions – Implications for the New Local Plan

- The site is suitable for housing development with no insurmountable environmental or technical constraints;;
- The site is available for development from early 2017;
- There is a willing landowner and developer agreement in place, who are keen to progress housing development at the earliest opportunity;
- Housing development is viable; and
- Accordingly, for the purposes of preparing the Local Plan, the Mardyke Farm site should be treated as a deliverable source of housing land with an expectation of completions being achievable in the early part of the plan period.

9. Regeneration Benefits

9.1 There is a recognised need for regeneration in the local Beam Park/South Hornchurch area largely in response to legacy issues associated with its industrial past. Redevelopment of the site for housing (and associated use) offers the opportunity to address this, and deliver significant regeneration benefits for the local area, as discussed below:

Local Market Conditions

9.2 Much of this area of East London is identified for positive change, including the nearby Rainham West Site Allocation and Riverside Opportunity Area beyond. However, despite a buoyant housing market across London as a whole, local market conditions remain challenging with key housing sites struggling to get off the ground due to viability constraints (typically caused by high site preparation costs, infrastructure costs, and low end values). Accordingly, despite notable investments, the considerable development opportunities presented by these key housing sites and other regeneration initiatives in this area of London have not yet been fully realised by either the public or the private sector.

9.3 However, development at the Mardyke Farm site is not subject to the same viability challenges that constrain many other local site opportunities. Housing development here is viable and the landowner's selected developer is committed to bringing it forward at the earliest opportunity. This will involve a significant capital injection into the local area which will represent a clear/demonstrable statement of confidence in the local market from one of the UK's largest housebuilders. We would expect this to reduce the risk profile of the wider local area (including the strategic allocation sites referred to above) as a location for housing investment and improve achievable sales values through market re-positioning which, as a consequence, would be likely to help unlock development on other sites in the local area that have stalled on viability grounds.

Physical Regeneration of the site

9.4 The Mardyke Farm site currently represents a blight on the local area in amenity terms. This position will be mitigated in due course through completion of the restoration scheme, which will establish a future baseline position of unmanaged natural greenspace.

9.5 However, there is a significant opportunity to achieve an enhanced physical outcome for the site through redevelopment (refer to developer's vision at Appendix

C), which would 'lift' the physical quality (and perceived attractiveness) of the wider area.

Infrastructure

9.6 The site offers the potential to accommodate a new school and would be expected to support the viability of transport infrastructure upgrades through increased patronage and CIL/s.106 contributions (in accordance with the standard tests). Such upgrades would firstly address any impacts generated by the development itself but would also be expected to deliver benefits to the wider community through support of strategic area-wide initiatives.

9.7 Local infrastructure upgrades would include potential opportunities for decentralised energy infrastructure.

Vitality and Viability of Rainham District Centre

9.8 The provision of new homes at the site would lead to a substantial increase in the district centre's walk-in catchment expenditure level, which would have a positive impact on the vitality and viability of the centre.

Conclusions – Implications for the New Local Plan

- Housing development on this site offers the opportunity to trigger wide ranging regeneration benefits. These range from the physical regeneration of the site to impacts on market conditions across the wider local area (which would assist in unlocking regeneration/housing delivery on other sites).

10. Summary and Conclusions

10.1 This representation sets out the compelling case for a revision of the Green Belt boundary to exclude the Mardyke Farm site from the Green Belt alongside the provision of a strategic site specific policy that allocates the site for housing (and associated development) in the emerging plan.

10.2 The case focuses on setting out the exceptional circumstances necessary to justify a revision to the Green Belt boundary which are considered to be as follows:

i) The following development needs exist:
- There is a need to identify additional land for housing development in the borough in order to meet objectively assessed housing needs;
- There is a need to provide new social infrastructure (including a school) and to support the upgrade of other infrastructure (including transport) in the local area;
- There is a need for regeneration (physical, social, economic) of the local South Hornchurch/Beam Park area; and
- There is a need to secure a sustainable long term future (including management arrangements) for the site.

ii) The site makes a limited contribution to the purposes of including land within the Green Belt, therefore its value in Green Belt policy terms is limited (the release of the site from Green Belt is therefore not likely to give rise to significant harm). Similarly, the site is considered to have only limited value in Green Infrastructure terms (any loss/harm can be appropriately mitigated).

iii) The site is deliverable, with development able to address each of the development needs set out above and therefore realise significant planning benefits in terms of housing, infrastructure and regeneration:
- It will be available for development from early 2017 (with delivery expected in the early part of the plan period);
- It is suitable for housing development in environmental, technical, townscape, and infrastructure capacity terms; and
- Development is a viable proposition, with a willing landowner and developer in place.

The Opportunity

10.3 The Developer's 'Vision' for the site is presented at Appendix C and highlights how the site could be developed to deliver approximately 1,500 new homes. The vision promotes a mix of housing types, with a focus on family homes, a new school and

community farm all set within an extensive landscaped environment invluding the provision for new sports and recreation, a village green and Public Park.

10.4 The vision for the site has been developed through the establishment of key design principles which flow through the site. These principles are considered in detail within the accompanying report to demonstrate how Mardyke Farm could be developed to deliver an exemplar and exciting new neighbourhood.

Procedural Considerations

10.5 The scale of the opportunity at Mardyke Farm and the ability for this to convert into new housing completions in the early part of the plan period, means that it would be appropriate to include the site as a 'strategic' allocation in the first part of the new Local Plan (as opposed to a subsequent Site Allocations DPD).

Next Steps

10.6 The landowner/developer is keen to work collaboratively with LBH and residents in the preparation of the new local plan and to ensure that the most appropriate policy position for the Mardyke Farm site is taken forward.

KEY TO NATIVE GRASS/ WILD FLOWER SEED MIXES

A Species mix 3: sparse wildflower grassland Emorsgate Seeds EM7 Meadow Mixture @ 2-4 gms/ sq.m

B Species mix 1: wildflower meadow: site-specific mix (refer to Ecological Restoration Plan) @ 2-4 gms/ sq.m

C Species mix 2C: mixed native scrub/ wildflower grassland mosaic: Emorsgate Seeds EM10 Tussock Mixture @ 2-4 gms/ sq.m

D Species mix 7B: invertebrate habitat wildflower mix: site-specific mix sown in max. 100 sq.m patches over max. 20% of each invertebrate habitat area(refer to Ecological Restoration Plan)@ 2-4 gms/ sq.m

E Species mix 6A: water margin Emorsgate Seeds EP1 mixture @ 2-4 gms/ sq.m

PROGRAMME FOR PLANTING AND SEEDING

1. Ground preparation works for seeding will be undertaken in suitable weather conditions within six months of completion of the final filling and grading works and removal of all plant and machinery from site.
2. All native tree and shrub seeding will be undertaken in suitable weather conditions in late autumn (mid-October to mid-December) following completion of ground preparation works under item 1, or as advised by specialist supplier.
3. Wild flower/ grass seed mixes will be sown in suitable weather conditions in late March to early May following completion of the seeding programme for tree and shrub seeds in the preceding autumn.
4. Marginal pond plantings will be undertaken in the late spring period (late April and May), prior to completion of seeding operations around the pond margins (seed mix E)

Key

- Invertebrate habitat
- Mixed native scrub
- Grass Paths
- Public access points
- Site Boundary
- Sparse wildflower grassland
- Running Water
- Standing water
- Wildflower meadow
- Wild flower meadow and native scrub mosaic

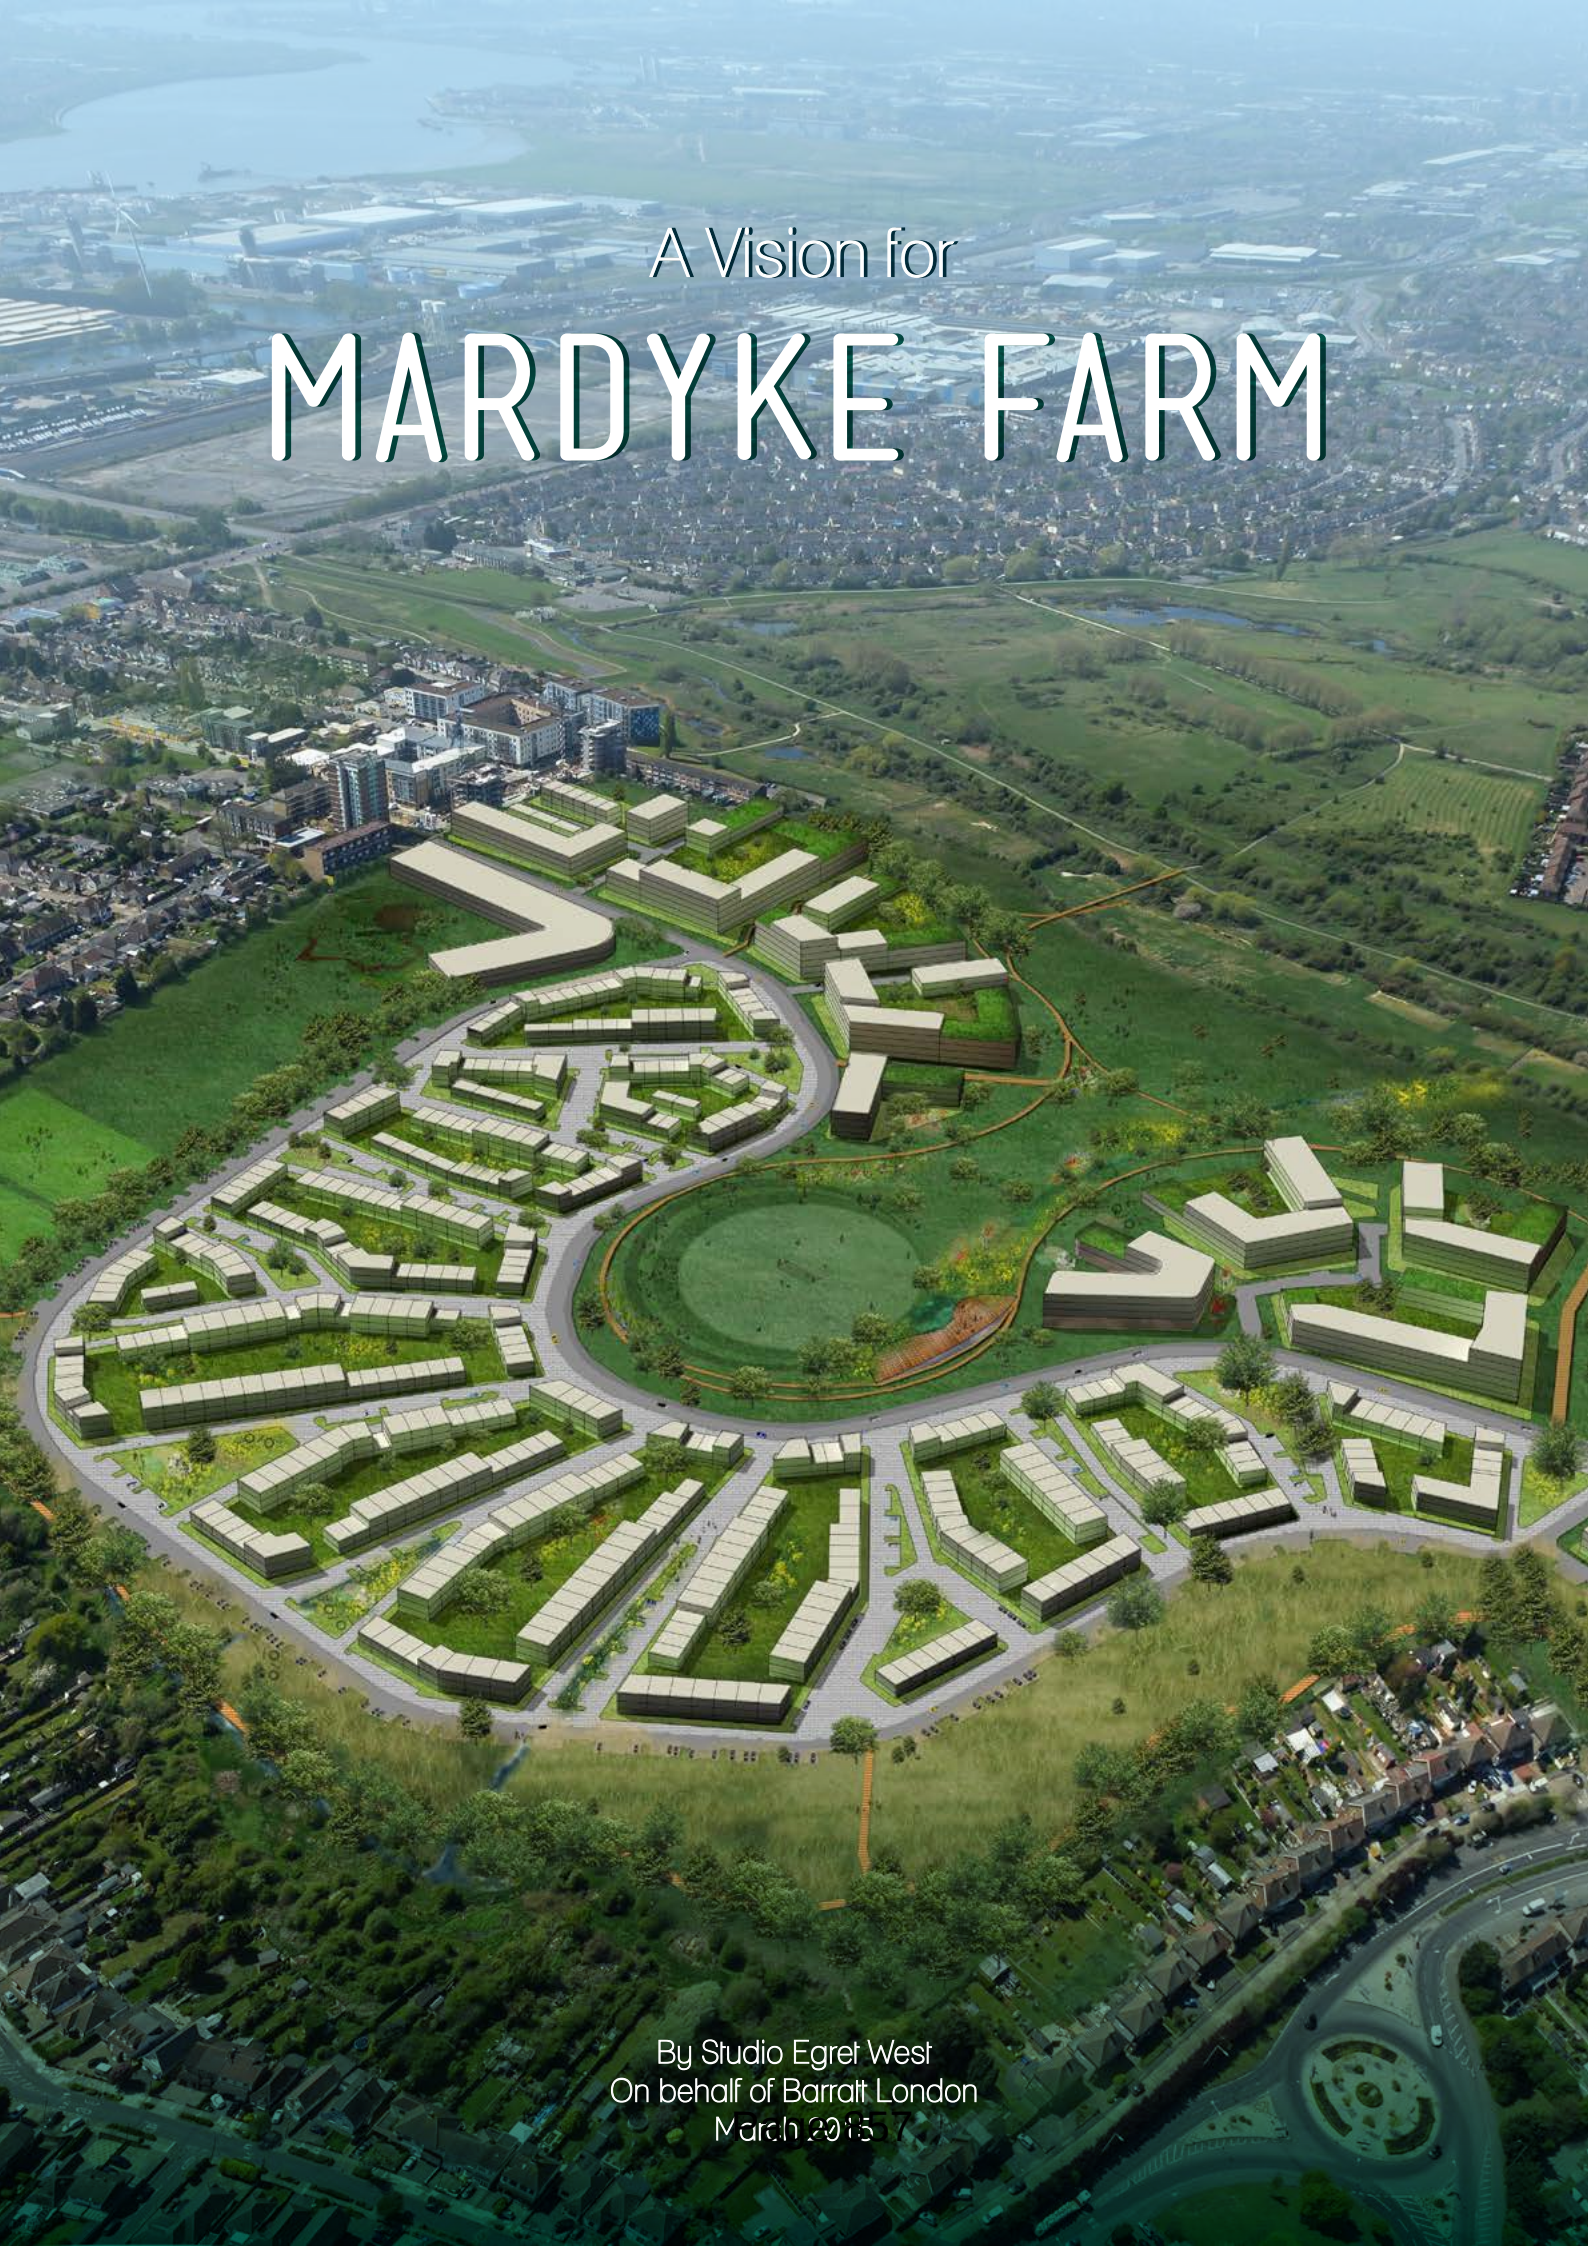
Report

Appendix C Development 'Vision'



A Vision for

MARDYKE FARM

By Studio Egret West
On behalf of Barratt London
March 2015

This document sets out our vision for the future of Mardyke Farm and provides a concept highlighting how the site could be developed to deliver approximately 1,500 new homes. The vision promotes a mix of housing types, with a focus on family homes, a new school and community farm all set within an extensive landscaped environment including the provision for new sports and recreation, a village green and Public Park.

The vision has been developed through the establishment of key design principles which flow through the site. These principles are considered in detail below and highlight how the vision for Mardyke Farm has been developed to deliver an exemplar and exciting new neighbourhood.

Future Context

London is rapidly expanding. The city's population is projected to grow to 10 million by 2030. That means an additional one million people to accommodate in a city with an already insatiable demand for housing.

As we look to the future, the epicentre of London's regeneration process is shifting east. Vast swaths of land are being transformed into mixed use neighbourhoods together offering around 26,000 jobs and 16,000 homes in the London Riverside area. Investment in public transport infrastructure with a planned new station on the c2c line to London Fenchurch Street and an extension of the London Overground to Barking Riverside and Abbey Wood (connecting to Crossrail) will help unlock development potential and reconnect this part of London with the City and other key areas.

The LB Havering will deliver a significant portion of new housing at Beam Park over the coming years, but is nevertheless falling short of the London Plan annual housing target. More homes are needed, and more sites to deliver them.

Just north of Beam Park lies Mardyke Farm, officially part of the Green Belt but not very green. From 1860 to 1960, the site was extracted of gravel and sands, significantly reducing its recreational and ecological value. It was infilled with uncontrolled waste in the 1960s, and is today being restored using inert materials to create a new elevated landform with publically accessible grassland and wildlife habitats. But Mardyke Farm could be more than a natural landscape. It could be a natural landscape and the home of a new and ecologically driven residential neighbourhood; a low rise and organic framework of houses and apartments interwoven with a diverse range of managed green open spaces for people and wildlife that effectively extend the Beam Valley Country Park into the site and right to the doorstep of the neighbouring residential community.

sew

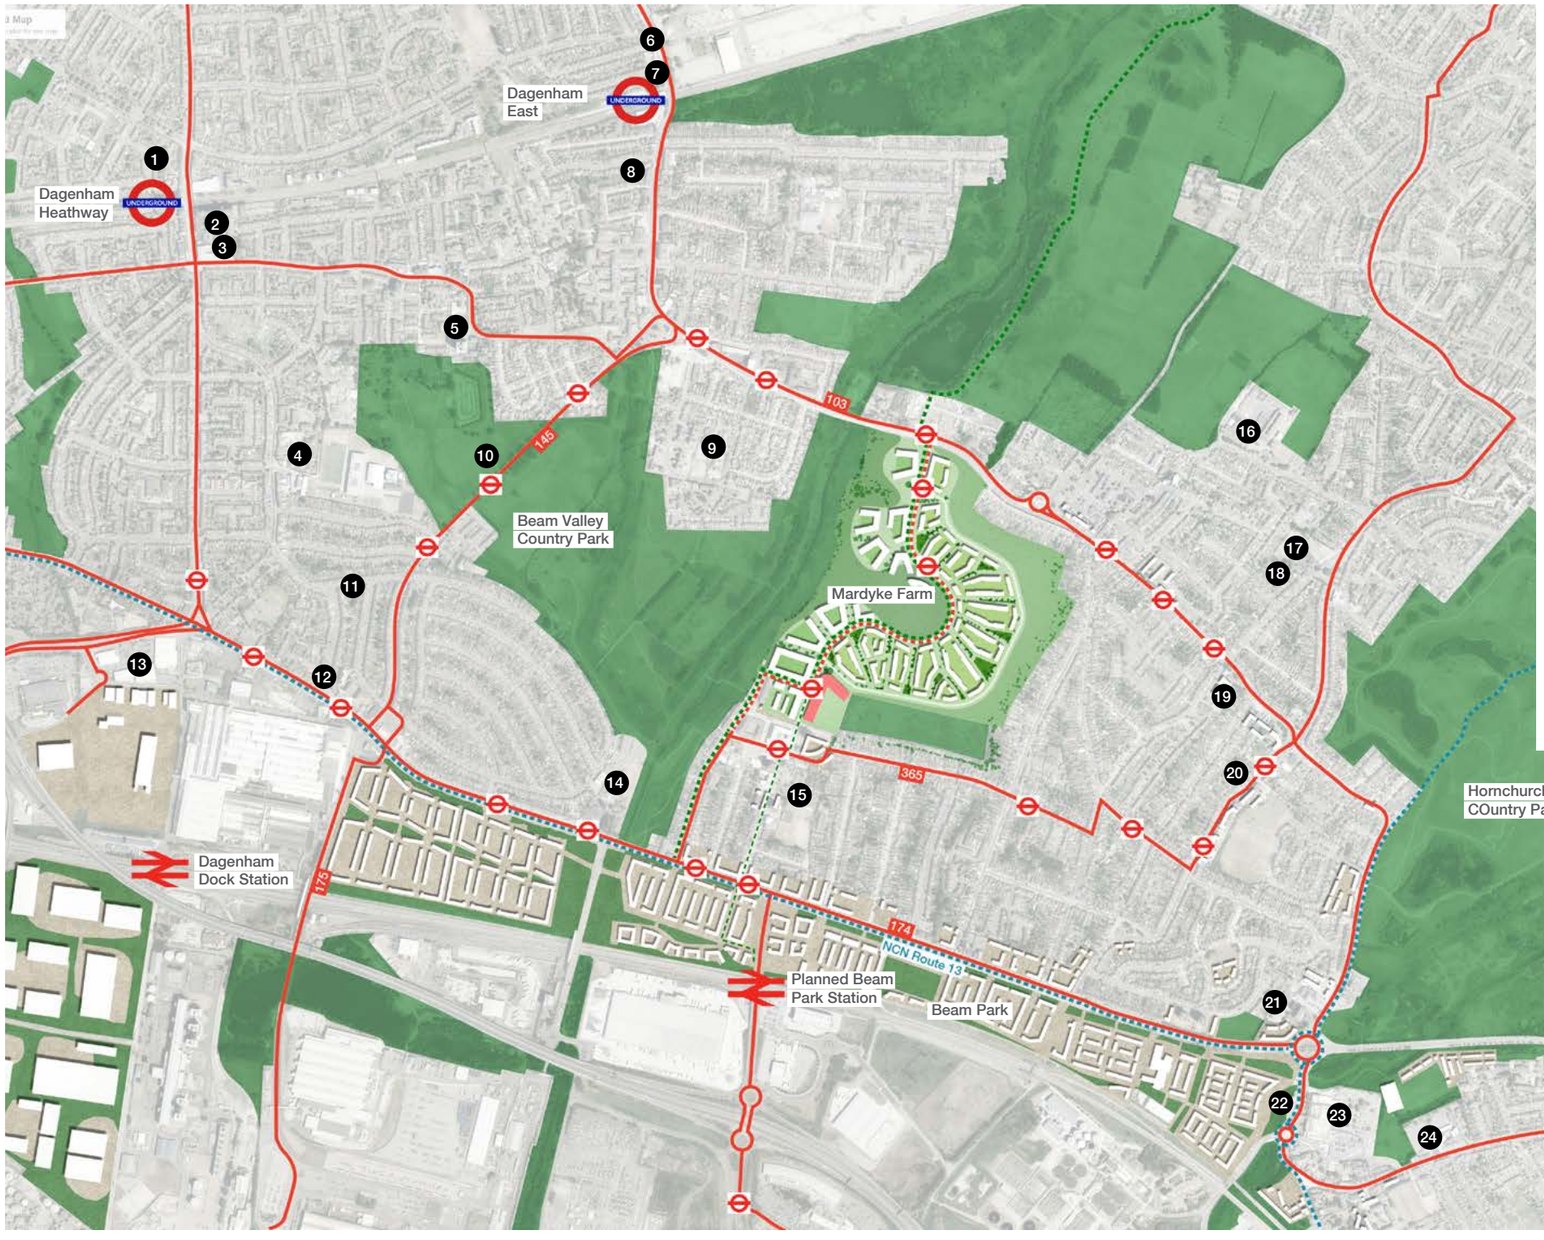
Future Context

Mardyke Farm sits in a low rise suburban environment of family homes with generous gardens.

The nearest stations are Dagenham East to the north (District Line) and Dagenham Dock to the south (c2c rail service). Plans for a new station at Beam Park will improve access to public transport and provide a 25 minute rail link to central London. Several bus services operate in the vicinity of Mardyke Farm, and with the potential for up to 1,500 new homes on the site, we believe that there is scope for a new bus route or alternatively a route extension to service the site. This route would ideally link with the planned Beam Park rail station and the future Barking Riverside Overground station to the south, as well as Dagenham East to the North.

A number of primary and secondary schools are located in the surrounding area, however with the injection of new family homes on the scale of Beam Park and Mardyke Farm, an additional school will be required. Local shops, services and community facilities are located at Dagenham East and Rainham District Centre approximately 1 km south east of the site.

The Sustrans National Route 13 of the National Cycle Network, which runs along New Road (A1306) will connect Tower Bridge in East London with Fakenham in Norfolk when complete.



Local Facilities and Services:

1. Iceland Supermarket
2. Post Office
3. Dagenham Library
4. Local Shops
5. Grays Court Community Hospital
6. Post Office
7. Dagenham Police Station
8. Dewey Road Surgery (GP)
9. The Leys Primary School
10. Dagenham Park Leisure Centre
11. Oval Road Surgery (GP)
12. Marsh Greenn Primary School
13. Chequers Corner
14. Beam County Primary School
15. Newtons Primary School
16. Brittons Academy Technology Secondary School
17. Whybridge Infant School
18. Whybridge Junior School
19. South Hornchurch Library
20. Post Office
21. La Salette Catholic Primary School
22. Rainham Police Station
23. Rainham District Centre
24. Rainham Village Primary School

Site Conditions

During the restoration of Mardyke Farm a 12 metre thick layer of clean inert material has been added to the site, dramatically altering its topography and creating a gently rising mound with a high point of 14 metres at the heart of the site, dropping to around 3 metres around the site perimeter.

The Beam Valley Country Park straddles the western boundary. Most of it is a Local Nature Reserve designated for its running water and associated wet grassland and ditch habitat.

A great crested newt population has been recorded in an open swale on the eastern boundary. The breeding pond and the key areas of terrestrial habitat are being retained and enhanced during site restoration.

An area of mature trees area located to the north west along the Beam Valley Country Park boundary.

Currently, the sole entry to the site is from Rainham Road South to the north. Two pedestrian walkways to the south provides access from Frederick Road to an existing area of sports and play.

Principle 1
Extending the Country Park

The Beam Valley Country Park is a 74 hectare landscape on previously derelict land.

The park is one of the area's greatest assets. The park has woodland and grassland, former gravel pits and the River Beam and Wantz Stream. Birds found on the site include kingfishers, reed warblers, reed buntings and skylarks.

Before Mardyke Farm was a working aggregate site, it formed part of this green open landscape. We want to reconnect the site with the Country Park by extending a finger of verdant green into the centre of the site to create a village green at the top of the hill with views across the Country Park.

This landscape is for everyone's enjoyment of new and existing residents, visitors and passers-by.

The existing tree planting is retained and enhanced.

Principle 2
A Generous Ecological Buffer

Mardyke Farm has been a working site for over 100 years, It has lain empty of development for a long long time.

So how to fill a void? Our answer is to establish a generous ecological buffer around the perimeter of the site along adjacent properties that shields and prevents being overlooked, to create a visual green for people and a protected habitat for wildlife.

At present, public recreational access is available to the south of the site only. The ecological buffer would increase site accessibility, welcoming pedestrians via controlled walkways to enjoy the many facilities and recreational assets on site.

N

0 200m

sew

Principle 3

A Central Spine for Walking, Cycling, Cars and Buses

A central spine connects the site with the surrounding area, bridging boundaries and inviting people in. We see this as a slow, pedestrian priority route for cars with the potential for an extended/new bus service.

A majority of vehicles would access the site from the north, whilst the southern access would service around 100 homes. A bus gate would limit through traffic to buses only.

A dedicated cycle lane runs the full length of the spine, linking to the Sustrans National Route 13 along New Road (A1306).

Bus stops are strategically located near key points of attraction: the play/sports fields to the south, the Village Green at the centre, and the main entry to the north.

A secondary perimeter route runs along the ecological buffer. We promote this as a shared surface street where cars slow down and cyclists and pedestrians take priority.

Principle 4
A School as an Anchor

With up to 1,500 new homes on the site and several regeneration sites in the neighbouring area, a new school is required to complement the existing offer.

The school is strategically located to the south of the site, providing easy access for both families living at Mardyke Farm and to those living in the neighbourhoods to the south.

The school site measures approximately 2 hectares, and will utilise the existing 4 hectare play/sports area for school activities. The school buildings can be used as community facilities after school hours

Principle 5

A Farm and Village Green as the Focus

Mardyke Farm takes its name from the historic farm that preceded the aggregate works. We want to bring back the farm to Mardyke Farm, right at the heart of the site, on the village green on top of the hill.

This is not a farm in a conventional sense - it's not only a place to grow fruits and vegetables to sell in the local farmers' market/ cafe, but it's a place to grow ideas and businesses in the form of an entrepreneurial hub. It's a place to cultivate creativity and to exhibit it to a wider audience in multifunctional communal spaces. It's a place for little people to grow up in the crèche.

In short, it's a fantastic local facility for residents and visitors, combining shopping with community facilities and local business.

Principle 6

As Many Family Homes as Possible

This is a family orientated area, and we have maximised the number of family homes on the site, varying from single family homes to maisonettes to mews houses and duplexes. Building heights range from 2 to 3 storeys.

The homes are arranged in a series of organically formed residential blocks accessed via green play streets.

The organic block forms create an easily navigable grain, whilst allowing moments of surprise and delight in the form of small pocket parks and open spaces for neighbours to meet, greet and play.

Principle 7

Fingers of Medium Density Accommodation Overlooking the Beam Country Park

The Beam Valley Country Park edge is populated by medium density buildings that open up towards the parkland to soak up the views. The buildings step down in height towards the site boundary, and as the ground level drops down towards the River Beam and Wantz Stream.

Family duplexes are arranged over ground and first levels, with apartments above. Communal podium gardens provide amenity and play.

N

0 200m

sew

Principle 8
Healing the Southern Edge

The south-western edge of the site is defined by the backs and exposed gardens of family houses and an apartment building within the Orchard Village Estate. These buildings deserve an improved setting, which we can deliver as part of the Mardyke Farm development.

We propose to "heal the edge" by completing the block with a new medium rise apartment building with internal mews houses and communal gardens.

N

0 200m

Principle 9

A Network of Green Walkways and Cycleways

Green space is maximised on site to create a sense of houses in landscape, and to reinstate a strong connection to the Beam Valley Country Park.

Apart from the dedicated cycle lane, walking and cycling is encouraged through an extensive network of green routes that permeates the residential grain and extend into the neighbouring parkland to connect with existing trails and paths.

Pedestrian priority play streets are provided within the residential neighbourhood, linking with the central spine, to ensure the site is permeable and accessible.

A raised boardwalk within the ecological buffer makes this biodiverse environment accessible to people in a controlled way. A north-south boardwalk extends the western site boundary, weaving and meandering across the landscape, rising gently at the centre of the site to circumvent the village green.

Principle 10
Integrated Car Parking

Although significant public transport upgrades are on the agenda, the site's low PTAL rating (1-2) means that sufficient car parking standards are required.

Along the Beam Valley Country Park edge, undercroft car parking facilities are seamlessly integrated into the buildings, utilising the level change. The car parking is wrapped by residential uses. Communal amenity space provided atop, on podium level.

On street car parking is provided for the family homes, integrated into the play streets and along the perimeter street.

Overall, a parking ratio of 1:1 is provided for all homes.

Illustrative Masterplan

The Mardyke Farm neighbourhood has been designed with nature and ecology at the forefront, with a 4 hectare village green at the centre, an 8 hectare ecological buffer around the edge towards existing properties, 4 hectares of play/sports fields and a series of smaller pocket parks interwoven into the residential grain. All to maximise green space and to protect and enhance site ecology.

Shaped by the topography of the site, our masterplan provide up to 1,500 homes, a primary or secondary school, and space for shops, business and community facilities in the Mardyke Farm pavilion on the village green.

NUMBER OF HOMES
Houses: 250
Maisonettes :350
Duplexes: 250
Apartments: 650

TOTAL: 1,500 homes

The Farm Pavilion

Existing Landscape & Topography

The existing site could be perceived as a man-made mountain. It is a plateau of unfinished landscape potential which can enhance its green belt setting if given a proper treatment.

At 14 metres AOD, the site is highly visible from the Beam Park Nature Reserve to the west. From the top of the mound, the site gently slopes at a gradient of 1:30, and then more steeply (1:15) around the site perimeter where it blends into the surrounding topography and grades into the back gardens of adjacent properties.

An agreed approach to the restoration/ remediation of the site has been developed to best locate ecological enhancements and improvements on the site.

The following proposals work hand in hand with the restoration scheme to avoid major excavation/earth moving for construction of homes and road infrastructure (to be confirmed by engineer). This allows for ample ecological mitigation to highlight the sites importance next to the Beam Parklands which could serve as a major driver to attract visitors to the area.

Agreed Ecological Restoration Plan

sew

Landscape Design

The site has a great farming history and there is even mention of a 17th century windmill.

To enhance the site's setting, a countryside landscape is proposed to remind users of the site's history. This can be replicated with boundary treatments of loose stone walls, hedgerows, hedgebanks, and almost a barn/ farm yard vernacular.

Building upon the principles set by the masterplan, key moves have been identified to unlock the site's landscape potential to enhance its natural beauty while still meeting the amenity requirements of a growing community.

A series of curved boardwalks and paths allow seamless connections north and south to existing and future transport stations and to neighbouring residential areas. Gateways and entrances east and west will also allow better use of the Beam Parklands and to help existing residents in South Hornchurch use the park.

The following sections highlight the key components of the landscape design.

Eastern Ecological Buffer

The proposed development will provide an 8 hectare dedicated ecology area along the eastern and southern edge of the site.

The vast majority of this ecology area will comprise retained areas of swales, rough wildflower grassland, ruderal and scrub, with smaller areas of retained native scrub and woodland belts as well as new wet pond features. The project ecologist has advised an appropriate approach to both the retention and future management of this landscape. This approach will be as follows:

- Retain/enhance the existing ecologically rich landscape and embrace its valuable environmental qualities;
- Enhance people's experience of the area by providing raised timber boardwalks and seating areas;
- Enhance existing wetland and marginal landscape environment, combining further diversity and offering additional ecological habitat opportunities;
- Provide viewing platforms and information boards to allow appreciation of ecological habitats;
- Take appropriate management actions such as the removal of non-native, overly aggressive, or un-desirable species from these areas, to encourage the growth of other more desirable species that are present.

Beam Park Interface

Wherever possible existing trees will be protected and retained.

As the site slopes west towards the Beam River, we propose to reinforce the earth with additional tree planting. A mix of lower native scrub planting will reinforce stability and allow for views from the village green across the parklands ensuring natural surveillance.

The Boardwalk will become a publicly accessible space, providing access to Mardyke Farm and long distance views across the landscape. Hovering breakout seating areas cantilever into the park and add a unique element of identity to the development. Hedgerows and other types of planting limit visual intrusion from the Beam Valley Country Park.

sew

Village Green

The traditional definition of a village green is ‘a common open area within a settlement’.

A village green usually consists of common grassland and it is often located at the heart of a rural settlement. Historically a village green would have been used for grazing. At the centre of the masterplan is a proposed village green that will provide a place for residents to gather and remember the history of Mardyke Farm long ago. The space will have a community focus and flexibility to accommodate a changeable program of events and activities. It is located at the highest point of the site, maximising views across the adjacent parkland and beyond. Some of the key features of the village green will be:

- Open lawn with a mix of semi mature specimen trees;
- An informal play space for ball games, exercising or picnics;
- Open space with overlooking and passive surveillance by neighbouring properties and surrounding footpaths and roadways;
- Sculpted earthworks to contain the main green space, create informal seating banks around the edge of the green and focus users into the centre of the space;
- Ecology/SUDS features to connect the site and create a heart of the drainage and potential flooding story. These can help feed allotments or other growing spaces for residents.

Intergrated Play/Amenity Spaces

A variety of doorstep play for all ages and abilities is accommodated within a series of pocket parks.

The play and amenity areas will accommodate the following:

- Inclusive access connecting each space;
- A 'farming' and rolling hill vernacular with loose stone walls, large mounds and farm animal play equipment throughout;
- Play equipment that is natural in form and appearance providing an attractive mix of play apparatus;
- Planting that is integrated throughout and heightens the play experience. Planting has been carefully selected to offer sensory attributes of scent, colour, touch and sound;

Integration between building fronts and the landscape.

Private Resdiential Gardens

Private gardens can function both as a fantastic amenity for families and as ecological corridors.

We propose a series of garden trees and shrub planting with visual and ecological interest to tie in with the overall masterplan.

There is also potential to incorporate living roofs, which can serve as interconnected corridors for birds and other wildlife.

SUDS Corridors

The neighbouring Beam Park Local Nature Reserve is very flood sensitive. We wish to capitalise on this and use it as an opportunity to educate residents about water retention.

A key corridor is created from the top of the hill, the village green, with water moving through a system of planted terraces that can. The water then moves down the hill in both eastern and western direction towards either the Beam River or the ecological water features to the east. In the residential neighbourhood, the SUDS corridor is incorporated into a strong "home zone" streetscape with trees using the water to help create verdant living front doors to the homes.

To achieve this, the following features are proposed:

- Indigenous species throughout the SUDS corridor, capturing ecological qualities of the native grassland meadows;
- Step free pedestrian access meandering through the ecological corridor;
- Ecologically rich planting;
- Informal natural play and seating opportunities.

School Grounds

The external school grounds are an important aspect of the school design. Boundaries between outside and inside are purposely blurred, adding different outdoor ecological experiences that help tell the story of the site and its history.

The external space is composed of the following playful, imaginative design features:

- Play spaces set on different levels stepping down the hillside;
- Integrated, curved and fully accessible ramped access;
- Colourful and varied materials offering a fun challenging and diverse external environment;
- Sports provision;
- Play and fitness equipment and features;
- A variety of outdoor learning spaces able to accommodate both small groups and larger groups for outdoor activities and learning;
- Planting that has a calming and beneficial effect with sensory species used throughout play spaces, a variety of trees, orchard planting and robust boundary planting to discourage children playing or accessing areas close to the top boundary walls;
- Allotment beds for growing vegetables and to encourage outdoor learning;
- Amphitheatre for school gatherings and meetings;
- Cycle and scooter parking;
- Entrance space for meeting and greeting.

The sports ground is open to the public after school hours.

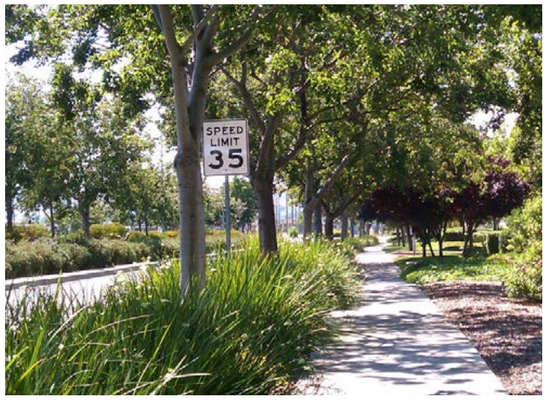
sew

Street Typologies

A range of street typologies will reflect the anticipated use of each street. Wherever possible we have taken measures to introduce planting, traffic calming and a warm palette of natural materials.

Our proposals aim to achieve the following:

- Pedestrian safety and priority;
- Integrated planting on each street layout;
- Integrated Sustainable Urban Drainage;
- A changing planting character for each typology to avoid repetition and provide interest all year round.



Courtyards

As the majority of courtyards are open sided to the Beam Valley Country Park, they must have the ability to enhance the ecological capacity as well as adding amenity value.

This can be done by maximising the amount of planting and softscape with mounding that can resemble the mounding on the main part of the site but on a smaller scale. Mini mounds create some vertical interest for play or amenity while some can become oasis of verdant ecology and even SUDS capacity. The curvy nature of these areas creates softness to the site and a slight diversion from the rigidity of the apartment blocks. The courtyards must also integrate with the green roofs that step down the hillside to create a complete experience of nature and ecology.

Materials

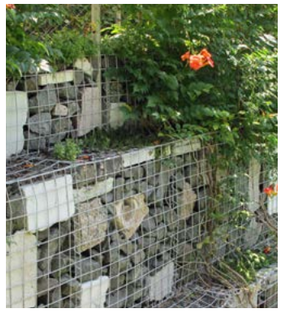
A single high quality and robust palette of materials is proposed throughout the site, primarily following the character areas identified earlier.

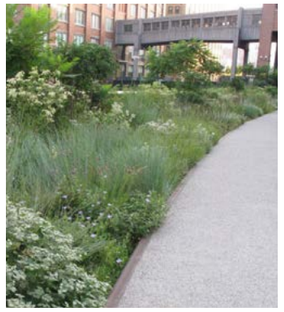
Natural aggregate concrete paving carpets that delineates the main pedestrian routes through all areas of public realm. Change in paving type is used to announce key entrances and areas of public open space. Resin bound gravel is used in areas more sympathetic to surrounding ecology or to mediate between areas of paving and areas of rubberised play surface. To help identify the school grounds as something different and unique within the masterplan, a splash of colour is proposed to the play spaces.

The materials chosen will reflect the earthy colours of the former farm and complement the architectural materials. This subtle approach to paving detailing provides a high quality canvas that integrates the surrounding landscape and architecture. To ensure that infrastructure does not overwhelm the external environment we intend to use raised tables at key pedestrian crossings and for all residential streets rumbled concrete setts will be the preferred carriageway surface. If level changes across the site necessitate retaining structures, stone walls will be complementary to the overall material palette. As important as the materials themselves is the quality of workmanship in constructing the landscape, this is important for longevity of the site.

The majority of the site will have footpath gradients less than 1:21, where steeper gradients are required, these will be compliant to relevant and prevalent standards (at the time of writing, BS 8300:2009).

Surfaces will be designed in accordance with prevailing standards, where technical design constraints, aesthetic aspirations and access/inclusive design issues are in conflict, consultation will take place to establish an acceptable solution. Contrast surfacing will be used to delineate crossings in shared surface areas.





Planting

Tree Planting Design

The tree species planting palette would be greatly influenced by the existing mixture of trees existing along the site boundaries. The proposal aims to strengthen these environments with a rich woodland mix that overtime will mature to reinforce the slopes of fill and add ecological and visual interest.

Site wide street trees will continue to pioneer the site providing a network of trees along each residential street. Species vary with a mix of native trees such as Sorbus aucuparia and Acer campestre combined with damp tolerant trees for SUDS beds, such as Alnus glutinosa and narrow columnar forms such as Quercus robur Fastigiata Koster.

Larger species such as Liriodendron tulipifera, Robinia pseudoacacia and Quercus robur could be strategically located to enhance wayfinding throughout the site. Feature trees will be implemented within the Village Green forming a memorable parkland space.

Trees will also be selected for their changing seasonal colours, blossom, form and fruit. Clusters of birch and cherry trees will provide a fresh pioneering backdrop of native species, whilst Liriodendron tulipifera and Quercus palustris are used as feature specimens to define entrances and significant external spaces.

Natural Grassland and Wildflower Planting Design

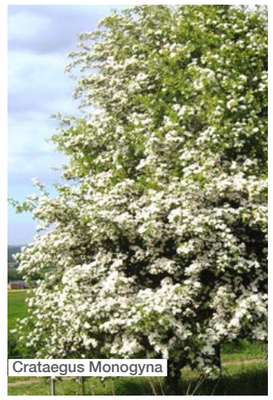
A substantial amount of grassland meadows will be created for the ecological buffer. These will create areas of open habitats that are characteristic of the previous conditions on the site, including sparse wildflower grassland, scrapes and bare-ground which are ideal for notable invertebrates and birds.

Prunus Spinosa

Liriodendron Tulipifera

Acer Campestre

Acer Rubrum



Crataegus Monogyna

Cytisus Scoparius

Fagus Sylvatica

Euonymus Europaeus

EXECUTIVE SUMMARY

Barratt London are progressing a planning strategy for the 37ha Mardyke Farm site which is situated on land to the south of the A1112 (Dagenham Road) to the west of South Hornchurch in Havering. The strategy seeks to secure a revision of the Green Belt boundary to exclude the site from the Green Belt, as well as a site specific policy that allocates the site for housing and associated development. It would then be the intention to secure the reallocation within the emerging Havering Local Plan.

There is a wide selection of services and facilities in the vicinity of the site which cater for everyday needs. The site is within walking distance of a number of bus stops which are served by routes that run towards Romford, Rainham, Barking and Dagenham. The London Riverside Opportunity Area (LROA) is situated immediately to the south of the site. There are a number of improvements proposed within the LROA including a new railway station at Beam Park and additional bus connections. These will therefore improve the public transport accessibility of the area and will allow residents to access a wider range of employment opportunities without needing to use the private car.

The proposed development will take primary access from the A1112 to the north in the form of a new roundabout or signal controlled junction. This access will serve the majority of the site and the internal site access road could form a loop-type arrangement. A second point of access could also be provided to the south via Lower Mardyke Avenue or Roman Close. Although Roman Close is not currently adopted, it has recently been improved as part of the Orchard Village development. The proposals would offer the opportunity to provide improvements to the A1112 to the north of the site including additional crossing opportunities for pedestrians and cyclists.

The proposals will form connections with the existing pedestrian and cycle networks in the area. The main internal site access roads will contain footways on both sides to facilitate pedestrian movements through the site. A segregated cycleway could also be provided through the site to link the existing cycle routes along the A1112 to the north and the A1306 to the south. There may also be potential to provide a shared cycle/footway along both sides of the A1112 in the vicinity of the site to enhance the accessibility of the site for cyclists.

The proposals could also offer the opportunity to provide a bus link through the site which could be served by existing bus services in the area. New bus stops would be provided as part of this arrangement to reduce walking distances, improve bus connections between the north and south and further integrate the site with the surrounding area. There could also be the potential to provide a bus gate to prioritise bus movements within the site and reduce bus journey times. These proposals would improve north-south bus connections between the LROA, the site, Romford and future Crossrail.

A total of two options have been examined for the proposed site access junction with the A1112 to the north of the site. The first option featured a single roundabout access. The second option featured a single traffic signal junction. Initial modelling has revealed that both junction arrangements have the potential to operate within capacity during the future development year of 2031. The signal controlled option was shown to operate further within capacity limits and may therefore offer a more long-term solution. However, further investigation would be required as part of a more detailed transport assessment to substantiate these findings.

This transport appraisal demonstrates that a proposed residential development at the site (with associated uses) would offer a wide variety of benefits to the surrounding area. The site is also situated in a sustainable location and the proposals and their improvements are considered to be in accordance with current national and local policy. In view of the above, we consider that the site is suitable for allocation as a residential development in transport terms.

1.0 INTRODUCTION

1.1 Ardent Consulting Engineers (ACE) has been appointed by Barratt London to advise on the transport opportunities and constraints relating to the proposed allocation of land at Mardyke Farm for residential use and associated development. The site is situated in the vicinity of Beam Park to the west of South Hornchurch in Havering.

1.2 The London Borough of Havering (LBH) is the local planning authority and the local highway authority. Transport for London (TfL) are statutory consultees given the site location and development size. TfL is also the highway authority for the A13 which is classified as a "Red Route" and forms part of the Transport for London Road Network (TLRN) approximately 1km to the south of the site. The site is located within the northwest corner of the South Hornchurch ward and is located adjacent to the London Borough of Barking and Dagenham's (LBBD) eastern boundary.

1.3 This appraisal has been prepared in support of an allocation of the site to provide a residential development (with associated uses) in the emerging Havering Local Plan, which will cover the period until 2031. Initial discussions have been held with LBH Highways to understand their position with regards to the site, transport and access.

1.4 The report investigates potential access options that could be provided to serve the proposed residential development (with associated uses) on land to the south of the A1112 (Dagenham Road). Access has been investigated and designed with reference to current design guidance including Manual for Streets (MfS) and the Design Manual for Roads and Bridges (DMRB).

1.5 Following this introduction, the remainder of the report is structured as follows: -

- **Section 2.0** describes the site location and existing conditions surrounding the site including accessibility and facilities;
- **Section 3.0** examines existing local policy and provides details of the London Riverside Opportunity Area situated immediately to the south of the site;
- **Section 4.0** provides details of the proposed development and the likely trip generation and distribution;
- **Section 5.0** investigates two potential vehicular access options which could be used to serve the site from the north and undertakes the associated modelling;
- **Section 6.0** provides details of the internal design and off-site considerations that should be used to inform the design and layout of the proposed development; and
- **Section 7.0** summarises the potential benefits that the proposed development of the site could bring to the surrounding area.

