Annex C: London Plan context

C.1 Strategic issues covered in the London Plan that the Havering Local Plan cannot change include:

- The minimum 10 year housing target for Havering 11,700 dwellings as a rolling target
- The identification of London Riverside as an opportunity area
- The classification of the metropolitan and district centres:
    - Romford Metropolitan Centre
    - District centres of Collier Row, Elm Park, Harold Hill, Hornchurch, Rainham and Upminster.
- The designation of Strategic Industrial Locations:
    - Harold Hill Industrial Estate
    - King George Close Estate, Romford
    - Rainham Employment Area
- Identification of Havering as a Strategic Outer London Development Centre
- Location of Havering within the Thames Gateway National Growth Area
- Strategic benchmarks for specialist accommodation for older people in Havering, set at 135 for private sale, 50 for intermediate sale and 0 for affordable rent
- The identification of Havering as a Mineral Planning Authority in London with a landbank appointment of at least 1.75 million tonnes of land won aggregates up to 2031

Context

The natural and built environments are really important for the health and wellbeing of the community. Around the globe there are numerous examples where carefully planned environments provide the circumstances where good health and wellbeing can be more easily achieved. The benefits can have positive effects on both established and incoming communities - which can last for generations. Good planning can result in, for example, less opportunity for criminal behaviour and stronger community cohesion, as well as further health benefits such as less likelihood of obesity, and better mental health.

The big question is how to provide sufficient homes for a growing and changing population, whilst at the same time promoting health and wellbeing. We know that Havering as a place is changing. The population is destined to grow, and there is a need to build more homes and develop the infrastructure to accommodate this growing and changing population.

One of the ways to influence and promote health and wellbeing through development is to ensure that the Local Plan is sufficiently robust to maximise health gains and, where there is a risk of negative impact, to mitigate against this. Undertaking a health impact assessment (HIA) on Havering's Local Plan has helped to make the Local Plan more robust in this respect. The HIA of the Local Plan has resulted in a raft of policies being revised, new guidance being drafted and a proposed new policy that requires developers of all major developments to undertake their own HIA pre-application. In order to equip developers and planning teams to take this forward, the Public Health Service will be developing detailed guidance for developers and delivering training to planners.

It has become evident that the synergies known to be present between public health and planning have been incorporated into this piece of work. This is confirmation of the value of public health being transferred into the local authorities and it has resulted in the development of strategic plan that has incorporated concepts of health and healthy living from the outset.

1.0 Introduction

1.1 Purpose of this Report

During 2016-2017 London Borough of Havering Planning Department and the Public Health Service conducted a Desktop Health Impact Assessment (HIA) of the Local Plan. This purpose of this report is to describe the steps and actions that were taken as a result. This report is set out as follows:

- brief descriptions of a Local Plan, and an HIA
- processes followed in undertaking the HIA
- appraisal findings, and immediate actions taken to strengthen the Local Plan
- additional recommendations

The report concludes with:

- a reflection on the value of the HIA
- proposals for monitoring and evaluation

1.2 What is the Local Plan?

The Local Plan for Havering guides future growth and development within the borough over the next 15 years, until 2031. The Plan sets out the Council's vision and strategy, and the policies that are needed to deliver them. The Plan indicates the broad locations in Havering for future housing, employment, retail, leisure, transport, community services and other types of development. The policies in the Local Plan will help ensure that the needs of the borough over the next 15 years are sustainably met. The Local Plan and Proposals Map together with the London Plan, the Joint Waste Development Plan Document (DPD) for the East London Waste Authority Boroughs and Havering's forthcoming Detailed Sites Plan will comprise the Development Plan for the borough and will be the primary basis against which planning applications are assessed.

The Local Plan must be consistent with the National Planning Policy Framework (NPPF) 2012 and in general conformity with the London Plan 2016 (consolidated with alterations since 2011). The NPPF recognises that the planning system can play an important role in facilitating social interaction and creating healthy, inclusive communities. The London Plan includes policies on improving health and addressing health inequalities, and health and social care facilities. The London Plan was subject to a full Integrated Impact Assessment which included a Health Impact Assessment.

1.3 What is a Health Impact Assessment (HIA)?

HIA is a process that can help to evaluate the health effects of a plan or project. It is used for plans or projects such as transport or land use, i.e. plans that are not primarily concerned with health or the delivery of health services. HIAs should provide practical recommendations for enhancing positive health impacts of a project, and for minimising negative impacts.

The HIA approach recognises that where we live, how we travel, and how we gain access to green space or leisure activities can all have a significant impact on health and wellbeing. HIA provides an opportunity to ensure that the potential impacts on health and wellbeing, particularly where there may be inequalities in outcomes for marginalised or disadvantaged groups, are addressed from the outset and mitigated where possible.

There are many HIA tools available; all follow a similar approach which is:

- Screening: identifying whether an HIA would be useful
- Scoping: planning the HIA
- Assessment: identifying groups/populations affected and quantifying health impacts

- Recommendations: suggesting practical actions to promote positive health and minimise negative effects
- Reporting: presenting the results of the HIA
- Monitoring and evaluation: determining the HIA's impact on the decision and health status

2.0 Health Impact Assessment Process

2.1 Screening

The screening stage considers the need for and type of HIA required.

2.1.1 Establishing the need for HIA

While there is no statutory requirement to undertake a HIA when preparing a Local Plan, national and regional policy and local strategy all recognise the important connections between planning and the health of communities, and led to the decision to proceed with HIA:

> National Planning Practice Guidance says, *"Local planning authorities should ensure that health and wellbeing, and health infrastructure are considered in local and neighbourhood plans and in planning decision making. Public health organisations, health service organisations, commissioners and providers, and local communities should use this guidance to help them work effectively with local planning authorities in order to promote healthy communities and support appropriate health infrastructure*".
>
> The London Plan says, "*The impacts of major development proposals on the health and wellbeing of communities should be considered, for example through the use of Health Impact Assessments (HIA)".*
>
> Havering's Health and Wellbeing Strategy recognises the importance of addressing the wider determinants to improve health and wellbeing, including factors such as the impact of the local environment, and the interplay between the environment and social conditions. See Appendix 1: Wider determinants of Health, for a description of the many factors that interact to influence health status and the Dahlgren and Whitehead illustration "Rainbow of Determinants".

2.1.2 Selecting HIA approach

There are three main approaches for HIA:

- Prospective – at the start of a development of a project, proposal or plan
- Concurrent – runs alongside the implementation of the project
- Retrospective – assesses the effect of an existing project and can be used as an evaluation tool. Retrospective assessments can also be made of unexpected events

Within any of the above, HIA can take one of three different forms, depending on the focus, the time and resources available:

- Desktop HIA – encompassing a small number of participants around a table using existing knowledge and evidence
- Rapid HIA – through establishing a steering group and participatory stakeholder workshop(s) – typically involving a brief investigation of health impacts, including literature reviews and gathering of knowledge and further evidence from a number of local stakeholders
- Comprehensive HIA – in-depth, and carried out over months, with extensive literature searches and collection of primary data

Planners and Public Health Specialists jointly agreed to undertake a Prospective Desktop HIA because:

- National guidance and London Policy, described that it is most useful to undertake HIA at the very start of Local Plan development (thus prospective approach)
- There was already available considerable knowledge and evidence to inform the HIA, including evidence from the Local Joint Strategic Needs Assessment, knowledge of the impact of wider determinants on health, and knowledge of policies that underpinned the Local Plan
- The need to take into account a high number of underpinning policies made workshops impractical and it was planned to conduct a wider consultation on the Local Plan as is required under Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012

2.2 Scoping

This step defines the scope and scale of the HIA. The following details were identified and agreed:

- timescales
- the team of assessors; individuals with the necessary knowledge and skills. These were drawn from the Council's Development Planning Team and Public Health Service
- the assessors' individual roles and responsibilities for collecting/analysing the information
- specific HIA tool[1] to be used

The HIA tool selected was the London Healthy Urban Development Unit (HUDU) model. This model was chosen as it had been identified as suitable for high-level HIA of development plans and proposals, including planning frameworks and masterplans for large areas, regeneration and estate renewal programmes and outline and detailed planning application. The tool had been cited in the Mayor for London guidance documents, and had recently been used elsewhere in London and shown to be effective. The HUDU Rapid HIA tool is also minimally resource intensive.

2.3 Appraisal

The third step consists of the impact study, using information about the characteristics of the project, program or policy, information of a scientific nature obtained by reviewing the literature and consulting with experts about the potential effects of the project, program or policy, and by taking into account the profile of the population that is likely to be affected.

The HIA tool helps identify those determinants of health which are likely to be influenced by a specific development proposal. It assumes that policies, programmes and projects have the potential to change the determinants of health. Changes to health determinants then leads to changes in health outcomes or the health status of individuals and communities. It does not identify all issues related to health and wellbeing, but focuses on the built environment and issues directly or indirectly influenced by planning decisions.

Applying the HUDU tool, the Local Plan and all of the underpinning policies were assessed according to the following eleven topics:

(i) Housing quality and design
(ii) Access to healthcare services and other social infrastructure
(iii) Access to open space and nature
(iv) Air quality, noise and neighbourhood amenity
(v) Accessibility and active travel
(vi) Crime reduction and community safety
(vii) Access to healthy food

[1] There are a range of tools available, including the Healthy Urban Development Unit, the Wales Health Impact Assessment Support Unit, the Department of Health, as well as those used in other countries as described by the World Health Organization

(viii) Access to work and training
(ix) Social cohesion and lifetime neighbourhoods
(x) Minimising the use of resources
(xi) Climate change

Under each of the topics above, the HUDU tool poses a range of questions against which the draft Local Plan and supporting policies were considered, taking into account Havering's population profile and health needs (questions listed in Appendix 4).

The HIA process highlighted where there were possible gaps in policies, where there was a need for further guidance to be developed, and where some areas could be further strengthened. The process also helped to identify those policies that appeared to have no gaps and thus needed no changes. Appendix 3 summarises the key appraisal findings. It is worth noting that the policies included in the HIA of the Local Plan are also supported and enhanced by a raft of other national and local policies, such as Social Housing Regulation, Building Regulations, Licensing Policy, Education Policy etc. which in themselves have been developed to benefit the community. These wider policies and regulations were not considered through the HIA assessment.

The Local Plan has been prepared to be purposely focused and concise and it does not repeat policies that are already set out within the London Plan and National Planning Policy Framework. Policies within these documents are not re-assessed as part of this HIA.

In response to the findings and recommendations of the HIA revisions were made to the Local Plan. Some of the key actions taken were:

- Embedding health and wellbeing throughout the Local Plan, recognising that the health challenges of non-communicable diseases[2], health inequities and inequalities are hugely influenced by the environment
- Developing a specific Health and Wellbeing Policy to highlight the importance of health and wellbeing to those wishing to develop and invest in the borough
- Ensuring strong support for active travel options
- Supporting developments which improve access to open spaces via walking and cycling paths
- Including requirements for car clubs
- Strengthening policy support for independent living and adaptations to facilitate this

2.4 Recommendations

As described above, findings and recommendations were made throughout the iterative HIA process, and appropriate revisions made. In addition, it is also recommended that HIA be embedded in the approach to planning through the following three actions:

(a) Ongoing joint working between planners and public health, to include:
    - Continued consideration of health in all future policies and plans such as Site Specific Allocations and Supplementary Planning Documents
(b) A requirement for all major developments[3] to include a Health Impact Assessment stage, which should be commensurate of the scale of the development and take into account HIA principles, for example:

[2] Non communicable diseases include, for example, cardiovascular disease (heart attacks, stroke), cancer, chronic respiratory diseases, and diabetes

- be supported by good evidence of the needs of the local population, as an integral part of the development application
- include particular attention to the impacts that may increase inequalities in health outcomes experienced by marginalised or disadvantaged groups
- include a consultation process to engage with the local community, with particular consideration given to inequalities by taking into account the views of more vulnerable groups
- consider the preservation and provision of green and other open space
- consider how social cohesion and community safety can be enhanced through good design and provision of social infrastructure to meet the needs of diverse population groups.

(c) Promoting use of HIA for smaller developments, as even modest developments can add value to health and wellbeing

3.0 Conclusion

Meeting the local need for housing and necessary infrastructure means that development and growth are inevitable. It is essential that this development and growth are carefully planned in order to optimise the benefits and to mitigate any negative impacts. The Local Plan provides the opportunity to undertake this careful planning, particularly when shaped by, and scrutinised through the lens, of a HIA.

As the HIA of the Havering Local Plan has shown, the rigour of undertaking HIA has not only helped to identify and address gaps in the Local Plan, but has also contributed to assurances that many of the underpinning policies and planning processes had already taking into account the relationship between planning and health and thus required no modification.

The HIA of the Local Plan has helped to demonstrate at a local level the impact that development can have on health and wellbeing, and where there are opportunities to enhance health gains and mitigate against negative impacts. This in turn has led recommendations to further embed HIA in the planning processes.

4.0 Monitoring and evaluation

The Council is required to publish an Authority Monitoring Report (AMR) on an annual basis which reports on the extent to which the policies set out in Local Plan are being achieved. The proposed submission version of the Local Plan includes an indicator to monitor how many major applications are submitted with a Health Impact Assessment.

The Local Plan will influence the broader determinants of health, and as a result will make an important contribution to the overall long-term health and wellbeing of the borough's residents. It is expected that high level health and wellbeing outcomes will continue to be monitored by the Health and Wellbeing Board.

When the local plan is reviewed either in part or full, the HIA should be revisited to ensure it is still fit for purpose.

5.0 Next Steps

This HIA supports the Proposed Submission version of the Local Plan which is currently subject to public consultation. Following the receipt of the representations on the Proposed Submission version of the Local Plan, the

[3] A major development is defined as any residential scheme of 10 or more units, or any schemes of 1,000 square feet

Council will consider the representations prior to submitting the documents to the Secretary of State for Communities and Local Government for examination by an independent Planning Inspector. The HIA will be updated to reflect any changes made to the Local Plan before it is submitted to the Secretary of State.

Following the examination, the Council will consider the Inspector's Report prior to adopting the new Local Plan. Should the inspector require any changes to the Local Plan during the examination process, the HIA will be revisited and further updated in order to reflect the changes.

Appendix 1: Wider determinants of health, and the impact of the built environment on health

Figure 1 below reproduces Dahlgren and Whitehead's representation of the wider determinants of health. It illustrates the many factors that interact to influence health status.

Whilst we are powerless to alter such central factors as our age, sex and genetically inherited propensity to disease, the interaction between our individual characteristics and the environment in which we live, not just our immediate surroundings but also the socio-political and cultural environment, is key to determining health.

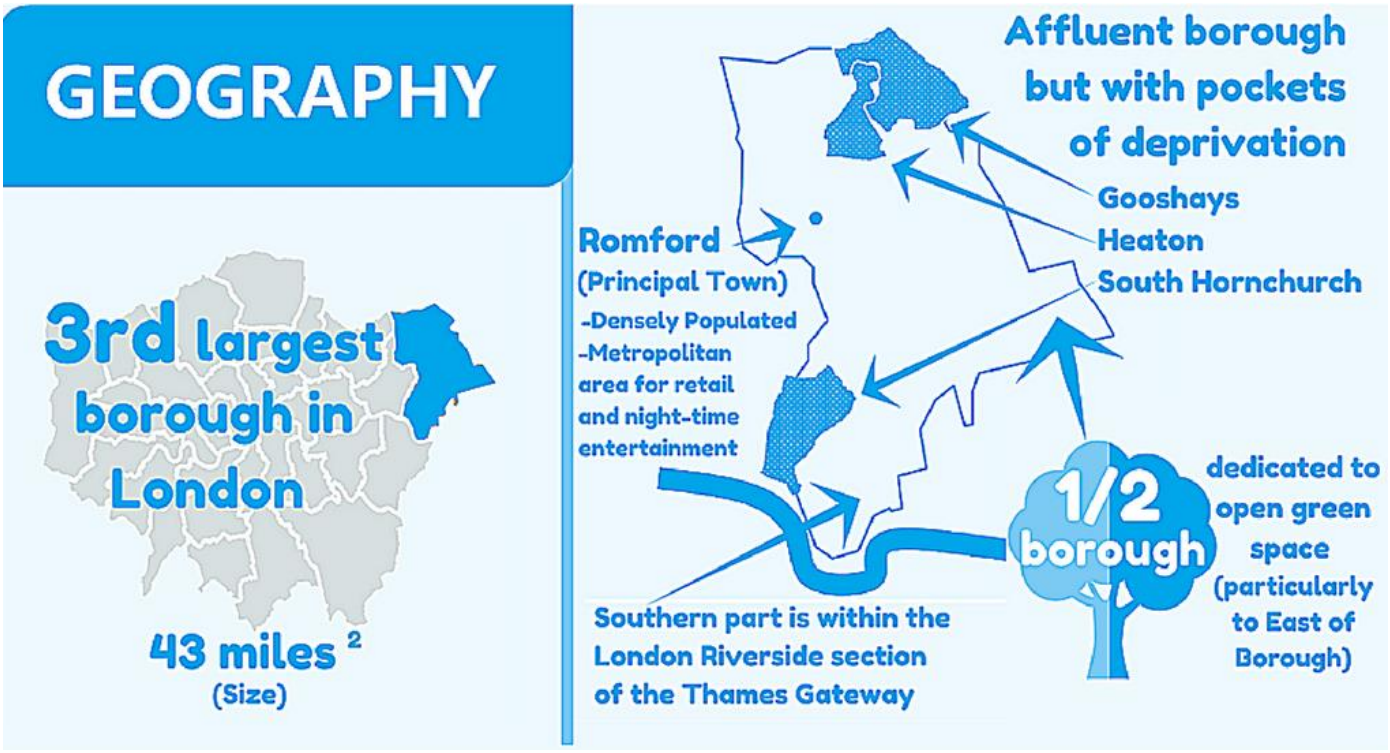
Figure

People living in areas of deprivation, with potentially poor housing conditions, overcrowding, high levels of unemployment, on low incomes, and poor education, live significantly shorter lives than their more affluent counterparts. For example, in England, a person in the quintile of lowest deprivation can expect to live around 7 years longer than a person in the quintile of highest deprivation. The environmental aspects of the local place also interplay with the social conditions; large networks of streets or estates can impact on our ability to access green and open spaces, important not just for physical activity, but for our mental health and wellbeing too. The design and density of housing, access to shops, supermarkets, leisure facilities and other retailers can affect the quality of our diet and lifestyle, including how we build and maintain our social relationships. Also, how we travel through our environments, whether there are traffic calming measures, safe places for children to play and the impact of traffic pollution on our air quality are important factors.

Appendix 2: Havering's Population Profile and Health Needs

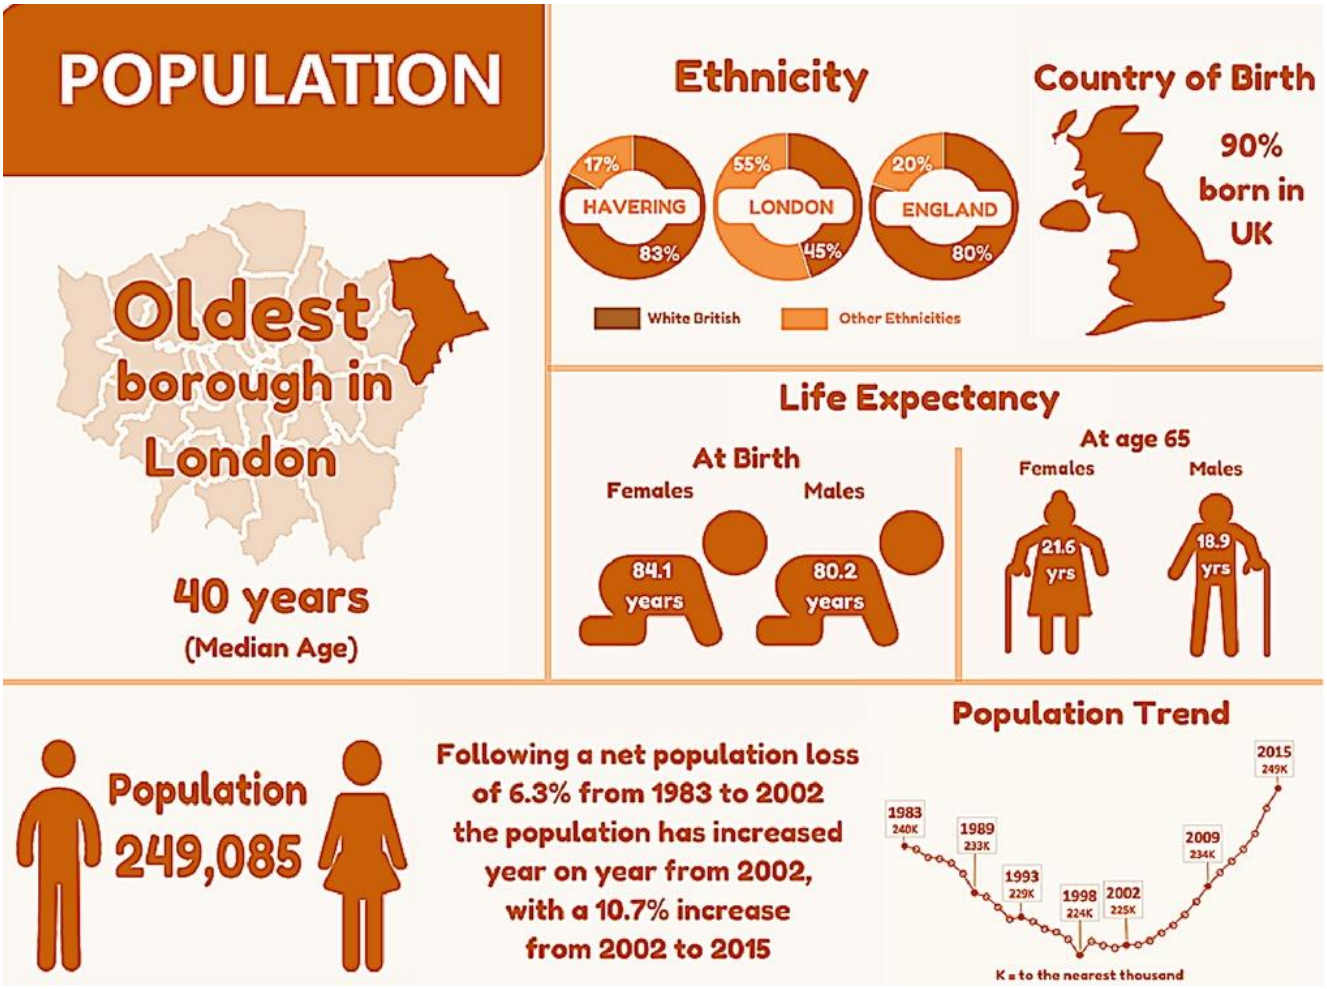
The following is a snapshot of the key population and health attributes of Havering. For full details, please refer to the document "*This is Havering: a demographic and socio-economic profile*[4]".

The London Borough of Havering is the third largest borough in London (43 square miles) and contains 18 electoral wards, with a total estimated population of 249,085. Havering is mainly characterised by suburban development, with almost half of the area dedicated to open green space, particularly to the east of the borough. The principal town (Romford) is densely populated and is an area of major metropolitan retail and night time entertainment. The southern part of Havering is within the London Riverside section of the Thames Gateway redevelopment area and will be an area of increasing development and population change. Havering is a relatively affluent local authority but there are pockets of deprivation to the north (Gooshays and Heaton wards) and south (South Hornchurch) of the borough.

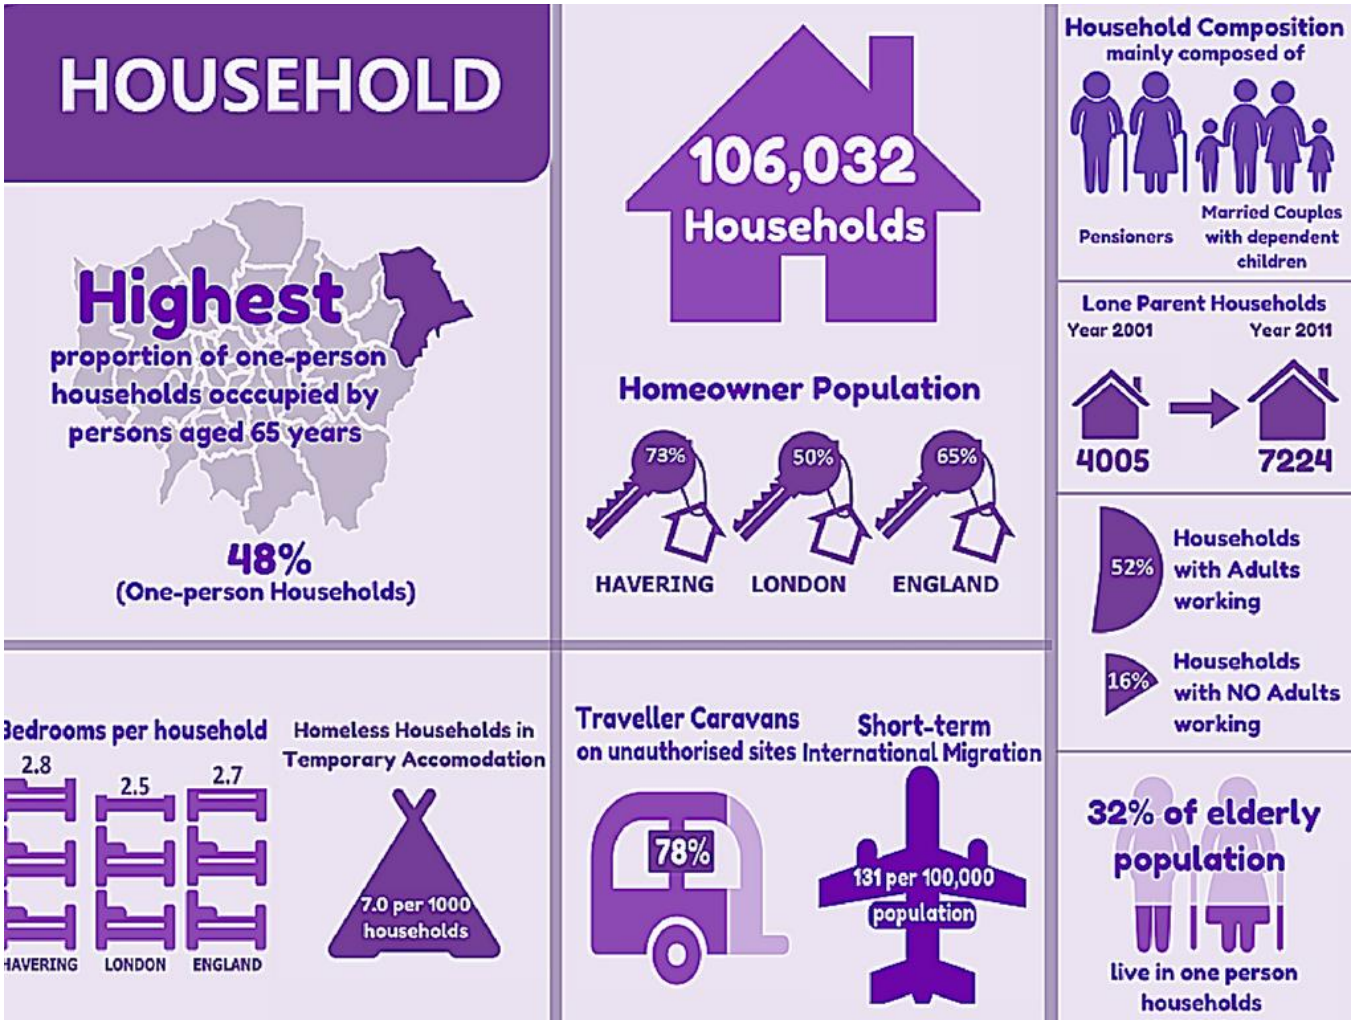


Havering has the oldest population out of all the London boroughs, with a median age of approximately 40 years old, and 18.4% of the population aged 65 years or over. The life expectancy at birth for people living in Havering is 80.2 years for males and 84.1 years for females. With a predicted 24% increase in those aged between 65 and 84 years and 45% increase in those aged 85 years or over by 2032 (compared to 2017), the health needs of older people is an important consideration.

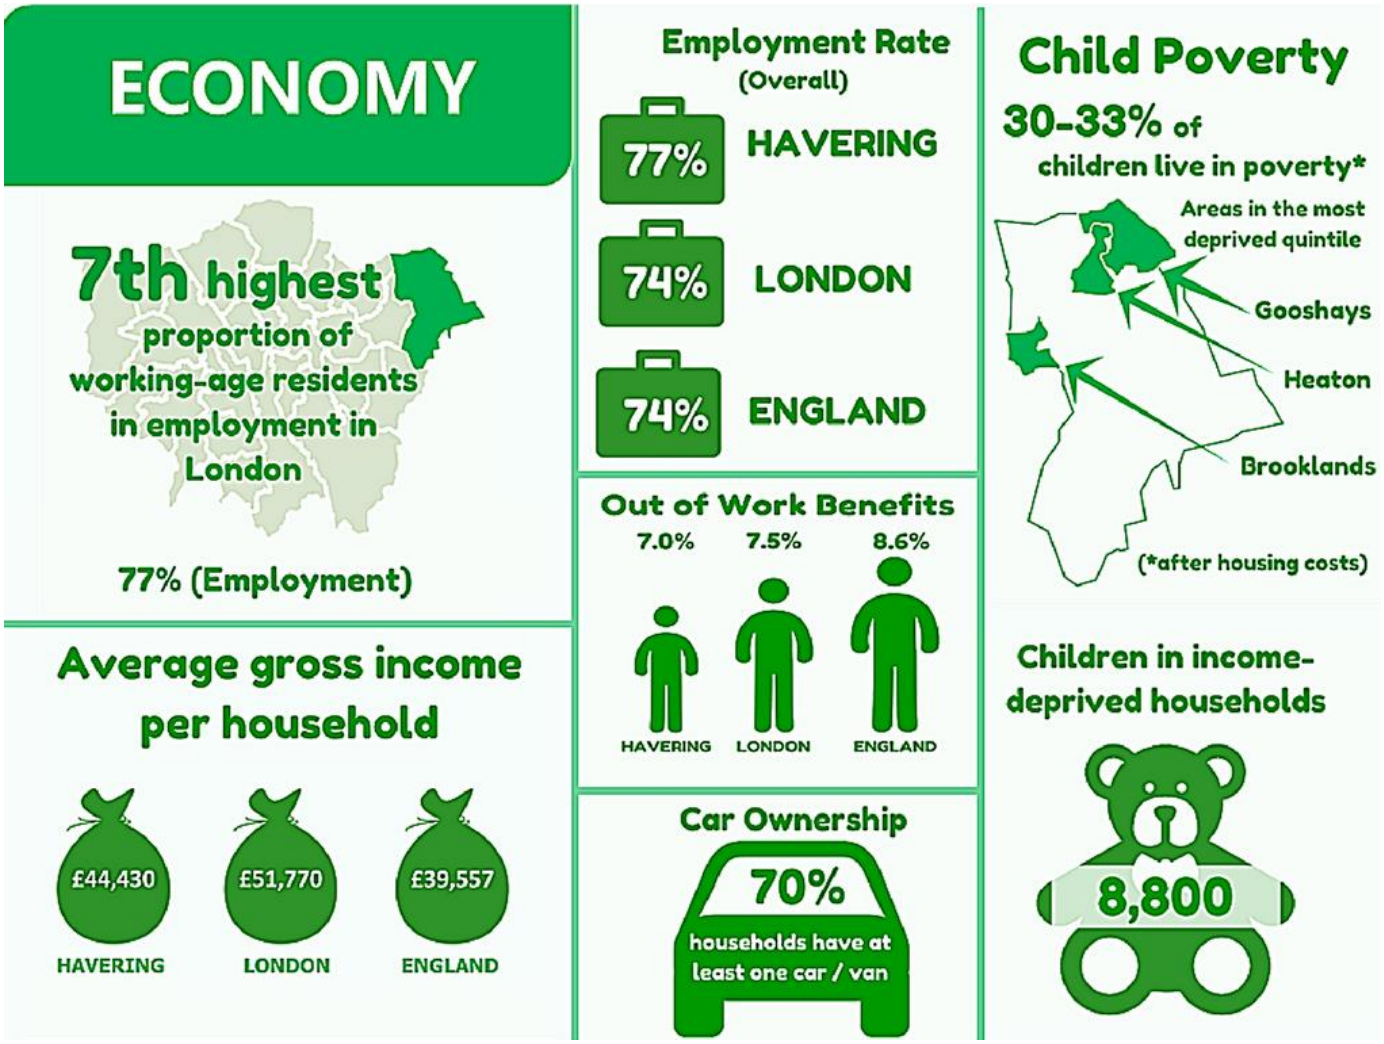
[4] London Borough of Havering (2017). *This is Havering: a demographic and socio-economic profile.* http://www.haveringdata.net/wp-content/uploads/2017/04/This-is-Havering_Havering-Demographic-Profile_Main-Document-v2.4.pdf



From 2002 to 2015, the population of Havering has increased by 10.7%. As well as increases in the number of births in Havering, there has been an increase in the general fertility rate from 58 (per 1,000 women aged 15-44) in 2004 to 67 in 2015. This equates to an additional 9 births per 1,000 women aged 15-44 within the period. From 2010 to 2015, Havering experienced the largest net inflow of children across all London boroughs. 4,536 children settled in the borough from another part of the United Kingdom during this six year period. It is also projected that the largest increases in population will occur in children (0-17 years) and older people age groups (65 years and above) up to 2032. With the increases in population at both ends of the age spectrum, any growth and development in the borough has to take account of the specific needs of both children and older adults



Havering is one of the most ethnically homogenous places in London, with 83% of its residents recorded as White British, higher than both London and England. It is projected that the Black African population will increase from 4.1% in 2017 to 5.2% of the Havering population in 2032. There are 106,032 households in Havering, according to the Council Tax List (as at 28th February 2017), which are mainly composed of pensioners and married couples with dependent children. About 70% of the population in Havering are home owners; this is one of the highest proportions across London boroughs. Almost half (48%) of all one person households in Havering are occupied by persons aged 65 years and over, which is the highest proportion in London. In 2011, there were 7,224 one-adult households with children under 16 in Havering. This is an increase from 2001 when there were 4,005 lone parent households. There has also been an increase in the number of one-adult households with no children.



The majority of children in Havering are not poor, but around 8,800 live in income-deprived households. Gooshays and Heaton wards have the highest proportion of children living in poverty.

Appendix 3: Key Appraisal Findings

The HIA assessment process was structured around the 11 topics defined in the HUDU HIA tool. This identified gaps in policy, policies that had positive impacts on health, and policies that could be further enhanced to improve health outcomes. Section 2.3 provides a brief summary of assessment and actions taken. This appendix provides greater detail of that process.

(i) Housing quality and design

Housing availability and the quality of housing directly impacts on health. The HIA considered the relevant policies in the Local Plan that contribute to both the creation and maintenance of quality housing, as well as how broader Housing policy is applied locally (e.g. as the Lifetime Homes[5] criteria). The HIA took into account factors that impact on housing need and supply, as well as the housing needs of specific groups, and considerations such as energy efficiency, and adaptability to support independent living.

As far as housing quality and design was concerned, many of the policies were found to already include health and wellbeing as objectives and were assessed as having positive health impacts, for example:

- Policy 3: Housing Supply, 'Policy 4: Affordable Housing' and 'Policy 5: Housing Mix ' seeks to ensure that the Local plan provides for delivery of a range of housing types and sizes, including affordable housing responding to local housing need.
- Policy 6: Specialist Accommodation included a set of criteria to ensure that any development of such housing is well served by public transport, access to essential services and shops and provides an appropriate level of amenity space suited to meet the needs of residents.

There were some policies that were assessed as having a positive impact on health that could be further enhanced:

- Policy 7: Residential Design and Amenity – now states, "New developments should promote independent living by utilising designs which can allow for alterations to be made in the future. The Council will support and encourage proposals which provide adaptations enabling residents to live independently and safely in their own homes."
- Policy 12: Healthy Communities now states within the support text "It is important that the health and well-being of a building's occupants is considered and appropriate measures taken to prevent sick building syndrome. Therefore, all new developments - residential, business, commercial, and industrial - need to comply with the Building Regulations and the Chartered Institute of Building Services Engineers (CIBSE) Guide on building control systems"

(ii) Access to healthcare services and other social infrastructure

A healthy place can be defined as 'a good place to grow up and grow old in'. It is one which supports healthy behaviours and supports reductions in health inequalities. It should enhance the physical and mental health of the community and, where appropriate, encourage:

[5] http://www.lifetimehomes.org.uk/: describes how homes can be built with the potential for adaptation later. Such adaptations are important to ensure people continue to be able to live independently in their own homes for as long as possible as they age and their needs change.

- active healthy lifestyles that are made easy through the pattern of development, good urban design, good access to local services and facilities; green open space and safe places for active play and food growing, and which is accessible by walking and cycling and public transport.
- the creation of healthy living environments for people of all ages which supports social interaction. It meets the needs of children and young people to grow and develop, as well as being adaptable to the needs of an increasingly elderly population and those with dementia and other sensory or mobility impairments.

Supplementary Planning Guidance for the London Plan says that social infrastructure should be designed to meet people's needs at all stages of life[6]. Consideration should be given around the provision of a wide range of services including those for health, education, community, culture, play, recreation, sports and faith, and emergency facilities and services to meet other local needs that contribute to quality of life. Green infrastructure in all its forms is also a key component of social infrastructure. Similarly, business growth is important for jobs and maintaining the income levels of local residents. Income is a key wider determinant of health.

The HIA process found the Havering Local Plan had a largely positive health impact in relation to social infrastructure. The preparation of an Infrastructure Delivery Plan to identify infrastructure needs arising from increased demand on health services (GPs, Pharmacies, Dentists, etc.) and education provision (schools, colleges) has a positive impact. The Local Plan also made reference to implementing the policies contained within the London Plan, which promotes co-location of facilities and provision of multi-functional buildings.

The HIA identified that there were policies that had a positive health impact but which could be further enhanced:

- Policy 6: Specialist Accommodation for Older People – now incorporates the recommendation that common areas are encouraged to be included in proposals, thus providing occupants a space where they can socialise and interact with other people and the design takes into account the facilities and needs of the occupants.
- Policy 16: Social Infrastructure – this now states that, "The Council will make sure that new and existing residents will have access to a range of social infrastructure facilities by: (ii) Requiring major developments to provide new social infrastructure facilities as part of mixed-use developments where feasible, where a deficiency is identified through the Infrastructure Delivery Plan.

(iii) Access to open space and nature

The Borough's assets include its wealth of green and open spaces. Preservation of this space, which can have a positive impact on mental as well as physical health, was a key feature of the Local Plan. The following policies were all considered to have a positive impact on health and wellbeing:

- Policy 3: Housing Supply
- Policy 15: Culture and creativity
- Policy 18: Open Space, Sports and Recreation
- Policy 29: Green Infrastructure
- Policy 30: Nature Conservation

There were a small number of policies that were assessed to have a positive impact which could be further enhanced:

- Policy 17: Landscaping - was amended to clarify maintenance responsibilities
- Policy 15: Culture and creativity – was strengthened and inclusivity was included

[6] Greater London Authority (2015). *Social Infrastructure: Supplementary Planning Guidance*. https://www.london.gov.uk/file/22780/download?token=a-BvX_IN

iv. Air quality, noise and neighbourhood amenity

Air pollution can damage lives, with harmful effects on human health, the economy and the environment. Air pollution contributes to cardiovascular disease, lung cancer and respiratory diseases, and has a disproportionate impact on the young and old, the sick and the poor.

The HIA identified that the growth in the borough is also likely to increase the number of vehicles, with the potential to have a negative impact on air pollution. Policy 3: Housing Supply - may cause an increase in air pollution as a result of building works.

The HIA process identified the measures that were already in place to mitigate against these negative effects:

- The impact of building/construction on noise and pollution (dust, exhaust fumes etc.) is largely controlled by the London Plan and by statutory Health and Safety Regulations.
- Local policies that were assessed as having a mitigating effect included:
  - Policy 36: Low Carbon Design, Decentralised Energy and Renewable Energy
  - Policy 34: Managing Pollution
  - Policy 29: Green Infrastructure
  - Policy 30: Nature Conservation
  - Policy 23: Transport Connections
  - Policy 24: Parking Provision and Design
  - Policy 13: Town Centre Development
  - Policy 19: Business Growth
  - Policy 15: Culture and creativity

Air Quality was initially addressed within the Pollution Policy. However, given the importance of this issue a new, expanded Air Quality policy was included which recognises links between air quality and health.

Noise pollution can be affected by late night entertainment (bars, clubs, festivals etc.). Both the National Planning Policy Framework and Havering Local Plan seek to encourage the vitality of town centres.

The HIA process identified the measures that were already in place to mitigate against the negative effects:

- Policy 7: Residential Design and Amenity and Policy 26: Urban Design both seek to protect the amenity from both residential and commercial developments, which is inclusive of noise pollution.

(iv) Accessibility and active travel

Physical activity is a key protective factor in maintaining health and wellbeing. The HIA identified that Havering's Local Plan policy on Transport Connectivity prioritises and promotes sustainable modes of transport, such as walking and cycling. This supports the London Plan which aims to encourage people to undertake active travel, and which promotes the provision of cycle lanes, and encourages local businesses to provide cycle storage and accessible showers.

- Policy 23: Transport Connections, describes how new development should be integrated into the existing cycle network and to promote good pedestrian and cycle access between the development and open spaces.

The Policy covering transport connections was assessed as having a positive impact but one that could be further enhanced. As a result of the recommendations, the following key alterations were made:

- Policy 25: Transport Connections – now requires new development to optimise sustainable access and other future transport connections, wherever applicable and seeks to ensuring good sustainable access between new developments and public transport interchanges in the borough to promote active travel

(v) Crime reduction and community safety

Feeling safe and secure has an influence on health and wellbeing. Good design can "design out crime" and can encourage people to use communal space. In turn this can encourage higher levels of physical activity through walking and cycling and outdoor play for children, as well as good community health as a result of increased social interaction.

Havering's Local Plan promotes community safety, ensuring overlooking of public spaces; and minimising opportunity for antisocial behaviour through the following policies:

- Policy 7: Residential Design and Amenity
- Policy 26: Urban Design
- Policy 23: Transport Connections
- Policy 15: Culture and creativity
- Policy 24: Parking provision and design

Further policies were assessed as having a positive impact but which could be further enhanced, particularly through applying 'Secured by Design' standards:

- Policy 9: Residential Design and Amenity – now supports development designed in accordance with the principles of Secured by Design

(vi) Access to healthy food

Levels of obesity in Havering are similar to the national average; with two-thirds being are overweight or obese (110,000 residents)[7]. Not only does obesity contribute to cancer, coronary heart disease and stroke, but also significantly impacts on mental health. Access to good quality, healthy food is an important factor in reducing or preventing obesity. Access to healthy food can be limited by

- large networks of streets or estates with limited access to local shops
- poor transport routes to large, out of town supermarkets
- small, local convenience stores stocking fewer fresh produce items
- high density of hot food take-aways

All of the policies in Havering's Local Plan were assessed as having a positive impact on access to healthy food. In particular, Policy 13: Town Centre Development includes provisions for a range of retail uses which ensure there are appropriate use classes within the town centres. It also seeks to control and limit the over-proliferation of take away units in the Borough's town and local centres.

(vii) Access to work and training

Being in employment is one of the biggest factors in reducing inequalities in health, and is associated with many positive mental health benefits. The following policies were all assessed as having a positive impact on work and training:

[7] London Borough of Havering (2016). Obesity Needs Assessment. http://www.haveringdata.net/resource/view?resourceID=JSNAObesityMain

- Policy 22: Skills and Training support proposals that provide employment and skills opportunities
- Policy 17: Education - Support for the provision of childcare facilities that are accessible by public transport, walking and cycling
- Policy 19: Business Growth
- Policy 13: Town Centre Uses
- Policy 21: Affordable workplace

(viii) Social cohesion and lifetime neighbourhoods

Social cohesion can be described as 'the willingness of members of a society to co-operate with each other in order to survive and prosper'. In modern society, what this means is that the members of society can live and work together, respecting others view, differences, property and life. From a planning perspective, social cohesion will be supported by a community that provides the social infrastructure to enable people of different races, faith and cultural groups to pursue the activities that are meaningful to them. For example, this may relate to policies for the building of centres for the celebration of different faiths. It also relates to creation of neighbourhoods which promote a diverse mix of people, of different ages and backgrounds, and which provide the facilities required by those different age groups throughout their lives. In order to create a 'Lifetime neighbourhood', it requires residents to be at the very heart of the process, empowering them to identify priorities and take action, with support from statutory, voluntary, public and private sector agencies to realise their vision[8].

Having a close social network to support a person, whether it is a family member, friend or faith group, is also an important determinant of health. Loneliness and social isolation are major factors in depression and common mental illness. Havering has a relatively high number of lone parents (7,224) as well as percentage of people over the age of 65 who live in one-person households (32%).

The Local Plan was assessed as having a positive impact on social cohesion, through alignment with the London Plan and the "Provision of Lifetime Neighbourhoods" as well as through the following policies:

- Policy 26: Urban Design
- Policy 7: Residential Design and Amenity
- Policy 15: Town Centre Uses
- Policy 16: Social Infrastructure
- Policy 15: Culture and creativity
- Policy 18: Open Space, Sports and Recreation

The assessment did identify that the positive impact could be further enhanced through:

- developers conducting health impact assessments on major development proposals to take into account the changing needs of a broad demographic who will be the residents of that development. The HIA also identified that consideration should be given to inequalities, by taking into account the views of more vulnerable groups such as people with learning disabilities, elderly or housebound residents, those with English as a second language
- increasing the connectivity between existing and new communities, such as extending cycle lanes, and ensuring access to green/open space in new developments. This has been reflected in the Policy 26: Urban Design

[8] Department for Communities and Local Government (2011). *Lifetime Neighbourhoods*. https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/6248/2044122.pdf

(ix) Minimising the use of resources

Energy efficiency is particularly important where people on low incomes may be experiencing fuel poverty. Havering has two significant areas of deprivation which fall into the top 10% of the most deprived neighbourhoods in the UK, as well as a high percentage of older, retired people on limited incomes. Around a third of children live in poverty in Havering, after accounting for housing costs. The Local Plan therefore seeks to optimise the energy efficiency of buildings and supports low carbon and renewable energy developments in principle via 'Policy 39: Low carbon design, decentralised energy and renewable energy'.

Over 50% of the borough is within the Green Belt, policies relating to the preservation and use of Green Belt land and green infrastructure is of importance. The health impact of this was addressed positively in the Local Plan through Policy 3: Housing Supply, which considers the use of previously developed land. In addition, through the application of the London Plan the use of available land is optimised.

Sustainable design and construction techniques, and use of recycling, including building materials, were both assessed to have a potentially positive health impact through the following policies:

- Policy 36: Low Carbon Design and Renewable Energy
- Policy 35: On-site waste management
- Policy 39: Secondary Aggregates

(x) Climate change

Effective use of renewable energy sources will be a major contributing factor in the ongoing work to address climate change. Implementation of strategies to reduce the energy use of buildings, such as provision of appropriate ventilation, shading and landscaping can all contribute to ensuring public spaces respond to temperature variation throughout the year, as well as provide additional greening for the promotion of positive mental health and wellbeing. The positive health benefits of preserving and enhancing biodiversity were highlighted in the HIA as a powerful justification for their inclusion in the Local Plan.

The HIA identified the following policies that help to mitigate the effects of climate change and severe weather, such as flooding,

- Reflecting the London Plan policy Sustainable Urban Drainage techniques (SUDS)
- Local Plan policies:
    - Policy 29: Green Infrastructure
    - Policy 30: Nature Conservation
    - Policy 18: Open Space, Sports and Recreation
    - Policy 26: Urban Design
    - Policy 27, Landscaping
    - Policy 32: Flood Management

Appendix 4:

Theme: Housing quality and design	
1	Does the proposal seek to meet all 16 design criteria of the Lifetime Homes Standard or meet Building Regulation requirement M4 (2)?
2	Does the proposal address the housing needs of older people, i.e. extra care housing, sheltered housing, lifetime homes and wheelchair accessible homes?
3	Does the proposal include homes that can be adapted to support independent living for older and disabled people?
4	Does the proposal promote good design through layout and orientation, meeting internal space standards?
5	Does the proposal include a range of housing types and sizes, including affordable housing responding to local housing needs?
6	Does the proposal contain homes that are highly energy efficient (e.g. a high SAP rating)?
Theme: Access to healthcare services and other social infrastructure	
7	Does the proposal retain or re-provide existing social infrastructure?
8	Does the proposal assess the demand for healthcare services and identify requirements and costs using the HUDU model?
9	Does the proposal provide for healthcare services either in the form of a financial contribution or in-kind? Does a health facility provided as part of the development match NHS requirements and plans?
10	Does the proposal assess the capacity, location and accessibility of other social infrastructure, e.g. schools, social care and community facilities?
11	Does the proposal explore opportunities for shared community use and co-location of services?
12	Does the proposal contribute to meeting primary, secondary and post 19 education needs? Also pre-school
Theme: Access to open space and nature	
13	Does the proposal retain and enhance existing open and natural spaces?
14	In areas of deficiency, does the proposal provide new open or natural space, or improve access to existing spaces?
15	Does the proposal provide a range of play spaces for children and young people?

16	Does the proposal provide links between open and natural spaces and the public realm?
17	Are the open and natural spaces welcoming and safe and accessible for all?
18	Does the proposal set out how new open space will be managed and maintained?
Theme: Air quality, noise and neighbourhood amenity	
19	Does the proposal minimise construction impacts such as dust, noise, vibration and odours?
20	Does the proposal minimise air pollution caused by traffic and energy facilities?
21	Does the proposal minimise noise pollution caused by traffic and commercial uses?
Theme: Accessibility and Active Travel	
22	Does the proposal prioritise and encourage walking (such as through shared spaces?)
23	Does the proposal prioritise and encourage cycling (for example by providing secure cycle parking, showers and cycle lanes)?
24	Does the proposal connect public realm and internal routes to local and strategic cycle and walking networks?
25	Does the proposal include traffic management and calming measures to help reduce and minimise road injuries?
26	Is the proposal well connected to public transport, local services and facilities?
27	Does the proposal seek to reduce car use by reducing car parking provision, supported by the controlled parking zones, car clubs and travel plans measures?
28	Does the proposal allow people with mobility problems or a disability to access buildings and places?
Theme: Crime reduction and community safety	
29	Does the proposal incorporate elements to help design out crime?
30	Does the proposal incorporate design techniques to help people feel secure and avoid

	creating 'gated communities'?
31	Does the proposal include attractive, multi-use public spaces and buildings?
32	Has engagement and consultation been carried out with the local community?
Theme: Access to healthy food	
33	Does the proposal facilitate the supply of local food, i.e. allotments, community farms and farmers' markets?
34	Is there a range of retail uses, including food stores and smaller affordable shops for social enterprises?
35	Does the proposal avoid contributing towards an over-concentration of hot food takeaways in the local area?
Theme: Access to work and training	
36	Does the proposal provide access to local employment and training opportunities, including temporary construction and permanent 'end-use' jobs?
37	Does the proposal provide childcare facilities?
38	Does the proposal include managed and affordable workspace for local businesses?
39	Does the proposal include opportunities for work for local people via local procurement arrangements?
Theme: Social cohesion and lifetime neighbourhoods	
40	Does the proposal connect with existing communities, i.e. layout and movement which avoids physical barriers and severance and land uses and spaces which encourage social interaction?
41	Does the proposal include a mix of uses and a range of community facilities?
42	Does the proposal provide opportunities for the voluntary and community sectors?

43	Does the proposal address the principles of Lifetime Neighbourhoods?
44	Does the proposal make best use of existing land?
45	Does the proposal encourage recycling (including building materials)?
46	Does the proposal incorporate sustainable design and construction techniques?
Theme: Climate change	
47	Does the proposal incorporate renewable energy?
48	Does the proposal ensure that buildings and public spaces are designed to respond to winter and summer temperatures, i.e. ventilation, shading and landscaping?
49	Does the proposal maintain or enhance biodiversity?
50	Does the proposal incorporate sustainable urban drainage techniques?

Havering
LONDON BOROUGH

CABINET MEETING
19th JULY 2017

HAVERING LOCAL PLAN

EQUALITIES IMPACT ASSESSMENT 2017

Havering
LONDON BOROUGH

EQUALITIES IMPACT ASSESSMENT

1. Introduction

1.1 This document is the Equality Impact Assessment (EIA) for the London Borough of Havering's Proposed Submission version of the Local Plan. The purpose of the EIA is to ensure that equality is placed at the centre of policy development and review and identifies the likely impact of this Plan on the borough's diverse community. The EqIA can anticipate and recommend ways to avoid any discriminatory or negative consequences for a particular group.

1.2 The duty to carry out an EIA of new policy is set out in the Equality Act 2010. The Act protects people from discrimination on the basis of certain characteristics, which are known as protected characteristics. The protected characteristics are:

- Age
- Disability
- Ethnicity/Race
- Gender/Sex
- Gender reassignment
- Marriage and Civil Partnership
- Pregnancy and maternity
- Religion or beliefs and;
- Sexual orientation

1.3 The Duty requires public bodies to have due regard for the need to eliminate discrimination, advance equality of opportunity, and foster good relations between different people when carrying out their activities.

2. The Havering Proposed Submission version of the Local Plan

2.1 The Proposed Submission version of the Local Plan for Havering guides future growth and development within the borough over the next 15 years up to 2031. The Plan sets out the Council's ambitious Vision: Havering – Making a Greater London and strategy and the policies that are needed to deliver them.

2.2 The Local Plan indicates the broad locations in Havering for future housing, employment, retail, leisure, transport, community services and other types of development. The policies in the Proposed Submission version of the Local Plan will help ensure that the needs of the borough over the next 15 years are sustainably met. The Proposed Submission version of the Local Plan and Proposals Map, when adopted, together with the London Plan, the Joint Waste Development Plan Document (DPD) for the East London Waste Authority Boroughs and Havering's forthcoming Detailed Sites Plan will comprise the Development Plan for the borough and will be the primary basis against which planning applications are assessed.

2.3 The Proposed Submission version of the Local Plan must be consistent with the National Planning Policy Framework (NPPF) 2012 and in general conformity with the London Plan 2016 (consolidated with alterations since 2011). The London Plan was subject to an integrated impact Assessment which incorporated sustainability, community safety, health and equalities assessments.

2.4 The Proposed Submission version of the Local Plan has been prepared to be purposely focused and concise and it does not repeat policies that are already set out within National and Regional planning documents.

3. Process

3.1 The EIA has been prepared following an iterative process. This involved identifying the likely impacts arising from each draft policy and then considering these impacts as positive, negative or neutral in light of the thrust of the relevant policy. This was set against known facts, information and evidence gathered from the Council's robust evidence base which underpins the Local Plan and which relates specifically to the protected characteristics listed in the Equality Act 2010. Recommendations on ways by which the negative impacts could be removed or mitigated and the positive impacts strengthened were then sought. The draft policies affected were then redrafted with such amendments in mind and then re-examined in the same iterative process until they emerged with no known negative impacts and became acceptable.

3.2 The EIA will be reviewed following consultation on the Local Plan and will be updated to reflect any necessary changes.

4. Havering Spatial Portrait in regards the protected characteristics:

Age

Table 1: Age range proportions- Demographic and Diversity Profile Jan 2015

Age	Havering	Greater London	National	
0-4	*6.1%*	*5.9%*	*5.0%*	Children
5-10	*7.0%*	*8.4%*	*7.9%*	
11-17	*8.5%*	*5.6%*	*5.9%*	Young People
18-24	*8.7%*	*12.3%*	*11.9%*	
25-64	*51.3%*	*56.7%*	*52.8%*	Working Age
65-84	*15.8%*	*9.6%*	*14.3%*	Older People
85+	*2.7%*	*1.5%*	*2.2%*	

Source: Havering Demographic and Diversity Profile Jan 2015

4.1 Havering's age structure is geared significantly towards the elderly, with proportionally more people aged 65+ than both that of Greater London and the rest of the nation, accounting for 18.5% of all Havering residents.

4.2 There is also a significantly greater child population aged under 4 (6.1%) which, when considered in conjunction with its increasingly ageing population suggests the borough is likely to experience mounting pressures on its social infrastructure in the near future, with increased competition for school places and rising demand for health, educational and recreational facilities outstripping current provision.

4.3 In contrast, there are significantly smaller proportions of young adults and working age residents aged 18-64 (60.0%) than both the Greater London (68%) and national averages (64.7%).

Disability

4.4 Havering has one of the highest recorded rates of serious physical disability among London boroughs, with a rate of 7,788 per 100,000 people, well above the London and national averages of 7,006 and 7,704 respectively. (Health survey England 2001)

4.5 Furthermore, 18.2% of working age people in Havering has disclosed they have a disability or a long term illness, a figure again outweighing Outer London and London averages of 16.4% and 16.1% respectively, and just short of the national average of 19.2% (GLA, London Borough Profiles 2016).

Gender re-assignment

4.6 No data is available regarding gender reassignment.

Marriage and civil partnership

4.7 The 2011 census indicated that 48.5% of Havering's population are married, which is significantly greater than the proportion of married couples for Greater London (39.8%) and the rest of the country (46.6%).

4.8 Conversely, Havering has some of the lowest percentages (just 0.2%) for registered same-sex civil partnerships in London (0.5%), and also falls below the proportions for the rest of the country (0.3%) (Census data, 2011).

Pregnancy and maternity

4.9 The total fertility rate in Havering has fluctuated over the years but has risen from 54 births per 1,000 women in 2003, to 66 births per 1,000 women in 2014 (Havering Public Health Service 2016, 'This is Havering'), a factor responsible for the significant increase in children aged under 4 in the Borough.

Race

Table 2: Ethnicity proportions *Source: ONS 2011 Census*

		Havering	Greater London	National
Ethnicity				
White groups	White British	*83.3%*	*44.9%*	*80.5%*
	White Irish	*1.3%*	*2.2%*	*0.9%*
	Gypsy/Irish traveller	*0.1%*	*0.1%*	*0.1%*
	White Other	*3.0%*	*12.6%*	*4.4%*
Mixed groups	White and Black Caribbean	*0.8%*	*1.5%*	*0.8%*
	White and Black African	*0.3%*	*0.8%*	*0.3%*
	White and Asian	*0.5%*	*1.2%*	*0.6%*
	Other Mixed	*0.5%*	*1.5%*	*0.5%*
Black groups	Caribbean	*1.2%*	*7.0%*	*1.8%*
	African	*3.2%*	*4.2%*	*1.1%*
	Black Other	*0.4%*	*2.1%*	*0.5%*
Asian groups	Indian	*2.1%*	*6.6%*	*2.5%*
	Pakistani	*0.6%*	*2.7%*	*2.0%*
	Bangladeshi	*0.4%*	*2.7%*	*0.8%*
	Chinese	*0.6%*	*1.5%*	*0.7%*
	Other Asian	*1.1%*	*4.9%*	*1.5%*
Other	Arab	*0.1%*	*1.3%*	*0.4%*
	Any other Ethnic Group	*0.4%*	*2.1%*	*0.6%*

4.10 Havering is clearly one of the most ethnically homogenous Boroughs in London, with data to suggest over 83% of its residents are recorded as white British which is a figure significantly greater than that of London (44.9%) and the rest of the country (80.5%). Within the broad white groups category there is the Gypsy/Irish Traveller community who make up to 0.1% of the borough's population.

4.11 According to the GLA ethnic group categorisation, Black Africans form the largest minority group, with 3.8% of the total population. Estimates also suggest this ethnic group will be the fastest growing over the Proposed Submission version of the Local Plan period, rising to around 5.2% of the Boroughs population by 2030.

4.12 Furthermore, according to the Census 2011, the most commonly spoken languages in the borough after English were; Lithuanian (0.4%), Polish (0.4%), Punjabi (0.3%) Bengalis (0.2%) and Filipino (0.2%)

Religion

Table 3: Faith proportions-

Religion	Havering	Greater London	National
Christian	*66.0%*	*48.4%*	*59.3%*
Muslim	*2.0%*	*12.4%*	*4.8%*
Buddhist	*0.3%*	*1.0%*	*0.4%*
Hindu	*1.0%*	*5.0%*	*1.5%*
Sikh	*1.0%*	*1.5%*	*0.8%*
Jewish	*0.5%*	*1.8%*	*0.5%*
No religion	*23.0%*	*20.7%*	*25.1%*
Not stated	*7.0%*	*8.5%*	*7.2%*
Other religion	*0.3%*	*0.6%*	*0.4%*

Source: ONS 2011 Census

4.13 Havering is an overwhelmingly Christian borough, with a higher proportion of Christians (66.0%) than both Greater London (48.4%) and the rest of country (59.3%). The next biggest religious denomination was Muslim at (2.0%), however this is still markedly below proportions experienced within both Greater London (12.4%) and the rest of the country (4.8%).

4.14 Data does however suggest that Islam is the fastest growing religion in Havering and will continue to grow in prominence as the Borough's population continues to grow and diversify.

Sex/gender

4.15 The percentage of girls and women in Havering is slightly above the average for London (50%) and England (51%).

- 52% of Havering's current population (125,848) are girls and women (and)
- 48% of Havering's current population (116,232) are boys and men.

Sexual orientation

4.16 There is no information on sexual orientation or gender identity at either local or national levels.

4.17 On the basis of the integrated Household survey, the Office for National Statistics data (2011-12) suggests that in London, 91% of those surveyed were heterosexual/straight, 2.5% as gay, lesbian or bisexual, 0.4% have an alternative sexual identity and 5.7% do not know or did not respond. The ONS emphasises that Integrated Household Survey is an experimental data source undergoing evaluation for inclusion in new official statistics.

5. Analysing equality information and assessing the impact

a) Policies not relevant to equalities or offering general benefits to all protected groups

5.1 There are several policies which are considered not to be relevant to the Equalities Impact Assessment or offer general benefits to all groups. These policies are outside the scope of the EqIA and are summarised below.

Policy 28: Heritage assets

5.2 Havering has a wealth of heritage, including listed buildings and conservation areas. The policy seeks to conserve and enhance these heritage assets, including those identified on the Havering Local List.

Policy 31: Rivers and river corridors

5.3 The council will seek to enhance the river environment by requiring developments in close proximity to a river to investigate and, where feasible, secure opportunities to restore and enhance rivers and their corridors.

Policy 36: Low carbon design, decentralised energy and renewable energy

5.4 The policy seeks to optimise the energy efficiency of buildings and support low carbon and renewable energy developments.

Policy 37: Mineral reserves

5.5 The policy seeks to safeguard mineral reserves in Havering from other forms of development that might otherwise sterilise the resource and/or prejudice future mineral extraction.

Policy 38: Mineral extraction

5.6 The policy supports mineral extraction in mineral safeguarding areas when the apportioned land-bank falls below seven years and the extraction would not unacceptably impact upon public health and safety, quality of life, the

natural or built environment and the efficient and effective operation of the road network.

Policy 39: Secondary aggregates

5.7 The policy seeks to minimise the quantity of primary aggregates and resources necessary to facilitate a development and the amount of waste generated through good practise, appropriate design and the recycling of construction materials.

b) Strategy and Policies impacting upon protected groups

5.8 It is considered that all groups will benefit in some way from the policies below. Particular effects relating to individual protected groups are identified and discussed.

Spatial Strategy

5.9 The Spatial Strategy sets out the council's ambitious growth and place-making agenda, supporting a significant level of sustainable development whilst continuing to preserve and enhance the borough's most valuable assets. The Strategy sets out plans for the delivery of a range of high quality homes that aims to exceed the boroughs minimum housing target of 17,550 (over the 15 year plan period), ensuring sufficient provision to meet all resident needs, regardless of age, ethnicity, religion, disability or family situation.

5.10 The Spatial Strategy also lays out plans to increase social and commercial infrastructure, including the delivery of an early years and schools expansion programme to increase the number of early years and school places for new and existing residents, including for those in the growth areas of Romford and Rainham and Beam Park. Improvements to health, leisure and recreational facilities will also help relieve growing social and infrastructural pressures as a result of an increasing borough population and maintain the high quality of life Havering residents currently enjoy.

5.11 Increased transport connectivity across the borough will also see increasing levels of social inclusiveness as Havering's major centres and key trip generators become more accessible for elderly and disabled residents as well as dependents who do not have access to a car or choose to make their journeys by other modes. The borough-wide development expected over the

course of the Plan also has potential to provide a range of employment opportunities that can be seen to benefit all protected groups.

Policy 1: Romford Strategic Development Area

5.12 The policy promotes the delivery of a range of high quality, mixed tenure dwellings that help cater to the boroughs local housing need, providing homes for all residents regardless of age, disability or family dimension. Plans to increase social and commercial infrastructure provision including the delivery of an early years and schools expansion programme and improvements to health and recreational facilities will also help relieve growing social and infrastructural pressures to the benefit of all within the Romford area. The policy also outlines strategy to increase transport connectivity which will increase levels of social inclusiveness as Romford becomes more accessible for the elderly and the disabled. Such development also has potential to provide a range of employment opportunities that can be seen to benefit people from all socio-economic backgrounds.

Policy 2: Rainham and Beam Park Strategic Development Area

5.13 The policy promotes the delivery of a range of high quality, mixed tenure dwellings that helps cater to the boroughs local housing need, providing homes for all age groups, disabilities and family dimensions. Increasing social and commercial infrastructure provision, including the delivery of new schools and health services will help relieve growing social and infrastructural pressures to the benefit of all within the Rainham and Beam Park area and will also see increasing levels of social inclusiveness as enhanced transport links improve the accessibility of the area for the elderly and the disabled. The provision of a new local centre also has potential to provide a range of employment opportunities for people from all socio-economic backgrounds.

Policy 3: Housing supply

5.14 The potential supply of additional homes in Havering may exceed the minimum annual housing target of 1,170 homes per year as set out in the London Plan.

5.15 Under the housing supply policy it is outlined that this will be achieved through focusing the delivery of new homes in Havering's two housing zones at Rainham and Beam Park and Romford, supporting the renewal and intensification of existing housing estates, prioritising all non-designated land

for housing, encouraging the effective use of land by re-using previously developed land and finally, allocating a range of sustainable sites for housing development.

5.16 The housing supply policy therefore seeks to secure a sufficient supply of homes that not only meets the varying local and sub-regional housing needs of all its residents, but also exceeds its annual housing target by maximising the supply of housing. It can therefore be considered that all groups will benefit from such policy, as the supply of housing will ensure the availability of homes that meets the differing needs of all protected people; from pensioners and first time buyers, to lone parent households and families with young children. The policy will also see specialist homes provided for those with disability, as well as increased availability for all Havering residents, regardless of race, religion, gender, sexual orientation, marital status, gender identification or socio-economic background.

Policy 4: Affordable housing

5.17 The policy seeks to ensure the correct delivery of affordable housing within the borough, with proposals expected to maximise the provision of affordable housing. Housing schemes of 10 or more units or sites 1,000m^2 or greater will be required to provide at least 35% affordable housing. As a result, it is considered that all groups will benefit in some way from such policy, particularly the younger generation wishing to get a foot on the housing ladder as well as retirees wanting to 'down size'. The policy can also be seen to benefit people with disability, those of differing sexual orientation, religious beliefs and ethnic minorities, single parent households and expectant mothers who might otherwise struggle to afford suitable accommodation.

Policy 5: Housing mix

5.18 The Housing Mix policy will ensure the provision of a mixture of dwelling types that suitably addresses the boroughs local housing need as calculated by the borough's latest Strategic Housing Market Assessment (SHMA) report.

5.19 It is considered that all groups will benefit from such policy as it seeks to provide a wide range of housing types, sizes and tenures that meet the ostensibly assessed needs (OAN) of all protected groups, including people with disabilities and families with children, first time buyers and senior citizens alike. The policy can be seen to provide all groups with the opportunity to satisfy their housing needs and go on to attain the highest quality of life possible.

Policy 6: Specialist accommodation

5.20 The policy seeks to ensure the provision of housing that meets the specialist needs of local people, particularly the elderly and other persons who struggle to live independently. As a result, the policy ensures the delivery of housing that demonstrates good connectivity and accessibility, an appropriate level of amenity space that meets the needs of the intended occupants and housing that positively contributes to creating mixed, balanced and inclusive communities. This policy is largely for the benefit of the elderly and those with disability who require carefully planned and adaptable homes to live independently, be socially inclusive and receive the highest quality of life possible.

Policy 7: Residential design and amenity

5.21 The policy assures the delivery of good quality, secure and safe living environments for new residents whilst ensuring that the amenity of existing residents is not adversely impacted. The policy therefore ensures developments are easily accessible and adaptable and consequently, the policy can be seen to benefit all protected groups and communities within Havering, particularly the elderly and those with disability.

5.22 The policy also seeks to protect groups most at risk from violent crime, particularly 'stranger violence', as well as those groups who suffer fear of crime i.e. women, the frail, elderly and the disabled and groups traditionally targeted for hate crime, i.e. those in the LGBT community or from ethnic and faith minority backgrounds. This will be addressed by ensuring all new developments are designed in accordance with the principles of 'Secured by Design'.

Policy 8: Houses in multiple occupations (HMO's)

5.23 The policy ensures that HMOs, which are composed of residential units with shared facilities such as kitchens and bathrooms, uphold the quantum of amenity space that is appropriate for the number of occupants, taking into consideration the quality and usability of space. The policy can therefore be seen to safeguard the provision of cheaper living arrangements, of which there is clearly a large demand particularly among young, single adults and those from poorer socio-economic backgrounds of which there is a high proportion from ethnic minority backgrounds. Consequently, the policy ensures the safeguarding of acceptable living standards for all Havering residents.

Policy 9: Conversions and sub-divisions

5.24 The policy supports conversions and sub-divisions that meet amenity space standards and that provide safe and secure access to each unit from the street. This policy will help to increase housing supply to meet Havering's existing and future housing need through maximisation of existing housing stock by conversion. It is therefore considered that all groups will benefit in some way from this policy as the increase in the supply of housing will ensure availability of homes for all protected groups; age groups including pensioners and first time buyers, single parents and families with young children, people with disability and people of different ethnic backgrounds, religions, genders, sexual orientation, marital status and gender identification.

Policy 10: Garden and backland development

5.25 The policy supports the loss of garden land where it represents comprehensive development of a number of whole land plots, ensures good access and does not result in 'gated' developments that would otherwise prevent access which would normally be provided by a publicly accessible street.

5.26 Like the conversions and sub-divisions policy, this policy will help to increase housing supply to meet Havering's existing and future housing need through maximisation of existing housing stock by infill development. It is therefore considered that all groups will benefit from such policy as the increase in the supply of housing will ensure availability of homes for all protected groups; age groups including pensioners and first time buyers, single parents and families with young children, people with disability and people of different ethnic backgrounds, religions, genders, sexual orientation, marital status and gender identification.

Policy 11: Gypsy and Traveller accommodation

5.27 In August 2015 a revised version of Planning Policy for Traveller Sites (PPTS) which included a change to the definition of Travellers for planning purposes was published. The new definition is set out in Annex 1 of the PPTS. It should be noted that the Havering Gypsy and Traveller Accommodation Assessment (2017) evidence base and the planning policy on Gypsy and Traveller Accommodation formulated from it have been prepared on the basis of this new definition.

5.28 The policy ensures that additional sites and pitches for gypsy and traveller accommodation in Havering as identified in the 2017 needs assessment are provided. The provision of permanent pitches should provide certainty and stability for families and should help to reduce the social exclusion of the gypsy and traveller community.

5.29 The provision of permanent pitches should have a positive impact on access to essential services and facilities. This should ensure improved access to education – particularly in conjunction with Traveller Education Service – and the potential to improve qualifications, skills and training opportunities within the gypsy and traveller community and subsequently, the policy should have a positive impact on the general health and well-being of the gypsy and traveller community.

5.30 The lack of suitable sites and uncertainty over the status of temporary or unauthorised sites can have a negative impact on health and well-being within the gypsy and traveller community. The provision of permanent gypsy and traveller pitches in the borough on sites where families wish to live, and in many cases are already well established, should have a positive impact on fostering community identity and participation. The allocation of sufficient permanent pitches should reduce the incidences of unauthorised sites and the social tensions that these can cause.

Policy 12: Healthy communities

5.31 The policy supports proposals that contribute to the creation of healthier communities and seek to reduce long-standing health inequalities across the borough. Such policy will be to the benefit of all protected groups, with the council proactively seeking policy to increase quality of life for all Havering's residents with those groups with higher health related needs, such as the elderly and disabled persons likely to benefit most. As a consequence, all major developments are required to be supported by a Health Impact Assessment outlining the potential health implications of their proposals.

Policy 13: Town Centre development

5.32 Havering's centres are a focus for activity and community life and provide character and identity to local areas and the borough as a whole. The policy therefore seeks to assure that key shops and services of appropriate scale are located in centres which are made increasingly accessible and offer a diverse range of uses for all to enjoy in an attractive, clean and safe shopping environment. Increasing the accessibility of Havering's town centres will be of

particular benefit to less mobile groups such as the disabled, the elderly and families with young children.

Policy 14: Eating and drinking

5.33 The policy seeks to limit the over-proliferation of fast food outlets along Havering's Metropolitan, District and Local centres due to the adverse impacts these can inflict on both the vitality and viability of town centres and the health and well-being of its residents. Such policy can therefore be seen to benefit all protected groups, particularly young children who are most susceptible to obesity and its health implications.

Policy 15: Culture and creativity

5.34 The Council is committed to protecting and enhancing the boroughs cultural assets, with the council supporting proposals which promote community engagement, increase social inclusiveness and expand the boroughs cultural offer to reflect the diversity of its local communities. This policy can be seen to benefit all protected groups with proposals safe-guarding both the boroughs culture assets and residents' beliefs and values in an attempt to further instil respect and tolerance for all.

Policy 16: Social infrastructure

5.35 Havering is a relatively affluent borough; however, there are pockets of deprivation to the north (Gooshays and Heaton wards) and south (South Hornchurch), which has led to the existence of health inequalities in the borough. The Social Infrastructure policy therefore seeks to improve the health and well-being of Havering's population by ensuring that development creates the basic environment for people to lead a healthy lifestyle, with access to a variety of health, education, sports and leisure facilities which will be protected and enhanced under this policy. The policy will naturally benefit groups with higher health related needs, such as older and disabled people, as well as children who require access to health, sports and leisure facilities to ensure they remain active, lead healthy lives and combat the growing risk of childhood obesity.

5.36 Havering also has many meeting places, churches, synagogues, temples, community facilities and prayer centres that cater for a range of faiths and beliefs. The policy seeks to support community organisations and religious groups to help them to meet their need for faith facilities. For many, local

community centres and cultural centres are their main source of support, particularly for people from Ethnic Minorities. These centres support social activity and provide help and advice for dealing with life's difficulties.

Policy 17: Education

5.37 The policy seeks to assure the delivery of sufficient school and nursery places to meet the needs and demands of the borough. This will benefit all current and future school children regardless of ability/disability aged between 0 & 19, as well as improving the socio-economic environmental condition of the borough, making it a more attractive place to live, work and visit.

Policy 18: Open space, leisure and recreation

5.38 The policy seeks to ensure that all residents have access to high quality open space, sports and recreation facilities by protecting the borough's existing facilities and requiring development to improve the quality of and access to said facilities.

5.39 Improving the quantity and quality of open space provision and enhancing access to said facilities has been found to convey significant physical and mental health benefits and consequently, such policy can be seen to benefit all protected groups, particularly the elderly; those with disability and mothers with young children who may wish to take their children out to accessible and nearby recreational spaces for important play time.

Policies 19-21: Business growth, Loss of industrial land & Affordable workspace

5.40 The Business growth, Loss of industrial land & Affordable workspace policies aim to deliver business growth and economic prosperity across the borough by protecting existing Strategic Industrial locations (SILs) and Locally Significant Industrial Sites (LSISs), as well as promoting new office development within Romford. The protection of employment land will help to decrease unemployment which is currently a large problem for ethnic minority groups, people with disability, young people and the elderly who may wish to start or return to work, with land readily available to accommodate the business spaces needed to generate jobs.