2.0 SITE LOCATION AND EXISTING CONDITIONS

Site Location

2.1 The site is approximately 37ha in area and is located to the west of Rainham and South Hornchurch and to the southeast of Dagenham as shown at **Plate 1** and in more detail at **Figure 1**. The site is bordered by the A1112 (Dagenham Road) to the north, residential properties to the east and south, the Orchard Village housing development to the south and Beam River to the west.

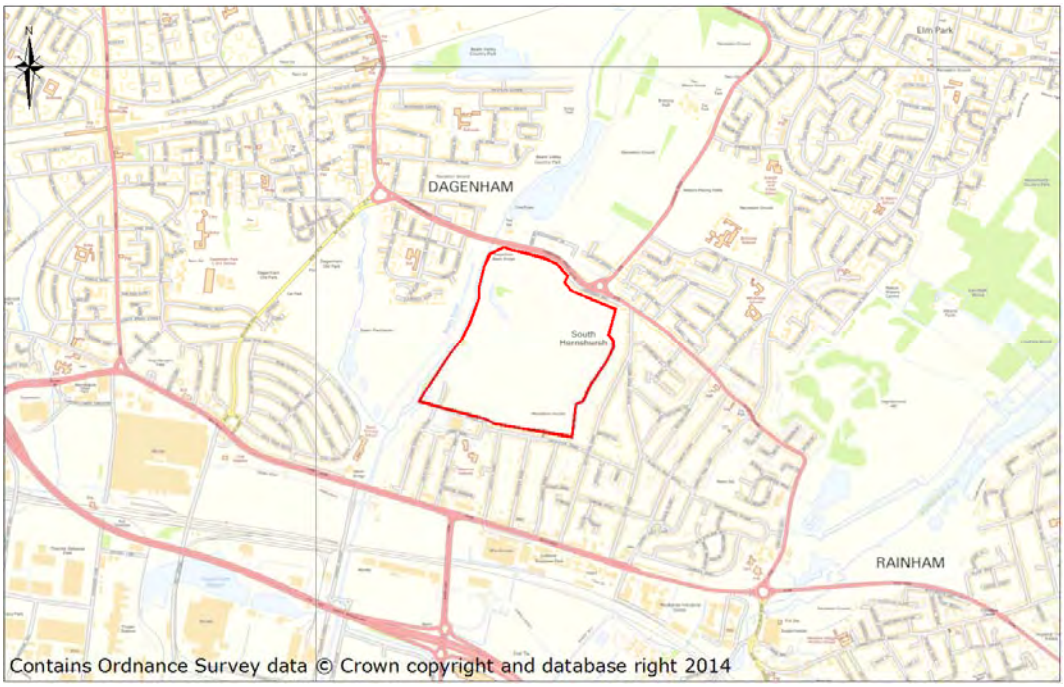

Plate 1: Site Location

Existing Use

2.2 The site is currently being restored with completion due in April 2017. The 4ha area to the south of the site, which is owned by the London Borough of Havering, is currently being used for recreational purposes. This area is situated to the rear of the residential dwellings on Frederick Road and can be accessed via footways from Frederick Road to the east and Roman Close to the west.

Existing Access Arrangements

2.3 An existing access is located to the north of the site which forms a priority junction with the A1112 (Dagenham Road). This access is situated approximately 300m to the west of the A125/A1112 roundabout.

2.4 There are also a couple of stopped-up accesses which run into the site from the south. Lower Mardyke Avenue runs into the southwest portion of the site for a distance of approximately 50m. A spur road also feeds off Roman Close which although not currently adopted, has recently been improved as part of the Orchard Village development. Further details are provided later in this section.

2.5 As previously noted, pedestrians are able to access the southern portion of the site to the rear of the residential dwellings on Frederick Road via footways which can be accessed from Frederick Road and Roman Close. The existing vehicular and pedestrian access arrangements for the site are shown on **Plate 2**.

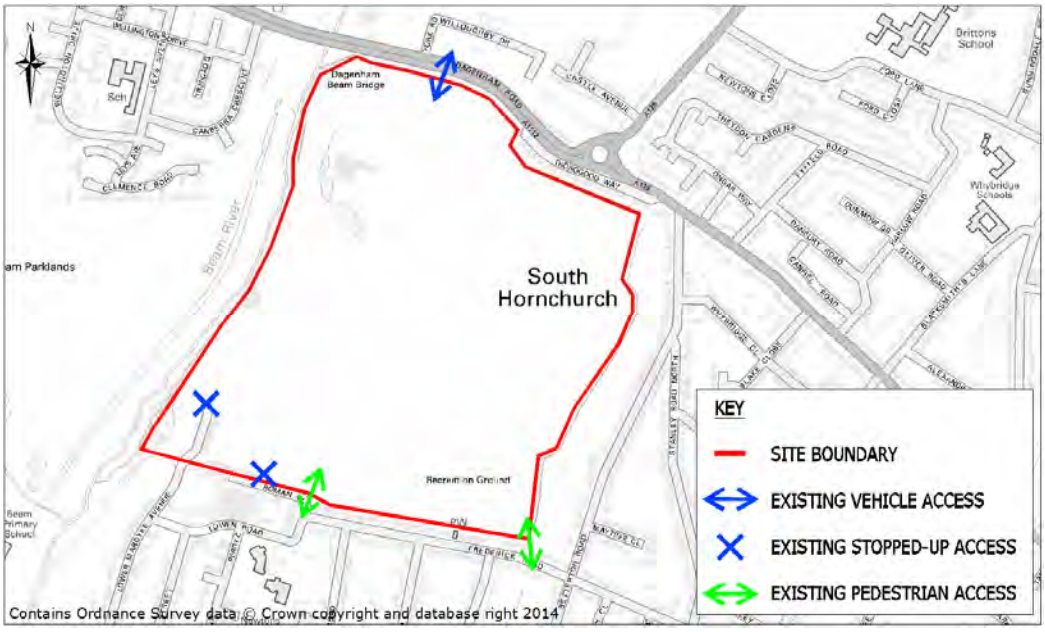

Plate 2: Existing Access Arrangements

Existing Travel Patterns

2.6 To determine the existing travel patterns of residents living in the area, 2011 Census Method of Travel to Work data has been obtained for the South Hornchurch ward where the site is located. This information is presented below in **Table 2.1** and the full data is contained within **Appendix A**.

Table 2.1: Method of Travel to Work Mode Share for the South Hornchurch Ward (source: 2011 Census)

Mode	Share
Underground, Metro, Light Rail, Tram	12.5%
Train	10.2%
Bus, Minibus or Coach	9.9%
Taxi	0.8%
Motorcycle, Scooter or Moped	1.0%
Driving a Car or Van	54.8%
Passenger in a Car or Van	4.7%
Bicycle	1.3%
On Foot	4.2%
Other Method of Travel to Work	0.6%
Total	100.0%

2.7 **Table 2.1** shows that although the majority of residents living within the Ward currently drive (55%), there are opportunities to use bus, London Underground and train services with approximately 33% residents using public transport. The proportion of users travelling on-foot (4%) and by bicycle (1%) is however low and the proposals would provide the opportunity to increase the uptake of these modes such as by improving pedestrian and cycle routes and connections.

Orchard Village Development

2.8 The Orchard Village development is situated to the south of the site and is bounded by Lower Mardyke Avenue, Walden Avenue, Lowen Road and Roman Close. The proposals include up to 555 new homes and an approximate investment of £80 million to regenerate the former Mardyke Estate and improve the lives of residents and the community in the area.

2.9 The first two phases (approximately 200 new residential dwellings) have now been completed and the construction of Phase 3 is currently underway. Phase 3 is projected to be completed late

2014/early 2015 and will provide further residential units, as well as community and retail uses.

2.10 The proposed development will provide the opportunity to integrate the site with the Orchard Village development including by means of secondary access to the south via Roman Close or Lower Mardyke Avenue for example. The site will also benefit from the investment being made including the improvements to the local highway network and the additional facilities which will be available to residents.

Local Highway Network

A1112

2.11 The A1112 (Dagenham Road) borders the site to the north and is classified as an "Urban All-Purpose" dual carriageway (UAP2) based on the road types contained within DMRB TA 79/99. The A1112 accommodates an Annual Average Daily Flow (AADF) of approximately 21,800 vehicles based on traffic flows provided by the Department for Transport (DfT) for 2013. Further details of traffic flows along the A1112 are provided later in this section.

2.12 The A1112 commences at the roundabout junction with the A125 at its eastern extent and then runs westwards towards the roundabout junction with the B178. The A1112 then runs northwards through Dagenham East and Chadwell Heath towards the A12 in the form of a single carriageway with one lane in each direction.

2.13 The A1112 is subject to a 30mph speed limit, is street lit and contains footways on both sides between the A125 and B178 roundabout junctions. Although the A1112 consists of two lanes in each direction in the vicinity of the site, the nearside lane is taken up by a bus lane in each direction. The bus lanes are in operation at

all times and can be used by buses, cyclists and taxis. The bus lanes are replaced by cycle lanes further to the west where the A1112 enters a residential area and remains a dual carriageway with one lane in each direction. There are a number of bus stops located along the A1112 which are served by bus route 103.

A125

2.14 The A125 (Rainham Road) forms a three-arm roundabout junction with the A1112 to the north of the site and runs northwards towards Romford via Elm Park and Rush Green, as well as to the east through South Hornchurch towards Rainham and the A1306. The A125 is a single carriageway road which is street lit and subject to a 30mph speed limit. The A125 runs through residential areas, has footways on both sides and provides uncontrolled and signalised crossings for pedestrians. Bus route 103 runs along the A125 to the east.

2.15 The A125 is a principal route which accommodates an AADF of approximately 31,800 vehicles to the north of the A1112/A125 roundabout and 25,200 vehicles to the south of the A1112/A125 roundabout based on 2013 flows provided by the DfT. The A125 is classified as a UAP1 single carriageway road based on DMRB and predominantly carries through traffic.

B178

2.16 The B178 (Ballards Road) forms a three-arm roundabout junction with the A1112 to the northwest of the site and runs southwards towards the A1306 (New Road). The B178 is a single carriageway road which is street lit and subject to a 30mph speed limit. Footways run along both sides of the carriageway and segregated cycle lanes are also in place along part of the link as it runs through a park. The B178 passes through a residential area to the south of

the park and accommodates bus stops which are served by bus route 145.

A1306

2.17 The A1306 (New Road) runs to the south of the site and forms two junctions with the A13 including near Purfleet to the southeast and to the south of Dagenham near Dagenham Dock railway station to the west. The A1306 also forms a signalised junction with Lower Mardyke Avenue (which provides a link into the site), as well as a signalised junction with the B178 and a roundabout junction with the A125 as outlined above.

2.18 The A1306 is a dual carriageway road which is street lit, subject to a 30mph speed limit and consists of two lanes in each direction in the vicinity of the site. Bus lanes run along the nearside lane of the A1306 in each direction in a similar fashion to the A1112 to the north of the site. Bus routes 145, 165, 174, 175, 287, 365 and 372 run along the A1306.

2.19 The A1306 is a principal route which accommodates an AADF of approximately 13,100 vehicles in the vicinity of the junction with Lower Mardkye Avenue (based on 2013 flows). It is therefore considered that the A125 is classified as a UAP3 dual carriageway road which carries mixed traffic and provides frontage access, bus stops and pedestrian crossings.

Other Local Roads

2.20 Frederick Road borders to the south, forms a priority crossroads junction with Betterton Road to the east and turns into Lowen Road at the priority junction with Roman Close to the west. Roman Close also borders the site to the south and has recently been improved as part of the Orchard Village development e.g. it now features shared surfacing to improve access for pedestrians and cyclists. A spur

road currently runs northwards from Roman Close into the southern part of the site where it is currently stopped-up. It should be noted that Roman Close is not currently an adopted highway.

2.21 Lowen Road runs between Roman Close to the east and Lower Mardyke Avenue to the west. Lower Mardyke Avenue runs in a north-south direction and provides access into the southern section of the site where it is also currently stopped up.

2.22 The local single carriageway roads outlined above contain one lane in each direction, are traffic calmed, subject to 20mph speed limits and primarily serve residential dwellings including the Orchard Village development. Frederick Road, Lowen Road and Lower Mardyke Avenue are also served by bus route 365 which runs in a westbound and then southbound direction.

2.23 **Plate 3** shows how the site fits in with the surrounding local highway network.

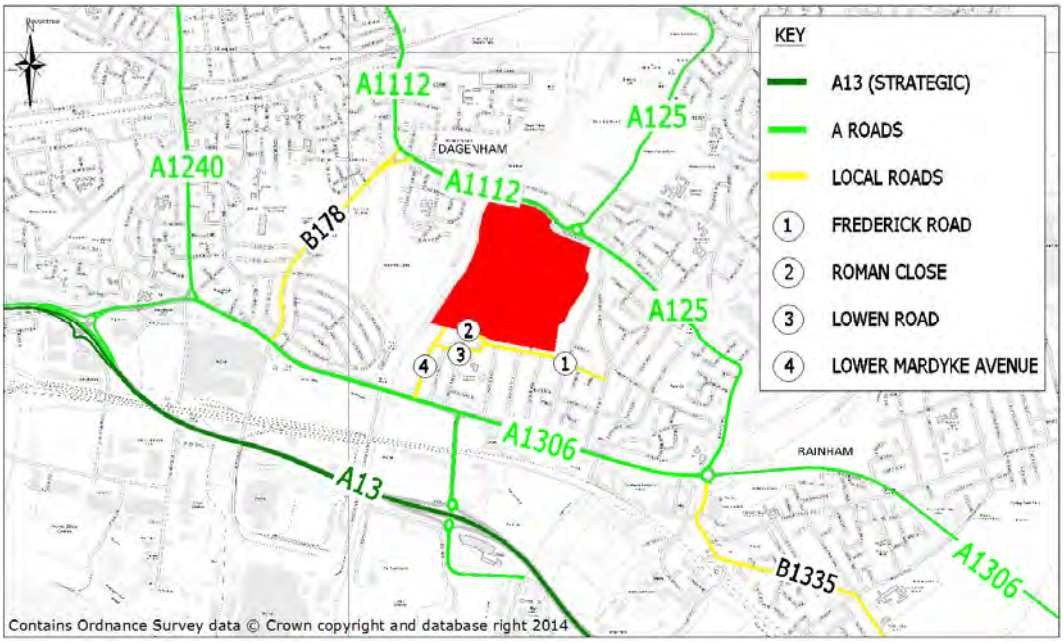

Plate 3: Local Highway Network

Strategic Highway Network

A13

2.24 The A13 runs in an east-west direction to the south of the site and can be accessed via the A1306 New Road. The A13 is classified as a "Red Route" and forms part of the Transport for London Road Network (TLRN). The A13 forms a junction with the M25 at Junction 30 approximately 8km to the east of the site where it then continues eastwards into south Essex. The A13 also runs towards east London and forms a junction with the A406 North Circular Road approximately 7km to the west of the site.

2.25 The A13 is a dual carriageway road and consists of three lanes in each direction to the south of the site. The A13 accommodates an AADF of approximately 84,000 vehicles in the vicinity of the junction with the A1306 (based on 2013 flows). The A13 is classified as an "Urban Motorway" (UM) dual carriageway road based on DMRB, which provides a through route with grade separated junctions.

A12

2.26 The A12 runs in an east-west direction to the north of the site and can be accessed via the A1112. The A12 is also classified as a "Red Route" and forms part of the TLRN. The A12 forms a junction with the M25 at Junction 28 to the east and runs towards the A406 North Circular Road as well as east London to the west.

2.27 The A12 is a dual carriageway road which consists of two lanes in each direction to the north of the site. The A12 accommodates an AADF of approximately 50,000 vehicles through Romford in the vicinity of the junction with the A125 and can also be considered to be classified as an UM dual carriageway road.

Existing Traffic Flows (A1112)

2.28 The DfT provides traffic data in the form of Annual Average Daily Flows (AADF) which represents the number of vehicles that drive on a stretch of road on an average day of the year. The A1112 is classified as a Class A Principal Road in an Urban Area and traffic count data is available for a section of the A1112 in the vicinity of the site. The location of the manual count which was used to obtain the traffic data is shown in **Plate 4** below:

Plate 4: A1112 Traffic Count Location (Ref: 71002)

2.29 Traffic count data has been obtained for 2013 which represents the most recent period available. The AADF has been presented by vehicle type and direction in **Table 2.2** below.

Table 2.2: A1112 Annual Average Daily Flows (2013)

Direction	Cars/LGVs	HGVs	Buses	Total
Eastbound	10,406	475	106	10,987
Westbound	10,293	460	101	10,854
Total	20,699	935	207	21,841

2.30 The above shows that the A1112 experiences a two-way flow of 21,841 vehicles across an average day. This consists of approximately 95% motorcycles, cars and LGVs, 4% HGVs and 1% buses. These flows have been converted to peak hour flows based on the assumption that 10% average daily traffic would occur during the average peak hour. This is considered to provide a robust approach, given that each hour represents approximately 4% of the 24hr period. These results are shown in **Table 2.3** below.

Table 2.3: A1112 Peak Hour Flows (2013)

Direction	Cars/LGVs	HGVs	Buses	Total
Eastbound	1,041	48	11	1,099
Westbound	1,029	46	10	1,085
Total	2,070	94	21	2,184

2.31 The A1112 is classified as an urban all-purpose dual carriageway (UAP2), provides two lanes in each direction and has an approximate carriageway width of 7.0m in each direction. However, as the nearside lane cannot be used by general traffic, it is considered that up to 1,600 vehicles could be accommodated within one lane in each direction per hour (see Chapter 3 of DMRB TA 79/99). It is therefore considered that the A1112 currently operates within capacity, with approximately 1,100 vehicles travelling in each direction during the peak hour.

2.32 In light of the above, the surrounding highway network consists of a number of principal routes which are able to cater for large traffic volumes in excess of 20,000 vehicles per day. The A1112 and A1306 run as dual carriageways to the north and south of the site and provide access to other strategic routes including the A125, A13 and the A12. These routes predominantly carry through traffic and provide access to areas within east London as well as towards Kent and Essex.

Initial Accident Review

2.33 An initial review of accidents has been undertaken for the surrounding highway network based on road casualty data available on CrashMap. A summary of the number and severity of incidents which have occurred during the most recently available three year period (2011 to 2013) has been provided in **Tables 2.4** and **2.5** below.

Table 2.4: Accident Data Summary (Links)

Link (excluding junctions below)	Distance	Slight	Serious	Fatal	Total
A1112 (between B178 and A125)	1.0km	11	0	0	**11**
A125 (north of A1112)	1.0km	5	0	0	**5**
A125 (between A1112 and Cherry Tree Lane)	0.9km	10	0	0	**10**
A125 (between Cherry Tree Lane and A1306)	1.0km	6	1	0	**7**
B178 (between A1112 and A1306)	1.5km	9	0	0	**9**
A1112 (north of B178)	1.0km	18	3	0	**21**
A1306 (between B178 and Marsh Way)	1.1km	7	2	0	**9**
A1306 (between Marsh Way and A125)	1.5km	8	2	0	**10**
Frederick Road	0.7km	0	1	0	**1**
Roman Close	0.1km	0	0	0	**0**
Lowen Road	0.3km	1	0	0	**1**
Lower Mardyke Avenue	0.5km	0	0	0	**0**
Total	**10.6km**	**75**	**9**	**0**	**84**

Table 2.5: Accident Data Summary (Junctions)

Junction	Slight	Serious	Fatal	Total
Existing Site Access (A1112)	0	0	0	**0**
A1112/B178	6	0	0	**6**
A1112/A125	1	0	0	**1**
A1306/B178	3	1	0	**4**
A1306/A125	9	0	0	**9**
A1306/Lower Mardyke Avenue	1	0	0	**1**
A1306/Marsh Way	9	1	0	**10**
A125/Cherry Tree Lane	8	0	0	**8**
Total	**37**	**2**	**0**	**39**

2.34 The above shows that a total of 123 incidents occurred on the surrounding highway network within a three year period including 84 incidents along links and minor junctions and 39 incidents at major junctions. This is equivalent to approximately 41 incidents

per year (an average of 1-2 incidents per junction per year and 2-3 incidents per kilometre link of highway per year).

2.35 The information presented above indicates that approximately 3-4 incidents occurred per year along the A1112 to the north of the site. This is representative of the incident rates along other surrounding links (such as the A125 and the A1306) and does not appear to be an accident hotspot. Furthermore, no incidents occurred at the existing site access junction with the A1112, or along Lower Mardyke Avenue or Roman Close. This suggests that the highway network in the vicinity of the site's vehicular access points currently operates safely.

2.36 Notwithstanding the above, a more detailed analysis of accident data would need to be undertaken as part of a transport assessment in order to support a detailed planning application. This data would be obtained from Transport for London (TfL) to provide more specific details, such as the nature of the incidents taking place and the types of users involved.

Public Transport

Buses

2.37 The following provides details of the nearest bus stops to the site which are situated to the north on the A1112, as well as to the south on Lower Mardyke Avenue and the A1306 (see **Figure 2** for locations):

- Bus Stop N (bus flag & shelter) - A1112 (westbound) adjacent to the site's northern boundary to the west of the existing access;
- Bus Stop A (bus flag & shelter) – A1112 (eastbound) to the west of the existing access;

- Bus Stop MF (bus flag & shelter) – A1306 (eastbound) approximately 30m to the east of the junction with Lower Mardyke Avenue;
- Bus Stop MC (bus shelter) – A1306 (eastbound) approximately 60m to the east of the junction with Lower Mardyke Avenue;
- Bus Stop MG (bus flag & shelter) – A1306 (westbound) approximately 30m to the west of the junction with Lower Mardyke Avenue; and
- Bus Stop MA (bus flag & shelter) – Lower Mardyke Avenue (southbound) to the south of the site.

2.38 Pedestrians are be able to use the signalised crossing approximately 270m to the west of the existing site access junction to access Bus Stop A on the northern side of the A1112. Pedestrians are also able to use the signalised crossing approximately 10m to the east of the A1306/Lower Mardyke Avenue junction to access Bus Stop MG on the southern side of the A1306.

2.39 **Table 2.6** sets out the bus routes which currently serve the bus stops outlined above, as well as their approximate frequencies.

Table 2.6: Bus Services in the Vicinity of the Site

Service	Route and Direction	Services in Hour Commencing					
		07:00	08:00	09:00	16:00	17:00	18:00
A1112 (EB) - Bus Stop A (York Road)							
103	Chase Cross to Rainham Station	6	6	6	6	6	5
A1112 (WB) - Bus Stop N (York Road)							
103	Rainham Station to Chase Cross	6	6	6	6	6	6
A1306 (EB) - Bus Stop MF (South Street)							
174	Dagnam Park Square to C E M E	7	7	7	7	7	7
287	Barking Station to Abbey Wood Lane	3	4	4	4	4	5
A1306 (WB) - Bus Stop MG (Lower Mardyke Avenue)							
174	C E M E to Dagnam Park Square	7	7	7	7	7	7
287	Abbey Wood Lane to Barking Station	3	4	5	4	4	4
A1306 (EB) - Bus Stop MC (South Street)							
365	South Street to Havering Park	5	5	5	5	5	5
Lower Mardyke Avenue (SB) - Bus Stop MA (Orchard Village)							
365	Havering Park to South Street	4	5	5	5	5	5

2.40 **Table 2.6** shows that the highway network in the vicinity of the site is served by up to 22 buses in each direction per hour.

Rail

2.41 Dagenham East is the nearest London Underground station to the site and is situated within an approximate 1.5km walking distance to the northwest. This station is served by the District Line which runs between Upminster to the east and through east and central London to the west.

2.42 Dagenham Dock is the nearest National Rail station to the site which is situated within an approximate 2.5km walking distance from the

southern boundary of the site at Lower Mardyke Avenue. This station is served by C2C services which run towards London Fenchurch Street, Grays, Pitsea, Southend and Shoeburyness.

2.43 Both these stations are outside what the Department for Transport (DfT) and Transport for London (TfL) would consider to be a reasonable walking distance which is set at 960m for sites within London. However, local bus services provide access to both Dagenham East and Dagenham Dock stations and could therefore be used to interchange with these.

Public Transport Accessibility Level

2.44 The Public Transport Accessibility Level (PTAL) index adopted by Transport for London (TfL) reflects walking times to public transport facilities, service range and reliability of services for the London area. The index is split into bands summarised by **Table 2.7** below.

Table 2.7: PTAL Rating Description

PTAL Rating	Description
1a-1b	Very Poor
2	Poor
3	Moderate
4	Good
5	Very Good
6a-6b	Central

2.45 Site specific PTAL information has been obtained from TfL. The centre of the existing site has a PTAL score of 1b (very poor). Although there are a number of bus services accessible from within a 640m walking distance of the site, there are no underground or

railway services accessible from within a 960m walking distance of the site access. The results of the PTAL output are contained within **Appendix B**.

2.46 It is acknowledged that the site currently has a low PTAL score; however, there are proposals to improve the transport infrastructure in the vicinity of the site as part of the London Riverside Opportunity Area (LROA) proposals which are summarised later in **Section 3.0**. Furthermore, approximately 23% residents currently travel by London Underground or train and the PTAL score does not consider the potential for using bus services to interchange with these rail services.

Walking and Cycling

2.47 There are footways running along both sides of the A1112 to the north of the site which run between the roundabout junctions with the B178 to the west and the A125 to the east. The footways continue along the A1112 to the north of the B178 roundabout junction towards Dagenham East. There are also footways along the A125 to the east and north of the A1112/A125 roundabout junction.

2.48 A signalised pedestrian crossing is present on the A1112 approximately 270m to the west of the existing site access junction. This allows pedestrians to cross between the northern and southern footways and provides access to the bus stops on each side of the carriageway. The existing footway network to the north of the site also allows pedestrians to access Dagenham East London Underground station.

2.49 Footways are present on Lower Mardyke Avenue in the vicinity of the turning head to the south of the site. These run southwards towards the signalised junction with the A1306 New Road and allow

pedestrians to access the bus stops along this link as well as the employment and educational opportunities to the south of the site.

2.50 Cyclists are currently able to use the bus lanes which run along the A1112 to the north of the site. There are then cycle lanes present along the A1112 to the north of the A1112/B178 roundabout junction. National Cycle Network (NCN) Route 13 runs to the south of the site along the A1306 (New Road) and can be accessed via Lower Mardyke Avenue or Roman Close. NCN Route 136 also runs to the east of the site and passes along a section of the A125 as well as through Hornchurch Country Park. These routes are shown on **Figure 2**.

Local Facilities

2.51 There are a range of existing facilities in the vicinity of the site, namely: -

- Open space and sports facilities for recreation including Beam Valley Country Park, Bretons Outdoor Centre and Manor Road Sports Ground;
- Numerous educational establishments including nurseries and schools, as well as Brittons Academy;
- Local shops including a newsagents, post offices, restaurants, cafes, pubs/bars, supermarkets and retail outlets;
- Employment areas including Suttons Business Park to the south;
- Additional facilities including libraries, police stations, healthcare services, places of worship and community centres;

- Bus stops served by routes providing direct links to South Hornchurch, Rainham, Elm Park, Hornchurch and Romford;
- Dagenham East London Underground station served by the District Line which runs between Upminster to the east and through east and central London to the west; and
- Dagenham Dock and Rainham railway stations served by C2C train services to/from London Fenchurch Street, Grays, Pitsea, Southend and Shoeburyness.

2.52 Further details and a plan showing the location of facilities in the area are contained on **Figure 1**.

Conclusion

2.53 It is considered that the proposals will integrate the site with the surrounding networks and land uses thus minimising walking distances to local services and facilities and reducing the need to travel by vehicular modes. The site is therefore situated in a sustainable location for residential development in accordance with current national government policy set out in the *National Planning Policy Framework* and local policy set out in the *Local Development Framework*. Further details on local policy is contained in the following section.

3.0 LOCAL POLICY AND OPPORTUNITY AREA PROPOSALS

LBH Highways

3.1 Initial discussions have been held with LBH Highways to understand their likely requirements for the site in terms of transport and access on the hypothetical basis that the site will support a residential development with associated uses. A summary has been provided below:

- The design approach for the site should be in accordance with Manual for Streets and should prioritise walking and cycling links;
- The site/proposals should comply with the policies contained within the Local Development Framework (LDF);
- Primary access should be taken from the A1112 to the north to limit the extent of additional traffic on the residential streets to the south;
- Primary access to the north could take the form of one or more junctions depending on the type of arrangement, which may need to be controlled;
- The development should avoid contributing to existing rat running and congestion issues in the area.
- The bus lane along the A1112 should be maintained; and
- A transport assessment would be required to support a planning application for the site/proposals including modelling of key junctions.

3.2 Further more detailed discussions would need to be held with LBH such at a pre-application stage or as a planning application becomes progressed. The site also borders the London Borough of Barking & Dagenham (LBBD) who would also likely need to be consulted.

Local Development Framework

3.3 The LDF was adopted by the Council in 2008. Since then, the Government has published its National Planning Policy Framework (NPPF) and the Mayor of London has published a new London Plan (with subsequent alterations). As a result, the Council is currently preparing a new Havering Local Plan which will replace the LDF and cover the period up until 2031.

3.4 The LDF continues to guide future planning in the Borough until the emerging Havering Local Plan is adopted. The Core Strategy and Development Control Policies Development Plan Document (DPD) forms the most important LDF document which sets the Council's approach to planning the whole borough up to 2020. The following provides a summary of the Core Policies and Development Control Policies which relate to transport.

3.5 **Core Policy (CP) 9 'Reducing the Need to Travel'** states that the need to travel will be reduced by locating major developments in places with good public transport accessibility, relating residential densities to existing and future public transport access levels, ensuring there is a range of local employment opportunities and improving opportunities for informal recreation in the Havering countryside.

3.6 **CP10 'Sustainable Transport'** states that sustainable transport will be promoted by:

- Achieving integration between different transport modes;
- Submitting a travel plan and transport assessment for proposals with material transport implications;
- Ensuring that new development does not overload the capacity of the public transport and strategic road networks;

- Working in partnership with the relevant agencies to seek funding for and deliver public transport improvements including in the London Riverside Opportunity Area;
- Relating maximum car parking standards to public transport accessibility;
- Minimising the distance to local public transport nodes;
- Increasing accessibility to Romford Town Centre by considering the potential to introduce a Park and Ride facility to encourage modal shift; and
- Seeking contributions for improvements to public transport accessibility and capacity (and other transport improvements).

3.7 **Development Control Policy (DC) 32 'The Road Network'** states that new development will not be allowed where it would have an adverse impact on the functioning of the road hierarchy.

3.8 **DC33 'Car Parking'** states that car parking provision should not exceed the maximum standards set out in Annex 5.

3.9 **DC34 'Walking'** states that developers will be required to take account of the needs of pedestrians and address desire lines to local facilities including schools and public transport nodes. In certain circumstances, contributions may be sought to promote walking in the Borough, pedestrian accessibility towards important local facilities or the pedestrian environment at transport interchanges.

3.10 **DC35 'Cycling'** states that developments will need to take account of cyclists by providing safe and secure cycle parking (in accordance with Annex 6) and changing/shower facilities, encouraging access by and circulation of cyclists and providing cycle priority measures where necessary. Contributions may be sought to provide off-site

improvements to the cycle network and cycle facilities including at key public transport nodes.

3.11 **DC36 'Servicing'** states that adequate servicing arrangements will need to be provided for new housing developments and should be located within the curtilage of the development where possible, allowing vehicles to leave in forward gear.

LBH Residential Design Supplementary Planning Document

3.12 The LBH Residential Design Supplementary Planning Document (SPD) was adopted in 2010 and aims to improve the quality of new residential schemes by providing guidance on how they can be built to a high quality. The document forms part of Havering's LDF and is a material consideration for decisions on planning applications.

3.13 One of the main objectives of the document is to promote the accessibility and local permeability of residential developments which can be achieved by meeting the following criteria:

- To be well integrated with surrounding networks, movement patterns and land uses;
- Featuring a network of well-connected streets to improve internal permeability;
- Providing safe and clearly defined pedestrian and cycle routes which follow desire lines to facilitate movement; and
- Prioritising pedestrian and cyclist movements, such as by separating routes and encouraging lower traffic speeds.

3.14 In addition to the above, car parking should be well integrated within a development so as not to dominate the landscape and provided in accordance with Development Control Policy DC33.

3.15 Cycle parking should be provided in safe, secure and accessible locations and in accordance with Development Control Policy DC35.

3.16 Waste and recycling storage should be carefully considered so that they can be easily accessed by both residents and waste/recycling collection vehicles.

London Riverside Opportunity Area

3.17 The site is located immediately to the north of the London Riverside Opportunity Area (LROA) which covers 3,000 hectares and extends from the Royal Docks to the west to Rainham Marshes to the east. The LROA encompasses the southern part of the London Borough of Havering, as well as parts of Barking & Dagenham and Newham. The extents of the LROA and how this relates to the site is shown below in **Plate 5**.

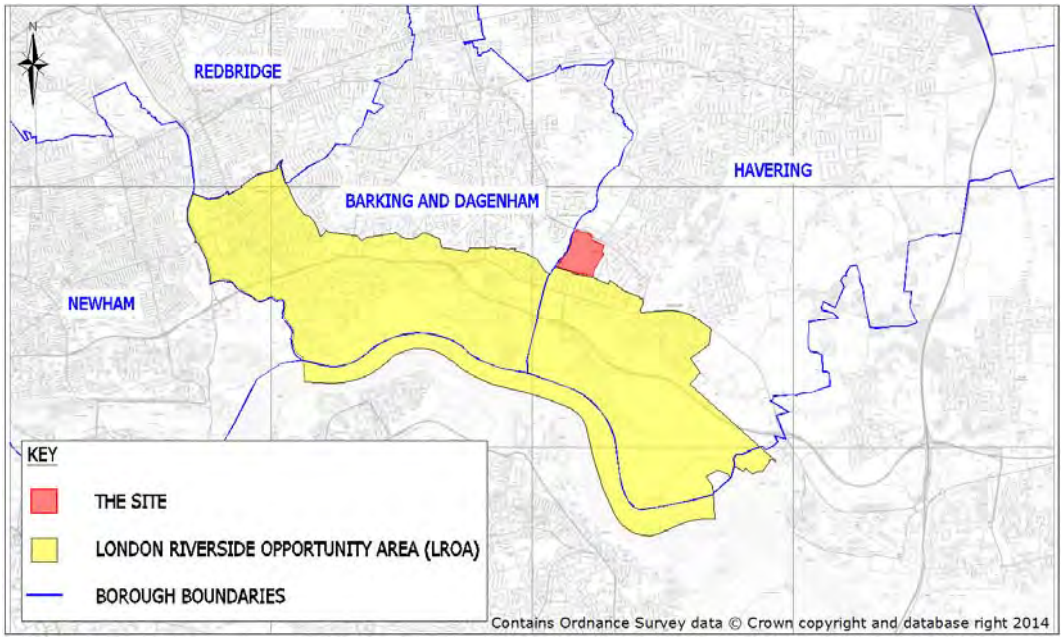

Plate 5: LROA Extents

3.18 There are a number of transport improvements proposed within the LROA including improvements to the A13, a new mainline rail station at Beam Park, additional bus corridors/connections and a potential river crossing over the Thames which would be accessed from the A13. These will help facilitate the delivery of new homes and jobs in the area as well as to reduce physical barriers to travel, improve

connections, reduce crowding on public transport and lower highway congestion.

3.19 Beam Park station is proposed to be situated between Dagenham Dock and Rainham stations on the Essex Thameside branch of the C2C line. The station would be accessed from Marsh Way to the south of the A1306 (New Road) which would place it within an approximate 800m walking distance of the site's potential southern point of access on Roman Road. Funding is currently being sought for the new station which could open as early as 2020.

3.20 Additional bus corridors are sought within the LROA to improve east-west connections across Barking Riverside as well as between Rainham Village and Beam Park. There are also proposals to improve bus connections between the LROA and areas to the north including towards Romford and future Crossrail. The site could facilitate these arrangements by accommodating a bus link in a north-south direction.

3.21 There are a number of strategic cycle routes which serve London Riverside including CS3 (Barking to Tower Gateway), LCN13 connecting Rainham with the City, LCN57 linking Dagenham with Epping and LCN58 running between Rainham, Romford and Epping. The proposals would offer the opportunity to link the site with the existing routes nearby and could also potentially provide a cycle route through the site and improve existing cycle facilities along the A1112.

4.0 THE PROPOSED DEVELOPMENT AND LIKELY TRIP GENERATION

4.1 The site consists of approximately 37ha of land and the level of development being considered as part of this appraisal is outlined below: -

- Up to 1,500 residential units;
- Educational facilities including a school;
- Community use;
- Area of public realm;
- Pedestrian and cycle routes; and
- A potential bus link.

4.2 The proposals therefore seek to deliver a residential development with associated employment, educational and recreational facilities which will reduce the need to travel in accordance with LDF Policy CP9. The proposals will focus on delivering pedestrian and cycling routes through the site along key desires lines in accordance with MfS, the Residential Design Guide SPD and LDF Policies DC34 and DC35.

4.3 Plans showing the indicative masterplan for the site are provided in **Appendix C**.

Trip Generation

4.4 All person trip rates have been obtained from the TRICS/TRAVL database for similarly sized mixed use residential developments situated within outer London with low PTAL ratings of 1-2. A total of two sites were selected in total and details of these as well as the trips are contained within **Appendix D**.

4.5 The 2011 Census 'Method of Travel to Work' dataset for the South Hornchurch Ward (where the site is located) has then been used to infer likely resident travel patterns for the proposed development (see **Table 2.1**). A summary of the all person trips rates and anticipated all person trip generation for the proposals (based on the site's area of 37ha) has been provided below in **Table 4.1**.

Table 4.1: Anticipated Development Trip Generation

Proposed Trip Generation	Weekday am peak hour			Weekday pm peak hour		
	In	*Out*	*Two-way*	*In*	*Out*	*Two-way*
Person trip rates (per 100sqm)	**0.064**	**0.233**	**0.297**	**0.126**	**0.080**	**0.207**
Person trips (37 ha)	**238**	**861**	**1099**	**467**	**298**	**764**
Vehicle driver trips (54.8%)	130	472	602	256	163	419
Vehicle Passenger trips (4.7%)	11	40	51	22	14	36
Pedal cycle trips (1.3%)	3	11	14	6	4	10
Walk trips (4.2%)	10	36	46	20	13	32
Train trips (10.2%)	24	88	113	48	30	78
Underground trips (12.5%)	30	107	137	58	37	95
Bus trips (9.9%)	24	86	109	46	30	76
Motorcycle Trips (1.0%)	2	9	11	5	3	8
Other trips (1.4%)	3	12	15	6	4	10

4.6 The above shows that the development is projected to generate the highest number of trips during the AM peak period, where approximately 602 two-way vehicular trips are anticipated to occur. Further details of the information obtained from the Census database and the trip generation calculations are held in **Appendices A** and **D**.

4.7 It should be noted that the site was formerly a landfill site and is currently being restored. As a result, the proposed level of trips shown above will not strictly be all additional. Furthermore, vehicular trips associated with the residential development are likely to consist primarily of light vehicles, rather than the heavy vehicles associated with the site's former use. Nonetheless, for the purposes of this appraisal it has been assumed that the trips shown in **Table**

4.1 would be additional to the network and would consist of 5% HGVs e.g. for deliveries/ servicing movements to provide a worst case assessment.

Vehicle Trip Distribution

4.8 The distribution for the residential element has been derived from 2011 Census Travel to Work Origin-Destination (O-D) data for the resident population of the Havering 028 Middle Layer Super Output Area (MSOA) which covers a smaller area than Ward level and is therefore more specific to the site.

4.9 In the absence of detailed traffic count data, the distribution has only been examined as far as travelling eastbound or westbound along the A1112 to determine the likely level of vehicular trips projected to use this link as well as the two roundabout junctions. The assumptions used to inform the distribution are presented in **Appendix D** and the results are provided below in **Table 4.2**.

Table 4.2: Anticipated Vehicular Trip Distribution

Direction	Junction	Destinations	Proportion
East	A1112/A125	South Hornchurch, Rainham, Romford, Upminster, Thurrock, Brentwood, Basildon, Dartford	63.8%
West	A1112/B178	Barking, Dagenham, Redbridge, Tower Hamlets, Newham, City of London	36.2%

4.10 The above shows that the majority of trips are anticipated to depart/arrive from the east via the A1112 and the A1112/A125 roundabout. These trips will be travelling towards destinations within Havering as well as areas further to the east in Essex and Kent.

Future Development Year

4.11 The 2013 peak hour traffic flows for the A1112 (**Table 2.3**) have been factored up to the future year of 2031 to reflect the end period of the emerging Havering Local Plan. These have been based on growth factors derived from the National Transport Model (NTM) and the National Trip Ends Model (NTEM) using the Trip Ends Model Program (TEMPRO). NTM projections for "Urban Principal Roads" in the London were used together with NTEM factors for the Havering (main) area. The obtained growth factors are shown below in **Table 4.3**.

Table 4.3: Growth Factors (2013 to 2031)

Time Period	Growth Factor
AM Peak	1.238
PM Peak	1.243
Average Day	1.256

4.12 The above shows that traffic flows along the A1112 between 2013 and 2031 are anticipated to increase by a factor of 1.238 during the AM peak which represents the worst case period in terms of development trips. In addition, average daily flows are anticipated to increase by a factor of 1.256 which would result in a 2031 AADF of approximately 27,500 vehicles along the A1112.

Traffic Flow Diagrams

4.13 A number of traffic flow diagrams have been put together for the 2013 and 2031 AM peak hour scenarios based on the information provided within this section and **Section 4.0**. The diagrams show the existing and projected levels of traffic anticipated to travel along the A1112 to the east of the proposed site access junction towards the A1112/A125 roundabout and to the west of the proposed site access towards the A1112/B178 roundabout.

4.14 The following scenarios have been examined for the AM peak hour:

- 2013 Existing A1112 Traffic
- 2031 Baseline A1112 Traffic
- Development Traffic Distribution
- Development Traffic Generation
- 2013 With Development Scenario
- 2031 With Development Scenario

4.15 The traffic flow diagrams are contained within **Appendix E**.

Projected Traffic Flow Increase

4.16 The 2013 peak hour traffic flows for the A1112 (see **Table 2.3**) have been compared with the anticipated level of additional traffic which is expected to occur as a result of the proposed development. The AM peak hour has been examined as this represents the period when the proposed development is anticipated to generate the highest level of vehicular trips. The results are shown in **Table 4.4** below.

Table 4.4: 2013 AM Peak Hour Flows

A1112 (East of Access)				
Direction	**Existing**	**Development**	**Total**	**% Increase**
Eastbound	1,099	307	1,406	28%
Westbound	1,085	84	1,170	8%
Two-Way	2,184	391	2,575	18%
A1112 (West of Access)				
Direction	**Existing**	**Development**	**Total**	**% Increase**
Eastbound	1,099	48	1,146	4%
Westbound	1,085	174	1,260	16%
Two-Way	2,184	222	2,406	10%

4.17 The results for 2031 (which reflects the end period of the emerging Havering Local Plan) have also been calculated for the AM peak hour and are presented in **Table 4.5** below.

Table 4.5: 2031 AM Peak Hour Flows

A1112 (East of Access)				
Direction	**Baseline**	**Development**	**Total**	**% Increase**
Eastbound	1,360	307	1,667	23%
Westbound	1,343	84	1,427	6%
Two-Way	2,703	391	3,094	14%
A1112 (West of Access)				
Direction	**Baseline**	**Development**	**Total**	**% Increase**
Eastbound	1,360	48	1,408	4%
Westbound	1,343	174	1,517	13%
Two-Way	2,703	222	2,925	8%

4.18 The results show that the proposals are anticipated to increase two-way traffic flows along the A1112 by approximately 14% to the east of the access and 8% to the west of the access in 2031 during the AM peak hour.

4.19 Predicted two-way flows on the dual carriageway section of the A1112 to the north of the site are anticipated to reach a maximum of around 3,100 vehicles per hour in 2031. This link has a capacity of approximately 3,200 vehicles per hour, and is therefore projected to almost reach capacity in 2031 with development traffic. The proposed development may therefore be required to contribute towards improvements to the A1112 in the vicinity of the site to increase link capacity and avoid adverse impacts in accordance with LDF Policy DC32.

4.20 In addition to the above, it is considered that the A1112/A125 and A1112/B178 roundabout junctions would need to be assessed as part of a detailed planning application for the proposed

development. Further junctions may also need to be assessed including:

- A1306 New Road/Lower Mardyke Avenue 3-arm signalised junction;
- A1306 New Road/Marsh Way 3-arm signalised junction;
- A125 Rainham Road/A1306 New Road 4-arm roundabout;
- A1306 New Road/B178 Ballards Road 4-arm signalised junction;
- A1112 Rainham Road North/A124 Wood Lane 3-arm roundabout; and
- A125 Upper Rainham Road/A124 Hornchurch Road gyratory.

4.21 It should be noted that although the above is considered to provide a robust assessment, the results are based on a number of assumptions and are therefore indicative. A more detailed analysis would need to be undertaken as part of a transport assessment when supporting a planning application to provide more definitive results.

Potential Increase in Public Transport Usage

4.22 The results in **Table 4.1** show that the proposed development is projected to result in an additional 109 bus trips, 137 London Underground trips and 113 rail trips during the AM (worst case) peak hour.

4.23 The site is currently served by up to 22 buses each way per hour, which indicates that approximately 2-3 additional passengers would use each of these services at peak time. However, additional passengers may also use these services to access Dagenham East London Underground station and Dagenham Dock railway station given that these are outside of a reasonable walking distance.

4.24 In light of the above, the additional public transport demand would need to be examined as part of a detailed planning application, particularly in terms of nearby bus stops and Dagenham East London Underground station. The proposals will seek to improve bus services in the area such as by providing a bus link through the site which will help to cater for this additional demand. In addition, the transport improvements proposed as part of the LROA will provide additional capacity on the local public transport network as well as increasing opportunities for residents to access rail and bus services. These factors will therefore also need to be considered.

Travel Plan

4.25 A Travel Plan would need to be implemented in conjunction with any development on the site in order to promote the use of sustainable modes of transport (walking, cycling, public transport and car sharing) by those living there. This would be prepared in accordance with good practice guidelines in force at the time of any planning application submission (such as *TfL's Travel Planning for New Developments in London, November 2013*) and would comprise initiatives such as appointment of a Travel Plan Co-ordinator to promote the existence of the plan and annual monitoring to track progress against mode share targets which would be set.

5.0 VEHICULAR ACCESS OPTIONS TO ACCOMMODATE THE DEVELOPMENT

Opportunities and Constraints

5.1 There are a number of opportunities to allow a proposed residential development to be served from the site. The A1112 forms a principal route to the north and is considered appropriate to provide a primary point of access which could be achieved via one or two site access junctions. The site fronts the A1112 for a distance of approximately 350m which provides sufficient scope to provide an access within a location that avoids other junctions and bus stops. It is noted that the majority of traffic needs to access/egress the site to the north and this arrangement would therefore facilitate this.

5.2 There are also opportunities to the south in the form of two currently stopped up links which could provide secondary/ emergency points of access. Emergency-only access may also be achievable via Frederick Road. It is considered that the site can be well served by the surrounding highway network and that residents would have a number of different options to access/egress the site which would reduce the reliance on any one access point having to be used.

5.3 Notwithstanding the above, there are also a number of constraints which need to be considered. In terms of access to the north, the A1112 is currently a dual carriageway, accommodates bus lanes, bus stops and forms other junctions in the vicinity of the site frontage. The A1112 also forms a bend to the east in the vicinity of the A1112/A125 roundabout junction which may reduce visibility upon the approaches to a new junction. These factors will therefore influence any proposed access options e.g. avoiding bus stops and integrating bus lanes where possible.

5.4 The nature of the residential roads to the south limit the amount of additional traffic that could potentially be accommodated. A moderated level of development should therefore be served by any secondary access to the south and a direct link through the site should be avoided to deter rat-running. Roman Close is currently not adopted and Lower Mardyke Avenue would need to be improved/ upgraded in the vicinity of the site's southern boundary to facilitate access. This would also be subject to the redline boundary of the site.

Design Requirements

5.5 To determine the appropriate number of accesses and junction type to serve the development the Highway's Agency's Design Manual for Roads and Bridges (DMRB) has been used.

5.6 DMRB is used primarily for the design of trunk and motorways and given the nature of the A1112 which is a principal urban road; DMRB has been adopted as the appropriate guidance to inform this assessment. The assessment used the following chapters from DMRB:

- TD42/95 'Geometric Design of Major/Minor Priority Junctions
- TD16/07 'Geometric Design of Roundabouts'
- TD50/04 'The Geometric Layout of Signal-Controlled Junctions and Signalised Roundabouts

5.7 Traffic counts undertaken in 2013 were factored to represent a development design year of 2031 (the end year of the Local Plan). The 2031 AADF for the A1112 was estimated at 27,500 vehicles and the two-way peak hour flow was estimated at 2,700 vehicles.

5.8 A trip generation for the proposed development has been undertaken in **Section 4.0** of this report. The trip generation

indicated that the development would generate a two-way peak hour flow of approximately 600 vehicles. The traffic flows can be found in **Appendices D** and **E**.

Number of Accesses

5.9 To serve a development of this size the number of vehicular accesses needs to be carefully considered to suit the requirements of the emergency services as well as to provide good connections to the surrounding highway network.

5.10 It is considered that primary means of access would be taken from the A1112 to the north which would ultimately be used to serve the majority of the development. A second point of access could be provided to the south e.g. from Roman Road or Lower Mardyke Avenue to serve a smaller section of the development. An emergency point of access may also be able to be provided from Frederick Road.

5.11 Further to the above, there may be potential to provide a second point of access from the A1112 to the north. This option has not however been investigated as part of this initial appraisal. Further details of the access arrangements investigated for the main access on the A1112 are provided in **Section 6.0**.

Types of Access

5.12 The Design Manual for Roads and Bridges provides information regarding junction type. Using the traffic flow information and trip generation it is possible to determine the appropriate junction type for the primary access which will serve the proposed development. Where the design year major road flow is above 18,000 vehicles, DMRB TD42/95 suggests a roundabout (or other type) would be required to serve the development.

Access Options

5.13 Based upon the information presented above the following access options have been developed for consideration in this report:

1) Single roundabout access to the north with secondary/ emergency access to the south; and
2) Single traffic signal access to the north with secondary/ emergency access to the south.

5.14 The secondary/ emergency access could be taken from Roman Close by utilising the existing spur road which partially runs into the site (see **ACE Drawing W420-SK04**). Lower Mardyke Avenue also provides a potential secondary/ emergency access option into the site (see **ACE Drawing W420-SK05A**) subject to the site's redline boundary. Vehicle restriction measures could be implemented to prevent unauthorised access and to control the level of movements generated to the south of the site.

Primary Access Option 1: Single Roundabout

5.15 The roundabout junction has been designed with reference to DMRB TD16/07. Table 6/1 in TD16/07 indicates that a normal roundabout could be provided where flows are less than 16,000 AADT on any approach along a dual carriageway.

5.16 To meet the requirement for entry path deflection and other geometric parameters outlined in TD 16/07, it is considered that the smallest normal roundabout that would be able to be accommodated on the A1112 to support the development would have an Inscribed Circle Diameter (ICD) of approximately 60 metres. Due to the level of traffic passing through the junction, two lane approaches (with a minimum width of 3.0m) have been provided on each arm and the

bus lanes have not been provided through the roundabout to allow general traffic to use both lanes.

5.17 Owing to the need to realign the A1112 to achieve adequate deflection at the roundabout (particularly to the west), the most suitable location is in the centre of the site's northern boundary in the vicinity of the existing site access. It should be noted that as this report only provides an initial appraisal, the proposed layout of the roundabout does not currently incorporate the junction with York Road to the west. The potential for accommodating York Road within this type of layout would be investigated as part of a more detailed report such as a transport assessment if the roundabout forms the preferred option.

5.18 The proposed roundabout includes a 2.5m segregated cycleway and a 2.0m footway on both sides of the site access arm. Furthermore, 3.0m wide shared cycle/footways have been shown along the eastern and western approaches to the roundabout, as well as around the roundabout. Toucan crossings have been provided on the A1112 arms and an uncontrolled crossing has been provided on the site access arm to allow pedestrians and cyclists to cross.

5.19 A plan showing the proposed junction location and arrangement is contained on **ACE Drawing W420-SK02A**.

Primary Access Option 2: Single Traffic Signal Access

5.20 The traffic signal junction has been designed with reference to DMRB TD 50/04. The junction has again been located within the centre of the site's northern boundary in the vicinity of the existing site access for the following reasons:

- To ensure appropriate spacing from other junctions e.g. York Road to the west;

- To be situated on a straight section which avoids the bend to the east; and
- To avoid existing bus stops and help link the development with the existing bus stops.

5.21 Due to the level of flow passing through the junction, two lane approaches (with a minimum width of 3.0m) have been provided on each arm and the bus lanes have been removed (through the junction) to allow general traffic to use both lanes. A 3.5m wide right turn lane has been provided on the eastern approach for traffic wishing to turn right into the site from the A1112. This right turn lane is approximately 25m in length in front of the stop line and is therefore able to accommodate a queue of four vehicles.

5.22 The proposed signal junction includes a 2.5m segregated cycleway and a 2.0m footway on both sides of the site access arm. Toucan crossings have then been provided on the site access arm and A1112 eastern arms to allow pedestrians and cyclists to cross between the site and the northern side of the A1112. The proposals also include a 3.0m wide shared cycle/footway along the southern and northern sides of the A1112 which would accommodate both pedestrians and cyclists.

5.23 Keep clear markings have been provided to the west of the proposed signal junction to allow vehicles to turn in/out of York Road. An additional toucan crossing has been provided to the west of the junction with York Road to provide pedestrians and cyclists with an additional opportunity to cross between the northern and southern shared cycle/footways. This will also allow vehicles to turn right into York Road without having to give-way to vehicles travelling eastbound i.e. when the toucan crossing is in use.

5.24 A plan showing the proposed junction location and arrangement is contained on **ACE Drawing W420-SK01A**.

5.25 Details of the proposed staging and phasing for the signal controlled junction are contained within **Appendix G**.

Capacity Assessments

5.26 Junction capacity assessments using the analysis tools ARCADY (for roundabouts) and LINSIG (for the traffic signals) have been undertaken for the two access options outlined above. The 2013 existing year scenario and 2031 future year scenario have been tested for each junction with development traffic applied. The flows have been taken from the traffic flow diagrams contained within **Appendix E** as detailed within the previous section.

5.27 As previously noted, these traffic flows are considered to represent a worst case assessment for the following reasons:

- All vehicular trips have been assumed to be additional to the network i.e. existing trips associated with the site have not been discounted;
- The peak hour flows for the A1112 are based on 10% of the AADF flow which presents a robust methodology;
- The 2031 flows are based on robust growth factors (approximately 24% growth between 2013 and 2031);
- The peak hourly level of development traffic has been considered which occurs during the AM peak (08:00-09:00);
- Delivery/ servicing and potential bus movements have been considered i.e. 5% development has been shown as HGVs;
- The majority of development traffic (63%) has been assumed to turn right out of the site; and
- All development traffic has been applied to the main access on the A1112, despite an alternative access being available to the south which would serve part of the development.

Option 1 - ARCADY Assessment

5.28 Junction capacity assessments have been undertaken for the proposed roundabout option for the 2013 and 2031 with development scenarios using ARCADY 8. An RFC of 0.85 or higher is generally considered to demonstrate that practical capacity has been reached.

5.29 The ARCADY model includes crossings on each of the arms and to further ensure that the modelling is robust, it has been assumed that 60 two-way pedestrian movements would be made during the peak hour. This represents the combined level of pedestrian and cycle trips that are anticipated to be generated by the proposed development during the AM peak as outlined in **Table 4.1**. A total of 60 two-way movements have been shown to cross the site access arm, and 30 two-way movements have been shown to cross the A1112 arms.

5.30 Further to the above, it has been assumed that 5% of all movements would consist of HGVs including those associated with the site. The three crossings have all been modelled as toucan crossings (including across the site access for robustness) to consider delay associated with pedestrians and cyclist movements at this junction.

5.31 The results of the ARCADY assessments are presented in **Table 5.1** below.

Table 5.1: ARCADY Results for Roundabout Option

Junction Arm	AM Peak Hour (Worst Case)			
	2013 Existing Flows + Dev		2031 Base Flows + Dev	
	Max RFC	Max Queue	Max RFC	Max Queue
A1112 (E)	0.634	2	0.763	4
Site Access (S)	0.442	1	0.508	2
A1112 (W)	0.696	3	0.839	6

5.32 The results presented in **Table 5.1** indicate that the normal roundabout operates within capacity during the 2013 and 2031 development year scenarios. However, the roundabout is shown to operate very close to capacity during the 2031 peak hour scenario, with a maximum RFC of 0.839 on the A1112 (W) arm where a maximum queue of six vehicles is anticipated to form.

5.33 In light of the above, the layout/ geometry of the A1112 western arm may need to be amended to provide additional capacity as part of any further assessments should a normal roundabout form the preferred option. The full ARCADY output data can be found in **Appendix F**.

Option 2 - LINSIG Assessment

5.34 Junction capacity assessments have been undertaken for the proposed signal controlled option for the 2013 and 2031 with development scenarios using the analysis tool LINSIG 3.

5.35 A Degree of Saturation (DoS) of 90% is considered to demonstrate that practical capacity has been reached for a given arm. A DoS of 100% or above indicates that the ultimate capacity has been reached (or exceeded).

5.36 In terms of the operation of the junction as a whole, the Practical Reserve Capacity (PRC) identifies the additional capacity that could

theoretically be accommodated. A negative PRC suggests that the junction is projected to operate over capacity.

5.37 The LINSIG model includes the priority junction with York Road to the west of the proposed signal controlled site access junction, as well as the proposed toucan crossing on the A1112 further to the west. The movements in/out of York Road have been shown to give-way where necessary and it has been assumed that 60 two-way movements (30 in, 30 out) would be made during the peak hour.

5.38 The traffic flows have been inputted as Passenger Car Units (PCUs) based on the flows shown on the traffic flow diagrams in **Appendix E**. It has also been assumed that several routes along the A1112 would only be used by buses, taxis and motorcyclists due to the bus lanes which are present on the junction approaches. For the purposes of this assessment, it has been assumed that these routes would be used by six buses in each direction per hour (equivalent to 12 PCUs) based on the frequency of bus service 103, as well as 5% of light vehicles e.g. taxis and motorcyclists.

5.39 **Table 5.2** provides a summary of the LINSIG output for the development scenarios.

Table 5.2: LINSIG Results for Signal Controlled Option

Junction Arm	AM Peak Hour (Worst Case)					
	2013 Existing Flows + Dev			2031 Base Flows + Dev		
	DoS	Max Mean Queue (PCUs)	Total Delay (PCUs/hr)	DoS	Max Mean Queue (PCUs)	Total Delay (PCUs/hr)
A1112 East	64.4%	17.3	5.1	71.8%	21.3	6.1
Site Access	70.4%	10.9	4.8	84.5%	12.8	6.6
A1112 West	57.6%	11.4	4.0	65.3%	13.9	4.5
York Road (Entry)	*4.2%*	*0.0*	*0.0*	*5.2%*	*0.5*	*0.3*
York Road (Exit)	*9.4%*	*0.3*	*0.1*	*12.1%*	*0.9*	*0.4*
Total Junction	PRC 27.4%	Total Delay (PCU/hr) 32.42		PRC 5.5%	Total Delay (PCU/hr) 45.85	

5.40 The LINSIG output shows that the junction operates within capacity during the 2013 and 2031 with development scenarios. Again, the junction is shown to approach capacity during the 2031 peak hour scenario with a maximum Degree of Saturation of 84.5% anticipated to occur on the site access arm. The junction is however anticipated to have a Practical Reserve Capacity of 5.5% indicating that some additional capacity may be available.

5.41 Nonetheless, the layout of this junction or signal staging/ phasing may need to be amended to provide additional capacity as part of any further assessments should a signal controlled junction form the preferred option. The full LINSIG output data including the anticipated phasing and staging arrangements can be found in **Appendix G**.

Discussion

5.42 Modelling has been undertaken for the two access options which indicate that both junction arrangements are projected to operate within capacity during the 2013 and 2031 development scenarios for the worst case hour. The signal controlled junction is shown to operate further within its capacity limits than the roundabout option and may therefore offer a more long-term solution in terms of providing access in/out of the site.

5.43 The proposed signal controlled junction may also be considered to offer the preferred option as it would require less land take than the normal roundabout and would not require the A1112 to be realigned to the south. However, it is considered that further investigation would be needed as part of a more detailed transport assessment to provide more definitive results i.e. based on traffic counts undertaken during the peak hours.

5.44 Further to the above, there could be potential to provide a second point of access onto the A1112 to the north of the site. This may help to relieve any potential pressures that may arise from having just one access point to the north by providing residents with an alternative option to access the strategic highway network. Again, this would require further investigation.

6.0 INTERNAL DESIGN AND OFF-SITE CONSIDERATIONS

Vehicular Access

6.1 The main point of vehicular access will be taken from the A1112 to the north in accordance with LBH Highways' initial views. This point of access would serve the majority of the development and could take the form of a loop-type arrangement. The internal road layout should be designed in accordance with MfS to cater for the anticipated vehicular demand depending on the number of units served. Direct vehicular routes would be avoided to deter rat-running through the site.

6.2 The vehicular routes through the site would need to cater for servicing and emergency vehicles. Refuse vehicles would need to be able to access bin stores from within an appropriate distance. Internal turning heads may also need to be provided to cater for the movements of refuse vehicles and fire tenders and to avoid these vehicles reversing for long distances. Swept paths should be undertaken to inform the design to ensure these larger vehicles would be able to manoeuvre through the site. Loading facilities may also need to be provided.

6.3 It is considered that a smaller portion of the development could be served from a southern point of access. This could take the form of a priority junction with Roman Close (see **ACE Drawing W420-SK04**) or Lower Mardyke Avenue (see **ACE Drawing W420-SK05A**) and would need to serve an appropriate level of development so as not to increase traffic levels beyond acceptable levels. This area has recently been improved and redeveloped as part of the Orchard Village development and further improvements could be made if needed to facilitate access in/out of the site, such as for a potential bus link.

6.4 There may also be potential to provide an emergency-only access link through the southeastern corner of the site via Frederick Road between residential properties 50 and 52. A footway currently runs between the properties which is stopped-up by bollards at Frederick Road to prevent vehicular access. There is an approximate minimum width of 4.1m at this location and it is therefore considered that this option would only be suitable for providing emergency access, rather than forming a potential secondary point of access. The emergency link could take the form of a stopped-up shared access road to provide access to pedestrians and cyclists.

6.5 The potential primary, secondary and emergency points of access are illustrated on the indicative masterplan plans contained within **Appendix C**.

Pedestrian and Cycle Links

6.6 The proposals will form connections with the existing pedestrian and cycle networks in the area. The existing footways along the A1112 could be upgraded to shared cycle/footways to accommodate both pedestrians and cyclists. Toucan crossings could also be provided on the A1112 in the vicinity of the site to provide pedestrians and cyclists with increased opportunities to access both sides of the carriageway. These could be integrated as part of the proposed A1112/site access junction (see **Section 5.0** for further details).

6.7 Additional pedestrian and cycle links could be provided at the proposed southern access point(s) on Roman Road and Lower Mardyke Avenue, as well as via Frederick Road (between properties 50 and 52) using the existing footway/ or a potential shared emergency link. This would allow the site to be easily accessed on-foot and by bicycle from the south and east, as well as to the north via the main site access. The main internal site access roads will feature footways on both sides to facilitate pedestrian movements through the site and along key desire lines.

6.8 The proposals could provide a segregated cycleway through the site in a north-south direction. This would link the existing cycle routes along the A1112 to the north and the A1306 to the south and would therefore improve connections and the accessibility of the site for cyclists. This would also provide residents with additional opportunities to cycle, helping to increase the low proportion of residents (1.3%) that currently travel by this mode.

Bus Link

6.9 The proposals could incorporate a bus link which would run through the site between the A1112 to the north and one of the potential southern accesses to the south. Bus routes would then be able to make use of Lowen Road and Lower Mardyke Avenue to access the A1306 to the south, under the same arrangement as existing bus route 365. There are currently four bus routes which run in the vicinity of the site which may potentially be able to make use of such a link. These existing bus routes are shown on **Figure 2**.

6.10 The bus link would need to be able to sufficiently cater for bus movements and swept paths could be used to inform the design. A bus gate restriction could be provided within the site to prioritise buses and control general access at a specific location. This would reduce bus journey times and increase the attractiveness of this mode of travel. Pedestrian and cyclist movements could also be facilitated by this type of arrangement. An indicative bus gateway restriction arrangement is provided within **ACE Drawing W420-SK03**.

6.11 Bus routes 174 and 365 currently start in the vicinity of the site to the south and run along the A1306 to/from Dagenham, Hornchurch, Romford, Gidea Park, Collier Row and Harold Hill. It is considered that these routes could be extended so that they start/end within the site to allow these services to be more easily accessed by residents. This would provide residents with easy access to

approximately 11-12 bus services per hour (every five minutes) in each direction. It should be noted that the journey times between existing destinations would be unaffected given that the extension would be at the start/end of the route(s).

6.12 Bus route 287 also runs along the A1306 to the south of the site and provides a direct link between Rainham and Dagenham. An initial appraisal of this route suggests that there may be limited potential to divert/extend this route through the site due to the additional journey time this would incur for existing users. However, the route could be diverted to serve the site (as well as existing residents within South Hornchurch) by running along the A1112 and then turning left into the site to travel southwards back towards the A1306.

6.13 Bus route 103 runs along the A1112 to the north of the site between Rainham and Romford. As this route currently serves the bus stops situated on the A1112 in the vicinity of the site, diverting the route may provide limited benefit. The proposals will offer the opportunity to improve crossing facilities on the A1112 to improve the accessibility of these existing bus stops.

6.14 New high quality bus stops with shelters, seating and raised kerbs could be provided within the site to facilitate passenger boarding/alighting. It is considered that up to four bus stops (two in each direction) could be provided to allow residents to be within an easy walking distance of either pair of stops.

6.15 The potential bus link would improve north-south bus connections in line with the aspirations of the LROA proposals. The proposed development could also potentially offer contributions to improving existing bus stops in the area such as those along the A1112 in the vicinity of the site.

Car Parking Provision

6.16 The LBH Car Parking Standards are contained within Annex 5 of the *Core Strategy and Development Control Policies Development Plan Document (DPD)* and are based on those provided in the London Plan. As the proposed development will be predominantly residential, the car parking standards have been examined for C3 Dwelling Houses. These are based on a density matrix as presented below in **Table 6.1**.

Table 6.1: LBH Maximum Car Parking Standards

Predominant Housing Type	Maximum Car Parking Provision	
Detached, Semi-Detached and	High	1.5-2 spaces per unit
Terraced Houses and Flats	Medium	1-1.5 spaces per unit
Mostly Flats	Low	<1 space per unit

6.17 **Table 6.1** shows that a parking provision of 1-1.5 spaces per unit would be appropriate for a large residential development consisting of a mixture of housing and flats. This equates to between 1,500 and 2,250 parking bays for a site consisting of 1,500 residential units.

6.18 In terms of motorcycle parking, one space should be provided per 20 car parking spaces, with a minimum of one space being provided for developments with more than ten car parking spaces.

6.19 Parking bays associated with Wheelchair Housing should be designed in accordance with the Wheelchair Housing Design Guide. Blue Badge holders should be able to park to easily use the development.

Cycle Parking Provision

6.20 The LBH Cycle Parking Standards are contained within Annex 6 of the *Core Strategy and Development Control Policies Development Plan Document (DPD)* and are in line with TfL's standards. The minimum requirement for C3 Dwelling Houses is provided below in **Table 6.2**.

Table 6.2: LBH Minimum Cycle Parking Standards

Housing Type	Minimum Cycle Parking Provision
Flats	1 space per unit
Dwelling Houses	1 space per 1 or 2 bedroom dwelling
	2 spaces per 3+ bedroom dwelling
Sheltered Accommodation	1 space per 450sqm

6.21 The above shows that one cycle space should be provided per flat or one or two bedroom dwelling, whereas two cycle spaces should be provided for dwellings with three or more bedrooms. The proposed development would therefore accord to this standard.

7.0 BENEFITS OF THE DEVELOPMENT

7.1 The site is well positioned in relation to the surrounding area which consists of a variety of residential, employment, open space/ recreational, educational and retail uses. The A1112 runs to the north of the site and there are a number of bus stops situated close by. The public transport accessibility of the site will improve in the future as part of the LROA proposals.

7.2 The proposals will seek to provide additional opportunities for walking and cycling routes through the site which will create and serve key desire lines between the north and the south. These routes would provide connections with existing pedestrian and cycle routes thereby integrating the site with the surrounding area. Additional crossing facilities could be provided on the A1112 to benefit pedestrians and cyclists, and existing routes could be upgraded such as providing shared cycle/footways along both sides of the A1112. Cycle parking will be provided in accordance with the standards in safe, secure and accessible locations.

7.3 The proposals will offer the opportunity to provide a bus link through the site to further improve accessibility by public transport. New bus stops would be provided as part of this arrangement to minimise walking distances. The bus link would improve connections to key public transport interchanges such as Dagenham East London Underground station allowing existing bus services to be better integrated.

7.4 The development would likely best be served by a primary access point to the north and secondary/ emergency points of access to the south. These arrangements would be designed to limit the extent of additional traffic on the residential streets to the south and to allow servicing vehicles to access the site, serve the development and exit in forward gear. Car parking will be well integrated and also provided in accordance with the appropriate standards.

7.5 The LROA is situated immediately to the south of the site and the proposals have the potential to improve the accessibility of the site particularly by rail and by bus. However, the proposed transport improvements require funding to be secured to allow them to come into fruition. The proposed development will not only reduce north-south barriers and improve local bus connections, but will offer the opportunity to provide contributions towards the LROA proposals. It is therefore considered that the proposed development of the site and LROA will be of mutual benefit to one another.

7.6 The proposed development would also offer the opportunity to provide additional improvements to the surrounding area. This could be in the form of improved pedestrian/cycle facilities along the A1112 and additional/improved bus stops and connections. These improvements will complement those being provided as part of the Orchard Village development to the south which will also be of benefit to the site.

7.7 A Transport Assessment and Travel Plan would need to be produced as part of any planning application at the site. These reports would provide further details of the likely impacts of the proposals on the public transport system and strategic highway network, as well as how these could be mitigated and additional transport improvements which could be put in place.

7.8 In light of the above, it is considered that a proposed residential development at the site with associated employment, educational and recreational facilities would offer a wide variety of benefits to the surrounding area. The potential development is considered to be in accordance with local transport policies detailed within the LDF and a transport assessment and travel plan would be produced as part of any planning application to further comply with these. The proposals will increase the opportunity for the proposed LROA transport improvements to be delivered by improving connections and offering potential contributions.

PTAL Rating is 1b.

Appendix C

Indicative Masterplan Plans

Illustrative Masterplan

The Mardyke Farm neighbourhood has been designed with nature and ecology at the forefront, with a 4 hectare village green at the centre, an 8 hectare ecological buffer around the edge towards existing properties, 4 hectares of play/sports fields and a series of smaller pocket parks interwoven into the residential grain. All to maximise green space and to protect and enhance site ecology.

Shaped by the topography of the site, our masterplan provide up to 1,500 homes, a primary or secondary school, and space for shops, business and community facilities in the Mardyke Farm pavilion on the village green.

NUMBER OF HOMES
Houses: 250
Maisonettes :350
Duplexes: 250
Apartments: 650

TOTAL: 1,500 homes

Principle 3

A Central Spine for Walking, Cycling, Cars and Buses

A central spine connects the site with the surrounding area, bridging boundaries and inviting people in. We see this as a slow, pedestrian priority route for cars with the potential for an extended/new bus service.

A majority of vehicles would access the site from the north, whilst the southern access would service around 100 homes. A bus gate would limit through traffic to buses only.

A dedicated cycle lane runs the full length of the spine, linking to the Sustrans National Route 13 along New Road (A1306).

Bus stops are strategically located near key points of attraction: the play/sports fields to the south, the Village Green at the centre, and the main entry to the north.

A secondary perimeter route runs along the ecological buffer. We promote this as a shared surface street where cars slow down and cyclists and pedestrians take priority.

Principle 9
A Network of Green Walkways and Cycleways

Green space is maximised on site to create a sense of houses in landscape, and to reinstate a strong connection to the Beam Valley Country Park.

Apart from the dedicated cycle lane, walking and cycling is encouraged through an extensive network of green routes that permeates the residential grain and extend into the neighbouring parkland to connect with existing trails and paths.

Pedestrian priority play streets are provided within the residential neighbourhood, linking with the central spine, to ensure the site is permeable and accessible.

A raised boardwalk within the ecological buffer makes this biodiverse environment accessible to people in a controlled way. A north-south boardwalk extends the western site boundary, weaving and meandering across the landscape, rising gently at the centre of the site to circumvent the village green.

Principle 10
Integrated Car Parking

Although significant public transport upgrades are on the agenda, the site's low PTAL rating (1-2) means that sufficient car parking standards are required.

Along the Beam Valley Country Park edge, undercroft car parking facilities are seamlessly integrated into the buildings, utilising the level change. The car parking is wrapped by residential uses. Communal amenity space provided atop, on podium level.

On street car parking is provided for the family homes, integrated into the play streets and along the perimeter street.

Overall, a parking ratio of 1:1 is provided for # homes.

» (Default Analysis Set) - 2013 Peak + Dev, AM
» (Default Analysis Set) - 2031 Peak + Dev, AM

Summary of junction performance

	AM				
	Queue (Veh)	Delay (s)	RFC	LOS	Network Residual Capacity
	A1 - 2013 Peak + Dev				
A1112 (E)	3.12	7.20	0.76	A	12%
Site Access (S)	1.02	6.95	0.51	A	
A1112 (W)	5.01	12.01	0.84	B	[A1112 (W)]

Values shown are the maximum values over all time segments. Delay is the maximum value of average delay per arriving vehicle. Network Residual Capacity indicates the amount by which network flow could be increased before a user-definable threshold (see Analysis Options) is met.

"D1 - 2013 Peak + Dev, AM " model duration: 07:45 - 09:15
"D2 - 2031 Peak + Dev, AM" model duration: 07:45 - 09:15

Run using ARCADY 8.0.0.296 at 04/03/2015 14:23:50

File summary

File Description

Title	Proposed Site Access
Location	Mardyke Farm

Pedestrian Flows

General Flows Data

Name	Profile Type	Average Pedestrian Flow (Ped/hr)
A1112 (E)	ONE HOUR	30.00
Site Access (S)	ONE HOUR	60.00
A1112 (W)	ONE HOUR	30.00

Turning Proportions

Turning Counts or Proportions (Veh/hr) - Proposed Site Access (for whole period)

		To		
		A	B	C
From	A	0.000	84.000	1343.000
	B	307.000	0.000	174.000
	C	1360.000	47.000	0.000

Turning Proportions (Veh) - Proposed Site Access (for whole period)

		To		
		A	B	C
From	A	0.00	0.06	0.94
	B	0.64	0.00	0.36
	C	0.97	0.03	0.00

Vehicle Mix

Average PCU Per Vehicle - Proposed Site Access (for whole period)

		To		
		A	B	C
From	A	1.000	1.050	1.050
	B	1.050	1.000	1.050
	C	1.050	1.050	1.000

Heavy Vehicle Percentages - Proposed Site Access (for whole period)

		To		
		A	B	C
From	A	0.000	5.000	5.000
	B	5.000	0.000	5.000
	C	5.000	5.000	0.000

Results

Results Summary for whole modelled period

Report

Appendix E
Technical / Environmental Appraisal

1.0. Geo-Environmental

1.1 Introduction

This geo-environmental section presents a summary of the contamination status of the site, with respect to constraints for development. The current approved scheme boundary is much smaller than the original landfilled area, which extends beneath the playing fields [currently in the ownership of Havering] located beyond the SE site boundary. For the purposes of this report, the playing fields have been included.

1.2 Site History

The site has been the subject of localised ad hoc sand and gravel (Drift Flood Plain gravels) extraction over the centuries. Early Ordnance Survey plans dated 1860's show the agricultural use of the site and the presence of an old gravel pit in the middle of the current site. The 1939 Ordnance Survey plan shows commercial gravel exploitation in the central northern part of the site which extends across the entire site by the late 1950's. The resultant void was infilled with general undefined waste materials between 1961- 1969.

The subsequent restoration of the site was insufficient and the site was noted as being an "eyesore". Planning permission [P0186.93] was therefore granted on appeal in 1995 and an Environment Agency waste management license [EAWML 80124] issued in 1996 to allow the site to be restored by extensively raising the ground levels with inert materials in accordance with waste management licensing and recontouring the site to create an informal amenity landform for use by local people. The filling ceased in late 2003 and the site remained dormant. Extensive discussions with both the local authority and the Environment Agency [EA] to vary some of the original conditions within the waste management license/planning consent were successful. A s73 planning permission was granted in July 2010 [P0432.10 and updated in 2014 ref: P0455.14] and an environmental permit was issued by the EA in 2010 [EPR/QP3196NT] to allow the final phase of restoration of the site, which started in April 2011 and will be completed in 2017.

1.3 Ground Conditions

At depth the site is underlain by Chalk, which is protected by the overlying thickness of impermeable London Clay. The overlying Taplow Gravels (sands and gravels) have been commercially exploited at the site and were then replaced by a variable infill in the 1960's and a separate controlled restoration phase which is nearing completion.

The site has been restored using chemically inert soils from sources that provide, in advance of being accepted, both chemical and geotechnical certification to demonstrate that they inert and suitable and are within agreed acceptance criteria. The quality of the imported restoration soils has been specified by the Environment Agency's defined acceptance criteria within the licensing of the restoration process and the quality of the imported material continues to be monitored by an independent third party and also by the EA. The restoration soils are geotechnically suitable materials broadly classified as semi-impermeable. The thickness of restoration materials deposited

Registered in England No. 5448282

across the site varies from 12m to 1m deep. The deep thickness of restoration grade soils will allow the site profile to be changed if required to accommodate any new development proposal. The implications of this means that development can proceed without encountering the underlying 1960's landfill material and without the need to mitigate human health issues and associated high abnormal development costs.

1.4 Regulatory Compliance

The licensed restoration works were principally directed towards mitigating potential human health and environmental issues and have been undertaken using restoration materials.

In line with the EA licensing obligations the site has been, and continues to be, independently monitored on a monthly basis to check for any impact to groundwater quality and to measure any gases that are produced from the original 1960's landfill using purpose installed boreholes around the perimeter of the site. In addition, on an annual basis, the water quality in the River Beam is checked from positions up and downstream of the site to determine whether there is any impact. The detailed site data obtained from this monitoring has formed the basis of extensive discussions with both the local authority and the Environment Agency and has provided the technical justification to vary some of the original conditions within the waste management license/planning consent. For example, in the 1993 original approved scheme and in the EA license, a mitigation measure of a clay cap placed over the entire site was deleted which means that runoff in periods of heavy rain will not create issues with regards potential localised flooding.

Ground gas concentrations and flow rate monitoring continues to be undertaken in the perimeter boreholes using a portable landfill gas analyser with integrated flow cell which is verified by laboratory testing of gas samples on a specified regular basis. The gas data is assessed against target concentrations of carbon dioxide, methane and flow rate and reported to the EA. The ground gas data revealed that generally the 50+ year old fill from the 1960's was not generating significant concentrations and flows. However, in a small section of boundary immediately adjacent to the rear gardens of Thorogood Way, the ground gas data revealed elevated concentrations and variable sporadic flow rates in 5 boreholes.

Havering Borough commissioned an independent investigation by Enviros Ltd in 2009 [report ref: Can: LO0720009, 090915 Sept 2009] to establish whether ground gas was migrating from the site into the gardens and beyond at the NE boundary of the site. Monitoring of the 15 boreholes in the rear gardens of Thorogood Way did not reveal any 1960's waste materials under the extended gardens and did not measure significant ground gas concentrations or flows and concluded that significant gas migration from the site was not occurring and "the area classified as "Green" when assessed against the conservative CIRIA assessment for proposed residential development."

Nevertheless, as a contingency, a vent trench was installed [together with monitoring boreholes] along a length of the site perimeter which includes the 5 boreholes and is in the vicinity of the rear gardens of 5-17 Thorogood Way. [Plan – Figure 11]. The purpose of this vent trench is to intercept any ground gas that may migrate offsite towards the gardens of Thorogood Way. However, throughout the restoration process there has been no human health ground gas risk demonstrated.

Registered in England No. 5448282

The implications for development on the site would be that standard brownfield precautionary gas protection measures are incorporated in the building design following discussions with the authorities.

Groundwater quality monitoring has been and continues to be undertaken on six selected "compliance" representative perimeter boreholes in accordance with the EA permit requirements; groundwater samples are submitted for laboratory testing to an agreed suite of determinands to check for any deterioration in quality against target concentrations for key determinands. The results have shown that the 1960's fill has generally had a limited impact on groundwater quality and that the situation has not deteriorated over time even during the placement of the overlying inert materials. There have been sporadic episodes of exceeding some target concentrations, in isolated positions such as roughly half way along, adjacent to the ditch on the eastern boundary. Trial pit investigations in the vicinity of the boreholes demonstrating these sporadic exceedences did not reveal any obvious source[s]. The implication of these results will involve discussions with the EA who will likely require assessment and technical justification for long term options associated with the surrender of the Environmental permit.

Environmental permit surrender will be undertaken following completion of the restoration works and supplying the technical justification based on the monitoring data and detailed risk assessments to demonstrate that the site is not having an unacceptable environmental impact. The EA have indicated that they will require a period of two years monitoring post completion of the restoration of the site. Detailed discussions will be undertaken during that time to establish the lines of evidence required to satisfy their requirements and facilitate surrender of the license.

1.5 Hydrogeological Setting

The site lies at the side of a shallow river valley, one of several (the Roding, Beam and Ingrebourne) that trend north-southwards towards the main Thames west-east erosion channel. Most of these river valleys have an incised V-shape central section, with substantial granular outwash (sand and gravel) deposits and later more clayey Head and Brickearth deposits, before recent fluvial Alluvial deposits on river sides. The sands/gravels and the Brickearth deposits have been exploited historically, for aggregate and brick-making respectively.

The site actually sits between two historical north-south geologically incised valleys or 'channels', one occupied by the River Beam (and extending miles upstream) and a much smaller one on the eastern perimeter, which is a shallow incision that peters out at the northern extent of the landholding (beyond A125, Rainham Road). The eastern incised valley contains a low lying ephemeral ditch/stream which discharged to a piped/open ditch system, flowing southward towards the Thames estuary (picking up highway discharges en-route).

The commercial exploitation of the sands and gravels are likely to have used grab-line methods to excavate the granular material down to the London Clay surface, and to follow these inclines in the natural direction and thereby removing almost all from the centre of the site, but leaving granular

Registered in England No. 5448282

material in place beneath the western and eastern 'valleys' and also adjacent to the (dry) northern and southern land boundaries – which is confirmed by the 1995 perimeter boreholes.

It is these more permeable perimeter zones, and the impermeable Clay beneath the whole site, which govern the hydrogeological trends from permeating rainfall, directing the majority of underground flows around the perimeter and towards the River Beam channel. There will also be a subsidiary much smaller groundwater flow regime towards the eastern boundary and the south-east corner; underlying geological features suggest that this 'underflow' will eventually find a route southwards to join the flood plain of the Thames, if not artificially captured by man-made drainage.

There is no abstraction of these near-surface groundwaters in this area, but there is deep potable water abstraction from the Chalk strata underneath the London Clay. There is, however, no known vertical connectivity between the site and the Chalk aquifer, in rational geological or man-made terms, due to the inherent thickness of London Clay present.

Groundwater monitoring at the boreholes around the perimeter and in the centre of the site have shown that where gravels are still present, such as at the perimeter of the site; groundwater levels were variable from an average of 2m depth in the dry months to an average of 1m depth in the wet months. In the restoration soils, groundwater was found to be highly variable perched groundwater [i.e. discontinuous and often dry].

The implications of this situation from a development perspective are that recontouring of the ground to achieve required development formation levels should not encounter significant groundwater; nor should excavations require dewatering with the exception of those in the residual gravels at the periphery of the site, where inflows would be more likely especially in the winter. The nature of the restoration soils is likely to accommodate infiltration and hence SUDS is a likely opportunity associated with development of the site.

1.6 Hydrological Setting

From a hydrological perspective, a number of licensed discharges empty into the River Beam, the closest being a Consent for Essex & Suffolk Water Plc to discharge "Miscellaneous discharge" immediately to the north-west of the site.

The channel or ditch located along the eastern boundary of the site [described earlier] is typically be marshy for extended periods of the year and during heavy periods of precipitation, standing water has been noted in this area.

The River Beam flood plain, located on the western boundary of the site is shown to be within Flood Zones 2 and 3 on EA published plans. These flood zones also are shown to affect the southern end of the channel/ditch located on the eastern site boundary. The actual situation will be confirmed through discussion with the EA.

Such an indicative floodplain is defined as an area where there is a significant risk of flooding: the chance of flooding in any year is greater than 1.3% (1 in 75). The mitigating factors are that the site

is elevated with respect to the floodplain and the Thames tidal walls act as the first line of defence for much of the land to the south of this site, which is defined as being in Zone 3.

The implications of the proximity of Flood zones 2 and 3 to the south and in the south-eastern corner of the site with regards development of the site will be a material consideration in the design of the site drainage and determining suitable formation levels.

1.7 Summary and Conclusions

The site will be fully restored and ready for development without the need for remediation. The deep thickness of restoration grade soils [suitable inert material, which should be well consolidated] will allow the site profile to be changed if required to accommodate new development proposals. The implications of this means that development can proceed without encountering the underlying 1960's landfill material and without the need to mitigate human health issues and associated high abnormal development costs.

In line with the EA licensing obligations the site has been, and continues to be, independently monitored on a monthly basis to check for any impact to groundwater quality and to measure any gases that are produced from the original 1960's landfill using purpose installed boreholes around the perimeter of the site. In addition, on an annual basis, the water quality in the River Beam is checked from positions up and downstream of the site to determine whether there is any impact, none of which has been found.

The ground gas data revealed that generally the 50+ year old fill from the 1960's was not generating significant concentrations and flows. However, in a small section of boundary immediately adjacent to the rear gardens of Thorogood Way, the ground gas data revealed elevated concentrations and variable sporadic flow rates in 5 boreholes. As a contingency, a vent trench was installed [together with monitoring boreholes] along a length of the site perimeter which includes the 5 boreholes and is in the vicinity of the rear gardens of 5-17 Thorogood Way. The purpose of this vent trench is to intercept any ground gas that may migrate offsite towards the gardens of Thorogood Way. However, throughout the restoration process there has been no human health ground gas risk demonstrated. The implications for development on the site would be that standard brownfield precautionary gas protection measures are incorporated in the building design following discussions with the authorities.

Groundwater monitoring results have shown that the 1960's fill has generally had a limited impact on groundwater quality and that the situation has not deteriorated over time even during the placement of the overlying inert materials. There have been sporadic episodes of exceeding target concentrations, primarily NH4 and TPH in isolated positions such as one borehole located roughly half way along, adjacent to the ditch on the eastern boundary. Trial pit investigations in the vicinity of the boreholes demonstrating these sporadic exceedences did not reveal any obvious source[s]. The implication of these results will involve discussions with the EA who will likely require assessment and technical justification for long term options associated with the surrender of the Environmental permit.

Registered in England No. 5448282

Environmental permit surrender will be undertaken following completion of the restoration works. Detailed discussions will be undertaken during that time to establish the technical justification based on the monitoring data and detailed risk assessments and other lines of evidence needed to satisfy their requirements to demonstrate that the site is not having an unacceptable environmental and facilitate surrender of the license. This process can be undertaken in parallel with any development options. The outstanding planning conditions will also need to be discharged.

Groundwater monitoring at the boreholes around the perimeter and in the centre of the site have shown that where gravels are still present, such as at the perimeter of the site; groundwater levels were variable from an average of 2m depth in the dry months to an average of 1m depth in the wet months. In the restoration soils, groundwater was found to be highly variable perched groundwater [i.e. discontinuous and often dry]. The implications from a development perspective are that recontouring of the ground to achieve required development formation levels should not encounter significant groundwater; nor should excavations require dewatering with the exception of those in the residual gravels at the periphery of the site, where inflows would be more likely especially in the winter. The nature of the restoration soils is likely to accommodate infiltration and hence SUDS is a likely opportunity associated with development of the site

The implications of the proximity of Flood zones 2 and 3 to the south and in the south-eastern corner of the site with regards development of the site will be a material consideration in the design of the site drainage and determining suitable formation levels. . The actual situation will be confirmed through discussion with the EA.

1 Introduction

1.1 Introduction

EAD was commissioned by Ebcliff to prepare an Ecological Deliverability Report for land at Mardyke Farm, Dagenham, Essex (approximate central NGR TQ 509836; refer to Figure 1; hereafter 'the site'). The site is being promoted for residential development in the Havering Local Plan. The report details the ecological baseline for the site and considers the suitability of the site for future residential development. Indicative Masterplans for the site are contained in 'A Vision of Mardyke Farm, Havering' (Studio Egret Way 2015).

The work was undertaken by members of the Chartered Institute of Ecology and Environmental Management (CIEEM) and in accordance with CIEEM's Code of Practice.

1.2 Background

The site comprises an inert landfill that is currently being restored in accordance with planning and Environment Agency waste management licensing obligations. Works include re-contouring the majority of the site to achieve the approved landform followed by landscaping an ecological enhancement. In the report, ecological conditions prior to the current restoration being commenced are referred to as 'pre-restoration'. The future baseline (following completion of the restoration) is referred to as 'post-restoration'.

1.3 Approach

The pre-restoration ecological baseline of the site was derived from desk study and ecological site surveys undertaken in 2008-10. The post-restoration ecological baseline was obtained with reference to the approved Landscape and Ecological Management Plan (EAD 2010) (hereafter 'LEMP') for site restoration.

1.3.1 Desk study

Biodiversity information was requested for a study area of 2km radius around the site (extended to 5km for previous records of bats) from Greenspace Information for Greater London. Information requested included the location and details of the following:

- designated sites of nature conservation value (extended to 15km for European Protected Sites, using MAGIC);
- previous records of protected and/or notable species, including Species of Principal Importance for Conservation in England ('Priority Species') and London and Havering Biodiversity Action Plan (BAP) Species.

Information was also obtained from the following websites:

- www.magic.gov.uk – information on protected sites; and
- www.naturalengland.co.uk – information on protected sites, Natural Area profiles and BAP Priority Habitats. .

The London and Havering BAPs were also reviewed.

1.3.2 Pre-restoration site surveys

An Extended Phase 1 Habitat survey of the site was undertaken on 14 and 15 July 2008, following Institute of Environmental Assessment Guidelines (1995) and JNCC Methodology (1993). This identified the habitats on the site and the presence/potential presence of protected or otherwise notable[1] species. The results of the survey were detailed on a Phase 1 Habitat plan. Target notes were used to identify specific features of ecological interest and a botanical species list was recorded, although no attempt was made to record every plant species on the site. There were no significant limitations on the results of the survey.

Surveys were undertaken during April-June 2010 to determine the presence/absence of great crested newt from seven ponds/ditches within and in the vicinity of the site. The surveys were undertaken according to Natural England Guidelines (English Nature 2001) and involved the use of three survey methodologies carried out over four site visits. As great crested newt were recorded within the ditch on the eastern boundary of the site, a further two site visits were undertaken to provide an estimate of population size.

A survey to determine the presence of reptiles on the site was undertaken following standard methodology (English Nature 1994; Froglife 1999). This involved deploying 300 artificial refugia (roofing felt tiles) across the site. The tiles were deployed in April 2011 and survey visits during May and early June 2011.

[1] Notable species are those which hold a specific conservation status e.g. Priority Species.

2 Ecological baseline

2.1 Designated sites of nature conservation value

2.1.1 Statutory designations

There are no statutory designations within the site although there are several within the 2km study area. These comprise two Sites of Special Scientific Interest (SSSI) and five Local Nature Reserves (LNR; refer to Appendix 1). The nearest SSSI is Ingrebourne Marshes, which is approximately 1.25km to the east of the site boundary. This was designated for freshwater marshland habitat and the presence of notable invertebrates and birds. The nearest LNR is Beam Valley, which is adjacent to the western site boundary. This was designated for its running water and associated wet grassland and ditches, which support a water vole population.

Epping Forest Special Area of Conservation (SAC) was the only European site within 15km of the site boundary and occurred approximately 11.7km to the north west. This was designated for its nationally outstanding assemblage of invertebrates, a major amphibian interest and an exceptional breeding bird community.

2.1.2 Non statutory designations

There are no non-statutory designations within the site although there are several within the 2km study area including 18 Sites of Importance for Nature Conservation (SINC) and two London Wildlife Trust reserves (refer to Appendix 1). The nearest SINC is Beam Valley South in Havering (HvBI17), which is adjacent to the western site boundary and is part of Beam Valley LNR.

2.2 Habitats

2.2.1 Pre-restoration habitats

Prior to commencement of restoration, the site comprised a mosaic of typical 'brown field' habitats. The majority of habitats were the result of natural colonisation of imported materials, including tall ruderal, ephemeral/short perennial, and dense and scattered scrub. In the central parts of the site these habitats were generally recently established; longer established habitats including semi-improved neutral grassland, and standing water were present around the site margins. Mature trees were recorded close to the western boundary. Other habitats recorded on site included bare ground, introduced scrub and swamp. The location of habitats within the site pre-restoration is shown on Figure 2. Appendix 3 lists the species including their scientific names; nomenclature follows Stace (1997). Photographs of the site pre-restoration are provided in Appendix 4.

2.2.2 Post-restoration habitats (future baseline)

The ecological objectives of the LEMP were as follows:

- maintain and enhance the great crested newt population associated with the ditches on the eastern boundary;
- retain the mature trees on the western side of the site, which provide suitable bat roosting habitat;
- retain the reptile population within the site;
- create sparse grassland to provide suitable habitat for ground-nesting birds and specialist invertebrates; and
- retain the presence of features such as sand banks, rubble piles, disturbed and sparsely vegetated ground and species-rich unmanaged tall-herb communities, which provide suitable habitat for invertebrates, including notable species.

In the approved restoration proposals, the majority of site would comprise open habitats, including wildflower meadow and sparse wildflower grassland with areas of mixed native scrub/trees and scrub-grassland mosaic. Scrapes, bare ground, low terraces/embayments and rubble piles would also be created.

2.2.3 Surrounding habitats

To the north, east and south of the site there was urban habitat, including residential development and roads. There was also amenity grassland (playing field) adjacent to the southern boundary. To the west there was the River Beam and adjacent fields, including ditches and wet grassland (refer to Section 2.1).

2.3 Protected and notable species[2]

A number of protected and/or notable species were identified by the desk study in the 2km study area or were recorded on the site during the surveys, as summarised below. The legislation and conservation status that applies to the species listed is provided in Appendix 2.

2.3.1 Plants

Desk study

Notable plants recorded in the study area are black poplar, which is a Priority Species under the London BAP and bluebell, which is legally protected from Sale.

Site survey

Japanese knotweed, giant hogweed and New Zealand pigmyweed, which are legally prohibited from planting or otherwise causing to grow in the wild, were recorded within

[2] The legislation and conservation status for the species listed is detailed in Appendix 3

the site. A programme to eradicate these invasive plant species from the site is being implemented and it is likely that they will no longer be present following completion of the restoration.

2.3.2 Invertebrates

Desk study

Notable invertebrates recorded in the study area include the following Priority Species and London BAP Priority Species:

- Stag beetle.
- 5-banded tailed digger wasp.
- Small heath butterfly.
- Mullein wave moth.
- Lackey moth.
- Cinnabar moth.

Site survey

Notable invertebrates recorded during pre-restoration site surveys were small heath butterfly and cinnabar moth. The site also provided suitable habitat for other notable invertebrates and the presence of such species was considered highly likely. The East Thames region is of nationally importance for invertebrates and waste ground and brown field sites in this region are known to support diverse invertebrate assemblages, including many Nationally Notable species. Features on the site that suggested it was of high value for invertebrates included unmanaged flower-rich habitats, sparsely vegetated ground and areas of exposed substrate and disturbed ground. Habitat for notable invertebrates was included in the post-restoration LEMP.

2.3.3 Amphibians

Desk study

Great crested newt, smooth newt and common frog have been recorded in the study area. Great crested newt is fully protected by UK and European legislation, and is a Priority Species, and London and Havering BAP Species. Smooth newt and common frog are legally protected from Sale.

Site survey

A ‘small’ population of great crested newt was recorded during the 2010 survey in a section of ditch on the eastern boundary of the site. Great crested newt (GCN) was absent elsewhere on the site and in immediately adjacent habitat. GCN are known to occur within the adjacent Beam Valley LNR, although the population in the LNR is effectively isolated from the site due to the barrier created by Beam River, which is several metres wide and has vertical banks over 1m high adjacent to the site.

A GCN translocation from habitats affected by the restoration works was undertaken in 2011 under a Natural England Development Licence. No GCN were found during the translocation, which is likely to be due to the sub-optimal nature of the affected habitats. The breeding pond and the key areas of terrestrial habitat in the east of the site are being retained and enhanced during site restoration and the value of this area for GCN is likely to improve.

2.3.4 Reptiles

Desk study

Slow-worm, grass snake and common lizard have been recorded within the study area. All native reptiles are legally protected and are Priority Species and London BAP Species. Slow-worm is a Priority Species under the Havering BAP.

Site survey

A 'low' population of grass snake and common lizard were recorded on site pre-restoration and the habitats within the site provided suitable foraging, sheltering and hibernating habitat for reptiles. A translocation was undertaken in 2011 and reptiles were captured and moved to retained habitats around the perimeter of the site.. Habitat retention and creation for reptiles was included in the restoration proposals (e.g. scrub/grassland mosaic).

2.3.5 Birds

Desk study

Notable birds have been recorded in the study area including seven species that are legally protected by special penalties (i.e. Schedule 1 species), 14 London BAP Priority Species and six RSPB Red List species. A summary of these records is provided in Table 1 below. All birds and their eggs, nests and young are legally protected.

Table 1: Summary of notable birds recorded in the study area.

Species	Schedule 1[3]	Priority Species	London BAP	Havering BAP	RSPB Red List
Black redstart	X		X		
Black-necked grebe	X				
Common tern		X	X		
Dunnock		X	X		
Fieldfare	X				

[3] Species listed on Schedule 1 of the Wildlife and Countryside Act (1981) (as amended).

Species	Schedule 1[3]	Priority Species	London BAP	Havering BAP	RSPB Red List
Green sandpiper	X				
Grey partridge		X	X		X
Herring gull			X		
House sparrow		X	X		X
Kingfisher	X				
Lapwing		X	X		
Linnet		X	X		X
Little ringed- plover	X				
Peregrine	X		X		
Song thrush		X	X	X	X
Starling		X	X		X
Turtle dove		X	X		X
Yellow hammer		X	X		X
Yellow wagtail			X		

Site survey

Notable birds recorded during the survey included linnet, skylark, grey partridge, starling, house sparrow and dunnock and it is likely that several of these species, including skylark, which is a Priority Species and Havering BAP Species, breed on the site. Potential nesting habitat included short vegetation, which is likely to be used by ground nesting species, and trees and shrubs. The presence of specifically protected (Schedule 1) birds as breeding species was considered unlikely. The restoration proposals included habitat for notable birds, including mixed native scrub and short-vegetation suitable for ground nesting species.

2.3.6 Mammals

Desk study

Serotine, Daubenton's, Leisler's, noctule and pipistrelle bats have been recorded in the study area. All bats and their roosts are fully protected under UK and European legislation and some are Priority Species under the London and Havering BAPs. Water vole, which is legally protected and a Priority Species and London and Havering BAP Species, and hedgehog, which is a Priority Species and London BAP Species have been recorded from the study area.

There are no records of otter or hazel dormice from the study area. These species are fully protected by UK and European legislation and are Priority Species and London BAP Species. There also are no records of badger, which is legally protected, from the study area.

Site survey

The mature trees provided potential roosting habitat for bats and several holes (e.g. old woodpecker holes) were noted. The site provided potential foraging and travelling habitat for bats although the lack of potential flight-lines in the central part of the site suggested that this area is likely to be of limited value. No evidence of badger was found and the site provided sub-optimal foraging habitat. The River Beam provided potential habitat for otters and it is possible that scrub within and adjacent to the site is used as a laying-up site. No potential habitat for a natal holt was recorded within the site. The site and adjacent habitats provided potential habitat for hedgehog. The standing water and swamp habitats within the site were considered unsuitable for water vole due to the limited depth and extent of water. No evidence of badger was found.

The mature trees with bat potential were retained within the restoration scheme. . The value of the site for otter, badger, hedgehog and water vole is likely to remain unchanged post-restoration.

3 Ecological deliverability of the site

3.1 Suitability of the site for development

3.1.1 Ecological constraints and opportunities

There are no over-riding ecological constraints to future residential development of the site in accordance with the principles set out in 'A Vision for Mardyke Farm'. None of the designated sites of nature conservation value in the vicinity would be directly impacted by the proposed works so their presence is considered unlikely to be a significant constraint. There is an opportunity to create a buffer along the west of the site which would avoid potential direct impacts to the Beam Valley LNR and indirect impacts (e.g. noise, visual disturbance and run-off) could be mitigated through appropriate timing of works, visual screening and sustainable site drainage as appropriate. With appropriate habitat creation within an 'ecological buffer' (as per 'A Vision for Mardyke Farm'), there would also be an opportunity to extend the habitats within the LNR into the site.