5.41 By retaining employment land and seeking the creation of accessible and affordable new local business space, we will also begin to see more people

with disability have access to wider employment opportunities. The policies also encourage the provision of well-designed affordable and flexible business spaces of varied unit sizes that would help foster an environment conducive to the creation of a wide-range of new employment opportunities for the benefit of all protected groups within the borough.

Policy 22: Skills and training

5.42 The policy aims to provide local residents the opportunity to acquire new skills and training from a range of new developments, especially where they offer scope for later employment. The policy includes the requirement for larger schemes to provide an employment and training strategy which will include details of how training and employment opportunities for local people will be incorporated into the scheme. Young people, ethnic minority persons and people with disability who often suffer higher levels of unemployment and lack skills, knowledge and opportunity are expected to benefit most from such policy. Furthermore; the policy also aims to stimulate and deliver opportunity for all people.

Policy 23: Transport connections

5.43 The policy aims to improve the public transport connectivity to key services and locations in and outside of the borough, most notably the boroughs town centres and Queens Hospital whose catchment is increasingly on the rise. This improved transport connectivity will improve accessibility for groups who largely depend on the public transport network i.e. the elderly, disabled and young adults and consequently, the policy can be seen to reduce indices of social exclusion across the borough.

5.44 The enhancement of the sustainable transport offer also links with the Managing pollution policy (Policy 33), as improved public transport connectivity should lead to decreased car use and subsequent improvements to Havering's air quality which will benefit all protected groups.

Policy 24: Parking provision and design

5.45 As an outer North East London borough, it is unsurprising that Havering has some of the highest levels of car use and car ownership in London. Although the borough has good radial connections and strong links to London and adjoining areas, many journeys (such as north-south) are difficult and time-consuming because of inadequate infrastructure.

5.46 The policy therefore requires all new development to provide 'sufficient' parking, with special revisions made to include disabled and cycle parking in line with the London Plan. The policy therefore ensures that the needs of all residents are met, including those groups traditionally reliant on car use such as the elderly and those with young children, as well as those without access to a car who rely on cycling as their principle means of travel.

Policy 25: Digital connections

5.47 The Policy seeks to promote the delivery of improved internet connectivity for all new developments. The disabled and older age groups will likely benefit most from such policy, with improved digital access allowing for home working and further skill progression providing a means of social inclusion for those who might otherwise struggle to leave home.

Policy 26: Urban design

5.48 Good design is essential to creating beautiful, sustainable and inclusive places. Under this policy, the Council will require a high standard of design for all buildings and spaces in the borough. A key element of good design recognised in the policy is ensuring that buildings are accessible to all. Examples of features which improve accessibility could include wheelchair access, step free routes, way-finding and non-slip surfaces. Those less mobile, including older and disabled people will benefit most from such policy.

Policy 27: Landscaping

5.49 The policy seeks to ensure that all new developments incorporate a detailed and high quality landscape scheme with existing landscape features that contribute positively to the setting and character of a local area as well as maximising opportunities for greening through planting of trees and other soft landscaping.

5.50 Landscape, which refers to the character, design and appearance of all of the spaces between buildings, can not only contribute positively to the streetscape and local character of an area but it can also provide visual amenity and opportunities for recreation and relaxation.

5.51 Ensuring incorporation of high quality landscape schemes and retaining existing landscape features has the potential to benefit all protected groups in

continuing to ensure the provision of opportunities for recreation and relaxation and enhancement of an area's visual amenity which would be of significant health benefits to all protected group.

Policy 29: Green infrastructure

5.52 The policy seeks to maintain and expand the network of green spaces and

natural features in the borough and optimise the benefits of green infrastructure to the environment, economy and community.

5.53 Green infrastructure, which is a network of green spaces and natural features can provide multiple benefits for all protected groups, providing opportunities for recreation, physical activity and education which can in turn encourage the adoption of healthy, active lifestyles as well as enhancing resident knowledge about their local environment.

Policy 30: Nature conservation

5.54 The policy seeks to ensure the protection and enhancement of designated biodiversity and geo-diversity sites across the borough for future generations to enjoy. Protection and enhancement of the boroughs biodiversity can be seen to benefit all protected groups, continuing to provide residents with high quality, attractive amenity space for all to enjoy. It is also considered that young people will benefit considerably from such policy, with increased opportunity for learning experiences to take place outside of the classroom to aid in their educational experience.

Policy 32: Flood management

5.55 The policy seeks to ensure that new and existing developments are safe from flooding and the physical safety of all residents and their belongings is guaranteed. The policy also ensures correct measures are integrated into new developments that minimise the risk of flooding and increase the resilience of Havering's communities to respond to the impacts of flooding events.

5.56 Developments that are located out of high flood risk zones and are well designed to counter flood risk would be of most benefit to vulnerable, less mobile groups such as the elderly, the disabled and families with very young children.

Policy 33 & 34: Air quality and Managing pollution

5.57 These policies seek to improve the health and well-being of Havering's residents and to protect the borough's natural environment from air pollution and undue adverse impacts of new development from noise, odour and light pollution, land contamination, visual pollution and vibration by controlling and minimising exposure to these adverse impacts. Air quality is a particular issue in Havering, with the whole of the borough identified as an Air Quality Management Area. The main pollutants of concern are Nitrogen dioxide (NO2), Particulate Matter 10 micrometres or in diameter (PM10) and Particulate Matter 2.5 micrometres or less in diameter (PM2.5), and long term exposure to these pollutants are linked to cancer, heart disease, reduced lung function and respiratory disease. These policies therefore have particular benefits for both young and elderly persons who have been identified as being particularly sensitive to health issues linked to air pollution.

Policy 36: Waste management for new developments

5.58 The waste management policy seeks to protect existing waste sites and ensure development reduces waste and promotes recycling. The policy seeks waste storage to be located where it can be conveniently and safely accessed, which will benefit all members of the community.

6. Results of Equality Impact Assessment Screening

Protected Group	Summarise any possible negative impacts that have been identified for each protected group and the impact of this for the development of this activity	Summarise positive impacts or potential opportunities to advance equality or foster good relations for each protected group
Age	The Proposed Submission version of the Local Plan is not expected to have a negative impact in relation to this protected group	All relevant policies contained within the Proposed Submission version of the Local Plan are considered to have positive impacts enjoyed by all ages. Older people will benefit particularly from policies to improve accessibility to services, health, amenity and recreational facilities, namely; - Housing supply - Affordable housing - Housing mix - Specialist accommodation - Residential design and amenity - Healthy communities - Town Centre development - Social infrastructure - Open space, leisure & recreation - Transport connections - Parking provision and design - Digital connections - Urban design - Flood management; and - Air quality and pollution Children and Young people will also benefit from all the above and the additional policies below, including: - Houses in multiple occupation - Conversions and subdivisions - Garden and backland development - Eating and drinking - Education and early years provision - Business growth - Affordable workspace

		- Skills and training; and - Nature conservation
Disability	The Proposed Submission version of the Local Plan is not expected to have a negative impact in relation to this protected group	It is considered that the relevant policies within the Proposed Submission version of the Local Plan will have a positive impact on the quality of life of disabled people. Disabled people will benefit particularly from policies to improve accessibility to homes, services, health, amenity and recreational facilities, namely; - Housing supply - Housing mix - Specialist accommodation - Residential design & amenity - Healthy communities - Social infrastructure - Open space, leisure & recreation - Business growth - Affordable workspace - Skills and training - Transport connections - Parking provision and design - Urban design; and - Digital connections
Ethnicity/Race	The Proposed Submission version of the Local Plan is not expected to have a negative impact in relation to this protected group	The Proposed Submission version of the Local Plan aims for overall improvements in the borough from which people should benefit regardless of their race. Protection and enhancement of cultural facilities will support the needs of ethnic minority communities as will the residential amenity policy, where the adoption of 'secured by design' principles will ensure safety for all. The needs of Romany Gypsies and Irish travellers which are identified as racial groups under the Equalities Act are also considered in the Proposed Submission version of the Local Plan, with the 'Gypsy & Traveller' policy seeking to meet the objectively assessed pitch needs of such a group.

Gender/Sex	The Proposed Submission version of the Local Plan is not expected to have a negative impact in relation to this protected group	The Proposed Submission version of the Local Plan aims for overall improvements in the borough from which all people should benefit, regardless of gender. The residential design and amenity policy will help to address both the fear of crime (most commonly expressed by women) and being a victim of 'stranger violence' within the public realm (as most commonly expressed by men)
Gender Re-assignment	The Proposed Submission version of the Local Plan is not expected to have a negative impact in relation to this protected group	The Proposed Submission version of the Local Plan aims for overall improvements in the borough from which all people should benefit, regardless of their current or previous gender. The residential design and amenity policy will help to address the fear of hate crime often expressed by many members of the LGBT community.
Marriage & Civil Partners	The Proposed Submission version of the Local Plan is not expected to have a negative impact in relation to this protected group	The Proposed Submission version of the Local Plan aims for overall improvements in the borough from which all people should benefit, regardless of their relationship status.
Pregnancy & Maternity	The Proposed Submission version of the Local Plan is not expected to have a negative impact in relation to this protected group	The Proposed Submission version of the Local Plan aims to secure additions and improvements to open space which will bring benefits to all sectors of society. Families and young people will be particular beneficiaries, with nearby open spaces central to important play time. Pregnant women and new families will also benefit from the social infrastructure policy which seeks to protect and improve community and healthcare facilities as well as their accessibility.
Religion or Belief	The Proposed Submission version of the Local Plan is not expected to have a negative impact in relation to this protected group	The Proposed Submission version of the Local Plan aims for overall improvements in the borough from which all people should benefit, regardless of their religion of beliefs.

		Faith facilities are also protected and places of worship encouraged under the Social Infrastructure policy so all beliefs have a safe place to worship.
Sexual Orientation	The Proposed Submission version of the Local Plan is not expected to have a negative impact in relation to this protected group	The Proposed Submission version of the Local Plan aims for overall improvements in the borough from which all people should benefit, regardless of their sexual orientation. The residential design and amenity policy will help to address the fear of hate crime often expressed by many members of the LGBT community.

Introduction

1. Introduction

1.1 Background

AECOM has been commissioned to undertake an independent sustainability appraisal (SA) in support of the London Borough of Havering's emerging Local Plan.

The London Borough of Havering is currently preparing a new Local Plan to replace the existing planning policies in the Havering Local Development Framework. The new Local Plan, which will cover the period to 2031, will be the key planning policy document for the borough and will guide decisions on the use and development of land. It is currently anticipated that the Local Plan will be submitted to the Secretary of State and then undergo an independent Examination in Public later in 2017.

Key information relating to the Local Plan is presented in Table 1.1.

Table 1.1: Key facts relating to the Havering Local Plan

Name of Responsible Authority	The London Borough of Havering
Title of Plan	Havering Local Plan
Subject	Spatial plan
Purpose	The Local Plan will guide future development and land use within the London Borough of Havering over the next 15 years up to 2031. Replacing the Havering Local Development Framework, the Local Plan together with the London Plan will comprise the Development Plan for the borough and will be the primary basis against which planning applications are assessed.
Timescale	To 2031
Area covered by the plan	London Borough of Havering (see map below)
Summary of content	The Local Plan will set out the vision, strategy and policies to manage growth and development in Havering in the period to 2031. It will indicate the broad locations in the borough for future housing, employment, retail, leisure, transport, community services and other types of development. The Local Plan will subsequently be supported by a separate Detailed Sites Local Plan. This will identify individual sites for specific uses that are intended to assist in delivering the priorities, objectives and strategy set out in the Local Plan.

1.2 Current stage of plan making

This SA Report accompanies the current consultation on the Local Plan (*Havering Local Plan – Proposed Submission*). The Proposed Submission Local Plan is being consulted on under Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations.

The current consultation follows previous Regulation 18 consultation undertaken on the Local Plan in February - March 2015.[1] This initial Local Plan consultation document identified a number of strategic priorities for the Local Plan to address, and invited respondents to comment on these together with a series of issues for the borough.

1.3 What is the plan seeking to achieve?

The vision and objectives for the Local Plan were developed during the initial stages of plan making.

In this context, the Local Plan's vision is framed by four cross-cutting aims:

> ***Communities -*** *We want to help our residents to make positive lifestyle choices and ensure a good start for every child to reach their full potential. We will support families and communities to look after themselves and each other, with a particular emphasis on our most vulnerable residents.*
>
> ***Places -*** *We will work to achieve a clean, safe environment for all. This will be secured through working with residents to improve our award-winning parks and continuing to invest in our housing stock, ensuring decent, safe and high standard properties. Our residents will have access to vibrant culture and leisure facilities, as well as thriving town centres.*
>
> ***Opportunities-*** *We will provide first-class business opportunities by supporting the commercial development of companies within the borough as well as being a hub for start-ups and expanding businesses. We will ensure sustainable economic growth that generates local wealth and opportunities, as well as securing investment in high-quality skills and careers.*
>
> ***Connections -*** *We want to capitalise on our location with fast and accessible transport links both within the borough and to central London, as well as making the most of national and international connections. Likewise, we will continue to make Havering a digitally-enabled borough that is connected to residents and businesses. Enhancing our connections will strengthen the borough's offer as a Greater London hub for business.*

To achieve this vision, the following strategic objectives have been identified for the Local Plan:

i. Create high quality, safe neighbourhoods with cohesive and inclusive communities, where Havering residents want to live and settle;

ii. Increase the supply of high quality housing in Havering by a minimum of 17,550 dwellings over the Plan period;

iii. Ensure an appropriate mix of dwelling sizes and tenures to meet the needs of Havering's increasingly diverse population;

iv. Deliver sustainable new communities in Rainham and Beam Park and Romford;

v. Enable healthier lifestyles to improve the health and well-being of Havering's population and reduce health inequalities;

vi. Enhance the vitality and viability of Havering's town centres and the diversity and quality of uses within them, enabling them to meet the needs of local communities;

vii. Improve the cultural provision in Havering and protect and enhance existing cultural assets;

viii. Ensure that the essential physical and social infrastructure is provided and existing infrastructure is enhanced to support the planned growth in Havering;

[1] London Borough of Havering (February 2015) A New Local Plan for Havering https://www3.havering.gov.uk/Documents/Planning/local-plan-questionnaire.pdf

ix. Support Havering's economic growth and the supply of high quality modern and flexible business premises within the borough's town centres and designated industrial areas;

x. Increase the quantity and variety of employment, training and learning opportunities for Havering residents;

xi. Improve accessibility, connectivity and ease of movement to, from and within Havering;

xii. Support sustainable transport options and make Havering a better place to cycle and walk around;

xiii. Create, protect and enhance distinctive places, spaces and buildings in Havering that are of high architectural quality, are safe, well designed and respect the character of the local area;

xiv. Proactively conserve, enhance, and ensure greater understanding of Havering's heritage assets, their settings and wider historic environment.

xv. Increase the quality and accessibility of Havering's public open spaces and maintain and enhance biodiversity and geodiversity;

xvi. Protect and enhance Havering's green belt;

xvii. Facilitate the reuse, recycling and landfill diversion of waste in Havering;

xviii. Improve and manage air quality, noise, land and light pollution throughout the borough, protecting and enhancing the levels of amenity that Havering residents currently experience

xix. Ensure that development in Havering minimises its energy use and is designed to adapt to, and reduce the effects of, climate change;

xx. Improve water quality and protect water resources in Havering;

xxi. Avoid, reduce and manage all forms of flood risk in Havering, and support the use of Sustainable Drainage Systems (SuDS);

xxii. Promote the re-use of minerals and minimise adverse environmental impacts from extraction in Havering;

In the context of the above aims and objectives, the current version of the Local Plan sets out the following:

- A 'Boroughwide Strategy for Growth' for Havering, incorporating a proposed spatial strategy and key diagram.
- Policies for two key Strategic Development Areas in Romford and Rainham / Beam Park.
- A series of planning policies to guide development in the borough to 2031.

1.4 Sustainability appraisal explained

SA considers and communicates the likely significant effects of an emerging plan, and the *reasonable alternatives* considered during the plan making process, in terms of key sustainability issues. The aim of SA is to inform and influence the plan-making process with a view to avoiding or mitigating negative effects and maximising positive effects. Through this approach, the SA seeks to maximise the emerging Local Plan's contribution to sustainable development.

An SA is undertaken in line with the procedures prescribed by the Environmental Assessment of Plans and Programmes Regulations 2004 (the SEA Regulations) which transpose into national law European Union Directive 2001/42/EC 'on the assessment of the effects of certain plans and programmes on the environment'. SA widens the scope of the assessment to explicitly include social and economic issues.

The SEA Regulations require that an environmental report is published for consultation alongside the draft plan that '*identifies, describes and evaluates' the likely significant effects of implementing 'the*

plan, and reasonable alternatives'. The environmental report must then be taken into account, alongside consultation responses, when finalising the plan. This SA Report serves that purpose.

The 'likely significant effects on the environment' include those indicated in Annex I of the SEA Directive as '*including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors*'. Reasonable alternatives to the plan need to take into consideration the objectives of the plan and its geographic scope. The choice of reasonable alternatives is determined on the basis of a case-by-case assessment.[2]

In line with the SEA Regulations, this SA Report must answer the three questions:

- **What has plan-making / SA involved up to this point?**
    - Including with regards to the consideration of 'reasonable alternatives'.
- **What are the appraisal findings at this current stage?**
    - i.e. in relation to the policies currently proposed for the Local Plan, as presented in the current *Havering Local Plan – Proposed Submission* document.
- **What happens next?**
    - What are the next steps for plan making?

These questions are derived from Schedule 2 of the SEA Regulations, which set out 'the information to be provided within the [environmental] report'.

1.5 This SA Report

At the current stage of plan-making, the London Borough of Havering is consulting on the Local Plan (*Havering Local Plan – Proposed Submission*). This SA Report is produced with the intention of informing the consultation.

This SA Report has been structured in three parts according to the three questions listed above.

1.6 SA scoping

The SEA Regulations require that: *'When deciding on the scope and level of detail of the information that must be included in the report, the responsible authority shall consult the consultation bodies'*. In England, the consultation bodies are the Environment Agency, Historic England and Natural England.[3] These authorities were consulted on the scope of the Local Plan SA in February 2015.

The consultation responses received on the Scoping Report, and the way in which these comments were addressed, are presented in **Appendix A**.

The Scoping Report presented the following elements:

Context review and baseline data

An important step when seeking to establish the appropriate scope of an SA involves reviewing the sustainability context from key policies, plans and programmes. From the SEA Regulations it is understood that there is a need to identify key international, regional and local objectives and issues.

The Scoping Report also included a detailed baseline review which aids understanding of the current and likely future situation in the plan area and therefore the identification and evaluation of 'likely significant effects' associated with the emerging plan and reasonable alternatives.

[2] Commission of the European Communities (2009) Report from the Commission to the Council, The European Parliament, The European Economic and Social Committee and the Committee of the Regions on the application and effectiveness of the Directive on Strategic Environmental Assessment (Directive 2001/42/EC). (COMM 2009 469 final).
[3] In line with Article 6(3).of the SEA Directive, these consultation bodies were selected because *'by reason of their specific environmental responsibilities,[they] are likely to be concerned by the environmental effects of implementing plans and programme'.'*

The context review and baseline information initially included in the SA Scoping Report (February 2015) was updated following the receipt of consultation responses and provides a key part of the information base for the appraisal. **Appendix B** presents a summary of the updated context review and the baseline data, as well as key sustainability issues for the borough.

SA Framework

Drawing on the review of the sustainability context and baseline, the SA Scoping Report identified a range of sustainability problems / issues that should be a particular focus of SA, ensuring that it deals with the most important sustainability issues. These issues were then translated into an SA 'framework' of objectives and appraisal questions.

The SA Framework provides a benchmark or yardstick against which the sustainability effects of the Local Plan and alternatives can be identified and evaluated based on a structured and consistent basis. In this context, the objectives and appraisal questions which comprise the SA Framework provide a methodological framework for the appraisal of likely significant effects on the baseline.

The SA Framework and the appraisal findings in this SA Report have been presented under nine 'SA themes', reflecting the range of information being considered through the SA process. These are:

- Biodiversity
- Climate Change
- Land, Soil and Water Resources
- Environmental Quality
- Historic Environment, Landscape and Townscape
- Population and Community
- Health and Wellbeing
- Transportation
- Economic Vitality, Employment and Skills

Table 1.2: SA Framework for the Havering Local Plan

SA theme	SA objectives	Appraisal questions. Will the option/proposal help to…
Biodiversity	Maintain and enhance biodiversity and geodiversity.	Support continued improvements to the status of the nationally designated sites of significance within and in the vicinity of the borough?
		Protect and enhance priority habitats, and the habitat of priority species?
		Support enhancements to local and sub-regional ecological networks, including through Green Infrastructure improvements?
		Achieve a net gain in biodiversity?
		Increase the resilience of biodiversity in the borough to the effects of climate change?
		Support access to, interpretation and understanding of biodiversity and geodiversity?
Climate Change	Reduce contributions to climate change and enhance the capability of the borough to adapt to climate change while promoting systems efficiency (water, energy, recycling, sustainable drainage systems, green infrastructure) and local renewable energy production.	Limit the increase in the carbon footprint of Havering from population growth?
		Promote the use of sustainable modes of transport, including walking, cycling and public transport and reduce the need to travel?
		Increase the number of new developments meeting sustainable design criteria?
		Generate energy from low or zero carbon sources?
		Reduce energy consumption from non-renewable resources?
	Avoid, reduce and manage all forms of flood risk, and encourage the use of SuDS.	Ensure that no development takes place in areas at higher risk of flooding, taking into the likely effects of climate change into account?
		Improve and extend green infrastructure networks in the borough to support adaptation to the potential effects of climate change?
		Sustainably manage water run-off, reducing surface water runoff (either within the borough or downstream)?
		Ensure the potential risks associated with climate change are considered through new development in the borough?
Land, Soil and Water Resources	Minimise the production of waste and maximise the reuse, recycling and landfill diversion of waste.	Reduce the amount of waste produced?
		Support the minimisation, reuse and recycling of waste?
		Maximise opportunities for local management of waste in order to minimise export of waste to areas outside?
		Encourage recycling of materials and minimise consumption of resources during construction?

SA theme	SA objectives	Appraisal questions. Will the option/proposal help to…
	Ensure appropriate levels of aggregate extraction, whilst minimising adverse environment impacts.	Facilitate appropriate levels of aggregate extraction?
		Minimise the adverse environmental effects of aggregate extraction?
	Protect water resources, while contributing to the objectives of water management plans.	Minimise water consumption?
Environmental Quality	Manage air quality, noise, land, water and light pollution throughout the borough.	Maintain or improve local air quality?
		Maintain or improve local noise quality?
		Support enhancements to water quality?
		Protect groundwater resources?
		Minimise light pollution?
	Reduce the adverse effect of traffic on the environment.	Reduce the adverse effect of traffic on the environment?
	Support land remediation that can improve the ecology of the area and mitigate flood risk.	Help remediate contaminated land?
Historic Environment, Landscape and Townscape	Conserve and enhance the historic environment, heritage assets and their settings where appropriate.	Conserve and enhance buildings and structures of architectural or historic interest?
		Support the integrity of the historic setting of key buildings of cultural heritage interest?
		Conserve and enhance the integrity of conservation areas present in the borough?
		Support access to, interpretation and understanding of the historic environment?
	Conserve and enhance cultural assets.	Conserve and enhance features and areas of cultural value for the local community?
	Create, protect and enhance places, spaces and buildings that are of high quality, well designed and respect the character of the local area.	Conserve and enhance local diversity and distinctiveness?
Population and Community	Provide the opportunity for all residents to live in an affordable,	Support the provision of a range of house types and sizes?
		Support enhancements to the current housing stock?

SA theme	SA objectives	Appraisal questions. Will the option/proposal help to…
	decent home.	Meet the needs of all sectors of the community?
		Provide quality and flexible homes that meet people's needs?
		Promote the use of sustainable building techniques, including use of sustainable building materials in construction?
	Improve accessibility to essential services, facilities and the workplace.	Improve the availability and accessibility of key local facilities and amenities, including specialist services for disadvantaged groups?
	Reduce poverty, inequality and social exclusion.	Promote the development of a range of high quality, accessible community facilities?
	Reduce crime, the fear of crime and increase community safety.	Facilitate design and layout which promotes community safety and helps reduce the fear of crime?
	Foster community identity and participation.	Promote social inclusion and community ownership?
Health and wellbeing	Improve the health and wellbeing of the population.	Promote accessibility to a range of leisure, health and community facilities, for all age groups?
		Provide and enhance the provision of community access to green infrastructure, in accordance with Accessible Natural Greenspace Standards?
		Encourage the use of healthier modes of travel?
		Reduce the impact on residents from the road network?
		Improve road safety?
Transportation	Reduce the need to travel particularly via environmentally harmful means by ensuring facilities and services are in sustainable locations and supporting flexible working conditions.	Reduce the need to travel through sustainable patterns of land use and development?
		Encourage modal shift to more sustainable forms of travel?
		Enable sustainable transport infrastructure enhancements?
		Facilitate working from home and remote working?
Economic Vitality, Employment and Skills	Improve opportunities for economic growth.	Promote the economic vitality of the key town and local centres of the borough?

SA theme	SA objectives	Appraisal questions. Will the option/proposal help to…
	Facilitate indigenous, inward and regional investment.	Provide for the needs of businesses (range of premises, services, infrastructure, skilled workforce)?
		Enable larger businesses to locate in the area?
	Offer all residents the opportunity for rewarding, well-located and satisfying employment.	Support local communities through employment provision?
		Provide live / work units?
	Improve life-long learning, skills and education.	Promote skills development and participation in further education?

This page is intentionally blank.

Part 1:
What has plan making / SA involved up to this point?

2. Introduction to Part 1

Preparation of the Havering Local Plan began in 2015. As highlighted above, two statutory consultations have been undertaken to date, including the initial Regulation 18 consultation for the Local Plan and the consultation on the SA Scoping Report.

The aim of Part 1 of this SA Report is not to recount the entire plan-making process to date but, rather, to explain how work was undertaken to develop and then appraise reasonable alternatives in late 2016 and early 2017. It also seeks to explain how the Council has taken into account the findings of the appraisal of reasonable alternatives when finalising the *Havering Local Plan – Proposed Submission* document. Presenting this information is important given regulatory requirements.[4]

3. Reasonable alternatives in SA/SEA

A key element of the SA process is the appraisal of 'reasonable alternatives' for the Local Plan. The SEA Regulations[5] are not prescriptive as to what constitutes a reasonable alternative, stating only that the SA Report should present an appraisal of the '*plan and reasonable alternatives taking into account the objectives and geographical scope of the plan*'.

The following chapters therefore describe how the SA process to date has informed the preferred spatial strategy for the borough and potential locations for proposed development. Specifically, this chapter explains how the Local Plan's spatial strategy has been developed in terms of housing numbers and distribution.

More specifically, this part of the report presents information regarding the consideration of reasonable alternative approaches to housing growth, or **'spatial strategy alternatives'**. Given that presenting a spatial strategy for housing is at the heart of the plan objectives (see section 1.3), it is reasonable that alternatives appraisal should focus on this matter.[6]

In light of this, this part of the report is structured as follows:

- Chapter 4 explains the process of establishing the reasonable alternatives considered through the SA process;
- Chapter 5 presents the appraisal findings; and
- Chapter 6 explains reasons for establishing the preferred option for the Local Plan, in light of the appraisal of the options considered as reasonable alternatives.

[4] There is a requirement for the SA Report to present an appraisal of 'reasonable alternatives' and 'an outline of the reasons for selecting the alternatives dealt with'.
[5] Environmental Assessment of Plans and Programmes Regulations 2004
[6] Recent case-law (most notably Friends of the Earth vs. Welsh Ministers, 2015) has established that planning authorities may apply discretion and planning judgement when determining what should reasonably be the focus of alternatives appraisal.

4. Options considered as reasonable alternatives through the SA process

4.1 Housing numbers

In November 2016, a revised estimate of objectively assessed housing need (OAHN) for Havering Borough was published through an update to the Outer North East London Strategic Housing Market Assessment (SHMA).[7]

The November 2016 OAHN, which had regard to relevant underlying trends (including the latest available demographic projections, anticipated economic growth and market signals), has established a need of 1,366 dwellings per annum to be delivered in the borough over the period 2011-2033. This was an increase from a previous figure of 1,145 dwellings per annum.

The established OAHN for Havering exceeds the target put forward through the Further Alterations to the London Plan (FALP). The FALP sets out a target of 11,701 dwellings to be delivered in Havering in the period 2015-2025, or 1,170 dwellings per annum to 2025. This figure is considered by the Greater London Authority to be a minimum; the FALP clearly states that Havering Council should seek to 'achieve and exceed' this target.

The London Plan is currently under review. As part of this process, housing targets for each London Borough will be updated. This will, however, be beyond the timeframe for the Havering Local Plan, and it is currently anticipated that the updated London Plan will undergo Examination in Public in summer 2018.

4.2 Spatial strategy options considered

The need to develop a broad growth strategy for the borough was identified early on in the development of the Local Plan. As such, it was recognised that this issue should be addressed via appraisal of reasonable alternatives through the SA process.

In light of the OAHN established for Havering and the FALP target for the borough, five spatial strategy options have been developed and appraised through the SA process. These reflect uplifts to the FALP target and OAHN figure, and range from the delivery of 1,253 dwellings per annum (dpa) in the borough in the first ten years of the plan to 1,549 dpa.

The spatial strategy options, and the rationale for each one, are presented in Table 4.1.

[7] Opinion Research Services (November 2016). Outer North East London Strategic Housing Market Assessment: Update for Havering, Report of Findings https://www.newham.gov.uk/Documents/Environment%20and%20planning/NewhamStrategicHousingMarketAssessment%5B1%5D.pdf

Table 4.1: Spatial strategy options considered as reasonable alternatives, and rationale

Spatial distribution option	Rationale
Option 1 – meeting the London Plan target (1,170 dwellings pa to 2025) and reflecting current densities	This option seeks to deliver in the region of **12,180** dwellings in the first ten years of the Local Plan period. It is based on a distribution reflecting the provisions of the current Local Plan (including an existing focus on Romford and the key district centres of Hornchurch and Upminster), coupled with a further focus on Rainham / Beam Park as a Strategic Development Area (SDA).
Option 2 – greater density in the two Strategic Development Areas	This option seeks to deliver in the region of **13,412** dwellings in the first ten years of the Local Plan Period. This is through a variance of Option 1 which increases densities in the SDAs of Romford SDA and Rainham / Beam Park, including in the respective Housing Zones in these locations. These densities would be over and above the current indicative densities recommended through the London Plan Housing Supplementary Planning Guidance (SPG) document (March 2016).[8]
Option 3 – greater density the two SDAs and further development in Hornchurch and Upminster, coupled with greater densities delivered through the Council's estate renewal programme	This option seeks to deliver in the region of **13,650** dwellings in the first ten years of the Local Plan through increasing densities at Romford, Hornchurch and Upminster and delivering increased densities in the areas covered by Havering Council's estate renewal programme. The densities will be over and above those proposed through the London Plan Housing Supplementary Planning Guidance for different categories of locations.
Option 4 – lower density to accommodate more family/older people's housing with corresponding limited Green Belt development in recognition of the trade-offs involved	Delivering in the region of **12,180** dwellings in the first ten years of the Local Plan, this option responds to existing demographic trends in the borough which, as highlighted by the SHMA, indicate increased demand for family housing and older people's housing. Given land supply constraints, this option would require a degree of development within the Green Belt.
Option 5 – exceeding OAHN by facilitating greater density in the two SDAs, further development in Hornchurch and Upminster, and limited Green Belt release	This option seeks to deliver **15,010** dwellings in the first ten years of the Local Plan, which is significantly above the established OAHN for the borough. It will facilitate development within the Green Belt to help contribute to maintaining a five-year land supply.

These options reflect existing and likely land availability in the borough, as reflected by the outcomes of ongoing evidence base studies being undertaken to inform the Local Plan.

A more detailed breakdown of the spatial distribution of housing represented by each option, including in relation to key locations in the borough, is presented in Table 4.2. These figures relate to the first ten years of the plan period as the Local Plan focuses on growth within the first ten years.

Total housing (10 year period)	**12,180**	**13,412**	**13,650**	**12,180**	**15,010**

[9] Including completions and housing already approved through planning permissions since the beginning of the plan period. These figures relate to the situation as at April 2017, and as such are the same for each option.

5. Appraisal of the spatial strategy options

The spatial strategy options presented in Table 4.1 and 4.2 above have been appraised against the SA Framework developed during the scoping stage of the SA and presented under the SA themes (Section 1.6).

In undertaking the appraisal, the proposed options were reviewed to determine the likelihood of positive or negative effects under each SA theme.

Where a causal link between the options and SA themes was established, impacts were identified on the basis of professional judgment with reference to the evidence base. The appraisal was undertaken with reference to the criteria in Schedule 1 of the SEA Regulations, that is:

- the probability, duration, frequency and reversibility of the effects;
- the cumulative nature of the effects;
- the transboundary nature of the effects;
- the risks to human health or the environment (for example, due to accidents);
- the magnitude and spatial extent of the effects (geographical area and size of the population likely to be affected);
- the value and vulnerability of the area likely to be affected due to-
    - special natural characteristics or cultural heritage;
    - exceeded environmental quality standards or limit values; or
    - intensive land-use; and
- the effects on areas or landscapes which have a recognised national, community or international protection status.

Every effort was made to predict effects accurately; however, this is inherently challenging given the strategic nature of the options considered. Because of the uncertainties involved, there was a need to exercise caution when identifying and evaluating significant effects and ensure that assumptions were explained in full. In many instances it was not possible to predict significant effects, but it was possible to comment on the merits (or otherwise) of the options in more general terms.

The appraisal findings are summarised below. These have been presented in a series of tables which present the findings of the assessment by SA theme.

Table 5.1: Biodiversity

Spatial strategy options

Option 1: Meeting the London Plan target and reflecting current densities- 12,180 dwellings over ten years
Option 2: Greater density in the two SDAs- 13,412 dwellings over ten years
Option 3: Greater density the two SDAs and further development in Hornchurch and Upminster- 13,650 dwellings over ten years
Option 4: Lower density to accommodate more family/older people's housing with corresponding limited Green Belt development in recognition of the trade-offs involved- 12,180 dwellings over ten years
Option 5: Exceeding OAHN by facilitating greater density the two SDAs, further development in Hornchurch and Upminster, and limited Green Belt release- 15,010 dwellings over ten years

Whilst the significance of the effects from each option on features and areas of biodiversity interest largely depends on the detailed location, scale and nature of development and the incorporation of biodiversity enhancement measures, it can be considered that a higher level of housing development in a settlement increases the likelihood (and potential magnitude) of negative effects on the designated sites and habitats and species present in their vicinity. This is linked to an increased likelihood of direct effects, such as from land take, disturbance or the loss of key features of ecological value, and an increased likelihood of indirect effects, such as from a reduction of ecological connectivity, and changes in land use patterns.

In relation to nationally designated nature conservation sites, three SSSIs are present in Havering. The two key sites in the south of the borough are: the Ingrebourne Marshes SSSI, which comprises part of the Ingrebourne Valley and supports the largest and one of the most diverse coherent areas of freshwater marshland in Greater London; and the Inner Thames Marshes SSSI, which forms the largest remaining expanse of wetland bordering the upper reaches of the Thames Estuary, and is of particular note for its diverse ornithological interest, including the variety of breeding birds and the numbers of wintering wildfowl, waders, finches and birds of prey. SSSI Impact Risk Zones (IRZs) are a GIS tool/dataset which maps zones around SSSIs according to the particular sensitivities of the features for which they are notified. They specify the types of development that have the potential to have adverse impacts at a given location. Natural England is a statutory consultee on development proposals that might impact on SSSIs. In this context, IRZs relating to the Ingrebourne Marshes SSSI and the Inner Thames Marshes SSSI for 'residential development of 100 units or more' covers the whole of Rainham. As such, Option 2, 3 and 5, which puts forward 2,534 dwellings in the Rainham and Beam Park SDA has the most potential to have effects on the two SSSIs. The option with the least potential to impact on the two sites is Option 4, which promotes fewer dwellings, at 1,771 dwellings. Other proposed locations for development are not within the IRZs for these two SSSIs.

The Hornchurch Cutting SSSI has been designated for its geodiversity interest and is located on the Hornchurch to Romford railway line north east of Hornchurch town centre. Given its designation for geological exposures, the extent of the site's IRZ is limited to within 50m of the site. As such, it is unlikely that the options being considered would result in significant effects on the integrity of the site, or that any one of options would have an increased likelihood of effects on this nationally designated site.

Two SSSIs are located in close proximity to the north of the borough, Hainault Forest SSSI and Curtismill Green SSSI. IRZs for these SSSIs relating to residential development do not extend to the settlements closest to the sites in the north of the borough, including Collier Row and Harold Hill. As such, Option 3 and 5, which propose a similar limited level of housing in these locations, would not be likely to lead to effects on the integrity of these sites. However, IRZs relating to the SSSIs extend into the undeveloped Green Belt on the northern edge of the borough. As such Options 4 and 5 have the potential to lead to effects on the SSSIs if development were to be proposed in the Green Belt in these locations.

Whilst the Green Belt has been designated to prevent urban sprawl, and not for biodiversity reasons, and parts of the Metropolitan Green Belt in general have low biodiversity value, the options which facilitate development within the Green Belt have the potential to lead to increased impacts on biodiversity assets. This is reflected by the increased concentration of BAP Priority Habitats in the areas of Havering within the Green Belt, in comparison with the concentration of BAP Priority Habitats in the built up parts of the borough. As such, Options 4 and 5 have increased potential to have impacts on key habitats of ecological importance through proposing new development within the Green Belt.

Option 4 also has the potential to lead to the less efficient use of land, with increased scope for direct impacts from new development on existing biodiversity assets. However it should be recognised that lower density development can support the biodiversity value of some locations through open space and garden provision. This, however, depends on the design and layout of new development and implementation of high quality multifunctional green infrastructure networks.

The facilitation of increased densities in the two SDAs through Option 2, 3 and 5, and increased densities in district centres and the estate renewal programme through Option 3 and 5 will reduce the need for new development areas in other areas of the borough. This would likely help reduce impacts on habitats, species and ecological networks in these locations. The facilitation of an increased level of development in key centres in the borough will however increase pressures on existing urban habitats and species in these centres,

including brownfield biodiversity.

Table 5.2: Climate Change

Spatial strategy options

Option 1: Meeting the London Plan target and reflecting current densities- 12,180 dwellings over ten years
Option 2: Greater density in the two SDAs- 13,412 dwellings over ten years
Option 3: Greater density the two SDAs and further development in Hornchurch and Upminster- 13,650 dwellings over ten years
Option 4: Lower density to accommodate more family/older people's housing with corresponding limited Green Belt development in recognition of the trade-offs involved- 12,180 dwellings over ten years
Option 5: Exceeding OAHN by facilitating greater density the two SDAs, further development in Hornchurch and Upminster, and limited Green Belt release- 15,010 dwellings over ten years

Climate change mitigation

Road transport is an increasingly significant contributor to greenhouse gas emissions in Havering. The options which direct an increased level of housing provision to the key town and district centres will promote accessibility through directing housing to the settlements with the broadest range of services and facilities. This will help limit the need to travel to services and facilities, therefore helping to limit emissions from transport. In this context, Option 2, 3 and 5 promotes the largest level of housing in Romford, which designated as a Metropolitan Centre through the London Plan, is the settlement with the widest range of services and amenities in the borough. Similarly Option 3 directs the highest level of housing growth to the district centres (notably, given capacity, Hornchurch and Upminster) which, after Romford are the settlements best served by services and facilities. On this basis, this option has the most potential to support the use of sustainable modes of transport and minimise the need to travel. Overall, in terms of housing delivery, Option 3 and 5 promotes the highest level of housing in Romford, Upminster and Hornchurch, followed by Option 2. Option 4 promotes a significantly lower proportion of houses in these three key settlements, doing less to support a reduction of greenhouse gas emissions from transport for the reasons stated.

The Rainham and Beam Park SDA comprises part of the London Riverside development. Given that the proposed housing growth in this area is part of the larger London Riverside Opportunity Area, it is considered that new housing will be delivered alongside a significant improvement of services, facilities and amenities in the area and enhancements to employment opportunities, including at the Rainham Employment Area. Proposals will also be supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line and a new station at Beam Park. The current proposals for the London Riverside Opportunity Area also seeks to promote lower carbon lifestyles, including through decentralised energy provision and realising low to zero-carbon energy potential opportunities. As such development in this location has the potential to help limit the carbon footprint of new housing growth. In the context of the above, Options 2, 3 and 5 which seek to deliver an increased level of housing at the Rainham and Beam Park SDA, have the potential to support lower carbon lifestyles.

Option 4, through spreading growth around the borough is likely to be less sustainable than focusing development within the key settlements because the more suburban locations will have fewer services and amenities readily available and encourage more travel. This is a factor that developers cannot easily mitigate. Dispersed growth is also more difficult to serve by public transport and may not achieve the 'critical mass' necessary to deliver new/improved public transport services to the nearest centres. As a result more trips are likely to be made by private car, with implications for greenhouse gas emissions. Similarly, Option 5, through facilitating development within the Green Belt away from existing centres, has the potential to have a similar effect in relation to emissions.

In terms of the other aspects relating to greenhouse gas emissions, the sustainability performance of development depends on elements such as the integration of energy efficient design within new development and the provision of renewable energy generation. This however can only be assessed on a site by site basis once the details of potential development become clearer (e.g. when 'pre-app' discussions take place between developers and the Council or a planning application is submitted). It should be noted though that the higher quantum of development proposed through Options 5 (and to a lesser extent) Option 3 will do more to increase the built footprint of the borough, with associated potential overall increases in greenhouse gas emissions.

In terms of carbon sequestration, this depends on elements such as the integration of green infrastructure enhancements within new development areas, incorporating the on and off-site provision of carbon sinks.

Climate change adaptation

In relation to fluvial and tidal flood risk, this largely relates to the presence of the River Thames and the Rivers Beam, Rom and Ingrebourne (and their tributaries). In relation to the River Thames, the parts of the borough to the south of Rainham are at risk from both fluvial and tidal flood risk. With regards to the River Beam, flood risk areas extend through the west of Hornchurch, and flood risk associated with the River Rom is present in

Romford, Rise Green and Rush Park. In relation to the River Ingrebourne, flood risk extends into parts of Harold Wood, western Upminster and Rainham.

Whilst all options have the potential to lead to development in these flood zones, or elevated levels of flood risk, it is considered that the provisions of the NPPF and national policy in relation to flooding will help guide development away from flood risk areas and ensure that appropriate mitigation measures are implemented. For example, the NPPF does not permit development within flood risk areas or where the effect would be to increase flood risk elsewhere without appropriate mitigation measures. Likewise, adherence to the recommendations and guidance presented in the Strategic Flood Risk Assessment (SFRA) undertaken to inform the Local Plan will help limit effects.

In relation to surface water flooding, given the urbanised nature of much of the borough, this is a key risk in many parts of Havering. A particular area of risk is Romford town centre. However, the effect of each option on flood risk from surface water runoff is difficult to establish given uncertainties regarding the nature of development and the incorporation of mitigation measures such as sustainable urban drainage systems (SuDS).

In relation to the other climate change adaptation issues, including increasing the resilience of Havering to extreme weather events, the urban heat island effect and other elements associated with the potential effects of climate change in the borough, it is not possible to evaluate the extent to which the options will support adaptation. This will depend on the extent to which new development facilitated through the options promotes, for example, the provision of high quality green infrastructure networks.

With regards to the cumulative impacts of development, there is potential for negative effects on flood risk if unmitigated. In respect to the four areas where most development is allocated through the options, the cumulative effect of housing delivery could be a significant change in the provision of hard standing which may lead to an increase in flooding either locally or elsewhere, if unmitigated. In addition, there is the potential for cumulative effects to occur where development in a number of settlements along the same watercourse will lead to changes to watercourse flow rates and an increased risk of flooding. For example, Harold Wood, Upminster and Rainham are all located along the River Ingrebourne. However, it is considered that potential cumulative effects with respect to this issue will be limited due to the provisions of the NPPF and national policy in relation to flooding.

Table 5.3: Land, Soil and Water Resources

Spatial strategy options

Option 1: Meeting the London Plan target and reflecting current densities- 12,180 dwellings over ten years

Option 2: Greater density in the two SDAs- 13,412 dwellings over ten years

Option 3: Greater density the two SDAs and further development in Hornchurch and Upminster- 13,650 dwellings over ten years

Option 4: Lower density to accommodate more family/older people's housing with corresponding limited Green Belt development in recognition of the trade-offs involved- 12,180 dwellings over ten years

Option 5: Exceeding OAHN by facilitating greater density the two SDAs, further development in Hornchurch and Upminster, and limited Green Belt release- 15,010 dwellings over ten years

Land and soil resources

All of the five options are likely to promote the use of previously developed land for new housing. However Option 3 which delivers a higher level of housing through facilitating increased densities in the two SDAs (Romford and Rainham / Beam Park), further development in Hornchurch and Upminster and delivering increased densities through the Council's estate renewal programme, have the most potential among the options to deliver the efficient use of land. In contrast, Option 4, which promotes lower densities and facilitates an element of Green Belt development, and Option 5, which delivers some Green Belt development, will do the least amongst the options to promote the efficient use of land. These two options also have the most potential to lead to the loss of greenfield land in the borough.

In relation to agricultural land quality, recent (post 1988) detailed agricultural land classification has not been undertaken in most of the borough. However, the earlier classification indicated that there are significant areas of Grade 1 agricultural land present to the south east of Upminster. In the non-built up parts of the north of the borough, the earlier classification also classified land as Grade 3 agricultural land. It is uncertain whether this comprises Grade 3a land (i.e. land classified as the best and most versatile agricultural land) or Grade 3b land (i.e. land not classified as such).

Whilst Option 3 and 5 promotes a larger housing delivery in Upminster (and, as such, in a part of the borough with higher agricultural quality land present), development under this option would be focussed on Upminster town centre. As such, there is less likely to be landtake on the best and most versatile agricultural land in this location. However, Options 4 and 5, through facilitating development in the Green Belt have increased potential to lead to the loss of higher quality agricultural land in this area, as well as in northern parts of the borough.

Water resources

In relation to water supply, the NPPF states that local plans should plan positively to ensure the provision of infrastructure for water supply, including an assessment of its quality and capacity (paragraphs 156, 157 and 162). In the context of the current assessment, it is anticipated that the Water Resources Management Plans prepared by water supply companies will be expected to address long-term water supply issues associated with growth.

Waste

The generation of waste is an inevitable consequence of development, including both waste generated by construction, as well as waste subsequently generated by households etc.. In a simplified scenario, the more housing that is delivered, the more waste that will be generated. In this context, Options 3 and 5 have the most potential to increase waste arisings though delivering more housing, with Option 1 and 4 having the most potential to limit waste arisings.

The management of waste, including the minimisation of waste and the encouragement of the re- use, recycling and recovery of waste materials would be undertaken on a site by site basis. All development would be required though to meet the relevant legislative requirements with regard to waste. Given the legislative and regulatory requirements regarding waste it is considered that development is unlikely to have a significant negative impact on waste management.

Table 5.4: Environmental Quality

Spatial strategy options

Option 1: Meeting the London Plan target and reflecting current densities- 12,180 dwellings over ten years
Option 2: Greater density in the two SDAs- 13,412 dwellings over ten years
Option 3: Greater density the two SDAs and further development in Hornchurch and Upminster- 13,650 dwellings over ten years
Option 4: Lower density to accommodate more family/older people's housing with corresponding limited Green Belt development in recognition of the trade-offs involved- 12,180 dwellings over ten years
Option 5: Exceeding OAHN by facilitating greater density the two SDAs, further development in Hornchurch and Upminster, and limited Green Belt release- 15,010 dwellings over ten years

Air quality

Air quality is a key issue for Havering. The whole of the borough was designated as an Air Quality Management Area in 2006 due to levels of nitrogen dioxide (NO_2) and particulate matter (PM_{10}). The main source of air pollution is road traffic vehicle emissions. Significant amounts also come from residential and commercial gas use, industry, construction sites and emissions from outside London.

Given that the options currently being considered are housing focused, this assessment focuses on emissions from transport related to housing growth.

The options which direct an increased level of housing provision to the key town and district centres will promote accessibility through directing housing to the settlements with the broadest range of services and facilities. This will help limit the need to travel to services and facilities, therefore helping to limit emissions from transport. In this context, Options 2, 3 and 5 promote the highest level of housing growth in Romford, which, designated as a Metropolitan Centre through the London Plan, is the settlement with the widest range of services and amenities in the borough. Similarly Options 3 and 5 direct the highest level of housing delivery to the larger district centres of Hornchurch and Upminster, which, after Romford are the two settlements best served by services and facilities, and the other district centres. On this basis, these options have the most potential to support the use of sustainable modes of transport (including walking and cycling) and minimising the need to travel.

Overall, in terms of housing delivery, Option 3 and 5 promote the highest level of housing in Romford, Upminster and Hornchurch. Option 4 promotes a lower proportion of housing growth in these three key settlements, doing less to reduce the need to travel for services and facilities and limit emissions.

The Rainham and Beam Park SDA is part of the London Riverside development. Given that proposed housing growth in this area is part of the larger London Riverside Opportunity Area, it is considered that new housing at this location will be delivered alongside a significant improvement of services, facilities and amenities in the area and enhancements to employment opportunities, including at the Rainham Employment Area. Proposals will also be supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line and a proposed new station at Beam Park. As such, development in this location has the potential to help limit emissions from transport resulting from growth. In this context, Option 2, 3 and 5, which seek to deliver an increased level of housing at the Rainham and Beam Park SDA, have the potential to limit emissions for these reasons.

Option 4, through spreading growth around the borough, including within the Green Belt, has the potential to increase emissions through encouraging car use. This is due to the option being likely to deliver housing at locations with fewer services and amenities readily available. This is a factor that developers cannot easily mitigate. Dispersed growth is also more difficult to serve by public transport and may not achieve the 'critical mass' necessary to deliver new/improved public transport services and walking and cycling networks to the nearest centres. As a result, more trips are likely to be made by private car, with implications for emissions from transport. Similarly, Option 5, through facilitating development within the Green Belt away from existing centres, has the potential to have a similar effect in relation to emissions.

Soil quality

All five options have the potential to support the widespread remediation of contaminated land in the borough through promoting the use of previously developed land. However, Options 3 and 5, which deliver a higher level of housing through facilitating increased densities in the SDAs (Romford and Rainham / Beam Park), increasing delivery in Hornchurch and Upminster, as well as delivering increased densities through the Council's estate renewal programme, have the most potential among the options to deliver the remediation of brownfield sites. In contrast, Option 4, which promotes lower densities and facilitates an element of Green Belt development, and will do less to facilitate the remediation of areas of land contamination by reducing an impetus on previously developed land.

Water quality

Whilst the significance of the effects from each option on water quality largely depends on the location, scale and nature of development and the incorporation of mitigation measures (e.g. SuDS, it can be considered that a higher level of housing development within a settlement increases the likelihood (and potential magnitude) of

negative effects on both surface water and groundwater resources. This is linked to increased levels of surface water runoff, increased suspended sediment loading and discharge of polluted runoff.

The chemical and biological water quality of watercourses in Havering has historically been poor, with particular issues relating to the water quality of the River Ingrebourne and the River Rom/Beam. The latest Water Framework Directive assessment identifies some improvements, with sections of Havering's waterways achieving moderate quality classification. Under the provisions of the Water Framework Directive, the Beam and Ingrebourne need to achieve good status by 2027.

In relation to the water quality of these watercourses, the River Rom and the River Beam have the potential to be affected by new development areas in Romford, Hornchurch, Rainham/Beam Park and Collier Row. In this respect, Options 3 and 5, followed by Option 2, have the most potential to lead to cumulative impacts on water quality in these two watercourses. The water quality of the River Ingrebourne has the potential to be affected by new development areas in Upminster, Harold Wood and Rainham. As such, Option 3 and 5 have the most potential to lead to cumulative impacts on water quality on the River Ingrebourne. It should be noted though that the development of previously developed land has the potential to support the remediation of contaminated land which may support longer term enhancements to water quality.

In relation to groundwater quality, part of Rainham and South Hornchurch are underlain by Zone 1 and 2 groundwater Source Protection Zones. In this respect, Options 2, 3 and 5 have the most potential to lead to effects on groundwater quality through facilitating an increased level of housing development in these locations.

Table 5.5: Historic Environment, Landscape and Townscape

Spatial strategy options

Option 1: Meeting the London Plan target and reflecting current densities- 12,180 dwellings over ten years

Option 2: Greater density in the two SDAs- 13,412 dwellings over ten years

Option 3: Greater density the two SDAs and further development in Hornchurch and Upminster- 13,650 dwellings over ten years

Option 4: Lower density to accommodate more family/older people's housing with corresponding limited Green Belt development in recognition of the trade-offs involved- 12,180 dwellings over ten years

Option 5: Exceeding OAHN by facilitating greater density the two SDAs, further development in Hornchurch and Upminster, and limited Green Belt release- 15,010 dwellings over ten years

The Rainham and Beam Park SDA covers the part of Rainham town centre designated through the Rainham Conservation Area. In this context, Options 2, 3 and 5, and to a lesser extent Option 1, have the most potential among the options to have impacts on the fabric and setting of the conservation area through facilitating an increased level of housing delivery in its vicinity. Whilst development, if poorly designed, can have negative impacts on the setting and fabric of the historic environment, high quality and sensitive design and layout can bring positive effects. In this context, as part of the wider London Riverside Opportunity Area, there is significant potential for new development in the area to enhance the setting of the historic environment through public realm improvements, enhancements to green infrastructure provision and investment in features and areas of cultural heritage interest. As such, an increased level of housing delivery in this area has the potential to offer additional opportunities for enhancing the setting and fabric of features and areas of cultural heritage interest, including the Rainham Conservation Area, depending on design, layout, materials used and the provision of green infrastructure enhancements.

In relation to Romford, historic environment constraints are limited to the Romford Conservation Area (covering the Market Place, High Street, North Street and South Street in the town centre) and approximately twelve listed buildings. The Romford Housing Zone, which comprises part of the SDA and will be a focus of development in the area, covers three locations in Romford town centre. The smallest of these, located to the north of the High Street, is located adjacent to Romford Conservation Area. Whilst increased housing delivery at this location through Option 2, 3 and 5, if poorly designed, could have negative impacts on the setting and fabric of the conservation area, high quality and sensitive design and layout could bring positive effects. As such, high quality design and layout could offer significant enhancements to the setting of the historic environment in this location. This is significant given Romford Conservation Area is deemed to be 'at risk' and in a 'very bad' condition by Historic England, resulting in the inclusion of the conservation area on Historic England's Heritage at Risk Register[10]. Similarly, one of the larger areas of the Housing Zone covers an area to the west of the town centre, a location with two listed buildings present, the Salem Chapel and Church of St Andrew, which are both Grade II listed. Given the current opportunities to enhance the poor public realm in this area, an increased focus on the Housing Zone through Options 2, 3 and 5 has significant opportunities to enhance the setting of these two key features of cultural heritage interest.

Parts of Upminster and Hornchurch are of historic environment interest. Two conservation areas cover various

[10] Historic England, Heritage at Risk Register 2016 https://historicengland.org.uk/advice/heritage-at-risk/search-register/list-entry/1659362 (accessed 15th February 2017).

parts of Hornchurch town centre, namely the Langtons Conservation Area and the St Andrews Conservation Area (the nearby St Leonards Conservation Area and the RAF Hornchurch Conservation Areas are outside of the town centre) and a range of listed buildings are present in the town. In relation to Upminster, a number of listed buildings are present in the town and the town has a distinctive character. In this respect, Option 3 and 5, which direct an increased level of housing growth to Hornchurch and Upminster have increased potential to effect on these areas of historic environment interest within the towns. Given greater capacity for growth in Hornchurch when compared to Upminster, there is a greater likelihood of effects on the historic environment in Hornchurch than Upminster resulting from these options. However, as highlighted above, these effects need not be negative; an increased level of housing delivery has the potential to offer additional opportunities for enhancing the setting and fabric of features and areas of cultural heritage interest, depending on design, layout, materials used and the provision of green infrastructure enhancements.

In relation to Collier Row and Harold Hill, no statutory historic environment designations are present in these settlements. However, Option 3 and 5, which promotes an increased level of development across all of the district centres, have increased potential for effects on the historic environment or townscape character in these locations.

54% of Havering is covered by the Metropolitan Green Belt. Whilst the Green Belt is designated to prevent urban growth into countryside, and as such not directly designated for landscape quality purposes, development within the Green Belt is nonetheless likely to have adverse impacts on landscape character and local distinctiveness through facilitating growth in the open countryside. This includes in locations such as Havering-atte-Bower, or Noak Hill, which have a rich historic environment resource. As such, Options 4 and 5, which facilitate a level of housing growth within the Green Belt, have more potential than Options 1-3 (which seek to focus development within the existing built-up areas of Havering) to lead to impacts on landscape character and local distinctiveness.

Table 5.6: Population and Community

Spatial strategy options

Option 1: Meeting the London Plan target and reflecting current densities- 12,180 dwellings over ten years

Option 2: Greater density in the two SDAs- 13,412 dwellings over ten years

Option 3: Greater density the two SDAs and further development in Hornchurch and Upminster- 13,650 dwellings over ten years

Option 4: Lower density to accommodate more family/older people's housing with corresponding limited Green Belt development in recognition of the trade-offs involved- 12,180 dwellings over ten years

Option 5: Exceeding OAHN by facilitating greater density the two SDAs, further development in Hornchurch and Upminster, and limited Green Belt release- 15,010 dwellings over ten years

In relation to housing delivery, of the five options Option 2, 3 and 5 will meet (and exceed) the established Objectively Assessment Housing Need for Havering. However all five options deliver the Further Alterations to the London Plan target for the borough.

Overall, through delivering a larger number of dwellings, Options 5 and 3 have most potential to deliver a broader range of housing types and tenures in the borough. Option 4 however focuses on the key housing needs in the borough of family housing and older peoples housing. In this context the option will do more to deliver these types of housing.

Accessibility to services and facilities is a key influence on the quality of life of residents and community cohesion. In this regard, development in the larger centres (Romford, Hornchurch and Upminster) will enhance accessibility through directing housing to the settlements with the broadest range of services and facilities. This will support accessibility to the wider range of amenities located in these settlements. Locating more housing in closer proximity to the services and facilities available in the key centres of the borough will also likely support quality of life and wellbeing through promoting walking and cycling and active lifestyles.

In this context, Option 2, 3 and 5 promote the highest level of housing growth in Romford, which, designated as a Metropolitan Centre through the London Plan, is the settlement with the widest range of services and amenities in the borough. Similarly Options 3 and 5 promote the highest level of housing delivery to the larger district centres of Hornchurch and Upminster, which, after Romford, are the two settlements best served by services and facilities in the borough, as well as the remaining district centres. On this basis, these options has the most potential to support accessibility to existing community facilities and promote more active lifestyles.

The Rainham and Beam Park SDA is part of the London Riverside development. Given that proposed housing growth in this area will take place as part of the larger London Riverside Opportunity Area, it is considered that new housing at this location will be delivered alongside a significant improvement of services, facilities and amenities in the area. Proposals will also be supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line and a proposed new station at Beam Park, and significant green infrastructure enhancements. As such, development in this location has the potential to support the quality of life of residents by promoting accessibility to services and facilities, facilitating access to green infrastructure networks, and encouraging sustainable transport use. In this context, Options 2, 3 and 5 which seek to deliver an increased level of housing at the Rainham and Beam Park SDA have the potential to promote these benefits.

Option 4, through spreading growth around the borough, including within the Green Belt, has an increased likelihood of delivering housing at locations with fewer services and amenities readily available. Dispersed growth is also more difficult to serve by public transport and may not achieve the 'critical mass' necessary to deliver new/improved public transport services and walking and cycling networks to the nearest centres. As a result, development is less likely to take place in accessible locations through Option 4. Option 5, through facilitating development within the Green Belt away from existing service centres, also partly has the potential to have a similar effect.

Whilst Havering has relatively low levels of overall deprivation, a number of pockets of deprivation are present in the borough, with areas of South Hornchurch and the Harold Hill area (Gooshays and Heaton wards) being within the 10% most deprived Lower Super Output Areas (LSOAs) nationally, and the wider areas of Harold Hill and Romford being in the 20% most deprived nationally (ONS 2010).

In this context, the provision of increased levels of development in South Hornchurch through the Rainham and Beam Park SDA via Options 2, 3 and 5 may help support the regeneration of the area, helping to promote a reduction of deprivation levels locally. Similarly, increased levels of housing delivery in Romford through the same options may support combating deprivation in more deprived areas of the town. This, however, depends on new development areas being well planned, supported by appropriate infrastructure and service provision, and being of appropriate design which supports a high quality public realm.

Table 5.7: Health and Wellbeing

Spatial strategy options

Option 1: Meeting the London Plan target and reflecting current densities- 12,180 dwellings over ten years
Option 2: Greater density in the two SDAs- 13,412 dwellings over ten years
Option 3: Greater density the two SDAs and further development in Hornchurch and Upminster- 13,650 dwellings over ten years
Option 4: Lower density to accommodate more family/older people's housing with corresponding limited Green Belt development in recognition of the trade-offs involved- 12,180 dwellings over ten years
Option 5: Exceeding OAHN by facilitating greater density the two SDAs, further development in Hornchurch and Upminster, and limited Green Belt release- 15,010 dwellings over ten years

The general health profile of Havering's residents has changed. In 2011, 81.6% of residents reported that they were in good health and 5.2% in bad health, compared to 69.7% in good health and 8.2% in bad health in 2001 (Census 2011). Accessibility to community services and health and recreational facilities are a key influence on health and wellbeing. In this respect, development in the larger centres (Romford, Hornchurch and Upminster) will enhance accessibility through directing housing to the settlements with the broadest range of services and facilities; this will support accessibility to the wider range of amenities located in these settlements, with benefits for the health and wellbeing of residents. In addition, the key centres in the borough have a wider range of health services, including primary health care services, and sports and recreational facilities, so better supporting residents' health and wellbeing. Furthermore, locating more housing in closer proximity to the facilities available in the key centres will also encourage healthier modes of travel including walking and cycling.

In this context, Option 2, 3 and 5 promote the highest level of housing growth in Romford, which, designated as a Metropolitan Centre through the London Plan, is the settlement with the widest range of services and amenities in the borough. Similarly, Options 3 and 5 promote the highest level of housing delivery to the larger district centres of Hornchurch and Upminster, which, after Romford are the two settlements best served by facilities. On this basis, this option has the most potential to support accessibility to community facilities (including health services and recreational amenities) and promote healthier modes of travel (including walking and cycling).

Overall, in terms of housing delivery, Options 3 and 5 promotes the highest level of housing in Romford, Upminster and Hornchurch. Option 4 promotes a lower proportion of housing growth in these three key settlements, doing less to support accessibility to services and facilities and support active modes of travel.

The Rainham and Beam Park SDA is part of the London Riverside development. Given that proposed housing growth in this area is part of the larger London Riverside Opportunity Area, it is considered that new housing at this location will be delivered alongside a significant improvement of services, facilities and amenities in the area. Proposals will also be supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line and a proposed new station at Beam Park, and significant green infrastructure enhancements. As such, development in this location has the potential to support health and wellbeing by promoting accessibility to services and facilities, facilitating access to green infrastructure networks, and encouraging active modes of travel. In this context, Options 2, 3 and 5 which seek to deliver an increased level of housing at the Rainham and Beam Park SDA, have the potential to support health and wellbeing for these reasons.

Option 4, through spreading growth around the borough, including within the Green Belt, has the potential to encourage car use. This is due to the option being likely to deliver housing at locations with fewer services and amenities readily available. This is a factor that developers cannot easily mitigate. Dispersed growth is also more difficult to serve by public transport and may not achieve the 'critical mass' necessary to deliver new/improved public transport services and walking and cycling networks to the nearest centres. As a result more trips are likely to be made by private car, with implications for health and wellbeing. Similarly, Option 5, through facilitating development within the Green Belt away from existing centres, has the potential to have a similar effect.

The delivery of higher levels of housing growth across the borough has the potential to lead to effects on health and wellbeing through increasing road safety issues and impacts on air and noise from increased traffic flows at certain locations. This may have impacts on the health and wellbeing of residents. In this context, Options 3 and Option 5 have increased potential to lead to increases in traffic flows through delivering a higher quantum of development in Havering. Effects however depend on the detailed location of new development areas and the integration of elements such as sustainable transport and green infrastructure provision.

Table 5.8: Transportation

Spatial strategy options

Option 1: Meeting the London Plan target and reflecting current densities- 12,180 dwellings over ten years

Option 2: Greater density in the two SDAs- 13,412 dwellings over ten years

Option 3: Greater density the two SDAs and further development in Hornchurch and Upminster- 13,650 dwellings over ten years

Option 4: Lower density to accommodate more family/older people's housing with corresponding limited Green Belt development in recognition of the trade-offs involved- 12,180 dwellings over ten years

Option 5: Exceeding OAHN by facilitating greater density the two SDAs, further development in Hornchurch and Upminster, and limited Green Belt release- 15,010 dwellings over ten years

The options which direct an increased level of housing provision to the key town and district centres in Havering will promote accessibility through directing housing to the settlements with the broadest range of services and facilities. This will help limit the need to travel by car to amenities. Settlements will be developed which are accessible by foot or by bike providing residents with alternative options to travel other than the car.

Options 2, 3 and 5 promote the highest level of housing delivery in Romford, which, designated as a Metropolitan Centre through the London Plan, is the settlement with the widest range of services and amenities in the borough with a PTAL rating of 6a/b. Similarly Options 3 and 5 direct the highest level of housing growth to the larger district centres of Hornchurch and Upminster, which, after Romford are the two settlements in the borough best served by services and facilities. Apart from Romford, these district centres have the highest PTAL ratings within the borough (Hornchurch is serviced by the London Underground District Line, whilst Upminster is services by both the District Line and Essex Thameside line and both centres have reliable, frequent bus connections). On this basis, this option has the most potential to support the use of sustainable modes of transport and minimise the need to travel. Overall, in terms of housing delivery, Options 3 and 5 promote the highest level of housing in Romford, Upminster and Hornchurch. Option 4 promotes a significantly fewer number of houses in these three locations, doing less to support sustainable transport use.

The Rainham and Beam Park SDA is part of the London Riverside development. Given the proposed housing growth in this area is part of the larger London Riverside Opportunity Area, it is considered that new housing will be delivered alongside a significant improvement of services, facilities and amenities in the area. Proposals will also be supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line and a proposed new station at Beam Park due to be in operation in 2020 (Havering Council continues to lobby Network Rail and the Train Operating Company C2C for increased capacity on the Essex Thameside line to support growth in the Rainham and Beam Park area including longer trains and a higher frequency of services. Havering is currently developing proposals to radically change the A1306 New Road to support development of the Rainham and Beam Park Housing Zone and provide people with the options to travel more sustainably). As such, development in this location has the potential to support sustainable transport use. In the context of the above, Option 2, 3 and 5 which seeks to deliver an increased level of housing at the Rainham and Beam Park SDA, have increased potential to support these elements.

Option 4, through spreading growth around the borough is likely to be less sustainable than focusing development within the key settlements because the more suburban locations will have fewer services and amenities readily available and encourage more travel. This is a factor that developers cannot easily mitigate. Dispersed growth is also more difficult to serve by public transport and may not achieve the 'critical mass' necessary to deliver new/improved public transport services to the nearest centres. As a result more trips are likely to be made by private car. Similarly, Option 5, through facilitating development within the Green Belt away from existing centres where public transport provision is limited, is likely to result in a greater number of trips being made by car. In the context of the options considered, well located and coordinated development with nearby key amenities and community facilities reduces the need to travel. This provides opportunities for the development of sustainable movement corridors which utilises growth to support public transport and walking and cycling. As such, the options considered all have the potential to support development at existing and future public transport nodes, including Crossrail and the new station planned for Beam Park. The level of growth considered through the options also offer opportunities for contributing or realising the need for new infrastructure to accompany new development.

Table 5.9: Economic Vitality, Employment and Skills

Spatial strategy options

Option 1: Meeting the London Plan target and reflecting current densities- 12,180 dwellings over ten years

Option 2: Greater density in the two SDAs- 13,412 dwellings over ten years

Option 3: Greater density in the two SDAs and further development in Hornchurch and Upminster- 13,650 dwellings over ten years

Option 4: Lower density to accommodate more family/older people's housing with corresponding limited Green Belt development in recognition of the trade-offs involved- 12,180 dwellings over ten years

Option 5: Exceeding OAHN by facilitating greater density the two SDAs, further development in Hornchurch and Upminster, and limited Green Belt release- 15,010 dwellings over ten years

Overall, through delivering a larger number of dwellings in Havering, Options 3 and 5 have the potential to deliver increased levels of housing provision, with additional potential to support the economic vitality of the borough. All of the options are, however, likely to have a long-term positive effect on the economy through the delivery of housing, and if matched with housing provision, employment and associated improvements to services/facilities.

Options 2, 3 and 5 will do more to support the economic vitality of Romford through allocating a larger proportion of development in the vicinity of the town. This will help rejuvenate the town centre and support Romford's status as a Metropolitan Centre. Options 3 and 5 will also do most to support the economic vitality of the key district centres of Hornchurch and Upminster through facilitating larger allocations in the towns. These options will also do more to support accessibility to employment and learning opportunities (including outside of the borough) through promoting development at locations with good access to key centres and transport nodes.

In contrast Option 4, which directs an increased proportion of development to the Green Belt, will do less to promote the economic vitality of existing centres in the borough.

Option 2, 3 and 5 through facilitating an increased level of housing delivery at the Rainham and Beam Park SDA will do more to support the overall economic regeneration of Rainham and South Hornchurch. Given that proposed housing growth in this area is part of the larger London Riverside Opportunity Area, it is considered that new housing at this location will be delivered alongside enhancements to employment opportunities, including at the Rainham Employment Area. Proposals will also be supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line and a proposed new station at Beam Park. As such, additional housing growth in this location has the potential to support economic regeneration proposals for the immediate and wider area, with Options 2, 3 and 5 doing more to facilitate this.

6. Overview of the reasons for choosing the preferred spatial strategy for the Local Plan

The following overview sets out the London Borough of Havering's reasons for selecting the preferred spatial strategy approach for the Local Plan in light of the appraisal findings presented above.

The Council's preferred strategy is Option 1, which the appraisal finds to perform relatively well as it delivers an appropriate level of growth which is delivered on previously developed land, in accessible locations and supported by services and facilities.

Whilst the preferred strategy does not perform negatively against any of the objectives, the appraisal highlights that other options could provide additional sustainability benefits in relation to certain themes. On balance, however, the Council considers the preferred strategy to be the most sustainable. The reasons are set out below.

Biodiversity – The appraisal finds that increased housing growth delivered through Options 2, 3 and 5 increases the likelihood of negative effects on the designated sites and habitats and species present in the borough. The preferred strategy proposes a lower amount of homes, limiting Impacts on biodiversity. As the preferred strategy does not release any Green Belt, the potential impacts on key habitats of ecological importance in the Green Belt are avoided, in contrast to Options 4 and 5. The Council therefore considers the preferred strategy the most sustainable from a biodiversity perspective.

Climate change – It is considered that Options 2, 3 and 5 have the greatest potential to support the use of sustainable transport modes and minimise the need to travel due to the increased number of homes being delivered in accessible areas. Increased development in the Rainham and Beam Park area specifically provides the opportunity to promote low carbon lifestyles. However, these benefits will also be achieved through the preferred strategy when a lower number of homes are directed towards these areas. Options 4 and 5 are deemed as less sustainable as development in the Green Belt would increase car trips with implications for greenhouse gas emissions. For the reasons above the preferred strategy is seen to make positive contributions in relation to the climate change theme.

Land soil and water resources – Only Options 4 and 5 would facilitate Green Belt release. This has the potential to lead to the loss of greenfield land as well as the loss of higher quality agricultural land. It is not possible to differentiate between options on the subject of water resources. The preferred strategy has together with Option 4 the most potential to limit waste arisings, due to a lower number of homes being delivered. The Council considers that for the reasons above, of all of the options, the preferred strategy will do most to limit impacts on land soil and water resources.

Environmental quality – Increased development in accessible locations through Options 2, 3 and 5 has the potential to promote the use of sustainable transport modes and minimise the need to travel, therefore helping to limit emissions from transport. These options also have the most potential for the remediation of brownfield site through increased housing delivery. However, Options 2, 3 and 5 also have the most potential to lead to cumulative impacts on air, water and groundwater quality through facilitating a higher level of growth. The preferred strategy will help limit emissions, whilst also promoting the remediation of brownfield land, and (to a lesser extent) limiting impacts on water and groundwater quality. As such, the Council considers that the preferred strategy appropriately balances the various elements effecting environmental quality.

Historic Environment, Landscape and Townscape – Option 4, through promoting lower levels of growth in Romford, Rainham and Beam Park, Hornchurch and Upminster could be seen to have more limited effects on Conservation Areas and heritage assets in these areas. However, the appraisal also suggests that, if sensitively designed, increased development in these areas through Options 2, 3 and 5 could result in significant opportunities to enhance the fabric and setting of heritage assets. The Council considers that the level of growth proposed in the preferred strategy optimally balances the need to create opportunities for enhancing the fabric and setting of heritage assets and townscape character, while not proposing a level of growth which would lead to wider scale impacts on the historic environment and townscape/landscape quality.

Population and Community – Whilst the preferred strategy exceeds the minimum housing target set out in Further Alterations to the London Plan, Options 2, 3 and 5 meet (and exceed) the established

Objectively Assessed Need for Havering. It is recognised that increased delivery in accessible locations through these options could have potential to support accessibility to existing community facilities, promote more active lifestyles and facilitate access to green infrastructure networks.

However, an increased level of growth in comparison to the preferred strategy also has the potential to overburden existing facilities and put pressures on existing infrastructure. The Council considers that the preferred strategy supports a balance between an appropriate level of growth whilst supporting the provision of facilities and infrastructure to support this. Unmet housing need is dealt with on a London-wide basis.

Health and Wellbeing – It is recognised that increased growth in accessible locations through Options 2, 3 and 5 has the potential to support accessibility to community facilities and promote active travel. The drawback of additional growth is that increased road safety issues and impacts on air and noise as a result of an increased level of development could adversely impact on the health and wellbeing of residents. As stated above, an increased level of growth compared to the preferred strategy also has the potential to overburden existing facilities and put pressure on existing green infrastructure networks. The Council considers that the preferred strategy provides an optimal balance between an appropriate level of growth and the ability to deliver the provision of facilities and infrastructure to support this.

Transportation – The appraisal finds that the options which promote a higher number of homes in accessible locations, Options 2, 3 and 5, have the most potential to support the use of sustainable modes of transport and minimise the need to travel. However, the appraisal also recognises that all options have the potential to support development at existing and future public transport nodes and offer opportunities for contributing or realising the need for new infrastructure to accompany new development. Therefore, the Council deems the preferred strategy to sufficiently promote sustainable travel by focusing development in accessible locations.

Economic Vitality Employment and Skills – Whilst the delivery of a larger number of dwellings through Options 2, 3 and 5 has the potential to support the economic viability and vitality of the borough, the appraisal recognised that all of the options are likely to have a long-term positive effect on the economy. The Council believes that the preferred strategy is therefore justified in the light of finding an optimal balance between facilitating and promoting economic growth whilst supporting the provisions of the remaining sustainability objectives.

The options and particularly the preferred strategy have been informed by the development capacity of the borough and the context provided by the NPPF and London Plan:

- Romford is identified as a Metropolitan Centre in the London Plan and is the largest town centre in the borough. Romford has scope for development across a number of well located and well connected sites. From 2018, it will benefit from improved rail services as a result of the arrival of Crossrail. Its potential has been recognised by its designation as a Mayoral Housing Zone. The next London Plan will re-affirm the role of Romford by designating it as an Opportunity Area in recognition of its potential to address an important part of Havering's growth potential.