Epping Forest SAC occurred approximately 11.7km to the north west of the site. It is considered highly unlikely that potential adverse impacts would occur on this designated site from the proposed development e.g. recreation impacts.

3.1.2 Ecological design principles

The key ecological design principles that have informed 'A Vision for Mardyke' and would inform any future development proposals are detailed below.

- Retention and enhancement of significant areas of wildlife habitats, including Priority Habitats, and London BAP Habitats within Public Open Space on the site. The function of these areas would be as follows:
- to provide an 'ecological buffer' between the site and the adjacent Beam Valley LNR and the opportunity to provide habitats that extend and complement those within the LNR;
- to provide a buffer between the site and the protected great crested newt habitats along the eastern boundary and the opportunity to integrate enhanced breeding and terrestrial habitats for great crested newts, reptiles and other protected species into the landscape plans for the site. The existing area of protected great crested newt terrestrial and breeding habitat would be retained and suitable management implemented to maintain and enhance its ecological value for newts and other wildlife in accordance with the Natural England Development Licence conditions;
- to retain the mature trees on the western side of the site, including those with bat roost potential, and provide supplementary woodland/mixed native

scrub/native hedgerow and tree planting to create ecological corridors and extend current woodland and hedgerow habitats;

- to provide suitable ecological 'corridors' around the margins of the site and retain and enhance the ecological function of the site as part of local ecological network;
- to create areas of open habitats and features that are characteristic of the previous conditions on the site, including sparse wildflower grassland, scrapes, sandbanks, rubble piles and bare-ground ideal for notable invertebrates and birds. There would be the opportunity for such habitats to be analogous to 'Lowland Meadows' and 'Open Mosaic Habitats on Previously Developed Land', and London BAP Habitat 'Wasteland'; and
- adoption of a sensitive lighting scheme to prevent light-spill on to retained and adjacent habitats.

There is also the opportunity for the ecological design to integrate wildlife habitats into urban development, including wetland creation as part of sustainable urban drainage and bird and bat habitat integrated into new buildings.

In light of the above, it is considered that development of the site could meet the ecological objectives within the LEMP (refer to Section 2.2.2 above), and be undertaken in accordance with the following relevant biodiversity policies in the London Borough of Havering's Core Strategy and Development Control Policies Development Plan Document (adopted 2008) policies DC58 – Biodiversity and Geodiversity, and DC59 – Biodiversity in New Developments.

The development could also be undertaken in accordance with the biodiversity requirements of the National Planning Policy Framework.

3.2 Ecological survey and assessment

The ecological baseline for the site would be updated prior to submission of any future planning application. The survey results would be outlined in an Ecological Impact Assessment (EcIA) Report, following CIEEM (2006) Guidelines. This would detail the full ecological baseline for the site and the impacts of the proposals (beneficial and adverse) during and post construction and provide an appropriate mitigation and enhancement strategy.

Appendix 2: Species legislation and conservation status

Invertebrates

A number of UK invertebrates are protected by international and national legislation, including the EC Habitats Directive (1992) and the Wildlife and Countryside Act 1981 (as amended). In addition, numerous species are Priority Species.

Plants

All wild plants are protected against unauthorised removal or uprooting under Section 13 of the Wildlife and Countryside Act 1981 (as amended). Plants listed on Schedule 8 of the Act (e.g. stinking goosefoot, red helleborine, monkey orchid) are afforded additional protection against picking, uprooting, destruction and sale. Bluebell (*Hyacinthoides non-scripta*) is protected against sale only. Further species are also protected under the Conservation of Habitats and Species Regulations 2010 (as amended).

Notable plant species include those that are listed as:

- Nationally vulnerable **–** A taxon is Vulnerable when the best available evidence indicates that it meets any of the criteria A-E for Vulnerable, and is therefore considered to be facing a high risk of extinction in the wild (Cheffings C M & Farrell L (Eds) (2005) *Species Status No. 7 – The Vascular Red Data List for Britain*, JNCC (online)
- Nationally scarce – species recorded in 16-100 hectads in Great Britain
- Nationally rare – species occurring in 15 or fewer hectads in Great Britain

Section 14 of the Wildlife and Countryside Act 1981 (as amended) prohibits the planting of certain invasive plant species in the wild, or otherwise causing them to grow there. Prohibited plants are listed on Part 2 of Schedule 9 and include Japanese knotweed, Himalayan balsam and giant hogweed.

Amphibians

There are seven native amphibian species present in Britain. These are afforded varying degrees of protection under national and European legislation. Great crested newts and their habitat are afforded full protection under UK and European legislation, including the Wildlife and Countryside Act 1981 (as amended), the Countryside and Rights of Way (CRoW) Act 2000 and the Conservation of Habitats and Species Regulations 2010 (as amended). Together, this legislation makes it illegal to:

- Deliberately capture, injure or kill a great crested newt.
- Damage or destroy any place used for shelter or protection, including resting or breeding places; or intentionally or recklessly obstruct access to such a place.
- Deliberately, intentionally or recklessly disturb great crested newts.

Great crested newt and common toad are Priority Species.

Reptiles
Slow-worm, viviparous/common lizard, adder and grass snake are protected under the Wildlife and Countryside Act 1981 (as amended) against intentional killing and injuring. These species are also Priority Species.

Birds
The bird breeding season generally lasts from March to early September for most species. All birds are protected under the Wildlife and Countryside Act (1981) (as amended) and the Countryside & Rights of Way (CRoW) Act 2000. This legislation makes it illegal, both intentionally and recklessly, to:

- kill, injure or take any wild bird;
- take, damage or destroy the nest of any wild bird while it is being built or in use;
- take or destroy the eggs of any wild bird

Furthermore, birds listed on Schedule 1 of the Wildlife & Countryside Act 1981 (as amended) are protected against intentional or reckless disturbance whilst nest building and when at or near a nest containing eggs or young. Dependent young of Schedule 1 species are also protected against disturbance.

In addition to this legal protection, the leading governmental and non-governmental conservation organisations in the UK have reviewed the population status of the birds regularly found here and produced a list of birds of conservation concern. Of the 246 species assessed, 52 were placed on the Red List of high conservation concern, 126 on the Amber List of medium conservation concern and 68 on the Green List of low conservation concern:

- Red list species are those that are Globally Threatened according to IUCN criteria; those whose population or range has declined rapidly in recent years; and those that have declined historically and not shown a substantial recent recovery.
- Amber list species are those with an unfavourable conservation status in Europe; those whose population or range has declined moderately in recent years; and those with internationally important or localised populations.

Badgers
Badger (*Meles meles*) is a widespread and common species. However, they are legally protected under The Protection of Badgers Act 1992, due to animal welfare concerns. Under this legislation it is illegal to:

- Wilfully kill, injure, take, or cruelly ill-treat a badger, or attempt to do so
- Intentionally or recklessly interfere with a sett by disturbing badgers whilst they are occupying a sett, damaging or destroying a sett, or obstructing access to it.

A badger sett is defined in the legislation as "*any structure or place, which displays signs indicating current use by a badger*".

Bats

There are 18 species of bats found in the UK, 17 of which are known to breed here. The conservation status of these species is summarised in the table below:

Common name	Scientific name	IUCN Red List*	Priority Species
Greater horseshoe	*Rhinolophus ferrumequinum*	LC	Yes
Lesser horseshoe	*Rhinolophus hipposideros*	LC	Yes
Daubenton's	*Myotis daubentonii*	LC	No
Brandt's	*Myotis brandtii*	LC	No
Whiskered	*Myotis mystacinus*	LC	No
Natterer's	*Myotis nattereri*	LC	No
Bechstein's	*Myotis bechsteinii*	NT	Yes
Alcathoe bat	*Myotis alcathoe*	DD	No
Greater mouse-eared	*Myotis myotis*	LC	No
Common pipistrelle	*Pipistrellus pipistrellus*	LC	No
Soprano pipistrelle	*Pipistrellus pygmaeus*	LC	Yes
Nathusius's pipistrelle	*Pipistrellus nathusii*	LC	No
Serotine	*Eptesicus serotinus*	LC	No
Noctule	*Nyctalus noctula*	LC	Yes
Leisler's	*Nyctalus leisleri*	LC	No
Barbastelle	*Barbastellabarabastellus*	NT	Yes
Brown long-eared	*Plectorus auritus*	LC	Yes
Grey long-eared	*Plectorus austriacus*	LC	No

*IUCN categories: LC Least Concern, NT Near Threatened, DD Data Deficient

All bat species are afforded full protection under UK and European legislation, including the Wildlife and Countryside Act 1981 (as amended) and the Conservation of Habitats and Species Regulations 2010 (as amended). Together, this legislation makes it illegal to:

- Deliberately capture, injure or kill a bat.
- Damage or destroy a bat roost; or intentionally or recklessly obstruct access to bat roosts.
- Deliberately, intentionally or recklessly disturb, a bat, including in particular any disturbance which is likely:
    - to impair their ability to survive, to breed or reproduce, or to rear or nurture their young, or
    - in the case of animals of a hibernating or migratory species, to hibernate or migrate; or
    - to affect significantly the local distribution or abundance of the species to which they belong.

A bat roost is defined in the legislation as "*any structure or place which a bat uses for shelter or protection*". Roosts are protected whether or not bats are present at the time.

Otter

Otters (*Lutra lutra*) are fully protected under UK and European legislation, including the Wildlife and Countryside Act 1981 (as amended), the Countryside and Rights of Way (CRoW) Act 2000 and the Conservation of Habitats and Species Regulations 2010 (as amended). Together, this legislation makes it illegal to:

- Deliberately capture, injure or kill an otter
- Damage or destroy any structure or place used for shelter or protection by an otter; or intentionally or recklessly obstruct access to such a place.
- Deliberately, intentionally or recklessly disturb an otter whilst it is occupying a structure or place which it uses for shelter or protection

Otter is listed as a Priority Species.

Water vole

Water vole are afforded full protection under the Wildlife and Countryside Act 1981 (as amended), which make it illegal to:

- Kill, injure or take a water vole.
- intentionally or recklessly destroy, damage or obstruct access to any structure or place that is used by a water vole for shelter or protection.
- intentionally or recklessly disturb a water vole whilst it is in a place used for shelter or protection.

Water vole is also a Priority Species.

Common/Hazel dormouse

The common dormouse is fully protected under UK and European legislation, including the Wildlife and Countryside Act 1981 (as amended), the Countryside and Rights of Way (CRoW) Act 2000 and the Conservation of Habitats and Species Regulations 2010 (as amended). Together, this legislation makes it illegal to:

- Deliberately capture, injure or kill a dormouse.
- Damage or destroy any structure or place used for shelter or protection by a dormouse; or intentionally or recklessly obstruct access to such a place.
- Deliberately, intentionally or recklessly disturb a dormouse whilst it is occupying a structure or place which it uses for shelter or protection

The dormouse is a Priority Species.

Appendix 3: Species list

Species List

Scientific Name	Common Name
	Trees and shrubs
Acer pseudoplatanus	Sycamore
Betula pendula	Silver birch
Buddleja davidii	Buddleia
Colutea arborescens	Bladder-senna
Cornus sanguinea	Dogwood
Crataegus monogyna	Hawthorn
Cytisus scoparius	Broom
Fraxinus excelsior	Ash
Laburnum anagyroides	Laburnum
Lavatera arborea	Tree mallow
Malus pumila	Cultivated apple
Populus tremula	Aspen
Prunus avium	Wild cherry
Prunus spinosa	Blackthorn
Quercus robur	Pedunculate oak
Rosa canina	Dog-rose
Rubus fruticosus agg.	Bramble/ Blackberry
Salix alba	White willow
Salix caprea	Goat willow
Salix cinerea	Grey willow
Salix fragilis	Crack willow
Sambucus nigra	Elder
Salix viminalis	Osier
	Grasses, sedges and rushes
Agrostis capillaris	Common bent
Agrostis stolonifera	Creeping bent
Alopecurus geniculatus	Marsh foxtail
Anisantha sterilis	Barren brome
Arrenatherum elatius	False-oat grass
Brachypodium sylvaticum	False brome
Bromus lepidus	Slender soft-brome
Carex pendula	Pendulous sedge
Carex spicata	Spiked sedge
Catapodium rigidum	Fern-grass
Cynosurus cristatus	Crested dog’s-tail
Dactylis glomerata	Cock’s-foot
Elytrigia repens	Common couch
Festuca arundinacea	Tall fescue

Scientific Name	Common Name
Festuca ovina	Sheep's fescue
Festuca rubra	Red fescue
Glyceria fluitans	Floating sweet-grass
Glyceria maxima	Reed sweet-grass
Holcus lanatus	Yorkshire fog
Hordeum murinum	Wall barley
Hordeum secalinum	Meadow barley
Juncus articulatus	Jointed rush
Juncus inflexus	Hard rush
Lolium perenne	Perennial rye-grass
Phalaris arundinacea	Reed canary-grass
Phleum bertoloni	Small-leaved timothy grass
Phleum pratense	Timothy
Phragmites australis	Common reed
Poa pratensis	Smooth meadow-grass
Vulpia myuros	Rat's-tail fescue
	Broadleaved Herbs
Achillea millefolium	Yarrow
Arctium. minus	Lesser burdock
Armoracia rusticana	Horse radish
Artemisia campestris	Field wormwood
Artemisia vulgaris	Mugwort
Ballota nigra	Black horehound
Blackstonia perfoliata	Yellow-wort
Bryonia dioica	White bryony
Calystegia sepium	Hedge bindweed
Centaurea nigra	Black knapweed
Chamerion angustifolium	Rosebay willowherb
Cichorium intybus	Chicory
Cirsium arvense	Creeping thistle
Cirsium vulgare	Spear thistle
Clematis vitalba	Traveller's-joy
Conium maculatum	Hemlock
Convolvulus arvensis	Field bindweed
Crassula helmsii	New Zealand pigmyweed
Crepis capillaris	Smooth hawk's-beard
Daucus carota	Wild carrot
Dipsacus fullonum	Teasel
Echium vulgare	Viper's bugloss
Epilobium hirsutum	Great willowherb
Equisetum hyemale	Rough horsetail

Scientific Name	Common Name
Fallopia japonica	Japanese knotweed
Foeniculum vulgare	Fennel
Geranium dissectum	Cut-leaved crane's-bill
Geranium molle	Dove's foot crane's-bill
Geum urbanum	Herb bennet
Glechoma hederacea	Ground ivy
Heracleum mantegazzianum	Giant hogweed
Heracleum sphondylium	Hogweed
Hieracium sp	Hawkweed species
Hypericum perforatum	Perforate St John's-wort
Hypochaeris radicata	Cat's ear
Iris pseudacorus	Yellow iris
Lactuca serriola	Prickly lettuce
Lathyrus latifolius	Broad-leaved everlasting-pea
Lathyrus pratensis	Meadow vetchling
Lepidium draba	Hoary cress
Linaria purpurea	Purple toadflax
Linaria vulgaris	Common toadflax
Lotus corniculatus	Common bird's foot trefoil
Lotus pedunculatus	Greater bird's foot trefoil
Lythrum salicaria	Purple loosestrife
Malva sylvestris	Common mallow
Medicago lupulina	Black medick
Medicago sativa	Lucerne
Melilotus albus	White melilot
Melilotus officinalis	Ribbed melilot
Odontites vernus	Red bartsia
Oenothera glazioviana	Large-flowered evening-primrose
Papaver rhoeas	Common poppy
Persicaria lapathifolia	Pale persicaria
Picris echioides	Bristly oxtongue
Plantago coronopus	Buck's-horn plantain
Plantago lanceolata	Ribwort plantain
Potentilla reptans	Creeping cinquefoil
Ranunculus repens	Creeping buttercup
Raphanus raphanistrum	Wild radish
Reseda lutea	Wild mignonette
Reseda luteola	Weld
Rumex conglomeratus	Clustered dock
Rumex obtusifolius	Broad-leaved dock
Saponaria officinalis	Soapwort

Scientific Name	Common Name
Senecio jacobaea	Common ragwort
Sonchus asper	Prickly sow-thistle
Sparganium erectum	Branched bur-reed
Tanacetum vulgare	Tansy
Tragopogon pratensis	Jack-before-noon
Trifolium arvense	Hare's-foot clover
Trifolium pratense	Red clover
Trifolium repens	White clover
Tripleurospermum inodorum	Scentless mayweed
Tussilago farfara	Colt's-foot
Typha latifolia	Bulrush
Urtica dioica	Common nettle
Verbena officinalis	Vervain
Vicia cracca	Tufted vetch
Vicia tetrasperma	Smooth tare
	Birds
Alauda arvensis	Skylark
Apus apus	Swift
Ardea cinerea	Grey heron
Carduelis cannabina	Linnet
Carduelis carduelis	Goldfinch
Corvus corone	Carrion crow
Falco tinnunculus	Kestrel
Passer domesticus	House sparrow
Perdix perdix	Grey partridge
Phylloscopus collybita	Chiffchaff
Pica pica	Magpie
Picus viridis	Green woodpecker
Prunella modularis	Dunnock
Streptopelia decaocto	Collared dove
Sylvia atricapilla	Blackcap
Sylvia communis	Whitethroat
Troglodytes troglodytes	Wren
Turdus merula	Blackbird
	Butterflies
Coenonympha pamphilus	Small heath
Inachis io	Peacock
Maniola jurtina	Meadow brown
Pararge aegeria	Speckled wood
Polygonia c-album	Comma
Pyronia tithonus	Gatekeeper

Scientific Name	Common Name
Thymelicus lineola	Essex skipper

Appendix F Green Belt Assessment / Methodology Framework

1. Green Belt Assessment Methodology

1.1 The purpose of this appendix is to set out the methodology applied in assessing Mardyke Farm's contribution towards the purposes of including land within the Green Belt.

1.2 Following a review of best practice in the assessment of Green Belt used within the industry, the criteria used to assess the Green Belt at Mardyke Farm were thoroughly justified and written in accordance with national policy. Studies demonstrate that the criteria to be used to undertake the Green Belt assessment needs to:

- Clearly define national policy terminology to inform the assessment criteria;
- Identify the objectives of each purposes against which the site is to be assessed, based on the definitions as set out above; and
- Take the form of a set of clear but specific questions to be answered for each purpose.

1.3 Accordingly, Table 1 below provides a consistent framework for assessment. Any interpretations made utilise the definitions stated.

Table 1: Green Belt Assessment Methodology

Purpose	Step 1: Definition of Terminology	Step 2: Define Green Belt Objectives	Step 3: Specific questions to determine whether site contributes towards Green Belt Purposes
To check the unrestricted sprawl of large built-up areas	**Sprawl** – 'spread out over a large area in an untidy or irregular way' (Oxford Dictionary). **Large Built-up areas** – in the context of the study, this focuses on Greater London, where outward expansion was controlled as an original purpose of the Green Belt.	The first purpose performs a barrier role. This purpose is assessed at the strategic level whereby it underpins the establishment of the Green Belt in the sense that the original strategic purpose was to check sprawl from London.	1) Does the parcel act, in itself, as an effective barrier against sprawl from large built-up areas outside of the study area? 2) Does the parcel contribute, as part of a wider network of parcels, to a strategic barrier against sprawl of these built-up areas?
To prevent neighbouring towns from merging	**Neighbouring towns** – LBH comprises a web of interconnected neighbourhoods without distinctive boundaries. The adopted Core Strategy does not identify a clear 'settlement hierarchy' within the borough and accordingly, the differentiation between the main built-up areas of neighbouring boroughs, rather than local neighbourhoods within LBH is considered to be the key consideration at the local level.	The second purpose performs an interstitial role, whereby gaps or spaces between settlements exist and have a clear role in preventing coalescence. This purpose is considered to play a significant role in maintaining the existing settlement pattern of towns.	3) Does the parcel provide, or form part of, a gap or space between existing 1st tier settlements (neighbouring towns/boroughs)? 4) What is the distance of the gap between the settlements? 5) Is there evidence of ribbon development on major route corridors?

Purpose	Step 1: Definition of Terminology	Step 2: Define Green Belt Objectives	Step 3: Specific questions to determine whether site contributes towards Green Belt Purposes
	Merging – this can be by way of general sprawl (above) or; **Ribbon Development** – The building of houses along a main road, especially one leading out of a town or village (Oxford Dictionary). This includes historical patterns or, or current pressures for, the spread of all forms of development along movement corridors, particularly major roads.		6) What is the visual perception of the gap between settlements from major route corridors? 7) Would a reduction in the gap compromise the separation of settlements in physical terms? 8) Would a reduction in the gap compromise the separation of settlements and the overall openness of the site visually?
To assist in safeguarding the countryside from encroachment	**Encroachment** – a gradual advance beyond usual or acceptable limits (Oxford Dictionary) **The countryside** – open land with an absence of built development and urbanising influences, and characterised by rural land uses including agriculture and forestry. Relevant landscape character or quality designations will be taken into account in assessing the role of the	The third purpose performs a protective role, to safeguard the countryside as defined above. Landscape characteristics also influence the perception of character and quality of countryside. The assessment therefore considers topography, woodland and tree cover and presence of hedgerows / boundary planting which can define views and perceptions of openness in	9) What countryside / rural characteristics exist within the site including agricultural or forestry land uses and how is this recognised in established national and local landscape designations? 10) Has there already been any significant encroachment by built development or other

Purpose	Step 1: Definition of Terminology	Step 2: Define Green Belt Objectives	Step 3: Specific questions to determine whether site contributes towards Green Belt Purposes
	Green Belt in safeguarding countryside in accordance with a 'functional' view of the countryside.	the landscape. Countryside, urban fringe and urbanising characteristics and influences have been taken into account as part of the assessment.	urbanising elements?
To preserve the setting and special character of historic towns	**Historic town** – settlement or place with historic features identified in local policy or through conservation area or other historic designation(s).	The fourth purpose performs a girdle role, as a green ring around historic settlements or to provide the landscape context to historic features that preserves setting by keeping land open. The purpose goes beyond a simple definition of historic towns and relates to the identification of all the key historic places across the study area in both urban and rural settings. Existing designations of historic value and interest such as conservation areas, historic parks and gardens and scheduled monuments have been used to identify historic 'places' relevant to this assessment. Both the physical and visual relationship with the Green Belt has been assessed.	11) What settlements or places with historic features exist within the site? 12) What is the relationship and connection (in the form of character, views and visual perception) between the site and historic features? 13) Does the site provide an open setting or a buffer against encroachment by development around settlements or places with historic features?

Purpose	Step 1: Definition of Terminology	Step 2: Define Green Belt Objectives	Step 3: Specific questions to determine whether site contributes towards Green Belt Purposes
To assist in urban regeneration, by encouraging the recycling of derelict and other urban land	**Urban Regeneration** – the aim of which the Core Strategy identifies as to revitalise areas of deprivation and preserve or enhance an areas heritage value through significant improvements to access to public services (including transport) and sensitive mixed use development to create balanced communities. **Recycling** – to use again (Oxford Dictionary) **Derelict and other urban land** – land in a very poor condition (Oxford Dictionary) which the Core Strategy identifies as falling within the category of Brownfield land or previously developed land. The NPPF encourages the effective reuse of such land, where it is not of a high environmental value.	The fifth purpose performs a local role to assist in the regeneration of specific local areas. Assisting urban regeneration, by encouraging the recycling of derelict and other urban land is perhaps the most complex purpose to assess because the relationship between the Green Belt and recycling of land is influenced by a range of external factors including local plan policies, brownfield land availability and the land and development market. Nonetheless a qualitative assessment of the sites contribution to local regeneration initiatives has been undertaken.	14) Is there a deliverable supply of derelict and other urban land available? 15) Does this parcel act, in itself, as a barrier to bringing other derelict and other urban land forward?

1.4 The above definitions of the primary objectives of the five purposes of the Green Belt is consistent with best practice cases within the industry and is therefore considered to represent a robust starting point from which to undertake an assessment of the site against Green Belt objectives.

1.5 In line with best practice, the assessment provides a qualitative assessment of Mardyke Farm against the purposes of including land within the Green Belt as defined within the NPPF based on the following classifications.

Green	Significant contribution to Green Belt Purposes
Orange	Partial contribution to Green Belt purposes
Red	Limited or no contribution to Green Belt purposes

1.6 The classification denotes the outcome of the assessment of the contribution the site makes to each of the Green Belt purposes.

1.7 For each purpose, the supporting text explains how the classification has been arrived at. The presentation of the classification for each purpose assists in understanding and assessing the value of the various roles performed by the site. This approach to individually assessing the national purposes allows for a clear and transparent evaluation that sets out the information needed to judge the overall contribution of Mardyke Farm to the purposes of the Green Belt.

Hornchurch
Masterplan Studies

23 March 2015

Formation Architects

Introduction

This document has been prepared by Formation Architects and Montagu Evans LLP to investigate development opportunities for the site currently occupied by the Cardrome Garage and Learner Centre and the Rom Skatepark, Upper Rainham Road, Hornchurch RM12 4EU.

The site extends over 4.8 hectares and is bordered by Upper Rainham Road to the east, a private residential development to the north and the public open space surrounding the River Beam and known as ‘The Chase’ to the south and west.

The site is currently designated as a Major Developed Site within the Green Belt.

The main and vehicular access is located along the eastern boundary, adjacent to an existing petrol station which does not form part of the site.

The area immediately to the north and west of the petrol station is occupied by a garage and a number of offices and structures including a tyre replacement centre, MOT centre, car wash and various vehicle repair units. In addition there are 5no. separate used car sites and related businesses occupying semi-mobile structures with established use status.

To the south of the petrol station is the skatepark, which occupies most of the south-east corner of the site and comprises of the main skating area and a number of associated ancillary buildings.

The skatepark has recently been listed by English Heritage for its cultural significance and will therefore be retained.

This document presents our initial masterplan studies for the redevelopment of the site for residential use. It is intended to provide an indication of the level of development that could be provided across the site and the associated planning benefits.

Planning Policy

Introduction

The purpose of this section is to provide an overview of relevant planning policy that has informed the masterplan work.

We consider that the proposed scheme demonstrates a sympathetic approach in redeveloping the site for residential purposes. The high quality design of the scheme seeks to best utilise the site area whilst considering the complex planning challenges involved in responding to the setting of the heritage assets and the Major Development Site within the Green Belt designation.

The Site

The Site falls within the jurisdiction of the London Borough of Havering (LBH) and is located within Upper Rainham, Hornchurch. The site extends to approximately 4.85 hectares (11.98 acres).

The site is located on the western side of the A125 (Upper Rainham Road), which provides connections to Romford, approximately two kilometres to the north, and Dagenham via the A1112, approximately 3.5 kilometres to the south.

Elm Park station lies 1.5 kilometres to the south east of the site and provides connections to the wider Underground network via the Piccadilly line. Romford Railway Station provides direct links into London Liverpool Street and is about 2.5 kilometres to the north.

Harrow Lodge Park is located approximately 300m to the south east of the site. The park provides large outdoor amenity space, child play and areas of hard standing dedicated to recreational sports such as tennis and a boating lake.

A skatepark is located in the south eastern corner of the site. The skate park, which was constructed in 1978, has recently (July 2014) been listed as a Grade II listed structure.

Planning History

An online planning history search uncovered numerous applications at the site dating between 1987 and 2008. The majority of the applications related to the erection of telephone masts. The most recent application was for advertisement consent, the application was refused in 2008.

Existing Use

The majority of the broadly rectangular site is used as an off road learner driving centre. Multiple small scale commercial units are located in middle section of the site, along the eastern boundary, adjoining the petrol station which fronts onto Upper Rainham Road. The petrol station does not fall within the red line boundary of the site.

In light of the planning history set out above, we consider that the lawful use of the majority of the site as existing is Sui Generis, the skatepark is D2 (assembly and leisure), and the collection of commercial premises is B2 (Light Industrial).

Planning Policy Context

The statutory development plan for the site currently comprises:

- LBH Core Strategy and Development Control Policies Document (DPD) (2008);
- LBH Site Allocations DPD (2008);
- Saved policies from the Romford Area Action Plan (2008); and
- The London Plan (Consolidated with Alterations since 2011).

There are a number of planning guidance documents that are of particular relevance to the proposals:

- Planning Obligations (2013);
- Heritage (2011);
- Residential Design (2010); and
- Sustainable Design and Construction (2009).

Site Specific Designations

The Site is designated as a Major Developed Site within the Metropolitan Green Belt.

A strip of land bordering the western boundary of the site is designated as a Metropolitan Site of Nature Conservation Importance.

The site falls within Flood Zone 1, the lowest designation and is therefore considered unlikely to flood.

As noted above, the skatepark on site is Grade II listed.

National Planning Policy Framework (NPPF) (March 2012)

The National Planning Policy Framework (the "NPPF") was published on 27 March 2012 and supersedes previous national planning guidance contained in various Planning Policy Guidance and Planning Policy Statements. The NPPF sets out the Government's approach to planning matters, and is a material consideration in the determination of planning applications.

The NPPF states that "the purpose of the planning system is to contribute to the achievement of sustainable development" (NPPF, paragraph 6) and that it "should play an active role in guiding development to sustainable locations" (paragraph 8). It further states that this presumption in favour of sustainable development, should be seen as a golden thread running through decision-taking (paragraph 14).

In March 2014 the Government published the National Planning Practice Guidance (NPPG) which is a material consideration in relation to planning applications. The NPPG replaces a number of previous circulars and guidance to provide a simplified single source of guidance at the national level.

The NPPF outlines 12 core planning principles which state that planning should proactively drive and support sustainable economic development to deliver new homes; seek to secure high quality design; support the transition to a low carbon future; encourage the use of previously developed land; promote mixed-use developments; and focus significant development in sustainable locations.

The NPPF also sets out a number of policies. Of particular relevance to the Client's proposal are the following:

- Chapter 6 of the NPPF makes it clear that local authorities need to boost significantly the supply of housing to deliver a wide choice of high quality homes, and to widen opportunities for home ownership and create sustainable, inclusive and mixed communities.
- In planning decision making, housing applications should be considered in the context of the presumption in favour of sustainable development. Relevant policies for the supply of housing should not be considered up-to-date if the local planning authority cannot demonstrate a five-year supply of deliverable housing sites (Paragraph 49).
- Chapter 7 attaches great importance to the design of the built environment. Good design is a key aspect of sustainable development, is indivisible from good planning, and should contribute positively to making places better for people (Paragraph 56). In determining applications, great weight should be given to outstanding or innovative designs which help raise the standard of design more generally in the area (Paragraph 63).
- Chapter 9 of the NPPF sets out the protection afforded to Green Belts (Paragraph 79). The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.
- When considering any planning application, local planning authorities should ensure that substantial weight is given to any harm to the Green Belt. 'Very special circumstances' will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations (para 89).
- Paragraph 89 states that a local planning authority should regard the construction of new buildings as inappropriate in Green Belt. Exceptions to this include the partial or complete redevelopment of previously developed sites (brownfield land), whether redundant or in continuing use (excluding temporary buildings), which would not have a greater impact on the openness of the Green Belt and the purpose of including land within it than the existing development.
- Chapter 12 of the NPPF sets out the national policy context in relation to the conservation of the historic environment. It states that local planning authorities should set out in their Local Plan a positive strategy for the conservation and enjoyment of the historic environment (para 126). In determining planning applications, local planning authorities should take account of:
- the desirability of sustaining and enhancing the significance of heritage assets and putting them to viable uses consistent with their conservation;
- the positive contribution that conservation of heritage assets can make to sustainable communities including their economic vitality; and
- the desirability of new development making a positive contribution to local character and distinctiveness.

London Plan (Consolidated with alterations since 2011)

The London Plan is the overall strategic plan for London setting out an integrated economic, environmental, transport, and social framework for London over the next 20-25 years. It provides the context to which individual boroughs must set their planning policies. Policies of particular relevance are outlined below.

- Policy 3.3 'Increasing Housing Supply' of the London Plan recognises that there is a pressing need for more homes in London and states that Boroughs should seek to achieve and exceed annual average housing targets. This Policy seeks to deliver an annual average of 423,887 net additional homes across London over the plan period, with an annual monitoring target of 1,170 new homes in LBH.
- development proposals to optimise potential for housing, taking into account local context and character.
- Policy 3.5 (a) 'Quality and design of housing developments' adds that "Housing developments should be of the highest quality internally, externally and in relation to their context and to the wider environment, to protect and enhance London's residential environment and attractiveness as a place to live."

London Borough of Havering Local Plan: Core Strategy and Development Control Policites (2013)

- LBH Core Strategy Policy CP1 (Housing Supply) – states that LBH will provide a minimum of 535 new homes across the Borough each year between 2007/08 – 2016/17. However the revised London Plan has increased the housing target to 11,701 new dwellings for the next 10 years (2015 – 2025) equating to 1,170 per annum.
- LBH supports the principle of residential development within the Borough as does the NPPF which has the required to significantly boost the supply of housing at its core.
- In line with Policy DC2 (Housing mix and Density) a mix of housing types and sizes will be required in all developments and should contain primarily contain 1, 2 and 3 bedroom units. It should be noted that the exact mix on each site will vary according to the location of the development, the character of the surrounding area, and the objectively assessed need at the time of application.
- Policy DC6 'Affordable Housing' states that on developments of 10 or more homes or residential sites of 0.5 hectares LBH will seek to achieve 50% of all new homes to be affordable. The borough wide affordable tenure split of 70:30 social / intermediate is also sought. These targets are of course subject to site specific circumstances and financial viability.
- DC45 (Appropriate Development in the Green Belt) states that planning permission for new buildings will only be granted for certain purposes, one of which is it if involves the limited infilling or redevelopment on a site designated as a Major Developed Site in accordance with DC46.

Emerging Policy

LBH has commenced its review of its adopted planning policy. The Council is currently conducting an initial round of consultation on a new Local Plan. This stage seeks to determine the views on the key strategic priorities for the Borough over the next 15 years and how these priorities should be addressed. This has afforded the opportunity to promote the site as a suitable location for housing in order to meet an increase in housing need across the Borough.

Current aspirations are for the site to be released from the Green Belt in order to maximise the opportunities affected by the site in terms of securing the long term future of the recently listed skatepark and the contribution it can make to meeting the current strategic housing needs.

In addition to these two main benefits, the site also affords opportunities to:

- deliver a sustainable form of development in accordance with paragraph 14 of the NPPF
- biodiversity and ecological improvements
- enhances public access to the site and the Green Belt beyond
- enhanced tree belt to improve views from the Green Belt
- remediation across the site

This would create a policy basis against which an application could be brought forward without the need to demonstrate a case of 'very special circumstances'. The site affords opportunity to address a number of policy objectives. However as identified the main two are as follows:

The Principle of Residential Development on the Site

There is a significant need for housing across London including within LBH. This need is amplified given following the adoption of the further alterations to the London Plan in March 2015. This has resulted in an increase in the annual housing requirements for the Borough. A boost in the supply of housing is a theme also evidenced throughout the NPPF.

The recently adopted Further Alterations to the London Plan sets a target to deliver 11,701 new homes in LBH between 2015-2025 (equating to an annual requirement of 1,170 dwellings per annum). In light of this, LBH will need to identify additional land to accommodate the increase in targets.

The delivery of a significant number of units on this previously developed site should be given significant weight by the Council and the GLA. In addition, the site's location within a suburban area lends itself to proposing a residential led scheme of the scale, density and design proposed.

Within this provision there will also be significant affordable housing provision.

Heritage Considerations

There is a Grade II Listed asset on site – a skatepark.

The NPPF requires LPAs to plan positively for the conservation and enjoyment of the historic environment, conserving heritage assets in a manner appropriate to their significance. In doing so, the contribution to wider social, cultural and environmental benefits as well as local character and distinctiveness should be considered.

In addition, securing a viable use of listed buildings should be sought to continue the long term preservation.

The London Plan and local policy reflects the NPPF, seeking to protect and enhance historic assets and their settings and conserving their significance by being sympathetic to their form, scale, materials and architectural detail.

The proposals demonstrate an intention to incorporate the skatepark into the site. The proposals also envisage a method of subsidising the running of the skatepark. In doing so, the development will comply with policy at national, regional and local levels by ensuring the long term provision of the asset to the significant benefit of the local community.

Constraints and Opportunities

A number of constraints have been identified for the site:

- Potential noise disturbance from Upper Rainham Road and the existing garage (only along the edge).
- Potential overlooking from the neighbouring properties to the north.
- Relationship with the small grain of surrounding buildings.
- Potential visual impact on open space to west and south, although the impact would be very limited due to vegetation and level changes.
- Telecommunication masts (can be relocated).

At same time, the site also offers a number of opportunities:

- Poor quality of the existing buildings on site.
- Proximity to established residential area.
- Excellent access to daylight and sunlight.
- Good access to local buses, site is under 1 mile to Elm Park underground station and 1.6 miles to Romford overground train station.
- The site is largely clear of buildings and mostly flat.
- The proximity to the open land to the west can provide visual amenity.
- The changes in level along the northern edge could be exploited to achieve taller buildings.
- The Rom Skatepark can become a unique feature of the redevelopment and a community asset.
- Site can provide much needed housing in the local area.

Masterplan Approach

The size of the site gives the opportunity to create a focal point, in the form of a public central space. This would provide amenity and help create a sense of place. The natural position for the central square would be in the widest portion of the site, ideally close to the main access so that it can also serve as an arrival point.

Upper Rainham Road is quite trafficked and as such a buffer might be required to protect the houses. The idea is to place larger blocks of flats with quality sound insulation along the street so that the homes at the rear can enjoy more privacy and are shielded from vehicular noise.

The north-east corner of the site relates quite closely to the neighbouring buildings and as such it offers the opportunity to create a more urban edge to the development, with a strong corner. Once again, a block of flats in this position would serve the purpose better than a row of houses.

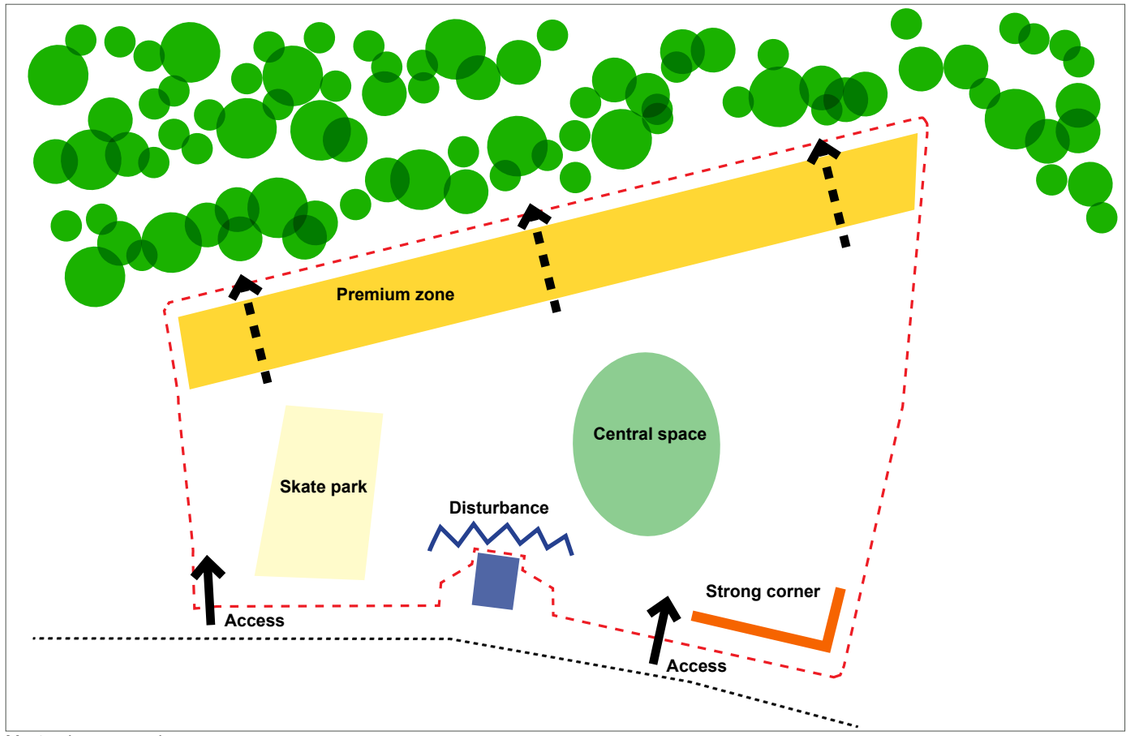
The proximity of the site to the large open space along the Rom River suggests that the western portion of the plot should be the most ‘prime’ area. It is in this location that the larger units will be placed, with direct visual access to the public open space and as far as possible from the road.

The Rom Skatepark is a key feature of the site and as such it should be well integrated within the masterplan. The nature of the operation makes it difficult to entirely open up the skate park to the rest of the site, nonetheless it could be part of the proposed network of footpaths and open spaces.

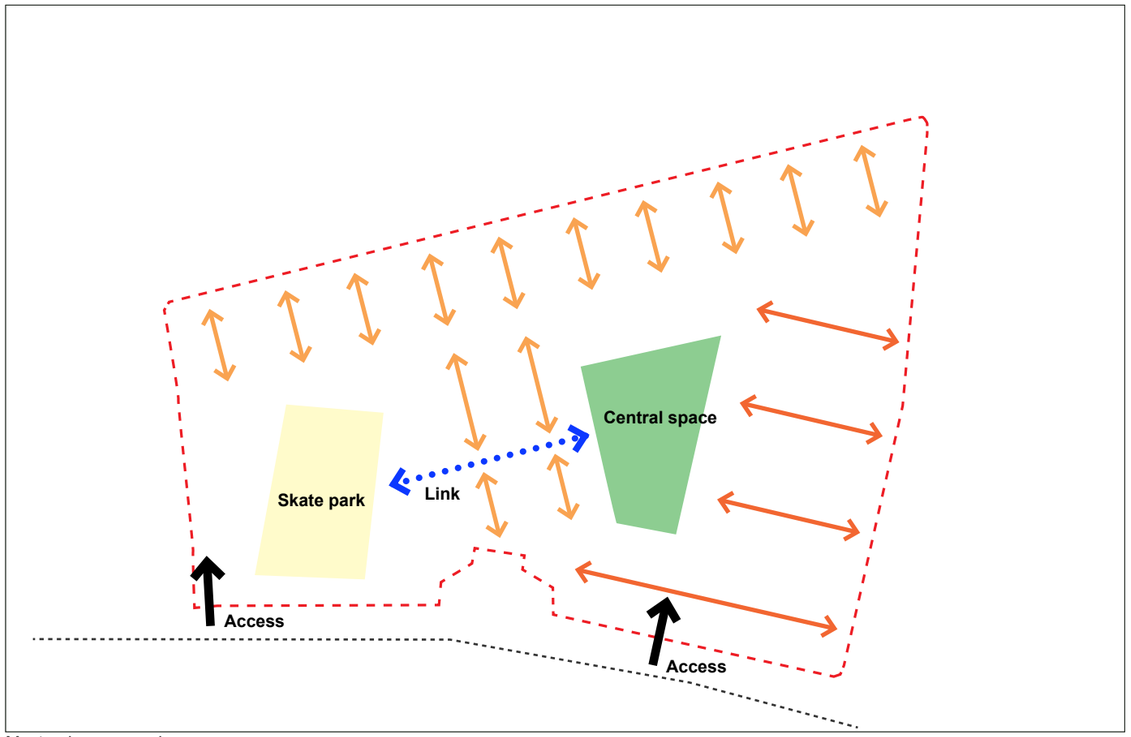
The diagram at the bottom of this page shows how the irregular shape of the site is dealt with by adopting two different alignments which converge in the central open space.

By doing so all buildings can retain a regular shape whilst still relating to the site boundaries.

All the studies contained in the following pages are based on the principles above and investigate alternative layouts with varying residential densities.



Masterplan approach



Masterplan approach

Previous studies

The principles described in the previous page have been applied to a number of studies aimed at establishing the appropriate density for the masterplan.

In Study 1 the different geometries converging into the central square correspond to two separate building typologies: the block aligned to the road are apartments and the rest are terraced houses.

This option generates the highest number of units with a large proportion made up of flats.

Study 2 reacts to the first option by turning almost all the blocks into rows of terraced houses, with the exception of two blocks of apartments along Upper Rainham Road.

The density is clearly affected and so is the urban form of the masterplan which becomes repetitive and dominated by a single typology.

Study 3 and 4 are a mix of the first two previous options and they seek to achieve a more balanced mix both in terms of typologies and quantum of development.

Study 4 in particular generates a more varied central space with houses along the northern and southern edges and flatted buildings on the eastern and western sides.

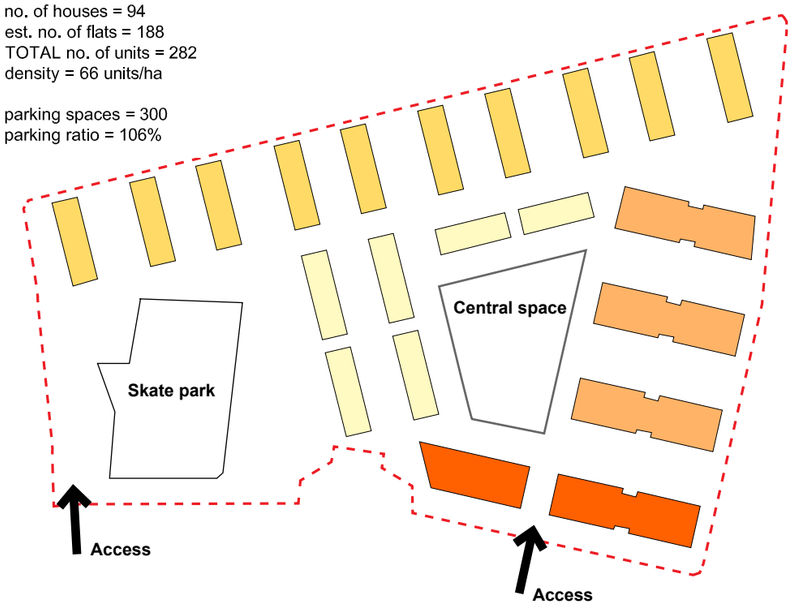
The final masterplan proposal has therefore been developed on the basis of Study 4, but with some alterations to the apartment blocks.