- Rainham and Beam Park is already identified within the London Riverside Opportunity Area which includes land in both Havering and adjoining Barking and Dagenham. The scope for this is as a result of the provision of a new station at Beam Park and the opportunity to provide space for essential local services. Rainham and Beam Park was granted Housing Zone status in 2015 which will help accelerate residential development in the area.

- The London Plan identifies the six District Centres of Hornchurch, Upminster, Collier Row, Harold Hill, Rainham and Elm Park in the borough, which should be the main foci for development and intensification. Hornchurch and Upminster are the largest district centres with the highest PTAL rating.

- Both the NPPG and the London Plan express a support for protecting the Green Belt from inappropriate development, except in very special circumstances.

7. Development of the planning policies for the Havering Local Plan

The planning policies for the Local Plan have been developed in response to government guidance (e.g. the National Planning Practice Guidance), evidence base studies, the appraisal of reasonable alternatives undertaken through the SA process and to reflect consultation responses on plan-making to date, including the initial Regulation 18 consultation undertaken for the Local Plan.

Following the preparation of an initial version of the draft Local Plan in early 2017, the draft policies presented in the plan underwent an initial assessment through the SA process. At this stage, a number of recommendations were made with the aim of enhancing the sustainability performance of the plan,

These were as follows:

- The Nature Conservation policy seeks to ensure development protects and enhances designated nature conservation sites present in the borough 'when development is on or adjacent to such a site'. Given that development which takes place further away from a designated site may still have impacts on site integrity (as reflected by the extent of Impact Risk Zones for SSSIs; which often extend a number of kilometres from a site), it is recommended that the policy is updated. In this context an appropriate update to the policy would be to refer to development which has the potential to impact on an SSSI, Local Nature Reserve or SINC rather than only development which is located 'on or adjacent' to a site.
- Given the proximity of the Rainham and Beam Park Strategic Development Area to the Ingrebourne Marshes SSSI and the Inner Thames Marshes SSSI, and its presence within the Impact Risk Zone for the SSSIs, there is further scope for the policy for the Strategic Development Area to acknowledge the need for adverse effects on the integrity of these key nationally designated sites to be avoided, and enhancements achieved.
- Whilst the Heritage Assets policy sets out a number of provisions for conservation areas in the borough, there is further potential for the policy to more explicitly seek to ensure that all development in conservation areas takes into account the relevant Conservation Area Appraisal or Management Plan. This would provide a robust focus for the protection and enhancement of local distinctiveness in conservation areas, and help ensure that development within conservation areas in the borough provides an appropriate degree of protection for conservation areas' integrity.

The draft Local Plan was then updated to reflect these recommendations.

The 39 policies presented in the *Havering Local Plan – Proposed Submission* document are as follows:

Policy 1	Romford Strategic Development Area
Policy 2	Rainham and Beam Park Strategic Development Area
Policy 3	Housing Supply
Policy 4	Affordable Housing
Policy 5	Housing Mix
Policy 6	Specialist Accommodation
Policy 7	Residential Design and Amenity
Policy 8	Houses in Multiple Occupation
Policy 9	Conversions and Subdivisions
Policy 10	Garden and Backland Development
Policy 11	Gypsy and Traveller Accommodation
Policy 12	Healthy Communities
Policy 13	Town Centre Development

Policy 14	Eating and Drinking
Policy 15	Culture and Creativity
Policy 16	Social Infrastructure
Policy 17	Education
Policy 18	Open Space, Sports and Recreation
Policy 19	Business Growth
Policy 20	Loss of Industrial Land
Policy 21	Affordable Workspace
Policy 22	Skills and Training
Policy 23	Transport Connections
Policy 24	Parking Provision and Design
Policy 25	Digital Connections
Policy 26	Urban Design
Policy 27	Landscaping
Policy 28	Heritage Assets
Policy 29	Green Infrastructure
Policy 30	Nature Conservation
Policy 31	Rivers and River Corridors
Policy 32	Flood Management
Policy 33	Air Quality
Policy 34	Managing pollution
Policy 35	On-site waste management
Policy 36	Low Carbon Design, Decentralised Energy and Renewable Energy
Policy 37	Mineral Reserves
Policy 38	Mineral Extraction
Policy 39	Secondary Aggregates

The latest version of the planning policies presented in the current *Havering Local Plan – Proposed Submission* document as presented to Cabinet and Full Council in July 2017 has been appraised in Part 2 of this SA Report.

Part 2:
What are the SA findings at this stage?

8. Appraisal of policy approaches presented in the latest version of the Havering Local Plan

8.1 Purpose of this chapter

This chapter presents appraisal findings in relation to the current *Havering Local Plan – Proposed Submission* document.

8.2 Approach to the appraisal

The appraisal of the policies in the *Proposed Submission* document has been presented under the nine SA Themes. In undertaking the appraisal, the proposed polices were reviewed to determine which are likely to have a positive or negative environmental effect under each SA Theme. For example, Policy 22 (Skills and Training) is unlikely to have any effect on biodiversity in the borough and therefore has not been considered under this theme.

Where a causal link between polices and SA Themes is established, significant effects are identified through the judgement of the consultants with reference to the evidence base (i.e. the scoping and other relevant information). The appraisal uses the criteria in Schedule 1 of the SEA Regulations, that is:

- the probability, duration, frequency and reversibility of the effects;
- the cumulative nature of the effects;
- the transboundary nature of the effects;
- the risks to human health or the environment (for example, due to accidents);
- the magnitude and spatial extent of the effects (geographical area and size of the population likely to be affected);
- the value and vulnerability of the area likely to be affected due to-
    - special natural characteristics or cultural heritage;
    - exceeded environmental quality standards or limit values; or
    - intensive land-use; and
- the effects on areas or landscapes which have a recognised national, community or international protection status.

Where likely significant effects have been identified, these are described in summary tables for each SA Theme.

Every effort is made to predict effects accurately; however, this is inherently challenging given the strategic nature of the *Proposed Submission* document. The ability to predict effects accurately is also affected by the limitations of the baseline data. Because of the uncertainties involved, there is a need to exercise caution when identifying and evaluating significant effects and ensure assumptions are explained in full.[11] In many instances it is not possible to predict significant effects, but it is possible to comment on merits (or otherwise) of policies in more general terms.

[11] As stated by Government Guidance (The Plan Making Manual, see http://www.pas.gov.uk/pas/core/page.do?pageId=156210): *"Ultimately, the significance of an effect is a matter of judgment and should require no more than a clear and reasonable justification."*

8.3 Biodiversity

8.3.1 Commentary on proposed Local Plan spatial strategy

The two key nature conservation sites in the south of the borough are: the Ingrebourne Marshes SSSI, which comprises part of the Ingrebourne Valley and supports the largest and one of the most diverse coherent areas of freshwater marshland in Greater London; and the Inner Thames Marshes SSSI, which forms the largest remaining expanse of wetland bordering the upper reaches of the Thames Estuary, and is of particular note for its diverse ornithological interest, including the variety of breeding birds and the numbers of wintering wildfowl, waders, finches and birds of prey. SSSI Impact Risk Zones (IRZs) are a GIS tool/dataset which maps zones around SSSIs according to the particular sensitivities of the features for which they are notified. They specify the types of development that have the potential to have adverse impacts at a given location. Natural England is a statutory consultee on development proposals that might impact on SSSIs. In this context, IRZs relating to the Ingrebourne Marshes SSSI and the Inner Thames Marshes SSSI for 'residential development of 100 units or more' cover the whole of Rainham. As such, the spatial strategy for the Local Plan, which puts forward 4,000 dwellings in the Rainham and Beam Park Strategic Development area, has the potential to have effects on the two SSSIs. Effects will depend on the implementation of the biodiversity policies of the Local Plan, which have been discussed below.

The Hornchurch Cutting SSSI has been designated for its geodiversity interest and is located on the Hornchurch to Romford railway line north east of Hornchurch town centre. Given its designation for geological exposures, the extent of the site's IRZ is limited to within 50m of the site. As such, it is unlikely that the spatial strategy, which supports an intensification of some uses in the district centres (including Hornchurch), would lead to significant effects on the integrity of the site.

Two SSSIs are located in close proximity to the north of the borough, Hainault Forest SSSI and Curtismill Green SSSI. IRZs for these SSSIs relating to residential development do not extend to the settlements closest to the sites in the north of the borough, including Collier Row and Harold Hill. As such, the preferred spatial strategy for the Local Plan, which focuses a larger level of development at the Romford and Rainham and Beam Park Strategic Development Areas and the district centres and precludes most development within the Green Belt, proposes a minimal level of housing delivery within the IRZs for these SSSIs and, as such, would not be likely to lead to effects on the integrity of these sites.

The facilitation of increased densities in the two Strategic Development Areas and some district centres, and the intensification of uses enabled by the estate renewal programme facilitated through the preferred spatial strategy will reduce the need for new development areas in other parts of the borough. This is likely help reduce impacts on habitats, species and ecological networks in these locations. Whilst parts of the Metropolitan Green Belt have low biodiversity value, the increased concentration of BAP Priority Habitats in the parts of Havering within the Green Belt, in comparison with the concentration of BAP Priority Habitats in the built up parts of the borough, highlights that the preferred approach will help protect a number of key areas of biodiversity importance. The facilitation of an increased level of development in key centres in the borough will however increase pressures on existing urban habitats and species in these centres, including brownfield biodiversity.

In terms of Gypsy and Traveller accommodation, the current version of the Local Plan seeks to formalise seven existing private sites and retain and protect the existing Travelling Showpeople plot at Fairoaks, St Marys Lane. Given this comprises an intensification of uses at the sites rather than the allocation of new sites, and the application of the other policies of the Local Plan will help limit effects, significant effects on biodiversity are not anticipated.

8.3.2 Commentary on *Proposed Submission* document as a whole

Whilst no significant effects on biodiversity assets from the spatial strategy can be readily identified, there will be a need for potential effects on biodiversity linked to the allocations associated with the spatial strategy to be avoided and mitigated. In this context, the current version of the Local Plan sets out a range of provisions which will 1) help limit potential effects from new development on features and areas of biodiversity interest in the borough and 2) support enhancements to biodiversity.

Policy 30 (Nature Conservation) seeks to protect and enhance the designated nature conservation sites in the borough, including nationally designated SSSIs and locally designated Local Nature Reserves and Sites of Importance for Nature Conservation '*when development is on or adjacent to such a site*'. However, there is further scope for this to be extended. For example Impact Risk Zones for SSSIs can extend many kilometres from an SSSI, and effects on SSSIs do not necessarily only result from development on or adjacent a site (e.g. growing populations can increase recreational pressure on valuable sites). Biodiversity in the borough will also be supported through the policy's aim to protect veteran trees and ancient woodland and protect priority habitats and species, its aim to provide appropriate new on-site biodiversity features and to protect and enhance biodiversity corridors.

Ecological networks in the borough will also be supported by the policies which promote open space and green infrastructure enhancements. In this context, Policy 29 (Green Infrastructure) seeks to ensure that green infrastructure provision is provided on-site, that there is compensation for the loss of green infrastructure where this takes place as a result of development and also provides for the active management of green infrastructure. The policy also identifies the organisations that developers should work with to support and enhance green infrastructure provision. Policy 27 (Landscaping) also supports landscape schemes which retain existing trees, planting and landscape features, maximise opportunities for 'greening' and protect and enhance biodiversity. This will be further supported by Policy 12 (Healthy Communities), which seeks environmental improvements and supports the provision of multifunctional green infrastructure providing and protecting open space. In relation to rivers' contribution to high quality biodiversity linkages, Policy 31 (Rivers and River Corridors) recognises the key role of river corridors in the borough for ecological networks through seeking to enhance the biodiversity value of river corridors and through securing *'opportunities to restore and enhance rivers*'. These policies will therefore support borough-wide and sub-regional ecological networks.

In relation to other policies which seek to protect and enhance biodiversity in the borough, Policy 36 (Low Carbon Design, Decentralised Energy and Renewable Energy) seeks to reduce the impact of renewable energy provision on biodiversity, and Policy 37 (Mineral Reserves) and Policy 38 (Mineral Extraction) seek to reduce the impact of minerals activities on biodiversity and secure enhancements.

Potential effects of the Local Plan on European designated nature conservation sites have been considered through the Habitats Regulations Assessment (HRA) undertaken for the Local Plan. This has highlighted that the proposed spatial strategy and policies of the Local Plan are unlikely to have effects on the key site on which effects have the potential to arise, Epping Forest SAC.

In this context the HRA concluded that the two main development pressures on Epping Forest SAC are recreational pressure and atmospheric pollution. However, due to the distance between Epping Forest SAC and the nearest settlement within the borough, it is considered that the increase in population in Havering is unlikely to significantly increase recreational pressure upon the SAC as the borough lies outside the core catchment of that SAC and has ample alternative semi-natural publicly accessible woodlands. In addition policies in the Havering Local Plan promote the provision of local green infrastructure and open spaces, providing local people with much closer recreational alternatives to Epping Forest SAC.

The distance between Epping Forest SAC and developed land within the London Borough of Havering, coupled with policies to tackle air pollution and reduce the level of cross-borough commuting also leads to a conclusion that the contribution of growth in Havering to vehicle flows (and thus air quality) through Epping Forest SAC will be negligible compared to other closer authority areas, and thus would not contribute materially to any effect in-combination.

Table 8.1 Likely significant effects and recommendations: Biodiversity

Likely significant effect	*Effect dimensions*
Improved borough-wide ecological connections	Direct, long-term, permanent and positive.
Improved ecological resilience	Direct, long-term, permanent and positive.
'Wider' ecological benefits	Direct, long-term, permanent and positive.
Increased habitat and greenspace through green infrastructure enhancements	Direct and indirect, long-term, permanent and positive.

8.4 Climate Change

8.4.1 Commentary on proposed Local Plan spatial strategy

Climate change mitigation

Overall, the delivery of 17,550 new homes and the intensification of employment uses across the borough has the potential to increase the built footprint of Havering, with associated increases in greenhouse gas emissions. However the extent to which this takes place depends on the implementation of policies designed to limit emissions.

In this context road transport is an increasingly significant contributor to greenhouse gas emissions in Havering. The spatial strategy taken forward through the Local Plan seeks to direct an increased level of housing provision to the larger settlements in the borough, including Romford and the district centres. This has the potential to encourage the use of lower carbon modes of transport, including walking and cycling and public transport through directing housing to the settlements with the broadest range of services and facilities and promoting accessibility and thereby reducing the need to travel by car.

The preferred spatial strategy promotes 6,500 dwellings in Romford, which designated as a Metropolitan Centre through the London Plan, is the settlement with the widest range of services and amenities in the borough. Similarly the preferred strategy directs development to the district centres, which, after Romford, are the settlements best served by services and facilities. On this basis, the preferred spatial strategy has the potential to support the use of sustainable modes of transport and minimise the need to travel. This will support a limitation of greenhouse gas emissions from transport.

The Rainham and Beam Park Housing Zone is part of the London Riverside development. Given that the proposed housing growth in this area is part of the larger London Riverside Opportunity Area, it is considered that new housing will be delivered alongside a significant improvement of services, facilities and amenities in the area and enhancements to employment opportunities, including at the Rainham Employment Area. Proposals will also be supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line and a new station at Beam Park. The current proposals for the London Riverside Opportunity Area also seeks to promote lower carbon lifestyles, including through decentralised energy provision and realising low to zero-carbon energy potential opportunities. As such development in this location has the potential to help limit the carbon footprint of new housing growth. In the context of the above, the preferred spatial strategy, which seeks to deliver 4,000 new homes around a new railway station at Rainham and Beam Park has the potential to support lower carbon lifestyles.

In terms of the other aspects relating to climate change mitigation, the sustainability performance of the options depends on elements such as the integration of energy efficient design within new development and the provision of renewable energy. This has been considered below.

Climate change adaptation

In relation to fluvial and tidal flood risk, this largely relates to the presence of the River Thames and the Rivers Beam, Rom and Ingrebourne (and their tributaries). In relation to the River Thames, the parts of the borough to the south of Rainham are at risk from both fluvial and tidal flood risk. With regards to the River Beam, flood risk areas extend through the west of Hornchurch, and flood risk associated with the River Rom is present in Romford, Rise Green and Rush Park. In relation to the River Ingrebourne, flood risk extends into parts of Harold Wood, western Upminster and Rainham.

Whilst the locations for development potentially taken forward through the preferred spatial strategy may be within these flood risk areas, it is considered that the provisions of the NPPF and national policy in relation to flooding will help guide development away from flood risk areas and ensure that appropriate mitigation measures are implemented. For example, the NPPF does not permit development within flood risk areas or where the effect would be to increase flood risk elsewhere without appropriate mitigation measures. Likewise, adherence to the recommendations and guidance presented in the Strategic Flood Risk Assessment (SFRA) undertaken to inform the Local Plan will help limit effects. The policy approaches proposed by the Local Plan relating to flood risk have been discussed below.

8.4.2 Commentary on *Proposed Submission* document as a whole

Climate change mitigation

A key SA objective is to address the causes of climate change through reducing emissions of greenhouse gases.

In terms of the provision of low carbon energy, Policy 36 (Low Carbon Design, Decentralised Energy and Renewable Energy) seeks to support the generation of energy from renewable or low carbon sources and '*require[s] major development to prioritise connection to any existing or planned decentralised energy networks and, where feasible, integrate combined heat and power systems on site*.' It also seeks to support wind turbines where they meet a series of criteria set out in the policy.

In relation to energy efficiency, Policy 36 (Low Carbon Design, Decentralised Energy and Renewable Energy) seeks to '*optimise the energy efficiency of buildings*'. It also requires major development to include a detailed energy assessment to demonstrate how the targets for carbon dioxide emissions reduction outlined in the London Plan are to be met. It also sets out that the London Borough of Havering will '*…require a cash in lieu contribution to the Council's Carbon Reduction Fund on any shortfall to secure the delivery of carbon dioxide savings elsewhere*.' With regard to residential developments, the scope to set standards for residential building performance has been radically curtailed by the Government's Housing Standards Review. The Ministerial Statement published in March 2015 outlined the Government's national planning policy on the setting of technical standards for new dwellings and local plan making. The Code for Sustainable Homes has been formally withdrawn so targets against this should no longer be set in policy. Energy performance standards that exceed the energy requirements of Building Regulations can still be set in local plans until commencement of amendments to the Planning and Energy Act 2008 in the Deregulation Bill 2015. However, given that the energy performance requirements in Building Regulations will be set at a level equivalent to the (outgoing) Code for Sustainable Homes Level 4, the Ministerial Statement advises that '*we would expect local planning authorities to take this statement of the government's intention into account in applying existing policies and not set conditions with requirements above a Code level 4 equivalent*.' As such it is recognised that the scope for the Havering Local Plan to include energy efficiency and sustainability standards is limited.

The policies relating to sustainable transport and green infrastructure, e.g. Policy 18 (Open Space, Sports and Recreation), Policy 23 (Transport Connections), Policy 24 (Parking Provision and Design), Policy 29 (Green Infrastructure), supported by Policy 12 (Healthy Communities), Policy 25 (Digital Connections) and Policy 33 (Air Quality) will help to reduce the growth in emissions relating to car use through supporting modal shift from the private car. This will be supported by Policy 1 (Romford Strategic Development Area), Policy 2 (Rainham and Beam Park Strategic Development Area), which will enhance accessibility by sustainable transport modes and reduce the need to travel by focusing services, facilities and amenities in the key centres of the borough.

Climate change adaptation

The borough's geography and its environmental sensitivities highlight the requirement for it to adapt to a changing climate over the next 50-100 years, including extreme weather events.

The Natural Environment White Paper recognises that green infrastructure is '*one of the most effective tools available*' to manage '*environmental risks such as flooding and heat waves*.' In this context Policy 29 (Green Infrastructure) seeks to ensure that green infrastructure provision is provided on-site; that compensation is provided for the loss of green infrastructure where this takes place as a result of development; and provides for the 'active management' of green infrastructure. The policy also identifies the organisations that developers should work with to support and enhance green infrastructure provision in the borough. Policy 18 (Open Space, Sports and Recreation) seeks to ensure that the loss of open space is resisted in the borough, new open space is provided through development, and the multifunctionality of open space is enhanced. Policy 27 (Landscaping) also supports landscape schemes which retain existing trees, planting and landscape features, and maximise opportunities for 'greening'. This will be further supported by Policy 12 (Healthy Communities), which seeks environmental improvements and supports the provision of multifunctional green infrastructure. In addition to helping enhance the resilience of the borough to the effects of climate change, such as more extreme weather events, drought and increases in flood risk, enhancements to green infrastructure supported by these policies will also support the resilience of ecological networks to the effects of climate change.

Policy 32 (Flood Management) sets out the Local Plan's approach to flood risk. In relation to fluvial flooding this seeks to limit flood risk through requiring flood risk assessments for all development on sites where drainage problems have been identified, and sites deemed necessary by the Council (as a Lead Local Flood Authority). It also recognises the role of the Washlands Flood Storage Area through ensuring that flood risk assessments are undertaken for development areas within this location. In relation to surface water flooding, the policy promotes the use of SuDS and includes provisions for the maintenance of such systems. It also states that the Council will *'…seek financial contributions towards the anticipated costs of flood risk management infrastructure required to protect the proposed development over its lifetime.'*

Policy 32 is supported by Policy 32 (River and River Corridors) which sets out a range of provisions for supporting enhancements to fluvial flood management in the borough. This includes through securing *'opportunities to restore and enhance rivers*' whilst incorporating flood defences within new development. Flood risk management will also be supported by the policy's provision that development will be set back by eight metres from main rivers, ordinary watercourses and other flood assets, and 16 meters from tidal rivers or defence structures.

As such the Local Plan adds value to the provisions of the National Planning Policy Framework (NPPF) with regards to fluvial and surface water flood risk in the borough.

Table 8.2 Likely significant effects and recommendations: Climate change

Likely significant effect	*Effect dimensions*
Reduction in greenhouse gas emissions through reducing need to travel and modal shift.	Direct, long-term, permanent and positive.
Reduction in greenhouse gas emissions from development of low carbon and renewable energy installations and the promotion of energy efficient development.	Direct and indirect, long-term, permanent and positive.
Enhancements to the resilience of the borough to the effects of climate change.	Direct and indirect, short, medium and long-term, permanent and positive.

8.5 Land, Soil and Water Resources

8.5.1 Commentary on proposed Local Plan spatial strategy

The spatial strategy put forward by the Local Plan has a strong focus on the use of previously developed land and an intensification of uses. Through focusing development within the key centres of the borough, accompanied by the Rainham and Beam Park Strategic Development Area and the intensification and renewal of existing council housing estates, the spatial strategy will promote the

efficient use of land. The plan's focus on protecting the Green Belt will also help protect the borough's soils resources and limit the loss of productive agricultural land.

8.5.2 Commentary on *Proposed Submission* document as a whole

Three policies set out the Local Plan's approach to minerals, aggregates and secondary materials. Policy 38 (Minerals Reserves) seeks to safeguard minerals resources from other forms of development that would sterilise the resource and or/prejudice future mineral extraction. It also sets out the instances when development would be allowed with a Minerals Safeguarding Area. This is reinforced by Policy 38 (Minerals Extraction) which supports minerals extraction in the borough if a range of conditions are met. In this regard the Local Plan takes a positive approach to minerals resources, recognising the value of the sand and gravel extraction which takes place in the south of the borough, and its contribution to the provision of aggregates in the wider area.

Resource efficiency in relation to building materials will be supported by Policy 39 (Secondary Aggregates). This policy sets out provisions for maximising possible rates of recovery from construction, demolition and excavation and supporting applications for temporary aggregate recycling facilities at development sites and quarries. This will support the minimisation of the quantity of primary aggregates and resources used in the borough.

With regards to sustainable waste management, Policy 35 (On-site Waste Management) sets out a range of provisions promoting the use of the waste hierarchy, seeking to ensure the provision of appropriate on-site waste management facilities to accompany new development, promoting appropriate storage and collection facilities, and for minimising the impact of waste management facilities on the public realm. It also seeks to ensure that all large developments have a waste management plan and proposals adhere to the Mayor of London's Business Waste Strategy '*Making Business Sense of Waste*'. It also facilitates the installation of small-scale on-site combined head and power (CHP) systems fuelled by waste for new large developments. In this context the policy will promote the prevention, minimisation, reuse, recycling and recovery of waste.

In relation to water resources it is recognised that the Mayor's SPG on Sustainable Design and Construction[12] sets out provisions relating to water efficiency. In relation to water supply, it is anticipated that the Water Resources Management Plans prepared by water supply companies will address long-term water supply issues associated with growth.

Table 8.3 Likely significant effects and recommendations: Land, Soil and Water Resources

Likely significant effect	*Effect dimensions*
Efficient use of land through an intensification of uses and a focus on the use of previously developed land.	Direct, long-term, permanent and positive.
Protection of agricultural land.	Direct and indirect, long-term, permanent and positive.

8.6 Environmental Quality

8.6.1 Commentary on proposed Local Plan spatial strategy

Air quality is a key issue for Havering. The whole of the borough was designated as an Air Quality Management Area in 2006 due to levels of nitrogen dioxide (NO_2) and particulate matter (PM_{10}). The main source of air pollution is road traffic vehicle emissions. Significant amounts also come from residential and commercial gas use, industry, construction sites and emissions from outside London.

The preferred spatial strategy for the Local Plan directs an increased level of housing provision to the key town and district centres of the borough. This will help limit the need to travel to services and facilities, therefore helping to limit emissions from transport. In this context the spatial strategy directs 6,500 houses to Romford, which, designated as a Metropolitan Centre through the London Plan, is the settlement with the widest range of services and amenities in the borough. It also directs

[12] Mayor of London (April 2014) Sustainable Design and Construction SPG

development to the district centres (including Hornchurch and Upminster), which, after Romford are the settlements best served by services and facilities in the borough.

The Rainham and Beam Park Housing Zone is part of the London Riverside development. Given that proposed housing growth in this area is part of the larger London Riverside Opportunity Area, it is considered that new housing at this location will be delivered alongside a significant improvement of services, facilities and amenities in the area and enhancements to employment opportunities, including at the Rainham Employment Area. Proposals will also be supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line and a proposed new station at Beam Park. In this context, the preferred spatial strategy, which seeks to deliver in the region of 4,000 new homes at the Rainham and Beam Park Strategic Development Area, has the potential to limit emissions from transport resulting from growth.

In terms of water quality, the effect of new development on water quality in the borough will depend on the implementation of measures to protect and enhance water quality and sustainable water management. This is not directly related to the proposed spatial strategy for the Local Plan.

In terms of Gypsy and Traveller accommodation, the current version of the Local Plan seeks to formalise seven existing private sites and retain and protect the existing Travelling Showpeople plot at Fairoaks, St Marys Lane. Given this comprises an intensification of uses at the sites rather than the allocation of new sites, and the application of the other policies of the Local Plan will help limit effects, significant effects on environmental quality are not anticipated.

8.6.2 Commentary on *Proposed Submission* document as a whole

As highlighted above, road transport is a key influence on air quality issues in the borough. In this context a number of the policies support sustainable transport use and a minimisation of the need to travel. In this context Policy 3 (Housing Supply) supports the preferred spatial strategy (discussed in the previous section) through supporting the density matrix set out through the London Plan and promoting an intensification of uses. This will be further supported by Policy 1 (Romford Strategic Development Area) and Policy 2 (Rainham and Beam Park Strategic Development Area) which will enhance accessibility by sustainable transport modes and reduce the need to travel by focusing services, facilities and amenities in the key centres of the borough.

Policy 23 (Transport Connections) sets out a range of provisions designed to support sustainable transport use in the borough. This includes: supporting enhancements to rail services; new north-south networks in the borough; improvements to bus services; enhancing access to employment areas; requiring new development to maximise access to public transport networks and cycle and pedestrian networks; promoting active school travel; facilitating improvements to walking and cycling networks; and maximising the opportunities afforded by Crossrail. The policy also seeks to limit congestion, a key contributor to air quality issues in the borough.

Sustainable transport use will also be supported by Policy 6 (Specialist Accommodation) and Policy 8 (Houses in Multiple Occupation) which seeks to ensure that these types of housing provision are accessible to facilities and amenities and public transport networks. Policy 12 (Healthy Communities) seeks to direct development to '*well connected locations*' and to support measures to promote walking and cycling. Policy 16 (Social Infrastructure) seeks to locate community facilities in locations close to residents and minimise the need to travel to such facilities, and ensure they are accessible by public transport and walking and cycling routes. Policy 24 (Parking Provision and Design) promotes car club membership and enhanced provision for cycle parking and electric vehicles, and promotes a demand management approach to car parking. Sustainable transport use will also be supported by Policy 26 (Urban Design), which facilitates design and layout which encourage walking and cycling and support permeability by active travel. Policy 29 (Green Infrastructure) and Policy 31 (Rivers and River Corridors) also support enhancements to walking and cycling routes in the borough.

In this context, the close focus of the Local Plan on sustainable transport use will help facilitate enhancements to air quality in the borough, and help limit the effect of the provision of in the region of 17,550 homes and an intensification of employment uses with respect to the borough's existing air quality issues.

The policies which promote enhancements to green infrastructure, including specifically Policy 29 (Green Infrastructure), Policy 12 (Healthy Communities), Policy 18 (Open Space, Sports and

Recreation) and Policy 27 (Landscaping) will support better air quality through facilitating increased absorption and dissipation of nitrogen dioxide and other pollutants, improve noise quality through increasing absorption of noise and promoting enhancements to water quality through managing pollutants in water run-off. Enhancements to green infrastructure will also promote modal shift (and, as such, help limit the effects of traffic growth on environmental quality in the borough) through improving opportunities for walking and cycling and enhancing sustainable transport networks.

Policy 33 (Air Quality) specifically seeks to address air quality issues through only supporting development which is '…*at least air quality neutral*', It also seeks to optimise green infrastructure provision, support active travel, and minimise emissions from construction. This will be supported by Policy 12 (Healthy Communities), which seeks to facilitate '…*environmental improvements, minimising exposure to pollutants and improving air quality*'.

In relation to water quality, Policy 32 (Flood Management) will help limit impacts on water quality from surface water runoff and fluvial flooding, and Policy 34 (Managing Pollution) seeks to ensure that new development '…*does not pose an unacceptable risk to the quality of the water catchment, groundwater or surface water*'.

Policy 35 further supports environmental quality through seeking to ensure that new development proposals '*Do not unduly impact upon, amenity, human health and safety, and the natural environment by noise, dust, odour and light pollution and land contamination*' and '*optimise the design, layout and orientation of buildings and the use of green infrastructure to minimise exposure to the above pollutants.'*

Table 8.4 Likely significant effects and recommendations: Environmental Quality

Likely significant effect	*Effect dimensions*
Limitation of the effects of housing and employment growth on existing air quality issues in the borough	Direct, long-term, permanent and positive.
Limitation of the effects of housing and employment growth on noise quality in the borough	Direct, long-term, permanent and positive.
Limitation of the effects of housing and employment growth on water quality in the borough	Direct, long-term, permanent and positive.

8.7 Historic Environment, Landscape and Townscape

8.7.1 Commentary on proposed Local Plan spatial strategy

The delivery of over 6,500 new homes predominately in high density, mixed use development in the Romford Strategic Development Area has the potential to have impacts on features and areas of historic environment interest in Romford. In this context, the main historic environment constraints in the town are limited to the Romford Conservation Area (covering the Market Place, High Street, North Street and South Street in the town centre) and approximately twelve listed buildings.

The Romford Housing Zone, which will be a focus of renewal, covers three locations in Romford town centre. The smallest of these, located to the north of the High Street, is located adjacent to Romford Conservation Area. Whilst increased housing delivery at this location, if poorly designed, could have negative impacts on the setting and fabric of the conservation area, high quality and sensitive design and layout could bring positive effects. As such, high quality design and layout could offer significant enhancements to the setting of the historic environment in this location. This is significant given Romford Conservation Area is deemed to be 'at risk' and in a 'very bad' condition by Historic England, resulting in the inclusion of the conservation area on Historic England's Heritage at Risk Register[13]. Similarly, one of the larger areas of the Housing Zone covers an area to the west of the town centre, a location with two listed buildings present, the Salem Chapel and Church of St Andrew, which are both Grade II listed. Given the current opportunities to enhance the poor public realm in this area, an increased focus on the Housing Zone through the preferred spatial strategy has significant opportunities to enhance the setting of these two key features of cultural heritage interest.

The Rainham and Beam Park Housing Zone covers the part of Rainham town centre designated through the Rainham Conservation Area. In this context, the proposed spatial strategy which proposes the delivering of 4,000 new homes in the area has the potential to have impacts on the fabric and setting of the conservation area through facilitating an increased level of housing delivery in its vicinity. Whilst development, if poorly designed, can have negative impacts on the setting and fabric of the historic environment, high quality and sensitive design and layout can bring positive effects. In this context, as part of the wider London Riverside Opportunity Area, there is significant potential for new development in the area to enhance the setting of the historic environment through public realm improvements, enhancements to green infrastructure provision and investment in features and areas of cultural heritage interest. As such, an increased level of housing delivery in this area has the potential to offer additional opportunities for enhancing the setting and fabric of features and areas of cultural heritage interest, including the Rainham Conservation Area, depending on design, layout, materials used and the provision of green infrastructure enhancements.

Parts of Upminster and Hornchurch are of historic environment interest. Two conservation areas cover various parts of Hornchurch town centre, namely the Langtons Conservation Area and the St Andrews Conservation Area (the nearby St Leonards Conservation Area and the RAF Hornchurch Conservation Areas are outside of the town centre) and a range of listed buildings are present in the town. In relation to Upminster, a number of listed buildings are present in the town and the town has a distinctive character. No statutory historic environment designations are present Collier Row and

[13] Historic England, Heritage at Risk Register 2016 https://historicengland.org.uk/advice/heritage-at-risk/search-register/list-entry/1659362 (accessed 15th February 2017).

Harold Hill. In this respect the preferred spatial strategy for the borough, which directs development to district centres, has the potential to affect areas of historic environment interest within these locations. However, as highlighted above, these effects need not be negative; an increased level of housing delivery has the potential to offer additional opportunities for enhancing the setting and fabric of features and areas of cultural heritage interest, depending on design, layout, materials used and the provision of green infrastructure enhancements.

54% of Havering is covered by the Metropolitan Green Belt. Whilst the Green Belt is designated partly to prevent urban growth into countryside, and, as such, does not directly designate land for landscape quality purposes, development within the Green Belt is nonetheless likely to have adverse impacts on landscape character and local distinctiveness through facilitating growth in the open countryside. This includes in locations such as Havering-atte-Bower, or Noak Hill, which have a rich historic environment resource. As such, the proposed spatial strategy, which largely precludes Green Belt development, will help limit impacts on landscape character and local distinctiveness in these locations.

In terms of Gypsy and Traveller accommodation, the current version of the Local Plan seeks to formalise seven existing private sites and retain and protect the existing Travelling Showpeople plot at Fairoaks, St Marys Lane. These are within the Green Belt. However, given this comprises an intensification of uses at the sites rather than the allocation of new sites, and the application of the other policies of the Local Plan will help limit effects, significant effects on landscape and townscape are not anticipated.

8.7.2 Commentary on *Proposed Submission* document as a whole

Parts of Havering Borough have a rich historic environment and distinctive townscapes that should be conserved and enhanced. This is reflected by the planning policies proposed for the Local Plan, which have a strong focus on facilitating enhancements to townscape quality in the borough, conserving and enhancing the fabric and setting of the historic environment and supporting local distinctiveness.

A key policy with regards to local distinctiveness and heritage assets is Policy 28 (Heritage Assets). This seeks to 'sustain or enhance' buildings deemed to be at risk and identify and maintain a local list of heritage assets. It also seeks to protect and enhance the fabric and setting of nationally listed buildings, and support high quality development within the curtilage of a Registered Park or Garden, Historic Park or Garden of Local Interest, or within an Area of Special Townscape or Landscape Character. In relation to the archaeological resource of the borough, the policy also sets out provisions for development within an area of archaeological interest and seeks to preclude harm or loss to scheduled monuments in the borough.

Townscape character, local distinctiveness and the setting of the historic environment will also be supported by the policies relating to green infrastructure (e.g. Policy 29 (Green Infrastructure), Policy 18 (Open Space, Sports and Recreation), Policy 29 (Landscaping), Policy 30 (Nature Conservation) and Policy 12 (Healthy Communities)), which will promote enhancements to the public realm. This will be further supported by the policies relating to sustainable transport use (see **Section 8.10.2**), which will help to reduce the impact of the transport network (and traffic) on the quality of the public realm, and support townscape character and the setting of the historic environment.

Other policies which have a close focus on protecting and enhancing townscape quality include the policies for the two Strategic Development Areas (Policies 1 and 2), Policy 13 (Town Centre Development) and Policy 26 (Urban Design). These set out a range of provisions for utilising high quality design and layout of development to promote improvements to the public realm and local distinctiveness. Local distinctiveness and the setting of historic environment assets will also be supported by Policy 27 (Landscaping), which: seeks to require all developments to submit landscape themes; supports proposals which take account of the landscape character of the site and its wider setting; seeks to retain and enhance existing trees, planting and landscape features of value and protect them during construction; and maximise opportunities for 'greening' through the planting of trees and other soft landscaping.

The integrity of the eleven existing conservation areas in the borough is supported by Policy 28 (Heritage Assets), which sets out provisions for protecting and enhancing these key areas of historic

environment interest. Central provisions of the policy include an aim to better reveal the character of conservation areas, support high quality and appropriate design, and facilitate the replacement of buildings which do not add to the character of a conservation area. The policy also supports the designation of new conservation areas, and the maintenance of up-to-date Conservation Area Appraisals and Management Plans and the consideration of these through development proposals.

Other policies with relevance to this SA theme include Policy 31 (Rivers and River Corridors), which seeks to enhance the quality of river corridors, Policy 36 (Low Carbon Design, Decentralised Energy and Renewable Energy), which seeks to limit the impacts on such provision on townscape and landscape quality, and Policy 38 (Minerals Extraction), which seeks to ensure that the impact of minerals activities on the quality of the public realm is minimised.

54% of Havering is covered by the Metropolitan Green Belt. Whilst the Green Belt is partly designated to prevent urban growth into countryside, and as such does not directly designate land for landscape quality purposes, development within the Green Belt is nonetheless likely to have adverse impacts on landscape character and local distinctiveness through facilitating growth in the open countryside. In this context the Local Plan relies on the provisions of the NPPF to facilitate the continued protection of the Green Belt.

Table 8.5 Likely significant effects and recommendations: Historic Environment, Landscape and Townscape

Likely significant effect	*Effect dimensions*
Enhanced townscape character, public realm and local distinctiveness.	Direct and indirect, long-term, permanent and positive
Protection and enhancement of heritage assets, including repair and reuse where appropriate.	Direct, long-term, permanent and positive.
Revitalisation of features and areas of historic environment value in the borough.	Direct and indirect, long-term, permanent and positive.

8.8 Population and Community

8.8.1 Commentary on proposed Local Plan spatial strategy

The Local Plan has been prepared in the context of growth and development within London and the wider South East region, with this area experiencing significant development pressures to meet the needs of a growing population. At least 17,550 homes will be delivered over the plan period, with the plan seeking to optimise the use of brownfield land while providing continued protection for Havering's Green Belt and open spaces. This is in line with the requirements of the London Plan. Additionally, the Council has sought to identify additional capacity in order to close the gap between the housing target set out in the London Plan and the recently established Objectively Assessed Housing Need.

The development strategy for the Local Plan seeks to focus growth in the larger settlements of the borough, notably around Romford, through the Romford Strategic Development Area (SDA) and district centres. The Local Plan also recognises the Rainham and Beam Park SDA as a major growth and regeneration area, with the capacity to provide a significant number of new homes and jobs. Both of these SDAs have been granted Housing Zone status by the Mayor of London. Securing good accessibility to services and facilities is central for the quality of life of residents, for sustaining vital communities and for social inclusion. In this context, the proposed spatial strategy will reduce the need to travel by private vehicles and enhance accessibility for residents by focusing housing and employment provision in the larger centres which contain a broader range of services, facilities and amenities.

Additionally, the spatial strategy recognises the value of the Green Belt in terms of its contribution to the character of the borough, highlighting how it assists in restricting the sprawl of large built-up areas, preventing the merging of neighbouring towns and safeguarding the countryside from encroachment. This strengthens the strategic spatial approach to focusing development within larger

settlements, particularly through optimising brownfield land and through the intensification of the district centres, which, after Romford, are the settlements best served by services and facilities within the borough. Furthermore, the intensification and renewal of existing council housing estates will provide an enhanced housing stock.

In terms of housing growth, the highest allocations are within Romford, through the Romford SDA, which, designated as a Metropolitan Centre through the London Plan, is the settlement with the widest range of services and amenities in the borough. On this basis, the preferred spatial strategy has the potential to support accessibility to existing community facilities and promote more active lifestyles. This, however, depends on new development areas being well planned, supported by appropriate social infrastructure and service provision, and being of appropriate design to support community vitality.

Housing developments within the Rainham and Beam Park SDA are supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line, through the proposition of a new station at Beam Park, and by achieving significant green infrastructure enhancements. As such, development in this location has the potential to support the quality of life of residents by promoting accessibility to new and improved services and facilities. These amenities are recognised as crucial social infrastructure to facilitate social inclusion and support the level of growth expected in the borough.

Reflecting the above context, the spatial strategy therefore supports the quality of life of residents through providing an appropriate balance between housing delivery and employment land intensification, and supporting improved accessibility to services facilities and amenities, promoting community vitality and promoting sustainable transport use.

8.8.2 Commentary on *Proposed Submission* document as a whole

The Local Plan (through Policy 1 (Romford Strategic Development Area) and Policy 2 (Rainham and Beam Park Strategic Development Area)) enables the provision of 6,500 homes and residential schemes within the Romford SDA and 4,000 within the Rainham and Beam Park SDA during the plan period. The policies also emphasise the Local Plan's support in for development proposals which enhance transport networks, ensure the delivery of vital social infrastructure and realise development within the larger settlements and district centres.

Key housing challenges in the borough include affordable housing provision, with Policy 4 (Affordable Housing) setting out the approach to address this challenge. In this context all developments of ten or more dwellings or residential developments with a site area of more than 1,000 sq. metres will be required to provide at least 35% affordable housing based on habitable rooms. Developments will also be required to deliver an appropriate housing mix in terms of size, type and tenure, reflecting the need and demand within the borough (outlined in Policy 5 (Housing Mix)). This will support meeting needs relating to the expected future population dynamics within the borough, with younger (0-15) and older (over 65) age groups seeing the largest increases. Reflecting these dynamics, Policy 6 'Specialist Accommodation' aims to both resist the loss of such housing and deliver extra accommodation which will enable older residents, or those with a disability, to live independently and safely in their own homes. Additionally, Policy 17 (Education) outlines the support for the development of new or the expansion of existing schools, with this critical social infrastructure supporting any future growth in the younger population.

In terms of the provision of sites to meet the needs of Gypsies and Travellers, Policy 11 (Gypsy and Traveller Accommodation) seeks to meet local Gypsy and Traveller need through the formalisation of seven existing sites and a site for Travelling Showpeople. It also sets out a range of provisions for the identified sites, including relating to site layout, services provision, boundary treatment and landscaping. The policy also enables the provision of additional permanent and temporary sites if need is identified and a range of provisions are met, including relating to access and parking, proximity to services and facilities, flood risk, and impacts on visual amenity. This will help support the availability and quality of Gypsy and Traveller provision in the borough.

Additional housing challenges within the borough concern the growth of the private rental sector. The Council recognises that Houses in Multiple Occupation (HMOs) can make a valuable contribution to the private rented sector by catering for the needs of specific groups/households. However, the plan

acknowledges that there is a need to balance this value with the potential harm that can arise from such developments if they are not regulated. As such, HMOs will be supported where the proposal meets the London Borough of Havering's quality standards for HMOs, the proposal does not result in more than 10% of properties in one street becoming HMOs or more than two adjacent properties becoming HMOs, and the property contains communal space large enough for all occupants (see Policy 8 (Housing in Multiple Occupation)). Furthermore, there is a need to support developments which meet housing needs and mitigate costly alternatives. Policy 9 (Conversions and Subdivisions) recognises the benefits of subdividing existing houses into self-contained homes and converting commercial floor space to residential use, subject to a set of conditions specified within the policy. Also, the Local Plan states that it will look favourably upon garden and 'backland' development if they represent comprehensive development of a number of whole land plots, ensure good access, retain and provide adequate amenity space and do not have significant adverse impacts on the amenity of existing and new occupants (see Policy 10 (Garden and Backland Development)).

Good accessibility to services and facilities is central to the quality of life of residents, for sustaining vital communities and improving health and wellbeing, in addition to reducing noise and air pollution, carbon emissions and traffic congestion related to heavy dependence on car travel. Policy 1 outlines how the arrival of Crossrail in 2018 in the Romford SDA will be a key driver of growth and investment within the borough. Proposals will also be supported through the Local Plan if they tackle congestion, improve connectivity, develop new paths for pedestrians and cyclists, and promote active travel within town centres (see Policy 1 and Policy 23 (Transport Connections)). The enhancement of town centres within the borough is important for maintaining their vibrancy and distinctive character, as stated in Policy 13 'Town Centre Development'. Additionally, the Local Plan recognises that through ensuring high quality urban design, development can be effectively integrated with existing path and circulation networks so encouraging active travel, in addition to providing an attractive, safe living environment for new residents (with these elements addressed in Policy 7 'Residential Design and Amenity' and Policy 26 'Urban Design'). Also, through supporting the delivery of multi-use, flexible and adaptable social infrastructure, it accommodates the borough's demographics (see Policy 16 'Social infrastructure'). These elements will all support the quality of life of residents.

Housing development within the Rainham and Beam Park SDA are supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line, through the proposition of a new station at Beam Park, and by achieving significant green infrastructure enhancements. As such, development in this location has the potential to support the quality of life of residents by promoting accessibility to new schools and leisure facilities. These facilities are recognised as crucial social infrastructure to facilitate social inclusion and support the level of growth expected in the borough, in addition to encouraging sustainable transport use. Additionally, Policy 2 aims to improve bus connections to Beam Park Station, Queens Hospital and the Rainham Employment Area, complementing any future proposals for commercial developments which provide skills and training for local residents (see Policy 22 (Skills and Training)). In order to help address future transport needs within the borough, the Local Plan states that all new developments will be required to provide sufficient car and cycle parking in accordance with the standards of the London Plan (see Policy 24 'Parking Provision and Design').

Accessibility to services and facilities will be further supported by the policies relating to sustainable transport, which will enhance transport options by non-car modes. This is particularly relevant for people with mobility concerns, in terms of improving bus reliability, improving the poor north to south links in the borough and curbing the reliance on cars – all of which are recognised as key sustainability issues.

Policy 29 (Green Infrastructure) seeks to maintain and expand the network of green spaces and natural features in the borough, with the Local Plan aspiring to optimise the benefits of green infrastructure to the environment, economy and community. This will support recreational and leisure activities, and promote the health, wellbeing and quality of life of residents.

Table 8.6 Likely significant effects and recommendations: Population and Community

Likely significant effect	*Effect dimensions*
Increased delivery of affordable housing.	Direct, long-term, permanent and positive overall.

Provide for gypsy and traveller sites to meet projected need.	Direct, long-term, permanent and positive overall.
Improved access to services and facilities.	Direct, long-term, permanent and positive overall.
Increased use of sustainable transport modes, including public transport and walking and cycling.	Direct, long-term, permanent and positive overall.
Enhanced provision of community infrastructure.	Direct, long-term, permanent and positive overall.
Provision of improved accessibility to multi-functional open spaces.	Direct, long-term, permanent and positive overall.
Reduced dependency on the private car.	Direct, long-term, permanent and positive overall.
Maintain and enhance the vitality of communities by locating housing where it sustains balanced communities.	Direct, long-term, permanent and positive overall.
Maintain and enhance the vitality of communities by securing the delivery of community infrastructure.	Direct, long-term, permanent and positive overall.

8.9 Health and wellbeing

8.9.1 Commentary on proposed Local Plan spatial strategy

Havering is one of London's greenest boroughs with a wealth of open space and over 50% of the borough designated as Green Belt land. As such, the development strategy for the Local Plan aims to focus residential development within the larger towns and district centres in the borough. Additionally, the Rainham and Beam Park SDA is also recognised as an area of future residential growth, with the Local Plan seeking to build a new neighbourhood around a new railway station which will improve transport access and safeguard the future economic success of the borough's key employment areas. Furthermore, the Local Plan encourages the intensification and renewal of existing council housing estates in order to enhance the housing stock.

Accessibility to services and facilities is a key influence on the quality of life of residents and community cohesion. In this regard, development in the key settlements in the borough (Romford and the district centres) will enhance accessibility through directing housing to the settlements with the broadest range of services and facilities. This will support accessibility to the wider range of amenities located in these settlements. Locating more housing in closer proximity to the services and facilities available in the key centres of the borough will also likely support quality of life and wellbeing through promoting walking and cycling and active lifestyles.

The delivery of housing and employment growth in the borough has the potential to lead to effects on health and wellbeing through increasing road safety issues and impacts on air and noise from increased traffic flows at certain locations. This may have impacts on the health and wellbeing of residents. In this context, the effects depend on the detailed location, layout and design of new development areas and the integration of elements such as sustainable transport and green infrastructure.

8.9.2 Commentary on *Proposed Submission* document as a whole

Health and wellbeing in the borough is closely related to a number of factors, including accessibility to services and facilities, the use of healthier modes of travel, access to high quality green infrastructure, the quality of housing, levels of crime and security, air and noise quality and optimising the benefits that the built and natural environment offers to the health and wellbeing of residents.

A central impact of the policies on health and wellbeing within the Local Plan will be through protecting and enhancing the borough's built and natural environment. This provides space - including natural green space - for recreation and relaxation, as well as air and water quality benefits. There is now robust evidence that access to nature improves people's health and wellbeing through encouraging healthy outdoor recreation and relaxation. In this context, Policy 18 (Open Space, Sports and Recreation) seeks to ensure that all residents of Havering have access to good quality open space and sports facilities, with the conditions stated in the policy emphasising the need to promote multifunctional and shared-use of existing facilities, as well as for new development to create additional open spaces and facilities for sports and recreation. This policy also has the potential to help improve the low participation in sports in the borough. The growth in community groups will be further facilitated by Policy 15 (Culture and Creativity) and Policy 16 (Social Infrastructure), which will support social inclusiveness.

Furthermore, Policy 30 (Nature Conservation) seeks to protect and enhance biodiversity and geodiversity assets in the borough, providing benefits to wildlife and local residents. Policy 31 (Rivers and River Corridors) recognises the value of Havering's water assets in terms of biodiversity and recreation, amongst other benefits listed within the policy. Policy 29 (Green Infrastructure) seeks to maintain and expand the network of green spaces and natural features in the borough, with the Local Plan aspiring to optimise the benefits of green infrastructure to the environment, economy and community. These policies, along with Policy 26 (Urban Design), Policy 27 (Landscaping) and Policy 28 (Heritage Assets) will support the health and wellbeing of residents through creating, protecting and enhancing places, spaces and buildings that are of high quality, well designed, support the quality of the natural environment and respect the character of the local area.

Policy 1 (Romford Strategic Development Area), Policy 2 (Rainham and Beam Park Strategic Development Area) and Policy 23 (Transport Connections) in the Local Plan will help to indirectly promote health and wellbeing improvements by supporting more sustainable modes of transport, improving road safety and encouraging more active travel. Likewise, the Local Plan aims to ensure that the health and quality of life of Havering's residents is not put at further risk or degraded by air and noise pollution issues. Key policies in this regard are Policy 33 (Air Quality), and Policy 34 (Managing Pollution), which seeks to ensure that new development proposals '*Do not unduly impact upon amenity, human health and safety and the natural environment by noise, dust, odour and light pollution, vibration and land contamination*). Health and wellbeing will be further supported by Policy 36 (Low Carbon Design, Decentralised Energy and Renewable Energy), which enables energy efficiency design, which will help limit issues such as fuel poverty and health issues relating to poor quality housing.

The Local Plan policies will also promote health and wellbeing in the borough by promoting accessibility to services and facilities. In this context, Policy 16 'Social infrastructure' and Policy 17 'Education' aims to support the provision of amenities in the borough, with the policies seeking to ensure that facilities are multi-use and flexible in order to adapt to any changes in the cultural demographics of the borough (see Policy 15). This is also particularly relevant in terms of meeting the needs of future population growth, with younger (0-15) and older (over 65) age groups seeing the largest increases. Furthermore, by focusing development within district centres (Romford, Hornchurch and Upminster) and encouraging sustainable transport use, as described in the preferred spatial strategy, this will potentially increase the accessibility to these facilities and reduce the reliance on travelling via private vehicles. The policies' focus on active travel (see **Chapter 8.10**) will also support healthier lifestyles in the borough.

Expanding on some of the indirect effects negatively impacting upon health and wellbeing, crime and the fear of crime can cause stress and anxiety, with community safety recognised as a key sustainability issue within the borough. There are very few explicit references to crime in the Local Plan document but there is clear evidence of the ability to 'design out' crime through high quality design. For example, Policy 7 'Residential Design and Amenity', outlines support for residential development designs that allow for active streets and good sight lines to prevent anti-social behaviour and crime and increase community safety (as identified by 'Secured by Design' - the official UK Police flagship initiative combining the principles of designing out crime with physical security). The National Planning Practice Guidance also provides direction on the issue in its design guidance; as such, further guidance is not anticipated to be required in the Local Plan on this issue.

In terms of deprivation, there are some significant areas of deprivation present in South Hornchurch, Harold Hill and around Romford. There are few explicit references to deprivation in the Local Plan document, however Policy 12 'Healthy Communities' outlines the support for development which provides opportunities for healthier lifestyles and reduces health inequalities, and seeks to ensure that all major development proposals are supported by a Health Impact Assessment to demonstrate that full consideration has been given to health and wellbeing. However all of the policies listed within this commentary have the potential to lead to indirect benefits to health and wellbeing and will therefore help to address a variety of deprivation- related issues. Additionally, the housing polices (see Section 8.8.2) refer to the provision of housing to meet local needs. Access to decent housing is an important wider determinant of health so these policies have the potential to indirectly support improved health outcomes and reduced health inequalities. The polices in the Local Plan which support biodiversity (Section 8.3.2), environmental quality (Section 8.6.2) and the historic environment, landscape and townscape (Section 8.7.2) will also support health and wellbeing through reducing effects on health from noise and air quality issues, increasing access to open spaces and recreational facilities, and enhancing the distinctive character of the borough.

Table 8.7 Likely significant effects and recommendations: Health and Wellbeing

Likely significant effect	*Effect dimensions*
Improvements in mental and physical health and wellbeing through enhancements to the quality of the built environment and public realm	Indirect, long-term, permanent and positive.
Improvements to health and wellbeing through prioritising transport modes other than cars and improving accessibility to services and facilities.	Indirect, long-term, permanent and positive.
Enhancements of active travel opportunities.	Direct, long-term, permanent and positive overall.
Enhancements to strategic and local green infrastructure networks, promoting leisure and recreational opportunities and active lifestyles.	Indirect, long-term, permanent and positive.
Enhanced provision of community infrastructure.	Direct, long-term, permanent and positive overall.

8.10 Transportation

8.10.1 Commentary on proposed Local Plan spatial strategy

The preferred spatial strategy directs an increased level of housing provision to the key town and district centres in Havering. This will promote accessibility through directing housing to the settlements with the broadest range of services and facilities and help limit the need to travel by car to employment and amenities.

In this context the spatial strategy facilitates the development of 6,500 dwellings in Romford, which, designated as a Metropolitan Centre through the London Plan, is the settlement with the widest range of services and amenities in the borough with a PTAL rating of 6a/b. It also directs housing growth to the district centres of the borough, which, after Romford are the settlements in the borough best served by services and facilities. Apart from Romford, these district centres have the highest PTAL ratings within the borough (for example Hornchurch is serviced by the London Underground District Line, whilst Upminster is services by both the District Line and Essex Thameside line and both centres have reliable, frequent bus connections).

The Rainham and Beam Park Housing Zone is part of the London Riverside development. Given the proposed housing growth in this area is part of the larger London Riverside Opportunity Area, it is considered that the delivery of 4,000 new homes in the area will be delivered alongside a significant improvement of services, facilities and amenities in the area. Proposals will also be supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line and a proposed new station at Beam Park due to be in operation in 2020. As such, the spatial strategy, through promoting a large scale of development in this area, has the potential to support sustainable transport use.

8.10.2 Commentary on *Proposed Submission* document as a whole

The policies presented in the current version of the Local Plan have a strong focus on supporting sustainable transport use and minimising the need to travel. In this context Policy 3 (Housing Supply) supports the preferred spatial strategy (discussed in the previous section) through supporting the density matrix set out through the London Plan and promoting an intensification of uses.

This will be further supported by the policies for the SDAs. In this context Policy 1 (Romford Strategic Development Area) seeks to: support the delivery of Crossrail services and enhancements in the vicinity of the station; support the delivery of a new east-west shared use link from the railway station across the River Rom to the residential areas to the west; pursue opportunities to tunnel the western

section of the ring road; work with TfL to improve accessibility into Romford Town Centre for active travel users; improve links to the hospitals in the borough; limit the role of the Romford ring road as a barrier; improve active travel links between Romford Station, Waterloo Road and Bridge Close; and require proposals for development along the River Rom to improve the quality and setting of the river and to provide continuous, safe and accessible links alongside the river. Policy 2 (Rainham and Beam Park Strategic Development Area) seeks to deliver: the Beam Park Station on the Essex Thameside Line; a transformational project along the A1306 (Beam Parkway) between Dovers Corner and the Marsh Way junction; a continuous east-west active travel connection between Rainham Village, Beam Park Station and the Rainham Employment Area; bus connections to Beam Park Station and bus links to Romford and Queens Hospital; improved bus connections to and from Rainham Employment Area; a link across Rainham Creek to support east west movements and to enable buses to access the Rainham Employment Area; and a new, integrated network of shared use routes connecting neighbourhoods, local facilities and open spaces.

Policy 23 (Transport Connections) sets out a range of provisions designed to support sustainable transport use in the borough. This includes: supporting enhancements to rail services; new north-south networks in the borough; improvements to bus services; enhancing access to employment areas; requiring new development to maximise access to public transport networks and cycle and pedestrian networks; promoting active school travel; facilitating improvements to walking and cycling networks; and maximising the opportunities afforded by Crossrail. The policy also seeks to limit congestion, a key contributor to air quality issues in the borough.

Sustainable transport use will also be supported by Policy 6 (Specialist Accommodation) and Policy 8 (Houses in Multiple Occupation), which seeks to ensure that these types of housing provision are accessible to facilities and amenities and public transport networks. Policy 12 (Healthy Communities) seeks to direct development to '*well connected locations*' and to support measures to promote walking and cycling. Policy 16 (Social Infrastructure) seeks to locate community facilities in locations close to residents and minimise the need to travel to such facilities, and ensure they are accessible by public transport and walking and cycling routes. Policy 24 (Parking Provision and Design) promotes car club membership and enhanced provision for cycle parking and electric vehicles, and promotes a demand management approach to car parking. Sustainable transport use will also be supported by Policy 26 (Urban Design), which facilitates design and layout which encourages walking and cycling and supports permeability by active travel. Policy 29 (Green Infrastructure) and Policy 31 (Rivers and River Corridors) also support enhancements to walking and cycling networks in the borough.

Finally Policy 14 (Eating and Drinking) seeks to ensure that such provision is located in accessible locations and such establishments do not adversely impact on the quality of the public realm through generating inappropriate traffic flows.

Table 8.8 Likely significant effects and recommendations: Transportation

Likely significant effect	*Effect dimensions*
Limitation of traffic growth and congestion resulting from housing and employment growth in the borough.	Direct, long-term, permanent and positive.
Enhancements to active travel networks in the borough, including pedestrian and cycle networks.	Direct, long-term, permanent and positive.
Enhanced accessibility to public transport networks, including rail and bus.	Direct, long-term, permanent and positive.
Improved access to services and facilities, and an associated reduction in the need to travel to such amenities.	Direct, long-term, permanent and positive.
Increased permeability of the townscape through enhancements to the quality of the public realm.	Direct, long-term, permanent and positive.

8.11 Economic Vitality, Employment and Skills

8.11.1 Commentary on proposed Local Plan spatial strategy

The preferred spatial strategy directs an increased level of housing provision to the key town and district centres in Havering. The delivery of 6,500 dwellings in Romford will support ongoing enhancements to the economic vitality of the town centre, recognising the town's designation as a Metropolitan Centre through the London Plan. Similarly, the delivery of development to the district centres of the borough will support the vitality of the larger district centres of Upminster and Hornchurch. This will be supported by the spatial strategy's stated aim to '*protect and strengthen'* the Metropolitan Centre of Romford and the District Centres at Collier Row, Elm Park, Harold Hill Hornchurch, Rainham and Upminster.'

The economic vitality of the borough will also be supported by the spatial strategy's aim to protect the King George Close Estate and the Harold Hill Estate Strategic Industrial Locations, and its aim to protect the borough's Locally Significant Industrial Sites at Harold Wood, Hillman Close, the Seedbed Centre, Lyon Road and Crow Lane for continued industrial and employment use.

The preferred spatial strategy, through facilitating the delivery of 4,000 new homes in the Rainham and Beam Park Housing Zone, will support the economic regeneration of Rainham and South Hornchurch. Given that proposed housing growth in this area is part of the larger London Riverside Opportunity Area, new housing at this location will be delivered alongside enhancements to employment opportunities, including at the Rainham Employment Area. Proposals will also be supported by enhancements to sustainable transport networks, utilising Rainham's location on the Essex Thameside line and a proposed new station at Beam Park. As such, additional housing growth in this location has the potential to support economic regeneration proposals for the immediate and wider area. Economic vitality at this location will also be further supported by the spatial strategy's aim to protect the borough's Strategic Industrial Location at the Rainham Employment Area and the Freightmaster Estate for continued industrial and employment use and the creation of a new Local Centre at Beam Park.

8.11.2 Commentary on *Proposed Submission* document as a whole

The benefits for economic vitality of the spatial strategy will be supported by the policies for the two Strategic Development Areas.

In relation to Romford, Policy 1 (Romford Strategic Development Area) sets out a range of provisions for supporting the refurbishment and replacement of existing retail units, reinforcing the role of South Street and promoting the transformation of the Market Place. It also provides for new office development, promoting the flexibility and adaptability of new office space in the town. This latter provision is important given the Employment Land Review's[14] finding that Havering contains some older office stock, which once vacant proves difficult to re-let given that it may no longer appeal to modern occupiers. The economic vitality of Romford will be further supported by the policy's focus on transport connectivity, including associated with the opportunities offered by Crossrail, and the policy's aim to enhance the quality of the public realm and local distinctiveness of the town centre and the area around the River Rom.

Policy 2 (Rainham and Beam Park Strategic Development Area) similarly sets out a range of provisions which will support the economic vitality of this location. This includes through the provision of a new Local Centre at Beam Park Station, which will provide between 3,500 and 4,000 sq m of floor space through the provision of new modern retail and commercial units, and potential provision for an expansion of floor space if required in the future. The policy will also support the economic vitality of the area through facilitating a high quality public realm, transport enhancements (including active travel and public transport provision and the transformation of key routes into 'green streets') and the overcoming of existing physical barriers in the area including roads, the river and industrial areas.

More widely in relation to this SA theme, a key Local Plan policy seeking to support the vitality of the borough's economy is Policy 19 (Business Growth). This includes supporting the proposed designation and development of Strategic Outer London Development Centres in the borough, protecting Strategic Industrial Locations and Locally Significant Industrial Sites, and focussing office space in Romford Town Centre and the district centres,

The policy also seeks to require large scale residential proposals in Romford Town Centre to incorporate flexible business space (e.g. office space, studios and workshops), and support the development of affordable and flexible business spaces of varied unit sizes to meet the needs of small and medium sized enterprise (SME), start-ups and businesses requiring more affordable workspaces. This will further reinforced by Policy 21 (Affordable Workspaces), which seeks to ensure that all major commercial developments include 20% of their floorspace as affordable workspace and incorporates provision for short term and flexible workspace. This is important given that a large contributor to the projected growth in office floorspace in Havering is demand from SMEs for smaller units (Employment Land Review 2015).

In relation to changes of use from industrial land to other uses, Policy 20 (Loss of Industrial Land) enables this if a range of provisions are met, including ensuring that the change of use from industrial employment uses will not lower the industrial capacity of the borough below that necessary to meet projected demand, and low demand at individual locations has been sufficiently established. The policy also enables the loss of industrial uses where the '…*existing employment land use causes unacceptable detrimental effects on the amenity of nearby residential areas*,' This recognises the findings of the Employment Land Review (2015), which indicates that approximately 24 hectares of existing industrial land in Havering could be released for other uses while still providing sufficient industrial land in the borough to meet future demand.

The vitality of town centres in the borough will be supported by Policy 13 (Town Centre Development). This seeks to ensure that appropriate town centre uses are encouraged which support the vitality of town centres, and development is facilitated which optimises the development potential of town centre sites. It also sets out a series of provisions relating to promoting development which is: appropriate to the scale and function of the town centre's position within the town centre network; does not harm the town centre's vitality and viability; promotes a wider retail offer and choice to consumers; provides high quality shop front design and signage that enhances the character and appearance of the town centre; provides active frontages at ground floor level, supports street activity and generates pedestrian movement; and makes effective use of upper floors. It also seeks to maintain a high proportion of A1 and A2 uses to maintain the primary shopping function of the area and seeks to prevent the concentration of A5 uses (i.e. hot food and takeaway) in inappropriate locations.

[14] URS (April 2015) Employment Land Review

These provisions for town centres will be further supported by Policy 14 (Eating and Drinking), which supports restaurant, pub, and micro-brewery uses if appropriate conditions are met, and Policy 15 (Culture and Creativity), which seeks to promote cultural offer, community engagement, and diversification of the night time economy. Both of these elements will therefore support the vitality and vibrancy of the borough, and contribute to the diversification of the economy.

The Local Plan also seeks to ensure that the opportunities available relating to growth in the borough are readily available to local people. In this context, Policy 22 (Skills and Training) seeks to ensure that local labour is utilised for construction projects through setting targets for the training and employment of local people, encourages the use of local businesses in the London Borough of Havering Council's supply chains and making Council job opportunities easily accessible to local people. The policy also sets out that these elements will be achieved through a requirement on developers to produce an Employment & Skills Plan to help ensure these provisions are met.

As highlighted in Section 8.10, the Local Plan policies have a strong focus on promoting accessibility, supporting sustainable transport use and minimising the need to travel. This will support the economic vitality of the borough through improving links within the borough and to locations outside of the borough, and enhancing accessibility for residents to the opportunities afforded by economic growth. Policy 25 (Digital Connections) will further support economic vitality of the borough through facilitating enhancements to high-speed broadband services and improved telecommunications coverage.

Table 8.9 Likely significant effects and recommendations: Economic Vitality, Employment and Skills

Likely significant effect	*Effect dimensions*
Diversification of the borough's economy.	Direct, indirect, long-term, permanent and positive.
Promoting the economic vitality of Romford and a Metropolitan Centre.	Direct, indirect, long-term, permanent and positive.
Promoting the economic vitality and viability of the borough's district centres.	Direct, indirect, long-term, permanent and positive.
Enhancing economic opportunities in the Rainham and South Hornchurch area.	Direct, indirect, long-term, permanent and positive.
Promotion of employment opportunities in the borough.	Direct, indirect, long-term, permanent and positive.
Supporting a growth of skills in the borough.	Direct, indirect, long-term, permanent and positive.

8.12 Cumulative effects

Cumulative effects occur from the combined impacts of policies and proposals on specific areas or sensitive receptors.

In the context of SA/SEA, cumulative effects can arise as a result of the in-combination and synergistic effects of a plan's policies and proposals. Comprising 'intra-plan' effects, these interactions have been discussed above in Sections 8.3 to 8.11, which evaluate the in-combination and synergistic effects of the various policies of the Local Plan.

Cumulative effects can also result from the combined impacts of a plan with impacts of another plan, or the 'inter-plan' effects. These can affect the same receptor, resulting in in-combination or synergistic effects. The Havering Local Plan therefore has the potential to combine with other planned or on-going activities in the vicinity of the borough to result in cumulative effects.

As discussed in Section 4.1, housing need in Havering has been considered through the estimation of objectively assessed housing need (OAHN) through the Outer North East London SHMA. In addition

to Havering's OAHN, the SHMA also sets out housing need for the London Boroughs of Redbridge and Barking and Dagenham, which comprise the remaining parts of the Housing Market Area.

The OAHN for the three areas comprising the Housing Market Area are as follows:

Table 8.10 Objectively assessed need in the Outer North East London Housing Market Area

Local Planning Authority area	*OAHN*
London Borough of Havering	1,366 per annum (recent update, November 2016)
London Borough of Barking and Dagenham	2,132 per annum (September 2016)
London Borough of Redbridge	2,287 per annum (April 2017)

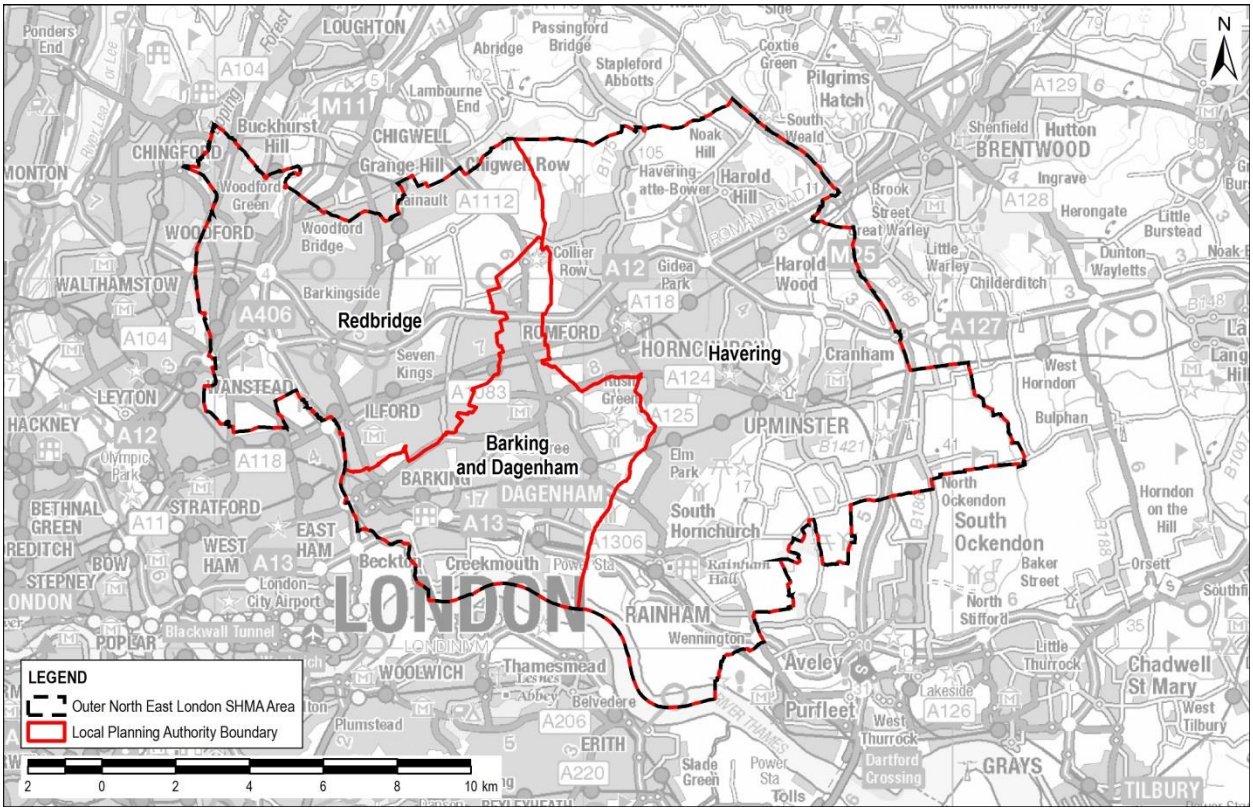

Figure 8.1 Outer North East London Housing Market Area

The Local Plans for the three Local Planning Authorities will set out the level of growth and development that will take place in the respective boroughs. As such, the in-combination effects of housing growth across the three Local Planning Authority areas have the potential to lead to cumulative effects. Furthermore, the combination of Local Plan proposals and other proposals being taken forward in the wider area has the potential to lead to cumulative effects. Examples include:

- Proposals linked to the London Plan Opportunity Areas, including associated with the proposals for the London Riverside Opportunity Area outside of the borough (including at Barking Riverside);
- Crossrail; and
- Potential enhancements to capacity on the Essex Thameside line.

In this context, potential effects which may occur as a result of the in-combination effects of the Local Plan and other plans and proposals in the area include the following:

- Increases in traffic flows and congestion from the in-combination effects of development, with potential impacts on air and noise quality. However the in-combination effects of proposals

on enhancing public transport and pedestrian and cycle infrastructure may help limit potential negative effects and secure positive effects in this regard.

- Incremental erosion of the Metropolitan Green Belt as a result of the need to deliver objectively assessed need, and associated cumulative impacts on landscape character from new development.
- Cumulative impacts on ecological networks. This is from the in-combination effects of new development and associated infrastructure on habitats and biodiversity corridors. However, enhancements to green infrastructure provision facilitated through Local Plan proposals and other projects in the area have the potential to support local, sub-regional and regional ecological networks.
- Impacts on flood risk from the in-combination effects of new development, including relating to surface water and fluvial flooding. However, the provisions of the NPPF and measures and policy approaches implemented through the relevant plans and proposals will limit the significance of effects.
- Improvements to accessibility resulting from the in-combination effects of enhancements to public transport and walking and cycling networks.
- Impacts on the urban heat island effect (a key likely impact of climate change) from an intensification of land uses across the wider area. This however has the potential to be offset by enhancements to sub-regional green infrastructure networks and open space provision.

As highlighted above, for many potential cumulative effects, the policy approaches proposed by the current version of the Local Plan will help reduce the significance of these in-combination impacts. However monitoring for the various Local Plans and, more broadly, the London Plan will be a key means of ensuring that unforeseen adverse environmental effects are highlighted, and remedial action can be taken where adverse environmental effects arise.

Chapter 9 below sets out a proposed monitoring programme for the SA process.

9. Monitoring programme for the SA

9.1 Monitoring in SA

The SEA Directive states that '*member states shall monitor the significant environmental effects of the implementation of plans and programmes…..in order, inter alia, to identify at an early stage unforeseen adverse effects, and to be able to undertake appropriate remedial action*' (Article 10.1). In addition, the Environmental Report (or SA Report) should provide information on a '*description of the measures envisaged concerning monitoring*' (Annex I (i)). To limit the potential burdens related to monitoring associated with the SA process, monitoring should be undertaken smartly. For this reason, the proposed monitoring framework should focus on those aspects of the environment that are likely to be negatively impacted upon, where the impact is uncertain or where particular opportunities for improvement might arise.

9.2 Proposed monitoring programme

Table 9.1 outlines suggestions for a monitoring programme for measuring the Local Plan's implementation in relation to the areas where the SA has identified significant opportunities for an improvement in sustainability performance to arise. It also seeks to monitor where uncertainties relating to the appraisal findings arose and suggests where monitoring is required to help ensure that the benefits of the Local Plan are achieved through the planning process.

The purpose of monitoring is to measure the significant sustainability effects of a plan, as well as to measure success against the plan's objectives. It is therefore beneficial if the monitoring strategy builds on monitoring systems which are already in place. To this end, many of the indicators of progress chosen for the SA require data that is already being routinely collected at a local level by the London Borough of Havering and its partner organisations. It should also be noted that monitoring can provide useful information for future plans and programmes.