Study 1

SUMMARY

no. of houses = 94
est. no. of flats = 188
TOTAL no. of units = 282
density = 66 units/ha

parking spaces = 300
parking ratio = 106%

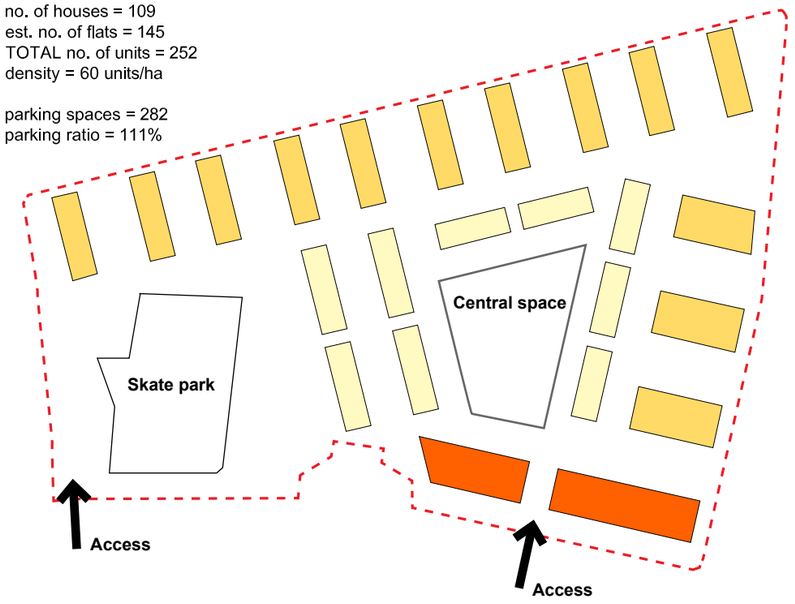


Study 3

SUMMARY

no. of houses = 109
est. no. of flats = 145
TOTAL no. of units = 252
density = 60 units/ha

parking spaces = 282
parking ratio = 111%

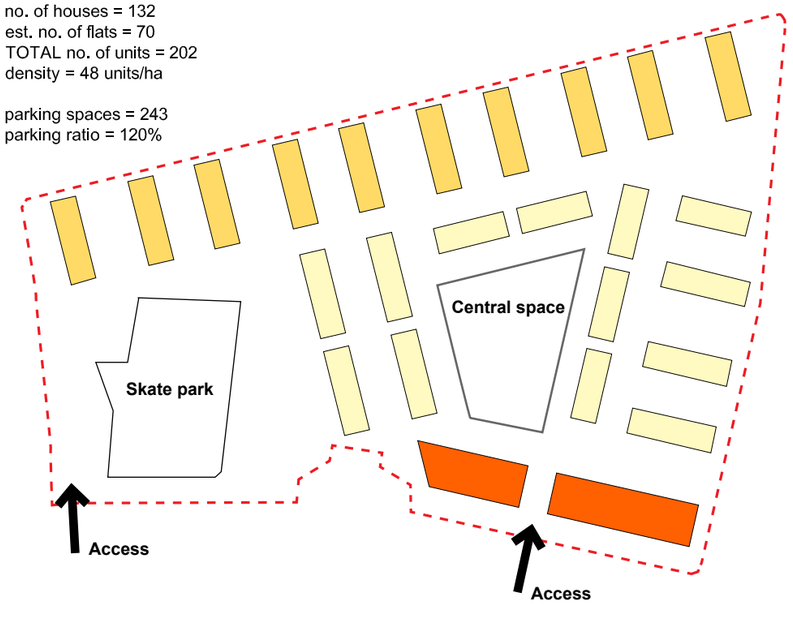


Study 2

SUMMARY

no. of houses = 132
est. no. of flats = 70
TOTAL no. of units = 202
density = 48 units/ha

parking spaces = 243
parking ratio = 120%

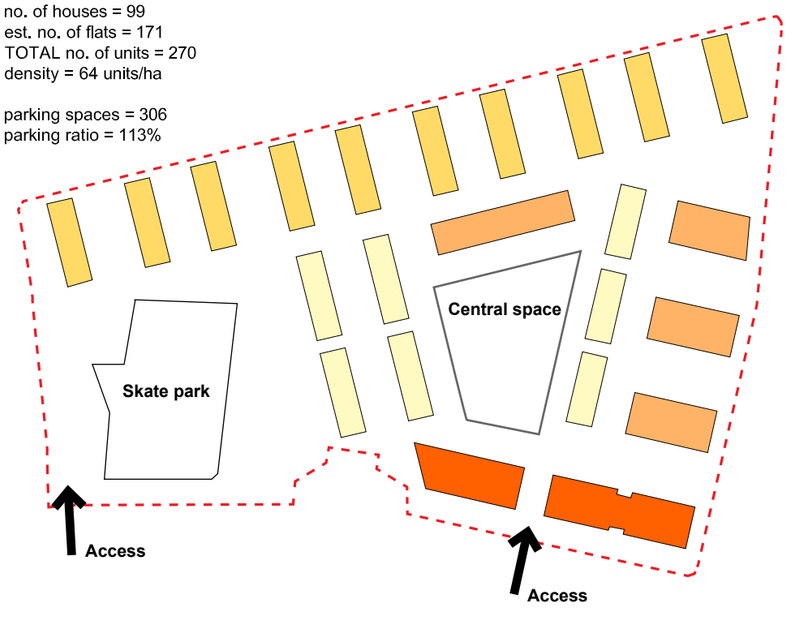


Study 4

SUMMARY

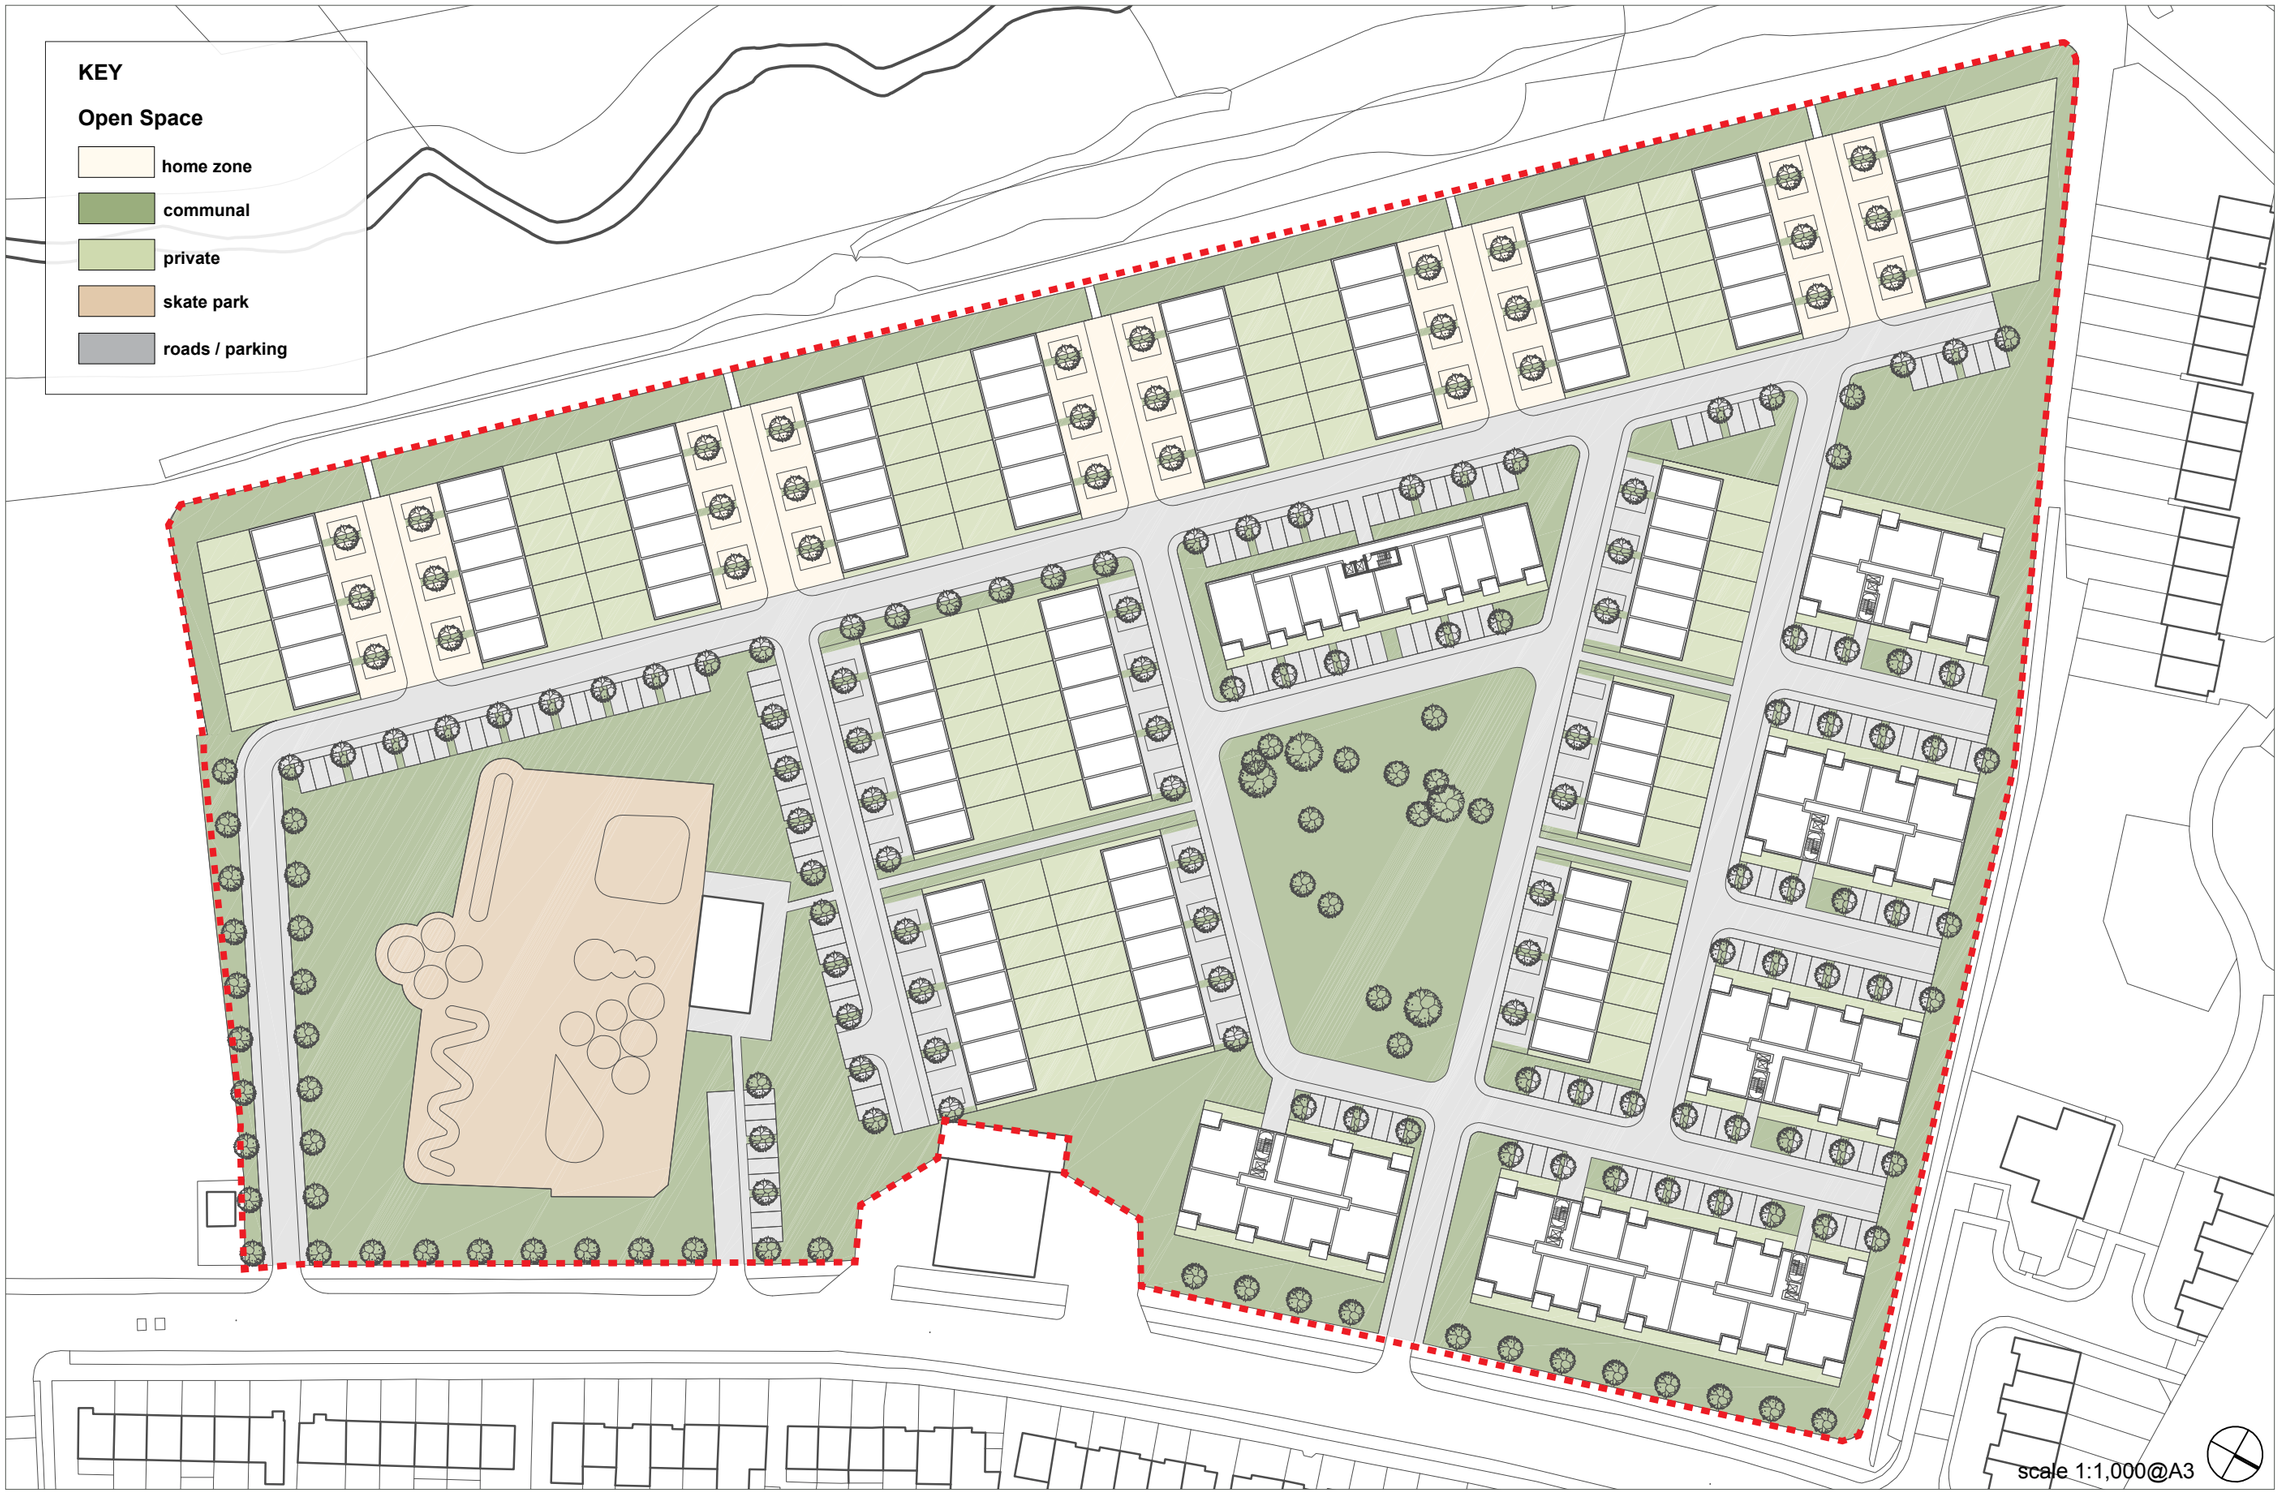
no. of houses = 99
est. no. of flats = 171
TOTAL no. of units = 270
density = 64 units/ha

parking spaces = 306
parking ratio = 113%



3b houses (2.5 floors)
4b houses (3 floors)
Blocks (3 floors)
Blocks (4 floors)

Proposed masterplan



Masterplan Concept

As stated above, the final masterplan has been based on Study 4. Due to further design development the blocks in the masterplan have been reduced from four floors to three floors and therefore the number of units and mix have been altered accordingly.

The diagram on this page illustrates the main features of the proposal:

- Building Heights
- Unit Types
- Vehicular Circulation
- Open Space

The proposal delivers 242 residential units with a range of sizes and typologies.

60x1bed flats

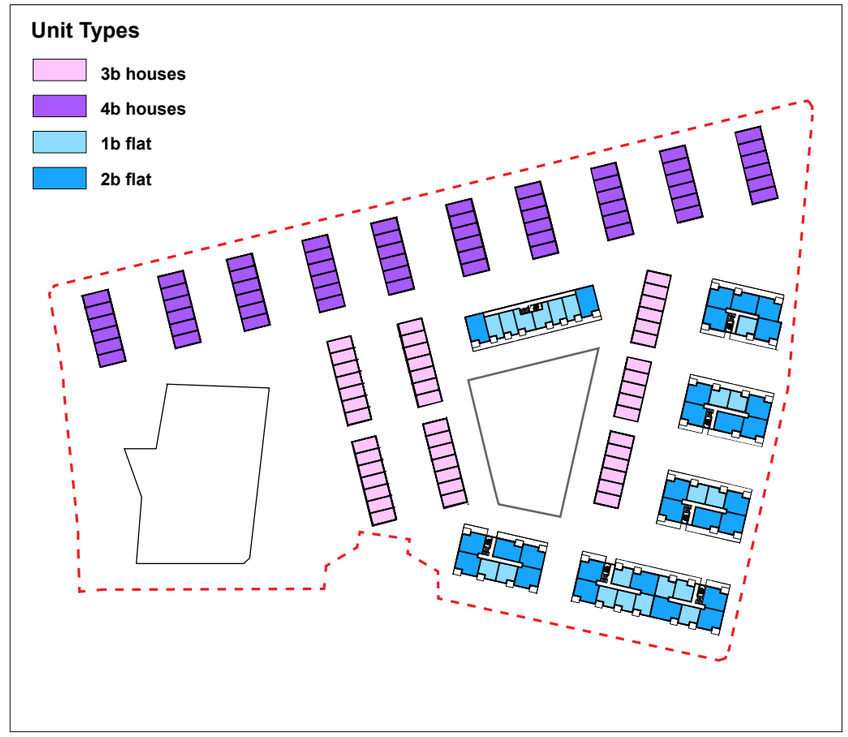
77x2bed flats

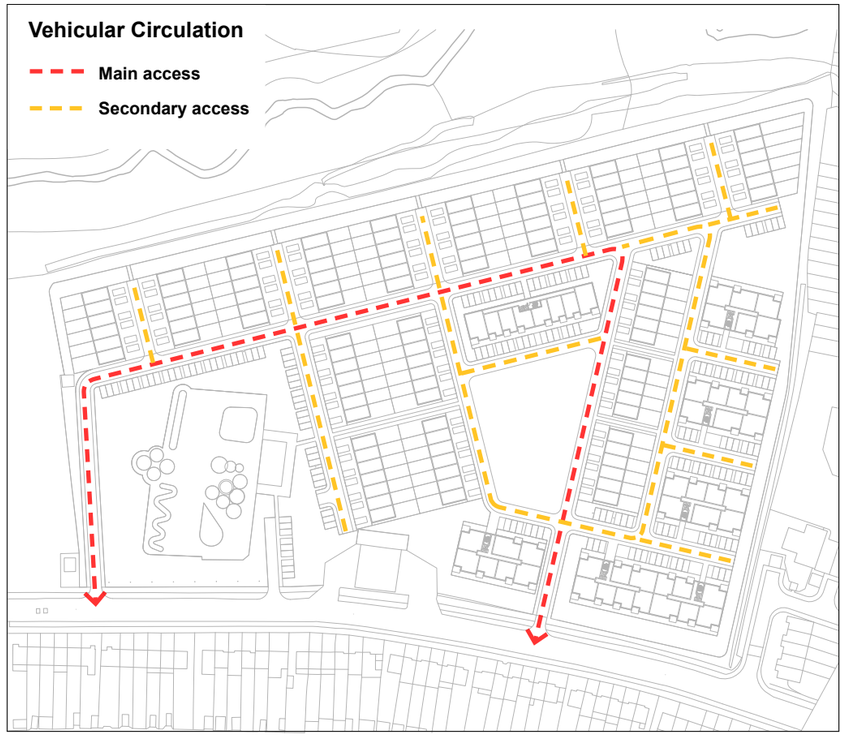
45x3bed houses

60x4bed houses

The current mix generates a density of about 57 units/ hectare.

The parking provision is 281 spaces (116%).





Hard standing

Although included within the Green Belt, the site is not an undeveloped green field and includes a large proportion of hard standing, comprising the skate park and the learner centre facilities and tracks.

The soft landscape area is also of little ecological value, being largely made up of informal mown lawn grass with no trees.

The diagrams on this page compare the proposed masterplan and the existing conditions on the basis of built area, hard standing and grass areas.

The proposed hard standing is roughly the same as the existing, but the soft landscaping will be of vastly superior quality, comprising of private gardens and communal landscaped areas with semi-mature trees.

Existing landscaping

Built footprint

Hard landscaping

Soft landscaping

Site area	**48,280 sqm (100%)**
Built footprint	**1,393 sqm (3%)**
Hard landscaping	**25,967 sqm (54%)**
Soft landscaping	**20,920 sqm (43%)**

Proposed landscaping

Site area	**48,280 sqm (100%)**
Built footprint	**9,714 sqm (20%)**
Hard landscaping	**17,985 sqm (37%)**
Soft landscaping	**20,581 sqm (43%)**

Formation Architects - precedents

Cambridge City Football Club

Formation Architects submitted a detailed planning application for the redevelopment of this site close to the city centre of Cambridge on behalf of Crest Nicholson in May 2014.

Formation Architects were appointed by Crest Nicholson in September 2013 and submitted the scheme for planning after winning unanimous support from the Cambridge Design and Conservation Panel and the support from the officers after 6 months of pre-planning consultation.

The scheme comprises of 106 units including 53 apartments and 51 houses for families.

The masterplan revolves around a central square as a focal point for the new neighbourhood.

All houses have gardens and upper floor terraces, all flats have generous balconies or roof terraces. Floor to ceiling heights are 2.7m throughout.

The landscaping is inspired by the use of the site as the former Cambridge City Football Ground.

Key

- Public open space
- Private gardens
- Terrace
- Shared surface
- Road
- Parking
- Sedum roof on bin and storage units

Bolingbroke Park, Enfield

Formation Architects have designed a major housing development for London and Quadrant Group on a 4.5 hectare site in London Borough of Enfield.

The project comprises 231 new dwellings of which 69 will be terraced and semi-detached houses; the remainder will be 1, 2 and 3 bed flats in 4 storey high apartment buildings.

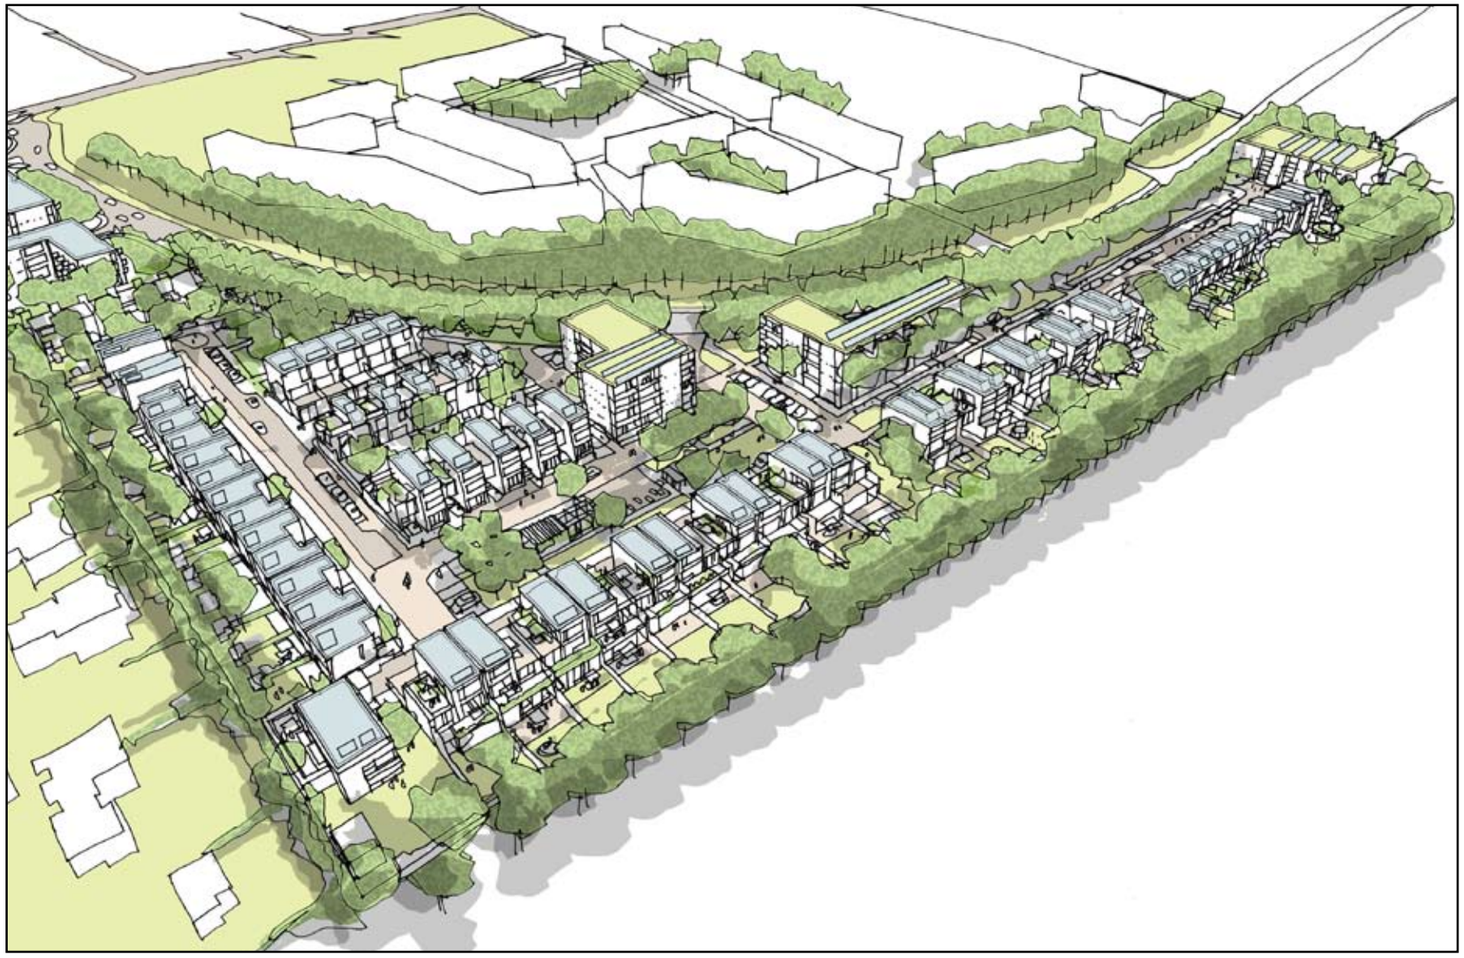
The development will be known as Bolingbroke Park and has been designed to take advantage of the established woodland setting of the site. The high quality of its details and materials will make a positive contribution to the local built environment. It will feature a number of energy saving features including photo-voltaic roof panels to generate electricity.

The site, which is surrounded by mature trees, generated a layout that reflects its sloping topography and maximizes sunlight and daylight to all dwellings. Formation Architects have been appointed by Quadrant Construction (part of the London & Quadrant Group) to develop the design information towards construction.

Seven Acres, Cambridge

The site forms part of the Great Kneighton (formerly known as Clay Farm) masterplan at the southern border of Cambridge and comprises 128 units including 70 houses and 58 apartments. All dwellings are designed to Code for Sustainable Homes Level 4 and one prototype house to Code Level 5. All units have a floor to ceiling height of 2.7m with 2.9m in the larger 4-bed house types living-rooms. The specifications are being developed in line with Skanska's emerging brand which builds on the Scandinavian heritage of the company.

Ideal Home of the Year Award at the Blue Ribbon Awards 2013. 2013 Gold Best What House? Award, 2013 Bronze Best Sustainable Development What House? Awards 2013. Recognised by Building for Life 12. Overall Winner of the Best Development Multiple Units, UK for the International Property Awards 2012. Shortlisted for The Housing Design Awards 2012. Commended for the Sunday Times British Homes Awards 2012. Highly commended for the House Builder Awards 2012.



Maiden Lane

The site is located on a former light industrial estate at the western edge of the Crayford Marshes. About two thirds of the 6.3ha site is designated as an emergency flood reservoir which offers the opportunity to create a new open space for local residents.

The layout comprises 254 units of which 160 are apartments and 94 are terraced houses, offering a mix of typologies and tenures within the scheme. The key driver was to benefit from the views towards the open land north and east of the site and to ensure a maximum amount of sunlight and privacy to the residents. This has been achieved through a simple legible street layout with the main access road on the north side of the site connecting to traditional tree-lined streets with on street parking. On the southern perimeter of the site is a more intimate shared “home-zone” type of environment.

Formation Architects have worked intensively with a variety of consultants and the client to develop a masterplan on a difficult site that delivers a contemporary approach to suburban habitation.

The delivery of the project hinged on the construction of the *Europa Gym* as part of the Section 106 agreement for the residential development.

Risebridge Close
Havering

Report for:
Ptarmigan Land Limited

INTRODUCTION

Overview

AA Environmental Limited (AAe) has been commissioned to produce an Ecological Constraints & Opportunities Note for the site off Risebridge Close, Havering. The aim of this document is to evaluate the ecological constraints on the site, which are summarised below and shown on the attached Constraints Plan (Figure 1), along with providing a range of ecological mitigation and enhancement measures.

This assessment has been based on a walk-over survey of the site and surrounding land, where access was possible (completed on Friday 11 September 2015) a desktop study including a data request from Greenspace Information for Greater London (GiGL) and a brief review of internet resources (e.g. MAGIC, Google Earth aerial imagery and Natural England's websites).

Site Description and Proposals

The site is located to the north of Romford, located off Risebridge Close and is centred at National Grid Reference: TQ 515913. The site is bordered by areas of semi-improved grassland, a golf course, residential properties within Chase Cross and associated roads.

The site itself is dominated by rough grassland (semi-improved), with some boundary hedgerows, woodland belts and scrub present. A restricted area of traditional orchard is also present in the north-eastern corner of the site. A review of the Google Earth imagery suggests that the land use has largely remained unchanged since at least 2006, with the site appearing more managed between 1999 and 2002. The proposals are to develop the site for residential use along with associated infrastructure and Public Open Space (both formal and informal).

ENVIRONMENTAL INFORMATION

Desk-top Study

There are no statutory ecological designated sites on or directly adjacent to the site, according to GiGL or the Multi-agency website, and there are no records of protected or notable species on the site, according to the data search. The nearest ecological statutory designated site is The Manor Local Nature Reserve, which is located approximately 3 km to the north-east of the site. However, Rise Park Stream HvL13, a non-statutory designated Site of Importance for Nature Conservation (SINC), is located adjacent to the western boundary of the site. There are a further fourteen SINCs within 2 km of the site. Further details are provided in Table1 attached. In addition, although not recorded within the GiGL data search, there is an area of Deciduous Woodland (within the SINC) and an area of Traditional Orchard, both of which are both Priority Habitats under Section 41 of the *Natural Environment and Rural Communities (NERC) Act 2006*.

Walk-over Survey

The site is dominated by rough grassland, with boundary vegetation mainly comprising dense and scattered scrub and tall ruderal vegetation. Hedgerows formed the majority of the field boundaries, with a woodland belt and restricted areas of dense scrub also present. There were a number of drainage ditches along the site boundaries, although the majority of these were dry at the time of the survey. There were also a number of ponds recorded within nearby habitat.

Species

Badgers
Evidence of badgers, in the form of a run with badger hair found and a dung pit, was recorded on the site (TNs 1 and 2 on Figure 1). Although no setts were recorded during the initial walk-over, it is important to note that not all of the site was covered and, as badgers are active, setts could still be found during subsequent visits. The site does provide foraging habitat for badgers.

Bats
Although there were only a few buildings present on the site (land currently tenanted with no access permitted), depending upon the proposals further bat surveys on any buildings scheduled to be demolished will need to be completed to confirm presence/absence of any roosts. In addition, there are a number of mature trees that do have features, such as rot holes and split bark and limbs that do provide roosting opportunities for bats and again further assessment would be required in order to confirm any roosts if any of these trees require felling (locations are shown on Figure 1).

The majority of the site, being dominated by rough grassland with established boundary hedgerows, woodland belts and woodland areas, provides areas of good foraging for bats, with bat activity likely to be concentrated at the field boundaries.

There are no records of bats on the site itself, according to the data search; however, there are records of brown long-eared (*Plecotus auritus*), noctule (*Nyctalus noctula*) and leisler's bat (*Nyctalus leisleri*) located within habitat to the north of the site.

Dormice
There are no known records of dormice within 2 km of the site. The majority of the site does not provide suitable habitat for dormice but the established woodlands, interconnecting hedgerows and areas of dense scrub do provide suitable habitat.

Herpetofauna (amphibians and reptiles)
There are a number of ponds present within adjacent land, which may support breeding populations of amphibians (shown on the attached plan). As the site is dominated by rough grassland, with scrub and woodland, it provides suitable habitat for herpetofauna.

The nearest great crested newt (*Triturus cristatus*) record is 0.58 km to the north of the site. There are no known records of reptiles on the site itself, with the nearest reptile being a slow-worm (*Anguis fragilis*) recorded 0.72 km to the west of the site.

Water Voles
Although there are a series of drainage ditches along a number of the hedgerows, these remain dry for long periods and do not provide any habitat for water voles. There are no records of water voles within 2 km of the site.

Other Wildlife
Evidence of fox and deer were recorded. In addition, a few common species of bird, either recorded on the site or flying overhead, including Blackbird (*Turdus merula*), Robin (*Erithacus rubecula*), Carrion Crow (*Corvus corone*), Blue Tit (*Cyanistes caeruleus*), Mistle Thrush (*Turdus viscivorus*), Magpie (*Pica pica*) and Wood Pigeon (*Columba palumbus*), were also recorded.

CONSTRAINTS/FOLLOW-UP SURVEY WORK

Habitats

Apart from an area of traditional orchard present in the north-eastern corner of the site and the woodland belt along the western boundary, no habitats on the site are specifically protected for ecological reasons,

although there may be other constraints such as TPO's on trees and local/national policies (such as retention of hedgerows).

Species

Badger
Follow-up checks for badger could be carried out during other phase 2 surveys to ensure there are no unrecorded setts within the land were access was not permitted. Irrespective of any findings, as badgers are known to be active in the area, standard controls will have to be implemented including:

- any temporary and permanent fencing to be installed should be raised slightly off the ground (200 mm), to allow badgers unrestricted access throughout the site;
- any deep excavations that are to be left open overnight should include a means of escape for any animals that may fall in;
- where possible, works should be limited to the hours from dawn to one hour before sunset;
- the creation of large stock piles of earth should be avoided as these may prove attractive for badgers to excavate new setts;
- badger corridors will be maintained to allow badgers access to adjacent habitat; and
- new landscape planting to include species known to provide a food source for badgers.

Bats
On a scheme of this scale where hedgerows are potentially being removed and there are potential impacts from lighting etc., evening/dawn transect surveys are typically requested to demonstrate the level of bat activity on the site and to identify any mitigation measures that may be required. Bat Conservation Trust guidelines currently state for sites of **medium habitat quality** that one visit and transect must be undertaken during each month that bats are active (April-September). Additional requirements may be to leave a static detector out on site to record any evidence of bat activity.

Standard mitigation should also be implemented such as the use of a sensitive lighting scheme and retention of key hedgerows with dark corridors provided, where practicable.

Breeding Birds
As the site provides some areas of suitable bird nesting habitat, both for ground nesting and within the woodland and hedgerows, it may be necessary to carry out a breeding bird survey. In accordance with standard BBS methodology, three repeat visits are required (first visit is a scoping survey, which we have already completed) and should be carried out during suitable weather in April and May. Evidence of breeding activity by each species will be identified and mapped using standard coding for breeding activity. The criteria used to identify whether or not a species is breeding will be that used for the 1993 national breeding bird atlas (Gibbons, Reid and Chapman, 1993).

In addition to this, any site works likely to affect potential bird nesting habitat should be timed to avoid the main bird nesting season, which, in general, runs from March to August inclusive. If this is not possible, a check should be carried out prior to any clearance works to ensure there are no active nests present, including a check of the buildings on site.

Herpetofauna
As the site supports amphibian and reptile habitat, further surveys at the appropriate time of year and following standard methodology should be carried out to confirm presence/absence of reptiles. It might be necessary to carry out surveys of nearby ponds to confirm presence/absence of great crested newts (an alternative is to carry out eDNA testing). The results of any further surveys would determine whether any specific mitigation/enhancement measures are necessary.

Reptile surveys may be carried out between April and September, however they are optimal in April, May, June and September. Artificial refugia (corrugated tin and felt sheets measuring approximately 1 m^2) will be positioned within suitable habitat present on the site. The use of artificial refugia is thought to be the most efficient and effective method for recording the presence of reptiles. The artificial refugia will be left undisturbed for a period of seven days before returning to the site. A number of repeat lifts will then be

carried out on seven separate days and conducted during suitable weather conditions in order to record the maximum number of reptiles basking on or sheltering under the sheets.

Summary

The main constraints on the site identified during the walk-over survey were for herpetofauna, as well as potential survey work for bats, breeding birds and dormice. Ideally the scope of any further Phase II surveys should be discussed and agreed with the LPA's ecologist.

OPPORTUNITIES

Habitats

Enhancement of the existing hedgerows to be retained and planting of new species rich hedgerows.

Also the existing woodland areas could be enhanced with new native planting and sensitive management – e.g. selective thinning to open up areas for the benefit of ground flora, allowing good tree specimens to grow to maturity whilst implementing a coppicing regime on other suitable species and introduce buffer planting with scalloped edges.

As part of the development, certain areas of the site could be managed sympathetically for the benefit of wildlife. Where practicable, grass margins could be allowed to become established as wildflower habitat, and cut less frequently to provide cover for a range of species, allowing plants to set seed and certain invertebrates to complete their life cycle. Allowing certain areas of the site to become less managed will increase the diversity and abundance of insects, which in turn will support more bird life and provide ideal foraging habitat for a range of species. All arisings from management operations should be collected and removed to dedicated composting areas, which could be provided on the site. Any features required to augment the site drainage (as part of Sustainable Urban Drainage Systems), could also be designed to benefit wildlife, such as allowing the establishment of aquatic and marginal vegetation to improve foraging/breeding opportunities for invertebrates and herpetofauna.

Species

Badgers
Retention and strengthening of existing hedgerows and/or replacement species rich hedgerows provided with species known to provide food sources for badgers. Introduction of a sensitive lighting scheme, with dark corridors provided.

Bats
Retention and strengthening of existing hedgerows and woodland areas and/or replacement species-rich hedgerows provided. A series of bat boxes could be installed on some of the established vegetation to be retained or incorporated into the new build to provide enhanced roosting opportunities. New planting could include species of known value for wildlife and the retention and enhancement of existing watercourses and provision of new waterbodies on the site would improve foraging opportunities. Introduction of a sensitive lighting scheme, with dark corridors provided.

Licence application and proportionate mitigation if any confirmed roosts are found and are to be lost to the proposals.

Breeding Birds
Retention and enhancement of existing woodlands, woodland belts and hedgerows and/or replacement species-rich hedgerows provided along with new habitats created as part of the overall landscape strategy. A series of bird boxes could be installed on some of the established vegetation to be retained or incorporated into the new build to provide enhanced nesting opportunities.

In order to retain suitable habitat for ground-nesting birds, areas of the site should be left un-managed, especially during sensitive times of year such as the breeding season (March to August).

Dormice
Retention and enhancement of existing woodlands, woodland belts and hedgerows and/or replacement species-rich hedgerows provided along with new habitats created as part of the overall landscape strategy. This could include thinning tall trees in the existing woodland areas to encourage growth of understorey and the production of more fruits, nuts and insects for food. These areas could be further enhanced using plant species with a known benefit for dormice (such as hazel, oak or honeysuckle). If habitats are isolated, new planting should create links so that there is uninterrupted habitat suitable for dormice.

A series of dormouse nest boxes could be installed on some of the established vegetation to be retained to provide enhanced nesting opportunities

Herpetofauna (amphibians and reptiles)
Measures to enhance the site for herpetofauna could include: introduction of suitable waterbodies located adjacent to natural habitats, provision of rough grassland/wildflower type habitat, allowing scrub to establish and construction of hibernacula. If any confirmed breeding ponds for great crested newts are to be lost then a licence application and proportionate mitigation would need to be provided.

Other wildlife
A range of further enhancement measures could be incorporated into the scheme in order to provide suitable foraging habitat and shelter for brown hares, such as:

- production of flower-rich verges, headlands and beetle banks;
- roadside fencing, or wildlife tunnels; and
- structured landscape buffers.

Herring Gull (*Larus argentatus*)	Priority Species	0.45 km to the N
Great crested newt (*Triturus cristatus*)	European Protected Species, Protected Species & Priority Species	0.58 km to the N
Song Thrush (*Turdus philomelos*)	Priority Species	0.6 km to the N
Brambling (*Fringilla montifringilla*)	Protected Species	0.6 km to the N
Redwing (*Turdus iliacus*)	Protected Species	0.6 km to the N
Kingfisher (*Alcedo atthis*)	Protected Species	0.61 km to the N
West European hedgehog (*Erinaceus europaeus*)	Priority Species	0.69 km to the N
Slow-worm (*Anguis fragilis*)	Protected Species & Priority Species	0.72 km to the W

Fieldfare (*Turdus pilaris*)	Protected Species	0.78 km to the N
Noctule bat (*Nyctalus noctula*)	European Protected Species, Protected Species & Priority Species	0.86 km to the N
Skylark (*Alauda arvensis*)	Priority Species	Within 1 km of the site (no Grid Reference provided)
Yellowhammer (Emberiza citrinella)	Priority Species	Within 1 km of the site (no Grid Reference provided)
Reed Bunting (*Emberiza schoeniclus*)	Priority Species	Within 1 km of the site (no Grid Reference provided)
Lapland Bunting (*Calcarius lapponicus*)	Protected Species	Within 1 km of the site (no Grid Reference provided)
Grass snake (*Natrix natrix*)	Protected Species & Priority Species	1.04 km to the W
Dunnock (*Prunella modularis*)	Priority Species	1.05 km to the N
Tree Pipit (*Anthus trivialis*)	Priority Species	1.15 km to the N
Cuckoo (*Cuculus canorus*)	Priority Species	1.15 km to the N
Lesser Spotted Woodpecker (*Dendrocopos minor*)	Priority Species	1.15 km to the N
Grasshopper Warbler (*Locustella naevia*)	Priority Species	1.15 km to the N
Yellow Wagtail (*Motacilla flava*)	Priority Species	1.15 km to the N
Spotted Flycatcher (*Muscicapa striata*)	Priority Species	1.15 km to the N
Lapwing (*Vanellus vanellus*)	Priority Species	1.15 km to the N
Red Kite (*Milvus milvus*)	Protected Species	1.15 km to the N
Greenshank (*Tringa nebularia*)	Protected Species	1.15 km to the N
Common Crossbill (*Loxia curvirostra*)	Protected Species	1.15 km to the N
Common pipistrelle (*Pipistrellus pipistrellus*)	European Protected Species & Protected Species	1.16 km to the W
Leisler's bat (*Nyctalus leisleri*)	European Protected Species & Protected Species	1.31 km to the N
Brown long-eared bat (*Plecotus auritus*)	European Protected Species, Protected Species & Priority Species	1.76 km to the N
Grey Partridge (*Perdix perdix*)	Priority Species	1.82 km to the N
Ring Ouzel (*Turdus torquatus*)	Priority Species	1.82 km to the N
Merlin (*Falco columbarius*)	Protected Species	1.82 km to the N
Whimbrel (*Numenius phaeopus*)	Protected Species	1.82 km to the N
Osprey (*Pandion haliaetus*)	Protected Species	1.82 km to the N
Honey-buzzard (*Pernis apivorus*)	Protected Species	1.82 km to the N
Wryneck (*Jynx torquilla*)	Protected Species & Priority Species	1.82 km to the N
Turtle Dove (*Streptopelia turtur*)	Priority Species	1.85 km to the SW
Wood Warbler (*Phylloscopus sibilatrix*)	Priority Species	1.91 km to the NW
Marsh Tit (*Poecile palustris*)	Priority Species	1.91 km to the NW
Eurasian badger (Meles meles)	Badgers Act (1992)	Within 2 km of the site (confidential record)
European Protected Species = species listed under The Habitats Directive Annexes II and IV Protected Species = species listed under the Wildlife and Countryside Act 1981 (as amended) Schedules 1, 5 and 8 Priority Species = species listed under the Natural Environment and Rural Communities (NERC) Act 2006 Section 41		

Development Framework Document
Land at Risebridge Chase, Romford
Ptarmigan

5 October 2015

PTARMIGAN

[iceniprojects]

CONTENTS

1 Introduction

2 Site Location

3 Strategic Accessibility and Opportunities

4 Site Opportunities and Constraints

5 Concept Masterplan and Deliverability

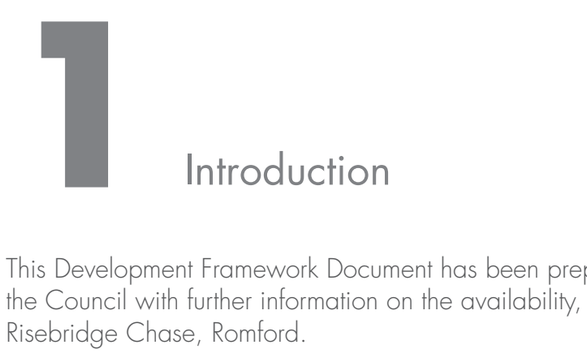
1 Introduction

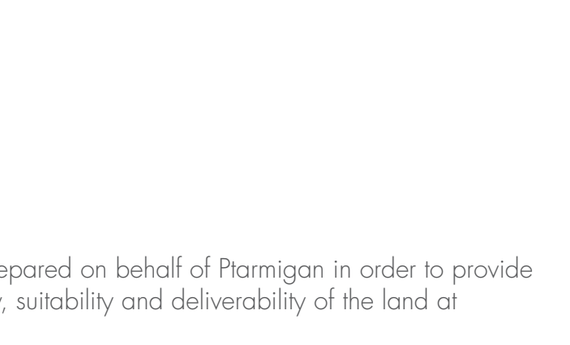
This Development Framework Document has been prepared on behalf of Ptarmigan in order to provide the Council with further information on the availability, suitability and deliverability of the land at Risebridge Chase, Romford.

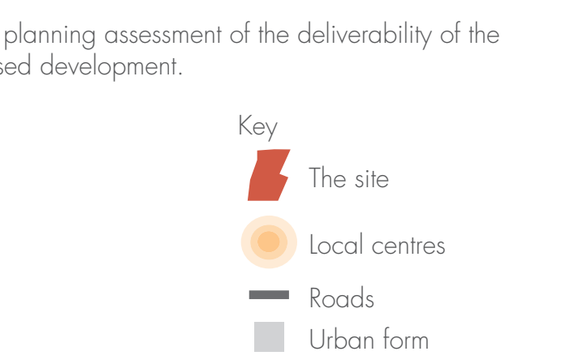
It provides an overview of the detailed technical and planning assessment of the deliverability of the site that will guide the design approach to the proposed development.

It sets out:-

2. Site Location
3. Strategic Accessibility and Opportunities
4. Site Opportunities and Constraints
5. Concept Masterplan and deliverability







Images showing the range of residential character in the area

Context

2 SITE LOCATION

The site is located to the north of Romford town centre in the suburb of Chase Cross. The site lies on the edge of the urban area and is surrounded by urban forms, with housing surrounding the boundaries of the site to the north, east and west. The Risebridge golf course lies to the south east, providing separation between the site and the developed areas of Harold Hill.

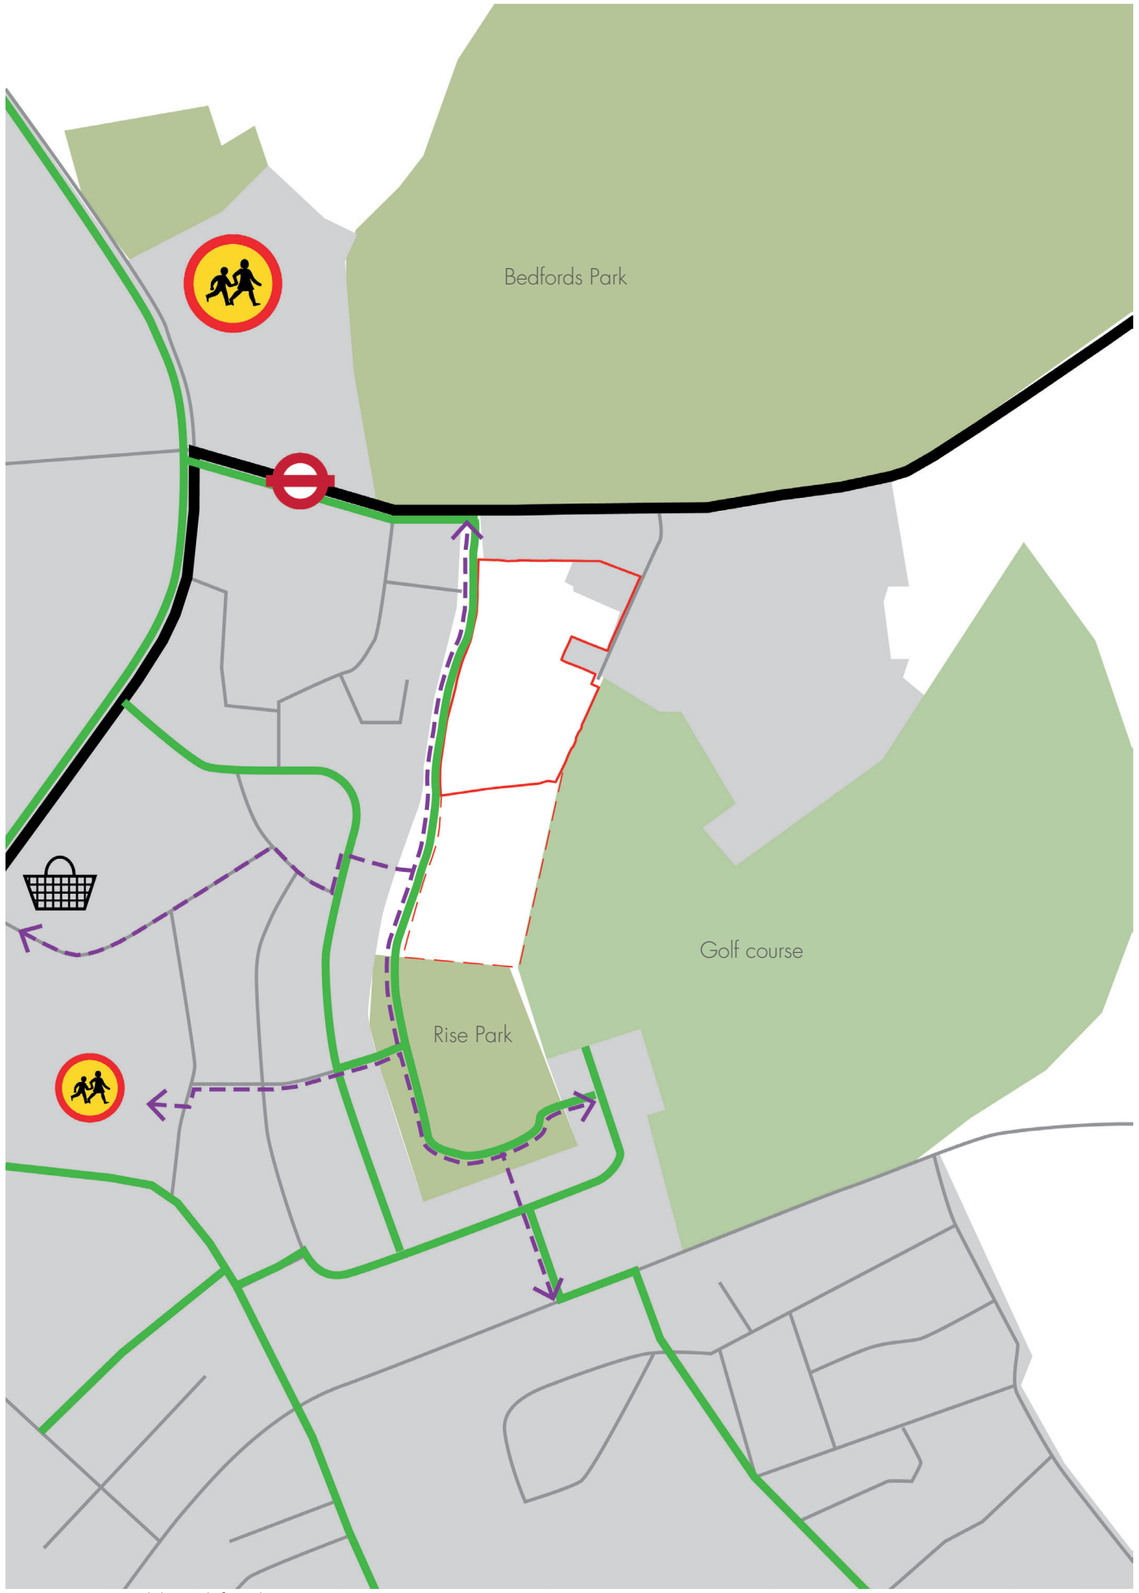
To the north of Lower Bedfords Road lies Bedfords Park which is accessible via a public footpath that runs along the western boundary of the site. The land to the south of the site is currently unused scrubland to the north of Rise Park. The development of the site would provide an opportunity to open up the land to the south for development and provide an opportunity to create a direct and attractive link between Rise Park and Bedfords Park.

There are a number of services, shops and amenities in the local centres at Gobian's Avenue, Moray Way, Pettits Boulevard and Chase Cross Road, all of which are within easy walking distance of the site. The local highway and footpath network also provides access to the facilities and amenities of the larger centres of Romford, Gidea Park and Harold Wood.

Key

- The site
- Further opportunity land
- Local bus stop
- Bus route
- Local shops
- Infant school
- Academy school
- Pedestrian access
- Quiet and off-road cycle routes
- Local parks

From the south, the site is completely framed by hedgerow. Bedfords Park woodland is to the rear.



Transport and local facilities

3 STRATEGIC ACCESSIBILITY AND OPPORTUNITIES

The site is one of the potential options being considered to accommodate new growth. It is located within the Green Belt, but is well contained and provides an opportunity to accommodate development within the context of the existing urban area. As a result, the site is considered to serve a very limited Green Belt function.