Table 9.1 Proposed monitoring programme for the SA of the Local Plan

Area to be monitored	*Indicator*	*Data source*	*Frequency of monitoring*
Effect of housing, employment and infrastructure on greenhouse gas emissions.	Carbon footprint of the borough	London Borough of Havering	Annual
Effect on the delivery of renewable energy	Renewable energy installation capacity in MW	London Borough of Havering	Annual
Loss of Green Belt land	Number of hectares of undeveloped Green Belt land lost to development	London Borough of Havering	Annual
Effect of new development on air quality	No. of days when air pollution is moderate or high for NO_2 or PM_{10}	London Borough of Havering	Daily
Green infrastructure provision	Ha of Accessible Natural Greenspace per 1,000 population	London Borough of Havering	Annual
Economic vitality	Number of VAT registrations	London Borough of Havering	Annual
Car use	Proportion of people travelling to work by public transport or walking and cycling	Transport for London	Annual
Effects on townscape character	Percentage of new developments which are informed by detailed characterisation studies	London Borough of Havering	Annual
Minerals supply	Local Aggregates Assessment	London Borough of Havering	Annual
Employment in emerging sectors of Havering's economy	Number of people employed in emerging economic sectors	London Borough of Havering	Annual

This page is intentionally blank.

Part 3:

What are the next steps?

10. Next Steps

10.1 Next steps for plan making / SA process

This SA Report accompanies the current consultation on the Local Plan (*Havering Local Plan – Proposed Submission*).

Once the period for representations on the *Havering Local Plan – Proposed Submission* document and the SA Report concludes, the main issues raised will be identified and summarised by the London Borough of Havering, who will then consider whether, in light of representations received, the plan can still be deemed 'sound'. If this is the case, the Local Plan will be submitted for Examination, alongside a statement setting out the main issues raised during the consultation. The Council will also submit the SA Report.

At Examination, the Inspector will consider representations (alongside the SA Report) before then either reporting back on the Local Plan's soundness or identifying the need for modifications. If the Inspector identifies the need for modifications to the Plan these will be prepared (and undergo SA where appropriate) and then be subject to consultation (with a possible SA Report Addendum published alongside).

Once found to be 'sound', the Plan will be formally adopted by the London Borough of Havering. At the time of Adoption, a SA 'Statement' must published that sets out (amongst other elements) '*the measures decided concerning monitoring*'.

Appendix A Consultation responses received on the Scoping Report

Consultation response	How the response was considered and addressed
Natural England	
The approach and methodology used are in line with regulations and the advice that would be offered by Natural England; therefore we have no substantive comments to make in respect of this Scoping Report.	Comments noted
The report lists twenty two Sustainability Objectives which can be broadly support, especially Objective (10) 'Maintain and enhance biodiversity and geodiversity'	Listed within the 'Relevant Plans and Policies: General / Overarching' section in Appendix B
Reference to the London Plan 2013 and the Further Alterations to the London Plan are welcomed and to be encouraged	
Similarly identification of and reference to the Sites of Special Scientific Interest (SSSI's – Hornchurch Cutting, Inner Thames Marshes and Ingrebourne Marshes) within the Borough, is also welcomed and to be encouraged. The Council may also wish to give consideration to Hainault Forest and Purfleet Marshes SSSI's which abut the Borough and could be affected by development in proximity to them, including the potential for recreational pressure due to increased housing numbers.	Additional SSSIs mentioned in the Biodiversity section in Appendix B
Environment Agency	
Task 1: Policy Review *LBH Consultation Question 1 Are there any relevant policies, plans, programmes or strategies additional to those outlined in Appendix A that should be reviewed?* We feel that the majority of relevant policies, plans, programmes and strategies have been outlined in Appendix A but have the following comments to make: **Biodiversity and Geodiversity** International: The Water Framework Directive should be included in the Biodiversity and Geodiversity section in addition to the Water and Flood Risk section as WFD also considers and assesses these issues.	The WFD has now been included within the relevant plans and policies for both of these sections in Appendix B.
Regional: Appendix A should be revised to include the Roding Beam and Ingrebourne catchment of the Thames River Basin Management Plan.	Revision made.
Water and Flood Risk. Local: In this section you have referenced the Havering SFRA 2007 (Page 24). This should be amended to reference your latest Strategic Flood Risk Assessment which was completed in 2014. The data within the 2007 SFRA has largely been superseded and therefore is not a suitable basis for policies in the Local Plan.	The 2014 SFRA has not been directly referenced within the local policies for the 'Water and Flood Risk' section. The following text has, however, been provided: *"A new Havering SFRA (Levels 1 and 2) is being prepared. The full, updated SFRA will be used to inform the Local Plan preparation".* The 2014 SFRA has been mentioned within the

Consultation response	How the response was considered and addressed
It is my understanding that you have also published a Surface Water Management Plan and a Local Flood Risk Management Strategy. These should also be included in the Water and Flood Risk section as strategies to inform your Local Plan.	national list of policies for the 'Water and Flood Risk' section, in the 'Implications for the Local Plan' box for the 'National Planning Policy Framework 2012' listing. Comments noted. Both have been included in the 'Water and Flood Risk' policy list in Appendix B
Task 2: Baseline Information *LBH Consultation Question 2 Is there any additional baseline data that should be included in appendix B?* The following sources of baseline data should be included in Appendix B to inform your Local Plan: **Biodiversity and Geodiversity**	
In bullet point one you have stated ...There are two large rivers running north-south through Havering-namely, the Rivers Rom/Beam and Ingrebourne - and the southern boundary of the borough is marked by the Thames (page 57). Although the Rivers Ingrebourne, Rom, Beam and Thames could be considered the largest rivers in Havering I have listed the complete names of main rivers in the Borough below:	Comments noted. All rivers are now listed within this section.
Rivers in LB Havering are: • River Ingrebourne • Rainham Main Sewer • Wennington Branch Sewer • Rainham Creek • Haverings New Sewer • Carters Brook • Paines Brook • Weald Brook • Ravensbourne • Emerson Park Stream • Blacks Brook • Rom • Beam • West Mardyke Branch • River Mardyke • Puddledock Sewer • River Thames	Comments noted. All watercourses are now included, reflecting the updated list.
Climate Change and Flooding In this section you state... There are four distinct watercourses in Havering (page 60). Please see our comments above showing that there are more than four watercourses within the borough. The section then goes on to state... generally flood risk is limited to the southern area of the Borough in the vicinity of the Thames and the Valleys of the River Beam and Ingrebourne and their tributaries (page 60).	Text now reads as follows: *"Generally flood risk is limited to the southern area of the Borough in the vicinity of the Thames and the valleys of the Rivers Beam and Ingrebourne and their tributaries. Further clarification will be provided by the Strategic Flood Risk Assessment 2014".* Comments noted. An additional section has

Consultation response	How the response was considered and addressed
	been included, providing this information. .
We do not entirely agree with this statement and recommend further clarification using your recent SFRA. We agree that the Borough benefits from tidal defences. It may also be beneficial to include a section stating that these defences may have to be raised or set back as outlined in the guidance contained within the Thames Estuary 2100 plan to account for climate change. We also recommend that you include recommendations or a summary of findings from your Surface Water Management Plan and your Local Flood Risk Management Strategy if the aim of this section is to summarise flood risk in the borough.	This element has been considered through the appraisal
Pollution In this section you state... The Chemical and Biological water quality of the rivers in Havering has been historically poor particularly the River Ingrebourne and the River Rom/Beam, which have poor ecological status under the Water framework Directive. Under WFD the Beam and Ingrebourne need to achieve good status by 2027 and the Ravensbourne needs to achieve good ecological potential as it is a heavily modified water body (page 60). This statement is not necessarily true if you are using the term 'poor' in terms of WFD classifications. The most recent WFD classification data that we hold is attached to this letter. This should be used to inform specific policies in your forthcoming Local Plan. This data should be included as baseline data in Appendix B.	Comments noted. Data has been included within this section.
Task 3: Identified Sustainability Issues *LBH Consultation Question 3 Do you think the issues identified are appropriate? Are there any other issues that should be identified?* We feel that the following issues could be added to the table and ask that you consider either adding them to existing objectives or adding them as stand-alone objectives:	
3. Environmental Dimensions ***Biodiversity and Geodiversity*** Enhancements as identified by the Roding Beam Ingrebourne Catchment Plan would be a valid inclusion as an issue in this section.	*The 'Biodiversity and Geodiversity' section within the Environmental Dimensions contains three bullet points, with the wording as follows:* *"Protection and enhancement of green infrastructure and biodiversity;* *Protection of protected habitats and species; and Management of water quality of Havering's rivers, in line with existing and emerging plans. "*
Climate Change and Flooding The need to raise tidal flood defences, safeguard land for future flood defence works and improve fluvial flood defences to protect the borough from the increased risk of flooding as a result of climate change would be valid issues to be identified in this section. Enhancing existing flood storage and creating new flood storage areas where appropriate to alleviate tidal and fluvial flood risk (TE2100).	*"The need to raise tidal flood defences, safeguard land for future flood defence works and improve fluvial flood defences to protect the borough from the increased risk of flooding as a result of climate change"* is stated within the 'Climate Change and Flooding' Environmental Dimension section.

Consultation response	How the response was considered and addressed
You may also wish to consider including the issue of increased risk of surface water flooding as a result of climate change and the need for SuDS to be included in new development to help to alleviate this problem. We support the inclusion of issues raised in the **pollution** section.	Use of SuDS has been considered through the appraisal process
Task 4: Sustainability Appraisal (SA) Framework *LBH Consultation Question 4 Do you think the objectives identified are appropriate? Are there any additional ones we might consider?* We generally support the inclusion of aims 10, 11, 12, 13, 14, 17 and 18 but have the following comments for your consideration. Objective 14 could specifically reference Sustainable Drainage Systems and/or urban greening as a method of reducing contributions to climate change. We feel that it would be positive if land remediation could be added to objective 17. This objective could also include the aim to contribute to the recommendations of the River Basin Management Plan. Objective 18 could be amended to state Avoid, reduce and manage all forms of flood risk. It may also be appropriate to summarise how this will be achieved. You could state that this will be achieved through the robust application of the Sequential and Exception tests. It may also be appropriate to include a statement alluding to the fact that that this will be achieved by encouraging the use of SuDS.	Objective 14 now reads as follows: "*Reduce contributions to climate change and enhance the capability of the borough to adapt to climate change while promoting systems efficiency (water, energy, recycling, sustainable drainage systems, green infrastructure) and local renewable energy production".* Objective 17 now reads as follows: *"Improve water quality and protect water resources, while contributing to the objectives of water management plans".* Objective 18 now reads as follows: "*Support land remediation that can improve the ecology of the area and mitigate flood risk".*
Task 5: Scope of the SA I recommend that you also consult the Lead Local Flood Authority. This is due to the powers granted to them in the Floods and Water Management Act.	
Historic England	
We would draw your attention to English Heritage's published guidance on the Strategic Environmental Assessment of plans, *Strategic Environmental Assessment (SEA) / Sustainability Appraisal (SA) and the Historic Environment* (2013), in particular, the general principles when analysing the historic environment in the context of the SA process. The document is available in the guidance library on the Historic Environment Local Management (HELM) website (www.helm.org.uk).	Noted
It is essential that the Scoping Report is tailored to the type and purpose of the Local plan being considered. In line with the National Planning policy Framework (NPPF) the Local Plan should be based on adequate, up to date and relevant evidence. This includes the Borough's heritage assets and wider historic environment, and their contribution to the economic, social and environmental characteristics and prospects of Havering.	

Consultation response	How the response was considered and addressed
Relevant Plans and Policies The Design and Heritage section of appendix A should include a summary review and its implications of the following -	
International - European Landscape Convention (Florence Convention)	Comments noted. The European Landscape Convention is now listed.
National – PPS5 Practice Guide (planning in the historic environment) which is still valid until it is replaced by the forthcoming Historic Environment Good Practice Advice in Planning; and the National Planning Policy Guidance e.g. references to the conserving and enhancing the historic environment.	Comments noted. The PPS5 Practice Guide is now listed.
In addition in line with the inclusion of primary pieces of legislation captured in the 'general/overarching' section we would suggest including the Planning (Listed Buildings and Conservation Areas) Act 1990, as well as the Ancient Monuments and Archaeological Areas Act 1979.	Comments noted. The Planning (Listed Buildings and Conservation Areas) Act 1990 and the Ancient Monuments and Archaeological Areas Act 1979 are now listed.
Regional – The GLA have published a number of SPGs which are considered to be relevant to consider. This includes Accessible London: Achieving an inclusive environment (2014), and Shaping Neighbourhoods: Character and Context (2014).	Comments noted. 'Accessible London: Achieving an inclusive environment (2014)' and 'Shaping Neighbourhoods: Character and Context (2014)' are now listed.
Local – Any Borough Conservation Area appraisals and management plans; Heritage Cultural Strategy 2012-2014; Heritage SPD and any other relevant SPD.s	Conservation Areas are listed, along with the following text: "*The Local Plan will have regard to the issues and actions identified by each Conservation Area Management Plan".* The Heritage Cultural Strategy 2012-2014 and Heritage SPD have not been referenced in the 'Design and Heritage' local plans and policies section, but the Heritage SPD and Heritage Asset Register 2014 are referred to in the baseline information.
Baseline Information The baseline information could be improved further by providing more qualitative and analytical information on the status and condition of the historic environment in Havering. For example it would be useful to identify relevant trends and targets, plus identify any potential cross boundary heritage issues and characteristics.	Text within the Heritage section provides quantitative information regarding the number of nationally and locally designated historical features in Havering. There is no specific reference to 'trends or targets' in the Heritage section.
In addition it is important to ensure that all aspects of the historic environment are understood, beyond those designated and highlighted in the current draft Scoping Report. For example this could include other non-designated heritage assets, locally listed buildings and other features that are valued for the heritage interest. This could include any characterisation studies the Council may have undertaken and which should form part of the baseline understanding of the Borough's historic environment.	The following text has been included: "*There are also 180 Buildings of Local Heritage Interest included in the Heritage Supplementary Planning Document adopted in 2011 and reviewed in the Heritage Asset Register 2014. Fieldwork undertaken as part of the Heritage Asset Register work identified 12 buildings that have been demolished since their inclusion on the list".*
Sustainability Issues The current sustainability issues identified for the historic environment is limited. This could be expanded to include the issues, such as: Heritage assets at risk from neglect, decay or development	The identified sustainability issues within the 'Heritage' theme are as follows: • Protection and enhancement of Heritage assets. • Heritage assets at risk from neglect or

Consultation response	How the response was considered and addressed
pressures – these could specific types of heritage assets or defined areas where there is a concentration of a range of heritage assets. Areas where development has had or is likely to have significant impact upon the historic environment, principally upon the setting of heritage assets.	decay, as identified by the heritage at risk register. • Heritage assets at risk from development pressures, particularly Romford Conservation Area. • Securing the continued work of heritage management groups such as charities, civic societies and other voluntary groups.
<u>Sustainability Appraisal Framework</u> The current sustainability objective for the historic environment (number 16) should be expanded to include a reference to 'settings', so that it would read as follows: *Conserve and enhance the historic environment, ~~and~~ heritage assets and their settings.* This specific objective could then be supported by a series of sub-objectives that are tailored to the character of the Borough and the purpose of the Plan. This includes objectives relating to the economic, environmental and social dimension of managing the historic environment. Examples include: Protect, enhance and manage the character and appearance of landscapes and townscapes, maintaining and strengthening local distinctiveness and sense of place. Improve and broaden access to and understanding of local heritage, historic sites, areas and buildings. Foster heritage-led regeneration.	Comments noted. Objective 16 has been amended to reflect this suggestion. These additional examples have not been included within the list of sustainability objectives.
English Heritage would strongly advise that the Borough's own conservation staff are closely involved throughout the preparation of the emerging new Local Plan and associated Sustainability Appraisal, as they are often best placed to advise on: local historic environment issues and priorities, sources of data and consideration of options relating to the historic environment.	Comment fed back to London Borough of Havering

Appendix B Summary of context review and baseline data

This appendix presents information which relates to the scope of the SA process. This summarises and updates the information originally included in the SA Scoping Report, which was initially prepared in February 2015.

The appendix includes for each theme:

- Context review;
- Baseline data; and
- Key issues for the SA process.

B.1 Overall context review

International		
European Strategic Environmental Assessment Directive (2001/42/EC)	The Directive seeks to provide a high level of protection of the environment and to contribute to the integration of environmental considerations into the preparation and adoption of plans and programmes with a view to promoting sustainable development. The Directive requires the environmental assessment of plans and programmes which are likely to have significant effects on the environment.	Strategic Environmental Assessment to be carried out to inform the preparation of the Local Plan.
National		
Planning and Compulsory Purchase Act 2004	The provisions introduce powers which allow for the reform and speeding up of the planning system and an increase in the predictability of planning decisions and the speeding up of the handling of major infrastructure projects. The Act abolished local and structure plans and replaced them with Local Development Frameworks.	The Local Plan to be prepared in accordance with the requirements of the Act. The Local Plan must be accompanied by a Sustainability Appraisal.
Planning Act 2008	Established the Infrastructure Planning Commission and makes provision about its functions, the development of nationally significant infrastructure and town and country planning. It also makes provision for the introduction of the Community Infrastructure Levy.	The Local Plan to reflect introduction of the Community Infrastructure Levy.
Localism Act 2011	The Localism Act introduces a number of measures to provide greater decision making powers at the local level, creating space for Local Authorities to lead and innovate, and giving people the opportunity to take control of decisions that matter to them. The proposals set out in the Localism Act include: New freedoms and flexibility for local government; New rights and powers for communities and individuals;	The Local Plan to be prepared in accordance with the requirements of the Act. In preparing the Local Plan, the Local authority will be required to engage constructively, actively and on an ongoing basis with other local authorities to meet the Duty to Co-operate

	Reforms to make the planning system more democratic and more effective; Reforms to ensure decisions about housing are taken locally The Act sets out a range of changes to the planning system. Most significant for plan making are the concept of neighbourhood planning, which includes neighbourhood development plans and neighbourhood development orders (supporting community right to build), the abolition of Regional Spatial Strategies and the duty to co-operate.	
The Town and Country Planning (Local Planning) (England) Regulations 2012	The Regulations (a) consolidate the existing Town and Country Planning (Local Development)(England) Regulations 2004 and the amendments made to them; and (b) make new provision and amendments to take account of the changes made by the Localism Act 2011.	The Local Plan preparation process will need to comply with the requirements for content and for consultation arrangements included in the Regulations 2012.
National Planning Policy Framework 2012	Sets out the Government's planning policies for England and how these are expected to be applied. The NPPF has streamlined national planning policy replaces previous national planning policy statements and guidance. At the heart of the NPPF is the presumption in favour of sustainable development. The NPPF sets out how Local Plans should be prepared and how they will be examined.	The Local Plan will need to be consistent with the wide range policies in the NPPF including on the preparation of Local Plans.
National Planning Practice Guidance 2014	Provides additional planning practice guidance to support the NPPF on a significant range of planning issues	The NPPG will help guide the Local Plan preparation process to secure its compliance with the NPPF.
Securing the Future – United Kingdom Government Sustainable Development Strategy 2005	Identifies four priority areas for action: • Sustainable consumption and production • Climate change and energy • Natural resource protection and environmental enhancement	The Local Plan will need to take account of the principles of Sustainable Development.

	• Sustainable communities	
Urban White Paper 2000	This report identifies the need to tackle urban decline, through addressing education, transport, crime reduction, housing and planning. There is also a need to improve people's prosperity and quality of life.	The Local Plan will consider the recommendations made in regards to local areas of deprivation.
Regional		
London Plan 2011, Revised Early Minor Alterations to the London Plan 2013 and Draft Further Alterations to the London Plan 2014	The overall strategic plan for London, setting out an integrated economic, environmental, transport and social framework for the development of London over 20-25 years. Boroughs' LDDs have to be 'in general conformity' with the London Plan.	The Local Plan is required to be in general conformity with the London Plan. Further details on specific policy areas can be found throughout this table.
Local		
Havering Community Strategy 2008 – Living Ambition	Long-term strategy to improve still further the quality of life enjoyed by Havering's residents, based on five goals for the Environment, Learning, Towns and Communities, Individuals and Value: to ensure a clean, safe and green borough to champion education and learning for all to provide economic, social and cultural opportunities in thriving towns and villages to value and enhance the lives of our residents to deliver high customer satisfaction and a stable council tax	The Local Plan should reflect and help to achieve the Council's Living Ambition goals.

B.2 Biodiversity

Policy Context

Biodiversity and Geodiversity

International		
EU Biodiversity Strategy 1998	This strategy aims to anticipate, prevent and attack the causes of significant reduction or loss of biodiversity at the source. Targets for biodiversity are set by member states.	The Local Plan should seek to address those issues highlighted with spatial implications.
EU Biodiversity Action Plan 2006	The EU Biodiversity Action Plan addresses the challenge of integrating biodiversity concerns into other policy sectors in a unified way. It specifies a comprehensive plan of priority actions and outlines the responsibility of community institutions and Member States in relation to each. It also contains indicators to monitor progress and a timetable for evaluations. The European Commission has undertaken to provide annual reporting on progress in delivery of the Biodiversity Action Plan.	The Local Plan should seek to address those issues highlighted with spatial implications.
United Nations Convention (Ramsar) on Wetlands of International Importance (1971)	Lists wetlands of international importance based on ecological and hydrological criteria Promotes the conservation and wide use of the wetlands included in the list	The Local Plan will need to consider how to protect and enhance any wetlands
European Habitats Directive (92/43/EEC)	Maintain or restore designated natural habitat types, and habitats of designated species. Take appropriate steps to avoid degrading or destroying Special Areas of Conservation	The Local Plan will need to consider how to protect and enhance the boroughs natural spaces.
European Birds Directive (2009/147/EEC)	Identifies 181 endangered species and sub-species for which the Member States are required to designate Special Protection Areas	The Local Plan will need to consider how to protect local endangered species and their habitats.
European Water Framework Directive (2000/60/EC)	Sustainable use of water and long term protection of water resources. Member States must aim to reach good chemical and ecological status in inland and coastal waters by 2015 and reduce pollution to surface water and groundwater.	The Local Plan will need to protect local waterways and seek to improve quality of surface water.
National		
Countryside and Rights of Way Act 2000	Places a duty on local authorities to take reasonably practicable steps to further the conservation, restoration or enhancement of those species and habitats identified as priorities for biological conservation	The Local Plan will need to consider how to protect and enhance the boroughs biodiversity.
National Planning Policy Framework 2012	The planning system should contribute to and enhance the natural and local environment by: protecting and enhancing valued landscapes, geological conservation interests and soils; recognising the wider benefits of ecosystem services; minimising impacts on biodiversity and providing net gains in biodiversity where possible	The Local Plan is required to be consistent with the National Planning Policy Framework. The Local Plan will need to include policies to assess proposals for development with regards to biodiversity, geodiversity and landscape areas.

	Local planning authorities should set criteria based policies against which proposals for any development on or affecting protected wildlife or geodiversity sites or landscape areas will be judged. Distinctions should be made between the hierarchy of international, national and locally designated sites, so that protection is commensurate with their status and gives appropriate weight to their importance and the contribution that they make to wider ecological networks. Local planning authorities should set out a strategic approach in their Local Plans, planning positively for the creation, protection, enhancement and management of networks of biodiversity and green infrastructure.	
Natural Environment White Paper – The Natural Choice: securing the value of nature (2011)	Outlines the Government's vision for the natural environment over the next 50 years. It aims to set a clear institutional framework to achieve the recovery of nature: establish Local Nature Partnerships (LNPs) create new Nature Improvement Areas (NIAs) reforms to the planning system Specific actions include: removing barriers to learning outdoors creating a new Local Green Areas designation establishing a Green Infrastructure Partnership new phase of the Muck In4Life campaign	The Local Plan will need to consider how it will seek to protect, enhance and promote the boroughs natural environment.
National Biodiversity Strategy: Biodiversity 2020: a strategy for England's wildlife and ecosystem services (2011)	Aims to halt overall biodiversity loss, support healthy well-functioning ecosystems and establish coherent ecological networks, with more and better places for nature for the benefit of wildlife and people The Strategy identifies actions in 4 priority areas: A more integrated large-scale approach to conservation on land and at sea Putting people at the heart of policy Reducing environmental pressures Improving our knowledge	The Local Plan will need to consider how it will protect, enhance and promote the boroughs green habitats.
Biodiversity 2020: A Strategy for England's wildlife and ecosystems services (2011)	Aims to: halt overall biodiversity loss support healthy well-functioning ecosystems	The Local Plan will need to consider the implications of development on the local ecological network and resist habitat fragmentation.

	establish coherent ecological networks, with more and better places for nature for the benefit of wildlife and people.	
The State of Natural Capital: Second Report (2014)	This report lays the foundation for the Committee's third State of Natural Capital report, which will be published in early 2015. The Committee's main advice to Government on how to prioritise action to maintain and improve natural capital in order to maximise wellbeing will take the form of a 25 year plan. To produce this enabling framework for action, the Committee will engage with Government and undertake informal discussions with interested parties regarding the content and delivery of the proposed plan.	The Local Plan should seek to address those issues highlighted with spatial implications.
Natural Environment and Rural Communities Act 2006	The Natural Environment and Rural Communities Act 2006 sets up the framework for conservation of the natural environment, including establishing Natural England. It sets up the organisational structure for nature conservation and includes the main tools and legislation for achieving this.	The Local Plan should seek to protect the landscapes and priority species identified in the Action Plan. See Havering Nature Conservation and Biodiversity Action Plan 2014-2016 section below.
Regional		
London Plan 2011, Revised Early Minor Alterations 20112 and Draft Further Alterations to the London Plan 2014	The London Plan encourages and promotes the management, enhancement and creation of green space for biodiversity, and promotes public access and appreciation of nature. The Mayor has set up the concept of a Blue Ribbon Network for the Thames and London's waterways and the land alongside them. This will establish principles concerning the use and management of the water and land beside it. The Blue Ribbon Network along with green and open spaces create the Green Grid.	The Local Plan is required to be in general conformity with the London Plan and its Alterations. Continue protecting and enhancing the boroughs protected green spaces and waterways.
Mayor's Biodiversity Strategy 2002	Four priority areas: Protection of biodiversity Positive measures to encourage biodiversity action, promoting the management, enhancement and creation of valuable green space Incorporating biodiversity into new development Access to nature	The Local Plan will need to consider how it will address the four priority areas.
London Biodiversity Action Plan	11 habitat types are identified, each with its own Habitat Action Plan.	The Local Plan should support local and regional groups involved in the management and preservation of biodiversity.
Thames River Basin Management Plan 2009 - 2015	The management plan identifies priorities for improvement in the Roding, Beam and Ingrebourne catchment area. Key actions for this catchment identified: • The Environment Agency will investigate current levels of	The Local Plan should support the actions and priorities identified in the Thames River Basin Management Plan for the Roding, Beam and Ingrebourne catchment.

	abstraction in the Upper Roding. • The Environment Agency will work with partners to re-meander the Mayes Brook through Mayesbrook Park and improve water quality from urban diffuse pollution. • The Environment Agency will work with partners to re-naturalise the River Ravensbourne through Harrow Lodge Park. • The Environment Agency will work with partners to restore the Wantz Stream and the Beam through the Dagenham Washlands Flood Storage Area. • The Environment Agency will investigate methods for improving fish passages through the tidal sluices.	
All London Green Grid SPG 2012	Promotes the concept of green infrastructure and the benefits of increasing provision, by describing and advocating an approach to the design and management of green and open spaces to deliver hitherto unrealised benefits. These benefits include sustainable travel, flood management, healthy living, and creating distinctive destinations; and the economic and social uplift these support.	Local Plan will need to promote green infrastructure, new and old.
London's Foundations SPG 2012	Sets out London's geological heritage, explaining the process for identifying sites of national, regional and local geological importance, identifying important geological sites for protection and advising boroughs on how to promote as well as protect geodiversity.	The Local Plan will need to protect the areas of geological importance identified in the borough.
Local		
Havering Nature Conservation and Biodiversity Action Plan 2014-2016	Provides the framework for the Council and its partners to progress nature conservation and biodiversity work in the borough for the three years (2014-16). The Action Plan ensures that the Council considers biodiversity issues in exercising its functions, as required by the Natural Environment and Rural Communities Act 2006 (see above)	The Local Plan should seek to protect the landscapes and priority species identified in the Action Plan.

Baseline Information

Biodiversity and Geodiversity:

- Havering's environment includes 420 ha of forest cover, 93 Sites of Importance for Nature Conservation, 3 Sites of Special Scientific Interest and seven local nature reserves. It is also protected by Green Belt which covers half of the borough. There are also 17 rivers flowing through Havering, of which the largest are the rivers Rom, Beam and Ingrebourne, and the river Thames which marks the southern boundary of the borough The other rivers are: Rainham Main Sewer, Wennington Branch Sewer, Rainham Creek, Haverings New Sewer, Carters Brook, Paines Brook, Weald Brook, Ravensbourne, Emerson Park Stream, Blacks Brook, West Mardyke Branch, River Mardyke, and Puddledock Sewer.
- Of Havering's Sites of Important Natural Character 9 are of metropolitan importance, 21 are of borough importance grade 1, 43 of borough importance grade 2, and 16 are of local importance.
- Havering has three Sites of Special Scientific Interest (SSSIs) – Hornchurch Cutting, Ingrebourne Marshes and Inner Thames Marshes. 34% of Havering's SSSI land is classed as favourable, 42% is in unfavourable condition and declining and 21% is in unfavourable condition but recovering, whilst 3% has been destroyed or partly destroyed. In addition to these, there are two SSSIs that border Havering and could be affected by further development and population growth in Havering. These are Hainault Forest in Redbridge and Purfleet Marshes in Thurrock.
- The Local Natural Reserves in Havering are: Rainham Marshes, Bedfords Park, The Chase (jointly managed with London Wildlife Trust), The Manor (Dagnam Park and Duck Wood), Ingrebourne Marshes, Cranham Brickfields, and Cranham Marsh.

  There are 7 wildlife corridors running through Havering: From the Inner Thames Marshes SSSI following the Common Sewer NE into Running Water Brook and Belhus Woods; the Ingrebourne Valley from the Thames to Harold Wood, then up through Harold Hill via Paine's and Carter's Brook; the stream valley from Berwick Ponds up to Cranham Marsh and then via Broadfields Farm, Cranham Brickfields, Tylers Commons and Maylands Golf Course to Dagnam Park; from Dagnam Park via Bedfords Park to Havering Country Park and Hainault Forest; Beam Valley and Dagenham Corridor, with a branch up through Harrow Lodge Park into Hornchurch; From Bedfords Park south via Rise Park and Raphael Park; and The River Thames.
- Protected species that can be found in Havering include bats, brown owl, great crested newt, water vole, badgers, harvest mouse, brown hare, reptiles and amphibians, stag beetle, and other BAP species.

B.3 Climate Change

Policy Context

Energy and Climate Change		
International		
Doha amendment to the Kyoto Protocol on Climate Change (2012)	Places greenhouse gasses emission reduction targets of 20% for the UK.	The Local Plan must consider the impact of climate change, and how to contribute to reductions in greenhouse gas emissions.
The Future We Want - Rio+20 United Nations Conference on Sustainable Development (2012)	Recognizes the importance of the three Rio conventions for advancing sustainable development. Urges all parties to the United Nations Framework Convention on Climate Change and parties to the Kyoto Protocol there to fully implement their commitments, as well as decisions adopted under those agreements.	The Local Plan must consider the impact of climate change, and how to contribute to reductions in greenhouse gas emissions.
Renewable Energy Directive (2009/28/EC)	Establishes a common framework for the use of energy from renewable sources in order to limit greenhouse gas emissions and to promote cleaner transport. It sets national indicative targets for renewable energy production from individual member states. The UK has committed to sourcing 15% of its energy from renewable sources by 2020.	The Local Plan will seek to contribute towards meeting renewable energy targets.
Energy Performance of Buildings (EU Directive 2010/31/EU)	Requires moving towards new and retrofitted nearly-zero energy buildings by 2020 (2018 in the case of Public buildings), and the application of a cost-optimal methodology for setting minimum requirements for both the building's envelope and the technical systems.	The Local Plan should promote energy efficiency of buildings within policies.
National		
Climate Change Act 2008	Places a duty on the United Kingdom to reduce its carbon dioxide and other emissions by at least 26 per cent by 2020 and at least 60 per cent by 2050, compared to 1990 baseline level (which includes other greenhouse gases).	Ensure the policies in the new Local Plan contribute to achieving the targets set in the Act.
Energy Act 2008	The Energy Act 2008 updates energy legislation to: • reflect the availability of new technologies and emerging renewable technologies • correspond with the UK's changing requirements for secure energy supply • protect our environment and the tax payer as the energy market changes	The Local Plan should promote and encourage the use of renewable energy technologies.

Energy Act 2011	The Act includes provisions on: Green deal: the Act creates a new financing framework to enable the provision of fixed improvements to the energy efficiency of households and non-domestic properties, funded by a charge on energy bills that avoids the need for consumers to pay upfront costs. Private rented sector: the Act includes provisions to ensure that from April 2016, private residential landlords will be unable to refuse a tenant's reasonable request for consent to energy efficiency improvements where a finance package, such as the Green Deal and/or the Energy Company Obligation (ECO), is available. Provisions in the Act also provide for powers to ensure that from April 2018, it will be unlawful to rent out a residential or business premise that does not reach a minimum energy standard (the intention is for this to be set at EPC rating 'E'). Energy Company Obligation: the Act amends existing powers in the Gas Act 1986, Electricity Act 1989 and the Utilities Act 2000 to enable the Secretary of State to create a new Energy Company Obligation that will: Take over from existing obligations to reduce carbon emissions which expire at the end of 2012. Work alongside the Green Deal finance offer by targeting appropriate measures at those households likely to need additional support – in particular those containing vulnerable people on low incomes and in hard-to-treat housing. The Act also includes measures to: Improve energy efficiency and energy security. Enable low-carbon technologies. Extend the role of the Coal Authority.	Promote high energy efficiency standards for new buildings and support refurbishment of existing buildings to a minimum EPC standard of 'E' to ensure smooth transition to the 2018 Energy Act provision.
UK Renewable Energy Strategy (2009)	Sets out the approach to meet a legally binding target to ensure 15% of our energy comes from renewable sources by 2020. This target is most likely to be achieved by generating: 30% of our electricity from renewables 12% of our heat generated from renewables and 10% of transport energy from renewables All new homes in England will be zero-carbon from 2016 and all new buildings by 2019.	New developments will need to comply with high energy efficiency and carbon-zero requirements. The Local Plan should promote local energy production from renewable sources.

National Planning Policy Framework 2012	The NPPF states that, to support the move to a low carbon future, local planning authorities should: plan for new development in locations and ways which reduce greenhouse gas emissions; actively support energy efficiency improvements to existing buildings; when setting any local requirement for a building's sustainability, do so in a way consistent with the Government's zero carbon buildings policy and adopt nationally described standards.	New developments will need to comply with high energy efficiency and carbon-zero requirements.
National Policy Statements EN1 – EN6	Suite of energy National Policy Statements (NPS) for England. The NPSs set out national policy against which proposals for major energy infrastructure projects will be assessed and decided on. NPS EN-1: Overarching Energy Policy Statement sets out the broad policy context and need for the development of nationally significant energy infrastructure, provides assessment principles in accordance with which applications will be decided, and sets out generic assessment impacts for all NPS technology types. The other NPS documents are: EN-2 Fossil Fuel Electricity Generating Infrastructure EN-3 Renewable Energy Infrastructure EN-4 Gas Supply Infrastructure EN-5 Electricity Networks Infrastructure EN-6 Nuclear Power Generation – Volume 1 EN-6 Nuclear Power Generation – Volume 2 The individual technology NPSs provide further detailed guidance for the specific type of development they cover, in addition to the generic guidance set out in EN-1. The Statements reaffirm the need for new low carbon energy infrastructure, based around: The county's wider greenhouse gas reduction and renewable energy production targets security of supply increasing electricity demand increasing energy costs closure of existing generation capacity	The Local Plan should promote local energy production from renewable sources.

Regional		
London Plan 2011, Revised Early Minor Alterations 20112 and Draft Further Alterations to the London Plan 2014	Sets out the Mayor's policies on for tackling climate change, particularly in relation to the built environment. The plan seeks to strongly influence the way in which new development in London responds to the challenge of climate change, and creates opportunities for existing areas with respect to both mitigation and adaptation.	The Local Plan is required to be in general conformity with the London Plan and its Alterations.
Managing Risks and Increasing Resilience: The Mayor's climate change adaptation strategy 2011	Aims to assess the consequences of climate change on London and to prepare for the impacts of climate change and extreme weather to protect and enhance the quality of life of Londoners. The Mayor proposes that this aim will be met through achieving the following objectives: Identify and prioritise the climate risks and opportunities facing London and understand how these will change through the century Identify and prioritise the key actions required to prepare London, and to define where responsibility for delivering and facilitating these actions lies Promote and facilitate new development and infrastructure that is located, designed and constructed for the climate it will experience over its design life Improve the resilience of London's existing development and infrastructure to the impacts of climate change Ensure that tried and tested emergency management plans exist for the key risks and that they are regularly reviewed and tested Encourage and help business, public sector organisations and other institutions prepare for the challenges and opportunities presented by climate change Promote and facilitate the adaptation of the natural environment Raise general awareness and understanding of climate change with Londoners and improve their capacity to respond to changing climate risks Position London as an international leader in tackling climate change.	Consider the contribution the Local Plan can make to reducing carbon emissions, through location of development, delivery of renewable energy, and energy efficient buildings.
Delivering London's Energy Future: the Mayor's climate change mitigation and energy strategy 2011	Sets out a strategic approach to limiting further climate change and securing a low carbon energy supply for London. The Mayor has set a target to reduce London's CO2 emissions by 60% of 1990 levels by 2025. Delivering London's Energy Future details the programmes and activities that are on-going across London to	Consider the contribution the Local Plan can make to reducing carbon emissions, through location of development, delivery of renewable energy, and energy efficient buildings.

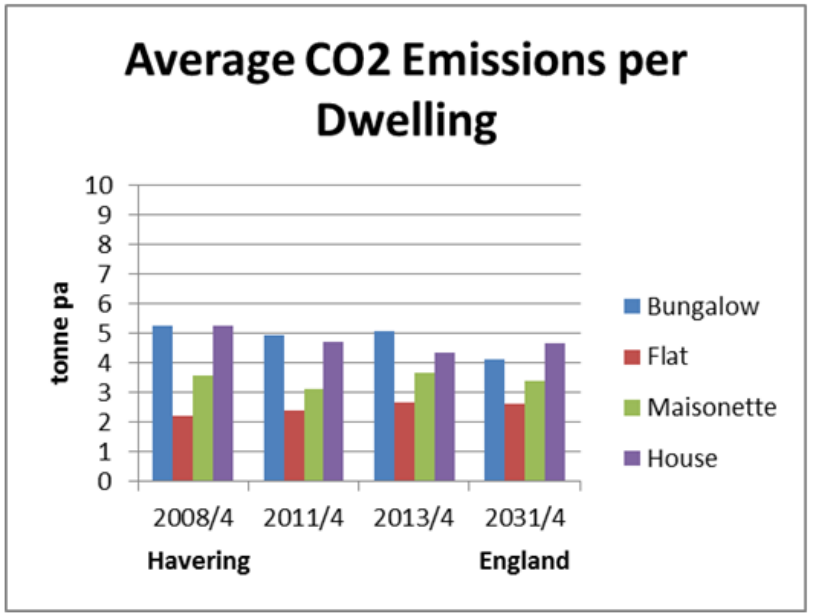
	achieve this. These include: • RE:NEW – retrofitting London's homes with energy efficiency measures, and helping Londoners save money off their energy bills. • RE:FIT – retrofitting London's public sector buildings, saving millions of pounds every year. • RE:CONNECT – ten low carbon zones in London aiming to reduce CO2 emissions by 20% by 2012 across the community. • Decentralised energy programme – aiming to supply 25 per cent of London's energy from secure, low carbon local sources.	
Local		
Havering Climate Change Action Plan 2014 -2017	Sets actions and targets for achieving reductions in energy consumption, generating renewable energy, adapting to anticipated impacts of climate change and reducing carbon emissions.	Alignment between the Local Plan and Council policy to achieve reductions in energy consumption and carbon emissions.
Havering Fuel Poverty Strategy 2012	Sets out the Council's commitment to reduce fuel poverty in Havering, particularly through efforts to improve the energy efficiency of residential properties of Havering's most vulnerable residents.	Alignment between the Local Plan and Council policy to reduce number of residents facing fuel poverty.

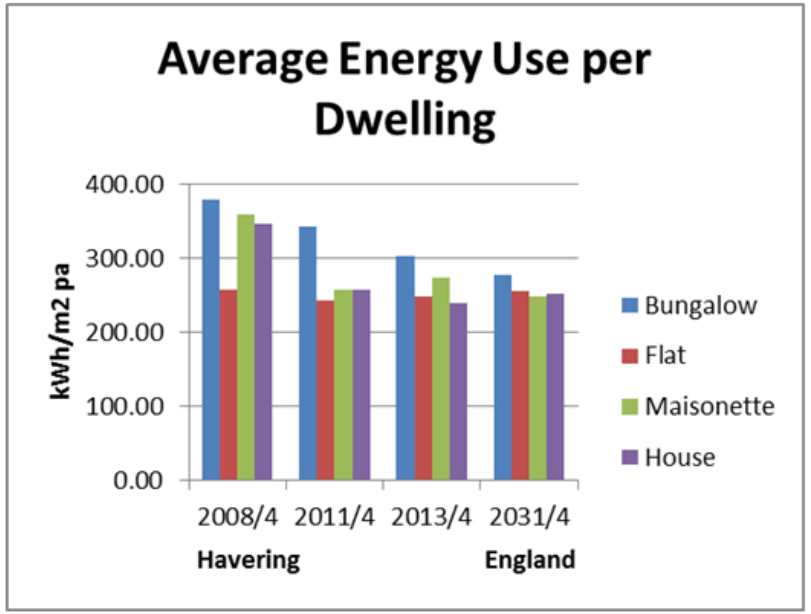
Baseline Information

Climate change and Flooding:

- CO2 emissions estimates in 2012 stood at 5.1 kt per capita, in line with London's emissions (5.2 kt per capita), and much lower than England average (7.0 kt per capita). Of the 1211.3 kt CO2 emitted in 2012, 1065.4 kt were within the scope of influence of the local authority (DECC, June 2014). Average yearly reduction of CO2 emissions in Havering has been at 2.4 kt per year, 0.19% of 2012 net value, much lower than the average London reduction of 0.48% in the same year.
- The biggest sources of CO2 in 2012 were from Domestic Gas consumption (23.30%) and Domestic Electricity consumption (19.36%), followed by Industry and Commercial using mainly electrical energy (17.78%), Motorway Transport (11.78%) and A-Roads Transport (12.82%).
- Havering Council's current planning policies uphold sustainability in building design and on-site renewable energy generation, in order to reduce the impact on climate change of new development. Some developments have gone beyond our requirements, and in Havering there is a 51-property passivhaus scheme, development schemes running on large CHP energy centres, and several which have achieved Code for Sustainable Homes Level 4.

  Havering has the fifth highest number of solar photovoltaic installations of all London boroughs, with 744 solar installations - 200 more than the sixth highest borough (DECC, 2014). There are also three large wind turbines at Ford Dagenham facilities generating 5.9MW of energy. Energy-from-waste facilities are currently operating in Rainham Riverside with Veolia, and new gasification plant has been approved for development which will turn non-recyclable and non-compostable waste into energy (London Riverside Opportunity Area Energy Masterplan, GLA, 2013)
- Between 2008 and 2013 there have been a total of 38,445 Energy Performance Certificates logged in Havering, of which 36,997 are dwelling certificates amounting to a total of 2,933,335 m2 Floor Area (CLG, 2014). The 1458 non-dwelling certificates amounted to 928,313 m2 Floor Area. Most domestic EPC certificates were registered with an average efficiency rating of 'D', followed by 'C' and 'E'. There are 44 domestic buildings and 6 non-domestic buildings registered with 'A' efficiency rating (CLG, 2014).
- 87.94% of households in 2011 had gas central healing and 5.83% had electric central heating. No central heating was reported by 2.00% of Havering's population, while 2.71% had two or more types of central heating (Census 2011).
- Havering has an estimated 6,300 households in fuel poverty, who may be struggling to afford their fuel bills each winter (DECC, 2012). This equates to 6.9% of the number of households in





Havering, however in some areas in Havering the level of fuel poverty is estimated at over 9% - some LSOAs in wards Brooklands, Craham, Gooshays, Hactor, Havering Park, Romford Town, and Upminster.

- The average water consumption in Havering in 2010/11 was 158.7 litres per person per day. The five year average, calculated for Havering is 158.9 litres per person per day between 2006-07 and 2010-11. This has decreased from 160 litres per person per day in 2009/10, and a five year average of 159.6 litres.
- It is anticipated that London (Havering included) will face warmer average temperatures interspersed with more heavy rain incidences as the climate changes (London Climate Change Partnership, 2012). This will lead to increased surface water flooding, more risk of summer overheating in buildings and reductions in water availability.
- There are 17 ~~four~~ distinct watercourses in Havering, of which the following are the largest:
  - The River Beam forms a part of the western boundary of the Borough with the London Borough of Redbridge to the West. It has three tributaries. The River Rom drains the north-western area of the Borough and is joined by the Black Brook at Romford. The Emerson Park Stream joins the Rom at Heath Park, Elm Park. From this point the watercourse is named the Beam;
  - The Ingrebourne, including its tributaries the Weald Brook and the Paines Brook, drain the centre, east and north of the Borough;
  - The River Mardyke drains the eastern area of the Borough although for most of its length it flows through Thurrock, outside Havering; and
  - The River Thames into which the above watercourses drain. This forms the southern boundary of the Borough.

  Havering is potentially vulnerable to flooding from three sources (Multi-Agency Flood Plan 2012):
  - A proportion of the London Borough of Havering is situated in close proximity to the River Thames, River Rom, River Beam and River Ingrebourne which are all key features of the Borough, and all pose (to some degree) a potential risk of flooding to local homes and businesses.
  - The London Borough of Havering is also potentially vulnerable to tidal flooding along the Thames downstream of the Thames Barrier.
  - Lastly the London Borough of Havering is vulnerable to surface water flooding.
- Generally flood risk is limited to the southern area of the Borough in the vicinity of the Thames and the valleys of the Rivers Beam and Ingrebourne and their tributaries. Further clarification will be provided by the Strategic Flood Risk Assessment 2014.
- The southern area of Havering is at risk of flooding from the River Thames which is tidal at this point. The Borough is protected by the Thames Tidal Defences which run along both banks of the river downstream (east) of the Thames Barrier. There are tidal sluices at Beam Tidal Sluice, Havering Tidal Sluice and Frog Island Tidal Sluice which prevent ingress of the River Thames. However, due to the effects of climate change, these defences may have to be raised or set back as outlined in the guidance contained within the Thames Estuary 2100 plan.
- Havering's emergency services operate under a Multi-Agency Flood Plan that identifies the flood risks and emergency response framework. The latest version of this plan was published in 2012.

B.4 Land, Soil and Water Resources

Policy Context

Water and Flood Risk		
International		
Urban Waste Water Directive (91/271/EEC)	To protect the environment from the adverse effects of sewage discharges. The Directive regulates the collection and treatment of waste water from homes and industry and sets standards for collection and treatment of wastewater.	The Local Plan should seek to promote the objective contained within the waste water directive.
European Water Framework Directive (2000/60/EC)	Sustainable use of water and long term protection of water resources. Member States must aim to reach good chemical and ecological status in inland and coastal waters by 2015 and reduce pollution to surface water and groundwater.	The Local Plan will need to protect local waterways and seek to improve quality of surface water.
European Flood Risk Directive (2007/60/EC)	Aims to reduce and manage the risks that floods pose to human health, the environment, cultural heritage and economic activity. It requires Member States to assess whether all water courses and coast lines are at risk from flooding, to map the flood extent and assets and humans at risk in these areas, and to take adequate and coordinated measures to reduce this flood risk. The Directive shall be carried out in co-ordination with the Water Framework Directive, most notably through flood risk management plans and river basin management plans, and also through co-ordination of the public participation procedures in the preparation of these plans.	The Local Plan will need to take into account local flood risk zones, including through the preparation of an SFRA.
National		
Flood and Water Management Act 2010	The Act introduced a comprehensive management structure to protect people, homes and businesses from flood risk. It established Lead Local Flood Authorities (LLFA) and Risk Management Authorities (RMA) with different roles and responsibilities in flood risk and water management. Alongside new duties in preparing new plans called Preliminary Flood Risk Assessments (PFRA) and investigating flooding events, the LLFA and RMA will become Sustainable Drainage System (SuDS) Approval Bodies with responsibilities for approving proposed drainage systems in new development. They will also be required to adopt and maintain most approved	The Local Plan will need to ensure that Development will take into account flood prevention and management.

	SuDS.	
Flood Risk Regulations 2009	Introduces Lead Local Flood Authorities, who gain new powers and responsibilities such as: Developing Flood Risk Management Strategies Designation and registration of assets Creation of SUDS approval bodies Investigation of flooding	Local Plan will take into account results of SFRA and other Flood and Water Management Strategies prepared by the Council in its role as Lead Local Flood Authority.
National Planning Policy Framework 2012	Inappropriate development in areas at risk of flooding should be avoided by directing development away from areas at highest risk, but where development is necessary, making it safe without increasing flood risk elsewhere. Local Plans should be supported by Strategic Flood Risk Assessment and develop policies to manage flood risk from all sources, taking account of advice from the Environment Agency and other relevant flood risk management bodies, such as lead local flood authorities and internal drainage boards. Local Plans should apply a sequential, risk-based approach to the location of development to avoid where possible flood risk to people and property and manage any residual risk, taking account of the impacts of climate change, by: applying the Sequential Test; if necessary, applying the Exception Test; safeguarding land from development that is required for current and future flood management; using opportunities offered by new development to reduce the causes and impacts of flooding; and where climate change is expected to increase flood risk so that some existing development may not be sustainable in the long-term, seeking opportunities to facilitate the relocation of development, including housing, to more sustainable locations.	Local Plan will be informed by a new (2014/15) Strategic Flood Risk Assessment including the application of the sequential test (Level 1 SFRA) and the requirements of the exception test (Level 2 SFRA).
Regional		
London Plan 2011, Revised Early Minor Alterations 2012 and Draft Further Alterations to the London Plan 2014	The Mayor will work with all relevant agencies including the Environment Agency to address current and future flood issues and minimise risks in a sustainable and cost effective way.	The Local Plan is required to be in general conformity with the London Plan and its Alterations.

	Boroughs should utilise Strategic Flood Risk Appraisals to identify areas where particular flood risk issues exist and develop actions and policy approaches aimed at reducing these risks, particularly through redevelopment of sites at risk of flooding and identifying specific opportunities for flood risk management measures. Boroughs should, in line with the Flood and Water Management Act 2010, utilise Surface Water Management Plans to identify areas where there are particular surface water management issues and develop actions and policy approaches aimed at reducing these risks.	
Securing London's water future: The Mayor's water strategy 2011	The strategy promotes increasing water efficiency and reducing water wastage to balance supply and demand for water, safeguard the environment and help tackle water affordability problems. It also sets out how the Mayor will help communities at risk of flooding to increase their resilience to flooding.	The Local Plan will have regard to the principles and aspirations set out in the strategy.
Thames Estuary 2100 Plan	Development of a long-term (100 years) tidal flood risk management plan for London and the Thames Estuary	The Local Plan should have regard to the strategic direction for managing flood risk across the estuary and any actions to be taken in the short, medium and long term for the Rainham Marshes and Mardyke area.
Local		
Havering Strategic Flood Risk Assessment (SFRA) 2007	The SFRA is a planning tool that enables local authorities to select and develop sustainable site allocations away from vulnerable flood risk areas. In addition to informing site allocations the SFRA informs decision making on non-allocated planning applications, strategic flood alleviation measures and other measures to reduce flood risk to existing development, planning requirements for new development and emergency planning. The key objectives of the Havering SFRA (2007) are: To investigate and identify the extent and severity of flood risk to the area at present and in the future To inform the policies in the Site Specific Allocations Submissions Development Plan Document, Romford Area Action Plan (AAP) and the Development Control Policies (DPDs) To inform the Sustainability Appraisal To enable the Council to apply the Sequential Test and the Exception Test	The Local Plan should reflect the Strategic Flood Risk Assessment and ensure that flood risk is taken into account in allocating sites and developing policies. A new Havering SFRA (Levels 1 and 2) is being prepared. The full, updated SFRA will be used to inform the Local Plan preparation.

	To identify the level of detail required for site-specific FRAs To inform the emergency planning process. The Level 1 SFRA is a scoping study, taking a precautionary approach to identifying flood risk in the catchment, without accounting for flood defences. The Level 2 SFRA fully assesses the extent and variation of the residual risk remaining behind the defences in Havering.	
Multi- Agency Flood Plan 2012	The Plan seeks to provide 'a coordinated multi-agency response framework to mitigate the impact of a large-scale flood event in Havering, through achieving following objectives: • Prepare key parts of the community susceptible to flooding through the provision of advice and information; • To prioritise the identification and required responses to protect the vulnerable within the community; • To support the Environment Agency in the provision of warnings to communities at flood risk, where technically feasible; • Manage precautionary actions to preserve life for the highest impact flood risks; • Provide accurate and timely information to public and local business on flood response; • Manage the wider impact of borough flooding events to reduce disruption to the utilities, communities and environment; • Lead recovery activity to support the recovery of communities and business; • Maintain critical services within each organisation as part of business continuity arrangements'.	The Local Plan should have regard to provisions of the Multi-Agency Flood Plan and seek to facilitate effectiveness of emergency services' operation.
Surface Water Management Plan 2011	The Surface Water Management Plan (SWMP) for Havering was developed in 2011 as part of the Drain London6 programme. The SWMP uses data and modelling to seek to understand the causes and effects of surface water flooding – that from sewers, drains, groundwater, and runoff from land, small watercourses and ditches that occurs as a result of heavy rainfall. The plan also seeks to manage surface water over the longer-term through the work of a range of bodies, including LBH, the EA, Thames Water and Transport for London. It includes potential high-level solutions to the flooding problems identified.	The Local Plan should have regard to the provisions of the Surface Water Management Plan.
Local Flood Risk Management Strategy 2014	The objective of the Flood Risk Management Strategy (FRMS) is to tackle 'local' flood risk (e.g. surface water, groundwater and ordinary watercourses) as opposed to Main River fluvial flooding. In addition	The Local Plan should have regard to the provisions of the Local Flood Risk Management Strategy.

	it will identify short-term (2 years) measures to tackle flood risk and agree the principles for the longer-term management of flooding in the Borough. The FRMS seeks to bring together all the Flood Risk Management Authorities that contribute to the mitigation of flood risk within Havering.	

Waste		
International		
European Waste Framework Directive (2008/98/EEC)	The Directive sets a revised framework for waste management in the EU, aimed at encouraging re-use and recycling of waste. It includes a five-step hierarchy of waste management options, with waste prevention as the preferred option, and then reuse, recycling, recovery (including energy recovery) and safe disposal, in descending order. The Directive sets a 50% target for household recycling and reuse and 70% target for non-hazardous construction and demolition waste, both of which must be reached by the UK by 2020.	The Local Plan should reflect the waste hierarchy and have regard to the principles and aspirations set out in the strategy.
National		
National Planning Policy Statement 10: Planning for Sustainable Waste Management	Seeks to drive waste management up the waste hierarchy and provides a framework for communities to take responsibility for their waste and to ensure sufficient and timely waste management facilities; to implement the national waste strategy; to protect human health and the environment; to engage the community; to ensure new development supports sustainable waste management and to protect greenbelts but appreciate the locational needs of some facilities. The Statement also provides guidance for preparing Local Development Documents including information relating to identification of land for waste management facilities, suitable sites and areas and for determining planning applications.	The Local Plan should reflect and promote the waste hierarchy
Regional		
London Plan 2011, Revised Early Minor Alterations 20112 and Draft Further Alterations to the London Plan 2014	Applies the waste hierarchy waste management which starts from the position that the best approach is to reduce the amount of waste that arises in the first place. Where this is not possible, he supports an approach based on the waste hierarchy that emphasises re-use,	The Local Plan is required to be in general conformity with the London Plan and its Alterations. The Local Plan will need to reflect the waste hierarchy and

	and then recycling and composting, before energy recovery and disposal. Manage as much of London's waste within London as practicable, working towards managing the equivalent of 100 per cent of London's waste within London by 2031 Create positive environmental and economic impacts from waste processing work towards zero biodegradable or recyclable waste to landfill by 2031. Municipal waste recycling - the Mayor wishes to see a doubling to 45 per cent by 2015 and then 50 per cent by 2020 The London Plan sets out waste apportionment figures by borough.	contribute to the targets set by the Mayor.
London's Wasted Resource: The Mayor's Municipal Waste Management Strategy 2011	Has the following key objectives: Provide Londoners with the knowledge, infrastructure and incentives to change the way they manage municipal waste: to reduce the amount of waste generated, encourage the reuse of items that are currently thrown away, and to recycle or compost as much material as possible. Minimise the impact of municipal waste management on our environment and reduce the carbon footprint of London's municipal waste. Unlock the massive economic value of London's municipal waste through increased levels of reuse, recycling, composting and the generation of low carbon energy from waste. Manage the bulk of London's municipal waste within London's boundary, through investment in new waste infrastructure.	The Local Plan will have regard to the principles and aspirations set out in the strategy.
Making Business Sense of Waste: The Mayor's Business Waste Management Strategy	Set the overall direction for the management of business waste in London for the period 2010 to 2031 focus on waste reduction and the more efficient management of resources to reduce the financial and environmental impact of waste manage as much of London's waste within its boundaries as practicable, by taking a strategic approach to developing new capacity boost recycling performance and energy generation to deliver environmental and economic benefits to London	The Local Plan will have regard to the principles and aspirations set out in the strategy.

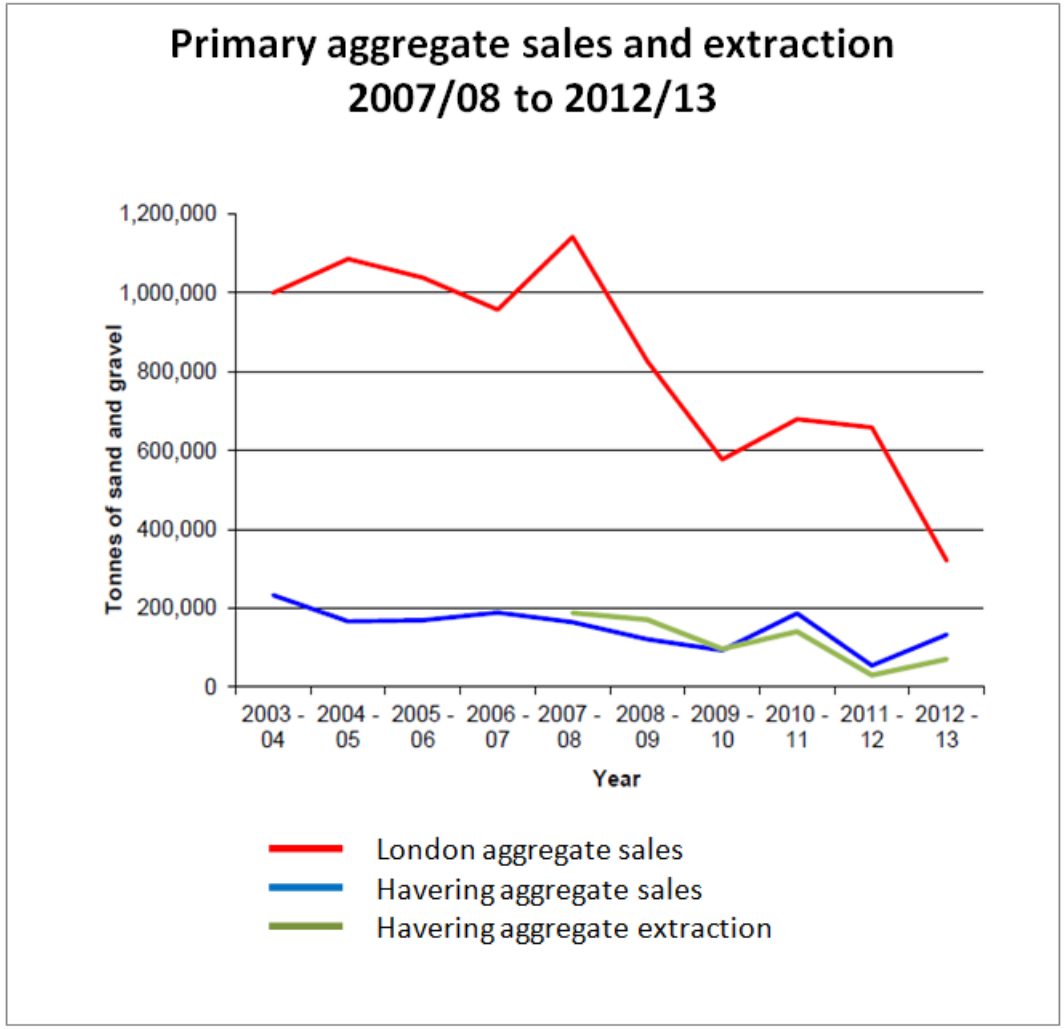
Local		
The Havering municipal Solid Waste Management Strategy 2006-2020	Provides a framework for managing municipal solid waste. The Strategy forms part of the ELWAs joint Municipal Waste Management Strategy.	The Local Plan will consider the strategic objectives for waste management.

Minerals		
International		
European Directive on the Management of Waste from Extractive Industries (2006/21/EC)	Produce a waste management plan which sets out predictions of the amount of waste likely to be generated and methods of management Ensure safety measures are in place that protect the environment and avoid possible accidents Create a site restoration plan Guarantee sufficient funds are available to restore the land to a satisfactory state	The Local Plan will need to comply with the provisions of this Directive.
National		
National Planning Policy Framework 2012 and National Planning Practice Guidance 2014	The NPPF seeks to ensure that there is sufficient supply to meet needs and seeks to make best use of resources. The NPPF sets out what the Planning Authority should consider when preparing local plans including the contribution of secondary/ recycled materials, defining minerals safeguarding areas, encouraging prior extraction and environmental impacts.	The Local Plan must be consistent with the NPPF and the Local Plan will need to identify and safeguard aggregates resources and include policies for the management of extraction activities.
Regional		
London Plan 2011, Revised Early Minor Alterations 20112 and Draft Further Alterations to the London Plan 2014	Seeks to ensure adequate supply of Aggregates to support construction in London. The London Plan sets a target of 95% of recycling/re-use of construction, demolition and excavation waste by 2020 and 80% recycling of that waste as aggregates by 2020. London should make provision for the maintenance of a landbank (i.e. seven years' supply) of at least 5 million tonnes of land won aggregates throughout the plan period until 2031. The plan sets a landbank apportionment of at least 1.75 million tonnes for LB Havering.	The Local Plan is required to be in general conformity with the London Plan and its Alterations. The Local Plan will need to identify and safeguard aggregates resources.

Baseline Information

Natural Resources:

- London Plan 2011 assigned a target assigned a mineral extraction target of 250,000 tonnes per annum to Havering. In addition to extraction, the London Plan aims for 95% recycling and re-use of construction, excavation and demolition waste by 2020, of which 80% of this waste will be recycled as aggregates.
- During 2012/13, 69,552 tonnes of primary land-won aggregates (production from virgin materials extracted from the land) were produced by two operators in the borough (Ingrebourne Valley Limited and Brett Aggregates). This is an increase on the 2011/12 production figure of 29,235 tonnes but still significantly lower than the 2010/11 figure of 140,000 tonnes (Draft LAA 2014).
- Average production of primary aggregates over the previous six years has been 115,391tpa, and for the previous three years has been 79,596tpa. The average sales of primary aggregates has been around 150,000tpa over the past ten years, and approximately 124,000tpa in the past three years (Draft LAA 2014). The data therefore reveal a general decline in average annual production and sales over time, and production has been below Havering's sub-regional apportionment throughout the period for which data is available.



- During 2012, 133,639 tonnes of secondary aggregates were produced in the borough. This is a significant increase on the 68,004 tonnes of secondary aggregates produced in 2011. The recycled aggregate production data for the financial year 2012/13 was 13,959 tonnes, a significant decrease on the figures for 2011/12 (45,433 tonnes) and 2010/11 (70,000 tonnes). (Draft LAA 2014)

Waste and Recycling:

- Havering produced 108,380 tonnes of (municipal) waste in 2013/14. The total amount of residual waste per household in 2013/14 was 656kg, this is slightly up on the 2012/13 amount of 644kg, but still below the 2009/10 outturn of 706kg per household. In 2013/14, 33.18% of household waste was recycled, re-used or composted, which has been declining annually since the 2011/12 rate of 35.57%.
- There are 54 public access sites with recycling facilities in the borough –fewer than in the other East London boroughs, although tonnage is comparatively good. At these recycling sites, most have glass, cans, plastic bottles and paper recycling and many also offer the facility for

textiles. There are also five sites around the Borough for recycling cartons.

- The East London Waste Authority (ELWA) was established in 1986 and is responsible for waste disposal in Havering as well as the London boroughs of Barking & Dagenham, Newham and Redbridge. ELWA collects over 430,000 tonnes of waste each year and is funded by the four boroughs – most of its cost relates to fees and taxes charged for the management, treatment and disposal of waste.

B.5 Environmental Quality

Policy Context

Air Quality		
International		
European Air Quality Directive (2008/50/EC)	To maintain and improve ambient air quality, including the establishment of air quality standards for a specific set of pollutants PM10, PM2.5 and N02.	New developments should help achieve stringent air quality targets.
National		
Air Quality Standards Regulations (2010)	Sets out the ways in which the EU Air Quality Directive 2008/50/EC will be complied with and managed at national level.	New developments should help achieve stringent air quality targets.
UK Air Quality Strategy (2007)	The strategy sets health-based air quality standards a range of air pollutants reflecting the European standards. The pollutants covered are: Benzene; 1,3-butadiene; carbon monoxide (CO); Lead; nitrogen dioxide (NO2); Ozone; Particles (PM10); sulphur dioxide (SO2); polycyclic aromatic hydrocarbons. Performance against these objectives is monitored where people are regularly present and might be exposed to air pollution.	New developments should help achieve stringent air quality targets.
National Planning Policy Framework 2012	New development should aim to prevent adverse risks of new and existing development from any adverse risks associated with air quality. Policies and proposals should account with EU limit values, accounting for any air quality Management Areas and the cumulative impact of Air Quality as a result of the proposals..	Development should support healthy communities and sustainable modes of transport.
Regional		
London Plan 2011, Revised Early Minor Alterations 20112 and Draft Further Alterations to the London Plan 2014	Sets out the Mayor's policies for tackling air pollution and improving air quality in London. The Mayor will work with strategic partners to ensure that the spatial, climate change, transport and design policies of the plan support implementation of the Air Quality and Transport strategies to achieve reductions in pollutant emissions and minimise public exposure to pollution.	The Local Plan is required to be in general conformity with the London Plan and its Alterations.
Clearing London's Air –	The strategy sets out a framework for improving London's air quality	The Local Plan will have regard to the principles and aspirations set

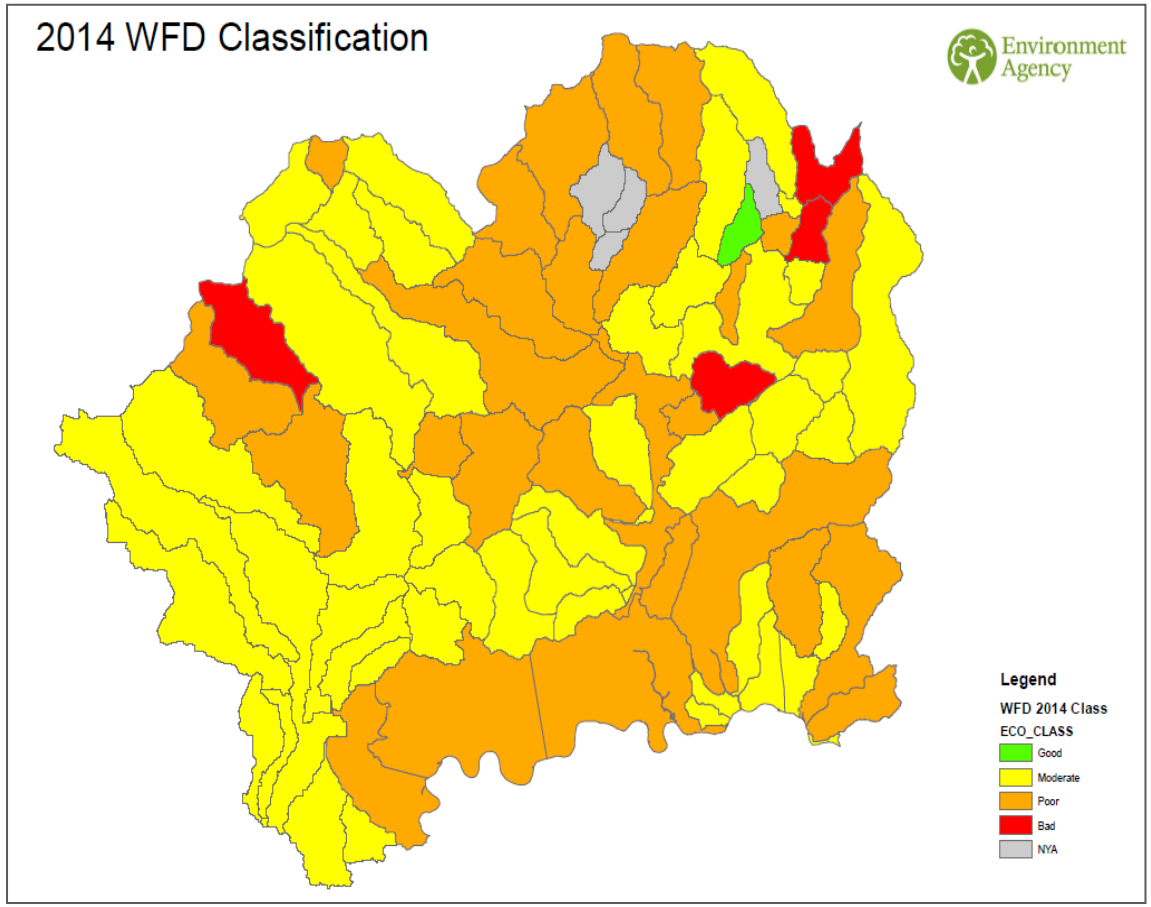
Mayor's Air Quality Strategy (2010)	and measures aimed at reducing emissions from transport, homes, offices and new developments, as well as raising awareness of air quality issues. This will be delivered through a number of initiatives including: • Age limits for taxis • Promoting low-emission vehicles (such as electric cars) • Promoting eco-driving • New standards for the Low Emission Zone • Retrofitting older buses • Targeted measures for areas where air quality is poor. • Using the planning system to reduce emissions from new developments. • Retrofitting homes and offices to make them more energy efficient	out in the strategy.

Pollution		
National		
National Planning Policy Framework 2012	One of the 12 Core Planning Principles of the NPPF is to contribute to conserving and enhancing the natural environment and reducing pollution. The NPPF goes further when guiding how a plan is prepared, stating: In preparing plans to meet development needs, the aim should be to minimise pollution and other adverse effects on the local and natural environment.	The Local Plan will need to minimise pollution from development
Regional		
London Plan 2011, Revised Early Minor Alterations 2012 and Draft Further Alterations to the London Plan 2014	London's issues with pollution are acknowledged in the London Plan and it is one of the Mayor's six strategic objectives to ensure that London is a city that becomes a world leader in improving the environment locally and globally, taking the lead in tackling climate change, reducing pollution, developing a low carbon economy, consuming fewer resources and using them more effectively. The Mayor sets out that London should be a city that leads in the reduction of pollution and has a suite of relevant environmental policies related to pollution, air quality and climate change.	The Local Plan is required to be in general conformity with the London Plan and its Alterations. The Local Plan will need to minimise pollution from development
The Control of Dust and Emissions during Construction and Demolition SPG 2014	This SPG seeks to reduce emissions of dust, PM_{10} and $PM_{2.5}$ from construction and demolition activities in London. It also aims to manage emissions of nitrogen oxides (NOx) from construction and demolition machinery by means of a new non-road mobile machinery Ultra Low Emissions Zone (ULEZ).	The Local Plan will need to consider how to reduce emissions of dust.

Baseline Information

Pollution

- The chemical and biological water quality of the rivers in Havering has been historically poor particularly the River Ingrebourne and the River Rom/Beam. The latest Water Framework Directive assessment identifies some improvements, with sections of Havering's waterways achieving moderate quality classification. Under the directive (WFD), the Beam and Ingrebourne need to achieve good status by 2027 and the Ravensbourne needs to achieve good ecological potential. Havering is served by Riverside sewage treatment works. This is situated in Rainham and discharges into Rainham Creek. It currently serves a population equivalent of 389,000 people. This works has been identified by Thames Water as having future growth/capacity issues.



- The whole of the Borough is designated as an Air Quality Management Area.
- Havering's particles emissions in 2012 amounted to 197.5 ktPM10 and 82.6 kt PM2.5, which represents 4.31% of total MP10 and 3.47% of total PM2.5 emissions in London. The biggest cause for PM10 levels are resuspension (72.8 kt), road transport (81.4 kt) and construction and demolition activities (17.7 kt). For PM2.5 levels the largest sources were road transport (19.6 kt), waste (8.75 kt), construction and demolition activities (6.4 kt) (DECC 2014).
- NOx emissions in 2012 was at 1,678 kt, a share of 3.59% of total NOx emissions in London. The main sources of particles were road transport (1038.8 kt), consumption of domestic gas (110.9 kt), and construction activities (88.5 kt) (DECC 2014).
- While no sites in the borough are currently designated as contaminated land, numerous sites in the borough have been previously utilised for heavy industry and other contaminative uses such as landfill and this may pose land contamination problems for future development on such sites.

- In 2012 5.19% of the population reported noise disturbances, much lower than London average of 16.39% and lower than England average of 7.51%. The rate of people affected by road, rail and air transport noise of 55dB(A) or more at night time in 2011 was 7.12%. This is significantly lower than London rate of 15.33% and lower than England rate of 8.01 (DEFTA, 2011).