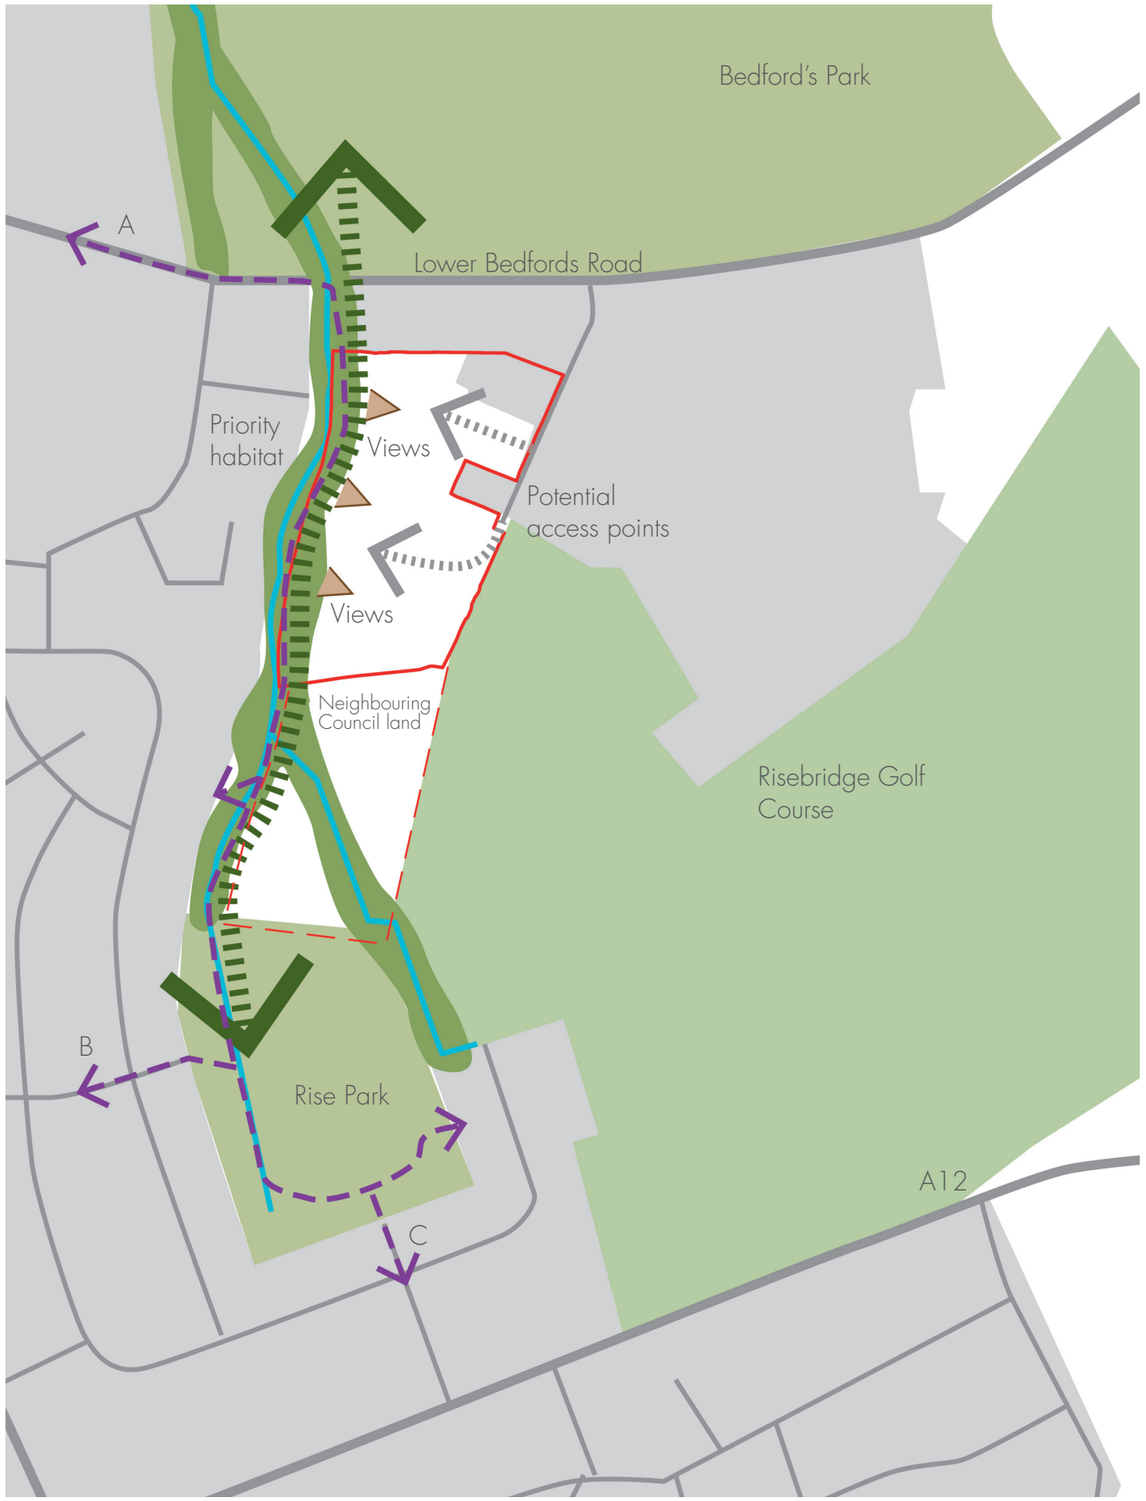
The site is well located in terms of the strategic public transport network, with local bus service number 499 to Romford. The local cycle route network provides access to Romford town centre and Collier Row. The railway stations at Romford, Gidea Park and Harold Wood are on the Greater Anglia Railway Line and are part of the Crossrail network. These stations are approximately 2.5 to 3km away and easily accessible by bicycle. The site is well located to provide access to a range of education facilities. The nursery school at Rise Park and secondary school Bower Park Academy are all accessible.

The alternative Green Belt sites being considered by the Council are distributed fairly evenly around the fringes of the Borough. The alternative sites include a mix of large sites that are situated away from existing urban boundaries or within more rural settings with limited services and facilities.

Key

A	Bower Park Academy 600m
B	Park Rise Infant School 700m
C	Raphael Park 1 km

Sequence of open spaces, from Bedford Park, along the ecology corridor to Rise Park.



Site orientation, open space network and the pedestrian links through the area.

4 SITE OPPORTUNITIES AND CONSTRAINTS

The site is well enclosed and benefits from a band of mature trees that follows the water course and hedgerows. There is low visual impact from Lower Bedfords Road and views from footpaths to the south are framed by a number of hedgerows. The gentle fall of land to the south would provide a good opportunity for passive solar gain, whether for the daylight amenity of homes or for the generation on on-site renewable energy. The ecology corridor to the west can provide the opportunity to increase the areas biodiversity whilst providing wetland and sustainable drainage.

The site has the potential to make a positive contribution to housing choice within the area, providing new residents with easy access to a number of public open spaces. The site can contribute to these landscape assets by enhancing the ecology setting of the western boundary strengthening the ecology link between parks.

The development of the site would provide the opportunity to unlock further land to the south. This further land, currently without access, could also strength southern links to Rise Park.

The enclosure by existing mature trees and hedgerows shows it to be a site with minimal visual intrusion on the setting of existing houses in the area. The combination of landscape setting and low impact on neighbours provides a compelling setting for new housing.

Key

The site excluding lease land

A Entrance creating a sense of arrival

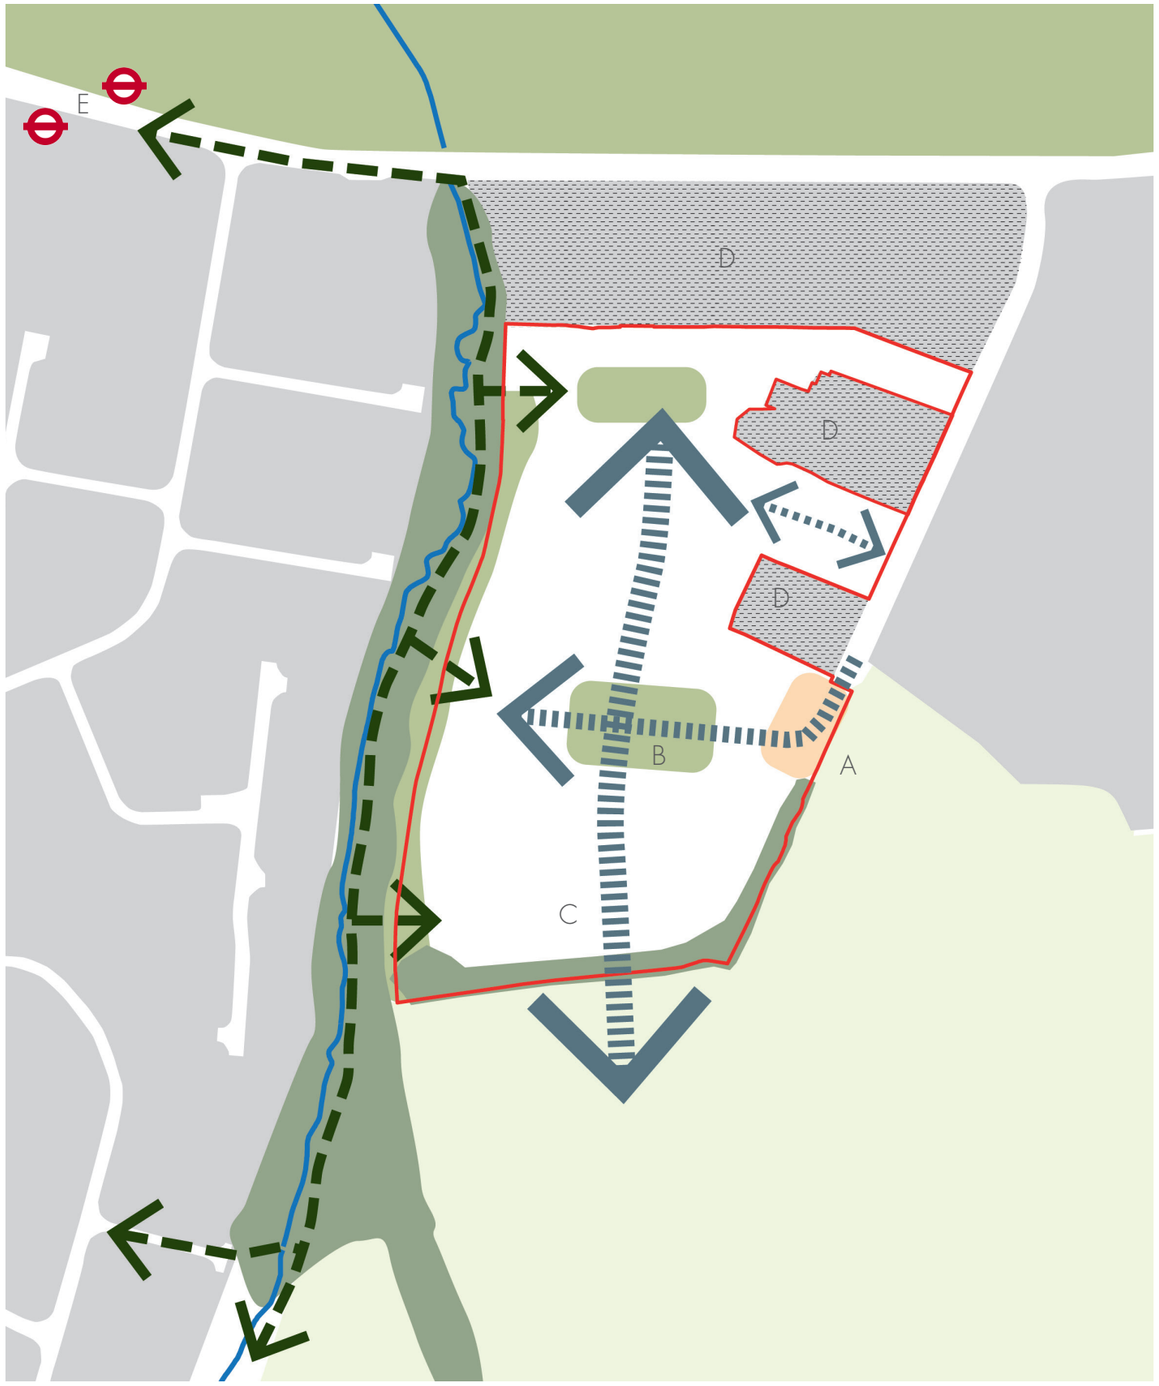
B Central Green linking to the western ecology corridor

C Potential route south to allow for the future opportunities on Council owned land

D Setting of existing neighbouring properties requiring sensitive treatment

E Easy access to bus stops only 230m from site

Pedestrian links



Site opportunities and constraints

5 CONCEPT MASTERLAN AND DELIVERABLES

This detailed assessment has confirmed that the site is available and suitable for development and is deliverable within the next five years.

The concept Masterplan for the site identifies opportunities to:

- Locate development in an accessible location, with a range of modes of travel available including bus, rail, the local footpath and cycle routes;
- Maximise ecological assets at the site and enhance biodiversity; and,
- Provide a wider range of housing in a location that serves a limited Green Belt function.

TECHNICAL NOTE

Project No:	**ITL11193**
Project Title:	**Land at Risebridge Chase, Havering**
Title:	**Site Highways Appraisal**
Ref:	**JD/ITL11193-001 TN**
Date:	**8 September 2015**

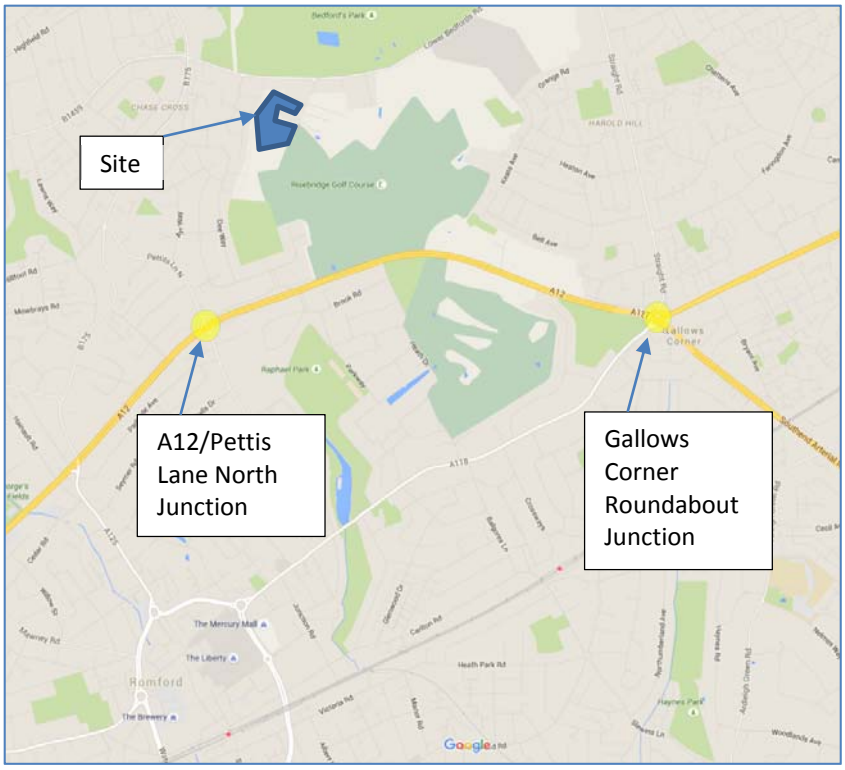
1.1 Introduction

1.1.1 i-Transport has been commissioned by Ptarmigan Land Limited to provide traffic and transport advice in relation to their potential development site, land at Risebridge Chase, in the London Borough of Havering.

1.1.2 The information in this note has been produced after a detailed site visit conducted on Wednesday 2nd September 2015 during the PM peak hour.

1.1.3 The site lies to the north of Romford, immediately north of the A12 and adjacent to Risebridge golf course.

Figure 1.1: Site Location



SECTION 2 Highway Network

2.1.1 The site is in close proximity to the strategic road links, the A12 and A127.

2.1.2 The routes to/from the strategic road network are described below:

- The site is accessed from the A12 and A127 east via the Gallows Corner roundabout junction, Straight Road, Lower Bedford Road and Risebridge Chase; and
- The site is accessed from the A12 west via the A12/Pettits Lane North junction, Havering Road (B175), Lower Bedford Road and Risebridge Chase.

2.1.3 Gallows Corner roundabout junction is congested during peak times and any traffic entering from Straight Road has to accept small gaps in order to access the roundabout.

2.1.4 Straight Road is an urban 30mph 2-way single carriageway residential road running north/south with at least 2.0m footways and a long bus only lane in the southbound direction on the approach to Gallows Corner.

2.1.5 Where Straight Road meets Lower Bedford Road a new junction is currently under construction. The previous junction arrangement took the form of a staggered four arm signalised junction. The proposed that the new junction arrangement will be a four arm roundabout.

2.1.6 According to TfL, the junction was selected for review because of a history of complaints about motor traffic congestion, a relatively poor casualty record and because of locally committed and expected development in the Harold Hill area and especially the residential development of the former Whitworth Centre (Persimmon) and the proposed Broxhill Park on the former Broxhill Centre.

2.1.7 Lower Bedford Road is an east/west 40mph 2-way single carriageway road, more rural in nature with a single 2m footway running along its southern side and a small width of verge and hedgerow on its northern side.

2.1.8 On the approach to Risebridge Chase from the east, Lower Bedford Road reduces from 40mph to 30mph.

2.1.9 Risebridge Chase forms a mini roundabout where it meets with Lower Bedford Road. The junction is small and it is difficult to egress when the westbound flow is heavy. It is likely that this junction will need upgrading, although this can be assessed in any transport assessment.

2.1.10 Risebridge Chase runs up to the boundary of the site. It is a rural access road that provides access to a handful of residential properties, a farm and the Risebridge golf course. Risebridge Chase has verge and footways on either side of the carriageway with existing lighting, as shown in **Figure 2.1**.

Figure 2.1: Risebridge Chase, Showing Footways and Verge

SECTION 3 Existing Access To the Site

3.1.1 As stated earlier in the note, footways exist on Risebridge Chase and Lower Bedford Road. The closest bus stops are located on Lower Bedford Road to the West of the site and are approximately 580m from the southern end of Risebridge Chase. Please note that these are further than the 400m walk distance usually required for bus stop access to new developments.

3.1.2 The sites PTAL is 1a which is poor. More bus stops and services are located to the West but they are beyond the maximum walk distance cut off.

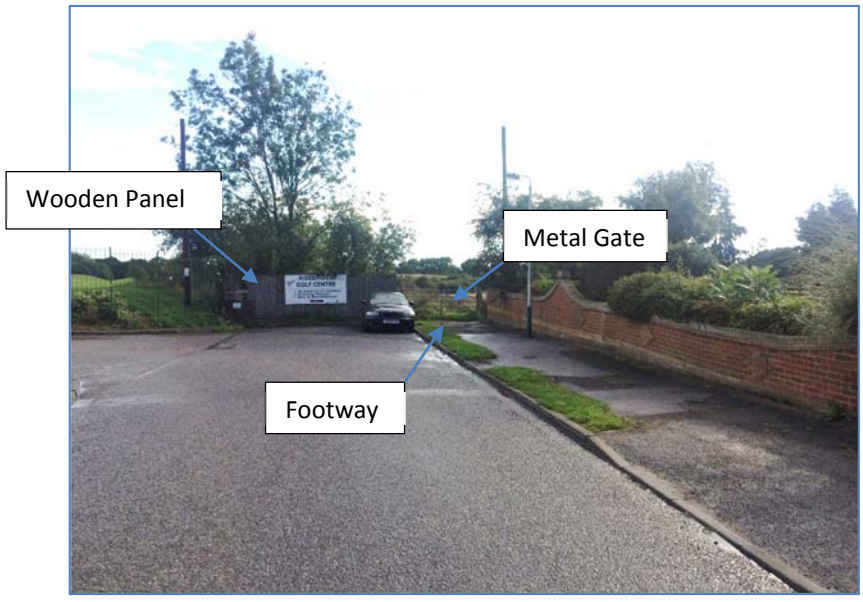
3.1.3 A public footpath exists on the western boundary of the site and connects to Rise Park, Lower Bedford Road and other residential areas to the south and west of the site. Where the public footpath meets Lower Bedford Road there is a Puffin Crossing allowing safe crossing to a footway on the northern side of the carriageway. A connection to the public footpath from the site could provide a shorter route from the development to Lower Bedford Road and the existing bus stops.

3.1.4 Romford lies within the Thames Gateway Area and will benefit from the following sustainable transport improvements:

- East London Transit – Transport for London – 2012/2017;
- Crossrail – Cross London Rail links – 2017;
- c2c Improvements – c2c Railway;
- Network Rail, Department for Transport Rail Group (no date yet fixed);and
- London bus network improvements – Transport for London.

3.1.5 Currently the site doesn't have a formal vehicular access, although the site can be accessed through a gate across a footway. A wooden panel is located next to the metal gate and both are located between the southern end of Risebridge Chase and the site boundary, and can be seen in **Figure 3.1** below.

Figure 3.1: Existing Site Access



3.1.6 The metal gate is set at 90 degrees to the existing house at the bottom of Risebridge Chase and is wide enough for only one car to pass through.

3.1.7 Behind the wooden panel is a large drainage channel, about 1m wide that runs south along the eastern edge of the site.

3.1.8 **Figure 3.2** shows a photo taken looking at the aforementioned metal gate and behind the fence panel. A fencepost can be seen marking the top of the drainage channel.

Figure 3.2: Ditch Location

SECTION 4 Future Vehicular Access

4.1.1 Section 6 of the London Borough of Havering supplementary residential design guidance states the following, on Movement and Accessibility:

> "The access to and circulation through a development should integrate with and improve the existing movement patterns of the wider area. A network of well-connected streets should be provided that offers a choice of routes with easy access to local amenities, open space, the public transport network and established routes.

> Infill developments should pay particular attention to the way they link together the areas that surround the site to avoid creating isolated enclaves of development. However, the need for permeability should still maintain safety, security and privacy. Routes into and through a development should minimise areas where the private activities of residents are visible to the public, and all access points should be clearly visible."

4.1.2 The guidance therefore references Manual for Streets 1 and advises against cul-de-sac arrangements.

4.1.3 Due to the sites location, integration with the surrounding movement pattern is only really possible on the sites eastern side where Risebridge Chase is located and the sites western side if a connection to the existing public footpath is made.

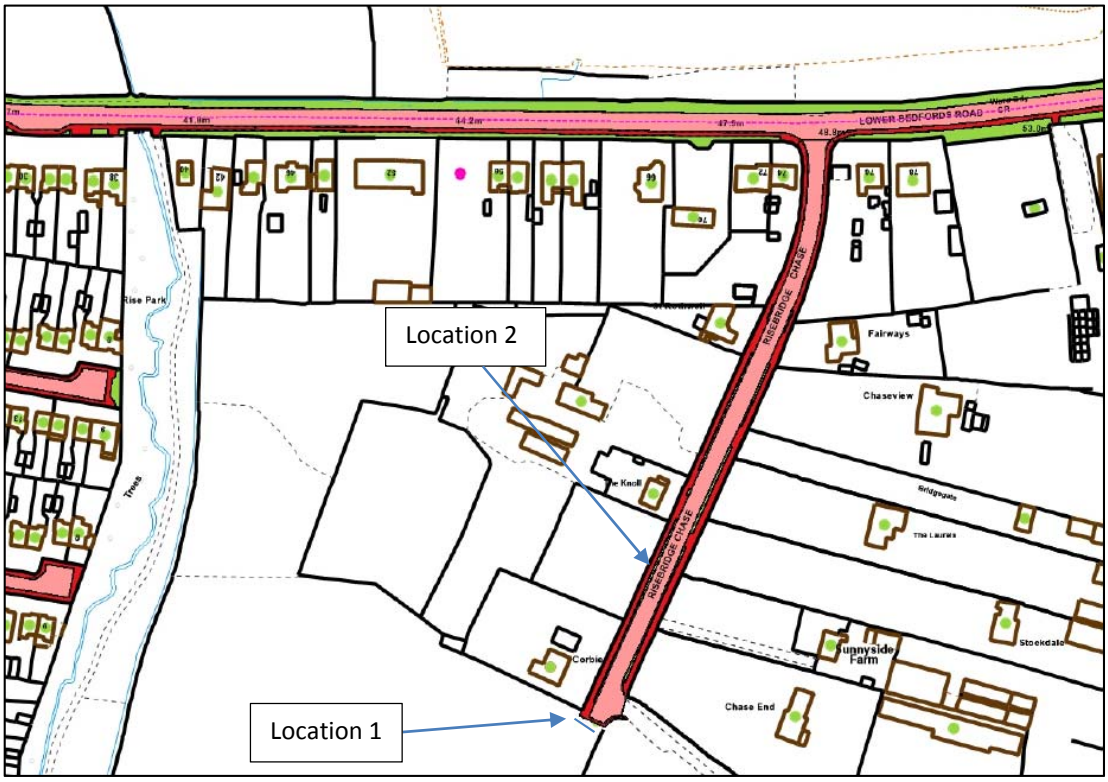
4.1.4 The design guide goes on to state ,

> "…ensure new design and layout is oriented around the needs of pedestrians, cyclists and connectivity to the public transport network. Ensure new residential layouts are easy to understand and navigate around.."

4.1.5 It is most likely that the highway authority will require a two-way vehicular access of 5.5m with at least one 2-2.5m footway adjoining Risebridge Chase. This would result in a minimum of a 7.5m access width onto Risebridge Chase.

4.1.6 This access width is possible in two locations as shown on **Figure 4.1**.

Figure 4.1: Possible Vehicular Access Location



4.1.7 The site access in location 1 would take the form of a priority junction with Risebridge Road.

4.1.8 The junction is possible in terms of visibility, width and connection to the public highway, hatched in pink in Figure 4.1. However, a junction in this location would require building carriageway over the existing drainage ditch that runs along the eastern boundary of the site, topographic survey is required to understand the impact of the drainage ditch on the access works.

4.1.9 **Figure 4.2** shows what the access junction would look like.

Figure 4.2 Site access example, location 1

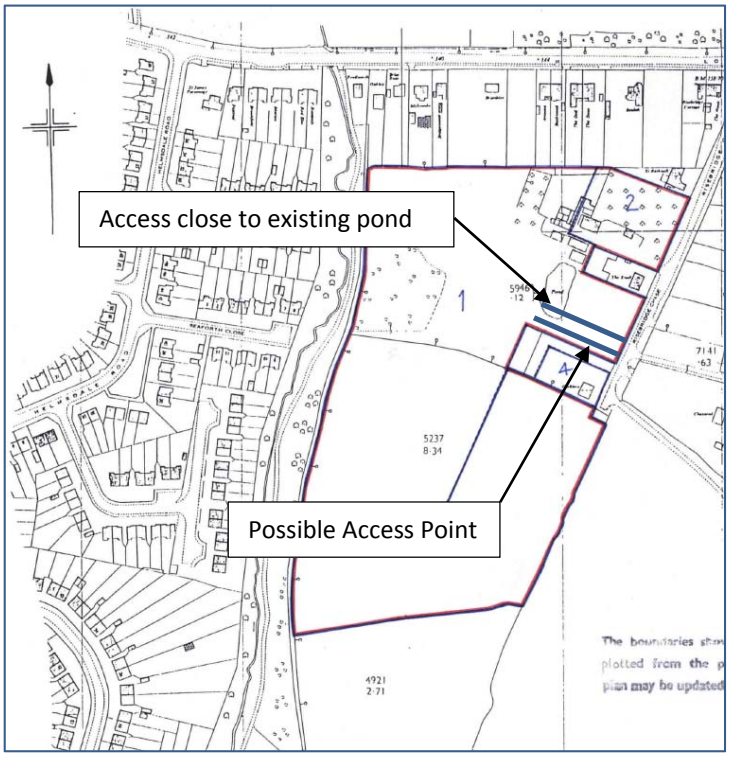
4.1.10 An alternative location for the site access is shown at location 2 shown in figure 4.1. The site access would take the form of a priority junction with Risebridge Road.

4.1.11 The junction is possible in terms of visibility, width and connection to the public highway, there are some utilities in the existing footway but they look to be easily avoided. It is most likely that a footway on either side of the access road would be required at this location.

4.1.12 The access road at this point will come into conflict with an existing pond, the extent of this should be investigated, and it was not accessible due to heavy vegetation during the site visit.

4.1.13 Figure 4.3 shows the potential location and width of the access, it also highlights the potential conflict with the pond.

Figure 4.3 Site access example, location 2



SECTION 5 Conclusions

5.1.1 A summary of the main findings are set out below:

- The site is located in a PTAL of 1A which is poor in terms of public transport accessibility, the nearest bus stop is over 400m away.
- There is an existing public footway to the west of the site, it may be possible to connect to this to improve the accessibility;
- The local authority will be looking for contributions to improve the accessibility of the site;
- The site visit identified two locations for potential vehicular access. Either location is possible in highways terms;
- Both potential access junction locations require topographical information in order to work up any access designs as both have existing water features;
- The access junction will require 2-way traffic movement and at least one footway with a minimum total width of 7.5m;and

- The junction onto the Lower Bedford Road is currently a mini-roundabout, due to the heavier flows on Lower Bedford Road, traffic will have difficulty exiting Risebridge Chase. The junction may need upgrading, although a larger roundabout is not possible due to the lack of available highway land. An alternative would take the form of a signalised junction.

LAND ADJACENT IVY HOLT NORTH ROAD HAVERING ATTE BOWER RM4 1PS

Introduction

This statement has been prepared to allow The London Borough of Havering to consider the above site for future development and to justify the scheme against relevant planning policies.

Development Description

This proposed use of the site would be for residential purposes and vehicular access to any dwellings/dwellings would be taken from new crossovers along North Road.

Planning Considerations

The local LDF seeks to ensure that new developments are satisfactorily located and are of a high standard of design and layout which is compatible with the character of the surrounding area and does not prejudice the environment of the occupiers or adjacent properties.

The general thrust of national and regional is to secure sustainable patterns of development and regeneration through the efficient re-use of previously developed urban land, concentrating development at accessible locations and transport nodes. The councils emerging LDF reinforces this through stating a presumption for the redevelopment of non designates sites within the urban area for residential use.

It is considered that in principle, the site is well placed for residential development in planning terms. It is located in close to a range of community, service and recreational facilities with public transport connections linking the site to Romford and Epping and further afield to London.

In accordance with the aims of sustainable regeneration, the proposal of the construction of new sustainable residential accommodation will assist in the regeneration of the wider area. It will provide much needed new housing in this part of the borough and will contribute to meeting the councils housing requirements of new dwellings per annum.

It also represents an efficient use of the site, which will allow the proposed development to integrate with the existing properties and buildings in proximity of the surrounding area.

At present the site is adjacent Ivy Holt and has been used as a builder's yard/ merchants for many years. This use is still in operation.

The proposed new use would be a great improvement on the current situation as it would be more in keeping with this residential area. It also should be noted next to the site is a school.

The site is situated within easy reach of many local amenities including schools, shops, supermarkets, places of worship, public open spaces, social venues and a large number of employment areas.

GB51 – Land north of Eastern Avenue East, Romford, London Borough of Havering

Additional planning policy information submitted by Old Libertians War Memorial Charitable Trust - March 2016

1. Introduction

This written representation is intended to assist with the assessment by the London Borough of Havering of the suitability for development of this 4.1ha site, currently within the Metropolitan Green Belt. It is accompanied by a Technical Note prepared by Mayer Brown, which outline the opportunities and constraints of this site and consequently the development potential. It contains a plan demonstrating the suitability of the site for development in light of the opportunities and constraints identified.

The site is deliverable (suitable, available and viable) and offers the opportunity to accommodate a high quality development of up to 150 homes alongside community facilities and associated green infrastructure.

The site is not in agricultural use and is unconnected to a farming unit. There is a temporary sports field (used for weekend youth football) with associated club building on the site but no formal designation for amenity or recreation.

The site has the potential to secure formal public open space, permanent public access and provision of high quality all-weather sports for a wider range of users than is currently the case. There are several options to relocate the grass playing pitches within the wider area.

2. Location

The site lies on the edge of Romford, adjoining the Harold Hill District of the town. Residential areas lie immediately to the north and east. There is vacant land (Meadow Farm) next to a scrapyard to the west. A mature hedgerow and tree belt partially screens the A12 (Eastern Avenue East), which runs immediately to the south.

The site has a key locational advantage over many other Metropolitan Green Belt sites in the District; it does not project out from the built up area into the open countryside. Instead, it comprises undeveloped land that is visually contained by an existing dual carriageway. Development of the site would infill this land to meet this existing physical barrier. South of the dual carriageway, the Romford Golf Club and the Gidea Park Sports Ground would still maintain the openness between the Harold Hill and Gidea Park Districts of the town.

Its location between existing housing and the A12 also provides an opportunity to increase densities as part of a noise mitigation strategy of benefit to existing residents.

3. Accessibility

The nearby Gidea Park and Harold Wood stations (under 2km) are served by the Great Eastern Main Line, which runs into Liverpool Street. Bus routes connect with these stations and various town and District centres.

There are local centres including Masefield Crescent within 400m. Hilldene School Grange Road is within 1km and a Tesco supermarket within 800m. There are many recreational facilities including the local Keats Avenue playsite within 400m to the west and the well-equipped Gidea Park Sports Ground within 800m to the south east. Romford town contains a District Centre and plentiful employment sites.

4. Designations

There are no environmental designations (either ecological or landscape).

The site does not lie close to a conservation area or listed building, or within an area of special character.

5. Green Belt function

The site makes a limited contribution to the purposes of including land within the Green Belt, therefore its value in Green Belt policy terms is limited (the release of the site from Green Belt is therefore not likely to give rise to significant harm). The table below provides a summary against the national functional criteria.

Purpose	Criteria	Assessment
1. to check the unrestricted sprawl of large built-up areas;	(a) Land parcel is at the edge of one or more distinct large built up areas (b) Prevents the outward sprawl of a large built up area into open land, and serves as a barrier at the edge of a large built-up area in the absence of another durable boundary	**GB51 is a relatively small site which adjoins the settlement boundary of Romford, and the developed surroundings are part of a single built-up area. Development of the land would effectively be infill as the surrounding development is part of the same settlement. GB51 is characterised by a number of urbanising features, including the A12 and surrounding housing.** **Development of site GB51 would not represent sprawl, as it is contained by existing development. Development could help to round off the settlement pattern.** **Land beyond this area to the west, which is designated as Park/Open Space as well as Green Belt, along with a strong woodland boundary, would prevent ribbon development along the A12.**
2. to prevent neighbouring towns merging into one another;	Prevents development that would result in merging of or significant erosion of gap between neighbouring settlements, including ribbon development along transport corridors that link settlements.	**The land is not between settlements and so has no role in separating neighbouring towns**

Purpose	Criteria	Assessment
3. to assist in safeguarding the countryside from encroachment;	Protects the openness of the countryside and is least covered by development.	**The countryside is afforded little protection by the designation of GB51 as Green Belt. Neighbouring land uses include, residential; road infrastructure; and recreation/parkland. This site is detached from the wider open countryside.**
4. to preserve the setting and special character of historic towns; and	Protects land which provides immediate and wider context for historic settlement, including views and vistas between the settlement and the surrounding countryside.	**Surrounding development in the form of relatively modern housing and the A12 dominate the character of the site. It has no role in preserving the setting or special character of the local townscape.**
5. to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.	All Green Belt achieves this purpose if the amount of land within urban areas that could be developed has already been factored in before identifying Green Belt land.	**The Council is already encouraging the maximum potential for urban regeneration in their policies and bearing in mind the large unmet housing need, the maintenance of this site as Green Belt is unlikely to fulfil this Green Belt purpose.**

Plan 1: Site Location Plan
Appendix A: Opportunities and Constraints Plan

1 Introduction

1.1 Mayer Brown have been instructed by Old Libertians War Memorial Charitable Trust to undertake a technical review of the Old Libertians Foundation Sports Ground to outline the opportunities and constraints of this site with regards to development potential.

1.2 The site is located to the north of Eastern Avenue East in Romford, Greater London. Refer to **Plan 1**. The approximate grid reference for the site is E_552873, N_190730.

1.3 The site is bound by hedgerows and trees, with residential dwellings sited to the north and east, Eastern Avenue East to the south, and farmland located to the west.

1.4 The site is currently a sports ground, with buildings located in the south east corner of the site.

1.5 This technical note has been produced to outline the opportunities and constraints of this site and consequently the development potential. A plan has been produced which demonstrates the suitability of this site for development in light of the opportunities and constraints identified, refer to **Appendix A**.

2 Transport

Access arrangements

2.1 The Old Libertarians ground is currently accessed directly from Masefield Close, via a priority junction. Masefield Close is a residential cul-de-sac with a carriageway width of approximately 6m. Parking bays are marked on both sides of the road, with vehicles being permitted to park partly on the footway. This is a common arrangement in this part of London to prevent blocking of the carriageway by parked cars and will assist in ensure that clear access remains to the development site.

2.2 Masefield Close is currently the only access point available to the site. The junction is located on the outside of a sharp bend so has good visibility in both directions. At present, the access is around 4.0m. To enable the greatest level of development, this entrance should be widened to around 6m carriageway width plus at least one footway, to ensure that a safe and suitable access is provided for all users.

2.3 Other access locations have also been considered. The cul-de-sac arrangement of Ramsey Gardens adjoins the site on the eastern side. This is understood to be a private road and therefore access is unlikely to be achievable in this location.

2.4 The A12 Eastern Avenue runs along the south side of the site. This is a dual carriageway with a central reserve, and this particular section has limited direct access points. At an appropriate time it may be beneficial to discuss the option for a left-in left-out entrance with the highways authority, possibly with slip roads depending on speeds and volumes on the A12, in case they would be amenable to this arrangement.

2.5 Should the adjacent sites become available (Meadow Farm and Park Farm), so that all three sites can be developed together, there is scope to re-use the existing entrance which serves the two farms directly onto the A12. This arrangement would require upgrading to meet current design standards, but could provide a left-in left-out junction with good visibility splays, suitable for traffic from a large residential development.

2.6 An alternative option to access the wider sites may be to link via Keats Avenue, which forms a stub arm arrangement at present. This currently provides an access to a park, which is understood to be managed by Havering Council. Any public open space lost by providing an access through this area would need to be replaced on-site. Also, careful design in line with Manual for Streets standards would need to be given to the highway through this area, as it is likely to split an equipped play area from an open playing field and therefore slow traffic speeds and safe crossing points would be essential.

Accessibility

2.7 Footways are provided along the majority of local residential roads, and a network of residential roads provide cycle routes to surrounding areas. The rail stations at Gidea Park and Harold Wood are both within an easy cycling distance, via quieter roads, with off-road paths provided around the A12 grade separated junction at Gallows Corner.

2.8 Bus stops are available on Straight Road, approximately 500m to the east of the Masefield Close site entrance. These stops are served by route 174, between Dagenham and Harold Hill, 499 between Gallows Corner and Heath Park Estate, and the night service N86 between Harold Hill and Stratford.

2.9 There is a parade of local shops at the eastern end of Masefield Crescent, within 350m of the site entrance on Masefield Close including a newsagent, convenience store and pharmacy, enabling future residents to walk to this location for “top up” shopping. Additionally, there is a large supermarket approximately 1km from the site on the A12 Colchester Road, which is within walking and cycling distance.

2.10 Overall access to the site is achievable with accessibility and sustainability criteria meant.

3 Drainage

Flood Risk

3.1 The site is located in Flood Zone 1, and hence the risk of flooding from rivers and sea at the site is low. Refer to the EA Flood Map for Planning (Rivers and Sea) in **Figure 3.1**.

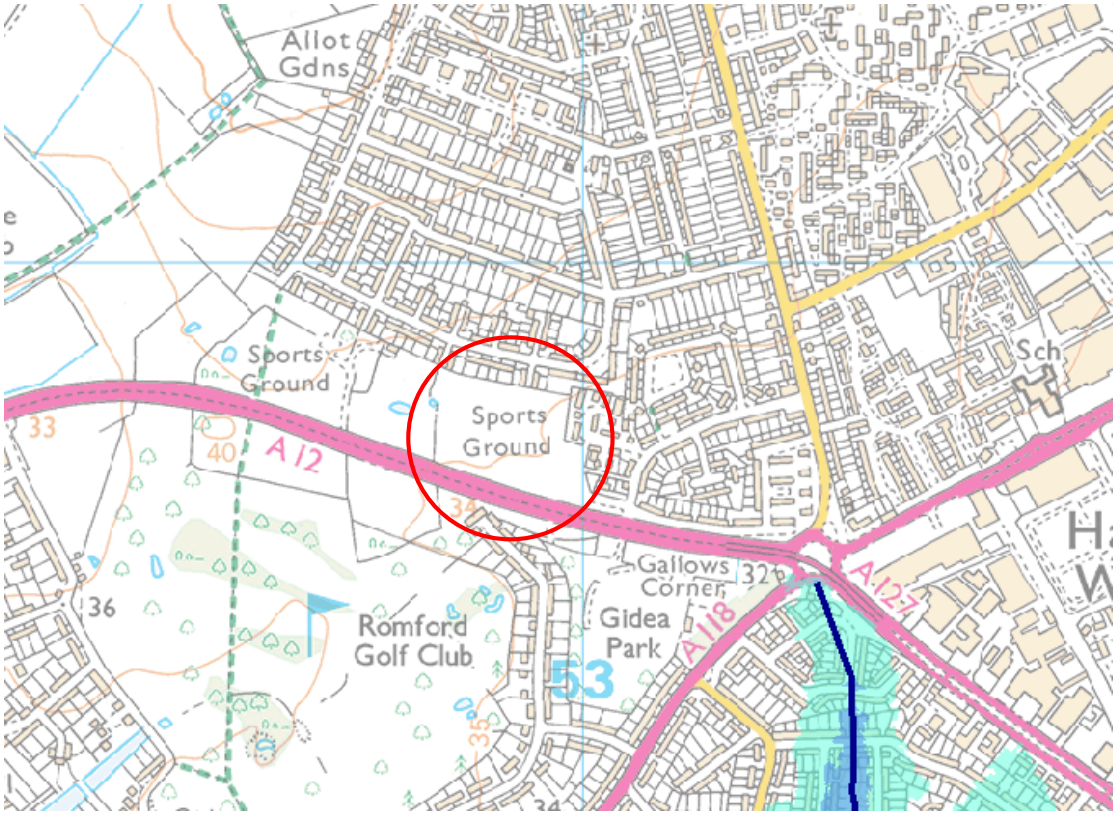

Figure 3.1. EA Flood Map for Planning (Rivers and Sea)

3.2 EA mapping displaying the risk of flooding from surface water indicates that the majority of the site is at a 'very low' risk of flooding from surface water, but small pockets of the site are at a 'low,' 'medium' or 'high' risk of flooding from surface water. Refer to **Figure 3.2**.

3.3 EA mapping indicates that there is no risk of flooding to the site from reservoirs.

Figure 3.2. EA Risk of Flooding from Surface Water

Drainage Strategy – Best Practice

3.4 As the proposed residential dwellings will be sited on a Greenfield site, the development will increase the impermeable area on site. As new developments should not increase flood risk elsewhere, the runoff rate from the new development site would be restricted to the Green Field Equivalent runoff rate (QBAR). To achieve this, attenuation would be provided to at least limit the runoff rate to QBAR, with an aim of reducing the runoff rate to lower than QBAR.

3.5 Regarding the discharge of surface water, Building Regulations Part H prescribes a hierarchal approach to surface water discharge. In order of preference, surface water should be discharged as follows:

- Via infiltration
- To watercourse
- To public sewer

3.6 The Geology of Britain viewer indicates that the site's bedrock geology is clay, silt and sand. Soakaway testing would be undertaken to determine the precise permeability of the ground and therefore the suitability of discharging via infiltration.

3.7 Regarding discharging surface water via a watercourse, **Figure 3.3** demonstrates that there are no watercourses within close proximity of the site.

3.8 If the above solutions are both deemed inappropriate, surface water can be discharged to a public sewer, subject to approval from the Regional Water Authority.

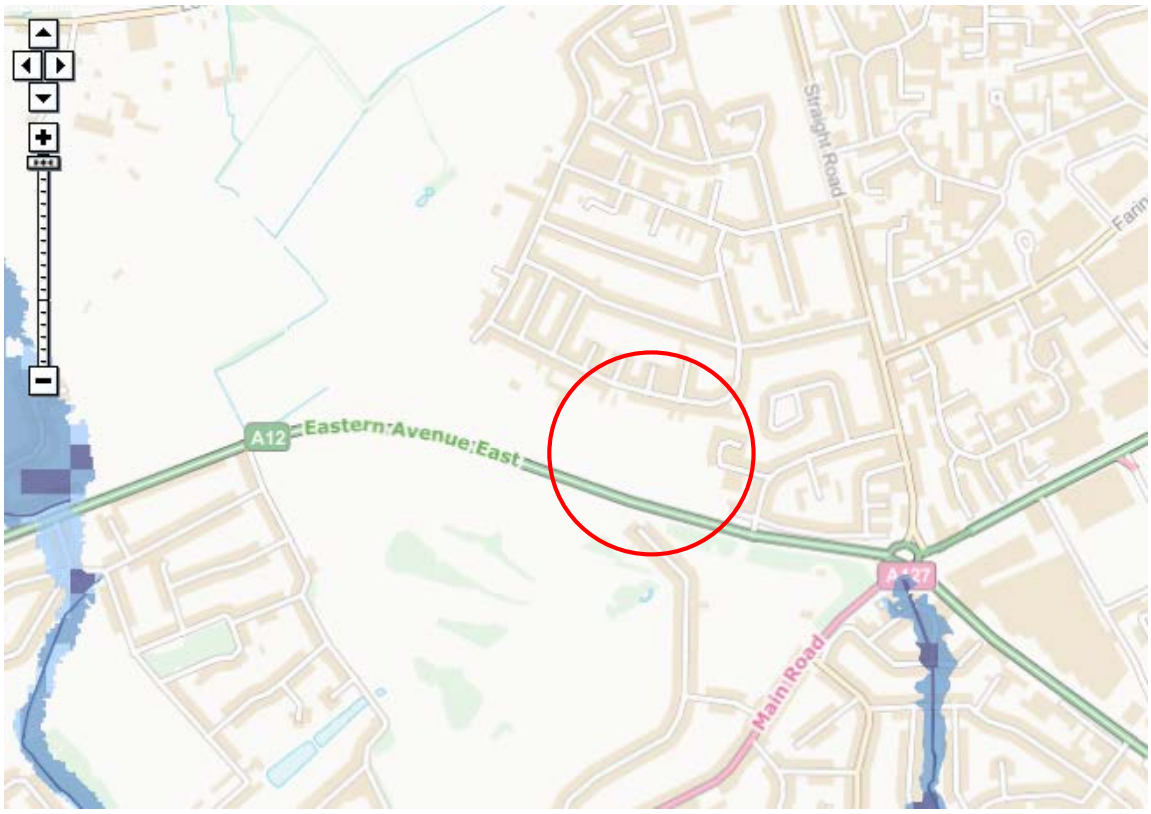

Figure 3.3. EA Risk of Flooding from Rivers and Sea

4 Ecology

Designated Wildlife Areas

4.1 The whole site is within metropolitan green belt; the Local Plan (Policy DC46) states that the council will promote uses in the green belt that have a positive role in fulfilling green belt objectives.

4.2 There are no statutory designated sites within 2 km of the site.

Site Habitats, Species and Further Assessment Required

4.3 The following is based on aerial photography and requires confirmation; an extended phase 1 habitat survey and data search should be undertaken to categorise the site's habitats and assess the habitats' suitability for supporting protected species.

4.4 The site is formed of three fields, two are fallow land and one is a sport field. All three are most likely former arable land. There are tree lines / hedgerows at most field boundaries.

4.5 The two fallow fields appear to be rough grassland with some light scrub. These areas could support reptiles, amphibians, breeding birds and badgers. The phase 1 habitat survey will identify badger setts and scope the need for reptile surveys (reptiles that may occur at the site are protected from harm) or bird surveys (specially protected birds are unlikely to occur here).

4.6 There is one pond within the site and nine within 250 m of the site; these should all be assessed for great crested newts. An initial suitability assessment will be required, followed by further surveys as appropriate. (Great crested newts are European Protected Species (EPS); the animals and their habitats are protected). Most of these ponds are on the far side of the A12, and so the impacts to newts in these ponds may be scoped out after the initial assessment. If that is the case, then only two ponds – one site pond and one pond to the west of the site may support newts which would be effected by development of the site. Direct impacts to both of these ponds can be avoided in the scheme design and appropriate compensation for newts can be achieved through creation of an enhanced wildlife area in the west of the site.

4.7 The site includes buildings. These should be assessed for their suitability for roosting bats (EPS), and subject to phase 2 surveys as appropriate.

Key Site Constraints and Opportunities for Enhancement

- Development should aim to achieve net gain to biodiversity in line with national policy.
- To achieve this, part of the site should include an area or areas for wildlife conservation. In particular, development massing should avoid the western part of the site, retaining this area for wildlife enhancement. This may also be needed to provide a receptor site and mitigation if reptiles or great crested newts are found to be present.
- Retain trees and hedgerows where possible.
- Include wetland planting within SUDs.
- There are two potential wildlife corridors in the existing site – a tree / hedge line that runs north – south through the middle of the site and the boundary planting along the A12; these should be retained and enhanced within a wide greenspace buffer.
- The eastern field appears to be the least ecologically significant, and there are fewer constraints to development here.

5 Landscape

Introduction

5.1 The site is located to the south of Bell Avenue and to the north of the A12 Eastern Avenue. To the east is the existing club house of the Old Libertians Foundation and Masefield Close. To the west is an area of open space and natural regenerating woodland.

5.2 The proposed site comprises of an existing sports ground bounded by semi mature trees and understorey vegetation to the north and west. The southern boundary comprises gappy trees and scrub with intermittent views into the proposed site. The eastern boundary has dwellings on Masefield Close, the club house and car park overlooking the existing sports pitches. Beyond the western site boundary are two pasture fields and a small industrial area on the northern boundary.

Landscape Character and Visual Sensitivities

5.3 The potential landscape and visual sensitivities are described below:

- The site is currently a sports ground so there will be a loss of local facilities and the character of the landscape will change from recreation to urban;
- The existing landscape character is of a semi rural landscape bound by mature and semi mature trees and vegetation;
- There will be a visual impact of the proposed development from surrounding urban grain, particularly from Bell Avenue and Masefield Close. The views will mainly be from upper storey windows only as the existing vegetation helps to screen views; and
- The proposed development will be seen from the A12 as there are gaps in the existing vegetation along the A12 Eastern Avenue. Hedgerows and mature trees which provide visual unity and ecological connectivity.

Landscape Mitigation Guidelines

5.4 The following measures should be incorporated into a mitigation strategy for the proposed development:

- Conserve the veteran tree resource, promoting management of the existing resource and planting to ensure succession and habitat continuity;
- Restore hedgerow boundaries to provide visual unity and intactness and increase biodiversity, linking agricultural land with woodland. Promote growth of hedgerow trees;
- Consider opportunities for further tree (in-field) and woodland planting to reduce the visual impact of urban development;
- Provision of adequate mitigation shelter belt planting to reduce visual impact from neighbouring dwellings particularly on Masefield Close and from the A12 Eastern Avenue;
- Provision of a buffer with the existing Green Belt on the western boundary;
- Provide public open space for benefit of new community and existing urban fringe dwellings; and
- Provide ecological wildlife corridors within the site.