B.6 Historic Environment, Landscape and Townscape

Policy Context

Design and Heritage		
International		
The European (Valletta) Convention on the Protection of the Archaeological Heritage (Revised) (2000).	To provide for the maintenance of an inventory of the country's archaeological heritage To provide for archaeological participation in planning policies designed to ensure well-balanced strategies for the protection, conservation and enhancement of sites of archaeological interest; To ensure that in development schemes affecting archaeological sites, sufficient time and resources are allocated for an appropriate scientific study to be made of the site and for its findings to be published	The Local Plan should protect, conserve and enhance the Boroughs Archaeological assets.
European Landscape Convention (Florence Convention)	The scope of the Convention is extensive: it applies to the entire territory of the Parties and relates to natural, urban and peri-urban areas, whether on land, water or sea. It therefore concerns not just remarkable landscapes, but also ordinary everyday landscapes and degraded areas. Landscape is recognised irrespective of its exceptional value, since all forms of landscape are crucial to the quality of the citizens' environment and deserve to be considered in landscape policies. Many rural and urban fringe areas in particular are undergoing far-reaching transformations and should receive closer attention from the authorities and the public.	The Local Plan should protect and enhance local and regional landscapes, whether they have heritage, natural, or other value.
National		
National Planning Policy Framework 2012	Chapter 12 of the NPPF provides guidance on Conserving and Enhancing the Historic Environment. Within that chapter, planning authorities are told they should recognise that heritage assets are an irreplaceable resource and conserve them in a manner appropriate to their significance. Requiring Good Design is a core principle and detailed guidance is set out in chapter 7. Critically, the NPPF states that "good design is indivisible from good planning". Further, local plans should "develop robust and comprehensive policies that set out the quality of development that will be expected	The Local Plan is required to be in general conformity with the London Plan and its Alterations.

	for the area".	
PPS5 Practice Guide (planning in the historic environment)	Although the policies of PPS5 have been superseded by the NPPF. However, the Practice Guide remains a valid and Government endorsed document pending Government's review of guidance supporting national planning policy. PPS5 Practice Guide provides detailed guidance on assessing, monitoring, planning for and making decisions on developments that affect significant heritage assets. The significance of a heritage asset is the sum of its architectural, historic, artistic or archaeological interest.	The Local Plan should have regard to the guidance contained in PPS5, particularly under points E2 : Evidence base for plan making, E3: Regional and local planning approaches, and E5: Monitoring indicators
Planning (Listed Buildings and Conservation Areas) Act 1990	This Act places a duty on Local Planning Authorities to consider from time to time if there are any parts of their area that are worthy of designation as a conservation area.	The Local Plan should assess whether changes to existing Conservation Areas are necessary or whether new conservation areas could be designated.
Ancient Monuments and Archaeological Areas Act 1979	This Act refers to powers of Secretary of State, the Historic Buildings and Monuments Commission for England and Local Authorities (as guardians) by making provision for the investigation, preservation and recording of matters of archaeological or historical interest and regulating operations or activities affecting such matters.	The Local Plan will have regard to the provisions of the Act when policies may affect ancient monuments or archaeological assets.
Regional		
London Plan 2011, Revised Early Minor Alterations 2012 and Draft Further Alterations to the London Plan 2014	The London Plan goes into significant detail on design and heritage matters. According to the document, "Good quality design will be essential and must respond sensitively to local context. Further, it sets out that planning for the significant growth taking place in London means: Improving quality of life for all Londoners and all of London – enabling growth and change, while also supporting the retention of London's heritage and distinctiveness, and making living here a better and more enriching experience for all.	The Local Plan is required to be in general conformity with the London Plan and its Alterations.
Mayor's Shaping Neighbourhoods: Character and Context SPG 2014	This guidance sets out an approach and process to help understand the character and context of a place so that its results can inform the planning and design process, and guide change in way which is responsive to individual places and locations.	The Local Plan should have regard to the recommendations of the SPG when considering Conservation Areas and their site appraisals.
Accessible London: Achieving an inclusive environment SPG 2014	The Accessible London SPG provides advice to boroughs, developers, designers and planning applicants on implementing inclusive design principles effectively and on creating an accessible environment in London, with particular emphasis on the access needs of disabled and older people.	The Local Plan should have regard to this SPG when drafting policies for inclusive design.
Local		
Conservation Area	The Conservation Area Management Plans identify site specific	The Local Plan will have regard to the issues and actions identified

The also consider actions to remedy the situation.	by each Conservation Area Management Plan.

Baseline Information

Open and green spaces:

- Green Belt covers 50% of Havering's area, accommodating a network of pathways and bridleways that form 'green chains' throughout the countryside. The Thames Chase community forest accounts for 70% of Green Belt land, including 400 ha of forest cover.
- The 2013 Your Council Your Say survey found that 75% of residents were satisfied or very satisfied with Havering's parks and green spaces, while 12% were dissatisfied or very dissatisfied and 14% were neither satisfied nor dissatisfied. This shows a very slight decline in satisfaction of 1% since the 2011 Your Council Your Say Survey, where satisfaction levels were 76% and dissatisfaction was 11%.
- There are 126 parks and other publicly owned open spaces, of which 4 are metropolitan parks and 5 are district parks. Of Havering's parks, 9 have Green Flag awards: Bedfords Park, Cottons Park, Harold Wood Park, Hylands Park, Lawns Park, Lodge Farm Park, St Andrews Park, Raphael Park and Upminster Park.
- There are 3 Countryside Conservation Areas: Home Farm and Clay Tye Farm; Dagnam Park and North East Havering; Tomkyns Lane pastures and common land.

Heritage:

- There are 140 statutory listed buildings in Havering, of which six are Grade I listed and 15 are Grade II* listed. Around 50% of the borough falls within Areas of Archaeological Potential, and there are also additional buildings, parks and gardens of historical interest and 4 Scheduled Ancient Monuments.

  Havering has 11 Conservation Areas, in Cranham, Rainham, Romford, Havering-atte-Bower, Gidea Park, St. Leonards, RAF Hornchurch, Corbets Tey, North Ockenden, Langtons and St Andrews. All Conservation Areas have a Conservation Area Character Appraisal and a Management Plan. Romford Conservation Area is considered at risk, mostly due to high development pressures for this metropolitan centre, and is under constant monitoring.

  Havering had 13 historic buildings at risk in 2014, with 10 buildings having remained on the register for longer than 5 years (Garden walls to former North Ockendon Hall, Church Lane; Bridge in Parklands Park, Corbets Tey Road, Upminster; 96-102 North Street, Romford; High House Farmhouse, Ockendon Road; Garden walls to south of Bretons House, Rainham Road, Hornchurch; Upminster Windmill, St Mary's Lane; Stable Block, Rainham Hall; Garden walls at Cranham Hall, The Chase; Mill Cottage, The Dell, Hornchurch; Footbridge to rear of Nos. 52 and 54, The Grove, Upminster), as well as one ancient monument (Cockeralls medieval moat in Dagnam Park).
- There are also 180 Buildings of Local Heritage Interest included in the Heritage Supplementary Planning Document adopted in 2011 and reviewed in the Heritage Asset Register 2014. Fieldwork undertaken as part of the Heritage Asset Register work identified 12 buildings that have been demolished since their inclusion on the list.

B.7 Population and Community

Policy Context

Housing		
National		
Housing Act 2004	Makes the following provisions: Regulates houses in multiple occupation Introduces Home Information Packs Provides the legal framework for Tenancy Deposit Schemes	The Local Plan will need to take account of and reflect the Provisions of the Act.
National Planning Policy Framework 2012	Promotes the provision of housing to meet present and future demand, based on objectively assessed needs. Local Plans should boost significantly the supply of housing. Authorities should demonstrate that they have enough deliverable housing sites to meet need for the next 5 years.	The Local Plan evidence base will need to objectively assess the needs for market and affordable housing in the housing market area. Identify a 5 year supply of specific, deliverable housing site and identify a supply of specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15.
Laying the Foundations: A housing strategy for England 2011	Sets out a package of reforms to: get the housing market moving again lay the foundations for a more responsive, effective and stable housing market in the future support choice and quality for tenants improve environmental standards and design quality. The new strategy addresses concerns across the housing market making it easier to secure mortgages on new homes, improving fairness in social housing and ensuring homes that have been left empty for years are lived in once again.	The Local Plan will have consideration for the recommendations made in the Strategy with regard to developing within market conditions and improving the quality of the environment and the design of dwellings.
Regional		
London Plan 2011, Revised Early Minor Alterations 20112 and Draft Further Alterations to the London Plan 2014	Sets out Mayor's policies with regard to housing delivery and design standards, and sets borough targets based on London-wide SHLAA and SHMA assessments. The Current Housing target in the London Plan 2011 for Havering is 970 units per annum. The Draft Further Alterations to the London Plan proposes to increase this to 1170 per annum.	The Local Plan is required to be in general conformity with the London Plan and its Alterations. The Local Plan will need to demonstrate how the housing target set out in the London Plan will be met
Housing Strategy 2010	Sets out the Mayor's priorities to: Raise aspirations and promote opportunity: by producing more affordable homes, particularly for families, and by increasing	The Local Plan will have regard to the principles set out in the Housing Strategy including housing design and provision of affordable housing

	opportunities for home ownership Improve homes and transform neighbourhoods: by improving design quality, greening homes, promoting successful, strong and mixed communities and tackling empty homes; Maximise delivery and optimise value for money: by creating a new architecture for delivery, developing new investment models and promoting new delivery mechanisms.	
Draft Revised London Housing Strategy 2014	Sets out Mayor's Housing delivery strategy through a series of targets and programmes. The key objectives of the strategy are: increasing housing supply to levels not seen since the 1930s; better supporting working Londoners and helping more of them into home ownership; improving the private rented sector and promoting new purpose-built and well managed private rented housing; pushing for a new, long-term financial settlement for London Government to drive housing delivery; and bringing forward land for development and accelerating the pace of housing delivery through Housing Zones and the London Housing Bank.	The Local Plan will have regard to the principles set out in the Housing Strategy recognising the need to increase housing supply, including affordable housing. As part of the Local Plan process it will be necessary to consider how collaboration with GLA (programmes) can benefit local and regional housing delivery.
Housing Supplementary Planning Guidance 2012	Supports the implementation of the London Plan in order to: increase housing supply and optimise housing potential improve the quality and design of housing developments by setting design standards promote housing choice and mixed and balanced communities negotiate and secure affordable housing improve the existing housing stock provide social infrastructure promote mixed use developments	The Local Plan will need to consider how the supply of housing can be increased. The Guidance should be followed to ensure that the Local Plan is in general conformity with the London Plan.
Local		
Housing Strategy 2014-2017	The strategy outlines Council's plans to counter existing and anticipated housing challenges. It identified five broad areas that the Housing service wants to focus on in order to meet the housing needs of our residents. These areas consist of: homelessness, affordable housing developments, private sector housing, older people's housing and supported housing.	The Local Plan should reflect the housing priorities identified in the Housing Strategy

Baseline Information

Demographic aspects:

- Havering's population numbered 238,281 in 2011, 2.89% of London's total population (8.2 million). The wards with the biggest population growth between 2001 and 2011 are Romford Town with 21%, Brooklands with 15%, Squirrels Heath at 12% and South Hornchurch at 8%. Upminster and Pettits have seen the least growth with only 1% population increase, while Hacton has had a population decrease of -2%. Borough's population is expected to increase by 19% by 2031, to 283,700 (GLA, mid estimates, 2013).
- The over 65-years age group will see the largest growth from the 2011 baseline, with 9% increase by 2016, 14.4% by 2021, 23.8% by 2026 and 36% by 2031 (GLA, 2013).
- Children and young people (0 to 15 years) is expected to see the second biggest increase, starting from 5.8% by 2016, to 14.6% by 2021, 19% by 2026 and 19.5% by 2031. At the time of the 2011 census, Gooshays remained the ward with the highest numbers of children, followed by Brooklands. 21% of all children in Havering live in Gooshays, Brooklands or South Hornchurch (GLA, 2013)
- Working age population (16 to 65 years) will see a steady growth from 2011 baseline, up 3.59% by 2016, to 10.8% by 2026 and 14.5% by 2031. (GLA, 2013)

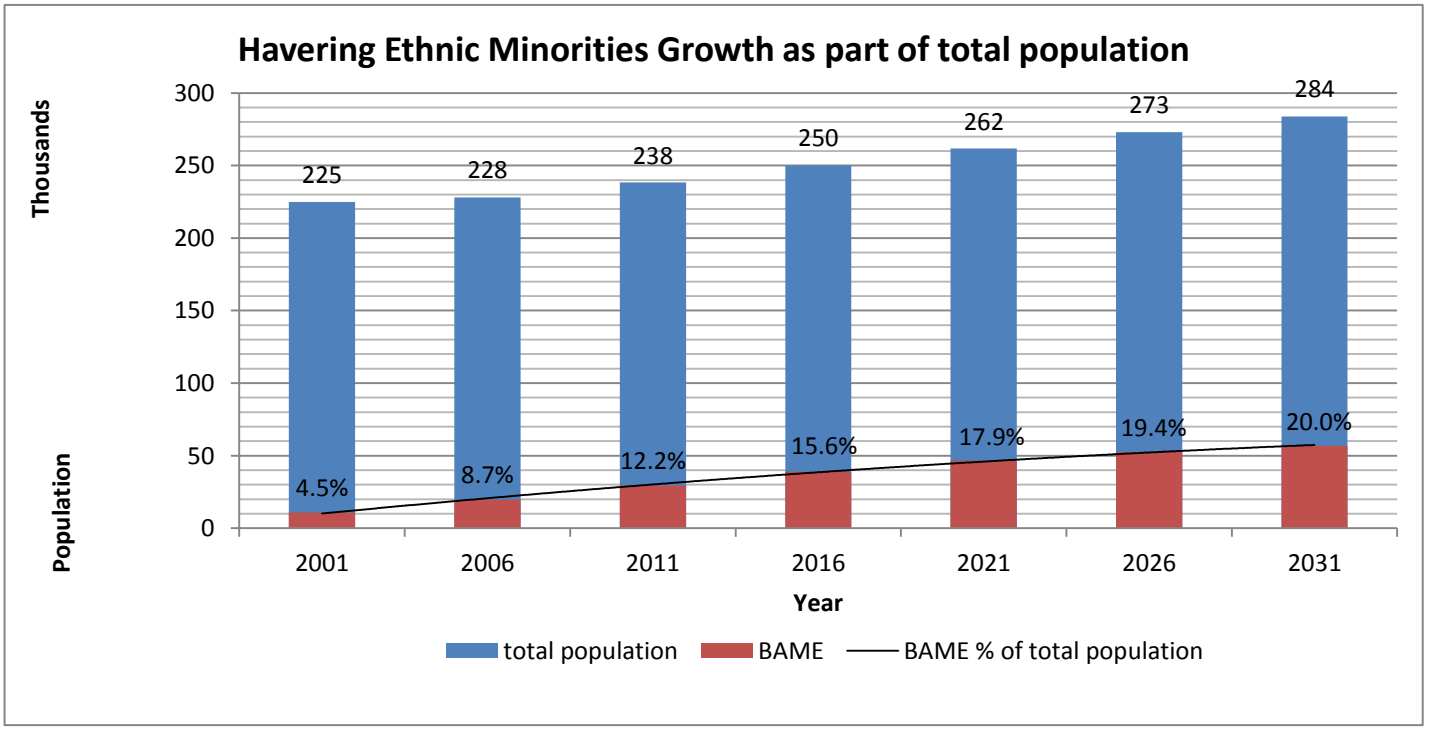
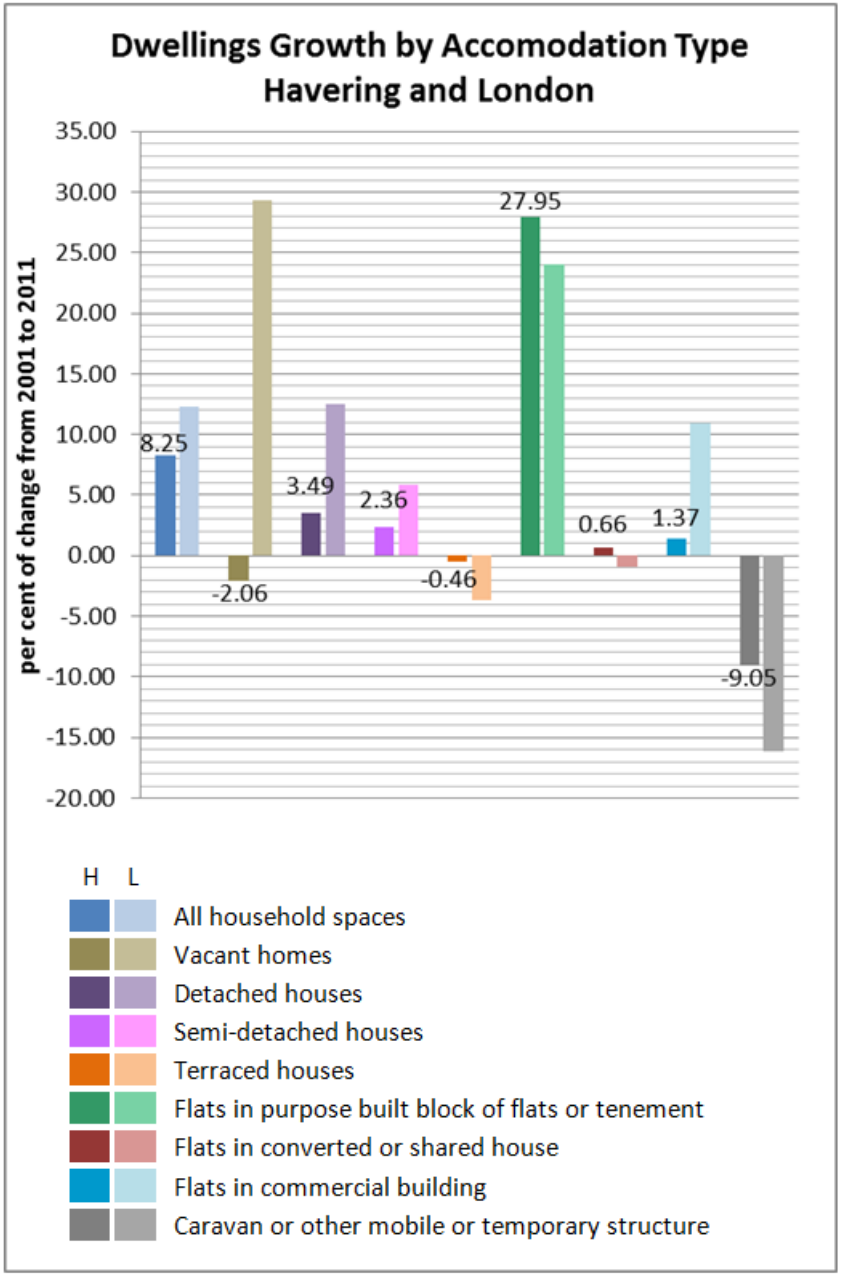
- Havering's ethnic profile shows an increasingly diverse population, from 12.2% of total population being BME in 2011 (Census 2011) and projected to grow to 20% by 2031 (GLA, 2012). The fastest growing groups are Black African, followed by Indian and Black Caribbean. Other Black and Other Asian groups also show significant growth (GLA, 2013).
- In 2011, 5.6 per cent of the households spoke at least one other language than English at home, and 2.3% of households did not have English as main language. The top 5 languages spoken in 2011 in Havering were Lithuanian (980 persons, 0.4%), Polish (829 persons, 0.4%), Panjabi (595, 0.3%), Bengali – with Sylheti and Chatgaya (490, 0.2%), Tagalog/Filipino (430, 0.2%). Lithuanian does not feature as a top five language in England nor London (Census, 2011). School census in January 2014 identified Yoruba as the top language, with 401 children speaking it (1.1%), followed by Lithuanian (1%), Urdu (0.7%), Polish (0.7%) Bengali (0.6%) and Romanian (0.6)%
- In the 2011 Census, two-thirds (65.58%) of Havering's population stated that they are Christian, followed by 22.57% with no religion and just below 6.65% who preferred not to state their religion. Other religions in the borough are: Muslim (2.03%), Hindu (1.24%), Sikh (0.81%), Jewish (0.48%), Buddhist (0.32%).



Housing:

- The number of households in Havering is expected to increase from 97,478 (in 2011) to about 112,827 by 2026 (15.75%) and 118,301 by 2031 (21.36%) – an average of 1.06% yearly increase from the 2011 level (GLA, 2013). The estimated number of households in 2013 is 101,00 (ONS, 2014)
- The total number of dwellings in 2011 was 99,290, a growth of 8.25% from 2001 value (ONS, 2011). A total of 128 communal establishments provided accommodation for 1,561 persons in 2011.
- Of the total number of households in 2011, 35.62% owned their home outright, 38.14% owned it with a loan or mortgage, and a further 0.60% had shared ownership. Of the households who rented their home, 10.76% rented from the Council, 3.43% rented from registered social landlords and 10.63% rented from private landlords (Census 2011). In 2013, 18.8% households rented from council or social landlords and 10.2% rented from private landlords, 35.2% owned their home outright and 35.4% owned their home with a mortgage or loan (APS, 2014).

  Havering's housing stock is comprised mainly of semi-detached (40.7% of dwellings) and terraced properties (26.4%), although there has been a growing number of purpose built flats in recent years (ONS, 2011). In 2011, 19.06% of homes were in purpose-built blocks of flats, up from 16.11% in 2001. This trend is in line with London wide housing growth (ONS, 2011).
- Local Authority owned dwelling stock has fallen from 12,004 in 2001 to 10,129 in 2011 (ONS, 2011), mostly due to selling of properties, or demolition and redevelopment. Council's stock at 1st April 2014 accounted for 9,884 properties with 80.4% of council owned housing reported as decent. The number of dwellings on the Registered Social Landlord list has increased from 1,731 in 2001 to 3,650 in 2011. Overall, the number of affordable dwellings has increased by 3,794 between 2001 and 2011 (ONS, 2011) and represented 15% of total stock. Social housing is largely concentrated in Harold Hill, Waterloo Road (Romford) and Orchard Village (formerly the Mardyke estate, South Hornchurch).
- Homeless people in temporary accommodation accounted for 4.6 per 1,000 households, but this rose to 6.3 per 1,000 households in March 2014 (CLG, 2014).
- Havering had 6,992 households on the Council housing waiting list in 2011 (HSSA) – comprising 7.1% of all households and was proportionally below both the Outer London average of 8.4% of all households on the waiting list, and the London average of 11%. Recent numbers, following the review of council's Allocation Policy, show 2,379 households in need of



social housing (Housing Register, 2014). Out of those waiting to be housed 74.6% require one or two bedroom accommodation, with more than 42% waiting specifically for two bedrooms.

- According to VOA (2014), average renting price in Havering is £919 per month, among the lowest in London. When considering property size, studios were priced on average £600 a month, 1-beds at £689 a month, 2-beds £884 a month, 3-beds at £1,065 a month, and 4+ beds at £1,684 a month. Analyses of the private rented sector 2013 to 2014 has indicated a year on year increase in price of 13.28% for studios (0 bedrooms), 12.25% for 4-bedroom units, and between 4.5% and 6.5% increase in the other types of dwelling sizes.
- The numbers of Housing Benefit claimants living in the private rented sector have increased from 3,800 in 2007 to 7,331 by April 2013 and for the first time, there are more claimants living in private rented homes than claimants in the social sector. Havering data has identified that only 10.07% of new applicants for housing benefits in 2013 were previous local residents, while 67.80% had migrated in from other London boroughs.
- The 2012 Housing Need and Demand Assessment data suggests that over 45% of market housing demand is from in- migration which is principally for two and three bedroom properties. Property type demand from in- migrant households is 52% of the total demand for flats and 58% of total demand for bungalows.
- Room occupancy ratings in 2011 show that 7.37% of households were undersized, while 48.66% of households had two extra rooms; also, 34.4% of households had two or more extra bedrooms, while 0.4% were seriously overcrowded and 3.5% needed an extra bedroom (ONS, 2011).

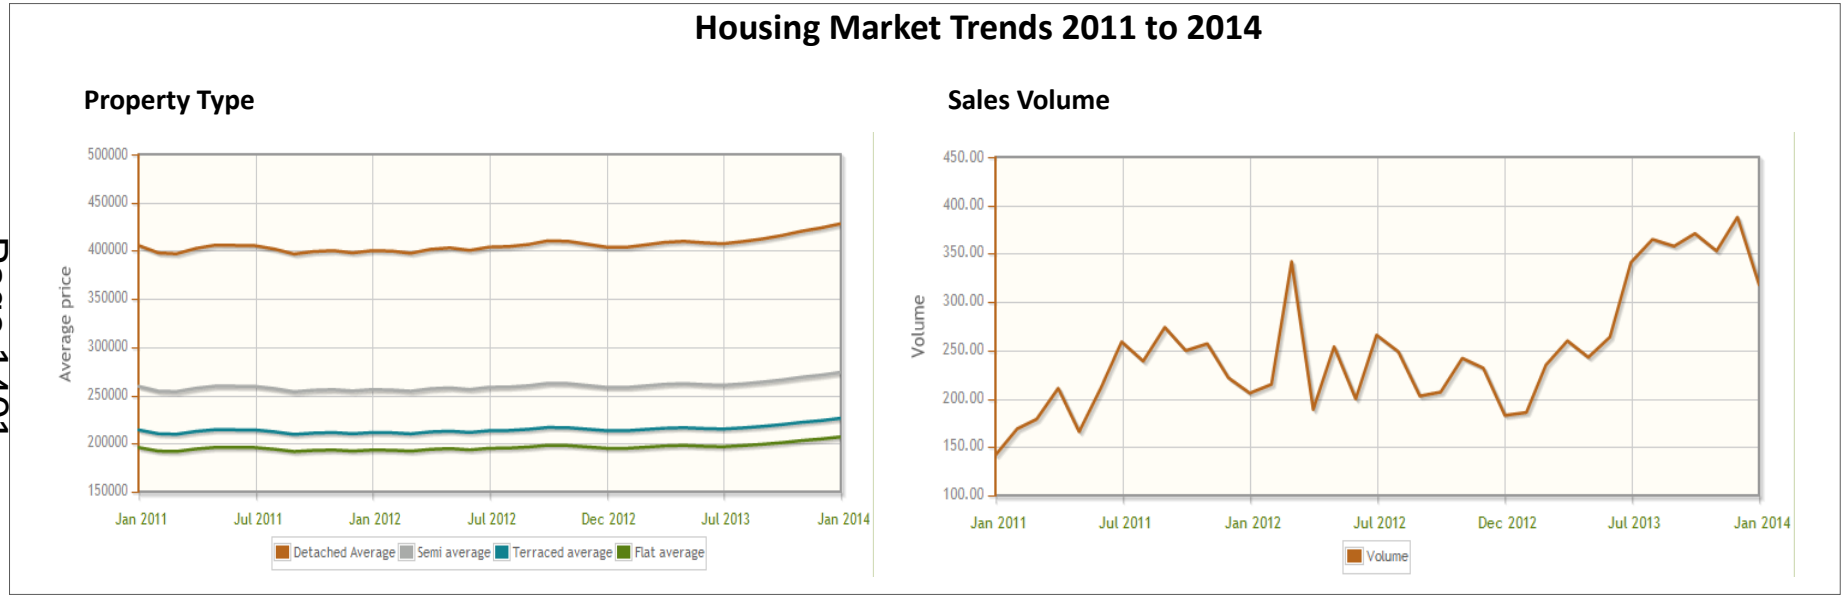
Source: BRE - Havering Housing Stock Condition Report 2013

- Housing market has increased in sales volume from about 2,500 in 2011 to around 3,500 in 2013, indicating a more favourable economic environment (Land Registry, 2014). In 2001, 2.32% of units were vacant, compared to 2.1% vacant in 2011, in spite of a growth of 8.13% in supply of homes (7462 units) (Census, 2011). Between 2008/09 and 2012/13, there have been an average of 422 new homes delivered each year (about half of it social housing)(AMR, 2013).
- The mean average house price in Havering has increased from around £255,500 in 2011 to about £265,000 in 2013, which remains significantly lower than the London average (Land Registry 2014). However, when looking at average price by property type, these have remained largely the same between 2011 and 2013, meaning there is an increase in demand for detached and semi-detached properties which have higher sale value.



B.8 Health and Wellbeing

Policy Context

Culture		
National		
National Planning Policy Framework 2012	The NPPF requires local authorities to take account of and support local strategies for social and cultural wellbeing, and protect and deliver sufficient community and cultural facilities and services to meet local needs (para. 17, 70 and 156). The NNF seeks to ensure the vitality of town centres and Identifies the arts, culture and tourism development (including theatres, museums, galleries and concert halls, hotels and conference facilities) as main town centre uses.	The Local Plan should include policies for the 'adequate provision' of community facilities, including the 'protection and enhancement' of existing community facilities (where they are viable), in recognition of the increasing importance these will / can play in town centre economies. Community facilities provide for the health and wellbeing, social, educational, spiritual, recreational, leisure and cultural needs of the community.
Creating a sporting habit for life – Youth Sports Strategy 2012	Aims to increase consistently the number of young people developing sport as a habit for life. Over the next five years, Sport England will invest at least £1 billion of Lottery and Exchequer funding to help to ensure that young people are regularly playing sport. Sport England will work with schools, colleges and universities, as well as local County Sports Partnerships, the National Governing Bodies for sport, local authorities and the voluntary sector to improve the sporting offer that we make available to them.	The Local Plan should include policies to support the provision of an appropriate level of sport and recreation facilities (informed by a revised Open Space, Sport and Recreation Needs Assessment)
Regional		
London Plan 2011, Revised Early Minor Alterations 20112 and Draft Further Alterations to the London Plan 2014	Sets out policies to support the continued success of London's diverse range of arts, cultural, professional sporting and entertainment enterprises and the cultural, social and economic benefits that they offer to its residents, workers and visitors.	The Local Plan is required to be in general conformity with the London Plan and its Alterations.
Mayor's Cultural Strategy: Cultural Metropolis (2010)	The Mayor's Cultural Strategy sets out his vision, priorities and recommendations for how to strengthen the cultural life of Londoners across the capital. The strategy recognises the significance of the cultural and creative sectors in making London a successful world city, and puts forward a case for its continued support and investment – particularly in the run up to the 2012 Olympics and the opportunity it presents for London to undertake a step change in cultural activity and participation	The Local Plan should include policies, policies for the 'adequate provision' of community facilities, including the 'protection and enhancement' of existing community facilities (where they are viable), in recognition of the increasing importance these will / can play in town centre economies. Community facilities provide for the health and wellbeing, social, educational, spiritual, recreational, leisure and cultural needs of the community.
Local		
Havering Culture Strategy	An over-arching 3-year Culture Strategy for the borough, covering	The Local Plan should reflect the Council's approach as set in the

2012-2014	the period 2012-2014. The core ambition of the Culture Strategy is 'to transform lives through participation in, and enjoyment of, culture'. The strategy set out three objectives (health and wellbeing, learning and development, and towns and communities) and four underpinning principles (community empowerment, work in partnership, inclusion and cohesion, and good value services) which outlined the Council's priorities for achieving this.	Culture Strategy and subsequent iterations.
Havering Culture Sub-Strategies (Sport & Physical Activity; Arts; Libraries; Parks & Open Spaces, and Heritage & History) 2013-2015	The five Culture Sub-Strategies (Sport & Physical Activity; Arts; Libraries; Parks & Open Spaces, and Heritage & History) provide a strategic direction for the Council and also for the wider development of culture in the borough through partnership with agencies in the public, private and voluntary sectors. The sub-strategies include an analysis of the current service, identify emerging opportunities and areas for development, and set out an action plan for the next 3 years.	The Local Plan should reflect the Council's approach as set in the Culture Sub-Strategies and subsequent iterations.

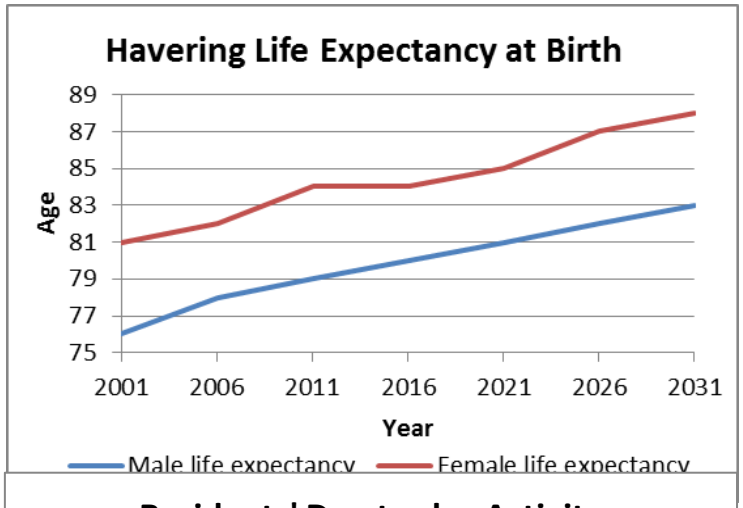
Equalities		
National		
National Planning Policy Framework 2012	Equalities and inclusive design are at the forefront of the NPPF. It recognises that design should not only be about the aesthetics of a building but that planning policies and decisions should address the connections between people and places and the integration of new development into the natural, built and historic environment. Inclusive design is defined as - designing the built environment, including buildings and their surrounding spaces, to ensure that they can be accessed and used by everyone"	The Local Plan should incorporate the principles of inclusive design.
Equality Act 2010	Requires that regard is given to the desirability of reducing socio-economic inequalities; reform and harmonise equality law and restate the greater part of the enactments relating to discrimination and harassment related to certain personal characteristics.	The Local Plan will need to ensure that it promotes equal opportunities.
Regional		
London Plan 2011, Revised Early Minor Alterations 2012 and Draft Further Alterations to the London Plan 2014	The London Plan aims to tackles health, social and educational inequalities within London. Specifically, section 3 on London's People features policy 3.1 'Ensuring Equal Life Chances for All'. Within that policy, guidance is provided on DPD preparation. The policy states: "In preparing DPDs, boroughs should engage with local groups and communities to identify their needs and make	The Local Plan is required to be in general conformity with the London Plan and its Alterations. The Local Plan should promote equal opportunities across all policy areas.

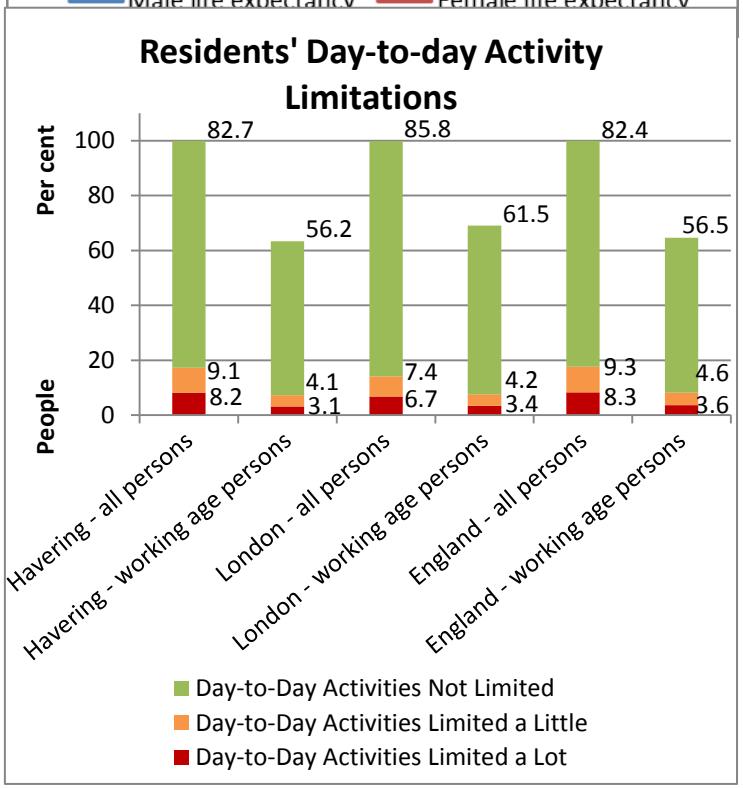
	appropriate provision for them". It is worth noting that the London Plan was prepared in keeping with national equalities and disabilities legislation and was subject to a full Equalities Impact Assessment during its preparation.	
Accessible London: Achieving an Inclusive Environment. Mayor's Supplementary Planning Guidance (2004)	This provides detailed guidance on the policies contained in the London Plan to make places usable by everyone especially disabled people.	The Local Plan should seek to ensure that places are accessible and usable.
Equal life chances for all 2014	Highlights the Mayor's commitment to tackling inequality; improving life chances, and removing barriers that prevent people from reaching their full potential. The document (an update from the 2012 version) sets out a number of objectives and how the Mayor aims to meet them. The objectives relate to such things as employment, sports, housing, and regeneration.	The Local Plan will need to ensure that it promotes equal opportunities.
Planning for Equality and Diversity in London. Mayor's Supplementary Planning Guidance (2007)	This SPG provides guidance on the implementation of policies in the London Plan, which relate to equalities issues and addressing the needs of London's diverse communities.	The Local Plan should seek to meet the needs of Havering's communities.

Baseline Information

Health and Wellbeing:

- General health of Havering residents is improving. In 2011, 81.6% were in good (and very good) health and 5.2% in bad (and very bad) health, compared to 69.7% in good health and 8.2% in bad health in 2001 (Census 2011).
- Life expectancy at birth is increasing, with both males and females expected to live 4 years longer by 2031 compared to 2011 (GLA, 2013).
- Infant mortality rate per 1000 live births was at 3.4 in the period between 2008 and 2010, lower than London and England rates (both at 4.4)(GLA, PHOF 2013).
- Hospital admissions are most commonly related to Coronary Heart Disease, and Cancers (Information Centre 2008). In 2011 there were 21,447 hospital admissions, up from 18,911 in 2006 (HSCIC, 2012).
- There are 52 GP practices in the Havering NHS Clinical Commissioning Group (CCG) catchment area, covering a total of 256,731 patients. The average patient list per practice in 2012 is therefore 4,937 which is an increase from 4,847 in 2011 (AMR, 2013).





Ambulance service incidents per hundred population rating in 2013 stood at 12.8, in line with London value (GLA, 2014).

The amount of road casualties has decreased significantly, from 973 recorded in 2006 (852 slight severity) to 673 recorded in 2013 (622 slight severity)(PHOF 2013).

- Long term health problems or disability that limits day-to-day activity were experienced by 17.3% of the population (7.2% of working age population) in 2011 (Census 2011). Data from the Department of Work and Pensions (DWP) in 2013 shows 20.66% of working age population in Havering is disabled, with 4.11% of Havering's working age residents are claiming Disability Living Allowance and a further 1.87% are claiming Incapacity Benefits.
- In 2012, 19.33% of people aged over 16 were smoking, and 30.57% were ex-smokers, higher than London rates (17.97% smokers and 28.74% ex-smokers), but lower than England rates (33.15% smokers and 47.3% ex-smokers). The 4-weeks smoking quit rate in Havering was 1,468 per 100,000 people aged over 16 years, in 2012/13, lower that the London rate of 1,846 and lower still than England rate of 2,050. The rate of mothers who were known to be smoking at time of delivery

was 11.4% in 2012/13, above the national ambition level of 11%, but lower than the London rate of 13.0% (HSCIC, 2014).

- Active People Survey 2012 found that only 36.1% of the population over 16 years was of normal weight (by body mass index), 0.6% being underweight and 41.0% being overweight but not obese, meaning 22.3% if the population is considered obese (PHOF 2013). In London 41.1% are of normal weight, 1.6% are underweight and 19.6% are obese, while in England 35.0% of population is of normal weight, 1.2% are underweight and 23.0% are obese.
- National Child Measurement Programme 2012/13 showed that children in Havering's schools are generally of healthy, with 78.1% of the 4-5 year olds and 63.9% of 10-11 year olds being of normal weight. Around 1% of children are underweight. (PHOF 2013) The biggest issue is the growth in the number of overweight and obese children from reception to year six. Of 5-6 year old children, 14.4% were classed as overweight in 2006/7, while 15.1% of year 6 pupils were overweight in 2012/13. Obesity rate in children at reception in 2006/7 was 11.2%, but 19.9% for year 6 pupils in 2012/13.
- The rate of people supported to live independently by social services in Havering is 2,979 per 100,000 residents, this is much lower than London and national averages and has decreased significantly since 2009 (DoH 2010).
- In 2011, 6.8% of population provided 1 to 19 hours of unpaid care a week, and a further 3.9% provide more than 20 hours unpaid care a week (Census 2011)
- In 2011, 1.7% of households represented lone parents (ONS, 2011).

- Between October 2005 and October 2006 31.2% of Havering's population was participating in sports at least 4 times a month for at least 30min (Sport England, 2012). Between 2011 and 2012 the rate reached 32.6%. This is lower than the London average of 35.4% in 2005-2006 and 36.5% in 2011-2012. Overall, 55.33% of adult population in Havering were physically active in 2012, just slightly under London (57.20%) and England (56.03%) rates (PHOF 2013).
- 10% of adults cycle at least once per month, in line with London and England values (DfT, 2013).
- London's Strategic Planning for Sports Facilities 2010 estimates the satisfied demand by Havering's facilities are at 60.1% for a-g pitches, 74.3% for sports halls, and 84.4% for swimming pools
- Havering ranks pretty well in subjective well-being scores. Between 2012 and 2013, Havering was 6th in London on Life Satisfaction Index with a score of 7.4 (worst recorded 7.0, best 8.1), 10th on Worthwhile Index with 7.65 (worst 7.22, best 8.23), 16th on Happiness Index with 7.24 (worst 6.85, best 7.51), and only 22nd on Anxiety Index with 3.17 (worst 3.74, best 2.51) (ONS/GLA, 2013).

Culture and Community:

- Romford is the entertainment centre of the borough, and sub-regionally important, offering a community theatre (Brookside Theatre), a museum, two cinemas, many eating establishments, pubs and nightclubs, and a strong retail offer that the Council is actively promoting in light of growing competition from Westfield Stratford City, Lakeside and Bluewater. Arts provision is strong in Hornchurch, with the Queen's Theatre and Fairkytes Arts Centre adding to Hornchurch's thriving restaurant offer. Upminster is also locally important as a hub for restaurants.
- Havering has three leisure centres, in Harold Hill, Hornchurch and Rainham, and two museums – the Havering Museum, opened in May 2010 in Romford, and Tithe Barn Museum in Upminster. Upminster Windmill is preserved by the Friends of Upminster Windmill and Upminster Windmill Trust and it is opened to the public on certain days throughout the year. The Council has also recently received HLF funding to restore the Windmill and build a Heritage and Education Centre, working with the Friends Group and Upminster windmill Trust. A new leisure centre for Romford (comprising a swimming pool, ice rink and gym facilities) is also anticipated to open early in 2017.

- There are 126 parks and other publicly owned open spaces, with 50% of the borough being Green Belt and largely covered by the Thames Chase Community Forest. Numerous countryside-based recreational opportunities are available in these areas. A 'green chain' runs through Havering, and is currently being developed and extended, to link together public footpaths and bridleways running as 'green veins' through the borough. In addition, work is on-going at 'Wildspace' with the ambition to form a regional visitor destination over the next 10 -15 years.
- Between 2011 and 2012, 44.5% of the population used a public library service, 52.1% visited a gallery or museum, and 60.9 attended an art event or participated in arts activities (DCMS 2013). This is an increase from 2010 to 2011 period when 41.1% used a library service, 36.2% visited a gallery or museum, and 53.6 attended an arts event or participated in arts activities.
- Between 2010/11 and 2012/13, yearly volunteering activities were reported by 17% of adult population, compared to 26% rate for London and 24% for England. (DCMS 2013)
- There are a vide variety of third sector groups active in Havering in fields such as education, health, wellbeing, social care, green infrastructure, sports etc.
- Havering's Your Council, Your Say survey 2013 found that 76% of residents feel satisfied with their local area as a place to live, while 11% felt dissatisfied and 13% felt neither satisfied nor dissatisfied. This shows an increase in satisfaction levels since the 2011 Your Council Your Say Survey, when 73.6% were satisfied, but the same levels of dissatisfaction were found at 10.9%.

Deprivation, Poverty and Crime:

Havering is ranked 177th authority by Index Of Multiple Deprivation 2010, but there are pockets of deprivation identified, with areas of South Hornchurch and the Harold Hill area (Gooshays and Heaton wards) being within the 10% most deprived LSOAs nationally, and wider areas of Harold Hill and Romford being in the 20% most deprived (ONS 2010).

In 2012, 13.6% of people in employment earned less than £7 an hour, which is comparable with London (13.3%) and lower than England rate (ONS, 2012).

- Number of working age persons (16 to 64) claiming Income Support Benefits has decreased from 4.7% in 2006, to 3.6% in 2011 and 2.5% in 2013. About 18.6% of the population were claiming benefits in 2013, down from 20.1% in 2010 (DWP 2014).
- 17.5% of households did not have any economically active persons in 2006. This fell to 16.1% in 2011, but rose back to 17.1% in 2012. This is still lower than the rate of workless households for London – 20.0% in 2006, 18.7% in 2011 and 17.5% in 2012 (ONS, 2013).
- 18.4% of children in Havering were living in workless families in 2012, a slight decrease from 2010 value of 18.7% (9200). Havering is doing considerably better than Outer London (33.2%) and better than London as a whole (22.9%). Of all younger age groups, the most vulnerable are those 0 to 4 years old, 23.6% of whom live in a family claiming out-of-work benefits (DWP, 2013).

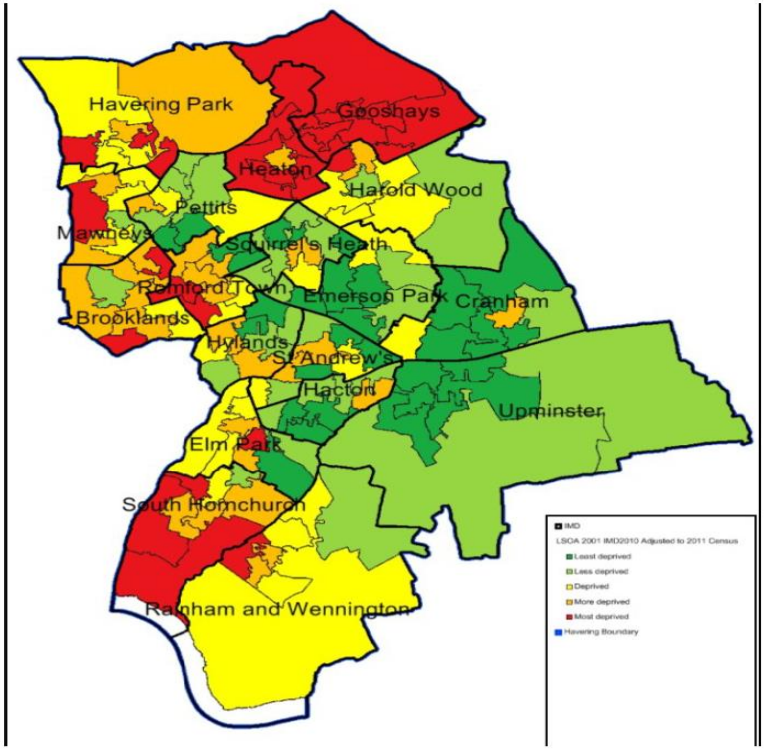


Figure 5: Index of Multiple Deprivation: local quintiles, 2011 census

- In 2012, 60.9% of primary school and 37.4% of secondary school pupils were entitled to Free School Meals (DCSF 2014).
- The rate of children looked after has decreased from 40 in 10,000 children aged under 18 in 2006 to 36 in 2012, and is better than Outer London rate (48) and London rate (55) (DfE 2013).
- The rate of new Personal Insolvencies per 1000 people was at 4.2 in 2001, but rose sharply to 19.6 in 2006 and is now falling slowly, with the rate in 2012 being 16.8. This trend is similar with London as a whole (Neighbourhood Statistics, 2012).
- Crime rates fell from 97.3 per 1000 people in 2001/02 to 87.6 by 2006/07 and a 62.3 in 2013/14 (MET 2014). However, violent crime, sexual offences and burglary have remained at similar levels in absolute numbers, and drug use accounts have doubled over the period (from 539 in 2001/02 to 903 in 2013/14). Accounts of criminal damage and fraud have seen the biggest reduction. Compared to London, Havering scores better on all accounts, and fairly similar to England and Wales values.
- The wards with crime rates above the borough average in 2012/13 were Romford Town (196.1 per 1000 people), Brooklands (80.1), Gooshays (78.0), St Andrew's (75.5), and South Hornchurch (72.8) (MET 2014).
- Ambulance service incidents recorded in 2013 and 2011 showed a decrease in all types of assault from 638 to 494, 22.57% decrease (London Ambulance Survey 2014). However, binge drinking incidents rose slightly from 616 to 642. Cocaine and Heroin overdose incidents have stayed roughly level, around five a year each.

In 2011, 10.74% of households in Havering were experiencing fuel poverty, in line with England average (10.90%), but above London average (9.86%) (PHOF, 2014)

B.9 Transportation

Policy Context

National		
The Future of Transport a Network for 2030: White Paper 2004	This White Paper looks at the factors that will shape travel, and our transport networks, over the next 30 years. It sets out how the Government will respond to existing pressures; safeguard our economic and social well-being and our environment. The strategy is built around three key themes: Sustained investment over the long term. Improvements in transport management. Planning ahead.	The Local Plan will need to consider the themes of the White Paper and promote sustainable transport which meet future needs
Creating Growth, cutting carbon, making sustainable transport happen: White Paper (2011)	The vision is for a transport system that is an engine for economic growth but one that is also greener and safer and improves quality of life in our communities. The Green Paper promotes the reduction of carbon emissions from transport at the local level, encourages more sustainable travel choices for shorter journeys and promotes electrification of the passenger car fleet in the longer term.	The Local Plan will need to promote sustainable transport that supports economic growth and reduces carbon emissions
National Planning Policy Framework 2012	Promoting sustainable transport is a core principle of the NPPF. Local Plans should actively manage patterns of growth, promoting public transport and walking/cycling. Encouragement should be given to growth that is directed towards more sustainable locations, which mitigate the need to travel and contribute towards healthy lifestyles. Plans that generate significant movement should ensure that public transport is maximised and pedestrian and cycle movements are prioritised. Local Authorities should safeguard sites and routes which are critical in maintaining choice of transport uses.	The Local Plan must be consistent with the NPPF. The Local Plan will need to promote sustainable transport options and seek to reduce the need to travel.
Regional		
London Plan 2011, Revised Early Minor Alterations 2012 and Draft Further Alterations to	The Overall aim is to have a city where it is easy, safe and convenient for everyone to access jobs, opportunities and facilities. The London Plan sets out an indicative list of transport schemes	The Local Plan is required to be in general conformity with the London Plan and its Alterations.

the London Plan 2014	such as Crossrail and sets out detailed car and cycle parking standards.	The Local Plan will need to promote sustainable transport and reflect the parking standards.
Mayor's Transport Strategy 2010	Six goals set out how the overarching vision should be implemented. The transport strategy should: Support economic development and population growth Enhance the quality of life for all Londoners Improve the safety and security of all Londoners Improve transport opportunities for all Londoners Reduce transport's contribution to climate change and improve its resilience Support delivery of the London 2012 Olympic and Paralympic Games and its legacy	The Local Plan will have regard to the principles and aspirations set out in the strategy.
Mayor's Cycle Safety Action Plan	Aims to reduce cycling casualties on London's Road by setting nine actions covering, cycling infrastructure, training and information, communication, enforcement, improved regulation, improved vehicle technology, commercial driving and working practices, improved research and monitoring and continued partnership working.	The Local Plan should have regard to the need for safe cycling.
Mayor's River Action Plan 2013	This plan outlines a number of specific measures to be taken by TfL and other stakeholders to help boost the number of river trips in line with achieving the Mayor's target of 12 million passenger journeys a year by 2020. This includes the extension of pier links up to Barking Riverside.	The Local Plan should have regard to the strategic promotion of the Blue Ribbon and river transport infrastructure growth.
Mayor's East and South East London Sub-regional Transport Plan - 2014 update	Supports a variety of projects and programmes aimed at improving transport in the East and South East London boroughs: Regeneration in London Riverside opportunity area, with possible projects such as London Overground Extension, junction improvements, river services pier, improved bus links into the wider boroughs, creation of a strategic cycle network with links to the Barking cycle hub, together with a potential station at Beam Park Olympic Transport Legacy Action Plan identified infrastructure improvements Crossrail Silvertown road tunnel and further river crossings work Romford Station Approach, Victoria Road and the Battis public realm improvements project	The Local Plan should have regard to the strategic and local transport infrastructure improvement programmes and projects, either already agreed or proposed, and their likely implications for development in the borough.

Baseline Information

Accessibility and Transport

- Of the 63,709 jobs in the borough in 2011, 31,928 were filled by local residents (50.11%), meaning Havering businesses are importing about half their workforce (Census 2011). The total number of people in employment in Havering was 91,856 meaning Havering is a net exporter of workforce. The main local authorities where people travelled for work are: Westminster and City of London (13.38%), Barking and Dagenham (7.74%), Tower Hamlets (5.89%), Redbridge (5.31%), Thurrock (3.99%), and Newham (3.88%) (Census 2011).
- In 2011, 23% of Havering's households had no car, while 44.2% had one car and 32.8% had two or more cars or vans (Census 2011). This level of car ownership (78%) is significantly above the Outer London average of 69.4% and the Greater London average of 58.3%. The proportion of households with two or more cars (28%) was greatly above the averages for Outer and Greater London – at 21% and 15% respectively. Overall, car ownership per household rating is at 1.2, whereas London is 0.8 and nationally it stands at 1.1 (Census 2011).
- Havering can be considered adequately accessible in terms of travel times, by various modes of transport, from residents' homes to key amenities, services and employment. Like most other London boroughs, Havering has no households which are over 8 km from a bank, building society, cash point, job centre, dentist or GP. All of our households are within 40 minutes travel from a centre of employment; 60 minutes travel from a hospital; 30 minutes travel from a supermarket; and all pupils are within 40 minutes travel of a secondary school. However, as of 2009 data, Havering saw 83% of working age people able to access employment by public transport – the joint lowest of London boroughs together with six other councils, and with the highest being 94%.

  Havering has six mainline railway stations – at Romford, Gidea Park, Harold Wood, Emerson Park, Upminster and Rainham – and four stations on the District line of the London Underground – at Elm Park, Hornchurch, Upminster Bridge and Upminster. This means the borough is generally well served between east and west, but leaves the northern areas of the borough (Collier Row and Harold Hill, for example) without rail links.

  Havering will benefit in coming years from the Crossrail services at three stations: Romford, Gidea Park, and Harold Wood. The Council is also the lead promoter for a new rail station at Beam Park in London Riverside as this would support the redevelopment and regeneration of this area.
- Havering is served by the M25 to the east and an extensive network of A-roads.
- Romford has the highest PTAL scores, given its frequent rail links to London and over 30 bus routes going through the town. Upminster is also a 'hotspot' for public transport accessibility but many parts of the borough are less well served by public transport.
- The main mode of travel to work remains the car, with 48.18% of people driving to work and a further 3.23% being driven to work and 1.08% taking a taxi. This is much higher than London rate of 28.03% drivers and 1.74% passengers, but lower than England rate of 57.01% drivers and 5.03% passengers. Taxies are used to travel to work by 0.51% of workers in London and 0.52% of workers in England (Census 2011).
- Only 0.9% of trips to work are made by bicycle and 6.27% on foot, while 3.58% of people work from home. By comparison, in London 4.04% of people cycle and 8.82% walk to work, while 5.07% work from home. In England, 2.95% of people cycle and 10.74% walk to work, with 5.36% working from home (Census 2011).
- Of public transport modes, rail is most popular with 18.03% of people travelling to work by train and 9.54% by underground. A further 7.72% travel to work by bus or coach (Census 2011).

- Most public transport-related suggestions for improving the borough that the Council received through the survey were about improving the buses and bus routes.
- The Your Council, Your Say survey found that road and pavement repairs were considered the aspect of the borough that most needs improving. Traffic congestion was also a prime concern for residents. When asked for suggestions for improving the borough, the most common topic that residents raised was parking, followed by pavements, then roads and potholes.
- There were 33 traffic counting points in Havering in 2013. Annual traffic flows in the borough have been oscillating over the last decade, with the trend showing no overall improvements compared to London where traffic levels have been constantly decreasing since 2003; in 2013 traffic in Havering was at 1,164 million vehicle kilometres. (DfT. 2014). But when excluding trunk road data, traffic is showing a decrease from its peak in 2006 (1040) to 1,014 in 2013 (DfT, 2014).

B.10 Economic Vitality, Employment and Skills

Policy Context

Economy and Employment		
National		
National Planning Policy Framework 2012	The NPPF places significant weight on the need to support economic growth through the planning system. To help achieve economic growth, local planning authorities should plan proactively to meet the development needs of business and support an economy fit for the 21st century. Planning policies should recognise and seek to address potential barriers to investment, including a poor environment or any lack of infrastructure, services or housing. Local Plans should take a flexible approach to employment allocations considering alternative uses if demand for a site does not materialise. Local Plans should create a hierarchy of centres that are resilient to future economic changes and promote healthy competition and customer choice.	The Local Plan will need to set out a clear economic vision and strategy for achieving sustainable economic growth. It will support existing business sectors, taking account of whether they are expanding or contracting and, where possible, identify and plan for new or emerging sectors likely to locate in the area.
Regional		
London Plan 2011, Revised Early Minor Alterations 2012 and Draft Further Alterations to the London Plan 2014	Sets out the Mayor's policies which policies seek to support development and growth of London's diverse economy, enabling it to contribute to the prosperity of the UK and provide Londoners with the goods, services and job opportunities they will need.	The Local Plan is required to be in general conformity with the London Plan and its Alterations.
Mayors Economic Development Strategy (2010)	The Mayor's vision is for London to be the best big city in the world. The Strategy sets out this vision with respect to the London economy, and how it can be realised. The Mayor's ambitions are for London to be the World Capital of Business, and to have the most competitive business environment in the world; to be one of the world's leading low carbon capitals, for all Londoners to share in London's economic success and for London to maximise the benefits of the 2012 Olympic and Paralympic games.	The Local Plan will need to have regard to the principles and aspirations set out in the strategy
London Enterprise Panel's Jobs and Growth Plan 2013	Sets out four key priorities: skills & employment: to ensure Londoners have the skills to compete for and sustain London's jobs; small & medium sized enterprises: to support and grow London's businesses;	The Local Plan will need to consider the priorities and integrate them into policies.

	science & technology: for the capital to be recognised globally as world leading hub; for science, technology and innovation - creating new jobs and growth; Infrastructure: to keep London moving and functioning.	
Land for Industry and Transport SPG 2012	The SPG provides guidance on industrial land requirements as well as on possibilities, appropriate processes and suitable locations for release of any surplus industrial land. The SPG further discusses how the requirements of different sectors can be addressed to enhance their competitiveness, and to carrying forward the Mayor's broader concerns for improvements to the overall quality of London's environment by emphasising the importance of good design for industrial development. The SPG also provides guidance to identify and protect land for transport functions including sites and routes which could be critical in developing infrastructure to widen transport choice.	The Local Plan will consider the principles and strategies contained in the SPG. The Guidance should be followed to ensure that the Local Plan is in general conformity with the London Plan.

Baseline Information

Education, Skills and Training:

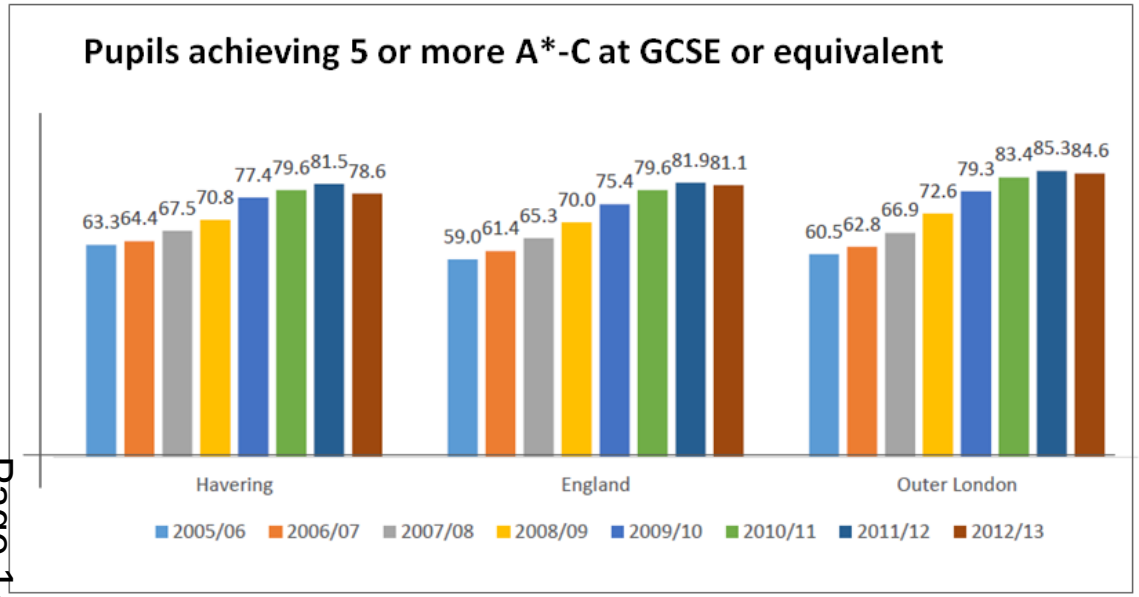
Havering currently has 419 Early Years Providers, which includes Private, Voluntary and Independent settings, Schools with Nursery Classes, Childminders, Out of School Clubs and Holiday Play schemes. Excluding Out of School and Play schemes, the number of Providers delivering the Early Education Entitlement is 146. Ofsted Inspection Data as at 31 March 2014 shows that 12% of these were rated as Outstanding, 64% as Good, 23% as Satisfactory, and only 1% as Inadequate (Ofsted, 2014).

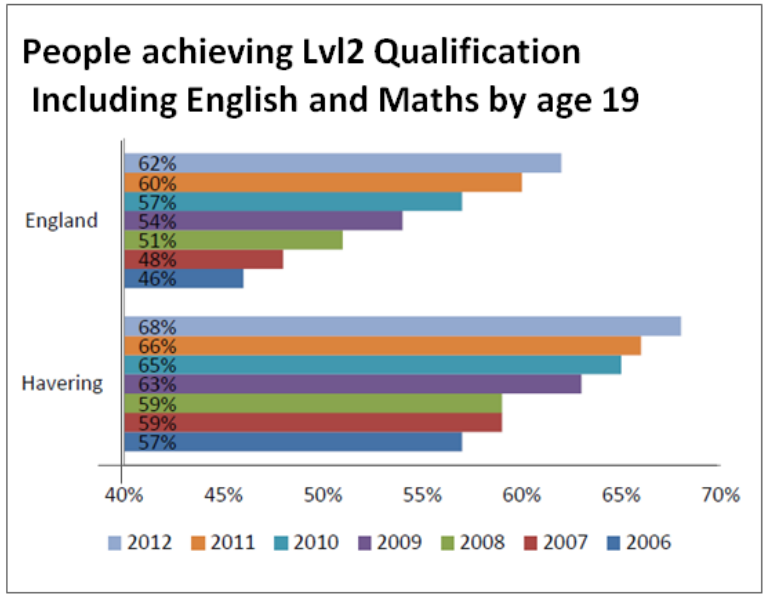
- Availability of childcare on a Borough wide basis continues to outstrip the number of 3 and 4 year olds. However, with the increasing population of under 5s, housing developments, and with Government extending Early Education Entitlement to about 40% of the two-year-olds nationally (around 1,130 2 year olds expected to qualify in Havering), pressure is increasing on place availability. Mawneys, Hylands, Harold Wood, Gooshays, Rainham & Wennington, Brooklands, Romford Town, Cranham wards are already experiencing increased provision need, with South Hornchurch and Havering Park wards expected to require further provision by 2020. The most common issue cited by current and prospecting developers is identifying proper sites where noise and increased parking/traffic would not cause a nuisance to existing residents. A lot of Providers, particularly sessional pre-schools, operate from hired facilities such as Church Halls, Community Halls and School sites.
- Havering has six children's centres. The centres work are paired into locality hubs, providing universal and early help services to three reach areas (north, central and southern Havering). Four children's centres were rated as having good overall effectiveness and two were graded as requiring improvement by Ofsted as at February 2014.
- In 2013 there were 37,602 pupils in Havering's 90 schools (DfE, 2013). 1.7% of these had a Statement of Special Educational Needs and a further 12.7% required special training through School Action programme.

- Of Havering's state funded schools, 59 are Primary, 18 are Secondary and 3 are Special Schools. There are also 6 Independent Schools and 4 Pupil referral units (DfE, 2013)
- Projected need for reception school places by 2015/16 is for 3,169, and 3,557 by 2020/21. Current capacity stands at 3,140 reception places per year, meaning there will be need for a further 196 places by 2015 and 604 by 2020 to maintain a +5% capacity. Since 2013/14 Havering has implemented an additional 12 forms of entry (FE) of primary school places, with a further 5 FE confirmed for future years. Furthermore, 810 places have been made available in additional bulge classes in order to meet the current demand for places. The Romford and Harold Hill primary planning areas are experiencing the greatest increase in demand for school places.
- Although Havering retains a statutory duty to ensure that there are enough school places available in the borough to accommodate all children who live here and might require one, it no longer has the powers to open new maintained schools. Thus, all new schools will need to be academies/free schools. Where the requirement for a new school in order to meet basic need is identified, the Local Authority will have to fund the purchase of any site and construction of a building to accommodate a free school.
- Demand for new secondary school places by 2015/16 is expected to be around 15,075, and grow to 17,070 by 2020/21. Current secondary capacity stands at 16,086 places, meaning that although there is a surplus of spaces for the short term, there will be a further 1,900 places needed by 2020 to maintain a +5% capacity.
- School travel planning updates show modal shift away from the car in 31 of the 90 primary schools in 2013 compared to 2012, but 20 schools showed increase in car use over the same period.

78.6% of pupils in Havering achieved 5 or more A*-C GCSEs at the end of Key Stage 4, in 2013. This is slightly below the London average of 84.6% and England average of 81.1% (ONS, 2013).

NVQ qualification Level 2 was attained by 21.2% of the population over 16 years old in 2011, 21.9% in 2012. This is an increase from 2006 value of 17.9% (ONS 2013).





Qualifications of Level 4 and above were achieved by only 19.4% of the population over 16 years in 2011, compared with 37.7% for London, and 27.3% for England. In 2013, this rate grew to 24.7% for Havering, 49.1% for London, and 35.0% for England (APS 2014).

- 26.4% of Havering's population over 16 years had no qualifications in 2011. By comparison, 17.6% of London's population over 16 had no qualifications (22.4% in England) in 2011 (Census 2011).
- For the period of 2011/12, in Havering, of the 1,880 students finishing KS5, 66% were looking to continue their education, with 56% targeting Higher Education Institutions, 6% Further Education Colleges, and 1% Sixth Form College, and 3% going for other training options (DfE 2012).
- Further education is provided in Havering through 'Havering College of Further and Higher Education', 'Havering Adult College' and 'Manor Park College', as well as a series of libraries and other centres. HAVCO, the local Council for Voluntary Services, provides free IT skills, employability and customer service training.
- On the job training is provided by 56% of employers (NESS 2013)
- Almost three quarters of the adult population have either no qualifications or Level 1 or 2, with less than a quarter having attained degrees. The no qualification level is heavily skewed by the 50-64 population, but there are relatively low levels of Level 4 and above qualified residents across all age brackets (HSES, 2014).
- There is a historically significant issue of early school leaving (16 or under) with over 50% of the adult population having left full-time education aged 16 or under. There has been a change somewhat in the percentage of those leaving education aged 16 or under over the last 4 years (2008-2012). However this trend is not wholly positive as it has been influenced by an increase in proportion of adults leaving education aged 17-19. The long term trend, however, means that Havering

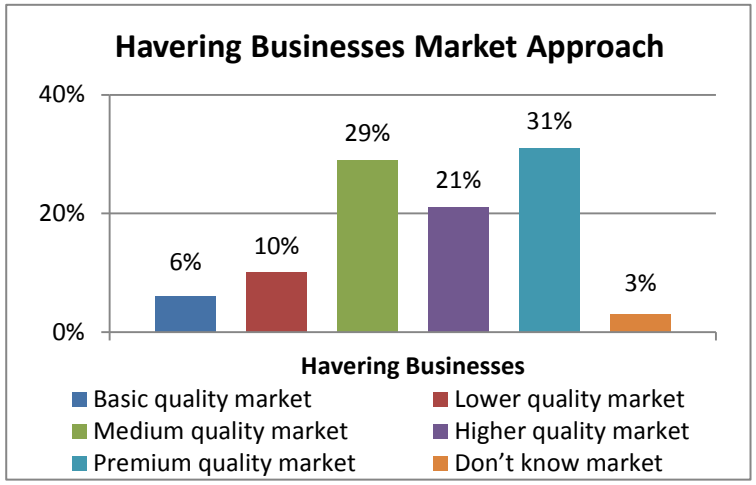
still has the highest proportion of adult population that left education aged 16 or under compared with neighbouring boroughs (Barking and Dagenham, Redbridge) and is significantly above the London average (24%) (HSES, 2014)

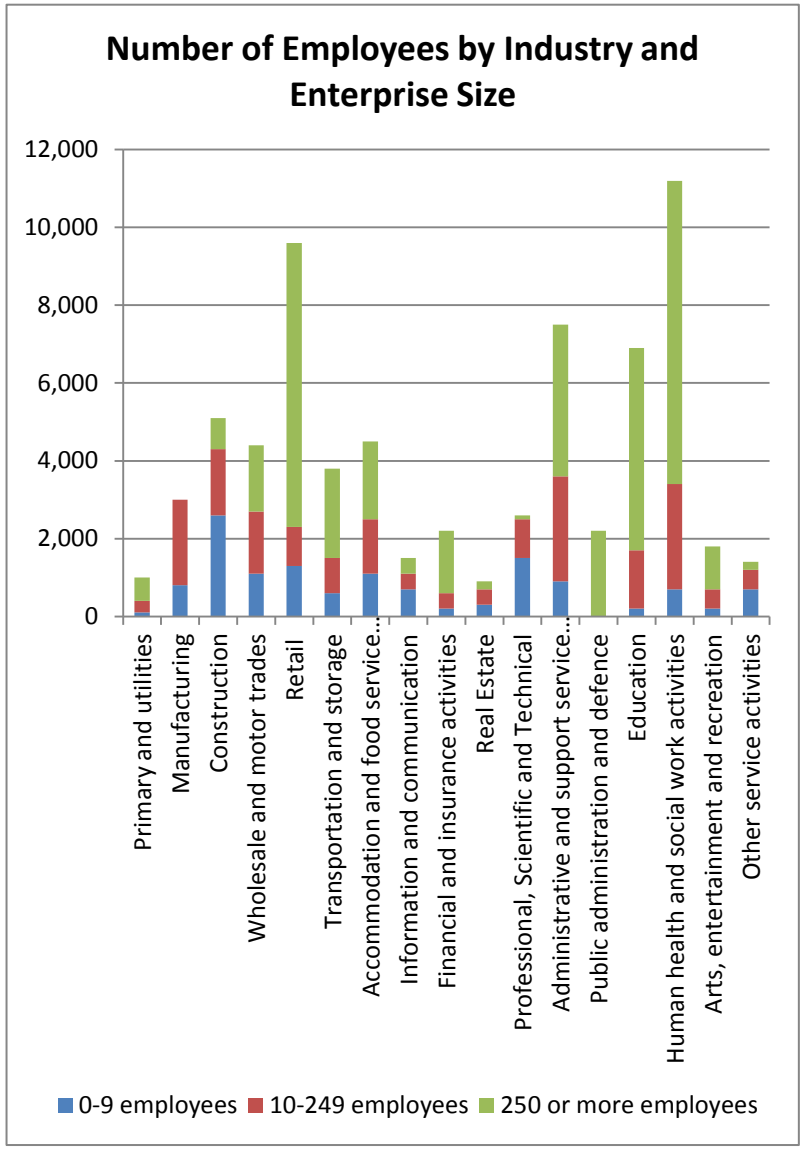
Businesses and Employment:

- In 2012 there were 8,390 active businesses in Havering, up from 7975 in 2008 (IDBR 2013). Of these, 2760 were active for more than 10 years and 1,885 were active for 4-9 years. 13.8% were not registered for VAT, compared to 16.26% of London businesses and 18.0% of England businesses (IDBR 2013).
- There were 1,085 births in 2012, an 8% increase since the previous year's 1,005 births (IDBR 2013). There were 975 deaths of businesses in Havering in 2012, compared with 840 in 2011, a 16% increase (IDBR 2013).
- 480 (5.72%) units had a turnover between £1mil and £4.99mil, while 125 (1.48%) had a turnover above £5mil (IDBR 2013).
- By size of workforce, 70.97% of businesses in Havering have 0-4 employees, 14.00% have 5-9 employees, 7.23% have 10-19 employees, and 4.84% have 20 to 49 employees. There are 20 businesses with 250 to 499 employees and 15 with over 500 employees (IDBR 2013).

Employment market size (including self-employed) in Havering has fallen from around 75,000 jobs in 2006 to around 69,700 in 2011 (ONS 2012), but is projected to rise to 71,000 by 2026 and 72,000 by 2031 (GLA 2013). The self-employed market has decreased as well from 16,000 in 2006 to 12,000 in 2011 (ONS 2012), with a projected comeback to 2006 levels by 2026 and increase to 17,000 by 2031 (GLA, 2013).

- The Employer Skills Survey 2013 indicates that local businesses see themselves as highly competitive, with 31% of consider they are competing in a market for premium quality products or services and 21% considering they are competing in a higher quality market.
- The main employment sectors in Havering are Human Health and Social Care Work Activities, Retail, Administrative and





Support Service Activities, Education and Construction. When looked at by enterprise size, the main industries for small unites (up to 9 employees) are Construction, Professional Scientific and Technical, and Retail; for medium units (10 to 249 employees) the main sectors are Human Health and Social Work Activities, Administrative and Support Service Activities, and Manufacturing; large enterprises (over 250 employees) operate mainly in Human Health and Social Work Activities, Retail, and Education (IDBR 2013).

- London is a global city and is highly attractive for businesses. The Index of employee growth showed an increase of 3% in 2012/13, compared with 1.2% for South East Region and 1.3% for the whole of the UK. -GLA estimates the largest growth in the London's jobs market over the next two decades to be in the following sectors: Professions, Real Estate, Scientific and Technical Activities; Information and Technology; Accommodation and Food Services Activities; and Administrative and Support Service Activities. Some growth is anticipated in Education, Heath, Retail, Arts Entertainment and Recreation, and Other Services, while considerable reductions would be expected in Manufacturing and Primary & Utilities sectors (GLA 2013).
- Jobs density in 2011 was 0.6, in line with Outer London average value, but lower than London value of 0.9 and national value of 0.8 (ONS 2013).
- The Annual Population Survey (APS) for 2012/13 found that 71.2% of Havering's working age population are employed with a further 7.4% being economically active (though not in employment). 21.4% of the population is therefore economically inactive. This is in comparison to 73% employed in 2011/12 a further 6% being economically active and 21% economically inactive. Workless households grew from 16.1% in 2011 to 17.1% in 2012, and are in line with London rate of 17.5%, but higher than Outer London rate of 15.1% (ONS 2013).

Of the economically inactive in 2011, 49.31% were retired, 16.92% were looking after home or family, 16.05% were students, and 10.92% were long term sick or disabled (Census 2011).

Of Havering's working age population, 16.8% are disabled, with 9.4% being both DDA and work-limiting disabled (ONS 2013). Of these, 58.5% are economically active (52.8% in employment), 8.9% are unemployed, with the remaining 41.5% being economically inactive.

- Long term unemployment and non-working is lower in Havering (4.7%) than Outer London (7.6%) and London (8.3%) averages. As of November 2013, 2.5% of working age residents were on Jobseekers' Allowance which is a lower rate than national (2.8%) or London averages (3.1%) (ONS 2014).
- Young people (16-18 year olds) not in employment, education or training rate was 4.3% in 2013, down from 4.5% in 2011 (DfE, 2014).
- The National Employer Skills Survey 2013 identified around 6% of businesses in Havering have at least one vacancy that is hard to fill (0.6% of vacancies), and 5% are reporting a skills shortage vacancy (0.5% of vacancies).
- Average number of vacancies per business unit in Havering is 1.6, and vacancy density (vacancies as % of current staff) of 30% or more are reported by 8% of businesses (NESS 2013).
- Of the hard to fill vacancies, 53.6% are for Professional Occupations, 10.7% in the Skilled Trades Occupations, 10.8% in Sales and Customer Services; only 3.2% hard to fill managerial vacancies. Of the reasons why a vacancy is hard to fill in Havering, the top most cited are: Low number of applicants with the required skills (56%), Lack of work experience the company demands (54%), Low number of applicants generally (19%), Lack of qualifications the company demands (18%), and Poor terms and conditions (e.g. pay) offered for post (18%) (NESS 2013).
- The main reasons cited for a skills gap in current workforce are: staff training is currently only partial (67%), workers new to the role (65%), introduction of new working practice (46%), worker lack of motivation (33%), staff have not received the appropriate training (32%), introduction of new technologies (30%). Workers

inability to improve after receiving training was cited by 29% of employers, and inability to recruit staff with the required skills was a problem for 20% of employers (NESS 2013).