6 Noise

Site Constraints

6.1 The site adjoins the A12 (Eastern Avenue) to the south. As such, the noise climate at the site is dominated by road traffic noise:

Figure 6.1: Site Constraints - Noise

6.2 Whilst DEFRA noise maps do not extend fully to the site area, available data indicates that the noise levels at the southern boundary of the site are in the region of 70-75dB $L_{den.}$ This noise levels is likely to correspond to a daytime sound level of 65-70 dB $L_{Aeq,16hour}$. The night-time noise level at the southern boundary of the site is indicated to be in the region of 60-65 dB $L_{Aeq,8hours}$.

6.3 Noise levels will reduce across the site (due to the natural attenuation of sound over increasing distance). The available noise maps indicate that noise levels at the northern boundary of the site may be approximately 10-15dB(A) lower than those at the southern boundary of the site, closest to the A12.

Significance of Existing Noise Levels

BS 8233: 2014; "Sound Insulation and Noise Reduction for Buildings

6.4 BS 8233: 2014 *"Sound Insulation and Noise Reduction for Buildings"* offers the following design guidance for indoor ambient noise levels within dwellings:

Activity	Location	07.00 to 23.00 hours	23.00 t0 07.00 hours
Resting	Living Room	35dB $L_{Aeq,16hour}$	--
Dining	Dining Room/Area	40dB $L_{Aeq,16hour}$	--
Sleeping (daytime resting)	Bedroom	35dB $L_{Aeq,16hour}$	30dB $L_{Aeq,8hour}$

Table 6.1: BS 8233 Indoor Ambient Noise Level Design Guidance

6.5 Given that an open window will provide an outside to inside sound reduction of around 10-15dB(A), it is clear that, if unmitigated, existing noise levels at the site could have a significant adverse noise impact on building occupants, most particularly for any buildings site close to the southern boundary of the site.

"Guidelines for Community Noise" (World Health Organisation, 1999)

6.6 The criteria outlined in this document provide a summary of research regarding the effects of noise on the community.

6.7 With regard to ***'annoyance'***, section 3.8 of the Guidelines states:

> *"Annoyance in populations exposed to environmental noise varies not only with the acoustical characteristics of the noise (source, exposure), but also with many non-acoustical factors of social, psychological, or economic nature. These factors include fear associated with the noise source, conviction that the noise could be reduced by third parties, individual noise sensitivity, the degree to which an individual feels able to control the noise (coping strategies) and whether the noise originates from important economic activity."*

6.8 Section 4.2.7 of the Guidelines further states that:

> *"The annoyance response to noise is affected by several factors, including the equivalent sound pressure level and the highest sound pressure level of the noise, the number of such events, and the time of day. Methods for combining these effects have been extensively studied. The results are not inconsistent with the simple, physically based energy equivalent energy theory, which is represented by the L_{Aeq} noise index.*
>
> *…….*
>
> *During the daytime, few people are seriously annoyed by activities with L_{Aeq} levels below 55dB; or moderately annoyed with L_{Aeq} levels below 50dB".*

6.9 It is clear that existing noise levels at the southern boundary of the site exceed WHO guideline values by a significant margin. If unmitigated, existing noise levels at the site could therefore have a significant adverse noise impact on future external amenity spaces. However, levels towards the northern boundary of the site are significantly lower and, even if unmitigated, should provide reasonable conditions for external amenity spaces.

Opportunities

6.10 The site provides a number of opportunities for mitigating the impacts of road traffic noise. Potential development strategies could include:

- The use of noise barriers running parallel to the A12 to reduce noise propagation across the site;
- Using the massing of future buildings to provide acoustic screening;
- Ensuring that future buildings offer an appropriate level of sound insulation (for example, by the specification of effective glazing/alternative means of ventilation);
- Locating amenity areas as far as practicable from the A12 and/or locating such areas to take advantage of the natural screening afforded by barriers/buildings.

6.11 With appropriate mitigation, the existing acoustic constraints of the site can be overcome to enable the site to be satisfactorily developed for future residential use.

6.12 In addition to the development site provided an opportunity for future sustainable residential accommodation, the development of the site would also provide benefits (i.e. reduce existing levels of traffic noise) to the existing residential area to the north of the site (Bell Avenue).

7 Ground Conditions

7.1 The Geology of Britain viewer indicates that the site's bedrock geology is as classified as London Clay Formation – Clay, Silt and Sand; refer to **Figure 7.1.**

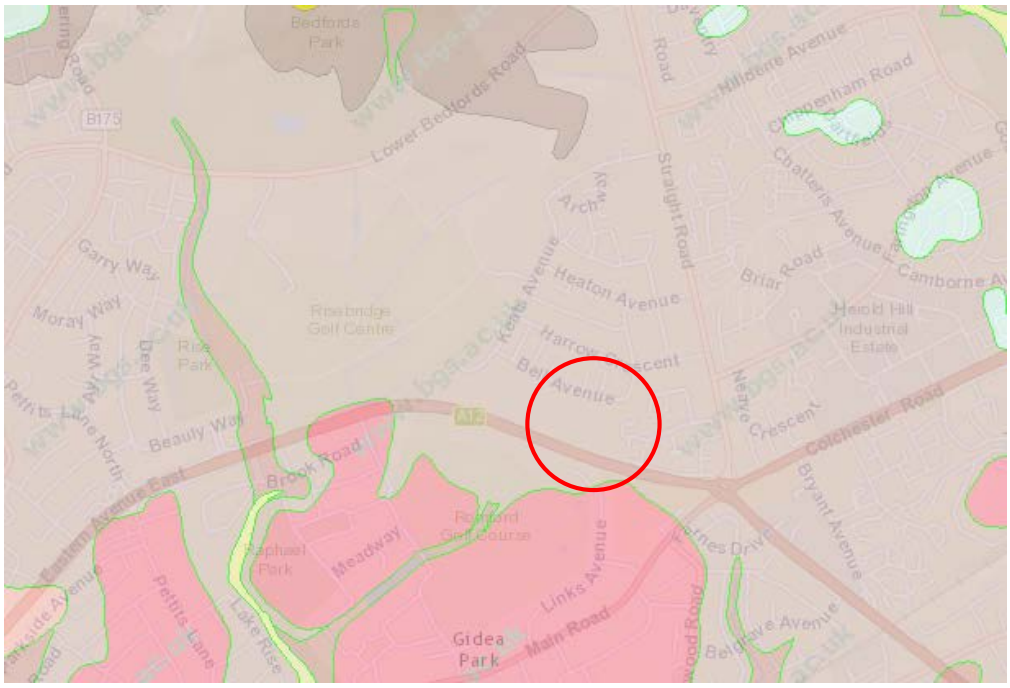

Figure 7.1. Geology of Britain viewer

7.2 As a result we do not expect any delivery issues with development matters. The precise permeability of the ground will be determined by soakaway testing.

8 Conclusion

8.1 The site is located to the north of Eastern Avenue East in Romford, Greater London. Refer to **Plan 1**. The approximate grid reference for the site is E_552873, N_190730.

8.2 Mayer Brown have considered the following disciplines to provide an initial view of the site and the development potential;

- Transport
- Landscape
- Drainage
- Ecology
- Ground Conditions
- Noise

8.3 In overall terms the site has limited constraints and of those identified onsite offer some betterment to local residents to reduce the noise impact of the A12 as it currently exists.

8.4 Access is achievable via the existing access arrangement, widened to accommodate the level of development.

8.5 The ground conditions indicate an onsite drainage solution is practical and possible creating a platform for sensitive and responsible development without causing impact on the surrounding area, or resources.

8.6 As a result we believe this site is worthy of consideration for development.

INTRODUCTION

The purpose of this document is to advance the merits of this site for inclusion as a suitable, available and sustainable housing site to assist the Council in maintaining a rolling programme of housing land.

The site is in single ownership meaning that there are no problems of site assembly.

SITE LOCATION AND DESCRIPTION

The site is located on the edge of the Upminster settlement area on the western side of Front Lane. It lies south of Junction 29 of the M25 motorway and the A127 Arterial Road.

It has an area of approximately 0.4 ha. It is currently in nursery use. There are a group of buildings to the south east corner. Access is between Nos. 355 and 357 Front Lane. No. 355 is a two storey semi-detached house. No. 357 is a single storey bungalow. The access is narrow and is restricted by a weeping willow and a mature hedge.

The site is bounded to the east and south and partly to the north by residential development. To the west is open land and mature woodland (Pot Kiln Wood)

There is a power line crossing the southern section of the site, with a large pylon located just to the west.

This part of Upminster is a mature residential area of mixed character. Front Lane is a busy road which includes bus routes. There is a local shopping area some 300 metres to the south at the junction with Avon Road.

PLANNING POLICY

Planning policy comprises three levels, National, Strategic and Local.

<u>National Planning Policy Framework (March 2012)</u>

The National Planning Policy Framework (NPPF) sets out the Government's planning policies for England and how these are expected to be applied. It sets out the Government's requirements for the planning system only to the extent that it is relevant, proportionate and necessary to do so. It provides a framework within which local people and their accountable councils can produce their own distinctive local and neighbourhood plans, which reflect the needs and priorities of their communities

The NPPF seeks to proactively drive and support sustainable economic development to deliver the homes, business and industrial units, infrastructure and thriving local places that the country needs. Every effort should be made objectively to identify and then meet the housing, business and other development needs of an area, and respond positively to wider opportunities for growth. Plans should take account of market signals, such as land prices and housing affordability, and set out a clear strategy for allocating sufficient land which is suitable for development in their area, taking account of the needs of the residential and business

The NPPF recognises that residential development can play an important role in ensuring the vitality of centres and set out policies to encourage residential development on appropriate sites.

The NPPF states that local planning authorities should identify and bring back into residential use empty housing and buildings in line with local housing and empty homes strategies and, where appropriate, acquire properties under compulsory purchase powers. They should normally approve planning applications for change to residential use and any associated development from commercial buildings (currently in the B use classes) where there is an identified need for additional housing in that area, provided that there are not strong economic reasons why such development would be inappropriate.

To boost significantly the supply of housing, local planning authorities should:

- use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in the Framework, including identifying key sites which are critical to the delivery of the housing strategy over the plan period;
- identify and update annually a supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements with an additional buffer of 5% (moved forward from later in the plan period) to ensure choice and competition in the market for land. Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply and to ensure choice and competition in the market for land;
- identify a supply of specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15;
- for market and affordable housing, illustrate the expected rate of housing delivery through a housing trajectory for the plan period and set out a housing implementation strategy for the full range of housing describing how they will maintain delivery of a five-year supply of housing land to meet their housing target; and;
- set out their own approach to housing density to reflect local circumstances.

Housing applications should be considered in the context of the presumption in favour of sustainable development. Relevant policies for the supply of housing should not be considered up-to-date if the local planning authority cannot demonstrate a five-year supply

of deliverable housing sites. Local planning authorities should seek opportunities to achieve each of the economic, social and environmental dimensions of sustainable development, and net gains across all three

The NPPF encourages the effective use of land by reusing land that has been previously developed (brownfield land), provided that it is not of high environmental value. Appendix 2 of the NPPF provides a definition of 'Previously developed land'

Previously developed land: Land which is or was occupied by a permanent structure, including the curtilage of the developed land (although it should not be assumed that the whole of the curtilage should be developed) and any associated fixed surface infrastructure. This excludes: land that is or has been occupied by agricultural or forestry buildings; land that has been developed for minerals extraction or waste disposal by landfill purposes where provision for restoration has been made through development control procedures; land in built-up areas such as private residential gardens, parks, recreation grounds and allotments; and land that was previously-developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape in the process of time.

The NPPF emphasises that the Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.

The site does not fall within the definition of 'previously developed land'. It would therefore be considered as a 'greenfield' site for the purposes of determination of a planning application.

<u>The London Plan</u>

Greater London is administered by the Greater London Authority, which is the strategic authority for the area under the control of the Mayor of London.

The following policies of the Greater London Plan are particularly relevant to the site:

Policies 3.3 (increasing housing supply), 3.8 (housing choice), 7.6 (architecture), 7.16 (green belt) of the 2011 London Plan are relevant.

The Plan makes it clear that the strongest protection should be given to London's Green Belt, in accordance with national guidance. Inappropriate development should be refused, except in very special circumstances. Development will be supported if it is appropriate and helps secure the objectives of improving the Green Belt as set out in national guidance

Core Strategy and Development Control Policy Development Plan Document

The site is within the area administered by the London Borough of Havering

Policies DC2 (Housing Mix and Density), DC3 (Housing Design and Layout), DC33 (Car Parking), DC36 (Servicing), DC45 (Appropriate Development in the Green Belt), DC61 (Urban Design) of the LDF Core Strategy and Development Control Policies DPD are considered relevant. The Adopted Residential Design SPD is also relevant.

The site is situated within the Metropolitan Green Belt where development is restricted in order to restrict the sprawl of urban settlements, safeguard the countryside from encroachment and preserve the setting and character of historic towns. The settlement area boundary runs just to the south of the site

GREEN BELT BOUNDARY

HOUSING LAND SUPPLY

London Borough of Havering's target is 4,850 units for the period 2012/13 to 2016/17. The current projected supply is 5,307 units. On this basis, the Council will meet be able to deliver a five year housing land supply. However, this is a rolling programme and the Council should continue to invite owners to advance sites that are genuinely available and suitable for residential development.

SITE SPECIFIC CONSIDERATIONS

Any intensification of development is likely to require upgrading of the access. It is considered that this is achievable on land within the control of the owners of the site.

POWER LINE

The proximity of a power line is noted. The National Grid has produced guidelines for development near power lines. It has sometimes been suggested that minimum distances between properties and overhead lines should be prescribed. National Grid does not consider this appropriate since each instance must be dealt with on its merits. However, it has always sought to route new lines away from residential property on grounds of general amenity. Since the only limitation on new development has been the statutory safety clearances, a large amount of residential and other development has been carried out subsequently beneath and adjacent to overhead lines.

Where development takes place and how it is designed are principally matters for the landowner, developer and the local planning authority to determine. National Grid should be consulted at an early stage on proposals for development near lines and substations, when it is more likely that National Grid's advice and guidance on development near to electricity lines issues can be taken into account

INFRASTRUCTURE CONTRIBUTIONS

The London Borough of Havering has adopted a Supplementary Planning Document (SPD) setting out the requirements for infrastructure contributions payable by development. In the case of residential development this is £6,000 per dwelling. In addition a payment of £20 per square metre (net internal) is made through Community Infrastructure Levy adopted by the Mayor of London. This is to assist in the funding of Crossrail. It is appreciated that this position may have changed by the time an application is submitted but the owner accepts that, in principle, this form of contribution is an acceptable and reasonable requirement to allow the public authorities to absorb the wider impacts of development on the local and strategic environment.

WILDLIFE AND NATURE CONSERVATION

The site has been extensively worked as a nursery and it is unlikely that any wildlife or nature conservation interests will be affected by redevelopment. It is accepted, however, that an ecological report would be appropriate in the event of an application for redevelopment being submitted.

OTHER USES OF THE LAND

Planning policy does allow re-use of existing buildings in the Green Belt and it is recognised that re-use often represents the most sustainable form of development. There are no buildings suitable for conversion to residential use and it is considered that in order to achieve a comprehensive scheme redevelopment offers the most appropriate option.

SUITABILITY OF THE SITE FOR RESIDENTIAL REDEVELOPMENT

There is no doubt that the site is well-located for facilities and public transport and, in this sense, it is 'sustainable'. However, sustainable development comprises three elements – economic, environmental and social. It is recognised that an application is currently likely to fail on the environmental consideration of protection of the Green Belt. Residential development is 'inappropriate'. Conversely, the existing use is 'appropriate'.

However, it adjoins an existing residential area and offers an obvious opportunity for an extension of residential development on land which is already intensively developed and available.

It is well-served by public transport and is a short distance from local services and facilities.

CONCLUSION

The site is genuinely available and is in a single ownership. The site is highly sustainable being located on a bus route and close to services and facilities. It offers a natural extension of the existing residential area. A development can be advanced which respects the character and design of existing local housing. Detailed design could achieve a scheme which would offer a suitable transition between the existing housing development and the countryside. This could, if appropriate, include green links to the countryside which would be of benefit both to the local population and to wildlife.

It is trusted that the Council will give careful consideration to identification of this site as a suitable housing site to assist in meeting its commitment to achieve a balanced community.

Dear Sir/Madam,

Land at Tomkyns Manor, Tomkyns Lane, Upminster, RM14 1TP

The following comments are in support for the release of land at Tomkyns Manor from the Green Belt. I understand that this land has already been submitted for consideration, so please accept this letter as additional evidence in support of this site.

The landowner has submitted this land as four separate sites:

- Site 1 – the site has an existing barn that is currently used as a stables. It is the landowners intention to convert this existing barn into residential accommodation.
- Site 2 – a site of approximately 10 acres (4ha), but given the characteristics of the area would be suitable for a scheme of 10-12 dwellings. This site would be suitable for a specific self-build allocation.
- Site 3 – a site of approximately 6 acres (2.4ha), but given the characteristics of the area would be suitable for a scheme of 6-8 dwellings. This site would also be suitable for a specific self-build allocation.
- Site 4 – a site of approximately 4 acres (1.6ha), but given the characteristics of the area would be suitable for a scheme of 4-6 dwellings. This site would also be suitable for a specific self-build allocation.

Green Belt

The four sites at Tomkyns Manor are all located on land designated as Green Belt.

Copyright © Plainview Planning Ltd. All Rights Reserved
Clarendon House, 42 Clarence Street, Cheltenham, GL50 3PL. Registered - No. 06563374
www.plainview.co.uk

PLAINVIEW

Paragraph 79 of the NPPF states that the fundamental aim of Green Belt policy is to prevent urban sprawl and to maintain their openness and their permanence. Paragraph 83 states that Green Belt boundaries should only be altered in exceptional circumstances. It is anticipated that the Council will have to release land within the Green Belt to meet the objectively assessed need for the Borough and wider housing market area, which would amount to an exceptional circumstance. This need will be set out in the emerging Strategic Housing market Area.

The sites at Tomkyns Manor are collectively enclosed with no degree of existing openness and in this respect these sites do not fulfil the requirements of the NPPF. The eastern and western boundaries of the wider site are characterised by mature landscaping which prevent views across the site. The eastern and western boundary of the site contains a mature thick tree belt that also provides a defensible Green Belt boundary. The land to the south of the site is enclosed by mature trees and landscaping in the surrounding area. The only views of the site from the surrounding area are from Tomykins Lane, however the thick mature boundary prevents views into the site.

Paragraph 80 of the NPPF states that the Green Belt serves five purposes:

- to check the unrestricted sprawl of large built-up areas;
- to prevent neighbouring towns merging into one another;
- to assist in safeguarding the countryside from encroachment;
- to preserve the setting and special character of historic towns; and
- to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

As will be explained below, neither of the sites at Tomykins Manor, fulfils the purposes of the Green Belt.

Unrestricted Sprawl

With regard to the aim to protected unrestricted sprawl, the site is located towards the eastern edge of the built-up area and is located in a semi-urban area that is characterised by a scattering of large residential dwellings. Tomkyns Lane and the mature landscaping on the eastern boundary of the wider site acts as a barrier physically and visually separates the site from the surrounding area. It is considered that the containment of the site by the mature landscaping along the boundary edges

Copyright © Plainview Planning Ltd. All Rights Reserved
Clarendon House, 42 Clarence Street, Cheltenham, GL50 3PL. Registered - No. 06563374
www.plainview.co.uk

represents an important characteristic that ensures that development of the site would not represent unrestricted urban sprawl.

In defining Green Belt boundaries, Paragraph 85 of the NPPF states that local planning authorities should define boundaries clearly, using physical features that are readily recognisable and likely to be permanent and could include roads and tree lines. It is considered that the mature landscaping would act as a robust and defensible boundary to the Green Belt.

The enclosed nature of this site ensures that its development would not represent unrestricted urban sprawl and the containment of the site is an important characteristic.

Coalescence

The second purpose of the Green Belt is to prevent neighbouring towns from merging into one another. With regard to the second purpose, development of the site would only marginally bring the built up area of Romford closer to Brentwood, which at its closest point is over 2 miles to the east. The proposed development would therefore only be located marginally closer to this settlement. Furthermore, the mature landscaping along the applications eastern boundary, together with a number of physical boundaries, such as the M25 motorway and various significantly wooded areas would prevent Romford and Brentwood from ever merging.

Development these sites would not result or contribute towards Romford and Brentwood merging into each other.

Safeguarding the Countryside

The third purpose of the Green Belt seeks to assist in safeguarding the countryside from encroachment. The wider site is largely separated from the rest of the countryside by the mature landscape boundaries on all sides.

The Setting and Special Character of Historic Towns

Point 4 requires the preservation of the setting and special character of historic towns. The historic core of Romford is centred along South Street in the town centre. Historically, Romford has developed by building on open land to the north and east of the town centre, such that the original historic core is surrounded by more modern development. In these circumstances, the site does not perform a function in preserving the setting of the historic centre of Romford.

PLAINVIEW

Urban Regeneration

Point 5 states that the Green Belt is required to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. There are a lack of development opportunities within the wider built-up area of Havering to meet the objectively assessed need for the borough and wider housing market area. Consequently the tightly drawn Green Belt boundary restricts housing delivery and results in the housing objectives of the London Plan not being met.

Development at the Tomkyn Manor sites would therefore not impact upon the regeneration of urban sites, but it would positively contribute to meeting the Council's wider housing objectives.

Self-Build Development

The landowner has indicated that he would be willing to put these sites forward as specific self-build allocations.

Over recent years, the Government has expressed strong support for custom and self-build schemes through a comprehensive legislative framework. Self-build housing is now embedded into national planning policy. Paragraph 50 of the NPPF states:

> *"To deliver a wide choice of high quality homes, widen opportunities for home ownership and create sustainable, inclusive and mixed communities, local planning authorities should: - plan for a mix of housing based on current and future demographic trends, market trends and the needs of different groups in the community (such as, but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their own homes) [our emphasis]"*

In March 2015, Planning Minister Brandon Lewis wrote to local authorities to stress the government's pledge to make custom home building simpler and more affordable, stating:

> *The government has a vision to increase diversity in the housing market; custom and self-build homes can play a crucial role as part of a wider package of measures to achieve this goal.*

Furthermore, the Planning Minister stressed a warning to local authorities who do not help promote this new form of house building, noting:

Copyright © Plainview Planning Ltd. All Rights Reserved
Clarendon House, 42 Clarence Street, Cheltenham, GL50 3PL. Registered - No. 06563374
www.plainview.co.uk

> *National planning policy and guidance is clear that local planning authorities should identify and plan for local demand for custom and self-build housing. Planning inspectors will want to see evidence that consideration of demand for custom and self-build housing has been taken into account when they examine local plans. Failure to provide sufficient evidence may lead to plans being found unsound.*

The Self-Build and Custom House Build Act 2015, now places a duty on all authorities to keep a register on individuals and community groups interested in building their own homes. Furthermore, councils will need to take into account this self-build need in their local plan making and show this demand in their SHMA report.

At present, the Council does not have any self-build policies or initiatives and does not appear to have set up its self-build register as required by the Self-Build and Custom House Build Act 2015.

In light of this, the sites at Tomkyns Manor would provide an important location to meet this self-build need that would not be possible in an established urban area given the lack of suitable self-build sites.

I trust that the comments made above will be considered alongside the submissions that have already been submitted in support of the sites at Tomkyns Manor. Should you have any further questions please feel free to contact me directly.

Yours faithfully,

Andrew Ransome

By Email and by Post

Dear Lukas,

Havering Local Plan – Call for Sites
Land west of Lodge Lane, Romford

Further to our recent discussions I write to formally submit details of our Client's land holding at Lodge Lane, Romford for consideration as part of the emerging Local Plan. Strutt & Parker are acting on behalf of Scott Properties with regards to the site.

As we discussed I understand that work on the emerging Local Plan and evidence base is progressing. I have therefore provided below details of the site and emerging proposals. I would request that these are please considered as work on the Local Plan progresses.

The site at Lodge Lane covers a total area of approximately 7ha. The site is split by an existing area of raised land and it is proposed that this is maintained to form a buffer between the proposed area of development and the portion of the land which will be provided as public open space. This site division is also in line with the existing limit of built development on the site of the adjacent Forest Row Centre and Litten Close south of this. The overall area proposed for development to accommodate the care village covers an area of approximately 3.9ha.

The site benefits from good connectivity with the existing community. Buses also run from outside the site, approximately every 10 minutes between Havering Park and Harold Hill, calling at Romford, Gidea Park and Harold Wood stations. These provide access to both National Rail and London Underground services in and out of Central London and other nearby centres. As well as the local facilities provided along Colliers Row which are approximately 0.5 miles from the site, Romford is approximately 2.5 miles away and offers a wide range of larger scale services and facilities. Access to the site is available from Abridge Gardens and Portmore Gardens, from Lodge Lane.

Strutt & Parker LLP is a limited liability partnership and is registered in England and Wales with registration number OC334522.
A list of members' names is open to inspection at our registered office: 13 Hill Street London W1J 5LQ.

It is proposed that the site provides for a high quality retirement community to meet housing needs and in particular assist in meeting the needs of the ageing population. The nature of the proposal will of course generate only limited traffic and is anticipated to provide in excess of 120 jobs. The proposal will therefore have very significant benefits in terms of the social and economic aspects of sustainable development. Additionally the land to the west of the site, is proposed to be retained as open space and provides opportunities for environmental enhancement.

Background

As you will be aware the NPPF highlights the need for the planning system to support *"strong, vibrant and healthy communities, by providing the supply of housing required to meet the needs of present and future generations; and by creating a high quality built environment, with accessible local services that reflect the community's needs and support its health, social and cultural well-being*".

The framework promotes healthy communities and seeks to "*deliver a wide choice of quality homes, widen opportunity for home ownership and create sustainable, inclusive and mixed communities*" by planning of a *"mix of housing based on current and future demographic trends, market trends and the need of different groups in the community*" such as older people. Older people are defined within the NPPF as "*people over retirement age, including the active, newly-retired through to the very frail elderly, whose housing needs can encompass accessible, adaptable general needs housing for those looking to downsize from family housing and the full range of retirement and specialised housing for those with support or care needs".*

In relation to health and social care facilities, Policy 3.17 of the adopted London Plan sets out that the Mayor will support the provision of high quality health and social care appropriate for a growing and changing population, particularly in areas of under provision or where there are particular needs. Policy 3.17 sets out that development proposals, which provide high quality health and social care facilities will be supported in areas of identified need, particularly in places easily accessible by public transport, cycling and walking.

There is a recognised need for housing to support the needs of older people within Havering. The London Strategic Housing Market Assessment (2013) which notes at 3.58 that the projected 2036 population has a much older average age, which has a very large effect on projected household growth. The SHMA notes that: "*Using the same set of household representative rates (DCLG rates extended to 2036), the projected 2036 population (the red line) would result in 4.27 million households, while the same number of people distributed according to the 2011 age distribution (the green line) would result in 3.96 million households.*"

It will therefore be important for the new Havering Local Plan to ensuring homes provided in borough meet the needs of the future ageing population and in this context opportunities such as that provided by the site at Lodge Lane are particularly relevant.

The proposed care village is strongly supported by Policy 3.17 of the adopted London Plan and the acute need for this facility is considered to provide very special circumstances for the release of this land from the Green Belt.

Retirement Community

The proposed development will comprise a retirement community which will offer three types of accommodation:

- Care Bedrooms – located in the Care Centre at the heart of the community and are suited to the person dependant on a 24/7 level of care;
- Serviced Care Suites – offer a greater degree of privacy and independence than a Care Bedroom, whilst still providing the client with the necessary level of care as required; and
- Close Care Apartments/Cottages – offer an independent lifestyle and are designed to make life as easy and enjoyable for the client as possible. These units are more suited to a more physically able couple where one partner may need some assistance with daily activities.

In addition to the care units, a complex (main house) will be provided centrally within the site that will contain a number of facilities to serve the proposed care units. These facilities will likely include a dining area, bar, lounge, library, spa and hydrotherapy pool, hobbies room, care services, staff and service. These facilities will not only be offered to the future residents of the retirement community, but also to the wider community, thereby allowing the development to integrate into the local area in a cohesive manner.

The community will also have the ability to cater for a variety of specialist care requirements. These include, but are not limited to:

- Dementia care;
- Palliative care;
- Respite care – offers care givers short term breaks. It helps care givers (including families) to reenergize, reduce stress and address personal needs that may have become neglected because of care responsibilities; and
- Convalescent care – offers care to people that are recovering from an illness or operation, taking strain away from the NHS.

It is envisaged that the village will be able to offer variable levels of care to meet a range of needs. This will support the generation of an inclusive community and maximise the benefits that the village will be able to provide to the wider area.

Many traditional retirement housing operators offer few advantages and benefits to older people over staying in their existing homes and are closely associated with residential housing falling under Use Class C3. A care village provides an environment which still forms part of the wider community but offers a distinguished new environment with clear cut benefits. It is intended that this will make leaving existing homes a feasible consideration and ensure that people are in the best environment to suit their needs.

Research - Continuing Care Retirement Community

Aston University published results of a study on a Midlands based Continuing Care Retirement Community (CCRC), comparing and contrasting the health outcomes of a group of 195 residents who elected to move into the development against a group who elected to stay in their existing homes. The results were dramatic on a number of levels. Key findings of the research included:

- NHS costs for the CCRC residents were cut by 38 per cent over 12 months compared with their costs when they first moved in;
- The CCRC residents experienced a significant reduction in the duration of unplanned hospital stays from 8-14 days to 1-2 days;
- Routine GP appointments for the CCRC residents fell 46 per cent after a year;
- Numbers of people with clinical levels of depression fell by 64.3 per cent over 18 months;
- Measures of depression symptoms were reduced by 14.8 per cent after 18 months for new CCRC residents and those with low mobility showed the greatest improvement in this 'mood measure';
- The cost of providing higher level social care was £4,556 (26 per cent) less per person, per year than providing the same level of care in the local community; and
- In-depth, 'autobiographical' memory improved by 10.1 per cent for the CCRC residents after 18 months.

Research – The International Longevity Centre – The state of the Nation's housing

The key points from the report relating to the need for elderly housing are summarized below:

- The population ageing is leading to rising care needs, but these care needs are not being met. In 2012/13 there were 1.86 million people over the age of 50 in England who had unmet needs - an increase of 120,000 people (or 7%) since 2006/7. This means that around 1 in 10 people aged over 50 in England has an unmet care need;
- The rate of construction of new housing for older people has varied over the years. It peaked in 1989 at 30,000 units but has since fallen back dramatically - averaging around 7,000 new units a year over the last decade;
- There are around 515,000 specialist retirement and extra care homes in England. However, this means that there is only enough specialist housing to accommodate 5% of the over-65 population;
- According to our calculations, there could be a retirement housing gap of 160,000 retirement housing by 2030 if current trends continue. By 2050, the gap could grow to 376,000; and
- Nearly 9 in 10 of the 65-79 age group live in under-occupied housing - over 50% live in homes with two or more excess bedrooms.

Sustainable transport

A care village will generate 25% of the traffic movements of a residential development of an equivalent scale, due to the majority of residents using the transport facilities provided by the care village (minibus and fleet cars), or also in this case the easily accessible public transport options.

Exceptional design

As part of a development integrating successfully into it's setting, design is key. The Care Village model focuses on exceptional design, with each development being bespoke responding to the local design features through the use of materials, and paying close attention to the existing built environment.

The double housing benefit

The new Care Village being proposed will provide a range of care accommodation to meet the needs of up to 300 older people requiring care and support. This will contribute towards alleviating the chronic shortage of elderly care facilities in the Epping Forest District along with freeing up larger, under occupied, family homes; a double benefit.

The local economy

A new care facility would not only provide full and part time employment opportunities for nursing care and administrative staff, but also cooks, waiters, gardeners, lecturers, hairdressers, event organisers and office staff. It is hoped that as many people as possible will come from the local community. The proposals are anticipated to provide in excess of 120 jobs.

Along with the economic benefits associated with the construction phase of the project, there will be significant benefits felt by the local economy through the additional spend from residents, employees and visitors to the care village.

Conclusion

The subject site presents a rare opportunity to utilise land which does not currently contribute significantly to the green belt or the surrounding built environment for a specialist use, which will not only help towards meeting the immediate chronic shortage of care and elderly accommodation, but also contribute positively to the local economy moving forward.

Both my clients and myself would be more than happy to meet with you and discuss the Care Village model in more detail. A Vision Document will be submitted in the near future, that will be informed by a number of technical reports; the purpose of this document will be to demonstrate a higher level of deliverability.

Should you require any other information at this stage please do not hesitate to contact me.

Yours sincerely

James Firth BA(Hons) MSc MRTPI

	- Site Constraints	10

1.0 INTRODUCTION

1.1 WS Planning & Architecture have been instructed by Jardin Smith International to prepare a document to support the submission of the site, land at Upper Bedfords Farm, Romford, Essex, in regards to the Councils call for sites.

1.2 The purpose of this report is to promote the site for development, in doing so the report will assess the:

- Relevant History
- The Site Details
- Development Management Constraints
- Heritage Constraints
- Infrastructure Constraints
- Site Access
- Environmental Constraints
- Other Constraints
- Development Potential.

2.0 RELEVANT HISTORY

2.1 In June 2015, WS Planning & Architecture submitted an application to the Council under the Towns and Country Planning (Environmental Impact Assessment) Regulation 2011, for a mixed use development comprising residential of 50+ dwellings, community uses and open spaces. No formal response would appear to have been received.

2.2 The site has also been actively promoted through the "call for sites" consultation carried out by the Greater London Authority in January 2013.

2.3 In addition, in July 2014 WS Planning & Architecture undertook an in-house Housing Needs Assessment for the London Borough of Havering. The purpose of this report was to provide background evidence in support of any planning application as at that time the Council had not produced any up to date evidence on the objectively assessed housing needs for the district.

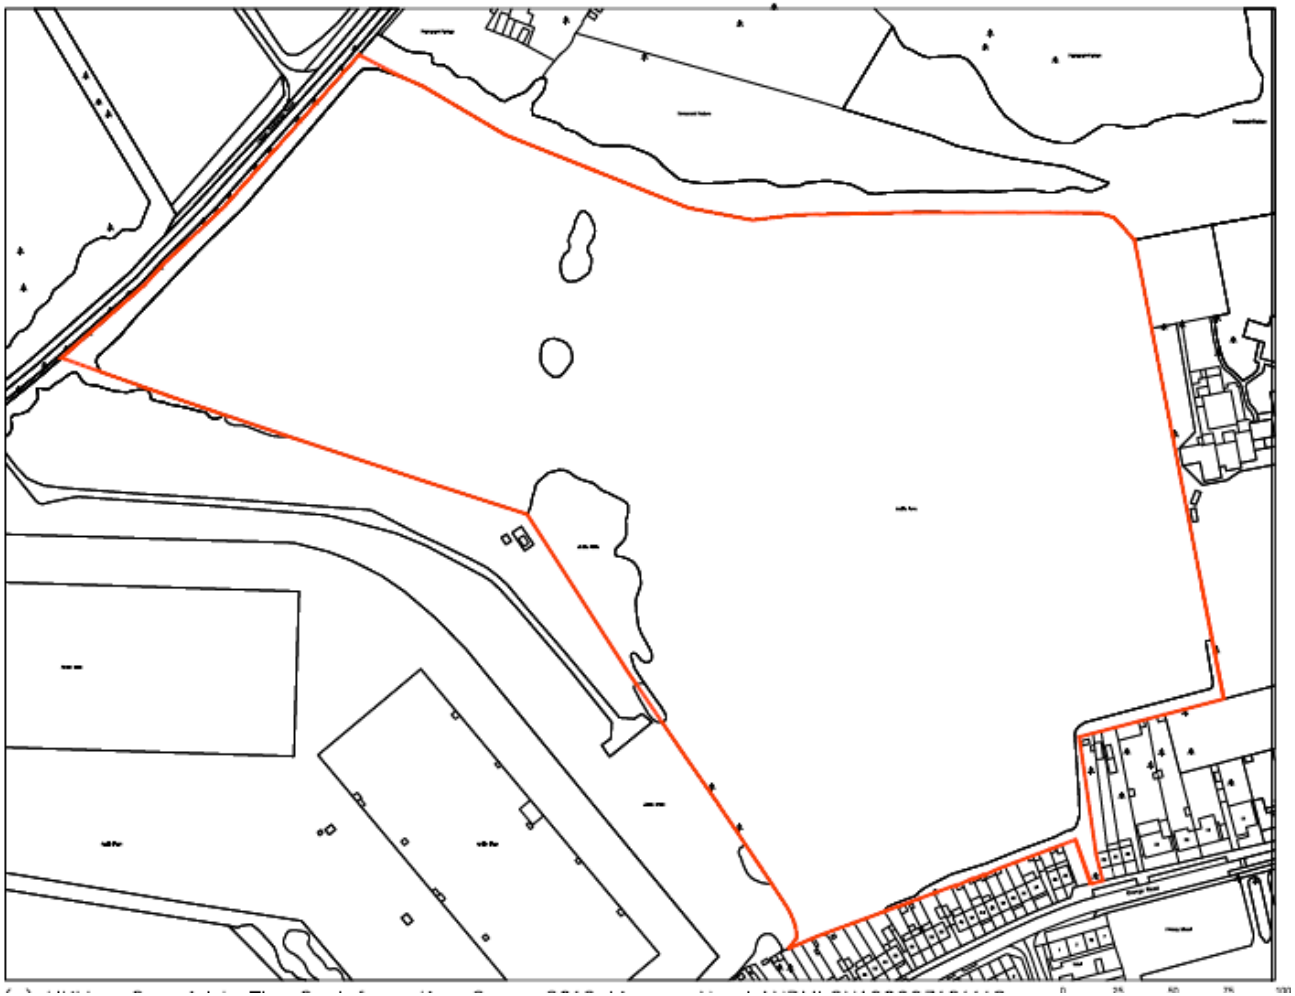
3.0 SITE

3.1 The site is located on the south of Lower Bedford Road within the Green Belt area of Romford. The site comprises a large parcel of land (10.45 hectares) which was formerly part of Upper Bedford Farm before being sold to in 2010.

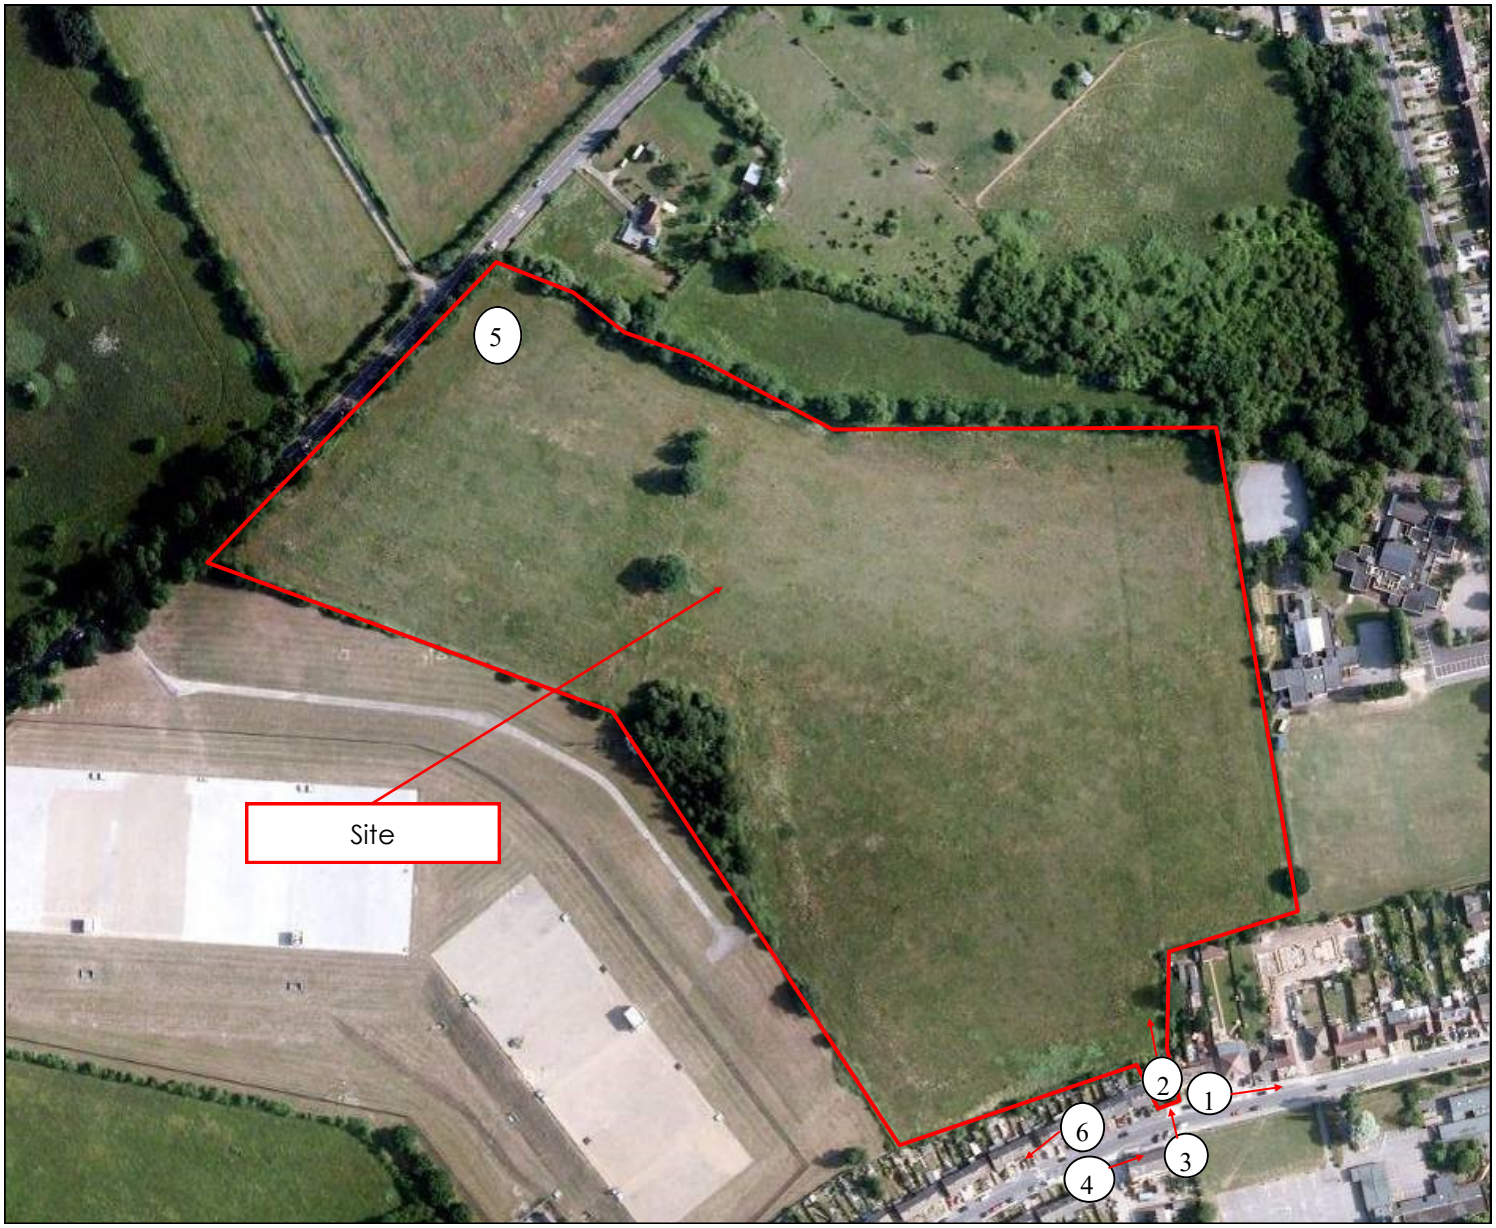
3.2 The site is abutted by housing to the south and on the edge of the urban area of Harold Hill. To the south of Harold Hill is the A12, to the east the M25 motorway.

3.3 A school lies to the southeast of the site together with an area of land designated as Borough Site of Special Scientific Interest. Access can be gained via Lower Bedford Road and there is an access to the land from Grange Road at the southern end of the site.

3.4 There are bus stops located in Straight Road next to St Ursula;s School and in Grange Road all within easy walking distance which provide a regular service to Noak Hill Dagnam Park Square and Gallows Corner.



Site photographs



1 - Sight line East from existing access on Grange Road

2 - Access to site from Grange Road

3 - Entrance to site from Grange Road

4 - Row of retail opposite site along Grange Road

5 - Panoramic view from Lower Bedfords Road access

6 - View West along Grange Road

Site constraints Assessment

3.5 - Site details	
Site address:	Land at South of Lower Bedfords Road, East Reservoir, Romford.
Site area:	10.45 hectares
How much of the site is suitable for development:	10.45 hectares
Is the site occupied or vacant:	Vacant
Existing use:	Grazing land
Is the site leased:	No
When could the site be made available for development:	Within 5 years
Are there any buildings on the site:	No

3.6 - Development Management Constraints
The site is constrained by its Green Belt designation. There are no other constraints.

3.7 - Heritage Constraints	
Conservation Area	No
Listed Buildings	Not within the site – Upper Bedfords Farmhouse is a Grade 2 listed building located to the north of the site. (See figure 1)
Special Character Area	No
Archaeological Interest	Not known

3.8 - Infrastructure constraints	
Bus stops	The site is within easy walking distance to several bus stops. Located in Straight Road and in Grange Road all of which provide a regular service to Noak Hill Dagnam Park Square and Gallows Corner. (See figure 2)
Railway Stations	The nearest stations are Harold Wood and Gidea Parkv which are approximately 3.35Km and 3.84km respectively . (See Figure 3)
Shops	Yes—various shops
Schools	Yes - St Ursula's infant and Junior schools, Hilldene Primary School.
Community facilities	Yes - various community facilities in the area.

Figure 1 - Upper Bedfords Farmhouse — Grade ii listed building.

Figure 2 - Bus Stops

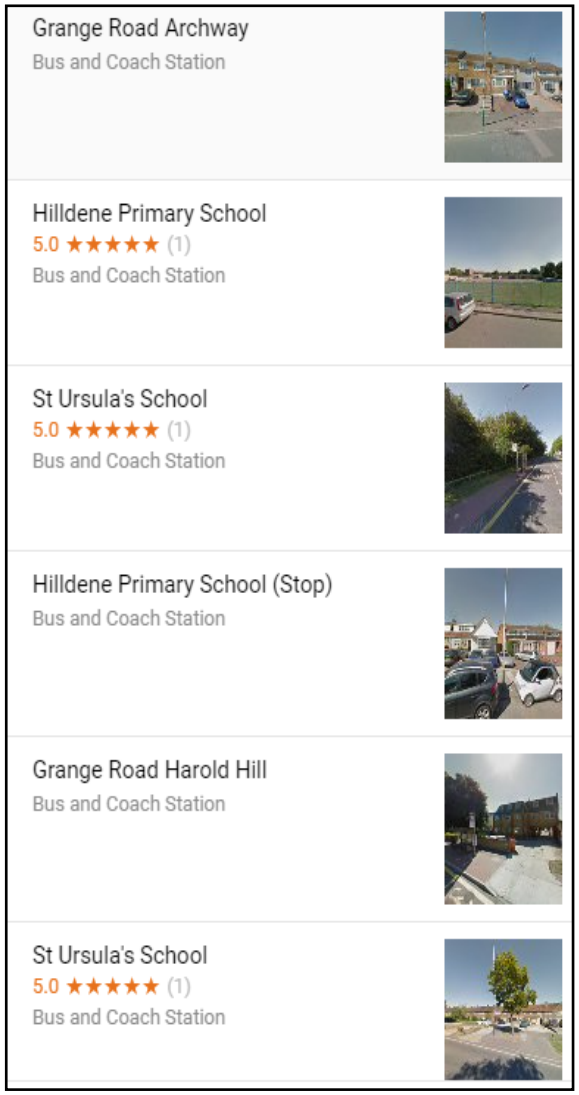


Figure 3 - Railway stations

3.9 - Site Access/Highway	
Does the site have a road frontage:	Yes - Lower Bedford Road and Grange Road.
Does the site have existing access.	There are two existing access points. One from Lower Bedford Road and a second point of access from Grange Road . (See figure 4).
Would the demolition of existing buildings be required to gain access to the site:	No
Do you own, or have unrestricted rights over, the existing proposed access to the site:	Yes

3.10 - Environmental Constraints	
EA Flood Zone:	No
Strategic Flood Risk Assessment:	Yes—SuDs applicable.
Potential contamination:	Unknown
Biodiversity/Ecology:	Yes – sites adjacent to areas of nature conservation interest. Ecology surveys are currently being undertaken.
Air Quality Management Area:	Yes
Open Space Deficiencies:	No
Environmental Protection Areas (within 5km):	No

Figure 4 - Existing Accesses.

3.11 - Other Constraints
There are several trees marking the boundaries and a small group of trees to the south west. An arboricultural survey is currently being undertaken.

3.12 - Development potential.	
Location:	The site is adjacent to the settlement boundary and could be a natural extension to the urban area.
What type of development would the site be suitable for:	Residential
How many dwellings could the site accommodate:	Approximately 130 dwellings. However this could be increased if deemed appropriate for the area.
Would the site accommodated a mix of market and affordable housing:	It is estimated that the site could comprise 83 market houses comprising 22 x 4/5 bed, 45 x 3 bed and 16 x 2 bed, together with 47 affordable house comprising 9 x 3 bed, 36 x 2 bed together with 2 blocks of flats of 1 and 2 bed. (See figure 5 for indicative layout plan)

Figure 5: Indicative layout plan.

C. London Plan context 34

1 Introduction

1.1 The importance of planning across boundaries

1.1.1 The Council recognises that planning across boundaries is an important aspect of the plan-making process. This relates to the management of development and infrastructure impacts that are likely to affect more than one local authority area. The Council is committed to the Duty to Co-operate and working effectively with neighbouring authorities and other bodies to make sure that it has dealt with issues that do not stop at administrative boundaries.

1.1.2 The Duty to Co-operate (hereafter: the Duty) is embedded in the Localism Act 2011 and relates to sustainable development or use of land that would have a significant impact on at least two local planning areas, otherwise described as strategic matters and requires:

- Councils and public bodies to 'engage constructively, actively and on an ongoing basis' to develop strategic policies;
- Councils to set out planning policies to address such issues; and
- Councils to consider joint approaches to plan making.

1.1.3 All local planning authorities are expected to demonstrate evidence of having successfully co-operated to plan for issues with cross-boundary impacts when their local plans are submitted for examination. However, The Duty is not a 'duty to agree'. The key requirement is therefore to demonstrate clear 'outcomes' emerging from the 'process' of cooperation that has taken place.

1.1.4 The Council is required to demonstrate evidence of having effectively co-operated with Duty-bodies to plan for issues with cross-boundary impacts throughout the preparation of the Local Plan. As co-operation is a continuous process of engagement, this statement provides an update towards this evidence base at the time of the publication of the proposed-submission version of the Havering Local Plan. The Council will update and finalise this statement to reflect the results of the engagement during the consultation on the proposed submission version of the Local Plan and prior to submission.

1.1.5 This statement accords with the Duty to Co-operate Statement Template published by the Planning Advisory Service (PAS) in August 2015.