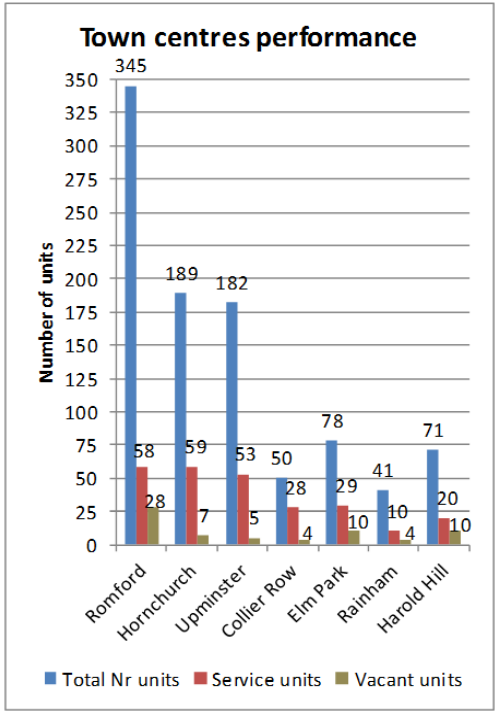
- In the case of 16 year olds employed, 74% of businesses report no skills gap, compared to the England average of 64%, and for 17 and 18 year olds 85% of employers were happy with their skills (compared to 71% for England). The main skills gap identified for these age groups are poor attitude and motivation, and lack of working world/life experience or maturity, with a few reporting lack of required skills or competencies (NESS 2013).
- Businesses reported high satisfaction with higher educated employees, with 95% of people hired from university or higher education being well to very well prepared, higher than England average of 83%. However, the number staff with level 4 qualifications as proportion of all staff was 50% or more for only 27% of businesses in Havering, and 46% businesses had less than 20% of staff with level 4 qualifications (NESS 2013).
- Median weekly earnings for Havering residents increased between 2006 and 2011 from £424 to £505, but the value for 2013 stood at £490. When considering full time and part time separately, the trend shows constant growth in both sectors, meaning the decrease for 2013 median value is due to more people working part time (ONS 2013). The London median weekly earnings in 2011 were £517 and grew to £523 by 2013; England average earnings grew to £419 in 2013.
- Equality of pay between males and females (in full time employment) is better in Havering than London and England, and the gap has been decreasing from about £48 in 2011 to females earning roughly the same as males in 2013 (ONS 2013).

Town Centres:

The London Plan 2011 identifies Romford as one of London's 12 Metropolitan centres, and Collier Row, Elm Park, Harold Hill, Hornchurch, Rainham and Upminster as Havering's six District centres. In addition to this, Havering has a network of 79 major and minor local centres, providing amenities that are conveniently located for day-to-day needs, less mobile, disabled and older residents.

The classification of the Harold Hill, Rainham and Elm Park as District Centres is subject to Monitoring by the GLA.

- The main retail competition is Lakeside shopping centre in Thurrock, Bluewater in Kent, and more recently, Westfield Stratford City – the largest urban shopping centre in Europe, which is 10-20 minutes from Romford by train.
- Romford town centre also contains the Romford Conservation Area that is considered at risk and is under monitoring.
- Havering's other town centres, together with Romford, serve an important role in providing leisure activities, along with retail and services. The largest concentration of leisure uses is in Hornchurch, with 58 units accounting for 30.7% of total units in this centre (LDC, October 2014). Romford has 66 leisure units, representing 17.6% of total units (LDC, October 2014). Upminster is also an important leisure hub, with 46 leisure units representing 25.8% of the centre's total units (LDC, October 2014).



Task 3: Identified Sustainability Issues

The following key sustainability issues have been identified, drawing on the context review and baseline data presented above.

Theme	Key Issues
1. SOCIAL DIMENSION	
Population Growth	• Population will grow, with younger (0 to 15) and older (over 65) groups seeing the largest increase, which means there is a need to consider appropriate housing and infrastructure developments to meet the needs of these groups. • Population is diversifying, which may give rise to different cultural needs – social infrastructure must be flexible enough to accommodate change.
Housing	• More people turning to Private Renting Sector following the revision of the Council's Allocation Policy • Less affordability of homes elsewhere in London is driving in-migration. • Homelessness in the borough. • The housing mix (tenure, size and services) should reflect identified need and demand. • Affordability of housing for local residents • Growth of the Private Rented Sector, its quality and affordability. • Appropriate provision and accessibility to supported housing to meet needs and mitigate costly alternatives.

Health and Wellbeing	• An increasing and aging population and appropriate provision of health and social care services in accessible locations. • Accessibility to public transport, services and employment. • Low participation in sports in the borough. • Access to open space and nature.
Culture and Community	• Some residents are not satisfied with their local area. • Changing demographics and the impact on community facilities
Education, Skills and Training	• The growth in population under 16 years means there is an increasing pressure to provide additional places for Early Years, Primary and Secondary education, with Primary level being the hardest affected. • Access to higher education • Low level of adult qualifications and impact on employment opportunities.
Deprivation, Poverty and Crime	• The borough is largely affluent but has some areas of deprivation at South Hornchurch and Harold Hill, and around Romford • 18.6% of the population is claiming benefits, with 2.5% claiming Income Support Benefits. • The overall crime rate is falling, but some types of violent crime remain a concern and a few wards have higher crime rate than the borough average.

2. ECONOMIC DIMENSIONS	
Businesses and Employment	• Provision of jobs for local people within the borough • Diversity of the local economy • Long term unemployment and lack of skills. • Some businesses have difficulties filling vacancies due to problems of access to properly qualified workforce. • Havering is a net exporter of employees and only about half the jobs available within Havering are held by local residents.
Transport	• Some areas of the borough are not well served by access to rail. • North to south public transport links in the borough are poor • Public transport accessibility for people with mobility concerns • Bus service provision and reliability in parts of the Borough • As an outer London borough, there is greater reliance on the car as a means of transport.
Town Centres	• Elm Park, Harold Hill and Rainham are under monitoring by the GLA. • Harold Hill has high vacancy rates. • Protecting and enhancing Romford's character and performance as a metropolitan centre and its role as the economic hub of the Borough. • Competition from other centres outside of the Borough such as Bluewater, Westfield Stratford City and Lakeside. • Town centres' ability to satisfy the need for leisure and cultural activities.

3. ENVIRONMENTAL DIMENSIONS	
Biodiversity and Geodiversity	• Protection and enhancement of green infrastructure and biodiversity • Protection of protected habitats and species • Management of water quality of Havering's rivers, in line with existing and emerging plans.
Open and Green Spaces	• Protection and enhancement of appropriate parks and open spaces throughout the borough. • Support for Thames Chase Community Forest and All London Green Grid • Protection of Metropolitan Green Belt • Improve access to open space and nature for people • Increasing pressures on land for different uses to meet the needs on of an increasing population • Securing the continued work of open space and nature conservation charities in the borough.
Heritage	• Protection and enhancement of Heritage assets. • Heritage assets at risk from neglect or decay, as identified by the heritage at risk register • Heritage assets at risk from development pressures, particularly Romford Conservation Area • Securing the continued work of heritage management groups such as charities, civic societies and other voluntary groups.
Natural Resources	• Protection of natural resources • Aggregate extraction targets
Climate Change and Flooding	• Energy efficiency and reduction of energy consumption • Management of demand for water • Large parts of the borough are at risk of flooding and more severe flooding incidences, potential heatwaves and water shortages are anticipated in London due to climate change. • Need to raise tidal flood defences, safeguard land for future flood defence works and improve fluvial flood defences to protect the borough from the increased risk of flooding as a result of climate change • Insufficient flood storage areas' capacity • Increased risk of surface water flooding

	• Traffic related emissions are high along A-roads and the section of M25 that passes through the borough, and around town centres.
Pollution	• Havering's rivers are typically of poor water quality • The whole of the borough is designated as an Air Quality Management Area. • The main sources of pollution are road transport and construction related activities. • Development of possibly contaminated lands released from industrial use.
Waste and Recycling	• Over a third of all household waste is recycled, re-used or composted • 30% of waste contracted by the East London Waste Authorities (ELWA) is sent to landfills. • Increasing population and the impact on waste generation and management, in both financial and environmental terms

1. Introduction

1.1 Background to the Project

AECOM was appointed by the London Borough of Havering to assist the Council in undertaking a Habitats Regulations Assessment of its Local Plan (hereafter referred to as the 'Plan' or 'Local Plan'). The objective of this assessment was to identify any aspects of the Plan that would cause an adverse effect on the integrity of Natura 2000 sites, otherwise known as European sites (Special Areas of Conservation (SACs), Special Protection Areas (SPAs) and, as a matter of Government policy, Ramsar sites), either in isolation or in combination with other plans and projects, and to advise on appropriate policy mechanisms for delivering mitigation where such effects were identified.

1.2 Legislation

The need for Appropriate Assessment is set out within Article 6 of the EC Habitats Directive 1992, and interpreted into British law by the Conservation of Habitats and Species Regulations 2010. The ultimate aim of the Directive is to "*maintain or restore, at favourable conservation status, natural habitats and species of wild fauna and flora of Community interest"* (Habitats Directive, Article 2(2)). This aim relates to habitats and species, not the European sites themselves, although the sites have a significant role in delivering favourable conservation status.

The Habitats Directive applies the precautionary principle to European sites. Plans and projects can only be permitted having ascertained that there will be no adverse effect on the integrity of the site(s) in question. Plans and projects with predicted adverse impacts on European sites may still be permitted if there are no alternatives to them and there are Imperative Reasons of Overriding Public Interest (IROPI) as to why they should go ahead. In such cases, compensation would be necessary to ensure the overall integrity of the site network.

In order to ascertain whether or not site integrity will be affected, an Appropriate Assessment should be undertaken of the plan or project in question:

Box 1: The legislative basis for Appropriate Assessment

Habitats Directive 1992

Article 6 (3) states that:

"Any plan or project not directly connected with or necessary to the management of the site but likely to have a significant effect thereon, either individually or in combination with other plans or projects, shall be subject to appropriate assessment of its implications for the site in view of the site's conservation objectives."

Conservation of Habitats and Species Regulations 2010

The Regulations state that:

"*A competent authority, before deciding to … give any consent for a plan or project which is likely to have a significant effect on a European site … shall make an appropriate assessment of the implications for the site in view of that sites conservation objectives… The authority shall agree to the plan or project only after having ascertained that it will not adversely affect the integrity of the European site*".

Over time the phrase 'Habitats Regulations Assessment' (HRA) has come into wide currency to describe the overall process set out in the Habitats Directive from screening through to IROPI. This has arisen in order to distinguish the process from the individual stage described in the law as an 'Appropriate Assessment'. Throughout this report we use the term HRA for the overall process and restrict the use of Appropriate Assessment to the specific stage of that name.

1.3 Scope of the Project

There is no pre-defined guidance that dictates the physical scope of a HRA of a Plan document. Therefore, in considering the physical scope of the assessment, we were guided primarily by the identified impact pathways (called the source-pathway-receptor model) rather than by arbitrary 'zones'. Current guidance suggests that the following European sites be included in the scope of assessment:

- All sites within the Havering borough boundary; and,
- Other sites shown to be linked to development within the borough boundary through a known 'pathway' (discussed below).

Briefly defined, pathways are routes by which a change in activity provided within a Local Plan document can lead to an effect upon an internationally designated site. Guidance from the former Department of Communities and Local Government states that the HRA should be '*proportionate to the geographical scope of the [plan policy]*' and that '*an AA need not be done in any more detail, or using more resources, than is useful for its purpose*' (CLG, 2006, p.6). More recently, the Court of Appeal[1] ruled that providing the Council (competent authority) was duly satisfied that proposed mitigation could be '*achieved in practice'* to satisfy that the proposed development would have no adverse effect, then this would suffice. This ruling has since been applied to a planning permission (rather than a Core Strategy document)[2]. In this case the High Court ruled that for 'a multistage process, so long as there is sufficient information at any particular stage to enable the authority to be satisfied that the proposed mitigation can be achieved in practice it is not necessary for all matters concerning mitigation to be fully resolved before a decision maker is able to conclude that a development will satisfy the requirements of Reg 61 of the Habitats Regulations'.

There are no European sites that lie within London Borough of Havering. Outside the borough, the nearest European site is Epping Forest SAC located 6.5km to the north-west. This site is therefore discussed in the analysis for completeness.

The Thames Estuary and Marshes SPA and Ramsar site is located 10km south east of Havering. This was given preliminary consideration but is considered to be too far from the borough for Havering to form part of its core regular recreational catchment[3]. Wastewater impacts from London population growth were considered, but Thames Water have invested extensively in infrastructure (such as expansions to Beckton, Mogden and Crossness Sewage Treatment Works, the Lee Tunnel and the Thames Tunnel) to ensure that water quality in the River Thames (and thus the SPA/Ramsar site downstream) improves notwithstanding the expected increase in the population of the catchment of WwTW that discharge to the tidal river.

The reasons for designation of Epping Forest SAC, together with current trends in habitat quality and pressures on the sites are indicated in Chapter 5.

In order to fully inform the screening process, a number of recent studies have been consulted to determine likely significant effects that could arise from the Havering Local Plan. These include:

- Redbridge Local Plan 2015-2030 Pre-submission Draft (July, 2016)
- Redbridge Local Plan 2015-2030 Habitats Regulations Assessment (Argus Ecology, February 2017)
- Barking and Dagenham Core Strategy (DPD) 2010-2025 (July, 2010)
- Brentwood Draft Local Plan in Consultation (2016)
- Waltham Forest Local Plan Core Strategy (Adopted March, 2012)
- Enfield Local Plan Core Strategy (2010)
- Epping Forest District Draft Local Plan (October, 2016)
- Recreational activity, tourism and European site recreational catchment data.

[2] High Court case of R (Devon Wildlife Trust) v Teignbridge District Council, 28 July 2015
[3] There does not appear to have been visitor survey of the part of the SPA in Thurrock but the much larger area of SPA in Kent has been surveyed and a core catchment of 6km has been identified. it is reasonable to assume that the Thurrock part of the SPA has a similar catchment (possibly smaller since the site itself is smaller and therefore possibly less appealing) in which case the main population centres of Havering would be well outside the core catchment as the closest (Cranham) is 13km away

1.4 This Report

Chapter 2 of this report explains the process by which the HRA has been carried out. Chapter 3 explores the relevant pathways of impact. Chapter 4 contains an initial sift of Local Plan policies to determine which present potential scope for impacts on European sites. Chapter 5 then provide more detailed screening (likely significant effects assessment) of each impact pathway. Each chapter begins with a consideration of the interest features and ecological condition of the site and of the environmental processes essential to maintain their integrity. An assessment of the Plan in respect of the European site is then carried out; mitigation strategies are proposed where necessary[4]. The key findings are summarised in Chapter 6: Overall Conclusions.

[4] Legal precedent confirms that it is perfectly acceptable to reference mitigation measures at the screening stage of HRA, if that is the stage at which they can be identified.

2. Methodology

2.1 Introduction

The HRA has been carried out in the continuing absence of formal central Government guidance, although general EC guidance on HRA does exist[5]. The former Department of Communities and Local Government (DCLG) released a consultation paper on the Appropriate Assessment of Plans in 2006[6]. As yet, no further formal guidance has emerged. However, Natural England has produced its own internal guidance[7] as has the RSPB[8]. Both of these have been referred to alongside the guidance outlined in paragraph 1.2.3 in undertaking this HRA.

Figure 1 below outlines the stages of HRA according to current draft DCLG guidance. The stages are essentially iterative, being revisited as necessary in response to more detailed information, recommendations and any relevant changes to the plan until no significant adverse effects remain.

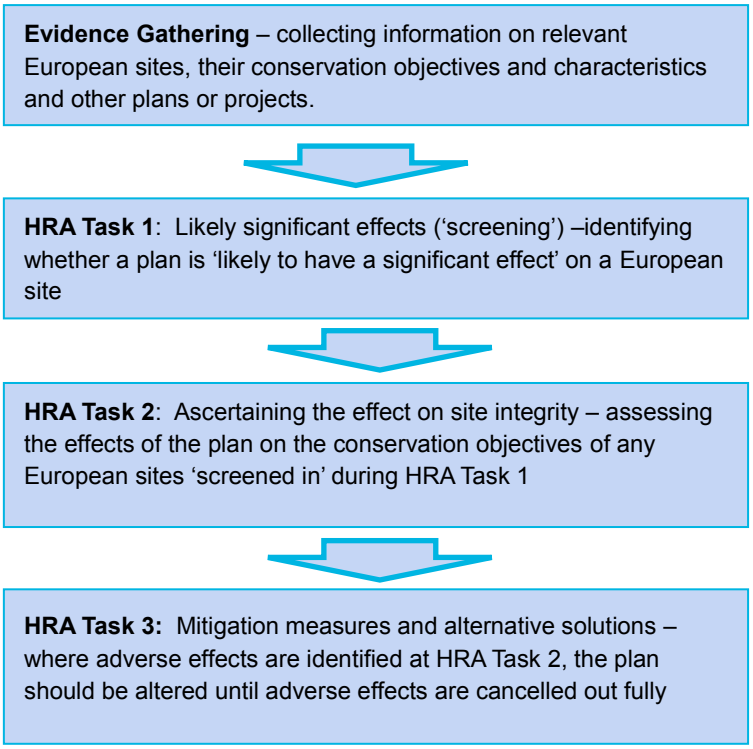

Figure 1: Four Stage Approach to Habitats Regulations Assessment. Source CLG, 2006.

2.2 HRA Task 1 – Likely Significant Effects (LSE)

Following evidence gathering, the first stage of any Habitat Regulations Assessment is a Likely Significant Effect (LSE) test - essentially a risk assessment to decide whether the full subsequent stage known as Appropriate Assessment is required. The essential question is:

"Is the Plan, either alone or in combination with other relevant projects and plans, likely to result in a significant effect upon European sites?"

The objective is to 'screen out' those plans and projects that can, without any detailed appraisal, be said to be unlikely to result in significant adverse effects upon European sites, usually because there is no mechanism for an adverse interaction with European sites.

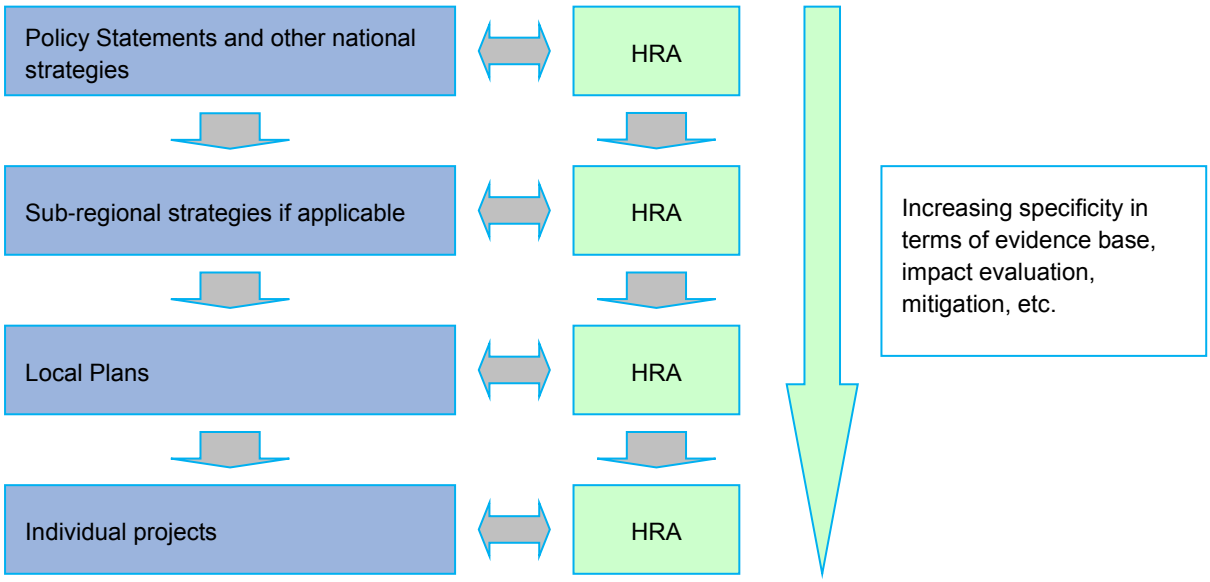
In evaluating significance, AECOM have relied on our professional judgement as well as the results of previous stakeholder consultation regarding development impacts on the European sites considered within this assessment.

The level of detail in land use plans concerning developments that will be permitted under the plans will never be sufficient to make a detailed quantification of adverse effects. Therefore, we have again taken a precautionary approach (in the absence of more precise data) assuming as the default position that if an adverse effect cannot be confidently ruled out, avoidance or mitigation measures must be provided. This is in line with the former Department of Communities and Local Government guidance and Court rulings that the level of detail of the assessment, whilst meeting the relevant requirements of the Conservation Regulations, should be 'appropriate' to the level of plan or project that it addresses. This 'tiering' of assessment is summarised in Box 2.

Box 2: Tiering in HRA of Land Use Plans



When discussing 'mitigation' for a Local Plan document, one is concerned primarily with the policy framework to enable the delivery of such mitigation rather than the details of the mitigation measures themselves since the Local Plan document is a high-level policy document.

2.3 Principal Other Plans and Projects That May Act 'In Combination'

It is neither practical nor necessary to assess the 'in combination' effects of the Plan within the context of all other plans and projects within Havering and the neighbouring local authorities in Greater London. In practice, therefore in combination assessment is of greatest relevance when the plan would otherwise be screened out because its individual contribution is inconsequential. For the purposes of this assessment, we have determined that, due to the nature of the identified impacts, the key other plans and projects relate to the additional housing and commercial/industrial allocations proposed for other relevant authorities over the lifetime of the Local Plan, particularly those presented within Table 1 below;.

Table 1: Housing levels to be delivered across the surrounding authorities, provided for context.

Local Authority	Total housing provided
London Borough of Havering	17,550 new homes within plan period 2017 to 2031/2
London Borough of Enfield	11,000 new homes within plan period 2010/11 to 2024/25
London Borough of Waltham Forest	10,320 new homes within plan period 2011 to 2026
London Borough of Redbridge	16,845 new homes within plan period 2015 to 2030

London Borough of Barking and Dagenham	17,850 new homes within plan period 2010/11 to 2024/25
Brentwood Borough Council	7,240 new homes within plan period 2013 to 2033
Epping Forest District Council	11,400 new homes (subject to change) within the plan period 2011-2033

There are other plans and projects that are relevant to the 'in combination' assessment most notably Thames Water's Final Water Resource Management Plan (WRMP) 2015-2040 (2014). These are all taken into account in this assessment.

The Minerals and Waste Development Frameworks for Essex is also of some relevance, since it may well contribute to increased vehicle movements on the road network within East Herts (and thereby contribute to air quality impacts). The Essex Local Transport Plan to 2031 will also be important in influencing vehicle movements on the highways network in the short term. However, the major impact is likely to be that of housing and commercial development within the surrounding local authorities as set out in Local Plans and these have therefore been the main focus of cumulative 'in combination' effects with regard to this HRA. In this context, we have also consulted the London Plan (Consolidated with Alterations 2016).

In relation to recreational activity, the following documents have been consulted for their plans and projects that may affect European sites in combination with development in Havering: Epping Forest Management Plan and visitor surveys[9];

[9] At time of writing the Corporation of London have commissioned an analysis of their existing visitor survey data which is likely to identify a requirement for further surveys to refine the recreational catchment of Epping Forest SAC

3. Pathways of Impact

3.1 Introduction

In carrying out a HRA it is important to determine the various ways in which land use plans can impact internationally designated sites by following the pathways along which development can be connected with internationally designated sites, in some cases many kilometres distant. Briefly defined, pathways are routes by which change in activity associated with a development can lead to an effect upon an internationally designated site. Following screening of the Plan, the following impact pathways are considered within this document.

Impact pathways for consideration are:

- Recreational pressure
- Atmospheric pollution

3.2 Recreational pressure

Different types of internationally designated sites are subject to different types of recreational pressures and have different vulnerabilities. Studies across a range of species have shown that effects from recreation can be complex.

Most types of terrestrial internationally designated site can be affected by trampling, which in turn causes soil compaction and erosion. Walkers with dogs contribute to pressure on sites through nutrient enrichment via dog fouling and also have potential to cause greater disturbance to fauna as dogs are less likely to keep to marked footpaths and move more erratically. Motorcycle scrambling and off-road vehicle use can cause serious erosion, as well as disturbance to sensitive species.

There have been several papers published that empirically demonstrate that damage to vegetation in woodlands and other habitats can be caused by vehicles, walkers, horses and cyclists:

- Wilson & Seney (1994)[10] examined the degree of track erosion caused by hikers, motorcycles, horses and cyclists from 108 plots along tracks in the Gallatin National Forest, Montana. Although the results proved difficult to interpret, it was concluded that horses and hikers disturbed more sediment on wet tracks, and therefore caused more erosion, than motorcycles and bicycles.

- Cole et al (1995a, b)[11] conducted experimental off-track trampling in 18 closed forest, dwarf scrub and meadow and grassland communities (each tramped between 0 – 500 times) over five mountain regions in the US. Vegetation cover was assessed two weeks and one year after trampling, and an inverse relationship with trampling intensity was discovered, although this relationship was weaker after one year than two weeks indicating some recovery of the vegetation. Differences in plant morphological characteristics were found to explain more variation in response between different vegetation types than soil and topographic factors. Low-growing, mat-forming grasses regained their cover best after two weeks and were considered most resistant to trampling, while tall forbs (non-woody vascular plants other than grasses, sedges, rushes and ferns) were considered least resistant. Cover of hemicryptophytes and geophytes (plants with buds below the soil surface) was heavily reduced after two weeks, but had recovered well after one year and as such these were considered most resilient to trampling. Chamaephytes (plants with buds above the soil surface) were least resilient to trampling. It was concluded that these would be the least tolerant of a regular cycle of disturbance.

- Cole (1995c)[12] conducted a follow-up study (in 4 vegetation types) in which shoe type (trainers or walking boots) and trampler weight were varied. Although immediate damage was greater with walking boots, there was no significant difference after one year. Heavier tramplers caused a greater reduction in vegetation height than lighter tramplers, but there was no difference in effect on cover.

[12] Cole, D.N. (1995c) Recreational trampling experiments: effects of trampler weight and shoe type. Research Note INT-RN-425. U.S. Forest Service, Intermountain Research Station, Utah

- Cole & Spildie (1998)[13] experimentally compared the effects of off-track trampling by hiker and horse (at two intensities – 25 and 150 passes) in two woodland vegetation types (one with an erect forb understorey and one with a low shrub understorey). Horse traffic was found to cause the largest reduction in vegetation cover. The forb-dominated vegetation suffered greatest disturbance, but recovered rapidly. Higher trampling intensities caused more disturbance.

The total volume of dog faeces deposited on sites can be surprisingly large. For example, at Burnham Beeches National Nature Reserve over one year, Barnard[14] estimated the total amounts of urine and faeces from dogs as 30,000 litres and 60 tonnes respectively. The specific impact on Epping Forest SAC has not been quantified from local studies; however, the fact that habitats for which the SAC is designated appear to be subject already to excessive nitrogen deposition, suggests that additional source of nutrient enrichment (including uncollected dog faeces) will make a cumulative contribution to overall enrichment. Any such contribution must then be considered within the context of other recreational sources of impact on sites.

3.3 Atmospheric Pollution

The main pollutants of concern for European sites are oxides of nitrogen (NOx), ammonia (NH3) and sulphur dioxide (SO2). NOx can have a directly toxic effect upon vegetation. In addition, greater NOx or ammonia concentrations within the atmosphere will lead to greater rates of nitrogen deposition to soils. An increase in the deposition of nitrogen from the atmosphere to soils is generally regarded to lead to an increase in soil fertility, which can have a serious deleterious effect on the quality of semi-natural, nitrogen-limited terrestrial habitats.

Table 2: Main sources and effects of air pollutants on habitats and species

Pollutant	Source	Effects on habitats and species
Acid deposition	SO2, NOx and ammonia all contribute to acid deposition. Although future trends in S emissions and subsequent deposition to terrestrial and aquatic ecosystems will continue to decline, it is likely that increased N emissions may cancel out any gains produced by reduced S levels.	Can affect habitats and species through both wet (acid rain) and dry deposition. Some sites will be more at risk than others depending on soil type, bed rock geology, weathering rate and buffering capacity.
Ammonia (NH3)	Ammonia is released following decomposition and volatilisation of animal wastes. It is a naturally occurring trace gas, but levels have increased considerably with expansion in numbers of agricultural livestock. Ammonia reacts with acid pollutants such as the products of SO_2 and NOX emissions to produce fine ammonium (NH_4+) - containing aerosol which may be transferred much longer distances (can therefore be a significant trans-boundary issue.)	Adverse effects are as a result of nitrogen deposition leading to eutrophication. As emissions mostly occur at ground level in the rural environment and NH_3 is rapidly deposited, some of the most acute problems of NH3 deposition are for small relict nature reserves located in intensive agricultural landscapes.
Nitrogen oxides NOx	Nitrogen oxides are mostly produced in combustion processes. About one quarter of the UK's emissions are from power stations, one-half from motor vehicles, and the rest from other industrial and domestic combustion processes.	Deposition of nitrogen compounds (nitrates (NO_3), nitrogen dioxide (NO_2) and nitric acid (HNO_3)) can lead to both soil and freshwater acidification. In addition, NOx can cause eutrophication of soils and water. This alters the species composition of plant communities and can eliminate sensitive species.
Nitrogen (N) deposition	The pollutants that contribute to nitrogen deposition derive mainly from NOX and NH_3 emissions. These pollutants cause acidification (see also acid deposition) as well as eutrophication.	Species-rich plant communities with relatively high proportions of slow-growing perennial species and bryophytes are most at risk from N eutrophication, due to its promotion of competitive and invasive species which can

[13] Cole, D.N., Spildie, D.R. (1998) Hiker, horse and llama trampling effects on native vegetation in Montana, USA. *Journal of Environmental Management* 53: 61-71

[14] Barnard, A. (2003) Getting the Facts - Dog Walking and Visitor Number Surveys at Burnham Beeches and their Implications for the Management Process. *Countryside Recreation*, 11, 16 - 19

		respond readily to elevated levels of N. N deposition can also increase the risk of damage from abiotic factors, e.g. drought and frost.
Ozone (O_3)	A secondary pollutant generated by photochemical reactions from NOx and volatile organic compounds (VOCs). These are mainly released by the combustion of fossil fuels. The increase in combustion of fossil fuels in the UK has led to a large increase in background ozone concentration, leading to an increased number of days when levels across the region are above 40ppb. Reducing ozone pollution is believed to require action at international level to reduce levels of the precursors that form ozone.	Concentrations of O_3 above 40 ppb can be toxic to humans and wildlife, and can affect buildings. Increased ozone concentrations may lead to a reduction in growth of agricultural crops, decreased forest production and altered species composition in semi-natural plant communities.
Sulphur Dioxide SO_2	Main sources of SO_2 emissions are electricity generation, industry and domestic fuel combustion. May also arise from shipping and increased atmospheric concentrations in busy ports. Total SO2 emissions have decreased substantially in the UK since the 1980s.	Wet and dry deposition of SO_2 acidifies soils and freshwater, and alters the species composition of plant and associated animal communities. The significance of impacts depends on levels of deposition and the buffering capacity of soils.

Sulphur dioxide emissions are overwhelmingly influenced by the output of power stations and industrial processes that require the combustion of coal and oil. Ammonia emissions are dominated by agriculture, with some chemical processes also making notable contributions. NOx emissions, however, are dominated by the output of vehicle exhausts (more than half of all emissions). Within a 'typical' housing development, by far the largest contribution to NOx (92%) will be made by the associated road traffic. Other sources, although relevant, are of minor importance (8%) in comparison[15]. Emissions of NOx could therefore be reasonably expected to increase as a result of greater vehicle use as an indirect effect of housing development, but the relevance of emissions from growth in particular areas will be influenced by the relative distance from the site and the likely trip generation.

[15] Proportions calculated based upon data presented in Dore CJ et al. 2005. UK Emissions of Air Pollutants 1970 – 2003. UK National Atmospheric Emissions Inventory. http://www.airquality.co.uk/archive/index.php

4. Initial Policy Sift

A detailed policy by policy analysis is presented in Appendix A, which focusses on those policies which cannot obviously be dismissed due to a clear absence of impact pathways (e.g. affordable housing, specialist housing, eating and drinking etc. clearly pose no risk to European sites). In summary, the following Policies have been screened out as presenting no potential for likely significant effects on European sites:

- **Affordable Housing** – this policy sets out the councils stance on the requirements for affordable housing within all new developments of over 10 dwellings or where the development sites is more than 1,000m^2 in area.
- **Housing Mix** – this policy sets out the councils stance on the requirements for developments to provide a mix of dwelling types sizes and tenures and that standards align with the London Plan (March 2015) and the GLA's Housing SPG (March 2016).
- **Specialist Housing** – this policy sets out the councils stance on the requirements for developing appropriate housing to meet the specialist needs of local people.
- **Residential design and amenity –** this policy sets out the provisions to protect the amenity of existing residents and requirements to ensure high quality living environments for residents of new developments.
- **Houses in Multiple Occupation –** this policy sets out the councils stance on the requirements for developing existing properties into houses in multiple occupation (HMOs) in order to prevent adverse impacts on the surrounding area and existing residents and to ensure a principle of mixed communities are not undermined.
- **Conversions and Subdivisions –** this policy sets out the councils requirements for converting existing houses to multiple self-contained homes and conversion of commercial floor space to residential use.
- **Gypsy and Traveller Accommodation –** this policy sets out the council's stance on the provision for current and future accommodation needs of Gyspies, Travellers and Travelling Showpeople.
- **Town Centre Development** – this policy seeks to enhance vibrancy of town centres, maintaining their important role for local communities.
- **Eating and Drinking** – this policy sets out the councils requirements for development and use of existing commercial/retail space for restaurants and takeaways.
- **Culture and Creativity –** this policy promotes protection and enhancement of the boroughs cultural assets and encourages proposals to promote community engagement and increased social inclusiveness.
- **Social Infrastructure** – this policy sets out the councils requirements for providing social infrastructure within and residential development in order to provide all new and existing residents with appropriate facilities.
- **Education -** this policy supports the expansion of primary and secondary schools where they help deliver the councils agreed strategy for provision of additional school places in the borough.
- **Loss of Industrial Land –** this policy supports the continued use of industrial land for such purposes unless it can be demonstrated that the loss will not lower the industrial capabilities of the borough or that there is no market interest for the site following one year of continuous active marketing.
- **Affordable workspace** – this policy promotes the incorporation affordable work space within new commercial and mixed development schemes. Where on-site provision is not possible, financial contributions for equivalent off-site provision will be sought.
- **Skills and training** – this policy supports proposals that will provide employment and skills development opportunities for the local residents of the borough.
- **Transport connections** – this policy supports a sustainable pattern of development in the borough by reducing the need to travel and offering a choice of transport modes to residents and visitors. The policy

also supports development which demonstrates adverse impacts on the transport network are avoided or mitigated where necessary.

- **Parking Provision and Design -** this policy sets out the requirements of the council to developers for providing sufficient car and cycle parking in accordance with parking standards of the London Plan.

- **Digital connections** – this policy supports the promotion and enhancement of connectivity of the borough through delivery of high speed broadband and telecommunication services.

- **Urban design –** this policy ensures the promotion and enhancement of the boroughs character and local distinctiveness.

- **Landscaping –** this policy promotes greening though the planting of trees and other soft landscaping and promotes the protection and enhancement of biodiversity.

- **Heritage assets –** this policy seeks to sustain or enhance significant heritage assets and maintain Conservation Areas, listed buildings, registered parks and gardens and areas with archaeological significance.

- **Flood management –** this policy sets out requirements for developments to, where reasonable, incorporate flood risk reduction measures and protect developments from increased risk of flooding.

- **On-site waste management –** this policy sets out the councils requirements around waste management, reuse, composting and recycling and waste disposal for new developments.

- **Low carbon design, decentralised energy and renewable energy –** this policy seeks to optimise the energy efficiency of buildings and supports low carbon and renewable energy developments in principle.

- **Mineral reserves** – this policy seeks to safeguard mineral reserves in the borough from other forms of development that would sterilise the resource and/or prejudice future mineral extraction.

- **Mineral extraction** – this policy sets out the requirements in order to protect the borough where mineral extraction activities are taking place.

- **Secondary aggregates –** this policy sets out the requirements in order to minimise the quantity of primary aggregate and resources necessary to facilitate a development and the amount of waste generated.

However, Policies Romford Strategic Development Area, Rainham and Beam Park Strategic Development Area, Housing Supply and Business Growth, do present theoretical pathways for impacts, largely because they govern the quantum and location of new development.

Having completed the initial sift of policies, impact pathways are now discussed in more detail in the following chapters.

5. Epping Forest SAC

5.1 Introduction

Epping Forest SAC is located approximately 6.5km north-east of the London Borough of Havering. 70% of the 1,600 hectare site consists of broadleaved deciduous woodland, and it is one of only a few remaining large-scale examples of ancient wood-pasture in lowland Britain. Epping Forest supports a nationally outstanding assemblage of invertebrates, a major amphibian interest and an exceptional breeding bird community.

5.2 Features of European interest[16]

Epping Forest qualifies as a SAC for both habitats and species. Firstly, the site contains the Habitats Directive Annex I habitats of:

- Beech forests on acid soils with *Ilex* and sometime *Taxus* in the shrub-layer.
- Wet heathland with cross-leaved heath; and
- Dry heath

Secondly, the site contains the Habitats Directive Annex II species Stag beetle *Lucanus cervus*, with widespread and frequent records.

5.3 Conservation objectives

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of qualifying natural habitats and habitats of qualifying species
- The structure and function (including typical species) of qualifying natural habitats
- The structure and function of the habitats of qualifying species
- The supporting processes on which qualifying natural habitats and the habitats of qualifying species rely
- The populations of qualifying species, and,
- The distribution of qualifying species within the site

5.4 Current pressures and threats[17]

- Air pollution
- Under grazing
- Public disturbance
- Changes in species distribution
- Inappropriate water levels
- Water pollution
- Invasive species
- Disease

5.5 Potential Effects of the plan

Two potential effects of the Local Plan document upon the SAC have been identified.

- Recreational Pressure
- Air Pollution

[16] JNCC (2015) Natura 200 Standard Data Form: Epping Forest SAC
[17] Natural England (2015). Site Improvement Plan: Epping Forest SAC

The impact pathways discussed in the following sections are inherently 'in combination' (i.e. Havering is discussed in terms of its contribution to the totality of impact arising from numerous authorities) and therefore a specific separate 'in combination' assessment is not provided.

5.5.1 Recreational Pressure

Epping Forest SAC receives a great many visits per year (estimated at over 4 million) and discussions with the Corporation of London have identified long-standing concerns about increasing recreational use of the forest resulting in damage to its interest features. A programme of detailed formal visitor surveys has been undertaken in recent years. Analysis of data from 2014 was undertaken by Footprint Ecology in September 2016[18]. This further analysis identified that 89% of survey respondents originated from within 5km of the SAC and 76% originated from within 4km. Some uncertainties with the data were identified as follows:

- It is not clear to what extent the postcodes reflect a random sample of visitors due to the nature of the survey method, which enabled completion online as well as collection of data from people who attended the visitor centres, rather than based on encounters with people on footpaths and at car parks across the site. Therefore, although the scale of response is good, respondents are a self-selecting group to some extent. However, in order to try and address this staff and volunteers targeted visitors from the harder to reach groups such as under 16s, ethnic minorities, the elderly and disabled, at the busier locations with the hard copy version to be completed by themselves or with help from staff and volunteers; and

- The data show an uneven distribution of postcodes from which visitors originated. It showed that the southern portion of Epping Forest SAC (427ha of the total area of 2476ha), receives more than half of visitors, who focus on a few key honeypot sites (Wanstead Flats, Bush Wood, Wanstead Park, Hollow Ponds, Connaught Water and High Beach), with the northern portion of the SAC receiving a smaller proportion of visitors. This is not really surprising given that far more people live within 5km of the southern part of the SAC than the northern part. However, it does mean that, while the data indicate that 89% of 2014 survey respondents live within 5km this may over-estimate the catchment for the northern part of the SAC within Epping Forest district.

It should be noted that the distances mentioned above are distances measured from the SAC boundary because interview location wasn't always known and in many cases questionnaires were completed online or at visitor centres rather than out on site. This survey therefore applied a slightly different method to those for other European sites, where visitor origin data has been typically been presented as the distance between the interview location (which is usually an entry point such as a car park) and home postcode. This doesn't change the distribution of respondents' post-codes around Epping Forest SAC, but means that the catchment information from the Epping Forest visitor surveys is not directly comparable to data collected on other European sites by other methods.

However, the distribution of postcodes revealed by the analysis seems logical and intuitive as a 5km zone would cover all the larger settlements surrounding the SAC. There is therefore no reason to assume that the core catchment is either much larger or much smaller. Based on the existing analysis and settlement patterns around the SAC it is reasonable to expect that most regular visitors to the SAC are likely to derive from the London Boroughs of Waltham Forest, Enfield, and Redbridge and the following main settlements in Epping Forest District: Chigwell, Buckhurst Hill, Loughton, Theydon Bois, Epping and Waltham Abbey. The London Borough of Havering is located 6.5km from Epping Forest SAC at its closest, with the nearest settlement (Collier Row) being 7.6km from Epping Forest SAC as the crow flies or approximately 11-15km by road (depending on route taken). As such all available evidence indicates that Havering is unlikely to contribute materially to visitor pressure in Epping Forest SAC. Moreover, Collier Row has the Havering Forest Country Park and Bedford's Park immediately adjacent and Hainault Country Park, Dagnam Park and Page's Wood nearby, which are all much more convenient attractions for resident's wishing to visit a countryside or woodland site. Unlike some London Boroughs, Havering is not short of natural recreational greenspace open to the public. As such, no likely significant effect is anticipated through this pathway, alone or in combination.

[18] Footprint Ecology (2016). Initial review of current visitor data for Epping Forest

5.5.2 Air Quality

It is acknowledged that air pollution may cause a significant ecological effect within 200m of a road through emissions and related nitrogen deposition from vehicle exhausts and Epping Forest SAC has been shown to be affected by traffic-related emissions (specifically NOx concentrations and nitrogen deposition and possibly also ammonia) arising from the local road network (those roads within 200m of the SAC). Future local emissions will be most dictated by those areas that are the biggest contributors to 'journey to work' flows on roads through the SAC[19]. The increase in housing development within the London Borough of Havering is likely to increase the number of cars on the road network, which will contribute to air pollution generally. However, the degree to which Havering contributes specifically to journey to work flows through the SAC is the most important factor in considering what contribution growth in the borough is likely to make to changing air quality within the SAC, rather than simply the quantum of development being delivered in the borough.

The nearest settlement to Epping Forest SAC within the London Borough of Havering is Collier Row, approximately 7.6km distant as the crow flies and up to 15km by road (depending on route taken and location of housing). Such distances mean that there are many opportunities for vehicles to disperse across the network elsewhere into London (or out of London) rather than travelling through Epping Forest SAC. It is also noted that journeys to work within the London boroughs tend to be relatively short for the majority of London-resident commuters compared to other parts of the country and London offers an extensive network of alternative public transportation methods[20]. Data from the 2011 census indicates that the major journey to work destination for residents of Havering (outside the borough itself) is Westminster (20% of journeys), which accounted for double the number of journeys of the next most popular destination. Westminster, Barking & Dagenham, Tower Hamlets, Thurrock and Newham collectively accounted for 53% of all journeys to work arising from Havering. In contrast, Waltham Forest and Epping Forest District accounted for less than 4% of journeys to work between them and only c. 33% of those visits would have been by private car, van or motorbike (i.e. just over 1% of all journeys to work arising from Havering). It is not known how many of that 1% might travel past Epping Forest SAC on their journey but given the number of available routes that do not pass the SAC it is likely to be a small proportion[21].

Therefore, all the available evidence indicates that very few new journeys to work arising from additional development in Havering are likely to involve routes through Epping Forest SAC. Therefore the borough's contribution 'in combination' will undoubtedly be very small. Havering Council are introducing several policies that are likely to either further reduce journeys to work out of the borough (such as through delivering new employment development within the borough) or improve air quality either by requiring air quality neutrality from new development or by improving public transport links within the borough and to the main journey to work destinations. Policy Air Quality and Policy Managing Pollution seeks to make sure the new development is at least air quality neutral[22] and delivers measures to support active travel to reduce pollution concentrations and exposure. Policies to increase business and therefore employment within the borough (Policies Rainham and Beam Park Strategic Development Area and Business Growth) should further reduce the number of residents journeying out of the borough to work, as will new sustainable transport initiatives mentioned in Policies Romford Strategic Development Area, Rainham and Beam Park Strategic Development Area and Transport Connections, such as improved public transport access to central London via Crossrail services at Romford, Harold Wood and Gidea Park Stations and a new station at Beam Park on the C2C line, the A127 Corridor for Growth project and improved north-south links within the borough, connecting Rainham and Beam Park, Romford and Harold Hill.

Moreover, it is also important to consider the improvements in background air quality that are expected nationally over the plan period. Although in recent years improvements have not kept pace with predictions, the general long-term trend in NOx has been one of improvement (particularly since 1990) despite an increase in vehicles on the roads[23]. There is every reason to believe that new initiatives such as the further roll-out of Euro6 standard vehicles and city-wide initiatives to improve air quality, as well as any decline in the popularity of diesel vehicles,

[19] Air quality impacts on vegetation from traffic occur over long time periods as a result of long-term (year on year) continuous exposure to pollutants. Therefore the number of regular journeys to work are the most significant factor in determining the contribution of a particular area or development

[20] For example, data from the 2011 census indicates that 33% of residents of London Borough of Havering travel to work by car, van or motorbike, which is substantially lower than for England & Wales as a whole (41%). Reference: https://www.nomisweb.co.uk/census/2011/QS701EW/view/1946157270?rows=cell&cols=rural_urban [accessed 08/06/17]

[21] Reference: https://www.nomisweb.co.uk/census/2011/WU03UK/chart/1132462387 [accessed 08/06/17]

[22] To enable the implementation of this policy, emission benchmarks have been produced for buildings' operation and transport across London based on the latest technology (including its effectiveness and viability). Developments that do not exceed these benchmarks will be considered by the Mayor of London to avoid any increase in NOx and PM emissions across London as a whole and therefore be 'air quality neutral'

[23] Emissions of nitrogen oxides fell by 69% between 1970 and 2015. Source: https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/579200/Emissions_airpollutants_statisticalrelease_2016_final.pdf [accessed 08/06/17]

will result in improvement in background air quality, which could offset increases in emissions from a greater number of vehicles on the road network.

Considering the very small proportion of journeys to work that might involve traversing Epping Forest SAC, the initiatives Havering is introducing to either reduce the need to travel outside the borough to work or improve sustainable transport links and the context of expected improvements in background air quality over the Local Plan period, it is considered that the contribution of growth in Havering to vehicle flows (and thus changing air quality) through Epping Forest SAC will be negligible and thus would not contribute materially to any adverse effect in combination.

6. Conclusions

The two main development pressures on Epping Forest SAC are recreational pressure and atmospheric pollution.

However, due to the distance between Epping Forest SAC and the nearest settlement within the London Borough of Havering, it is considered that the increase in population in Havering is unlikely to significantly increase recreational pressure upon the SAC as the borough lies outside the core catchment of that SAC and has ample alternative semi-natural publically accessible woodlands. In addition policies in the Havering Local Plan promote the provision of local green infrastructure and open spaces, providing locals with much closer recreational alternatives to Epping Forest SAC.

Considering the very small proportion of journeys to work that might involve traversing Epping Forest SAC, the initiatives Havering is introducing to either reduce the need to travel outside the borough to work or improve sustainable transport links and the context of expected improvements in background air quality over the Local Plan period, it is considered that the contribution of growth in Havering to vehicle flows (and thus changing air quality) through Epping Forest SAC will be negligible and thus would not contribute materially to any adverse effect in combination.

It is possible to conclude that development in the Havering Local Plan will not have a likely significant effect on any internationally designated site either alone or in combination. It is therefore considered that no amendments to the Local Plan are required.

Appendix A Initial Policy Sift

The table below presents an initial sift of policies and allocations within the Local Plan, from the point of view of HRA. Only those which cannot obviously be dismissed due to an absence of linkages to European sites are discussed.

Policy	Policy summary	HRA implications needing consideration
Romford Strategic Development Area	Romford Strategic Development Area (SDA) encompasses Havering's largest Town Centre and is one of Outer London's major growth and regeneration areas. Residential Development This policy sets out that 5,300 new high quality homes will be delivered in the Romford SDA within the Plan period. Commercial Development To strengthen Romford's role as a Metropolitan Centre this policy supports initiatives to improve commercial development the refurbishment of existing retail and/or provide new modern retail units, diversification and improvement of the quality of retail, culture and leisure opportunities and the reinforcement of South Street as the main shopping street. To transform the Market Place into a high quality civic space and accommodate mixed uses by providing residential and new commercial floor space above ground level. To incorporate major regeneration schemes in Romford Town centre, including the Romford Station Scheme and Romford Market transformation. Transport Connectivity Romford is the most accessible and well connected area within the Borough. This policy supports delivery of Crossrail to Romford as well as new east-west pedestrian cycle links, improved accessibility to Romford Town Centre and improvements to the ring-road and links along the River Rom. It requires developers to improve active travel links between Romford Station, Waterloo Road and Bridge Close; and requiring proposals for development along the River Rom to improve the quality and setting of the river and to provide continuous, safe and accessible links alongside the river. Social Infrastructure This policy supports the expansion of existing schools in the area in line with the Council's Commissioning Plan and Schools Expansion Programme in addition to new primary and secondary schools in the area and the creation of a new health hub, including relocation of sexual health services into the Town Centre. Design and Heritage This policy promotes improvements to existing retail frontages and proposed pedestrian routes as well as contributing	This policy provides for both residential and employment focused development. Potential HRA implications dependant on sites allocated. The majority of this policy focuses on improving the existing development and infrastructure within Romford Town Centre to make the centre a more accessible and inviting location to improve economic growth within the borough. No HRA implications arise from the improvements to existing development and infrastructure within Romford SDA.

	toward public realm improvements in the Market Place and while responding positively to the sensitive nature and urban fabric within the conservation area and views of St. Edward the Confessor Church and historic crossroads.	
Rainham and Beam Park Strategic Development Area	Rainham and Beam Park SDA is a major growth and regeneration area. Residential Development This policy supports development of over 3,000 new homes within the Rainham and Beam Park SDA. The policy also supports the redevelopment of undesignated sites in Rainham District centre and wider SDA. Commercial Development This policy supports a new Local Centre at Beam Park Station which will provide 3,500 and 4,000 m^2 of new floor space for modern retail and commercial units integrated within the Station building. New developments will be required to incorporate generous floor to ceiling heights of 3.00-3.75m at ground level for flexibility and adaptability for conversion. Transport Connectivity This policy supports the establishment of Beam Park Station on the Essex Thameside Line; a new green neighbourhood that links the existing settlements of South Hornchurch and Orchard Village with Rainham Village in addition to transforming New Road into an attractive high quality green street. The policy also supports improved east-west travel connections and a link across Rainham Creek for buses as well as a new integrated network of walking and cycling routes connecting neighbourhoods, local facilities and open spaces. Supporting Infrastructure This policy supports the expansion of existing primary and secondary schools in line with the Council's Commissioning Plan as well as the expansion of Havering College's Rainham Campus, the development of a new primary school at Beam Park, provision of health facilities and improvement to sports and leisure facilities. Design Principles This policy states that new development should adhere to a set of common development and design principles to ensure successful transformation of the area, including; providing layouts that facilitate coherent urban structure across the area, link existing settlements better and overcome the barrier presented by the river. As well as designing buildings which provide a good sense of enclosure and that help to make the area both safe and welcoming and which enhance the character of the area.	This policy provides for both residential and employment focused development. Potential HRA implications dependant on sites allocated. This policy also supports the establishment of a new green neighbourhood which is likely to have a beneficial impact on local biodiversity and improve green corridors within the local area. Other areas of this policy focus on improving the existing development and infrastructure within Rainham and Beam Park SDA to make the area a more accessible and inviting location to improve economic growth within the borough. No HRA implications arise from the improvements to existing development and infrastructure within Rainham and Beam Park SDA.
Housing Supply	Ensuring an adequate housing supply to meet local and regional housing need is essential in ensuring that Havering is a place where people want to live and where residents are able to stay and prosper.	This policy provides for residential focused development. Potential HRA implications dependant on sites allocated.

	This policy sets out that over the plan period at least 17,550 new homes will be built in the following areas: - 5,300 in Romford SDA - 4,000 in Rainham and Beam Park SDA - 700 through intensification and renewal of existing Council housing estates - 400 homes on previously developed sites within the Green Belt - 2,790 on small sites across the borough The policy also states that the council will support appropriate development of infill, under-utilised and vacant sites, prioritising all non-designated land for housing when available, optimising residential output and densities with the density matrix set out in the London Plan, encouraging reuse of previously developed land, resisting net loss of residential development, promote mixed use development in town centres and out of town centre locations and supporting initiatives to bring back empty residential properties into use.	
Garden and Backland development	This policy supports proposals for residential development on gardens and back-land sites when they : - Do not prejudice the future development of neighbouring sites; - Ensure good access and, where possible, retain existing through routes; - Retain and provide adequate amenity space for existing and new dwellings; - Do not have a significant adverse impact on the amenity of existing and new occupants.	Although this policy does not pose any HRA implications to European Sites this policy has the potential to cause a loss of biodiversity within the borough through the removal of garden greenspace. 24% of Greater London is private, domestic garden land of which it is estimated that 14% is vegetated green space. These vegetated garden areas are of high value to wildlife within a heavily built up area and it is recommended policies supporting removal of this habitat type take into consideration safeguards for biodiversity in the local area.
Healthy Communities	This policy supports proposals which provide opportunity for health lifestyles and contribution to the creation of healthier communities. The policy promotes environmental improvements, improving air quality and minimising exposure to pollutants, promotion of walking and cycling, promotion of active travel, provisioning for multifunctional green infrastructure and provision and protection of open space, leisure and recreational facilities. Promotion the diversification of uses within town centres and managing uses with negative health impacts such as betting shops and fast food takeaways. To avoid contributing to factors that affects climate change and to contribute to prevention measures for mitigating climate change. Developers are required to consider wider local/regional primary care strategies and to take into account how development can contribute to the objectives of those strategies.	No HRA implications. Provision of multifunctional greenspace and provisions and protection of open space, leisure and recreational facilities within the borough may have a beneficial influence through less people leaving the borough to visit greenspace and therefore reducing the number of visitors to Epping Forest SAC.
Open space, leisure	This policy promotes the creation/re-development of open space, leisure and recreational facilities when new	No HRA implications.

and recreation	development is created and resists the loss of existing designated open space, unless replacement is provisioned for. Where no sufficient provision can be made on-site developer contributions will be sought to create these facilities across the borough. Developments are required to provide children's play and informal recreation space on-site in line with the London Plan.	The creation and protection of open space and recreational facilities within the borough may have a beneficial influence through less people leaving the borough to visit greenspace and therefore reducing the number of visitors to Epping Forest SAC.
Business growth	This policy promotes building a strong and prosperous economy, by supporting development of Strategic Outer London Development Centres (SOLDC), protecting designated Strategic Industrial Locations (SILs) and Locally Significant Industrial Sites (LSISs), requiring large scale residential proposals to include flexible business space and supporting development of flexible business space for small and medium sized enterprises. As well as supporting development of a hotel in close proximity to Rainham Employment Area, supporting expansion of business in rural areas and creating an environment that attracts businesses and improves competitiveness of employment areas.	This policy provides for increased business and employment within the borough, which could lead to a net increase in traffic generation within and potentially surrounding the borough. Potential HRA Implications.
Green Infrastructure	This policy seeks to maintain and expand the network of green spaces and natural features in the borough. Including on site green infrastructure to new developments and compensation for any proposed loss of green space. Developers are expected to work with existing partnerships to support and enhance green infrastructure provision including; The All London Green Grid, Thames Chase Community Forest, Rainham Wildspace, Land of the Fanns Landscape Partnership and Roding, Beam & Ingrebourne Catchment Partnership	No HRA Implications. This is a protective and enhancement policy which along with other green infrastructure and biodiversity policies could potentially reduce the recreational pressure on Epping Forest SAC.
Nature Conservation	This policy seeks to protect and enhance biodiversity and geodiversity in the borough to provide benefits to both local wildlife and local residents, through protecting statutory designated sites, conserving and extending wildlife corridors, and through protecting veteran trees, ancient woodland and priority species and habitats.	No HRA Implications. This is a protective and enhancement policy which along with other green infrastructure and biodiversity policies could potentially reduce the recreational pressure on Epping Forest SAC.
Rivers and River Corridors	This policy seeks to enhance the river environment for biodiversity, recreation, place-making, amenity, freight transport and flood management.	No HRA Implications. This is a protective and enhancement policy which along with other green infrastructure and biodiversity policies could potentially reduce the recreational pressure on Epping Forest SAC.
Air Quality	This policy seeks to make sure the borough residents are not put at risk through health impacts relating to air quality. The council seeks to do this by only supporting development which;	No HRA Implications. This policy supports the Mayor's Sustainable Design and

	- Is at least air quality neutral - Delivers measures to support active travel to reduce pollution concentrations and exposure - Does not pose an unacceptable risk to the quality of the water catchment, groundwater or surface water - Optimises the use of green infrastructure to avoid pollution concentrations and exposure. - Minimises emissions from construction	Construction SPG linking back to the London Plan policy 7.14 Improving air quality, where it states development proposals should be at least 'air quality neutral' and not lead to further deterioration of existing poor air quality (such as areas designated as Air Quality Management Areas (AQMAs)). The Mayor is committed to improving air quality in London and has put in place an ambitious strategy of measures to reduce air pollution and minimise human exposure in order to improve Londoner's health and quality of life. Areas that do not meet national air quality targets for nitrogen dioxide (NO_2) and particulate matter (PM_{10}) are designated Air Quality Management Areas (AQMA) as havering has been. The Mayor's Air Quality Strategy sets out how the Mayor proposes to reduce air emissions across London. Each borough with an AQMA has its own Air Quality Strategy and a detailed Air Quality Assessment will need to be submitted with a planning application for each development within the AQMA in order to assess air quality neutrality and highlight mitigation.
Managing Pollution	The council will support development proposals that: - Do not unduly impact upon amenity, human health and safety and the natural environment by noise, dust, odour and light pollution, vibration and land contamination; - Do not pose an unacceptable risk to the quality of the water catchment, groundwater or surface water; and optimise the design, layout and orientation of buildings and the use of green infrastructure to minimise exposure to the above pollutants.	No HRA Implications. This is a protective and enhancement policy which along with other green infrastructure and biodiversity policies could potentially reduce the recreational pressure on Epping Forest SAC.

1. Introducing the Study

Background to the project and wider policy context

1.1 Opinion Research Services (ORS) was jointly commissioned by the Outer North East London local authorities (London Boroughs of Barking and Dagenham, Havering, Newham and Redbridge) to prepare a Strategic Housing Market Assessment (SHMA) to establish the Objectively Assessed Need for housing across the Area. We would note that London Borough of Waltham Forest were not part of the commissioning group, but given the identified housing markets in the study area results for Waltham Forest have been included within this document.

1.2 The study adheres to the requirements of the National Planning Policy Framework published in 2012 and Planning Practice Guidance (March 2014). The methodology also had regard to emerging good practice and outcomes from Examinations, as well as the Technical Advice Note about Objectively Assessed Need and Housing Targets Version 2 that was published by the Planning Advisory Service (PAS) in July 2015.

1.3 The purpose of the study is to support the local authorities in objectively assessing and evidencing the need for housing (both market and affordable) across Outer North East London for the 22-year period 2011-33, and provide other evidence to inform local policies, plans and decision making.

Government Policy

1.4 The National Planning Policy Framework (NPPF) contains a presumption in favour of sustainable development, and states that Local Plans should meet the full, objectively assessed needs for market and affordable housing in the housing market area. While Regional Spatial Strategies are now revoked, the London Plan has not been revoked. However, within the context of the London Plan, a responsibility for establishing the level of future housing provision required rests with the local planning authority.

> *At the heart of the National Planning Policy Framework is a **presumption in favour of sustainable development**, which should be seen as a golden thread running through both plan-making and decision-taking.*
>
> *Local planning authorities should positively seek opportunities to meet the development needs of their area.*
>
> *Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change, unless any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.*
>
> **National Planning Policy Framework (NPPF), paragraph 14**

> *To boost significantly the supply of housing, local planning authorities should use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area.*
>
> **National Planning Policy Framework (NPPF), paragraph 47**

1.5 Given this context, Strategic Housing Market Assessments (SHMAs) primarily inform the production of the Local Plan (which sets out the spatial policy for a local area). Their key objective is to provide the robust and strategic evidence base required to establish the full Objectively Assessed Need (OAN) for housing in the Housing Market Area (HMA) and provide information on the appropriate mix of housing and range of tenures needed.

> *Local planning authorities should have a clear understanding of housing needs in their area.*
>
> *They should prepare a Strategic Housing Market Assessment to assess their full housing needs, working with neighbouring authorities where housing market areas cross administrative boundaries. The Strategic Housing Market Assessment should identify the scale and mix of housing and the range of tenures that the local population is likely to need over the plan period which:*
>
> » *meets household and population projections, taking account of migration and demographic change;*
>
> » *addresses the need for all types of housing, including affordable housing and the needs of different groups in the community (such as, but not limited to, families with children, older people, people with disabilities, service families and people wishing to build their own homes); and*
>
> » *caters for housing demand and the scale of housing supply necessary to meet this demand;*
>
> **National Planning Policy Framework (NPPF), paragraph 159**

1.6 Modelling future housing need requires a consideration of the housing market from a high-level, strategic perspective; in this way an understanding of how key drivers and long-term trends impact on the structure of households and population over the full planning period can be delivered.

1.7 Planning Practice Guidance (PPG) on the assessment of housing and economic development needs was published in March 2014 and has been updated in March 2015. Previous SHMA Guidance (2007) and related documents were rescinded at that time, so the approach taken in preparation of this report is focussed on meeting the requirements of PPG. In addition, it reflects emerging good practice and the PAS OAN technical advice note.

London Specific SHMAs

1.8 The Strategic Planning Authority for London is the Greater London Authority. The GLA have produced a London SHMA (2013) covering the whole of Greater London which has been used to underwrite the evidence base for the Further Alterations to the London Plan (FALP) 2014.

1.9 The Report on the Examination in Public into the Further Alterations to the London Plan was published in November 2014. Issue 2 of the report was:

Given that the FALP sets out the objectively assessed housing need for London should London Boroughs be required to undertake their own assessments?

1.10 In response to this question the inspector concluded that this was not necessary. From paragraph 18 onwards he concluded that:

"The NPPF at paragraph 47 requires local planning authorities to, amongst other things, 'use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area'. The guidance in the NPPF regarding plan making is silent with regard to how responsibilities should be divided in a two tier system as exists uniquely in London. The London Plan is part of the development plan for London and, in my view, it must be right that read together with the development plan documents produced by London Boroughs, the development plan should be consistent with national policy.

However, in a two tier system there should be no need for each part of the development plan to include the full range of policies necessary to accord with all parts of the NPPF or PPG, provided that together they do (as far as is necessary) and are consistent with national policy. The PPG advises that there should be no need to reiterate policies that are already set out in the NPPF in Local Plans. It seems to me that the same principle should apply to a spatial development strategy. Further, to avoid unnecessary duplication and potential confusion, there should be no need for a local plan in London to reiterate policies set out in the FALP.

Section 334 of the GLA Act requires the Mayor to prepare a spatial development strategy. That plan must include a statement formulating the Mayor's strategy for spatial development for the use of land in Greater London. Housing need, supply and distribution are undisputedly strategic matters in London. I conclude below that the Mayor's estimate of objectively assessed housing need in London is justified by the evidence submitted to the EiP. Further, although I have reservations, I also consider that the FALP's strategy with regard to supply and distribution can be supported in the short term.

Once adopted, statute will require the local plans produced by London Boroughs to be in general conformity with the FALP. That includes conforming with a strategy which seeks to meet London's needs on brownfield land within the existing built up area. The SHLAA identifies most of the existing capacity and, effectively, through the SHLAA, the FALP has determined the extent to which individual Boroughs can contribute to meeting the strategic need for housing across London. Within the confines of the FALP's strategy there is little scope to do more.

I acknowledge that the NPPF requires each local planning authority to identify its own objectively assessed housing need. However, in my view, it is the role of the spatial development strategy to determine the overall level of need for London and to guide the distribution of new housing to meet that need. The Mayor points to the acceptance by previous EiP Panels that London constitutes a single housing market area with sub markets which span Borough boundaries. The Mayor also points to the findings of the High Court, following a challenge to the Revised Early Minor Alterations to the London Plan, within

which in his (undisputed) opinion, the Court accepted that although local variations exist, this did not compromise the view that London constitutes a single housing market area.

Other than some fine tuning regarding local need relating to the size and type of property and tenure, there is no need, in my view, for each London Borough to duplicate the work done by the GLA and produce their own individual assessment of overall need. IRC1 recommends that the FALP is changed to reflect this approach by removing references to London Boroughs needing to identify objectively assessed need with regard to the quantum of new housing in their areas".

1.11 In a position which lead to some initial confusion, the wording of this letter has been accepted by the Mayor of London, however no polices in the FALP were changed as a result of it. The GLA's position was clarified in May 2015 in their Draft Interim Housing Supplementary Planning Guidance, and confirmed in the final Housing SPG published in March 2016[1]. At paragraph 3.2.11 the March 2016 documents lists how the London boroughs should proceed in assessing their housing needs.

- Consider housing market area geographies that extend beyond single borough boundaries
- Consider different demographic scenarios, ideally using GLA household projections for consistency
- Make allowance for backlog need and other factors that increase the number of homes required.
- Take account of market signals
- Consider how the economy and jobs growth will influence housing need.
- Take into account wider needs.
- Specific needs.

1.12 **In conclusion**, this SHMA meets the CLG national guidance and the GLA's London Plan and March 2016 Housing Supplementary Planning Guidance, paragraph 3.2.11. It is mindful of the Inspector's findings (at the FALP examination) yet has followed the Mayor's methodology for assessing housing need.

Developing the Strategic Housing Market Assessment

1.13 The objective of the SHMA study was to give the Outer North East London authorities an objectively assessed and evidence based assessment of development needs for housing (both market and affordable) and to ensure that this was compliant with the requirements of the National Planning Policy Framework and Guidance, as well as the Mayor's methodology.

1.14 Fieldwork was undertaken with local stakeholders given that the implications of the study could have implications beyond the local authority boundaries. These included:

- A series of telephone interviews with Landlords and their agents, Housing associations, universities, business organisations, house builders and neighbourhood forums.
- Separate workshops for private and public sector stakeholders to consider the projects emerging findings

[1] https://www.london.gov.uk/what-we-do/planning/implementing-london-plan/supplementary-planning-guidance/housing-supplementary#Stub-174871

» A separate report on the fieldwork outcomes has been produced

Overview of the SHMA

1.15 The first key objective of this SHMA was to identify and define the functional housing market area(s) across Outer North East London area.

1.16 The second key objective of this SHMA was to establish the OAN for housing (both market and affordable) in the Outer North East London HMAs, ensuring that this was fully compliant with the requirements of the NPPF and PPG and mindful of good practice. The OAN for housing will help inform the planning policies for the period 2011-33.

1.17 The SHMA methodology was based on secondary data, and the SHMA sought to:

» Provide evidence of the need and demand for housing based on demographic projections;

» Consider market signals about the balance between demand for and supply of dwellings;

» Establish the Objectively Assessed Need for housing over the period 2011-33;

» Identify the appropriate balance between market and affordable housing; and

» Address the needs for all types of housing, including the private rented sector, people wishing to build their own home, family housing, housing for older people and households with specific needs.

1.18 This report considers the key outputs from the SHMA – namely establishing the Housing Market Areas and establishing the Full Objectively Assessed Need for housing in Outer North East London (including the overall balance between market and affordable housing) over the 22-year period 2011-33.

1.19 It is important to recognise that the information from the SHMA should not be considered in isolation, but forms part of a wider evidence base to inform the development of housing and planning policies. The SHMA does not seek to determine rigid policy conclusions, but instead provides a key component of the evidence base required to develop and support a sound policy framework.

Executive Summary

1. The Outer North East London Boroughs Strategic Housing Market Assessment 2015 (SHMA) has been undertaken at a time of considerable change, both locally and nationally. The SHMA highlights the complexity of understanding housing need in a relatively dynamic housing market. Key drivers such as the local economy, complex population change and the need to support growth in the local economy – all these factors interact to make the establishment of objectively assessed housing need a significant challenge.

2. The SHMA has considered various factors regarding the housing needed in the commissioning boroughs of Barking and Dagenham, Havering, Newham, Redbridge, along with Waltham Forest, which was not a commissioning borough. Critically, it has considered the current evidence base on population and households and the impact of wider Market Signals. From this, the SHMA has derived an objectively assessed housing need to inform housing and planning policies.

3. At the present time, the five boroughs are undergoing considerable change; London's status as a World City and the regeneration of historically 'poor' areas, such as Stratford, combined with Crossrail, mean that the relative affluence of the boroughs is changing rapidly. This poses significant challenges for the future; the operation of housing markets is complex and the ability of local authorities to interact in order to deliver desired strategic outcomes is challenging.

4. This Executive Summary, therefore, summarises the key challenges facing the Housing Market Areas and highlights the housing needed to meet them. The local authority areas are considered in two different geographies:

   - The Outer North East London housing market area which includes the boroughs of Barking and Dagenham, Havering and Redbridge;
   - The Outer East London housing market area which includes the boroughs of Newham and Waltham Forest (who were not part of this report commission).

Key Challenges

Housing Delivery

5. The National Planning Policy Framework paragraph 47 aims to *'To boost significantly the supply of housing'*. Nationally, new housing delivery nationally has fallen substantially in recent years relative to demand.

6. The rate of development in **Outer East London** (in terms of increase in dwelling stock over the last 10 years) shows that development has increased the stock size by +8.7%, which is higher than England (8.3%), but lower than comparator areas except for Barnet, Enfield and Haringey.

7. The rate of development in **Outer North East London** (in terms of increase in dwelling stock over the last 10 years) shows that development has increased the stock size by +6.1%, which is lower than England (8.3%) and lower than comparator areas except Ealing, Hillingdon and Hounslow.

8. However, there is a continuing need to support housing delivery if wider strategy goals are to be achieved.

Benefit Reform

9. Benefit reforms pose a considerable risk to existing households renting in the five boroughs in both the private and public housing sectors. The combination of the Benefit 'cap', changes regarding under-occupation and changes in Local Housing Allowance (LHA) are likely to mean adjustment in the rental sectors. One issue to note is the growth in Private Rented Sector and how this contributes to meeting housing need; Benefit reform poses a risk to this. The full implications of Reform are not yet known.

Duty to Co-operate

10. Section 110 of the Localism Act 2011 imposes a 'Duty to Co-operate' on Councils who submit plans for Examination after 15 November 2011. The scale of objectively assessed housing need identified in this SHMA has meant a proactive approach to co-operation between the commissioning authorities and their neighbours. The key challenge facing the various authorities remains how assessed need can be met.

11. The Outer North East London housing market area identified in the SHMA contains Barking and Dagenham, Havering and Redbridge and, in addition, the influence of the market area has wider implications for Enfield and Epping Forest necessitating Duty to Co-operate consultation there.

Housing Market Area

12. The identification of Housing Market Areas (HMAs) is the first relevant building block in the evidence for identifying objectively assessed housing needs. HMAs are defined as reflecting *"the key functional linkages between places where people live and work"* because, in general, people will live within a certain commuting distance or time of their work and, in general, will move house or their employment to facilitate that commuting. HMAs as defined do not align to individual local authority areas; they can be larger or smaller than a single local authority, but either way they can cut across boundaries. For this reason it is important to identify the HMAs and local authorities which it cuts across. In the case of Outer North East London the HMA cuts across the four boroughs in the study.

13. On the basis of the evidence, we would conclude that:

- Greater London can be considered as a single large housing market area which contains many smaller overlapping housing market areas within it.
- Migration[2] and travel to work flows do not identify any distinct housing market areas in London.
- House price represents a means of identifying separate housing market areas in London. The VOA has worked with house price and rent nationally to identify Broad Rental Market Areas (BRMAs) which determined LHA levels.
- BRMAs represent the most practical and pragmatic approach to identifying housing market areas in London. The 13 BRMAs in London will allow small groups of London boroughs to plan together.
- 100% of Newham's population fall in the Outer East London BRMA.

[2] Migration is the movement of people between geographical areas. In this context it could be either local authority districts, or wider housing market areas. The rate of migration is usually measured as an annual number of individuals, living in the defined area at a point in time, who were not resident there one year earlier. Gross migration refers to the number of individuals moving into or out of the authority. Net migration is the difference between gross in-migration and gross out-migration.

- 100% of Barking and Dagenham, 100% of Havering[3] and 98% of Redbridge's populations fall in the Outer North East London BRMA.
- When assessing objectively assessed needs at housing market area level we recommend that Barking and Dagenham, Havering and Redbridge be considered as one area, with Newham as part of a separate area (along with Waltham Forest).
- Given the overlapping nature of housing market areas, this does not preclude Barking and Dagenham, Havering, Redbridge and Newham from also considering their needs as part of the wider Outer North East London area. The Census migration data supports this conclusion.
- Given this context, it is appropriate for the SHMA analysis to focus upon two core areas (i.e. Barking and Dagenham, Havering and Redbridge, and Newham). Nevertheless, it will be important that the four boroughs consider the needs of other authorities in surrounding areas, their relationship and that these issues are explored under Duty to Co-operate arrangements.
- The HMA analysis should not be seen as prescriptive on other authorities who may wish to identify their housing market areas by other means.

Population and Household Growth

14. A key input into the modelling of housing need is the rate of household growth. Guidance states:

> *Household projections published by the Department for Communities and Local Government should provide the starting point estimate of overall housing need.*
>
> *Planning Policy Guidance (CLG, March 2014), para 015*

15. While CLG household projections are a useful starting point, there is a need to test these further to ensure that they are a robust basis for modelling need. These have been analysed and household figures derived to input into the assessment of housing need.

Market Signals

16. Current guidance states that market signals should be taken into account when considering assessed housing need:

> *The housing need number suggested by household projections (the starting point) should be adjusted to reflect appropriate market signals, as well as other market indicators of the balance between the demand for and supply of dwellings.*
>
> *Planning Policy Guidance (CLG, March 2014), para 019*
>
> *A worsening trend in any of these indicators will require upward adjustment to planned housing numbers compared to ones based solely on household projections … Plan makers should set this adjustment at a level that is reasonable*
>
> *Planning Policy Guidance (CLG, March 2014), para 020*

17. Market signals are indicators that supply and demand are not in balance for a local housing market. Possible market signals are listed in PPG and the following are the most pertinent; house prices, private sector rents, affordability, rate of development and overcrowding.

[3] Note: although part of London Borough of Havering is outside the Outer North East London BRMA; however, this is less than 1% of the Borough

18. Given the relative market signal indicators, and the trends they identify for the two areas under consideration, and the views of the Inspectorate and the Greater London SHMA to would seem reasonable to:

- Consider an uplift of 20% to be reasonable for Outer East London as the area experiences significant housing market pressures which are in line with other highly pressurised markets in London.
- Outer North East London experiences lower housing market pressures when compared with Outer East London, but does have similar pressures to London as a whole, so an uplift of around 15% would seem to be appropriate.

Objectively Assessed Housing Need

19. The SHMA identifies the Full Objective Assessed Need for Housing in the **Outer East London HMA** to be **96,100 dwellings over the 22-year Plan period 2011-33**, equivalent to an average of 4,370 dwellings per year. This includes the Objectively Assessed Need for Affordable Housing of 37,400 dwellings over the same period, equivalent to an average of 1,700 dwellings per year.

20. Meanwhile, the SHMA identifies the Full Objective Assessed Need for Housing in the **Outer North East London HMA** to be **99,800 dwellings over the 22-year Plan period 2011-33**, equivalent to an average of 4,540 dwellings per year. Again, this includes the Objectively Assessed Need for Affordable Housing of 38,600 dwellings over the same period, equivalent to an average of 1,760 dwellings per year.

21. The figures below summarise the housing size and tenure mix for each of the boroughs over a 22 year period.

Full Objectively Assessed Need for Housing; Size and Tenure Mix across Outer East London 2011-33 (Note: Figures may not sum due to rounding)

	Outer East London		
	Newham	Waltham Forest	TOTAL
MARKET HOUSING			
1 bedroom	2,600	2,500	5,200
2 bedrooms	6,400	4,900	11,200

Specific Needs

Private Rented Sector

22. One of the most significant housing changes in the past decade, in the five boroughs and in England, has been the rise in the relative size of the private rented sector and the decline in owner occupation. In the five boroughs, between 2001 and 2011, owner occupation declined by between -5.0% (Havering) and -8.2% Barking & Dagenham, -8.6% Newham, -10.7% Redbridge; private rent, however, increased by between +5.1% Havering, +9.5% Redbridge, +11.7% Barking & Dagenham, +15.4% Newham.

23. Overall, in terms of the private rented sector, the evidence supports continuing demand for, and growth in, the Private Rented Sector homes in the four authorities, in both self-contained and shared accommodation.

People wishing to self-build

24. Overall, the evidence suggests limited demand for self-build. However, this may under-estimate actual demand. Therefore, arrangements should be put in place to comply with the Self-Build and Custom Housebuilding Act and undertake a possible future survey to ascertain levels of demand for self-build in the HMA.

Older People

25. Overall, the evidence suggests a net need of 14,587 additional specialist units for older people by 2032. However, this need should be considered in partnership with other agencies as well as other factors and constraints in the market. These outputs are relatively similar to those in the GLA's London Housing Plan 2015. The exception is Barking and Dagenham where the GLA has benchmarked double the level of specialist housing needed.

26. Within the identified need there is a further need to consider the split in the identified need for rent and sale/intermediate sale homes; the GLA London Housing Plan provides a useful basis for this as does the Housing LIN approach.

	Annualised Need using Housing LIN	GLA London Plan 2015 Benchmark
Barking & Dagenham	34	70
Havering	185	185
Newham	69	75
Redbridge	108	125

Households with Specific Needs

27. Building regulations Approved Document M (2015) introduced three categories of accessible dwellings. Category 1 (visitable dwellings) relates to accessibility of all properties and, being mandatory, is not assessed in the SHMA. Category 2 (accessible and adaptable dwellings) is optional and similar to Lifetime

Homes. Category 3 (wheelchair user dwellings) is optional and equivalent to wheelchair accessible standard.

28. Overall, in terms of the need for adapted or wheelchair adapted dwellings for households with specific needs, the evidence supports:

- the need for all dwellings to meet Category 2 requirements, providing that this does not compromise viability.
- the need for 10% of market housing and 15% of affordable housing to meet Category 3 requirements.

Students

The main university in the area is the University of East London (UEL) which records 2,785 of its 11,351 students as living in postcodes E1 to E18. London South Bank University (LSB) also has a smaller presence in Havering. Students are concentrated in Newham, with some LSOAs having over 300 students. Parts of Waltham Forest, Redbridge and Barking and Dagenham also have some concentrations of students. UEL provides 1,170 units of specialist student accommodation in the area, though LSB has none. There is little evidence of further expansion from these two local universities.

Conclusion

29. As London boroughs, Barking and Dagenham, Havering, Newham, Redbridge and Waltham Forest face considerable strategic challenges in meeting the housing needs of their future population. The boroughs are changing rapidly and in parts becoming more affluent, largely as an indirect benefit from London's status as a World city. However, these benefits are not affecting all people and all parts of the boroughs. Further, there has been fundamental tenure adjustment, the continuing challenge of new housing delivery, responding to the needs of those households affected by welfare reform and a changing population profile.

30. Overall, therefore, there is a need for a continued co-ordinated approach towards the varied housing challenges faced to ensure future success.

Note: Since this SHMA was prepared, the GLA have published updated population and household projections. Further work is being undertaken to understand the implications of these projections in the Outer North East London Housing Market Area. In light of this additional work being undertaken the London Borough of Havering has not yet formally published the SHMA as part of the evidence base for its emerging Local Plan.

2. Defining the Housing Market Area

An evidence base to identify functional housing markets

Chapter Summary

2.1 This chapter follows the Planning Policy Guidance to analyse the available data and concludes with our recommendation that Barking and Dagenham, Havering and Redbridge be considered as part of a Housing Market Area which also includes Epping Forest, with Newham and Waltham Forest being part of a separate Housing Market Area. The key points leading to this conclusion are:

- Housing market areas reflect *"the key functional linkages between where people live and work"*
- To meet Planning Policy Guidance, a housing market area can be defined using house prices and rates of change in house prices; household migration and search patterns, and; contextual data (e.g. travel to work area boundaries, retail and school catchment areas)
- PPG recommends using travel to work areas (TTWAs) to provide information about commuting flows and the spatial structure of the labour market, but this is not feasible for London boroughs as the whole of London is a single TTWA.
- Census travel to work data demonstrates that travel to work for a significant minority of North East London boroughs' residents may be loosely related with place of residency.
- Census migration data demonstrates that none of the boroughs can be considered to be housing market area on its own, but the inter-borough migration between the four boroughs suggests that some combination with neighbouring boroughs will meet the definition of a housing market area.
- There is a high degree of alignment between Broad Rental Market Areas and house prices in London.
- The Outer East London BRMA shows a high degree of containment for Newham along with Waltham Forest: 100% of Newham's population, 75% of Waltham Forest and 2% of Redbridge fall within the Outer East London BRMA.
- The Outer North East London BRMA shows a high degree of containment for Barking and Dagenham, Havering and Redbridge: 100% of Barking and Dagenham's and of Havering's populations and 98% of Redbridge fall within the Outer North East London BRMA. 52% of Epping Forest's population and 25% of Enfield also fall within this BRMA. The need for co-operation between these local authorities is clearly particularly important.

Functional Housing Market Areas

2.2 The definition of a functional housing market area is well-established as being "...the geographical area in which a substantial majority of the employed population both live and work and where those moving house without changing employment choose to stay" (Maclennan et al, 1998)[4].

Planning Practice Guidance

2.3 Planning Practice Guidance (PPG)[5] on the Assessment of Housing and Economic Development Needs (March 2014) reflects this existing concept, confirming that the underlying principles for defining housing markets are concerned with the functional areas in which people both live and work:

> ***What is a housing market area?***
>
> *A housing market area is a geographical area defined by household demand and preferences for all types of housing, reflecting the key functional linkages between places where people live and work. It might be the case the housing market areas overlap.*
>
> *The extent of the housing market areas identified will vary, and many will in practice cut across various local planning authority administrative boundaries. Local planning authorities should work with all the other constituent authorities under the duty to cooperate.*
>
> **Planning Practice Guidance 2014, paragraph 10**

2.4 Therefore, PPG requires an understanding of the housing market area and says this can be defined using three different sources of information:

- House prices and rates of change in house prices
- Household migration and search patterns
- Contextual data (e.g. travel to work area boundaries, retail and school catchment areas)

2.5 These sources are consistent with those identified in the CLG advice note *'Identifying sub−regional housing market areas'* published in 2007[6].

[4] Local Housing Systems Analysis: Best Practice Guide. Edinburgh: Scottish Homes
[5] http://planningguidance.planningportal.gov.uk/blog/guidance/housing-and-economic-development-needs-assessments/
[6] Identifying sub−regional housing market areas (CLG, March 2007); paragraph 1.6

Geography of Housing Market Areas (NHPAU/CURDS)

2.6 CLG also published a report on the *'Geography of Housing Market Areas'* in 2010[7] which was commissioned by the former National Housing and Planning Advice Unit (NHPAU) and undertaken by the Centre for Urban and Regional Development Studies (CURDS) at Newcastle University. This study explored a range of potential methods for calculating housing market areas for England and applied these methods to the whole country to show the range of housing markets which would be generated. The report also proposed three overlapping tiers of geography for housing markets:

- Tier 1: framework housing market areas defined by long distance commuting flows and the long-term spatial framework with which housing markets operate;
- Tier 2: local housing market areas defined by migration patterns that determine the limits of short-term spatial house price arbitrage;
- Tier 3: sub-markets defined in terms of neighbourhoods or house type price premiums.

2.7 The report recognised that migration patterns and commuting flows were the most relevant information sources for identifying the upper tier housing market areas, with house prices only becoming relevant at a more local level and when establishing housing sub-markets. The report also outlined that no one single approach (nor one single data source) will provide a definitive solution to identifying local housing markets; but by using a range of available data, judgements on appropriate geography can be made.

2.8 Advice recently published in the PAS OAN technical advice note also suggests that the main indicators will be migration and commuting (paragraph 5.4).

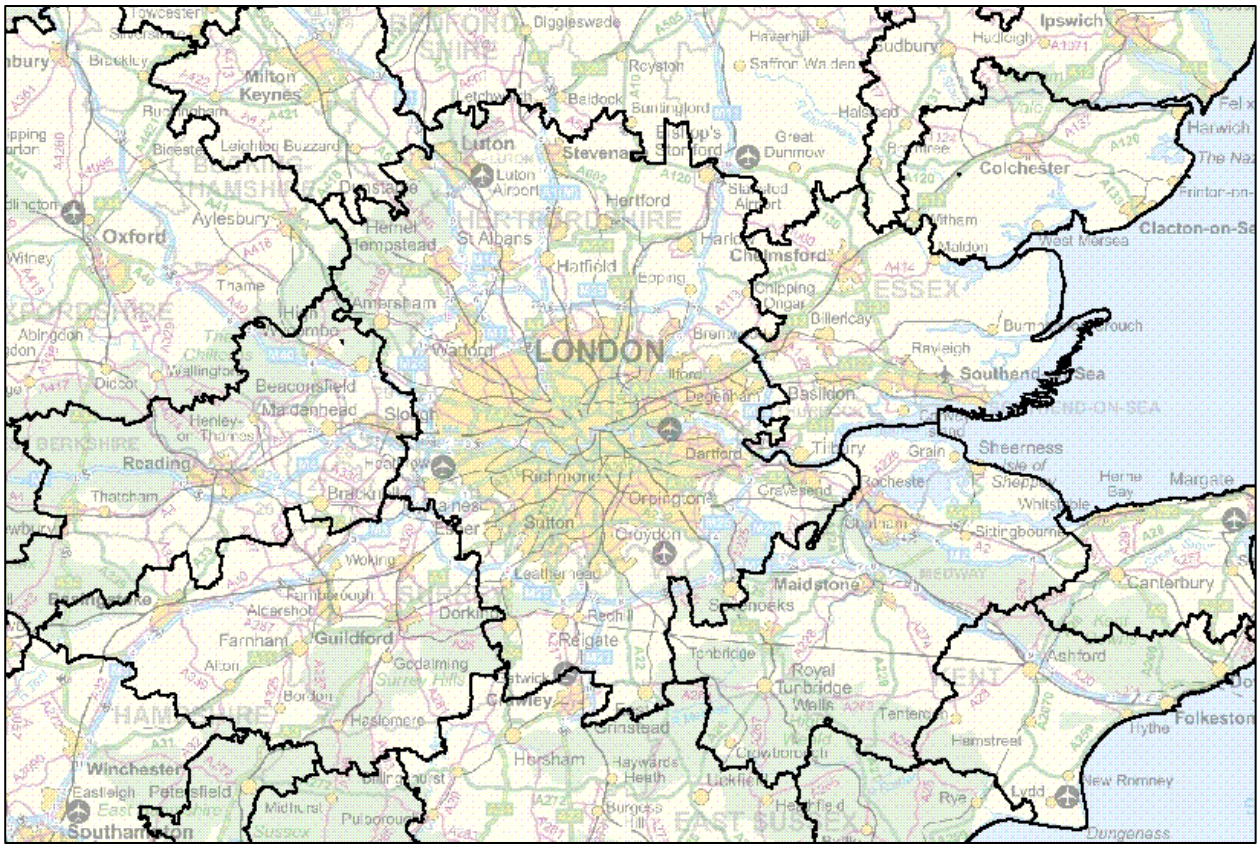
> *"The PPG provides a long list of possible indicators, comprising house prices, migration and search patterns and contextual data including travel-to-work areas, retail and school catchments. In practice, the main indicators used are migration and commuting. With regard to migration, the PPG explains that areas that form an HMA will be reasonably self-contained, so that…*
>
> *A relatively high proportion of household moves (typically 70%) are contained [within the area]. This excludes long-distance moves (e.g. those due to a change of lifestyle or retirement, reflecting the fact that most people move relatively short distances due to connections to families, friends, jobs and schools)."*

2.9 The PAS OAN technical advice note also suggests that analysis reported in the CLG report *"Geography of Housing Market Areas"* (CLG, November 2010) should provide a starting point for drawing HMAs (Figure 1). It is apparent that this study identifies a single housing market across London and beyond. Consequently, this is not useful in defining functional HMAs for the boroughs.

2.10 Nevertheless, it is important to note that whilst the 'starting point' CLG study (2010) was commissioned by the former National Housing and Planning Advice Unit (NHPAU) and undertaken by the Centre for Urban and Regional Development Studies (CURDS) at Newcastle University, the analysis of migration and commuting was based on data from the 2001 Census. Given this context, the PAS OAN technical advice note recognises that "*more recent data should always 'trump' this geography*" (paragraph 5.9).

[7] Geography of Housing Market Areas (CLG, November 2010); paragraph 1.6

Figure 1: NHPAU Study - PAS OAN technical advice note 'Starting Point



Travel to Work Areas

2.11 Housing market areas reflect *"the key functional linkages between places where people live and work"* and therefore it is important to consider travel to work patterns within the identified area alongside the migration patterns:

> *Travel to work areas can provide information about commuting flows and the spatial structure of the labour market, which will influence household price and location. They can also provide information about the areas within which people move without changing other aspects of their lives (e.g. work or service use).*
>
> **Planning Practice Guidance 2014, paragraph 11**

2.12 One of the PPG suggested data sources is the Office for National Statistics travel to work areas (TTWAs). Figure 2 shows the latest ONS TTWAs. These were published in 2015 and they are based on the origin-destination data from the 2011 Census.

2.13 London is represented by a single TTWA. Consequently, TTWAs are not useful in defining functional HMAs for London boroughs.

Housing Markets in London

2.14 Housing Market Areas reflect *"the key functional linkages between places where people live and work"* and therefore it is important to consider travel to work patterns within the identified area alongside the migration patterns. The Guidance (Paragraph 11) states:

> *"Travel to work areas can provide information about commuting flows and the spatial structure of the labour market, which will influence household price and location. They can also provide information about the areas within which people move without changing other aspects of their lives (e.g. work or service use)."*

2.15 The identification of housing markets in London is not a new area of study. As previously noted, the ONS identified London as a single Travel to Work Area and the CURDS analysis identified a single housing market area for London that extended beyond the city's administrative boundary.

2.16 The Greater London Authority has published Strategic Housing Market Assessments in 2008 and 2014 which both treat London as a single housing market area. The 2014 Greater London SHMA at Table 5 notes;

> *"While the London housing market is accepted to cross the regional boundary, practical considerations including data availability and the precise identification of the market area (see chapter 2)* ***favour limiting the study to the Greater London area,*** *in line with previous such studies and with common practice both within London and in neighbouring areas".*

2.17 The identification of a single London wide housing market has been further supported by a recent High Court judgement. Nine London Boroughs sought to challenge the Mayor of London's policy in relation to Affordable Rent in March 2014. The claimants case was summarised in paragraph 9 of the judgement in that:

> *"The Claimants submit that the Defendant has failed to have proper regard to the requirements of the NPPF. Indeed, he has mis-interpreted the NPPF when he claims that rent caps would undermine the deliverability of affordable housing, contrary to the objective of the NPPF.* ***He was also mistaken in treating London as a single housing market.*** *Each Borough had to assess its own needs, and develop its own targets and policies to meet them."*

2.18 In relation to the issue of a single housing market in London the judgement concluded at paragraphs 39-41 that:

> *"Turning to the next issue, I accept the Defendant's submission that he was entitled to conclude, in the exercise of his planning judgment that* ***London represented a single housing market.***
>
> *The term "housing market area" appears in the NPPF, but is not defined. That a "housing market area" within the meaning of the NPPF does not necessarily equate to LPA administrative boundaries is plain from paragraph 159:*
>
> > *"159. Local planning authorities should have a clear understanding of housing needs in their area. They should: prepare a Strategic Housing Market Assessment to assess their full housing needs, working with neighbouring authorities where housing market areas cross administrative boundaries. [...]"*
>
> *The view that London should be regarded as a single housing market is not new. As the reasons supporting MD1268 noted at paragraph 7.22:*
>
> > *"[...] since at least the establishment of the GLA, London has always been regarded as a single market for strategic planning purposes. Both the London Plan and the Mayor's Housing Strategy are based on this accepted approach."*

2.19 However, paragraph 43 of the judgement states

> *The Draft Replacement London Plan, Report of Panel, March 2011 stated at 3.28:*
>
> > *"As it was not disputed that London is a single Strategic Housing Market Area with complex sub-markets that spread across Borough boundaries and has constrained land supply the use of which has to be optimised, we agree with the Mayor that it is not only appropriate but necessary to include Borough provision targets."*

2.20 The view that London contains many housing market areas within it is further supported by the 2014 Greater London SHMA which notes at paragraph 1.13:

> *"It is important to note that this SHMA, like the 2004 HRS and the 2008 SHMA before it, looks at housing requirements at the regional London level only, and does not provide any estimates of requirements at the local level. London boroughs remain responsible for assessing their own requirements, within the policy context set by the NPPF and the London Plan. Given the fact that housing market areas in London frequently extend across local borough boundaries, many boroughs have chosen to work in partnership to assess housing requirements on a sub-regional basis."*

2.21 Given this context, we can conclude that the North East London authorities form part of the Greater London Housing Market Area (GLHMA); the GLHMA (a "Tier 1" HMA that is defined by commuting and migration patterns) needs to ensure a balance of jobs and workers. The Greater London Authority has prepared a SHMA for the GLHMA to inform the London Plan, and it is this study that must consider the need to balance jobs and housing at the London-wide level.

2.22 In the light of the above, there is a need to consider how housing market area geography might be considered at a level below London, in order to develop a pragmatic solution for practical planning purposes and the local assessment of housing need. In this way, it allows for practical planning by small groups of boroughs, working together, within the framework of an overarching GLHMA.

2.23 This SHMA, therefore, is based on a lower-tier HMA that will help the LPA plan housing at a Borough level. In determining the number of homes needed at Borough level, the SHMA will need to be consistent with the London Plan and the projected population/households consistent with GLA figures. By doing so, this lower-tier HMA will, therefore, contribute to balancing jobs and workers across the Greater London HMA, consistent with the London Plan.

Jobs and Housing

2.24 It is not possible to define an HMA that is smaller than Greater London that is self-contained in terms of commuting – so if jobs and workers are to be in balance, the analysis must be undertaken for the whole of Greater London. Nevertheless, it remains helpful to consider the functional relationships between where people live and work when considering appropriate lower-tier HMAs.

2.25 Figure 3 summarises the underlying travel to work data for the North East London Boroughs including Waltham Forest, and shows that at least 54% of people who work in each borough also live in that borough. Between 1% and 13% of those who work in one of the four boroughs Barking and Dagenham, Havering, Newham and Redbridge, live in another of the four. There is comparatively little travel to work from some of the neighbouring commuter belt local authorities such as Brentwood and Thurrock.

2.26 Figure 4 shows that at least 41% of each borough's residents work in that borough. Between 3% and 9% live in one of the four boroughs Barking and Dagenham, Havering, Newham and Redbridge, and work in another of the four, while between 9% and 15% work in Westminster or the City of London. There is comparatively little travel to work out of London to Essex.

2.27 Both tables demonstrate that travel to work for a significant minority of North East London boroughs residents may be loosely related with place of residency.

Figure 3: Residence Location by Work in North East London Boroughs (Source: Census 2011 - Note: Top five values shown, based on at least one borough having no less than 5%)

	Work in									
	Barking and Dagenham		Havering		Newham		Redbridge		Waltham Forest

Figure 4: Work Location by Resident in North East London Boroughs (Source: Census 2011 - Note: Top six values shown, based on at least one borough having no less than 5%

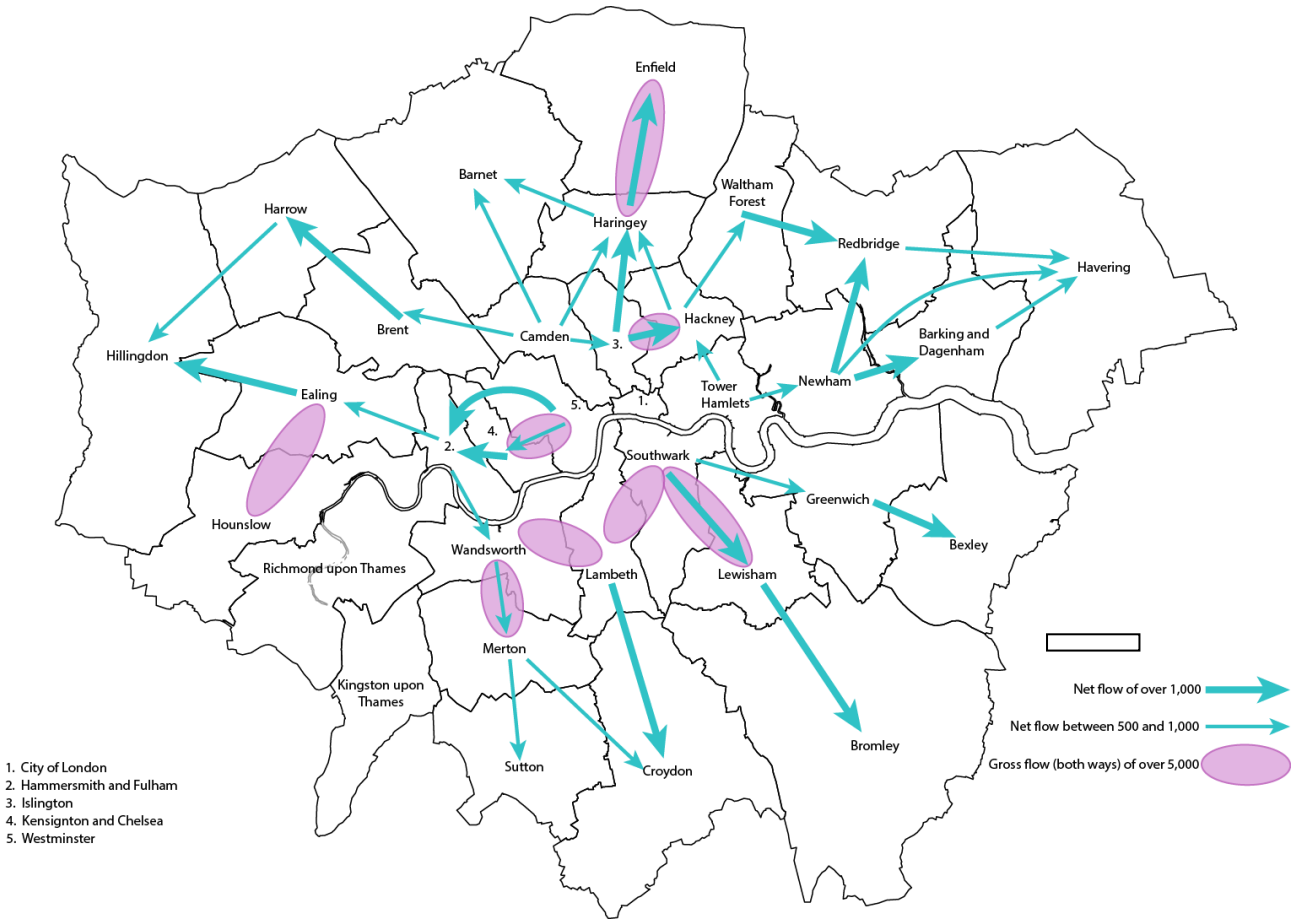
	Reside in									
	Barking and Dagenham		Havering		Newham		Redbridge		Waltham Forest	
Work in	Barking and Dagenham	43%	Havering	50%	Newham	45%	Redbridge	41%	Waltham Forest	43%
	Havering	9%	Westminster City of London	12%	Westminster City of London	15%	Westminster City of London	14%	Westminster City of London	15%
	Westminster City of London	9%	Barking and Dagenham	7%	Tower Hamlets	10%	Tower Hamlets	8%	Camden	5%
	Redbridge	8%	Tower Hamlets	5%	Camden	4%	Newham	7%	Tower Hamlets	5%
	Newham	7%	Redbridge	5%	Redbridge	3%	Waltham Forest	5%	Islington	4%
	Tower Hamlets	6%	Thurrock	3%	Islington	3%	Barking and Dagenham	4%	Hackney	4%

Migration Patterns

2.28 One of the ways to define a Housing Market Area is to consider an area *"where most of those changing house without changing employment choose to stay"*. Unfortunately, no data is available that relates migration with changes in employment circumstances, but given that most working people will live relatively close to their job, it is reasonable to assume that those migrants moving longer distances will tend to also change their place of work.

2.29 Figure 5 shows migration flows within London. This shows a complex pattern of moves from Central London to outer London boroughs, with a clear eastwards movement across Outer North East London. The main flows are net out migration from Waltham Forest to Redbridge, Newham to Redbridge and Newham to Barking and Dagenham. There are comparatively modest flows from Barking and Dagenham, Newham and Redbridge out to Havering and from Tower Hamlets to Newham. This does not imply that there is no other migration as only *net* flows of 500+ are shown by the blue arrows.

Figure 5: Migration between London Boroughs (Source: Census 2011)



2.30 The UK Census of population has recently released data on people who moved in the 12 months before the Census. Figure 6 shows the point of origin of people who moved and now live in one of the Outer North East London boroughs, while Figure 7 shows the location of people who lived in one of the boroughs and who moved in the year before the Census.

Figure 6: Current residents in North East London Boroughs who moved in the 12 months preceding the Census 2011 (Note: Top six values shown, based on at least one borough having no less than 5%)

	Residence at time of Census									
	Barking and Dagenham		Havering		Newham		Redbridge		Waltham Forest	
Residence 1 year before Census	Barking and Dagenham	54%	Havering	61%	Newham	66%	Redbridge	53%	Waltham Forest	61%
	Newham	14%	Barking and Dagenham	10%	Tower Hamlets	7%	Newham	14%	Newham	7%
	Redbridge	11%	Redbridge	8%	Waltham Forest	6%	Waltham Forest	9%	Hackney	6%
	Havering	5%	Newham	5%	Redbridge	4%	Barking and Dagenham	7%	Redbridge	4%
	Tower Hamlets	4%	Thurrock	3%	Barking and Dagenham	3%	Tower Hamlets	4%	Haringey	4%

Figure 7: Locations of households who lived in the North East London Boroughs before the Census 2011 and moved in the 12 months preceding the Census (Note: Top six values shown, based on at least one borough having no less than 5%)

	Residence 1 year before Census									
	Barking and Dagenham		Havering		Newham		Redbridge		Waltham Forest	
Residence at time of Census	Barking and Dagenham	56%	Havering	65%	Newham	60%	Redbridge	56%	Waltham Forest	60%
	Havering	10%	Barking and Dagenham	5%	Redbridge	9%	Barking and Dagenham	8%	Redbridge	9%
	Redbridge	9%	Thurrock	5%	Barking and Dagenham	6%	Newham	6%	Newham	7%
	Newham	6%	Brentwood	5%	Waltham Forest	5%	Havering	6%	Epping Forest	3%
	Thurrock	4%	Basildon	3%	Tower Hamlets	4%	Epping Forest	5%	Haringey	3%
	Waltham Forest	2%	Redbridge	3%	Havering	2%	Waltham Forest	5%	Enfield	2%

2.31 Between 53% and 66% of households who moved and now live in one of the Outer North East London boroughs were previously living in that borough. Meanwhile, between 56% and 65% of households who lived in one of the Outer North East London boroughs and who moved before the Census remained in the same borough. The largest proportion of moves between areas occurred between Barking and Dagenham, Newham and Redbridge rather than further afield, with moves to and from

Havering being comparatively common compared to other areas, but less so than between the other three boroughs.

2.32 There is some migration between the Outer North East London boroughs and Essex which demonstrates an outward flow from London. There is, however, little migration in from the neighbouring Essex local authority areas. For example, 3% of moves into Havering were from Thurrock and 2% from Brentwood, with smaller proportions in from Essex to the other Outer North East London boroughs. There is more outward migration, as might be expected when considering house prices; 5% of moves out of Havering were to Thurrock and 5% to Brentwood, with 4% of moves out from Barking and Dagenham being to Thurrock and 1% to Brentwood. Moves out to the neighbouring Essex authorities from the other Outer North East London boroughs were no more than 1% in any case. The sum of moves out to all Essex authorities is more significant; a total of 22% of moves out from Havering were to 11 Essex authorities, with 12% of moves out from Barking and Dagenham being to 10 Essex authorities, and 9% of moves out from Redbridge to 5 Essex authorities, though only 3% of moves out from Waltham Forest and 2% from Newham were to Essex. Numerically, this amounts to a significant number; in the year leading up to the 2011 Census, there were 8,579 moves out to Essex authorities from any of the five boroughs. Other than Havering, where 6% of moves into the Borough were from all Essex local authorities, in-migration was low, being between 0% and 3% for each borough.

2.33 Planning Practice Guidance on the Assessment of housing and economic development needs (Paragraph 11) states:

> *"Migration flows and housing search patterns reflect preferences and the trade-offs made when choosing housing with different characteristics. Analysis of migration flow patterns can help to identify these relationships and the extent to which people move house within an area. The findings can identify the areas within which a relatively high proportion of household moves (typically 70 per cent) are contained. This excludes long distance moves (e.g. those due to a change of lifestyle or retirement), reflecting the fact that most people move relatively short distances due to connections to families, friends, jobs, and schools'".*

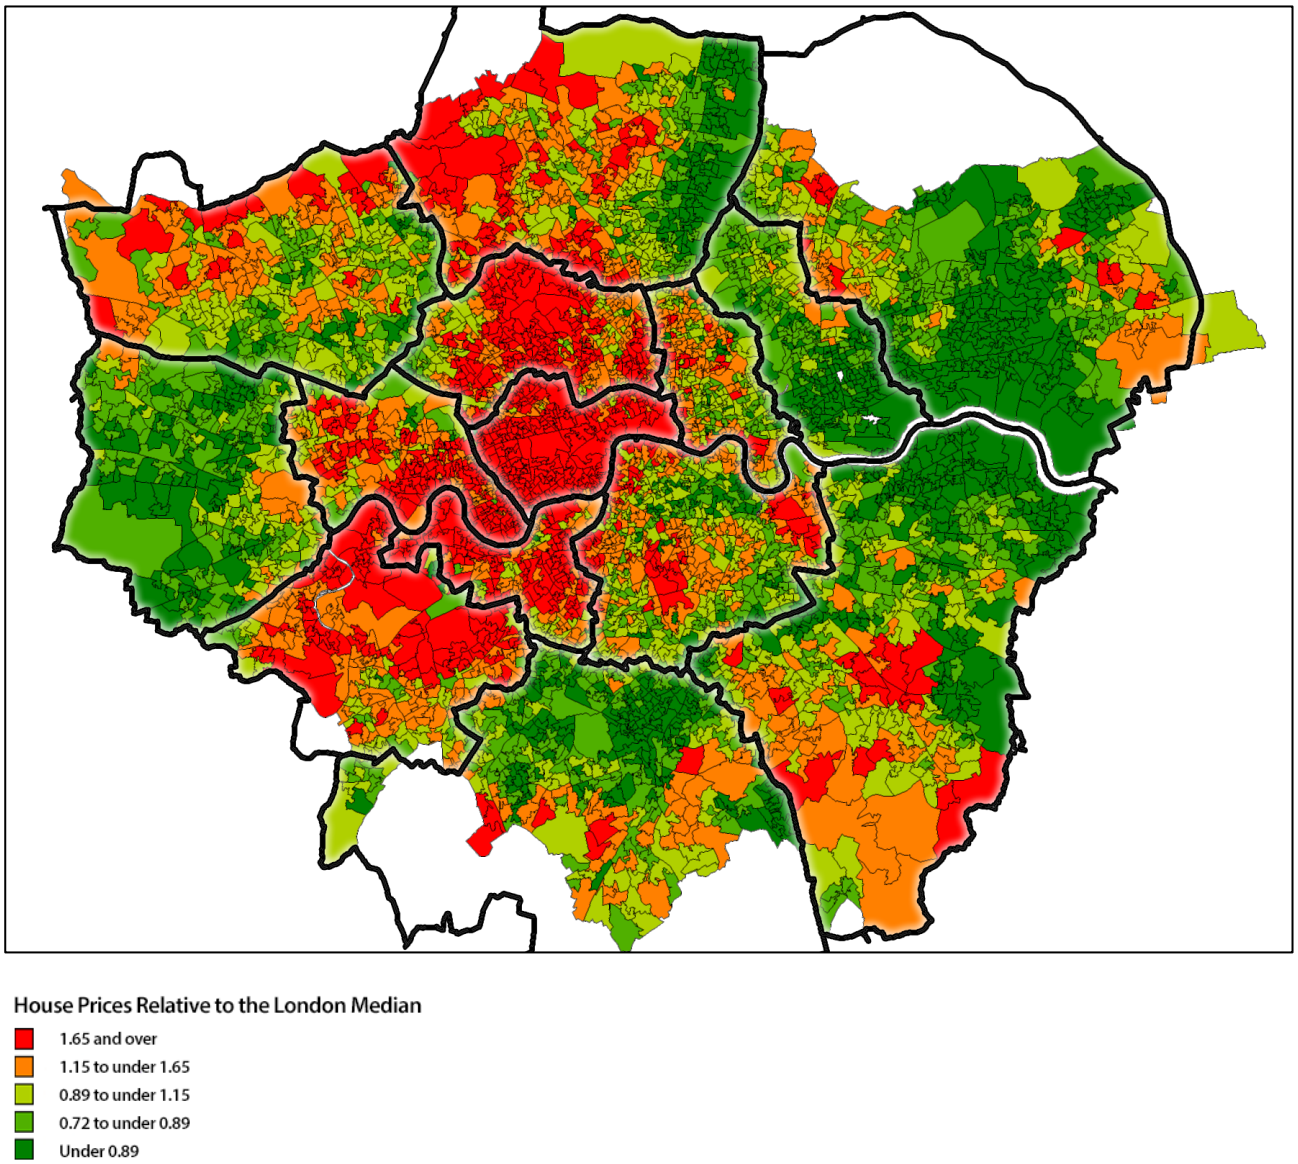
2.34 It is evident from the above analysis that none of the four boroughs can be considered to be housing market area on its own; migrants come and go from beyond Outer North East London. The inter-borough migration between the four boroughs suggests that some combination with neighbouring boroughs will meet the definition of a housing market area; although this is inconclusive as such moves often reflect the London-wide aspects of the housing market rather than a local housing market area.

House Prices and Valuation Office Agency Broad Rental Market Areas

2.35 The Broad Rental Market Area (BRMA) is the geographical area used by the Valuation Office Agency (VOA) to determine the Local Housing Allowance (LHA), the allowance paid to Housing Benefit applicants in the private rented sector. The BRMA area takes into account local house prices and rents, and is based on where a person could reasonably be expected to live taking into account access to facilities and services for the purposes of health, education, recreation, personal banking and shopping. When determining BRMAs the Rent Officer takes account of the distance of travel, by public and private transport, to and from these facilities and services. The boundaries of a BRMA do not have to match the boundaries of a local authority and BRMAs will often fall across more than one local authority area.

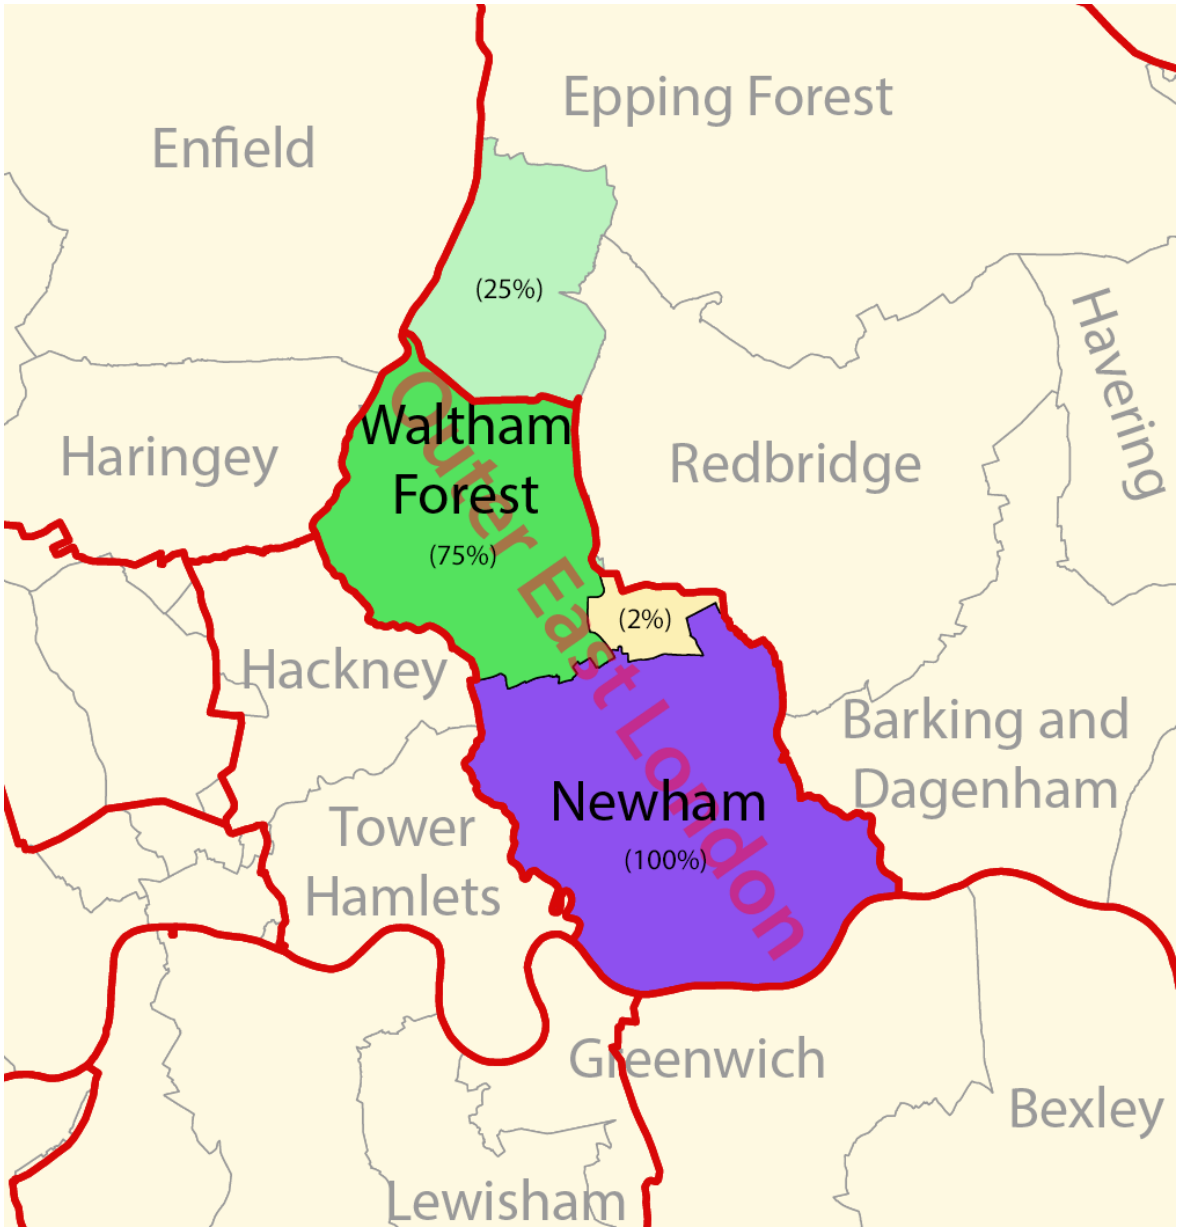
2.36 Figure 8 shows a relatively high degree of alignment between the BRMAs and house prices for London. Clearly there are areas of higher and lower prices around which it would be possible to form a series of housing market areas in London based on this measure, and the BRMA geography provides a useful framework for considering lower-tier housing market areas in London.

Figure 8: House Prices in London by Broad Rental Market Area (Source: Land Registry 2014)



2.37 Figure 9 shows that 100% of Newham's population falls within the Outer East London BRMA. It is also the case that 75% of Waltham Forest's population and a small proportion (2%) of Redbridge's population fall within the same BRMA. Therefore, the Outer East London BRMA shows a high degree of containment for Newham and Waltham Forest.

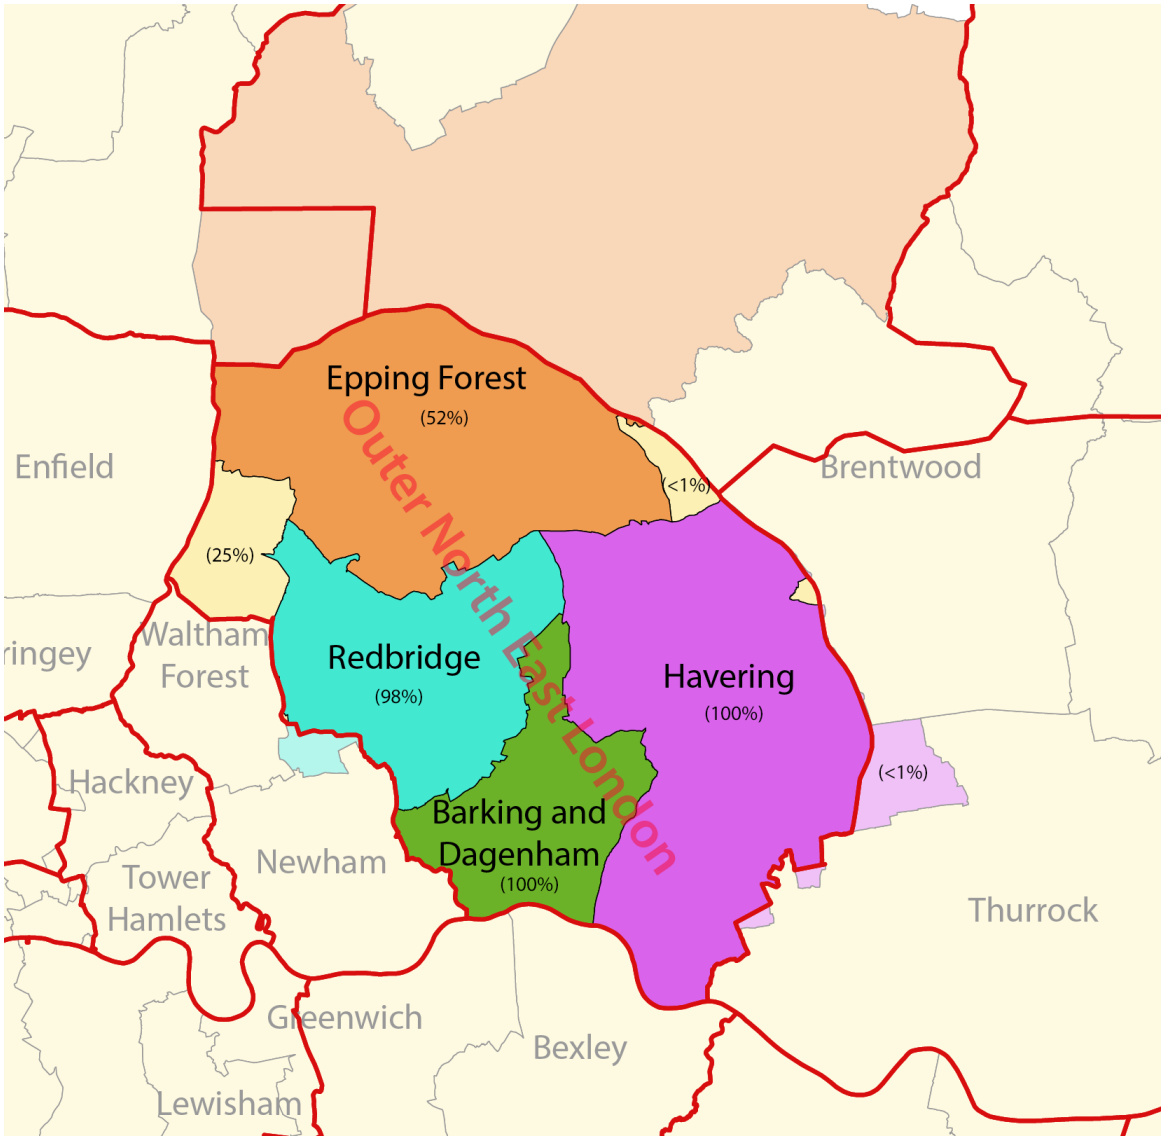
Figure 9: Outer East London Broad Rental Market Area



2.38 Figure 10 shows that 100% of Barking and Dagenham and Havering's populations falls within the Outer North East London BRMA along with 98% of Redbridge's population. It is also the case that 25% of Enfield's population fall within the same BRMA. Therefore, the Outer North East London BRMA shows a high degree of containment for Barking and Dagenham, Havering and Redbridge. If this BRMA is to define the housing market area, then close co-operation between all five local authorities is essential to ensure policies are developed which can deliver against the OAN, particularly to take account of Epping Forest being a district council rather than a London Borough.

2.39 While Epping Forest is also part of the BRMA for 'Outer North East London', it is not part of the Greater London Authority area, and, consequently, is subject to different planning arrangements to London boroughs and, therefore, outside the scope of this study. However, Epping Forest has been part of the wider consultation undertaken in the development of this study. Further, Epping Forest is undertaking their own SHMA as part of a wider HMA covering West Essex and East Hertfordshire.

Figure 10: Outer North East London Broad Rental Market Area



2.40 For planning purposes and the operation of the NPPF it is sensible for housing market areas to be relatively small to allow local authorities to work together as cohesive units. Therefore, ORS considers that the national Government-defined BRMAs based on house prices and rents form a sensible basis for deriving housing market areas in London where migration and travel to work patterns do not identify any distinct sub-markets.

2.41 We would stress that there are many ways of analysing housing sub-markets. The SHMA conclusion that Barking and Dagenham, Havering and Redbridge can considered as part of a single housing market area, with Newham part of a separate housing market area with Waltham Forest is based on a tested methodology which has been accepted in examination, but that does not prevent other options being explored.

Administrative Boundaries and Housing Market Areas

2.42 The NPPF recognises that housing market areas may cross administrative boundaries, and PPG emphasises that housing market areas reflect functional linkages between places where people live and work. The previous 2007 CLG advice note[8] also established that functional housing market areas should not be constrained by administrative boundaries, nevertheless it suggested the need for a "best fit" approximation to local authority areas for developing evidence and policy (paragraph 9):

> *"The extent of sub-regional functional housing market areas identified will vary and many will in practice cut across local authority administrative boundaries. For these reasons, regions and local authorities will want to consider, for the purposes of developing evidence bases and policy, using a pragmatic approach that groups local authority administrative areas together as an approximation for functional sub-regional housing market areas."*

2.43 This "best fit" approximation has also been commended by the PAS OAN technical advice note, which suggests (paragraph 5.21):

> *"It is best if HMAs, as defined for the purpose of needs assessments, do not straddle local authority boundaries. For areas smaller than local authorities data availability is poor and analysis is becomes impossibly complex. There may also be 'cliff edge' effects at the HMA boundary, for example development allowed on one side of a road but not the other."*

2.44 This means there is a need for balance in methodological approach:

- On the one hand, it is important that the process of **analysis and identification of the functional housing market areas should not be constrained by local authority boundaries**. This allows the full extent of each functional housing market to be properly understood and ensures that all of the constituent local planning authorities can work together under the duty to cooperate, as set out in Guidance (PPG, paragraph 10).
- On the other hand, and as suggested by the recent PAS OAN technical advice note (and the previous CLG advice note), it is also necessary to identify a "best fit" for each functional housing market area that is based on local planning authority boundaries. This "best fit" area provides an appropriate basis for analysing evidence and drafting policy, and would normally represent the group of authorities that would take responsibility for undertaking a Strategic Housing Market Assessment (SHMA).

2.45 In summary, therefore, the approach to defining housing market areas needs to balance robust analysis with pragmatic administrative requirements. Therefore, whilst we have established the most up-to-date functional housing markets for Outer North East London, it is now necessary to consider the most appropriate working arrangements for establishing the evidence base that the NPPF requires.

[8] Identifying sub-regional housing market areas (CLG, March 2007)

Conclusions

2.46 On the basis of the evidence, we would conclude that:

- Greater London can be considered as a single large housing market area which contains many smaller overlapping housing market areas within it.
- Migration and travel to work flows do not identify any distinct housing market areas in London.
- House price represents a means of identifying separate housing market areas in London. The VOA has worked with house price and rent nationally to identify BRMAs which determined LHA levels.
- BRMAs represent the most practical and pragmatic approach to identifying housing market areas in London. The 13 BRMAs in London will allow small groups of London boroughs to plan together.
- 100% of Newham's population fall in the Outer East London BRMA.
- 100% of Barking and Dagenham, 100% of Havering and 98% of Redbridge's populations fall in the Outer North East London BRMA.
- When assessing objectively assessed needs at housing market area level we recommend that Barking and Dagenham, Havering and Redbridge be considered as one area, with Newham as part of a separate area (along with Waltham Forest).
- Given the overlapping nature of housing market areas, this does not preclude Barking and Dagenham, Havering, Redbridge and Newham from also considering their needs as part of the wider Outer North East London area. The Census migration data supports this conclusion.
- Given this context, it is appropriate for the SHMA analysis to focus upon two core areas (i.e. Barking and Dagenham, Havering and Redbridge, and Newham). Nevertheless, it will be important that the four boroughs consider the needs of other authorities in surrounding areas, their relationship and that these issues are explored under Duty to Co-operate arrangements.
- The HMA analysis should not be seen as prescriptive on other authorities who may wish to identify their housing market areas by other means.

3. Demographic Projections

The starting point for Objectively Assessed Need

Chapter Summary

3.1 The first step in the Objective Assessment of Need is a demographic process to derive housing need from a consideration of population and household projections, after which market signals are considered. The key points and conclusions of the demographic process are:

- PPG places emphasis on the role of **CLG Household Projections** as the appropriate starting point in determining objectively assessed need. The ONS Sub National **Population projections** are also considered.
- For the 25-year period 2012-37, the CLG 2012-based projections show an annual increase of 3,900 households in Outer East London and 4,927 households in Outer North East London.
- Whilst PPG identifies CLG household projections as the starting point for establishing housing need, it also recognises the need to consider sensitivity testing this data and take account of local evidence.
- CLG and GLA household projections are considered. GLA long-term trend migration scenario is used as the basis for the SHMA central estimates. Long-term 10-year migration scenarios are more likely to capture both highs and lows and are not as dependent as 5-year scenarios on trends that may be unlikely to be repeated.
- GLA long-term trends based on 12-year migration flows identifies a total increase of 7,428 households per annum (7,587 dwellings) over the 22-year period 2011-33 and this provides the most appropriate demographic projection on which to base the Objectively Assessed Need (OAN) for housing for the 22-year Plan period 2011-33.

Process for Establishing Objectively Assessed Need

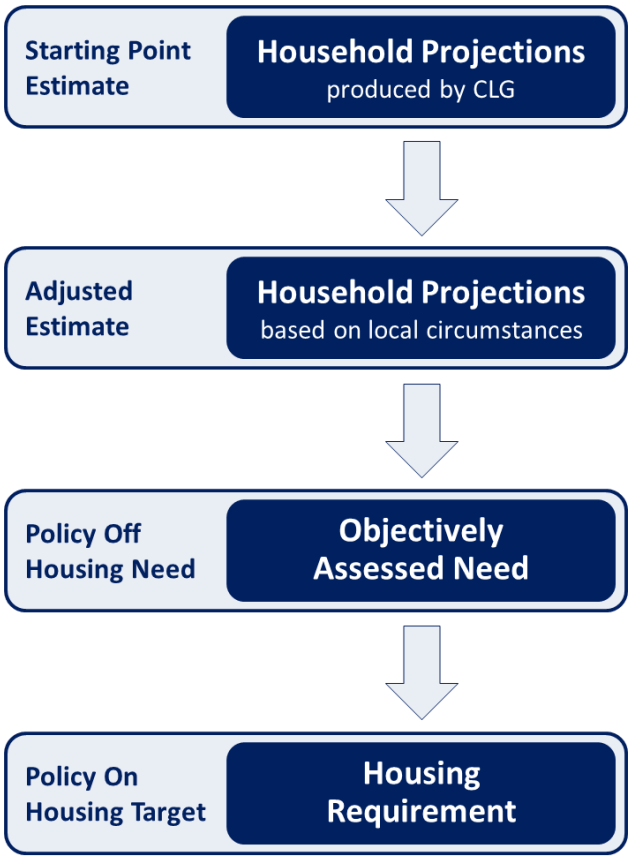
3.2 The Objective Assessment of Need identifies the quantity of housing needed (both market and affordable) in the Housing Market Area over future plan periods. This evidence assists with the production of the Local Plan (which sets out the spatial policy for a local area).

3.3 Figure 11 sets out the process for establishing the housing number for the Housing Market Area. It starts with a demographic process to derive housing need from a consideration of population and household projections. This chapter therefore considers the most appropriate demographic projection on which to base future housing need.

3.4 To establish the Objectively Assessed Need (OAN), external market and macro-economic constraints are applied to the demographic projections ('Market Signals') in order to ensure that an appropriate balance is achieved between the demand for and supply of dwellings. Nevertheless, it is important to recognise that the OAN does not take account of any possible constraints to future housing supply. Such factors should subsequently be considered by the local planning authorities as part of the plan-

making process in order to establish the appropriate Housing Requirement and planned housing number.

Figure 11: Process for establishing the housing number for the HMA (Source: ORS based on NPPF and PPG)



Official Household Projections

3.5 Planning Practice Guidance published in March 2014 places emphasis on the role of **CLG Household Projections** as the appropriate starting point in determining objectively assessed need. PPG was updated in February 2015 following the publication of the 2012-based Household Projections.

> *Household projections published by the Department for Communities and Local Government should provide the starting point estimate of overall housing need.*
>
> *The household projections are produced by applying projected household representative rates to the population projections published by the Office for National Statistics.*
>
> **Planning Practice Guidance 2014, paragraph 15**

> *The 2012-2037 Household Projections were published on 27 February 2015, and are the most up-to-date estimate of future household growth.*
>
> **Planning Practice Guidance 2015, paragraph 16**

3.6 Given this context, Figure 12 sets out the 2012-based **household** projections together with previous household projections that CLG has produced for the area. The projections have varied over time,

with the most recent set of projections showing the highest projected rates of growth. Each set of household projections will be influenced by a wide range of underlying data and trend-based assumptions, and it is important to consider the range of projected growth and not simply defer to the most recent data.

Figure 12: CLG Household Projections for North East London: annual average growth (Source: CLG Household Projections Note: Figures may not sum due to rounding**)**

	2012-based		2011-based interim		2008-based	
	10 years 2012-22	25 years 2012-37	10 years 2011-21	25 years Not published	10 years 2008-18	25 years 2008-33
Newham	2,654	2,244	1,408	-	164	379
Waltham Forest	1,667	1,656	1,196	-	446	580
OUTER EAST LONDON	**4,320**	**3,900**	**2,603**	**-**	**610**	**959**
Barking & Dagenham	1,511	1,507	1,471	-	468	568
Havering	1,162	1,306	1,163	-	949	1,007
Redbridge	2,191	2,114	2,179	-	1,329	1,256
OUTER NORTH EAST LONDON	**4,863**	**4,927**	**4,813**	**-**	**2,746**	**2,831**

3.7 The CLG 2012-based household projections show an increase of 4,927 households each year over the 25-year period 2012-37, and a marginally lower rate (4,863 p.a.) in the initial 10-year period. These figures project forward over the normal 25-year period and supersede both the 2008-based household projections (which projected a household growth of 2,831 per year from 2008-33) and the interim 2011-based household projections (which projected growth of 2,746 per year from 2011-21). The differences are largely due to changes in the ONS population projections (Figure 13) on which the CLG household projections are based; although there have also been changes to household representative rates (considered later in this chapter).

Official Population Projections

3.8 Figure 13 and Figure 14 show the outputs from the latest (2012-based) ONS Sub National **Population** Projections together with the previous projections that have informed the various CLG household projections (though note that CLG did not produce household projections based on the 2010-based SNPP). It is evident that the 2012-based projections follow a similar trajectory to the 2010-based and 2011 based projections, albeit from a higher starting point in Outer East London, but a notably higher rate of increase than projected by the 2008-based projection.

Figure 13: ONS Mid-Year Estimates and Sub-National Population Projections for Outer East London (Source: ONS. Note: There were methodological changes to the migration assumptions between the 2008-based and subsequent SNPP. Household projections were not produced for the 2010-based SNPP)

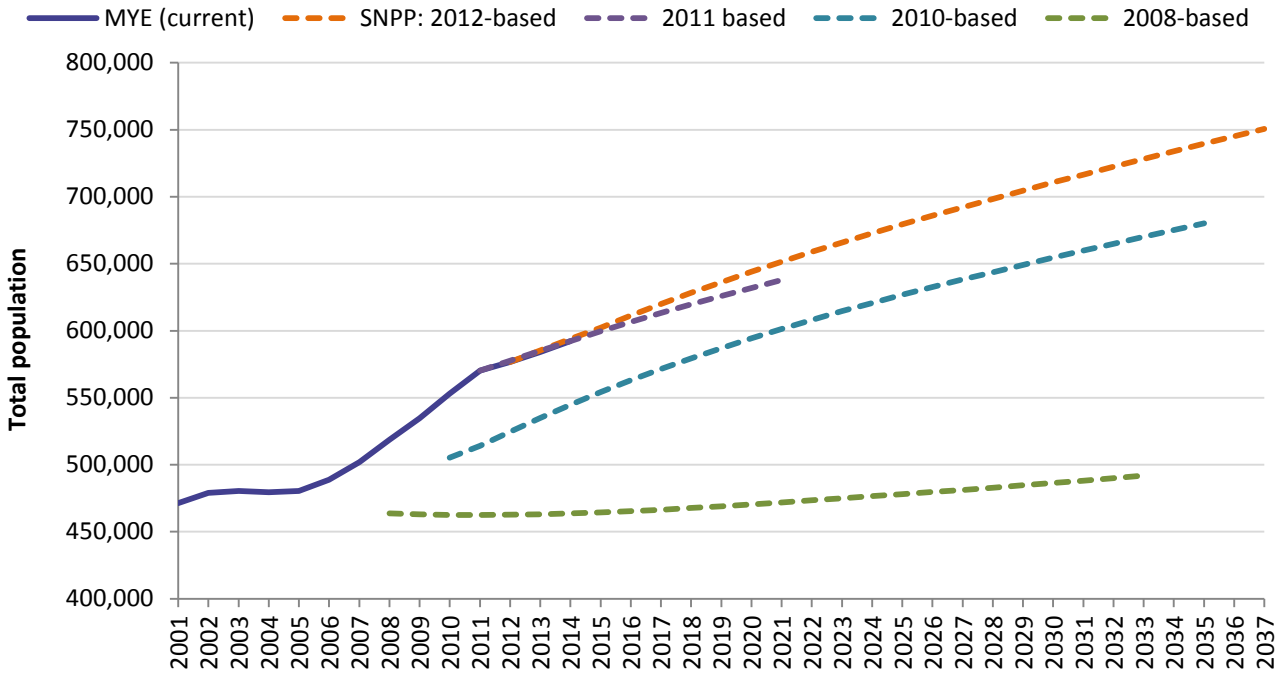


Figure 14: ONS Mid-Year Estimates and Sub-National Population Projections for Outer North East London (Source: ONS. Note: There were methodological changes to the migration assumptions between the 2008-based and subsequent SNPP. Household projections were not produced for the 2010-based SNPP)

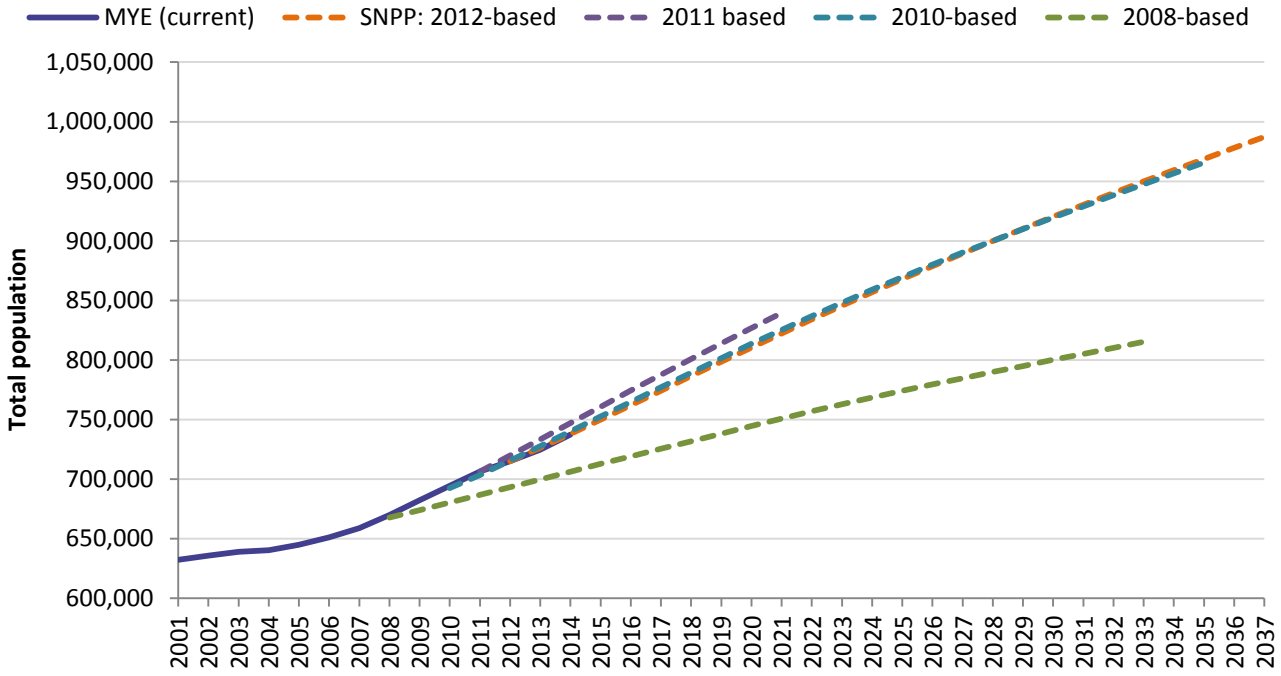

3.9 Differences in the projected increase in population between the different projections are largely associated with the **assumed migration rates**, which are based on recent trends using 5-year averages – so short-term changes in migration patterns can significantly affect the projected population growth. There were also methodological changes to the migration assumptions between the 2008-based and

2010-based figures. However, it is clear that the 2008-based household projections were based on a much slower population growth than is currently projected.

Population and Household Projections based on Local Circumstances

3.10 Whilst PPG identifies CLG household projections as the starting point for establishing housing need, it also recognises the need to consider sensitivity testing this data and take account of local evidence.

> *Plan makers may consider sensitivity testing, specific to their local circumstances, based on alternative assumptions in relation to the underlying demographic projections and household formation rates … Any local changes would need to be clearly explained and justified on the basis of established sources of robust evidence.*
>
> **Planning Practice Guidance 2014, paragraph 17**

3.11 Given that the demographic projections are trend-based, one of the most critical factors is the period over which those trends are based. The PAS OAN technical advice note considers this issue in relation to the ONS population projections (paragraphs 6.12-5.13):

> *''To predict migration between local authorities within the UK that model uses a base period of five years (for international migration the period is six years and the figures are controlled to national totals). This can throw doubt on the projections, because for many areas migration varies widely over time. Over a number of years one would expect such fluctuations to cancel out, so that long-term trends become apparent. But a five-year base period does not seem enough for this, bearing in mind that the ONS projections look ahead 25 years and Local Plans 15 years or longer. This is a main reason why for many areas successive rounds of population projections show very different results.*
>
> *The base period used in the latest official projections, 2007-12, is especially problematic. The period covers all of the last recession, in which migration was severely suppressed as many households were unable to move due to falling incomes and tight credit. Therefore the official projections may underestimate future migration - so that they show too little population growth for the more prosperous parts of the country, which have been recipients of net migration in the past. If so, by the same token the projections will also overestimate population growth for areas with a history of net out-migration.''*

3.12 This issue was also considered by an article by Ludi Simpson (Professor of Population Studies at the University of Manchester) and Neil MacDonald (previously Chief Executive of the National Housing and Planning Advice Unit) published in Town and Country Planning (April 2015)[9].

> *"The argument for using a five-year period rather than a longer one is that the shorter the period, the more quickly changes in trends are picked up. The counter-argument is that a shorter period is more susceptible to cyclical trends, an argument that has particular force when the five-year period in question – 2007-12 – neatly brackets the deepest and longest economic downturn for more than a generation. … A large number of local authority areas are affected by this issue. For 60% of authorities the net flow of migrants within the UK in 2007-12 was different by more than 50% from the period 2002-07. While this is comparing a*

[9] "Making sense of the new English household projections", Town and Country Planning (April 2015)

boom period with a recession, it serves to indicate the impact of the choice of reference period for trend projections."

3.13 On balance, we consider that:

» 5-year trend migration scenarios are less reliable: they have the potential to roll-forward short-term trends that are unduly high or low and therefore are unlikely to provide a robust basis for long-term planning.

» 10-year trend migration scenarios are more likely to capture both highs and lows and are not as dependent on trends that may be unlikely to be repeated. **Therefore, we favour using 10-year migration trends as the basis for our analysis.**

3.14 This SHMA has, therefore, produced additional projections based on long-term migration trends as part of the analysis. Whilst no one scenario will provide a definitive assessment of the future population; considering demographic projections where migration is based on long-term trends provides a more appropriate basis on which to consider future housing need.

3.15 We have adopted this approach systematically across all SHMAs that we have undertaken since the publication of the NPPF, and the approach was supported by the Inspector examining the Core Strategy for Bath and North East Somerset. His report[10] concluded (paragraphs 42-43):

"Given the uncertainties inherent in some of the data, particularly for flows of migrants internationally, a 10 year period is a reasonable approach … The inter-censal period provides a readily understandable and robust check on the reasonableness of the average of about 550 per year for migration and other change used in the ORS model. Thus I consider that the ORS mid-trend population projection is a reasonable demographic projection."

Population Trends

3.16 Figure 15 to Figure 19 shows the current and historic mid-year **population** estimates and Census estimates for each of the authorities since 1981. The data shows that the local authorities' populations were relatively stable throughout the 1980s and 1990s. However, since 2001 all of the authorities have seen a sharp growth in their populations with the growth in both Newham and Waltham Forest not being identified until the release of the 2011 Census.

[10] Report on the Examination into Bath and North East Somerset Council's Core Strategy (June 2014)

Figure 15: Newham official population estimates for the period 1981-2012 (Source: UK Census of Population 1981, 1991, 2001 and 2011; ONS Mid-Year Estimates, including data since superseded)

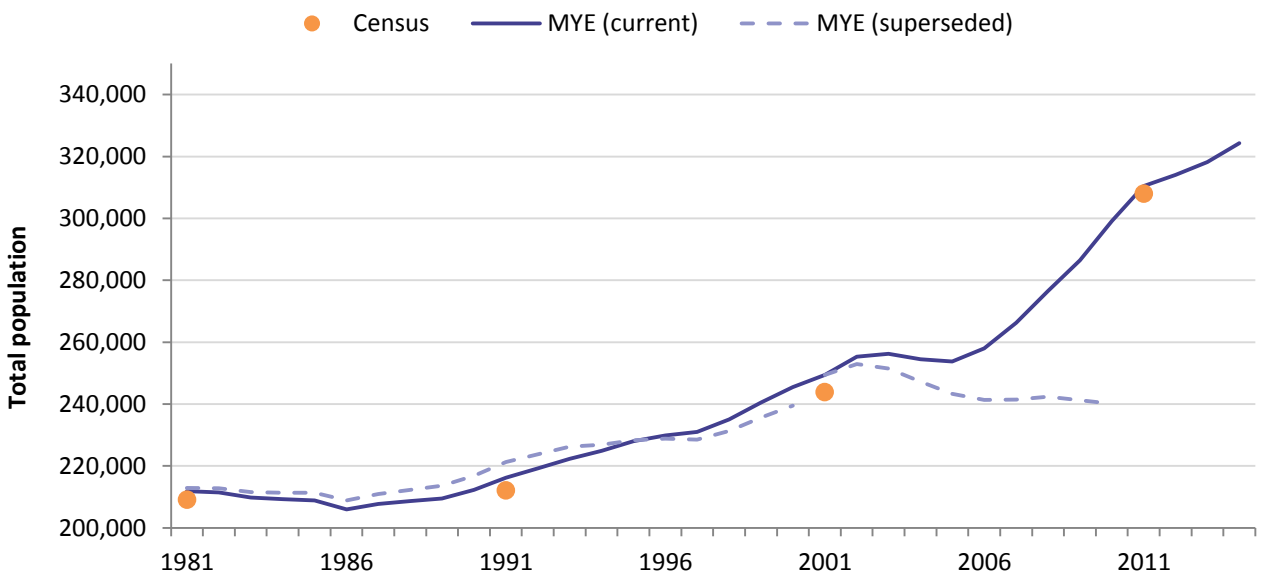

Figure 16: Waltham Forest official population estimates for the period 1981-2012 (Source: UK Census of Population 1981, 1991, 2001 and 2011; ONS Mid-Year Estimates, including data since superseded)

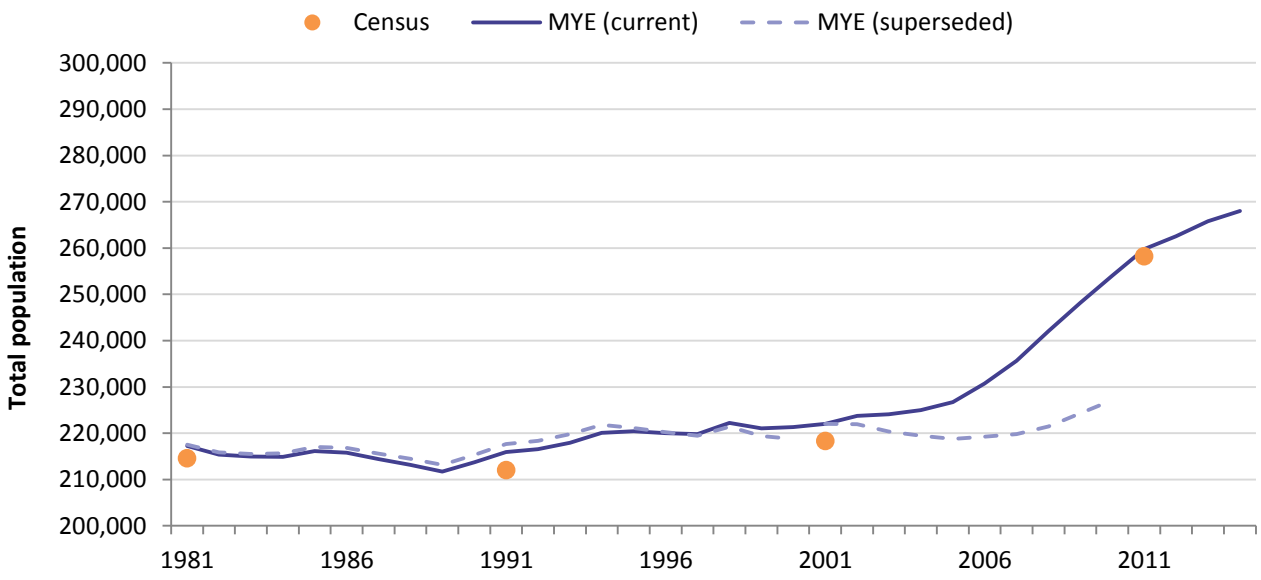

Figure 17: Barking & Dagenham official population estimates for the period 1981-2012 (Source: UK Census of Population 1981, 1991, 2001 and 2011; ONS Mid-Year Estimates, including data since superseded)

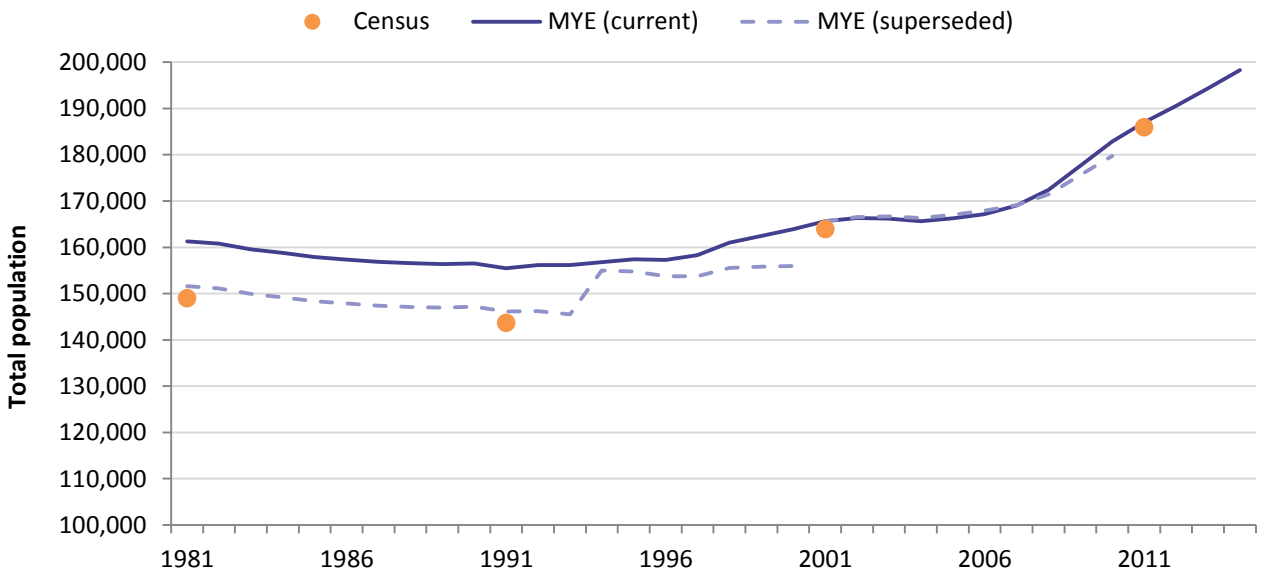

Figure 18: Havering official population estimates for the period 1981-2012 (Source: UK Census of Population 1981, 1991, 2001 and 2011; ONS Mid-Year Estimates, including data since superseded)

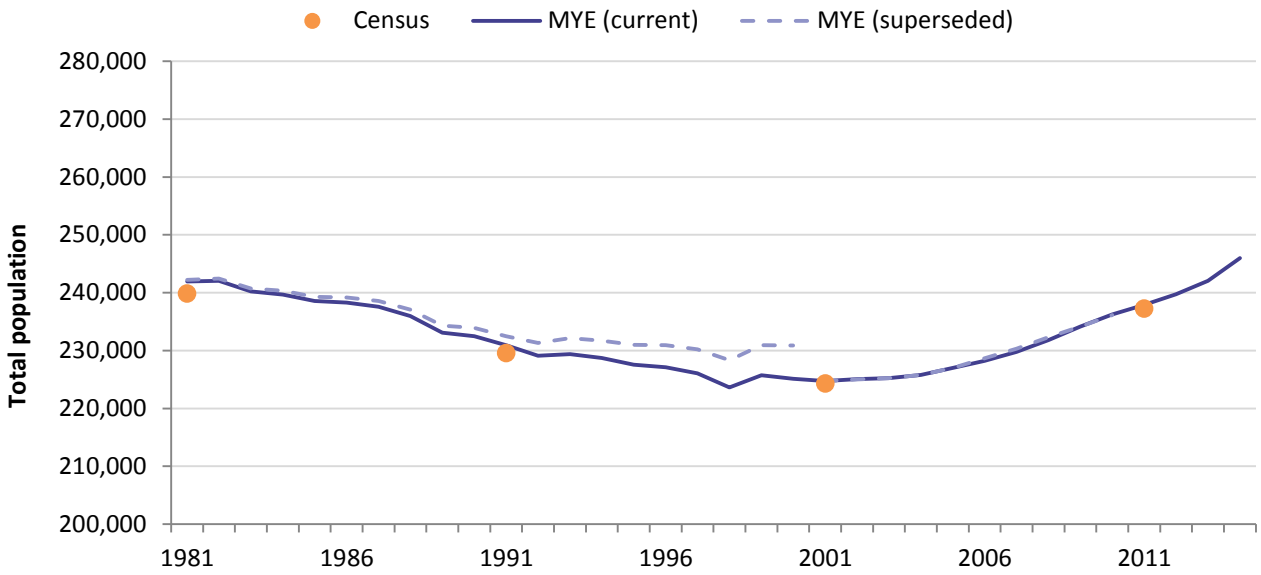

Figure 19: Redbridge official population estimates for the period 1981-2012 (Source: UK Census of Population 1981, 1991, 2001 and 2011; ONS Mid-Year Estimates, including data since superseded)

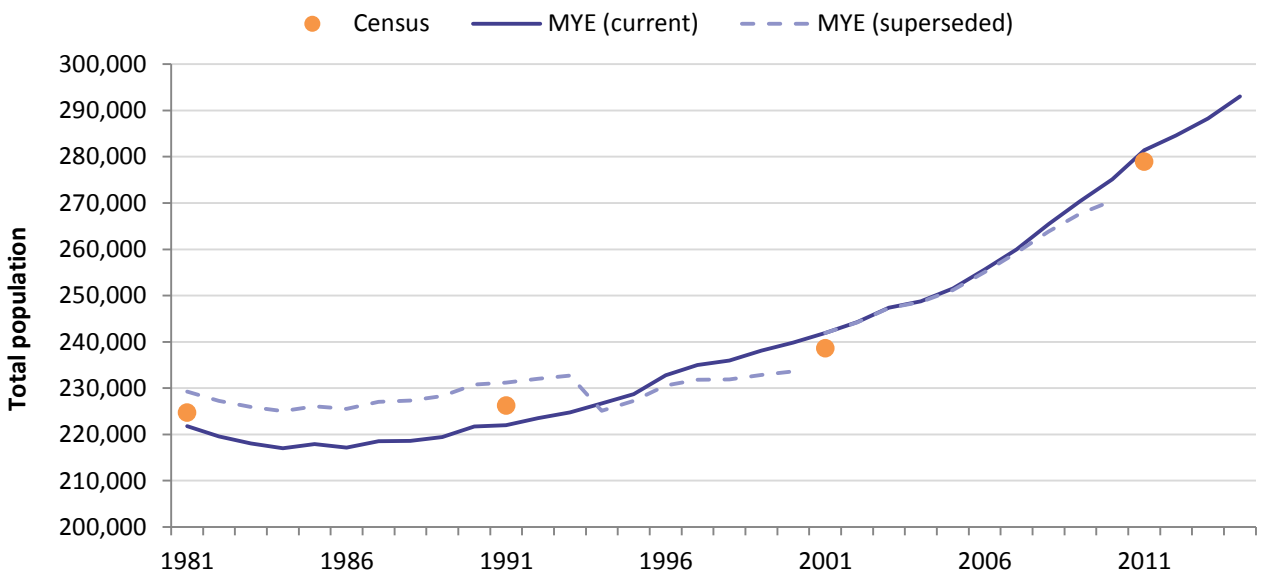

Population Projections

3.17 Having considered past population growth and its components, both the ONS and the GLA have produced population projections for each of the boroughs. Figure 20 shows all of the official estimates and projections for population in one chart for Outer East London and Figure 21 shows the equivalent figures for Outer North East London. It is clear that the GLA 2014 round short-term round data closely mirrors the 2012 based SNPP which is unsurprising given that the data underwriting them are from similar periods.