1.2 Legal context

1.2.1 The Localism Act 2011 makes strategic planning the responsibility of local authorities, which are expected to address strategic issues in Local Plans and demonstrate how this has been managed through the 'Duty to Co-operate'. The 'Duty' is set out in Section 33A of the Planning and Compulsory Purchase Act 2004 (as amended by Section 110 of the Localism Act).

1.2.2 As well as applying to all local planning authorities and county councils in England, the Duty also applies to a number of other 'prescribed' bodies, that Local Authorities should co-operate with in preparing Local Plans. Regulation 4 of the Town and Country Planning (Local Planning) (England) Regulations 2012 sets out who those 'prescribed' bodies are. These are set out below:

- The Environment Agency;
- The Historic Buildings and Monuments Commission for England (known as English Heritage);
- Natural England;
- The Mayor of London;
- The Civil Aviation Authority;
- The Homes and Communities Agency;
- Clinical Commissioning Groups;
- National Health Service Commissioning Board
- The Office of Rail Regulation;
- Transport for London;
- Each Integrated Transport Authority;

- Each highway authority; and
- the Marine Management Organisation.

1.2.3 The Local Enterprise Partnership (LEP) and Local Nature Partnership (LNP) are also included as a prescribed body as part of a separate clause 33a (9).

1.3 Policy context

1.3.1 The requirements for the Duty are set out in paragraphs 178-181 of the National Planning Policy Framework, and in the Planning Practice Guidance (PPG). The Duty particularly relates to the strategic priorities identified in paragraph 156 of the NPPF.

1.3.2 Two tests of soundness identified in the NPPF (paragraph 182) relate directly to the Duty, as follows:

- **Positively prepared** – the plan should be prepared based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is practical to do so consistently with the presumption in favour of sustainable development; and
- **Effective** – the plan should be deliverable over its period and based on effective joint-working on cross-boundary strategic priorities.

1.4 Structure of this statement

1.4.1 The Duty to Co-operate statement is structured in the following way:

- Section 2 provides an overview of the engagement stages throughout the preparation of the Local Plan
- Section 3 sets out the strategic planning context for Havering within London and the sub-region
- Section 4 provides an overview of the strategic planing issues for Havering and how strategic working has influenced the Local Plan

1.4.2 The statement is supported by Annex A: 'Key relationships and bodies' which details the engagement with individual statutory organisations and local authorities and Annex B: 'Audit trail' which provides an audit trail of key milestones for each strategic issue covered in Section 4.

2 Summary of Local Plan engagement stages

2.0.1 The Local Plan has been prepared in accordance with the stages identified in The Town and Country Planning (Local Planning) (England) Regulations 2012. Engagement with relevant stakeholders has taken place throughout the preparation of the Local Plan. The table below summarises the key interactions that the Council has initiated to fulfil the Duty to Co-operate for the Local Plan.

Table 2.1 Key engagement stages for the Havering Local Plan

Date	Event/occurrence	Target	Purpose
9 February until 23 March 2015	Havering Local Plan Issues and Priorities consultation (Reg 18). This included a Duty event with Local Authorities.	All stakeholders including local authorities, statutory bodies and the public	To provide an opportunity for bodies and members of the public to be engaged in the early stages of the Local Plan process and provide comments on the Issues and Priorities document. Engagement included a workshop for local authorities to identify and discuss cross boundary issues that affect the preparation of the Local Plan.
10 February 2016	Local Plan Duty to Co-operate update letter circulated	Local authorities, statutory bodies	To update bodies on the Local Plan progress and invite to discuss strategic issues.
28 November 2016	Direction of Travel published and circulated. This included a Duty event with Local Authorities.	All stakeholders including local authorities, statutory bodies and the public	To update bodies and the public on the progress and content of the Local Plan and invite stakeholders to raise any issues. Engagement included a workshop for local authorities to present progress on the Local Plan and ongoing evidence base work, and discuss ongoing cross boundary issues.
28 February 2017 and 28 June 2017	Draft Local Plan shared with neighbouring local authorities on a confidential basis	Local authorities, GLA	To provide neighbouring authorities the opportunity to informally review and comment on the Local Plan prior to the Regulation 19 consultation.
Summer 2017	Havering Local Plan Proposed Submission consultation (Reg 19)	All local authorities, statutory bodies and the public	To provide stakeholders the opportunity to address any soundness issues with the Proposed Submission version of the Local Plan.

2.0.2 Engagement with individual bodies has taken place on an ongoing and regular basis, and the Council will continue to do so as the Havering Local Plan progresses towards adoption. Other local authorities in the sub-region are also progressing Local Plans. Engagement has therefore also occurred through initiatives arranged by other local authorities. Annex A: 'Key relationships and bodies' sets out how the Council has engaged with individual bodies, and also provides more detail on the workshops and partnerships relevant for the Local Plan.

3 Strategic context for Havering

London Plan context

3.0.1 The Mayor's London Plan sets the strategic policy context for Havering. It is the overall strategic plan for London, covering a range of issues of strategic importance for the Greater London area. The Local Plan is required to be in general conformity with the London Plan, which is also part of the development plan for Havering.

3.0.2 The first London Plan was published in 2004. The latest alterations took place in 2015/16 and are known as Minor Alterations to the London Plan 2015. The Mayor is currently preparing a new London Plan, which is envisaged to be completed and adopted after the Local Plan.

3.0.3 The London Plan sets out the strategic context for growth and development as well as the key areas for growth and also covers a range of more detailed issues. Strategic issues covered in the London Plan that the Local Plan cannot change are included in Annex C: 'London Plan context'.

Sub-regional context

3.0.4 Havering is an Outer London Borough located on the London Essex border. It is adjoined by the London Boroughs of Redbridge and Barking & Dagenham to the west, and Bexley to the south beyond the River Thames. Havering also adjoins the Essex County Council and the local authorities of Brentwood Borough Council to the east, Epping Forest District Council to the north. The unitary authority of Thurrock Council is located to the southeast of Havering. All neighbouring authorities are currently in the process of preparing new Local Plans for their areas and are at various stages of plan preparation.

Joint Waste Development Plan for East London

3.0.5 Together with other East-London Boroughs, the Council adopted a Joint Waste Development Plan in 2012. This sets out a strategy for sustainable waste management until 2021 and provides policy steer as to additional facilities required and, as appropriate, preferred locations for such development. The Joint Waste Development Plan forms part of the each Borough's development plan and the policies within are used to determine waste related applications and help deliver sustainable waste management in accordance with relevant national guidance and targets set within the London Plan.

4 Strategic planning issues for Havering

4.1 Introduction

4.1.1 In this section is set out how the Council has engaged with other bodies to address the strategic planning issues for Havering. These have been identified early on in the Local Plan process, and updated to reflect ongoing discussions with stakeholders. The strategic planning issues for Havering relate to:

1. Housing need and delivery
2. Employment and retail
3. Green Belt
4. Transport
5. Infrastructure
6. Flood risk and rivers
7. Natural environment
8. Minerals

4.1.2 Within Annex B: 'Audit trail' an overview is provided of the key meetings and decisions that impact on the above strategic issues. This provides more detail on how engagement has taken place and when decisions were taken.

4.2 Housing need and delivery

Table 4.1 Housing need and delivery

1. **Strategic Planning issue** The NPPF sets out that local authorities meet "the full, objectively assessed needs for market and affordable housing in the housing market area". Havering shares the housing market area with the London Boroughs of Barking and Dagenham and Redbridge. The Council therefore has to co-operate with these authorities to identify the housing need in the housing market area. In line with the NPPF the Council also has to work together with other local authorities in the sub-region for this exercise. The Planning Policy for Traveller sites sets out that local authorities should plan positively for Gypsy and Traveller sites. The London Plan does not contain a policy direction on provision for Gypsy and Traveller accommodation. The Council should therefore seek to meet the needs for the Gypsy and Traveller population in the Local Plan, and work with neighbouring authorities on this issue.
2. **London Plan context** The GLA's Strategic Housing Market Assessment 2013 identifies a need for a minimum of 490,000 new homes in London between 2015-2026 (or 49,000 new homes per annum). In comparison, the GLA Strategic Housing Land Availability Assessment 2013 found that London has capacity for at least 420,000 additional homes or 42,000 per annum. The London Plan identifies that Havering should seek to achieve and exceed the relevant minimum 10 year housing target of 11,700, which translates into 1,170 per annum. This has been informed by the London Strategic Housing Market Assessment (SHLAA) 2013. The London Plan identifies Romford as a metropolitan centre, which together with the six district centres in the borough should be the focus for intensification and housing growth. In addition, in the south of the borough the London Riverside Opportunity Area is identified in the London Plan, which extents into he London Borough of Barking and Dagenham. The Council therefore has to take a strategic approach to housing delivery, working closely together with the GLA, Barking and Dagenham and other neighbouring local authorities.
3. **Evidence base** • GLA Strategic Housing Land Availability Assessment (2013) • London Strategic Housing Market Assessment (SHMA) (2013) • Outer North East London Strategic Housing Market Assessment (update November 2016) • Gypsy and Traveller Accomodation Assessment (2017) • Housing Position Statement • Draft Statement of Common Ground - LB Redbridge and LB Havering
4. **Strategic Partners** • Greater London Authority (GLA) / Mayor of London • London Borough of Barking and Dagenham • London Borough of Redbridge • London Borough of Newham • Local authorities in the sub-region of Brentwood, Basildon, Epping Forest, Thurrock and Chelmsford • Essex County Council • London Gypsy and Traveller Unit (LGTU) • Showmen's Guild (London Section)
5. **Actions taken** • Jointly prepared the Outer North East London SHMA with the London Boroughs of Redbridge, Barking and Dagenham and Newham. Other neighbouring local authorities have participated in the preparation of the SHMA • Engagement with the GLA on development in Rainham and Beam Park Strategic Development Area

- Engagement with the GLA on development in Romford Strategic Development Area
- Engagement with neighbouring authorities, LGTU and the Showmen's Guild during the preparation of the Gypsy and Traveller Accommodation Assessment

6. **Outcomes from strategic working**

The London Boroughs of Barking and Dagenham, Havering, Newham and Redbridge jointly commissioned a Strategic Housing Market Assessment (SHMA) to establish the Objectively Assessed Need (OAN) for housing across the area. This included Waltham Forest, which was not a commissioning borough but shared a housing market area with Newham. Neighbouring local authorities have been consulted throughout the preparation of the SHMA. The SHMA concluded that Havering falls within the Outer North East London housing market area, consisting of Barking and Dagenham, Havering and Redbridge. The SHMA found that the OAN for Havering is above the London Plan housing target at 1,366 homes per annum.

The Council has agreed a Statement of Common Ground with Redbridge. While both boroughs are unable to meet in full their locally derived objectively assessed need (OAN) for housing, it has been agreed that both boroughs will be seeking to meet the minimum housing targets set out in the current London Plan while closing the gap on their OAN. A similar approach has been agreed by the GLA and boroughs in the sub-region. The Council recognises that this issue is dealt with at a London-wide regional level through the London Plan. The Housing Position Statement sets out in more detail the Council's approach to housing needs and delivery in the Local Plan.

The Council has engaged extensively with the GLA and other stakeholders to speed up the delivery of homes in the Rainham and Beam Park Strategic Development Area and Romford Strategic Development Area. The Council has placed succesful bids with the GLA for Housing Zones in both areas. This helps unlock development in these areas. Planning frameworks for these areas have been developed in consultation with residents and relevant stakeholders.

Gypsy and Traveller needs

Consultants ORS were was commissioned to undertake the Gypsy and Traveller Accommodation Assessment (GTAA) for Havering. Through regular meetings with neighbouring authorities it was found that several other authorities are performing or updating their needs assessments, and were mainly looking to meet their own need within their local authority boundary. ORS also engaged with neighbouring authorities, LGTU and the Showmen's Guild to identify cross boundary issues. The GTAA concludes that there are no cross boundary issues affecting the provision for Gypsy and Travellers. The GTAA provides in more detail how engagement on this issue has taken place. The Council is looking to meet its own needs with regards to Gypsy and Traveller accommodation in the Local Plan and has communicated this with neighbouring authorities.

7. **Ongoing cooperation**

The Council will continue to engage with the GLA, and other stakeholders to ensure the delivery of homes in the Rainham and Beam Park and Romford Strategic Development Areas. The Council is also engaging with the GLA on the Strategic Housing Market Assessment (SHLAA) and Strategic Housing Land Availability Assessment (SHMA) and other housing issues throughout the preparation of the new London Plan.

4.3 Employment and retail

Table 4.2 Employment and retail

1. **Strategic Planning issue** The London Plan identifies several Strategic Industrial Locations in the borough. The London Plan also identified strategic outer London development centres in the borough. The Council needs to work with partners to ensure sufficient employment land is allocated to meet local and sub-regional employment needs. Provision also needs to be made of the right type of workspace, and the creation of jobs and improvement of skills to strengthen local employment opportunities. Ensuring the growth of Havering's economy including its town centres whilst recognising the wider regional context and the economic role of central London is therefore a key strategic issue for the Local Plan. Romford is identified in the London Plan as a metropolitan centre, playing an important function for the sub-region. The Council has to work with partners to make sure that Romford continues to provide this sub-regional shopping function. There are also six district centres in the borough. The London Plan notes that the designation of two of these district centres are at risk. It is therefore important to work with partners and in the wider sub-region including the GLA to make sure that the primary shopping functions of these town centres are maintained.
2. **Evidence base** • Havering Employment Land Review (2015) • Retail and Commercial Leisure Study (2015) • London Riverside Opportunity Area Planning Framework (2015)
3. **Strategic Partners** • Neighbouring local authorities • Greater London Authority • Strategic Retail Group • North East London Partnership
4. **Actions taken** • Discussions with the GLA and individual boroughs • Attendance of meetings with the Strategic Retail Group at the officer level including Thurrock Council, Dartford Borough Council, Gravesham Borough Council, Kent County Council, Medway Council, GLA, Sevenoaks District Council, London Borough of Bexley, and Swale Borough Council.
5. **Outcomes from strategic working** Engagement with the GLA has resulted in support for the designation of the Freightmaster Estate as a Strategic Industrial Location, in line with the recommendations of the Havering Employment Land Review and the London Riverside Opportunity Area Planning Framework. Discussions with the Strategic Retail Group and individual engagement with local authorities has lead to up-to-date knowledge of the plans ambitions of neighbouring authorities with regards to retail and employment and a general support for the approach in the Local Plan underpinned by the Havering Employment Land Review and Retail and Commercial Leisure Study.
6. **Ongoing cooperation** The Council will continue to attend meetings of the Strategic Retail Group and engage with the GLA and neighbouring authorities on the preparation of their Local Plans an the review of the London Plan.

4.4 Green Belt

Table 4.3 Green Belt

1. **Strategic Planning issue** Over half of Havering is part of the Metropolitan Green Belt. The NPPF states that Local planning authorities with Green Belts in their area should establish Green Belt boundaries in their Local Plans. Preparation of a new Local Plan provides the opportunity to review the extent of the Green Belt. Once established, Green Belt boundaries can only be altered in exceptional circumstances, through the preparation or review of a Local Plan (NPPF paragraph 83). Throughout the Local Plan process almost 80 sites have been submitted for potential release from the Green Belt. The Council has undertaken a review of the Green Belt to make sure the Green Belt land in the borough fulfils the purposes set out in the NPPF and in case any exceptional circumstances for Green Belt release will be identified throughout the Local Plan preparation. Several neighbouring boroughs are also reviewing the extent of their Green Belts in preparation of their Local Plans. Working across boundaries is an essential part of a Green Belt review as Green Belt parcels might overlap with neighbouring authorities, and for the role that the Green Belt plays in preventing the merging between towns. The Mayor of London has expressed a clear support for the current extent of the Green Belt, as contained in Policy 7.16 in the London Plan. Engagement with the Mayor is therefore an important part of the Green Belt review process.
2. **Evidence base** • Green Belt Study 2016 • Housing Position Statement • Outer North East London Strategic Housing Market Assessment (2016)
3. **Strategic Partners** • Greater London Authority • London Borough of Redbridge • London Borough of Barking and Dagenham • Brentwood Borough Council • Epping Forest District Council • Thurrock Council • Basildon Council • Essex County Council
4. **Actions taken** • Engagement with neighbouring local authorities in their Green Belt reviews. • Engagement with neighbouring local authorities during the preparation of the Green Belt Study.
5. **Outcomes from strategic working** Neighbouring authorities were informed of the intention to undertake a Green Belt Study in regular Duty to Co-operate meetings, where the Council was also kept up-to-date on progress of Green Belt reviews of neighbouring local authorities. Methods for Green Belt reviews of neighbouring authorities have been considered in the formulation of the method for Havering's Green Belt Study. The Council has engaged with neighbouring authorities during the various stages, for instance on the classification of settlements, to make sure there are no discrepancies with other authorities' methods. As many parcels overlap with Thurrock and they were preparing a Green Belt Study at the same time, it was decided to use similar assessment methods and have Green Belt parcels assessed by the same landscape architect. This assured that the boundaries of overlapping parcels matched and that they were generally awarded the same score across authority

boundaries. The approach was presented at the 19 Duty to Co-operate workshop with Local Authorities following the publication of the Havering Local Plan Direction of Travel document. A final draft of the Green Belt Study report was shared with neighbouring local authorities including the GLA and Essex County Council for comments, to inform the final report. Engagement with the GLA and neighbouring local authorities has confirmed that no exceptional circumstances could be identified to release Green Belt through the Local Plan.
6. **Ongoing cooperation** The Council is continuing to be involved in the preparation of Green Belt studies of neighbouring authorities currently underway, namely Brentwood and Thurrock, and will continue to engage with neighbouring authorities on Green Belt matters. The Council will also engage with the GLA on the London Plan review and any discussions concerning a strategic Green Belt review.

4.5 Transport

Table 4.4 Transport

1. **Strategic Planning issue** The level of development in Havering and adjoining boroughs has an impact on the capacity of the transport network. Different bodies have responsibilities for the transport network in Havering, specifically Transport for London, Highways England and the Council as the Local Highways Authority. Co-operation with other bodies, including in the sub-region, is therefore crucial to make sure that any transport impact of new development is appropriately mitigated and that the opportunities that new development provides to enhance transport links are realised. Specific issues for Havering are the connectivity in and to the Strategic Development Areas and the impact of growth on sub-regional routes such as the A127.
2. **Evidence base** • Infrastructure Delivery Plan • Transport Topic Paper • Statement of Common Ground with Essex County Council, neighbouring Essex authorities and Thurrock Council (in preparation)
3. **Strategic Partners** • Transport for London • Highways England • Neighbouring authorities • Essex County Council • London City Airport • Network Rail
4. **Actions taken** • Engagement with neighbouring local authorities, TfL and Highways England to discuss the transport implications of the Local Plan on the transport network, the preparation of the Transport Topic Paper and agree a Statement of Common Ground. • Involvement in the A127 Growth Corridor working group led by Essex County Council • Engagement with Highways England on the Lower Thames Crossing project and capacity improvement options for Junction 28 on the M25. • Frequent meetings with TfL, the East Sub Regional Transport Panel and neighbouring authorities to discuss a variety of topics, including, strategic planning issues, School Travel Planning across London, and general road safety education. • Engagement with the GLA, Network Rail and TfL on the new Beam Park Station. • Meetings have taken place with the Leader of the Council and Crossrail in regards to improvements works to Romford Station.
5. **Outcomes from strategic working** To accommodate growth in Havering a strategic transport modelling work package was commissioned. This has been prepared in co-operation with Transport for London (TfL), and the results have been shared with adjoining authorities. Engagement with the GLA has also taken place to optimise the benefits from Crossrail for the borough and Romford specifically, including improvements to Romford station. To unlock development in the Rainham and Beam Park Strategic Development Area a new station has been proposed at Beam Park. Engagement with Network Rail and TfL has resulted in support for the station to be delivered by 2020. In a meeting with Essex County Council on the Local Plan wider sub-regional transport issues were discussed. This included the transport impact on neighbouring authorities as Havering has raised potential transport issues during the consultations of the Draft Local Plans of Brentwood and Basildon. Havering agreed to work with partners to produce a Transport Topic Paper which sets out Havering's transport context, challenges and strategic aspirations the Council believe are needed to support the growth and development expected

over the next 15 years. A presentation and discussion on the progress of the topic paper took place at the Duty to Co-operate workshop for neighbouring authorities . Part of these discussions has included an agreement that Havering will continue to work with with Essex County Council and other local authorities and stakeholders outside the Local Plan process on a number of strategic transport issues including looking at the A127 Growth Corridor. A meeting has already taken place between Havering, Essex, neighbouring district authorities and Transport for London specifically to discuss the A127 Corridor. It is anticipated that further such discussion will be held on an intermittent basis.

A Statement of Common Ground (SoCG) has been prepared jointly between the London Borough of Havering, Essex County Council, Brentwood Borough Council, Basildon Borough Council, Thurrock Council (Unitary Authority), and Highways England. The purpose of this SoCG is to inform the Planning Inspectors and other parties of the agreed way forward on any issues that remain outstanding at the point of Local Plan submission. This includes agreed joint working on a number of strategic transport issues:

- A127 Corridor between Gallows Corner and Southend
- Lower Thames Crossing
- Communication of Works
- Improvements to Junction 28 of M25

The Council also engages on a regular basis with TfL and Highways England and other London Boroughs on particular transport projects and issues. Specific issues include river crossings, operational transport matters, junction improvements, road safety and school travel planning. In addition, the Council has started a dialogue with TfL on the Strategic Transport interventions that support the new corporate Vision. The engagement with stakeholders on transport schemes is reflected in the transport priorities in the Local Plan.

6. **Ongoing cooperation**

The Council will continue to be engaged with stakeholders to address transport issues. Specifically, Havering and Essex Council Council have an agreement that Havering will continue to be involved in the A127 Growth Corridor discussions. Highways England has agreed to have a continued dialogue with Havering regarding proposals which are developed for Junction 28 of the M25 and the Lower Thames Crossing. Through sub-regional meetings the Council will continue to meet with TfL on a quarterly basis.

4.6 Infrastructure

Table 4.5 Infrastructure

1. **Strategic Planning issue** Appropriate facilities and services will be needed to support the level of growth over the plan period and the needs of the changing population. The Council will have to work with providers across a range of infrastructure types to assure adequate provision within Havering and in the sub-region.
2. **Evidence base** • Infrastructure Delivery Plan (IDP) • Education Commissioning Plan (2016)
3. **Strategic Partners** • London Borough of Havering • Havering Clinical Commissioning Group (CCG) • London Healthy Urban Development Unit (HUDU) • NHS commissioning group • Essex County Council • Neighbouring local authorities • Greater London Authority • Infrastructure providers
4. **Actions taken** • Engagement with a range of infrastructure providers through the preparation of the Infrastructure Delivery Plan (IDP) • Engagment with Havering CCG, HUDU and the Council's Public Health department on health provision in the borough • Discussions with neighbouring boroughs on education provision
5. **Outcomes from strategic working** The IDP has been prepared with the co-operation of service providers across a range of sectors. This has resulted in an up-to-date overview of infrastructure needed to support the growing and changing population over the plan period. The Council has worked with Barking and Dagenham and the GLA regarding the provision of infrastructure for the Rainham and Beam Park Strategic Development Area, which have been reflected in the IDP. The Council has worked closely with the Health Department at the Council, Havering CCG and the NHS Commissioning Board to provide a clear view of the needs for health facilities over the plan period. With the use of the HUDU model, the requirments for health facilities in the borough have been identified, on a strategic scale. The identified needs have been identified in the IDP and reflect the policy position in the Local Plan. The issue of overflow between boroughs regarding education was brought up on regular meetings with neighbouring boroughs. The Development Planning team consequently engaged with colleagues in the Education Department of the Council to address this issue. As the Education Departments of Havering are in regular contact with colleagues at Essex County Council and neighbouring boroughs, they were aware of this issue and have addressed this in the school place projections.
6. **Ongoing cooperation** The Council will continue to regularly engage with education colleagues at Essex County Council regarding school place projections. In addition, the Council will continue to engage with the CCG and NHS to review the need for health facilities and set up a mechanism for delivery. Possible sites for health and school facilities will be identified in the Site Specific Allocations Local Plan. The IDP will be under regular review, for which engagement with providers and stakeholders will take place on a regular basis.

4.7 Flood risk and rivers

Table 4.6 Flood risk and rivers

1. **Strategic Planning issue** There are four watercourses in Havering and the borough has a large proportion of London's floodplains. Fluvial flood risk is a particular issue in the borough. Strategic working with the Environment Agency and the Local Flood Authority is required to assure the risks of flooding are appropriately assessed and addressed in the Local Plan through the location of development and the formulation of policies. As the borough is located on the River Thames it should establish a Thames Policy Area (London Plan Policy 7.29). This should be done in co-operation with neighbouring boroughs to make sure development with a direct relation to the River Thames is aligned.
2. **Evidence base** • Strategic Flood Risk Assessment - Level 1 (2016) • Flood Risk Management Strategy 2015 • Thames Estuary 2100 Plan
3. **Strategic Partners** • Environment Agency (EA) • Lead Local Flood Authority (LLFA) - London Borough Of Havering • London Borough of Barking and Dagenham • London Borough of Bexley • Greater London Authority (GLA) • Marine Management Organisation (MMO)
4. **Actions taken** • Engagement with the LLFA and EA on the updating of the Strategic Flood Risk Assessment Level 1. • Engagement with the LLFA and EA on the preparation of Local Plan policies. • Engagement with Barking and Dagenham and Bexley on the establishment of the Thames Policy Area boundary. • Engagement with the MMO
5. **Outcomes from strategic working** In the early stages of the Local Plan preparation Havering has worked with the Environment Agency (EA) and the Lead Local Flood Authority to update the Strategic Flood Risk Assessment (SFRA), which was completed in 2014. Recent shifts in the EA's climate change allowances require an update of this evidence. As the Local Plan does not contain site allocations a SFRA Level 2 would not normally be required at this stage. However, as the Local Plan proposes two key growth areas which comprise parts of flood zone 2 and 3, it has been agreed with the EA to provide more detail for these areas in an Annex of the SFRA Level 1, to bridge the gap to a Level 2 which will be prepared for the Site Specific Allocations Local Plan. This informed policies flood management policies in the Local Plan. The EA and Lead Local Flood Authority have been engaged with throughout the various stages of preparing the updated SFRA Level 1, which was formerly signed off by the EA in late 2016. Neighbouring local authorities were kept informed of the process of updating the SFRA in regular meetings and were notified upon publication of the report. The Council has shared part of the modelling work for the SFRA with the London Borough of Barking and Dagenham, as some river catchments overlap and because of the co-operation between the boroughs on London Riverside. The Council has heavily engaged outside of the statutory consultation stages with the EA and colleagues representing the LLFA in the formulation of Local Plan policies. This has made sure that issues as drainage, flood risk management, water quality and river enhancement are sufficiently addressed in the Local Plan.

The Council has aproached the London Boroughs of Bexley and Barking and Dagenham with regards to the establishment of the Thames Policy Area (TPA) boundary. Both boroughs had not yet identified the TPA for their borough. Havering proposed to continue to use the boundary as established in 'The Town and Country Planning (Mayor of London) Order 2008'. Both Bexley and Barking and Dagenham support this approach. The Marine Management Organisation (MMO) is in the process of preparing the South East Marine Plan. This affects Havering as the River Thames is a tidal river. The Council has engaged with the MMO to make sure the appropriate links are made between terrestrial planning and marine planning in the Local Plan.
6. **Ongoing cooperation** The Council will continue to engage with the EA and the LLFA through the preparation of the SFRA Level 2 for the Detailed Sites Local Plan, and for any potential review of the SFRA Level 1 in line with the review criteria contained in the report. The Council will continue to engage with the MMO on the preparation of the South East Marine Plan.

4.8 Natural environment

Table 4.7 Natural environment

1. **Strategic Planning issue** Havering is one of the greenest boroughs in London with a large number of designated nature conservation sites. The borough has four Sites of Specific Scientific Interest (SSSIs), of which one is geological. The Council has to make sure that the local designations are up-to-date and development does not adversely impact upon these sites and protected species and habitats. It therefore has to work closely together with local partners and statutory organisations to make sure the Local Plan policies and designations are robust.
2. **Evidence base** • All London Green Grid Supplementary Planning Guidance (GLA) • Mayor's Biodiversity Strategy (GLA) • Havering Nature Conservation and Biodiversity Strategy • Open Space Assessments Report and Strategy • Site of Importance for Nature Conservation (SINC) Review Paper 2017 • Habitat Regulations Assessment (HRA) Screening Report
3. **Strategic Partners** • Natural England • Environment Agency • Thames Gateway Local Nature Partnership • Greater London Authority – London Local Nature Partnership • London Borough of Havering • Havering Wildlife Project • London Wildlife Sites Board
4. **Actions taken** • Engagement with the relevant Local Nature Partnerships (LNPs) • Engagement with Natural England on the preparation of policies • Engagement with the Environment Agency on the preparation of policies • Engagement with neighbouring local authorities and relevant stakeholders on the production of the Green Infrastructure Strategy • Engagement with Havering Wildlife Project and London Wildlife Sites Board on the SINC review • Draft HRA Screening Report shared with neighbouring authorities and Natural England
5. **Outcomes from strategic working** Both the London LNP and Thames Gateway LNP are not active Local Nature Partnerships as they do not benefit from funding to fulfil their roles. In London the role of the LNP is covered by a policy framework provided by the London Plan, Supplementary Guidance Documents and strategies. The Council has made sure that the policies in the Local Plan are in line with this policy framework, and the concept of the All London Green Grid specifically as mentioned in the Green Infrastructure Policy. Following early engagement with Thames Gateway LNP it was agreed that the Fanns Landscape Partnership is being referred to in the Green Infrastructure policy of the Local Plan. Natural England has made the Council aware of the particular issues and opportunities regarding nature conservation in the borough and particularly around SSSI's. The Council has shared draft policies with Natural England prior to the Reg 19 consultation which resulted in broad support for the policies and themes covered in the Local Plan.

Through various meetings and email contact the Environment Agency has provided comments to various draft policies prior to the Reg 19 consultation. This has strengthened policies in the 'Green Places' theme such as the inclusion of a river enhancement policy, mention of the Roding and Beam Catchment Partnership in the 'Green Infrastructure' policy and a clear emphasis on water and land pollution in the 'Managing Pollution' policy. The Council has engaged with Havering Wildlife Project (HWP) which represents local organisations and specialists with an interest in nature conservation in the borough. Specifically, the Council worked with HWP to review the list of Sites Of Nature Conservation Importance (SINC). Proposed changes to sites at the Metropolitan level designations were discussed with the London Wildlife Sites Board (part of the GLA). Support from the London Wildlife Sites Board was given for the promotion of the North Ockendon Pit to Metropolitan level. The Council has also engaged with the London Borough of Barking and Dagenham with regards to the promotion of the Beam Valley SINC to Metropolitan level. Engagement with Natural England and neighbouring authorities during the preparation of the Habitat Regulations Assessment Screening Report has resulted in general support for the approach.
6. **Ongoing cooperation** The Council will continue to work in partnership with statutory organisations, neighbouring authorities and locally active partnerships to identify opportunities to enhance the natural environment in the borough.

4.9 Minerals

Table 4.8 Minerals

1. **Strategic Planning issue** Havering is one of only four London Boroughs to have a land won aggregate landbank apportionment as set out in the London Plan. The London Plan provides the strategic context for aggregates to support continued growth for London and sets a landbank for the Borough of at least 1.75 million tonnes, throughout the plan period (or until 2031). The Council has a designated Minerals Safeguarding Area within which such development would, in general, be supported subject to no significant environmental or amenity impacts. The Safeguarding Area also seeks to prevent undue sterilisation of reserve.
2. **Evidence base** • London Aggregates Monitoring Report 2014 & 2015 (September 2016) • Havering Authority Monitoring Report (AMR) 2015-16 • Havering Local Aggregate Assessment (LAA) (October 2014) • London Plan (March 2016)
3. **Strategic Partners** • Essex County Council (as the minerals authority for Essex) • Greater London Authority • London Aggregate Working Party • Thurrock Council
4. **Actions taken** • Regular meetings with the London Aggregate Working Party
5. **Outcomes from strategic working** The Council regularly attends meetings organised by the London Aggregate Working Party, proving feedback on applications received and trends identified from the Authority Monitoring Report. The Council has recently provided information for incorporation to a London-wide LAA, follow a decision that such a LAA would provide a more useful picture to the London situation rather than separate LAAs from the four Boroughs with an apportionment. Through regular attendance of meetings held by the London Aggregate Working Party the Council has been able to provide updates on the current position within the borough and discuss why the borough has not been able to meet its landbank in recent years. The Council feels, through meetings attended and information shared, that a good understand of both borough and London-wide issues and the general needs and desires of the industry/market has been established.
6. **Ongoing cooperation** The Council will continue to attend meetings with the London Aggregrate Working Party to co-operate on minerals planning issues.

Annex A: Key relationships and bodies

A.1 Statutory organisations

A.1 Engagement with the bodies prescribed in Regulation 4 of The Town and Country Planning (Local Planning) (England) Regulations 2012 is set out in this section of the report.

Table A.1 Summary of engagement with statutory organisations

Prescribed body	Summary of engagement	Outstanding issues
Environment agency	The Council has extensively engaged with the Environment Agency (EA) on the development of evidence and policies for the Local Plan. Several meetings with the EA were set up to discuss the progress on flood risk evidence and the development of policies. This has led to the agreement of the updated SFRA and the amendment of draft polices to include comments and suggestions by the EA, which have been informally agreed.	There are no outstanding issues.
Historic England	The Council has engaged with Historic England throughout the various stages of the Local Plan. Comments provided during the Reg 18 consultation have been taken on board to inform the draft policies of the Local Plan. Historic England have also provided comments to the Havering Local Plan Direction of Travel document. The Heritage Assets policy has also been shared with Historic England prior to the Reg 19 consultation, with the opportunity to provide comments.	There are no outstanding issues.
Natural England	The Council has engaged with Natural England beyond the statutory consultation stages. Within these engagement opportunities Natural England have expressed a general support for the approach to nature conservation in the Local Plan. Draft policies have been shared with informal agreement on the content being reached.	There are no outstanding issues.
Mayor of London (GLA)	The Council has engaged with the GLA beyond the statutory consultation stages. A number of specific meeting have been held with GLA officers on the Havering Local Plan. Discussions have covered all aspects of the Havering Local Plan but in particular have focused on housing delivery, infrastructure provision and the protection of the Green Belt. The Council are also actively engaged with the GLA in relation to the delivery of the the Romford and Rainham and Beam Park Housing Zones.	There are no outstanding issues.
Civil Aviation Authority	The Council has sought contact with the CAA on multiple occasions, but has not received any responses on requests to engage. It is therefore assumed that there are no strategic issues between the Council and the CAA and the Council therefore believes it has fulfilled the Duty with the CAA.	There are no outstanding issues.
Homes and Communities Agency	The functions of the Homes an Communities Agency (HCA) have in the London Region been taken over by the Greater London Authority (GLA) (as of 1 April 2012). The Council is therefore liasing with the GLA on housing matters rather than the HCA. The section above on the Mayor of London covers the engagement with the GLA.	There are no outstanding issues.

Prescribed body	Summary of engagement	Outstanding issues
Primary Care Trust	The Council has engaged with the Havering CCG, NHS Commissioning Board and Public Health to identify health needs over the Local Plan period. Several meetings have taken place to discuss future health provision, and the role the Local Plan can play with this. The health needs in the borough are reflected in the Infrastructure Delivery Plan. It has been agreed to keep the needs for health facilities and the mechanisms to deliver these under review.	There are no outstanding issues.
Office of Rail Regulation	The Council has sought contact with the ORR throughout various stages of the preparation of the Local Plan but has not received any responses. Instead the Council has worked extensively with Transport for London and Network Rail regarding Crossrail and the new Beam Park Station. The Council therefore believes that it has fulfilled the Duty with the ORR.	There are no outstanding issues.
Integrated Transport Authorities	Transport for London (TfL) is the Integrated Transport Authority in London. The Council has regular meetings with TfL where transport and planning issues are being discussed. The Council specifically co-operated with TfL in regard to the transport modelling undertaken which forms part of the evidence base for the Local Plan. TfL has been involved in Duty to Co-operate meetings with neighbouring boroughs and with Highways Authorities to explain the modelling work and discuss the delivery of strategic transport priorities identified in the Local Plan. The Council has co-operated with TfL on the preparation of the Transport Topic Paper, outlining the transport issues and priorities for Havering.	There are no outstanding issues.
Highways authorities	The highways authorities in Havering are Highways England, Transport for London (see above) and the Council. Regular meetings have taken place with Highways England to discuss particular transport issues and projects, such as the Lower Thames Crossing and Junction 28 of the M25, and to discuss the approach in the Local Plan towards transport. Highways England has also been involved in the preparation of the Transport Topic paper for the Local Plan and been kept up-to-date of its progress. The Higways Department at the Council has been involved in the preparation of the Transport Topic Paper supporting the Local Plan and involved in discussions with the other highways authorities. Evidence was jointly developed with the Highways Department regarding parking provision. The Local Highways Authority is therefore supportive of the Local Plan policies and has made sure the underpinning evidence base is robust.	The Council is in the process of agreeing a Statement of Common Ground with Highways England on strategic transport issues.
Marine Management Organisation	The Council has worked constructively with the MMO to make sure links with marine planning documents were appropriately made in the Local Plan. A representative of the MMO has provided a presentation at Havering offices to Development Planning and Economic Development officers on the links between marine and terrestrial planning. Background information and example policies were exchanged which has resulted in the inclusion of a reference to the relevant Marine Planning documents	There are no outstanding issues.

Prescribed body	Summary of engagement	Outstanding issues
	in the River Enhancement policy. The Council will continue to engage with the MMO with regards to the preparation of the South East Marine Plan.	
Local Enterprise Partnership	The London LEP is chaired by the Mayor of London. Engagement with the LEP is therefore part of the constructive and ongoing contact with the GLA, which is summarised in the 'Mayor of London' section above.	There are no outstanding issues.
Local Nature Partnerships	The whole of the borough is covered by the London LNP and the southern part of the borough is part of the Thames Gateway LNP. Both LNPs do not receive any funding from the Department for Environment Food & Rural Affairs and no longer fully fulfil their functions. In London LNP issues and objectives are covered by the policy framework by the London Plan policies, the All London Green Grid and the Mayor's biodiversity strategy. As the Council is not able to consult the LNP as aprt of the Local Plan preperation, the Council has fulfilled its duty to co-operate with the London LNP by assuring the Local Plan is consistent with this policy framework and other key statutory bodies are consulted. Contact with the Thames Gateway LNP has made clear that they are currently exploring how to fund their role and has no resources to comment on specific plans or projects. The Council is in regular contact with the Thames Gateway LNP on a project basis and has on its request included reference to the Land of the Fanns Landscape Partnership in the Green Infrastructure Policy.	There are no outstanding issues.

A.2 Local authorities

A.2 This sections sets out how the Council has engaged with neighbouring councils and other relevant local authorities. Engagement has taken place via:

- Specific Duty to Co-operate events for the Local Plan organised by the Council, as specified in Table A.2 'Havering Local Plan Duty to Co-operate events';
- Regular liaison meetings in the (sub-)region, as specified in Table A.3 'Regular liaison meetings relevant to the Havering Local Plan'; and
- Individual engagement with local authorities and through working structures for the development of (joint) evidence base, as specified in Table A.4 'Summary of engagement with relevant local authorities'.

A.3 This section does not tend to repeat detail to topic specific issues that are already covered in 4 'Strategic planning issues for Havering'.

Table A.2 Havering Local Plan Duty to Co-operate events

Event	Date	Attendees	Purpose
Duty to Co-operate workshop - Issues	25 February 2015	LB Bexley, Chelmsford City Council, Epping Forest District Council,	To kick-start the Local Plan process by presenting the

Event	Date	Attendees	Purpose
and options (Reg 18)		Thurrock Council, LB Barking and Dagenham, LB Redbridge, Brentwood Council, Basildon Council.	approach and identifying the strategic issues relevant to the preparation of the Local Plan.
Duty to Co-operate workshop - Direction of Travel (pre-Reg 19)	28 November 2016	GLA, LB Barking and Dagenham, LB Redbridge, Brentwood Borough Council. Thurrock Council, Basildon Council, Essex County Council, LB Waltham Forest, LB Bexley, Transport for London.	To discuss the proposed approach in the Havering Local Plan Direction of Travel document, provide more detail on ongoing evidence base work, discuss strategic issues, and discuss Local Plan progress from other local authorities.
Programme of individual dedicated DtC meetings	Throughout 2016-17	GLA, Brentwood Borough Council, Basildon Council, Thurrock Council, LB Redbridge, LB Barking and Dagenham, Essex County Council.	To discuss and address particular strategic issues between Havering and individual local authorities.

Table A.3 Regular liaison meetings relevant to the Havering Local Plan

Meeting Name	Frequency	Representatives	Purpose
Association of London Borough Planning Officers Development Plans and Policy Officers sub-group	Quarterly	London Boroughs, GLA, London Councils and various other stakeholders depending on the agenda	Meetings to discuss latest planning issues, share experience, best practice and keeps boroughs up-to-date on the progress of Local Plan preparation.
Co-operation for Sustainable Development (Officers') Group	Quarterly	Local authorities in northwest Essex and local authorities in the proximity, as well as other relevant stakeholders	To promote cross boundary working and discuss other Duty to Co-operate issues.
London Aggregate Working Party meeting	Quarterly	Local authorities and representatives from the aggregates industry and other stakeholders including the GLA and DCLG	To monitor the supply and demand for aggregates, rocks or building material to be used in construction.
Strategic Retail Group	Bi-annually	Local authorities in the Thames Gateway and the GLA	To discuss cross boundary issues in the Thames Gateway, Local Plan progress and retail issues specifically.
Thames Gateway Strategic Group	Quarterly	Members of local authorities and other stakeholders within the Thames Gateway	Discussions on Member level to discuss strategic issues in the area with a focus on transport.

Table A.4 Summary of engagement with relevant local authorities

Neighbouring authority	Summary of engagement	Outstanding issues
London Borough of Barking and Dagenham	The London Borough of Barking and Dagenham (LBBD) is in its early stages of Local Plan preparation. The Council has engaged with LBBD on a regular and ongoing basis. LBBD was one of the joint commissioning boroughs for the SHMA and shares the Housing Market Area with Havering and Redbridge boroughs. The Council has actively engaged with LBBD on this matter. The Council is working in partnership with LBBD in relation to the London Riverside Opportunity Area, which includes parts of both boroughs. The Council has heavily engaged with LBBD, the GLA and TfL in the preparation of the London Riverside Opportunity Area Planning Framework, and the London Riverside Development Infrastructure Funding Study. The Council has co-operated with LBBD on the establishment of the Thames Policy Area in the borough and on other detailed issues.	There are no outstanding issues.
London Borough of Bexley	The London Borough of Bexley (LBB) is preparing its Growth Strategy which will form the basis for a new Local Plan. The Council has engaged with LBB on a regular and ongoing basis. Although the boroughs are adjoining, it was agreed that there were few strategic issues that affect both boroughs due to the Thames operating as a barrier between the boroughs. It was agreed that the key strategic issue is the proposed River Crossing between Belvedere and Rainham, which would link the two boroughs. As a decision regarding this is beyond the scope and control of the Local Plan this discussion will remain ongoing. The Council has co-operated with LBB on the establishment of the Thames Policy Area in the borough.	There are no outstanding issues.
London Borough of Newham	The London Borough of Newham (LBN) has adopted its Detailed Sites and Policies DPD in 2016 and is working on a review of the Core Strategy (2012). LBN was one of the commissioning boroughs for the SHMA, but falls within a separate Housing Market Area (together with Waltham Forrest). The Council has therefore engaged with LBN on the preparation of the SHMA. The Council has engaged with LBN on a regular basis. However, no other strategic issues have been raised by LBN and the Council therefore believes it has met the Duty with LBN.	There are no outstanding issues.
London Borough of Redbridge	The London Borough of Redbridge (LBR) is slightly ahead of Havering in terms of the preparation of their Local Plan with Local Plan examination taken place in June 2017.	There are no outstanding issues.

Neighbouring authority	Summary of engagement	Outstanding issues
	LBR was one of the joint commissioning boroughs for the SHMA and shares the Housing Market Area with Havering and Barking and Dagenham boroughs. The Council has actively engaged with LBR on this matter and agreed a Statement of Common Ground regarding housing need. The Council has engaged with LBR on the preparation of the Green Belt Study.	
London Borough of Waltham Forest	The London Borough of Waltham Forest (LBWF) is in the early stages of preparing its Local Plan. LBWF was not one of the commissioning boroughs of the SHMA. However, as LBWF shares the Housing Market Area with Newham borough, the SHMA also covers LBWF. The Council has engaged with LBWF on a regular and ongoing basis. However, no particular strategic issues have been identified.	There are no outstanding issues.
Epping Forest District Council	Epping Forest District Council (EFDC) has published a Draft Local Plan (Reg 18) in October 2016. The Council has mainly engaged with EFDC via the Co-operation for Sustainable Development (Officers') Group, where planning issues were discussed on a regular basis. No particular strategic issues have been identified between the Council and EFDC. The Council has engaged with LBR on the preparation of the Green Belt Study.	There are no outstanding issues.
Brentwood Borough Council	Brentwood Borough Council (BBC) is currently preparing the Reg 19 version of its Local Plan. The Council has engaged with BBC on a regular and ongoing basis, and has provided comments to BCC's Draft Local Plan consultation in early 2016. The Council has initiated meetings with Brentwood to discuss progress on both Local Plans and cross boundary issues. Issues as Green Belt, Gypsy and Traveller provision, education and distribution of growth were discussed in individual meetings. The Council has engaged with BBC on the preparation of the Green Belt Study.	The Council is in the process of agreeing a Statement of Common Ground with BBC on strategic transport issues.
Chelmsford City Council	Chelmsford City Council (CCC) is in the early stages of Local Plan preparation. CCC has participated in the two Duty workshops and responded to the Reg 18 consultation. The Council and CCC share the position that there are no particular strategic issues between the local authorities. CCC is together with Havering involved in the A127 transport corridor working group.	There are no outstanding issues.

Neighbouring authority	Summary of engagement	Outstanding issues
Basildon Council	Basildon Council (BC) is working towards Reg 19 version of its Local Plan. The Council has engaged with BBC on a regular and ongoing basis, and has provided comments to BC's Draft Local Plan consultation in early 2016. The main strategic issues discussed were transport, Green Belt and distribution of growth. BC is together with Havering involved in the A127 transport corridor working group.	The Council is in the process of agreeing a Statement of Common Ground with BC on strategic transport issues.
Thurrock Council	Thurrock Council (TC) is in the early stages of preparing a new Local Plan. The Council has engaged with TC on a regular and ongoing basis. The main issues discussed with Thurrock have been the distribution of growth, transport and Green Belt. The Council has engaged with TC on the preparation of the Green Belt Study, by ensuring used methods were aligned in both authorities.	The Council is in the process of agreeing a Statement of Common Ground with TC on strategic transport issues.
Essex County Council	Essex County Council (ECC) has a responsibility for strategic planning as well as transport, minerals and waste. The Council has worked closely with ECC on the transport evidence for the Local Plan. The Council is engaged in the A127 transport corridor partnership initiated by ECC to align development and transport in this corridor. The Council has engaged with ECC on the planning for school places through Education departments.	The Council is in the process of agreeing a Statement of Common Ground with ECC on strategic transport issues.

Annex B: Audit trail

B.1 The tables below provide an overview of key milestones for each strategic issue.

Table B.1 Issue 1: Housing need and delivery

#	Action	Date
1	Initiation of the potential joint preparation of a Strategic Housing Market Assessment (SHMA) with East London Boroughs.	7 August 2014
2	Follow-up meeting to discuss the SHMA brief and approach with relevant the boroughs.	9 December 2014
3	First engagement with Basildon, Brentwood, Chelmsford and Thurrock Councils on the SHMA process.	Early 2015
4	ORS commissioned to undertake SHMA.	April 2015
5	SHMA stakeholder event including neighbouring local authorities.	24 June 2015
6	Interviews with neighbouring authorities and other stakeholders as part of the preparation of the SHMA.	Spring/summer 2015
7	Meeting with commissioning boroughs and the GLA to discuss draft SHMA.	25 August 2015
8	Rainham and Beam Park Planning Framework stakeholder event.	6 October 2015
9	Draft SHMA Report of Findings issued.	16 October 2015
10	Meeting to discuss SHMA approach with London Boroughs of Barking and Dagenham, Redbridge and Newham.	7 November 2015
11	Meeting with the GLA to discuss approach to and strategy of the Local Plan in general and several strategic issues including housing.	2 February 2016
12	Meeting with the LB Redbridge to discuss Redbridge's unmet housing need and other Local Plan issues.	7 March 2016
14	Email conformation from the GLA on the approach to housing targets and meeting local need.	21 July 2016
15	Meeting with the GLA to discuss strategic issues concerning the Local Plan.	21 September 2016
16	Engagement with neighbouring authorities by ORS for the preparation of the GTAA.	Autumn 2016
17	Presentation and discussion on housing including SHMA and GTAA at Duty workshop with neighbouring authorities.	28 November 2016
18	Meeting with the GLA on the Local Plan with an emphasis on housing issues.	6 February 2016
19	Meeting with the GLA on the Local Plan with an emphasis on housing issues.	13 March 2016
20	Meeting with Thurrock Council to update progress on the Local Plans and discuss growth in Thurrock.	24 May 2017

Table B.2 Issue 2: Employment and retail

#	Action	Date
1	Attended the North East London Partnership meeting to discuss the Troubled Families funding criteria and provision.	19th May 2016
2	Attended the North east London Partnership workshop to discuss delivery of provision in boroughs.	31st May 2016
3	Attendance of Strategic Retail Group meeting at Thurrock Council with neighbouring local authorities and other retail stakeholders.	21 September 2016
4	Meeting with the GLA to discuss strategic issues concerning the Local Plan.	21 September 2016
5	Attended the North East London Partnership launch of the Troubled Families Programme and the providers.	6th December 2016
6	Meeting with the GLA to discuss approach to employment and retail and other strategic issues.	2 February 2017

Table B.3 Issue 3: Green Belt

#	Action	Date
1	Attendance of Green Belt workshop at Epping Forest District Council.	8 February 2016
2	Commissioning of Peter Brett Associates to operate as 'Critical Friends' for the Green Belt Study.	June 2016
3	Discussed approach to Green Belt study with Basildon Council in Duty meeting.	28 June 2016
4	Commissioning of Peter Brett Associates and Enderby Associates to assist with the parcel assessments stage of the Green Belt Study.	July 2016
5	Discussed approach to Green Belt study with Thurrock Council in Duty meeting.	15 July 2016
6	Discussed approach to Green Belt study with Brentwood Borough Council in Duty meeting.	2 August 2016
7	Discussed approach to Green Belt with GLA in Duty meeting.	21 September 2016
8	Green Belt study methodology shared with neighbouring local authorities and the GLA on a confidential basis.	20 October 2016
9	Green Belt method explained and discussed at Duty to Co-operate workshop with neighbouring local authorities.	28 November 2016