3.18 However, the GLA 2014 round long-term trends show a lower rate of growth with an assumption of slightly lower in-migration to London and higher out-migration from London.

Figure 20: Official population estimates and projections for Outer East London the period 2001-2035 (Source: ONS and GLA

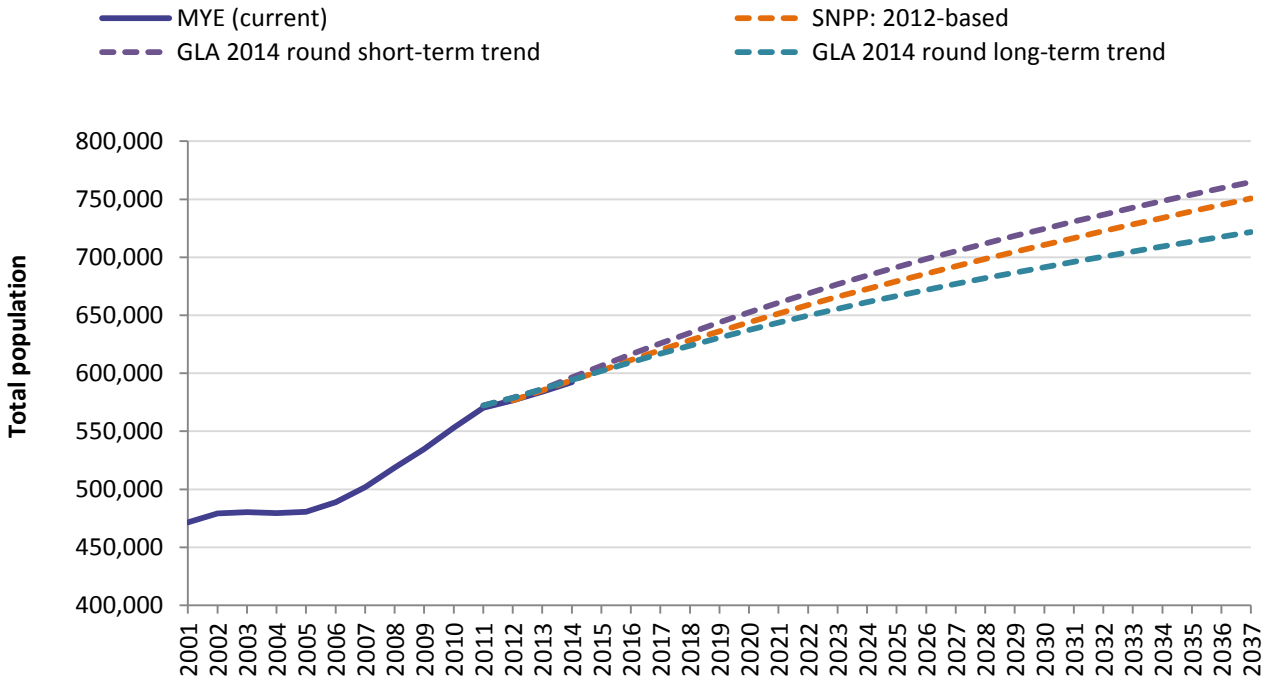

Figure 21: Official population estimates and projections for Outer North East London for the period 2001-2037 (Source: ONS and GLA

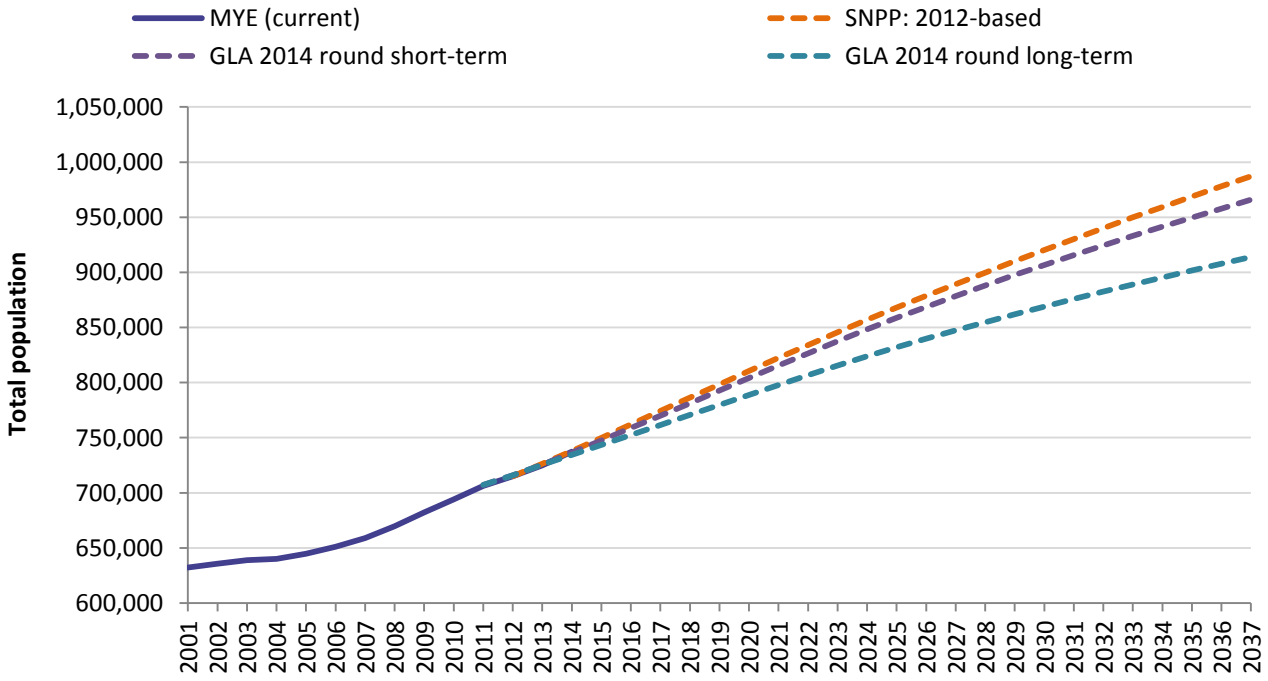

Establishing the Future Need and Demand for Housing

3.19 Modelling future need and demand for housing requires a consideration of the future housing market from a high-level, strategic perspective; in this way an understanding of how key drivers and long-term trends impact on the structure of households and population over the full planning period can be delivered. Further, it needs to be produced in a way that is consistent, strategic and robust.

3.20 The National Planning Policy Framework contains a presumption in favour of sustainable development, and states that Local Plans should meet objectively assessed needs for market and affordable housing based on household and population projections that take account of migration and demographic change:

> *At the heart of the National Planning Policy Framework is a **presumption in favour of sustainable development**, which should be seen as a golden thread running through both plan-making and decision-taking.*
>
> *Local planning authorities should positively seek opportunities to meet the development needs of their area.*
>
> *Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change, unless any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.*
>
> **National Planning Policy Framework (NPPF), paragraph 14**

> *To boost significantly the supply of housing, local planning authorities should use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area.*
>
> **National Planning Policy Framework (NPPF), paragraph 47**

> *Local planning authorities … should prepare a Strategic Housing Market Assessment to assess their full housing needs, working with neighbouring authorities where housing market areas cross administrative boundaries.*
>
> *The Strategic Housing Market Assessment should identify the scale and mix of housing and the range of tenures that the local population is likely to need over the plan period which meets household and population projections, taking account of migration and demographic change.*
>
> **National Planning Policy Framework (NPPF), paragraph 159**

Official Household Projections

3.21 Planning Practice Guidance published in March 2014 places emphasis on the role of CLG Household Projections as the appropriate starting point in determining objectively assessed need. However, the Guidance does allow for the use of sensitivity testing of CLG Household projections to 'test' whether these are appropriate, allowing for alternative assumptions to be used.

3.22 In the case of London we consider it appropriate to acknowledge the role of the GLA's own household projections. As discussed above, the projections undertaken by the GLA are more specific to London than those undertaken by CLG. Therefore, they form a more credible basis for planning in London than CLG's projections.

> *Household projections published by the Department for Communities and Local Government should provide the starting point estimate of overall housing need.*
>
> *The household projections are produced by applying projected household representative rates to the population projections published by the Office for National Statistics.*
>
> **Planning Practice Guidance 2014, section 3**

> *Plan makers may consider sensitivity testing, specific to their local circumstances, based on alternative assumptions in relation to the underlying demographic projections and household formation rates. Account should also be taken of the most recent demographic evidence including the latest Office of National Statistics population estimates*
>
> *Any local changes would need to be clearly explained and justified on the basis of established sources of robust evidence.*
>
> **Planning Practice Guidance 2014, section 3**

3.23 Given this context, Figure 22 sets out the range of household projections that CLG and GLA has produced for the boroughs for both 10 and 25 year periods. The GLA short term trend migration model uses data from 2008-2013 to project future migration, while the long-term migration scenario uses migration from 2001-2013 as the basis for its projection.[11]

Figure 22: CLG and GLA Household Projections for North East London: annual average growth (Source: CLG Household Projections Note: Figures may not sum due to rounding**)**

	CLG 2012-based		GLA 2014 Round Short-term trends		GLA 2014 Round Long-term trends	
	10 years 2012-22	25 years 2012-37	10 years 2011-21	25 years 2011-36	10 years 2011-21	25 years 2011-36
Newham	2,654	2,244	2,829	2,441	2,229	1,856
Waltham Forest	1,667	1,656	1,771	1,,710	1,760	1,617
OUTER EAST LONDON	**4,320**	**3,900**	**4600**	**4,151**	**3,989**	**3,473**
Barking & Dagenham	1,511	1,507	1,488	1,516	1,063	1,067
Havering	1,162	1,306	1,010	1,181	865	1,000
Redbridge	2,191	2,114	1,771	1,710	1,851	1,783
OUTER NORTH EAST LONDON	**4,863**	**4,927**	**4,269**	**4,407**	**3,779**	**3,850**

3.24 It is clear that the GLA projections using long-term trends for migration are typically lower than both the CLG 2012 based and GLA short-term trend migration models. The GLA projections indicate that the last 5 years for London have seen high levels of net migration and that a return to longer-term trends would see this figure being reduced.

[11] The 2014 round GLA household projections were updated in December 2015 after the analysis for this report was completed.

3.25 Across England as a whole we have taken the view that on balance, we consider that:

» 5-year trend migration scenarios are unlikely to be robust: they have the potential to roll-forward short-term trends that are unduly high or low and therefore are unlikely to provide a robust basis for long-term planning.

» 10-12-year trend migration scenarios are more likely to capture both highs and lows and are not as dependent on trends that may be unlikely to be repeated. **Therefore, we favour using 10-12 migration trends as the basis for our analysis.**

3.26 ORS are undertaking SHMAs for a range of local authorities across England, with many in commuter areas around London. In all cases we are utilising long-term trends in our modelling, so and assumption of long-term migration trends to and from London are balance by the same assumptions being applied to areas outside of London.

3.27 This SHMA therefore, uses the GLA long-term trend migration scenario as the basis for its central estimates. However, it is important to recognise that no one scenario will provide a definitive assessment of the future population and therefore we have sensitivity tested the figures using the short-term trend analysis form the GLA.

Household Projections and Dwellings

3.28 Using the GLA household projections, we can establish the projected number of additional households. The projected increase in households across the area is summarised in Figure 23.

3.29 Figure 23 also provides an estimate of dwelling numbers, which takes account of vacancies and second homes based on the proportion of dwellings without a usually resident household identified by the 2011 Census. This identified a rate of 2.1% for Barking and Dagenham, 2.1% for Havering, 2.0% for Newham, 2.4% for Redbridge and 1.9% for Waltham Forest.

Figure 23: Projected households and dwellings over the 22-year period 2011-33 (Note: Dwelling numbers derived based on proportion of dwellings without a usually resident household in 2011 Census Note: Figures may not sum due to rounding)

	GLA 2014 Round Short-term trends		GLA 2014 Round Long-term trends	
	Households 22 years 2011-33	Dwellings 22 years 2011-33	Households 22 years 2011-33	Dwellings 22 years 2011-33
Newham	2,518	2,569	1,921	1,960
Waltham Forest	1,731	1,765	1,649	1,681
OUTER EAST LONDON	**4,249**	**4,334**	**3,570**	**3,641**
Barking & Dagenham	1,525	1,558	1,075	1,098
Havering	1,153	1,178	975	996

OUTER NORTH EAST LONDON	**4,667**	**4,773**	**3,858**	**3,946**

3.30 While ORS consider that the GLA population and household projections utilised more local information than those produced by the ONS and CLG, we note two key points around their use in Outer North East London.

3.31 The first issue relates to the treatment of Unattributable Population Change (UPC) in the GLA's population projections. UPC is an accountancy adjustment to reflect the difference between MYE and

Census population estimates. In Newham and Waltham Forest, the 2011 Census indicated a very much larger population than had been identified by the MYE and the ONS label this discrepancy as UPC.

3.32 In their population projections, the GLA allocate the UPC to international migration. Therefore, the GLA effectively state that the population of Newham and Waltham Forest has grown faster than was previously believed and that all of this was due to international migration. This extra migration is then assumed to continue in to the future giving a higher projected population growth. Therefore, additional persons per annum have been added to the migrant numbers for Newham and Waltham Forest for each year in the projections.

3.33 As a general rule, ORS would agree with this approach. However, the UPC for Newham and Waltham Forest is so high that the figures should be treated with caution because some of the change may be due to other factors such as an under-estimate of the 2001 population. If the 2001 population was an under-estimate then the population growth between 2001 and 2011 wouldn't have been so high.

3.34 A second point to highlight is that the GLA household projections use the household representative rates from CLG 2012 based projections. While household sizes have risen in all authorities except for Havering since 1991, the CLG household representative rates see household sizes falling rapidly in the future. While some of this change can be attributed to an ageing population it does represent a striking reversal of recent trends and should be treated with caution.

Conclusions

3.35 PPG identifies that the *"starting point estimate of overall housing need"* is the CLG 2012-based household projections shown in Figure 22. For the 25-year period 2012-37, these projections show an annual increase of 8,827 households across the 5 local authorities; 3,900 in Outer East London and 4,927 in Outer North East London.

3.36 The data above shows that the principal projection (GLA long-term trends based on 12-year migration flows) identifies a lower increase of 7,428 households per annum (7,587 dwellings) over the 22-year period 2011-33, The long-term migration trends provide the most robust and reliable basis for projecting the future population, and therefore **the projected household growth of 7,428 households each year (7,587 dwellings) provides the most appropriate demographic projection on which to base the Objectively Assessed Need (OAN) for housing for the 22-year Plan period 2011-33**.

4. Affordable Housing Need

Identifying households who cannot afford market housing

Chapter Summary

4.1 This chapter considers the need for affordable housing, taking into account homeless households, concealed households, overcrowded households and other households living in unsuitable housing that cannot afford their own home. Newly forming households are then considered. It also provides initial estimates of the size mix of affordable housing required, affordable rents, shared and low cost home ownership and households with specific needs. The key points and conclusions of the affordable housing assessment are:

- Census data shows totals of 8,325 concealed families in Outer East London, and 6,560 in Outer North East London in 2011. The **increase in concealed families under 55** between 2001 and 2011 Censuses was 3,859 in Outer East London and 2,745 in Outer North East London.
- Applying the bedroom standard of overcrowding to Census data and English Housing Survey (EHS) trends yields estimates that, **4,115 owner occupied, 6,372 private rented and 7,768 social rented households were overcrowded** in Outer East London in 2011 and that **4,191 owner occupied, 3,859 private rented and 4,828 social rented households were overcrowded** in Outer North East London.
- DWP HB data alongside Census data shows considerable percentages of existing households in some categories based on age, household type and borough of residence are unable to afford their housing costs.
- The Model identifies that in Outer East London 37% of all newly forming households are unable to afford their housing costs, while the figure in Outer North East London is 34%.
- Bringing the information together for Outer East London gives a net estimate (after taking into factors such as account vacancies in affordable housing stock) of a need for additional affordable housing for 36,646 households over the period 2011-33. This is equivalent to an average of 1,666 households or 1,700 dwellings when allowing for vacant homes per year. This equates to 44% of all provision.
- Bringing the information together for Outer North East London gives a net estimate (after taking into factors such as account vacancies in affordable housing stock) of a need for additional affordable housing for 37,850 households over the period 2011-33. This is equivalent to an average of 1,720 households or 1,750 dwellings when allowing for vacant homes per year or 43.1% of all provision.

Defining Households in Housing Need

4.2 Demographic projections provide the basis for identifying the Objectively Assessed Need for all types of housing, including both market housing and affordable housing.

4.3 PPG notes that affordable housing need is based on households *"who lack their own housing or live in unsuitable housing and who cannot afford to meet their housing needs in the market"* (paragraph 22) and identifies a number of different types of household which may be included:

> ***What types of households are considered in housing need?***
>
> *The types of households to be considered in housing need are:*
>
> » *Homeless households or insecure tenure (e.g. housing that is too expensive compared to disposable income)*
>
> » *Households where there is a mismatch between the housing needed and the actual dwelling (e.g. overcrowded households)*
>
> » *Households containing people with social or physical impairment or other specific needs living in unsuitable dwellings (e.g. accessed via steps) which cannot be made suitable in-situ*
>
> » *Households that lack basic facilities (e.g. a bathroom or kitchen) and those subject to major disrepair or that are unfit for habitation*
>
> » *Households containing people with particular social needs (e.g. escaping harassment) which cannot be resolved except through a move*
>
> **Planning Practice Guidance: Assessment of housing and economic development needs (March 2014) Paragraph 023**

4.4 PPG also suggests a number of data sources for assessing past trends and recording current estimates for establishing the need for affordable housing (paragraph 24):

- Local authorities will hold data on the number of homeless households, those in temporary accommodation and extent of overcrowding.
- The Census also provides data on concealed households and overcrowding which can be compared with trends contained in the English Housing Survey.
- Housing registers and local authority and registered social landlord transfer lists will also provide relevant information.

4.5 The following section considers each of these sources in turn, alongside other relevant statistics and information that is available.

Past Trends and Current Estimates of the Need for Affordable Housing

Local Authority Data: Homeless Households and Temporary Accommodation

4.6 In both Outer East London and Outer North East London, there was a downward trend in the number of households accepted as being homeless and in priority need from 2005-2011 (Figure 24). However, the figures have started to rise again since 2011, with the most recent quarter in 2015 showing 426 cases in Outer East London and 328 cases in Outer North East London.

4.7 In Outer East London there has also been a downward trend in households living in temporary accommodation. In Outer East London there were 4,097 such households in 2002, including 873 in bed and breakfast accommodation and a further 131 in hostels; this had reduced to 3,811 in 2011, a net reduction of 286 households. The opposite pattern emerges for Outer North East London with a

sharp growth in those living in private sector leased properties being part of a net 1,186 growth in the number of households living in temporary accommodation.

Figure 24: Households accepted as homeless and in priority need and households in temporary accommodation 2001-15 (Source: CLG P1E returns. Note: Gaps in the chart represent missing data) –

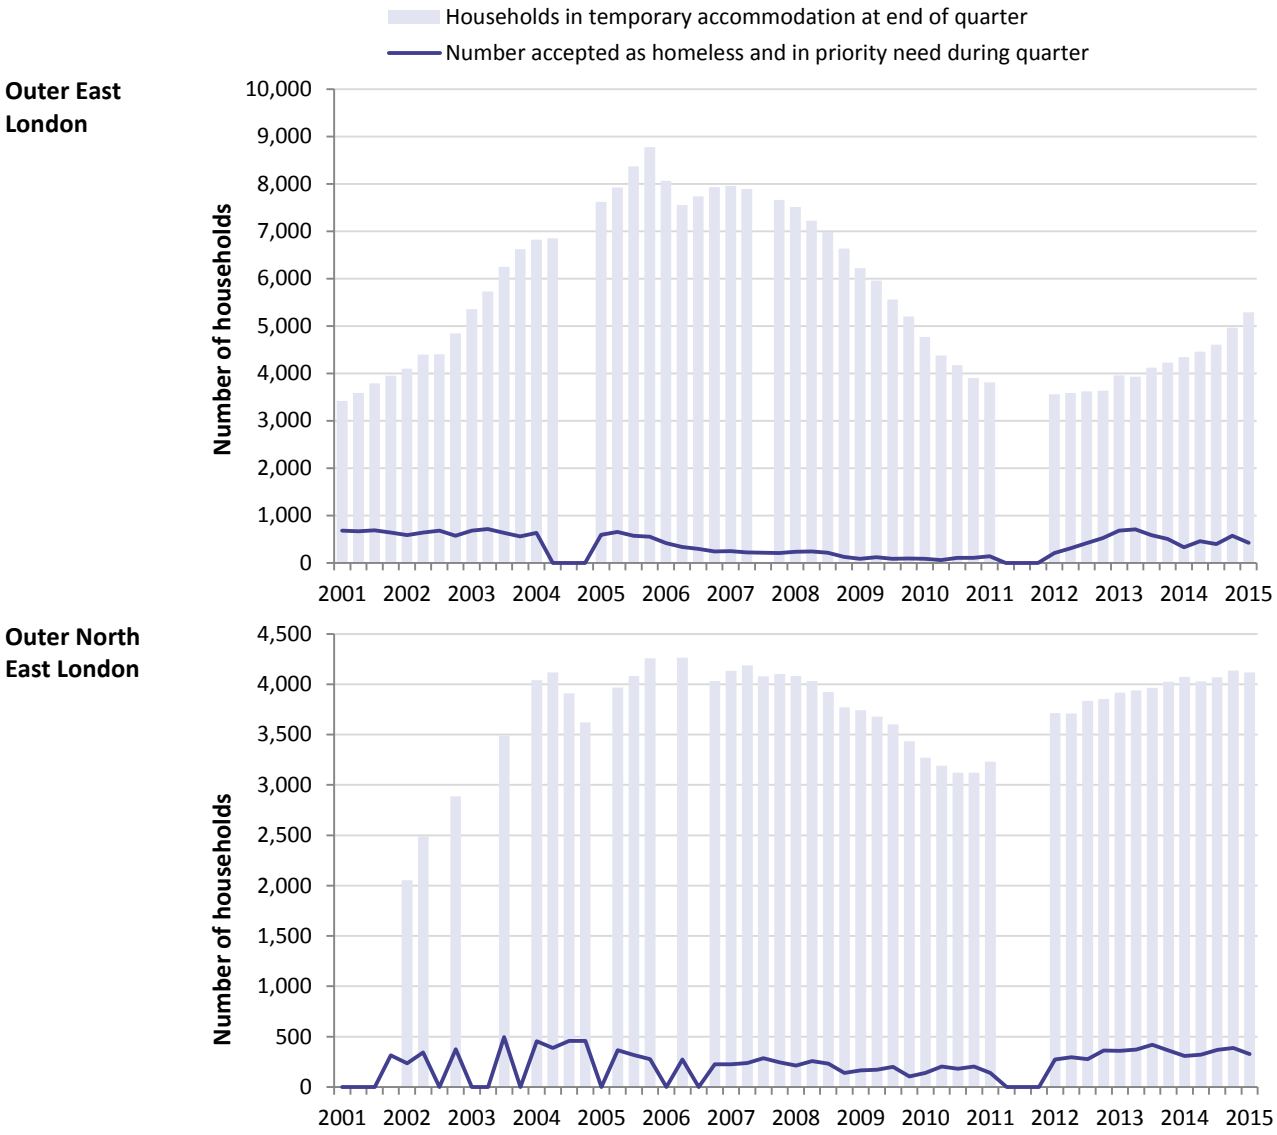

Figure 25: Households in temporary accommodation (Source: CLG P1E returns for March 2001, March 2002 and March 2011
Note: Figures may not sum due to rounding**)**

		Outer East London			Outer North East London			England
		2001	2002	2011	2001	2002	2011	2011
Households in temporary accommodation	Bed and breakfast	776	873	43	*	286	118	-
	Hostels	230	131	37	*	69	92	-
	Local Authority or RSL stock	918	1,100	176	*	882	8	-
	Private sector leased (by LA or RSL)	1,465	1,576	1,639	*	245	2,637	-
	Other (including private landlord)	27	417	1,916	*	572	375	-
	TOTAL	3,416	4,097	3,811	*	2,054	3,230	-
	Rate per 1,000 households	18.7	22.1	20.8	*	8.2	12.2	*2.2*
Households accepted as homeless but without temporary accommodation provided		604	755	18	*	0	0	-

4.8 It is evident that statutory homelessness has not become significantly worse across the study area over the period since 2002, but this does not necessarily mean that fewer households risk becoming homeless. Housing advice services provided by the councils limit the number of homeless presentations, through helping people threatened with homelessness find housing before they become homeless and many councils have a strong record of homelessness prevention in the years preceding the Localism Act. Housing allocation policies can also avoid the need for temporary housing if permanent housing is available sooner; however many households facing homelessness are now offered private rented housing.

4.9 Changes to the Law in 2011 means homeless households can now be offered accommodation in the Private Rented Sector and this cannot be refused, provided it is a reasonable offer. Prior to this change, Local Authorities could offer private sector housing to homeless households (where they have accepted a housing duty under Part 7 of the Housing Act 1996) but the applicant was entitled to refuse it. The Localism Act 2010 means refusal is no longer possible providing the offer is suitable. While the change aims to reduce the pressures on the social housing stock, an indirect result is that there are further demands on the private rented sector as Councils seek to house homeless households.

Census Data: Concealed Households and Overcrowding

4.10 The Census provides detailed information about households and housing in the local area. This includes information about **concealed families** (i.e. couples or lone parents) and **sharing households**. These households lack the sole use of basic facilities (e.g. a bathroom or kitchen) and have to share these with their "host" household (in the case of concealed families) or with other households (for those sharing).

Concealed Families

4.11 Concealed families are defined as; "family units or single adults living within other households, who may be regarded as potential separate households which may wish to form given appropriate opportunity"[12]. The number of **concealed families** living with households in Outer East London increased from 3,523 to 8,325 over the 10-year period 2001-11 Figure 26, an increase of 4,802 families (60%). Meanwhile the number of concealed households in Outer North East London rose by 3,780 over the same time period.

Figure 26: Concealed families in Outer East London and Outer North East London HMAs by age of family representative (Source: Census 2001 and 2011 Note: Figures may not sum due to rounding**)**

	Outer East London			Outer North East London		
	2001	2011	Net change 2001-11	2001	2011	Net change 2001-11
Aged under 25	375	1,128	+753	278	864	+586
Aged 25 to 34	1,141	3,407	+2,266	874	2,375	+1,501
Aged 35 to 44	552	841	+289	466	668	+203
Aged 45 to 54	303	855	+552	212	667	+456
Sub-total aged under 55	**2,371**	**6,231**	**+3,859**	**1,830**	**4,575**	**+2,745**
Aged 55 to 64	435	829	+395	343	634	+291
Aged 65 to 74	574	809	+235	471	839	+368
Aged 75 or over	143	456	+313	136	512	+376
Sub-total aged 55 or over	**1,152**	**2,094**	**+943**	**950**	**1,985**	**+1,035**
All Concealed Families	**3,523**	**8,325**	**+4,802**	**2,780**	**6,560**	**+3,780**

4.12 Although many concealed families do not want separate housing (in particular where they have chosen to live together as extended families), others are forced to live together due to affordability difficulties or other constraints – and these concealed families will not be counted as part of the CLG household projections. Concealed families with older family representatives will often be living with another family in order to receive help or support due to poor health. Concealed families with younger family representatives are more likely to demonstrate un-met need for housing. When we consider the growth of 3,859 families over the period 2001-11 in Outer East London and 2,745 in Outer North East London, with substantial growth amongst those aged under 35 in particular (in line with national trends).

Sharing Households

4.13 The number of sharing households in Outer East London increased from 1,178 to 1,213 over the 10-year period 2001-11 (Figure 27), an increase of 35 households. Outer North East London saw a rise on 32 households sharing.

Figure 27: Shared Dwellings and Sharing Households in Outer East London and Outer North East London HMAs (Source: Census 2001 and 2011 Note: Figures may not sum due to rounding**)**

	Outer East London			Outer North East London		
	2001	2011	Net change 2001-11	2001	2011	Net change 2001-11
Number of shared dwellings	445	385	-60	193	204	+11
Number of household spaces in shared dwellings	1,254	1,260	+6	650	664	+14
All Sharing Households	**1,178**	**1,213**	**+35**	**597**	**629**	**+32**
Household spaces in shared dwellings with no usual residents	76	47	-29	53	35	-18

4.14 Figure 28 shows that the number of multi-adult households living in Outer East London increased from 14,924 to 25,349 households over the same period, an increase of 10,425. The equivalent figure in Outer North East London was 4,618 more households. These people also have to share basic facilities, but are considered to be a single household as they also share a living room, sitting room or dining

area. This includes Houses in Multiple Occupation (HMOs) with shared facilities, as well as single people living together as a group and individuals with lodgers.

Figure 28: Multi-adult Households in Outer East London and Outer North East London HMAs (Source: Census 2001 and 2011 Note: Figures may not sum due to rounding**)**

	Outer East London			Outer North East London		
	2001	2011	Net change 2001-11	2001	2011	Net change 2001-11
Owned	6,850	7,382	+532	6,674	8,160	+1,486
Private rented	5,988	15,917	+9,929	2,489	5,356	+2,867
Social rented	2,086	2,050	-36	1,252	1,517	+265
All Households	**14,924**	**25,349**	**+10,425**	**10,415**	**15,033**	**+4,618**

4.15 The growth in multi-adult households was focussed particularly in the private rented sector, with an increase in single persons choosing to live with friends together with others living in HMOs. This growth accounts for 9,928 households in Outer East London and 2,867 households in Outer North East London and this represents over four-fifths (85%) of the total increase in multi-adult households living in the area.

4.16 Nevertheless, shared facilities is a characteristic of HMOs and many people living in this type of housing will only be able to afford shared accommodation (either with or without housing benefit support). Extending the Local Housing Allowance (LHA) Shared Accommodation Rate (SAR) allowance to cover all single persons up to 35 years of age has meant that many more young people will only be able to afford shared housing, and this has further increased demand for housing such as HMOs.

4.17 There is therefore likely to be a continued (and possibly growing) role for HMOs, with more of the existing housing stock possibly being converted. Given this context, it would not be appropriate to consider households to need affordable housing only on the basis of them currently sharing facilities (although there may be other reasons why they would be considered as an affordable housing need).

Overcrowding

4.18 The Census also provides detailed information about occupancy which provides a measure of whether a household's accommodation is **overcrowded or under occupied**:

> *"There are two measures of occupancy rating, one based on the number of rooms in a household's accommodation, and one based on the number of bedrooms. The ages of the household members and their relationships to each other are used to derive the number of rooms/bedrooms they require, based on a standard formula. The number of rooms/bedrooms required is subtracted from the number of rooms/bedrooms in the household's accommodation to obtain the occupancy rating. An occupancy rating of -1 implies that a household has one fewer room/bedroom than required, whereas +1 implies that they have one more room/bedroom than the standard requirement."*

4.19 When considering the number of rooms required, the ONS use the following approach to calculate the room requirement:

- A one person household is assumed to require three rooms (two common rooms and a bedroom); and

» Where there are two or more residents it is assumed that they require a minimum of two common rooms plus one bedroom for:

– each couple (as determined by the relationship question)
– each lone parent
– any other person aged 16 or over
– each pair aged 10 to 15 of the same sex
– each pair formed from any other person aged 10 to 15 with a child aged under 10 of the same sex
– each pair of children aged under 10 remaining
– each remaining person (either aged 10 to 15 or under 10).

4.20 For Outer East London, overcrowding increased from 38,558 to 57,866 households (an increase of 19.328) over the 10-year period 2001-11 (Figure 29). This represents a growth of 37%, which is higher than the national increase for England (23%). The equivalent growth in overcrowding for Outer North East London is 49%.

4.21 When considered by tenure across both HMAs, overcrowding has increased relatively marginally in the owner occupied sector. However, there has been a sharper growth in the social rented sector, but with the sharpest rises in overcrowding being seen in the private rented sector.

Figure 29: Proportion of overcrowded households 2011 and change 2001-11 by tenure (Note: Overcrowded households are considered to have an occupancy rating of -1 or less. Source: UK Census of Population 2001 and 2011 Note: Figures may not sum due to rounding**)**

English Housing Survey Data

Overcrowding

4.22 The English Housing Survey (EHS) does not provide information about individual local authorities, but it does provide a useful context about these indicators in terms of national trends between Census years.

4.23 The measure of overcrowding used by the EHS provides a consistent measure over time **however the definition differs from both occupancy ratings provided by the Census**. The EHS approach[13] is based on a *"bedroom standard"* which assumes that adolescents aged 10-20 of the same sex will share a bedroom, and only those aged 21 or over are assumed to require a separate bedroom (whereas the approach used by the ONS for the Census assumes a separate room for those aged 16 or over):

> *"The 'bedroom standard' is used as an indicator of occupation density. A standard number of bedrooms is calculated for each household in accordance with its age/sex/marital status composition and the relationship of the members to one another. A separate bedroom is allowed for each married or cohabiting couple, any other person aged 21 or over, each pair of adolescents aged 10-20 of the same sex, and each pair of children under 10. Any unpaired*

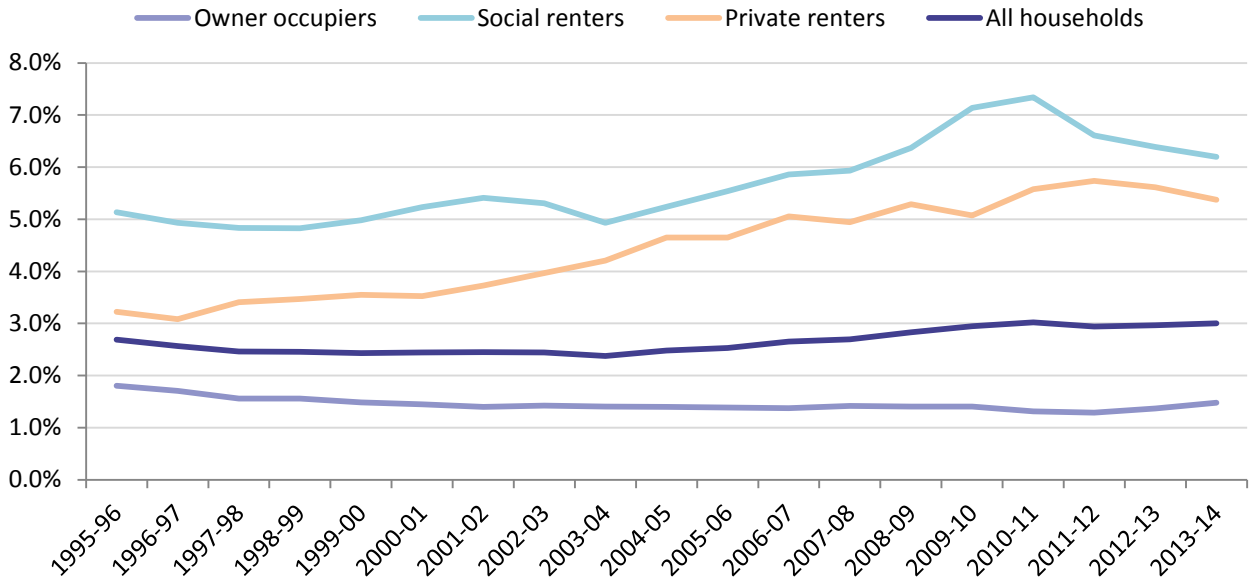
[13] https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/284648/English_Housing_Survey_Headline_Report_2012-13.pdf

person aged 10-20 is notionally paired, if possible, with a child under 10 of the same sex, or, if that is not possible, he or she is counted as requiring a separate bedroom, as is any unpaired child under 10.

"Households are said to be overcrowded if they have fewer bedrooms available than the notional number needed. Households are said to be under-occupying if they have two or more bedrooms more than the notional needed."

4.24 Nationally, overcrowding rates increased for households in both social and private rented housing, although the proportion of overcrowded households has declined in both sectors since 2011. Overcrowding rates for owner occupiers have remained relatively stable since 1995.

Figure 30: Trend in overcrowding rates by tenure (Note: Based on three-year moving average, up to and including the labelled date. Source: Survey of English Housing 1995-96 to 2007-08; English Housing Survey 2008-09 onwards)



4.25 Whilst the EHS definition of overcrowding is more stringent than the Census, the measurement closer reflects the definition of statutory overcrowding that was set out by Part X of the Housing Act 1985 and is consistent with statutory Guidance[14] that was issued by CLG in 2012 to which authorities must have regard when exercising their functions under Part 6 of the 1996 Housing Act (as amended).

4.26 This Guidance, *"Allocation of accommodation: Guidance for local housing authorities in England"*, recommends that authorities should use the bedroom standard when assessing whether or not households are overcrowded for the purposes of assessing housing need:

4.8 The Secretary of State takes the view that the bedroom standard is an appropriate measure of overcrowding for allocation purposes, and recommends that all housing authorities should adopt this as a minimum. The bedroom standard allocates a separate bedroom to each:
– married or cohabiting couple;
– adult aged 21 years or more
– pair of adolescents aged 10-20 years of the same sex
– pair of children aged under 10 years regardless of sex

[14] https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/5918/2171391.pdf

4.27 The bedroom standard therefore provides the most appropriate basis for assessing overcrowding. By considering the Census and EHS data for England, together with the Census data for the HMAs, we can estimate overcrowding using the bedroom standard. Figure 31 sets out this calculation based on the Census occupancy rating for both rooms and bedrooms. Based on the bedroom standard, it is estimated that **4,115 owner occupied, 6,372 private rented and 7,768 social rented households were overcrowded** in Outer East London HMA in 2011. Meanwhile, it is estimated that **4,191 owner occupied, 3,859 private rented and 4,828 social rented households were overcrowded** in Outer North East London HMA in 2011. Student households have been excluded from this calculation given that their needs are assumed to be transient.

Housing Condition and Disrepair

4.28 The EHS also provides useful information about **housing disrepair**. The EHS headline report for 2013-14 identifies that private rented sector dwellings had the highest rate of disrepair: 7% compared with 4% of owner occupied dwellings and 3% of social sector dwellings.

4.29 The Decent Homes Standard provides a broad measure of **housing condition**. It was intended to be a minimum standard that all housing should meet and that to do so should be easy and affordable. It was determined that in order to meet the standard a dwelling must achieve all of the following:

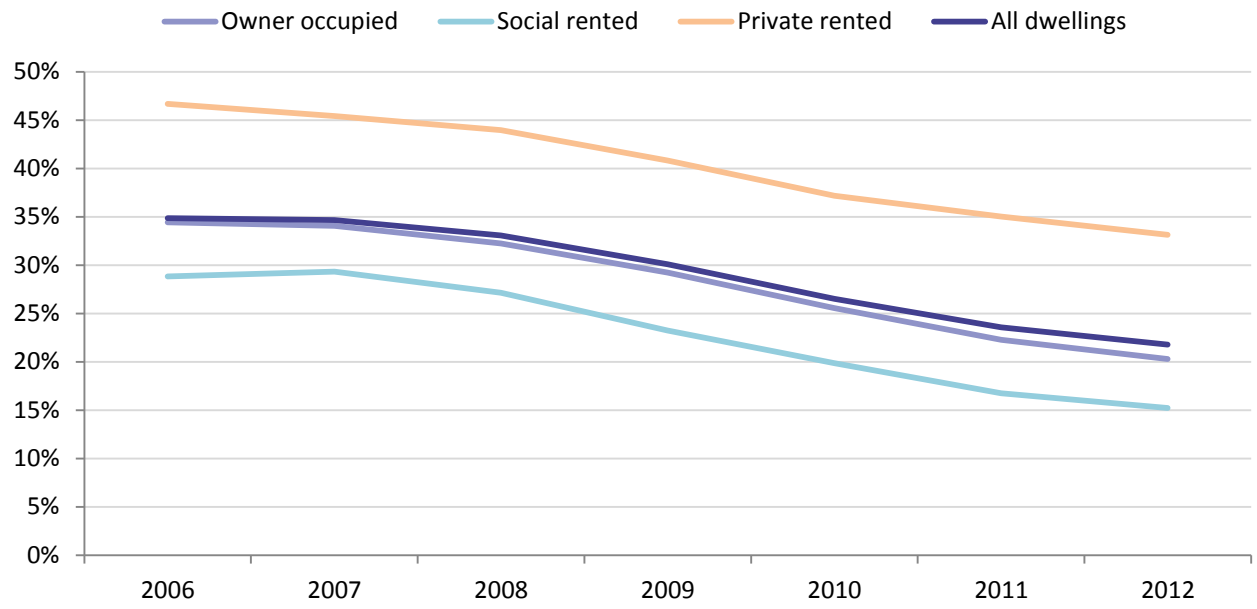
- Be above the legal minimum standard for housing (currently the Housing Health and Safety Rating System, HHSRS); and
- Be in a reasonable state of repair; and
- Have reasonably modern facilities (such as kitchens and bathrooms) and services; and

» Provide a reasonable degree of thermal comfort (effective insulation and efficient heating).

4.30 If a dwelling fails any one of these criteria, it is considered to be "non-decent". A detailed definition of the criteria and their sub-categories are described in the ODPM guidance: "A Decent Home – The definition and guidance for implementation" June 2006.

4.31 Figure 32 shows the national trends in non-decent homes by tenure. It is evident that conditions have improved year-on-year (in particular due to energy efficiency initiatives), however whilst social rented properties are more likely to comply with the standard, almost a third of the private rented sector (33.1%) remains currently non-decent. This is a trend that tends to be evident at a local level in most areas where there are concentrations of private rented housing, and there remains a need to improve the quality of housing provided for households living in the private rented sector.

Figure 32: Trend in non-decent homes by tenure (Source: English House Condition Survey 2006 to 2007; English Housing Survey 2008 onwards)



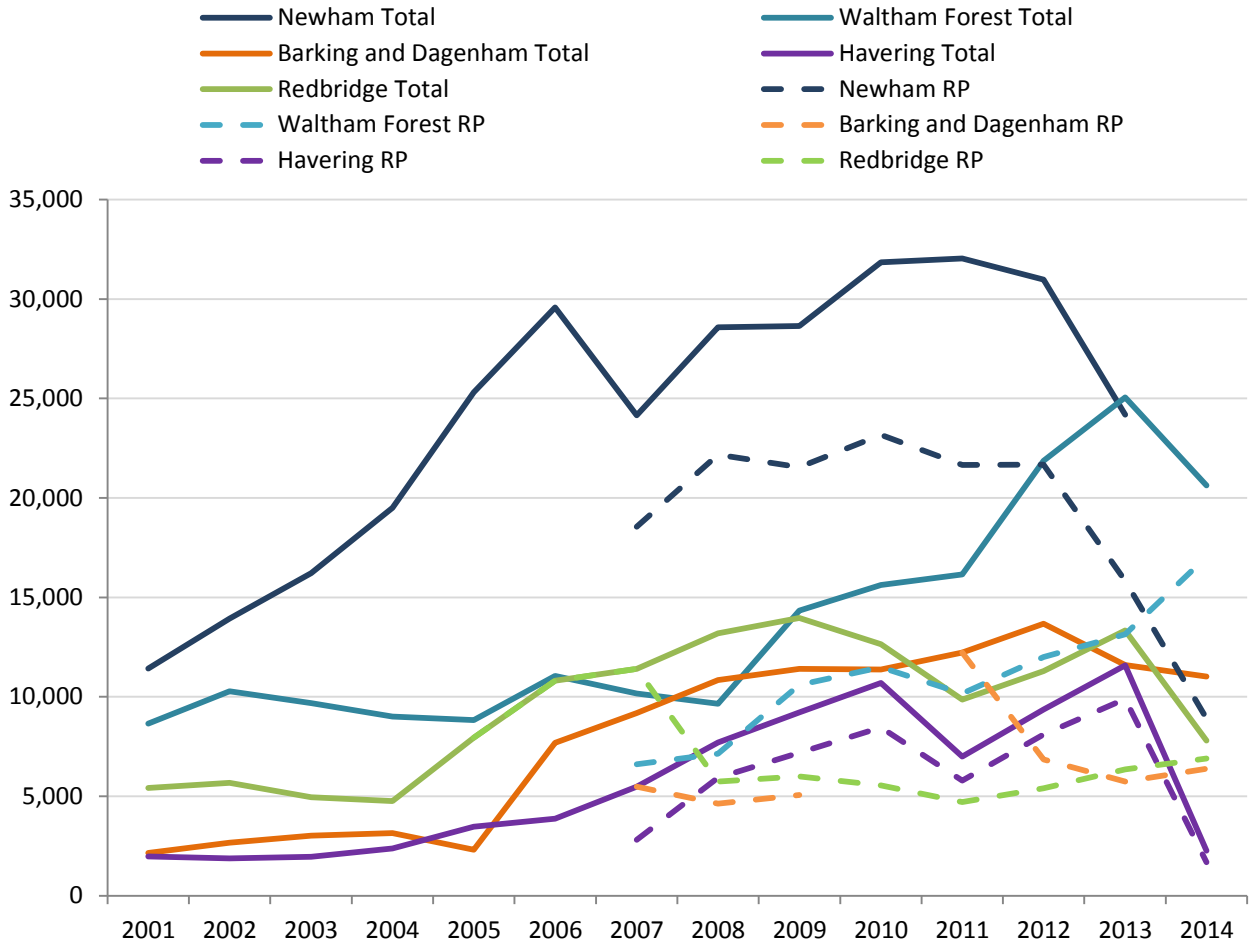
Housing Register Data

4.32 The local authority **housing register** and **transfer lists** are managed through individual Choice Based Lettings schemes managed by each of the five local authorities in the area. Households apply for a move via the scheme and 'bid' for homes along with applicants from various sources, including homeless households, housing register and transfer applicants.

4.33 Figure 33 shows the trend in households on the housing register over the period since 2001. Whilst the overall number of households on the housing register increased from 2001 to 2013. Between 2001 and 0213 the number of households on the housing registers rose from just under 30,000 to just over 85,000.

4.34 Nevertheless, the criteria for joining the housing registers in all five areas have recently changed as a result of policy changes following the Localism Act. Only people with a local connection now qualify for the housing register, and people with adequate financial resources (including owner occupiers) are no longer included – so the trends discussed above have to be understood in this context.

Figure 33: Number of households on the local authority housing register 2001-14 (Note: Solid line shows total number of households; dotted line shows number of households in a reasonable preference category. Source: LAHS and HSSA returns to CLG)



4.35 Figure 33 also show the number recorded in a reasonable preference category since 2007. Reasonable preference categories are defined in the Housing Act 1996, which requires "reasonable preference" for housing to be given to people who are:

- Legally homeless;
- Living in unsatisfactory housing (as defined by the Housing Act 2004);
- Need to move on medical/welfare grounds; or
- Need to move to a particular area to avoid hardship.

4.36 Figure 34 provides further detailed information for the last 2 years. The number of households in **reasonable preference categories** has also been subject to variation from year-to-year, although these have not always followed the trends in the overall number of households on the register. There are over 25,000 households in Outer East London and nearly 15,000 households in Outer North East London in a reasonable preference category. These figures need to be understood in the context of the implementation of the Localism Act mentioned above, which mean numbers on the registers are lower than in recent years.

Figure 34: Number of households on the local authority housing register at 1st April 2014 (Source: LAHS returns to CLG Note: Figures may not sum due to rounding**)**

	OUTER EAST LONDON			OUTER NORTH EAST LONDON			
	Newham	Waltham Forest	TOTAL	Barking & Dagenham	Havering	Redbridge	TOTAL
Total households on the housing register	18,058	20,635	**38,693**	11,024	2,271	7,804	**21,099**
Total households in a reasonable preference category	**8,908**	**17,036**	**25,944**	**6,384**	**1,684**	**6,908**	**14,976**
People currently living in temporary accommodation who have been accepted as being homeless (or threatened with homelessness)	2,877	1,632	**4,509**	32	53	0	**85**
Other people who are homeless within the meaning given in Part VII of the Housing Act (1996), regardless of whether there is a statutory duty to house them	2,564	0	**2,564**	1,394	97	2,532	**4,023**
People occupying insanitary or overcrowded housing or otherwise living in unsatisfactory housing conditions	5,741	14,271	**20,012**	4,429	2	3,477	**7,908**
People who need to move on medical or welfare grounds, including grounds relating to a disability	721	543	**1,264**	474,	204	369	**1,047**
People who need to move to a particular locality in the district of the authority, where failure to meet that need would cause hardship (to themselves or to others)	0	0	**0**	8	0	5	**13**

4.37 Nevertheless, we previously estimated that there were around 18,255 overcrowded households in the Outer East London HMA and 12,878 households in Outer North East London, based on the bedroom standard (Figure 31) – but in Outer East London 20,212 people were recorded by the housing registers in 2014 as currently *"occupying insanitary or overcrowded housing or otherwise living in unsatisfactory housing conditions"*. This result can be attributed to Waltham Forest where 14,271 households are on their housing register due to these issues, which is a very similar figure to the 2011 Census. However, most owner occupiers would not qualify for rented affordable housing due to the equity in their current home whilst others may only be temporarily overcrowded and will have sufficient space available once a concealed family is able to leave and establish an independent household. Therefore, the housing register for Waltham Forest appears to be overstating the number of overcrowded households in the area.

4.38 When considering the types of household to be considered in housing need, the PPG also identified "households containing people with social or physical impairment or other specific needs living in unsuitable dwellings (e.g. accessed via steps) which cannot be made suitable in-situ" and "households containing people with particular social needs (e.g. escaping harassment) which cannot be resolved except through a move". It is only through the housing register that we are able to establish current estimates of need for these types of household, and not all would necessarily be counted within a reasonable preference category. Nevertheless, there were 1,263 households in Outer East London and 1,047 households in Outer North East London registered "who need to move on medical or welfare grounds, including grounds relating to a disability".

Households Unable to Afford their Housing Costs

4.39 The PPG emphasises in a number of paragraphs that affordable housing need should only include those households that are unable to afford their housing costs:

> *Plan makers … will need to estimate the number of households and projected households who lack their own housing or live in unsuitable housing and who cannot afford to meet their housing needs in the market (paragraph 022, emphasis added)*
>
> *Plan makers should establish unmet (gross) need for affordable housing by assessing past trends and recording current estimates of … those that cannot afford their own homes. Care should be taken to avoid double-counting … and to include only those households who cannot afford to access suitable housing in the market (paragraph 024, emphasis added)*
>
> *Projections of affordable housing need will need to take into account new household formation, the proportion of newly forming households unable to buy or rent in the market area (paragraph 025, emphasis added)*
>
> **Planning Practice Guidance: Assessment of housing and economic development needs (March 2014)**

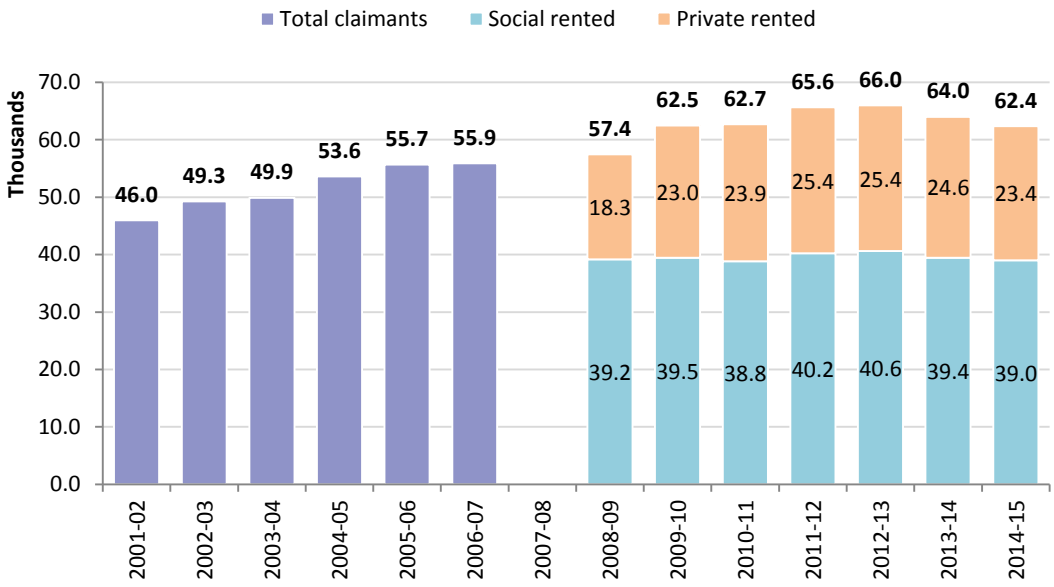
4.40 Housing benefit data from the Department for Work and Pensions (DWP) provides reliable, consistent and detailed information about the number of families that are unable to afford their housing costs in each local authority area. Data was published annually from 2001-02 to 2006-07 which identified the total number of claimants in receipt of housing benefit, and more detailed information has been available since 2008-09 which includes more detailed information about claimants and the tenure of their home.

Housing Benefit Claimants

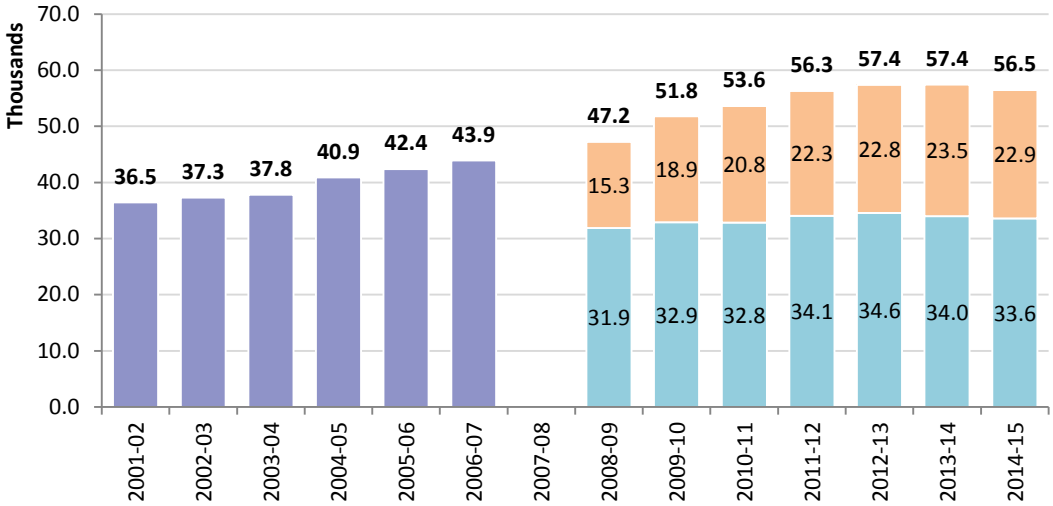
4.41 Figure 35 shows the trend in the number of housing benefit claimants.

Figure 35: Number of claimants in receipt of housing benefit by tenure (Source: DWP)

Outer East London



Outer North East London



4.42 The number of housing benefit claimants in Outer East London HMA increased from 46,000 to 55,900 over the period 2001-02 to 2006-07, equivalent to an average annual growth of around 2,000 families. The number of claimants reached 66,000 in 2012-13, so the rate of growth had continued. In Outer North East London the rate of growth between 2001-02 and 2006-07 was slower, but then accelerated to peak at a total number of claimants of 57,400 in 2012-13.

4.43 Considering the information on tenure, it is evident that the number of claimants in social rented housing increased by 1,400 in Outer East London and 2,500 In Outer North East London over the period 2008-09 to 2012-13. However over the same period the number of claimants in private rented housing increased by 7,100 in Outer East London and 7,500 in Outer North East London.

4.44 This increase in housing benefit claimants, in particular those living in private rented housing, coincides with the increases observed on the housing registers. Indeed, it is likely that many households applying for housing benefit would have also registered their interest in affordable housing. Nevertheless, many of them will have secured appropriate housing in the private rented sector which housing benefit enabled them to afford; so not all will necessarily need affordable housing, though many may prefer this type of housing if it were available.

4.45 The information published by DWP provides the detailed information needed for understanding the number of households unable to afford their housing costs. Of course, there will be other households occupying affordable housing who do not need housing benefit to pay discounted social or affordable rents but who would not be able to afford market rents. Similarly there will be others who are not claiming housing benefit support as they have stayed living with parents or other family or friends and not formed independent households. However, providing that appropriate adjustments are made to take account of these exceptions, **the DWP data provides the most reliable basis for establishing the number of households unable to afford their housing costs and estimating affordable housing need.**

Establishing Affordable Housing Need

4.46 In establishing the Objectively Assessed Need for affordable housing, it is necessary to draw together the full range of information that has already been considered in this report.

4.47 PPG sets out the framework for this calculation, considering both the current unmet housing need and the projected future housing need in the context of the existing affordable housing stock:

> ***How should affordable housing need be calculated?***
>
> *This calculation involves adding together the current unmet housing need and the projected future housing need and then subtracting this from the current supply of affordable housing stock.*
>
> **Planning Practice Guidance: Assessment of housing and economic development needs (March 2014) Paragraph 022**

Current Unmet Need for Affordable Housing

4.48 In terms of establishing the **current** unmet need for affordable housing, the PPG draws attention again to those types of households considered to be in housing need; whilst also emphasising the need to avoid double-counting and including only those households unable to afford their own housing.

> ***How should the current unmet gross need for affordable housing be calculated?***
>
> *Plan makers should establish unmet (gross) need for affordable housing by assessing past trends and recording current estimates of:*
>
> - *the number of homeless households;*
> - *the number of those in priority need who are currently housed in temporary accommodation;*
> - *the number of households in overcrowded housing;*
> - *the number of concealed households;*
> - *the number of existing affordable housing tenants in need (i.e. householders currently housed in unsuitable dwellings);*
> - *the number of households from other tenures in need and those that cannot afford their own homes.*
>
> *Care should be taken to avoid double-counting, which may be brought about with the same households being identified on more than one transfer list, and to include only those households who cannot afford to access suitable housing in the market.*
>
> **Planning Practice Guidance: Assessment of housing and economic development needs (March 2014) Paragraph 024**

4.49 Earlier sections of this chapter set out the past trends and current estimates for relevant households based on the data sources identified by PPG (based on a reference point of March 2011). Although this evidence does not provide the basis upon which to establish whether or not households can afford to access suitable housing, we believe that it is reasonable to assume that certain households will be unable to afford housing, otherwise they would have found a more suitable home.

Establishing the Current Unmet Need for Affordable Housing

4.50 Households assumed to be unable to afford housing include:

- All households that are currently **homeless**;
- All those currently housed in **temporary accommodation**; and

» People in a **reasonable preference category** on the housing register, where their needs have not already been counted.

4.51 Given this context, our analysis counts the needs of all of these households when establishing the Objectively Assessed Need for affordable housing at a base date of 2011.

4.52 For overcrowding, it is likely that most owner occupiers would not qualify for rented affordable housing (due to the equity in their current home); but it is reasonable to assume that households living in overcrowded rented housing are unlikely to be able to afford housing, otherwise they would have found a more suitable home.

4.53 Our analysis counts the needs of all households living in overcrowded rented housing when establishing the OAN for affordable housing (which could marginally overstate the affordable housing need) but it does not count the needs of owner occupiers living in overcrowded housing (which can be offset against any previous over-counting). Student households are also excluded, given that their needs are assumed to be transient and do not count towards the need for affordable housing in the area.

4.54 The analysis does not count people occupying insanitary housing or otherwise living in unsatisfactory housing conditions as a need for additional affordable housing. These dwellings would be unsuitable for any household, and enabling one household to move out would simply allow another to move in – so this would not reduce the overall number of households in housing need. This housing need should be resolved by improving the existing housing stock, and the Councils have a range of statutory enforcement powers to improve housing conditions.

4.55 When considering **concealed families**, it is important to recognise that many do not want separate housing. Concealed families with older family representatives will often be living with another family, perhaps for cultural reasons or in order to receive help or support due to poor health. However, those with younger family representatives are more likely to experience affordability difficulties or other constraints (although not all will want to live independently).

4.56 Concealed families in a reasonable preference category on the housing register will be counted regardless of age, but our analysis also considers the additional growth of concealed families with family representatives aged under 55 (even those not registered on the housing register) and assumes that all such households are unlikely to be able to afford housing (otherwise they would have found a more suitable home).

4.57 The needs of these households are counted when establishing the OAN for affordable housing and they also add to the OAN for overall housing, as concealed families are not counted by the GLA household projections.

Outer East London

4.58 Figure 36 sets out the assessment of current affordable housing need for Outer East London.

Figure 36: Assessing current unmet gross need for affordable housing (Source: ORS Housing Model)

	Affordable Housing		Increase in Overall Housing Need
	Gross Need	Supply	
Homeless households in priority need (see Figure 25)			
Currently in temporary accommodation in communal establishments (Bed and breakfast or Hostels)	80		80
Currently in temporary accommodation in market housing (Private sector leased or Private landlord)	3,555		
Currently in temporary accommodation in affordable housing (Local Authority or RSL stock)	176	176	
Households accepted as homeless but without temporary accommodation provided	18		18
Concealed households (see Figure 26)			
Growth in concealed families with family representatives aged under 55	3,859		3,859
Overcrowding based on the bedroom standard (see Figure 31)			
Households living in overcrowded private rented housing	6,372		
Households living in overcrowded social rented housing	7,768	7,768	
Other households living in unsuitable housing that cannot afford their own home (see Figure 34)			
People who need to move on medical or welfare grounds, including grounds relating to a disability	1,264	168	
People who need to move to a particular locality in the district of the authority, where failure to meet that need would cause hardship (to themselves or to others)	0	0	
TOTAL	**23,092**	**8,112**	**3,957**

4.59 Based on a detailed analysis of the past trends and current estimates of households considered to be in housing need, our analysis has concluded that there are **23,092 households currently in affordable housing need in the Outer East London HMA who are unable to afford their own housing**. This assessment is based on the criteria set out in the PPG and avoids double-counting (as far as possible).

4.60 Of these households, 8,112 currently occupy affordable housing that does not meet the households' current needs, mainly due to overcrowding. Providing suitable housing for these households will enable them to vacate their existing affordable housing, which can subsequently be allocated to another household in need of affordable housing. **There is, therefore, a net need from 14,980 households** (23,092 less 8,112 = 14,980) **who currently need affordable housing and do not currently occupy affordable housing in the Outer East London HMA** (although a higher number of new homes may be needed to resolve all of the identified overcrowding).

4.61 This number includes 3,957 households that would not be counted by the household projections. There is, therefore, a need to increase the housing need based on demographic projections to accommodate these additional households. As for the household projections, we have also added an additional allowance for vacancies and second homes (once again based on the proportion of dwellings with no usually resident household); this increases the need for overall housing provision by 4,036 dwellings.

4.62 Providing the net additional affordable housing needed will release back into the market (mainly in the private rented sector) the dwellings occupied by a total of 11,023 households (23,092 less 8,112 less 3,957) that are currently in affordable housing need who are unable to afford their own housing.

Outer North East London

4.63 Figure 37 sets out the assessment of current affordable housing need for Outer North East London.

Figure 37: Assessing current unmet gross need for affordable housing (Source: ORS Housing Model)

	Affordable Housing		Increase in Overall Housing Need
	Gross Need	Supply	
Homeless households in priority need (see Figure 25)			
Currently in temporary accommodation in communal establishments (Bed and breakfast or Hostels)	210		210
Currently in temporary accommodation in market housing (Private sector leased or Private landlord)	3,012		
Currently in temporary accommodation in affordable housing (Local Authority or RSL stock)	8	8	
Households accepted as homeless but without temporary accommodation provided	0		0
Concealed households (see Figure 26)			
Growth in concealed families with family representatives aged under 55	2,745		2,745
Overcrowding based on the bedroom standard (see Figure 31)			
Households living in overcrowded private rented housing	3,859		
Households living in overcrowded social rented housing	4,828	4,828	
Other households living in unsuitable housing that cannot afford their own home (see Figure 34)			
People who need to move on medical or welfare grounds, including grounds relating to a disability	1,047	55	
People who need to move to a particular locality in the district of the authority, where failure to meet that need would cause hardship (to themselves or to others)	13	1	
TOTAL	**15,722**	**4,892**	**2,955**

4.64 Our analysis has concluded that there are 15,722 households currently in affordable housing need in the Outer North East London HMA who are unable to afford their own housing.

4.65 Of these households, 4,892 currently occupy affordable housing that does not meet the households' current needs, mainly due to overcrowding. Providing suitable housing for these households will enable them to vacate their existing affordable housing, which can subsequently be allocated to another household in need of affordable housing. **There is, therefore, a net need from 10,830 households** (15,722 less 4,892 = 10,830) **who currently need affordable housing and do not currently occupy affordable housing in the Outer North East London HMA** (although a higher number of new homes may be needed to resolve all of the identified overcrowding).

4.66 This number includes 2,955 households that would not be counted by the household projections. There is, therefore, a need to increase the housing need based on demographic projections to accommodate these additional households. As for the household projections, we have also added an additional allowance for vacancies and second homes (once again based on the proportion of

dwellings with no usually resident household); this increases the need for overall housing provision by 3,021 dwellings.

4.67 Providing the net additional affordable housing needed will release back into the market (mainly in the private rented sector) the dwellings occupied by a total of 7,875 households (15,722 less 4,892 less 2,955) that are currently in affordable housing need who are unable to afford their own housing.

Projected Future Affordable Housing Need

4.68 In terms of establishing future projections of affordable housing need, the PPG draws attention to new household formation (in particular the proportion of newly forming households unable to buy or rent in the market area) as well as the number of existing households falling into need.

> ***How should the number of newly arising households likely to be in housing need be calculated?***
>
> *Projections of affordable housing need will need to take into account new household formation, the proportion of newly forming households unable to buy or rent in the market area, and an estimation of the number of existing households falling into need. This process should identify the minimum household income required to access lower quartile (entry level) market housing (plan makers should use current cost in this process, but may wish to factor in changes in house prices and wages). It should then assess what proportion of newly-forming households will be unable to access market housing.*
>
> **Planning Practice Guidance: Assessment of housing and economic development needs (March 2014) Paragraph 025**

4.69 The ORS Housing Mix Model considers the need for market and affordable housing on a longer-term basis that is consistent with household projections and Objectively Assessed Need. The Model provides robust and credible evidence about the required mix of housing over the full planning period, and recognises how key housing market trends and drivers will impact on the appropriate housing mix.

4.70 The Model uses a wide range of secondary data sources to build on existing household projections and profile how the housing stock will need to change in order to accommodate the projected future population. A range of assumptions can be varied to enable effective sensitivity testing to be undertaken. In particular, the Model has been designed to help understand the key issues and provide insight into how different assumptions will impact on the required mix of housing over future planning periods.

4.71 The Housing Mix Model considers the future number and type of households based on the household projections alongside the existing dwelling stock. Whilst the Model considers the current unmet need for affordable housing (including the needs of homeless households, those in temporary accommodation, overcrowded households, concealed households, and established households in unsuitable dwellings or that cannot afford their own homes), it also provides a robust framework for projecting the future need for affordable housing.

Households Unable to Afford their Housing Costs

4.72 PPG identifies that "projections of affordable housing need will need to take into account new household formation, the proportion of newly forming households unable to buy or rent in the market area, and an estimation of the number of existing households falling into need" (paragraph 25); however, the Model recognises that the proportion of households unable to buy or rent in the market

area will not be the same for all types of household, and that this will also differ between age cohorts. Therefore, the appropriate proportion is determined separately for each household type and age group.

4.73 The affordability percentages in Figure 38 are calculated using data published by DWP about housing benefit claimants alongside detailed information from the 2011 Census. There are several assumptions underpinning the Model:

- Where households are claiming housing benefit, it is assumed that they cannot afford market housing; and the Model also assumes that households occupying affordable housing will continue to do so;
- Households occupying owner occupied housing and those renting privately who aren't eligible for housing benefit are assumed to be able to afford market housing; so the Model only allocates affordable housing to those established households that the Government deems eligible for housing support through the welfare system; and
- The Model separately considers the needs of concealed families and overcrowded households (both in market housing and affordable housing) which can contribute additional affordable housing need.

Figure 38: Assessing affordability by household type and age (Source: ORS Housing Model based on Census 2011 and DWP)

	Under 25	25-34	35-44	45-54	55-64	65+
NEWHAM: Percentage unable to afford market housing						
Single person household	46%	30%	51%	63%	60%	62%

Components of Projected Household Growth

4.74 PPG identifies that the CLG household projections "should provide the starting point estimate for overall housing need" (paragraph 15) and that "the 2012-2037 Household Projections … are the most up-to-date estimate of future household growth" (paragraph 16). However, when considering the number of newly arising households likely to be in affordable housing need, the PPG recommends a "gross annual estimate" (paragraph 25) suggesting that "the total need for affordable housing should be converted into annual flows" (paragraph 29).

4.75 The demographic projections developed by the GLA to inform the overall Objectively Assessed Need include annual figures for household growth, and these can therefore be considered on a year-by-year basis as suggested by the Guidance; but given that elements of the modelling are fundamentally based on 5-year age cohorts, it is appropriate to annualise the data using 5-year periods.

4.76 Figure 39 shows the individual components of annual household growth.

Figure 39: Components of average annual household growth by 5-year projection period for Outer East London (Source: GLA 2014 Round Long-term Trend Household Projections Note: Figures may not sum due to rounding**)**

Outer East London	Annual average for 5-year periods during Plan					Annual average
	2011-16	2016-21	2021-26	2026-31	2031-36	2011-36
New household formation	7,442	7,909	8,095	8,279	8,441	7,989
Household dissolution following death	1,864	1,810	1,821	1,907	2,028	1,865
Net household growth within Outer East London HMA	**5,578**	**6,099**	**6,274**	**6,372**	**6,413**	**6,125**
Household migration in	14,755	15,263	15,513	15,738	16,031	15,378
Household migration out	16,303	17,412	18,308	19,006	19,643	17,934
Net household migration	**-1,549**	**-2,148**	**-2,794**	**-3,268**	**-3,612**	**-2,555**
Total household growth	**4,029**	**3,951**	**3,480**	**3,104**	**2,801**	**3,571**

4.77 In Outer East London over the initial 5-year period (2011-16) the model shows that:

- There are projected to be 7,442 new household formations each year; but this is offset against 1,854 household dissolutions following death – so there is an **average net household growth of 5,578 households** locally;
- There are also projected to be 14,755 households migrating to Outer East London HMA offset against 16,303 households migrating away from the area – which yields an **reduction of 1,549 households attributable to net migration;**
- The total household growth is therefore **projected to be 4,029** (5,578 less 1,549 = 4,029) **households each year** over the initial 5-year period of the projection.

Figure 40: Components of average annual household growth by 5-year projection period (Source: GLA 2014 Round Long-term Trend Household Projections Note: Figures may not sum due to rounding**)**

Outer North East London	Annual average for 5-year periods during Plan					Annual average
	2011-16	2016-21	2021-26	2026-31	2031-36	2011-36
New household formation	7,517	7,888	8,096	8,383	8,719	8,043
Household dissolution following death	3,964	3,716	3,564	3,623	3,800	3,724
Net household growth within outer North East London HMA	**3,554**	**4,172**	**4,532**	**4,760**	**4,919**	**4,318**
Household migration in	14,357	15,057	15,590	16,023	16,531	15,372
Household migration out	14,276	15,305	16,134	16,877	17,653	15,832
Net household migration	**82**	**-248**	**-544**	**-854**	**-1,122**	**-460**
Total household growth	**3,635**	**3,924**	**3,988**	**3,906**	**3,797**	**3,858**

4.78 Meanwhile, in Outer North East London over the initial 5-year period (2011-16) the model shows that:

- There are projected to be 7,517 new household formations each year; but this is offset against 3,964 household dissolutions following death – so there is an **average net household growth of 3,554 households**;
- There are also projected to be 14,357 households migrating to Outer North East HMA offset against 14,276 households migrating away from the area – which yields an **growth of 82 households attributable to net migration;**
- The total household growth is therefore **projected to be 3,635** (3,554 plus 82 = 3,635) **households each year** over the initial 5-year period of the projection.

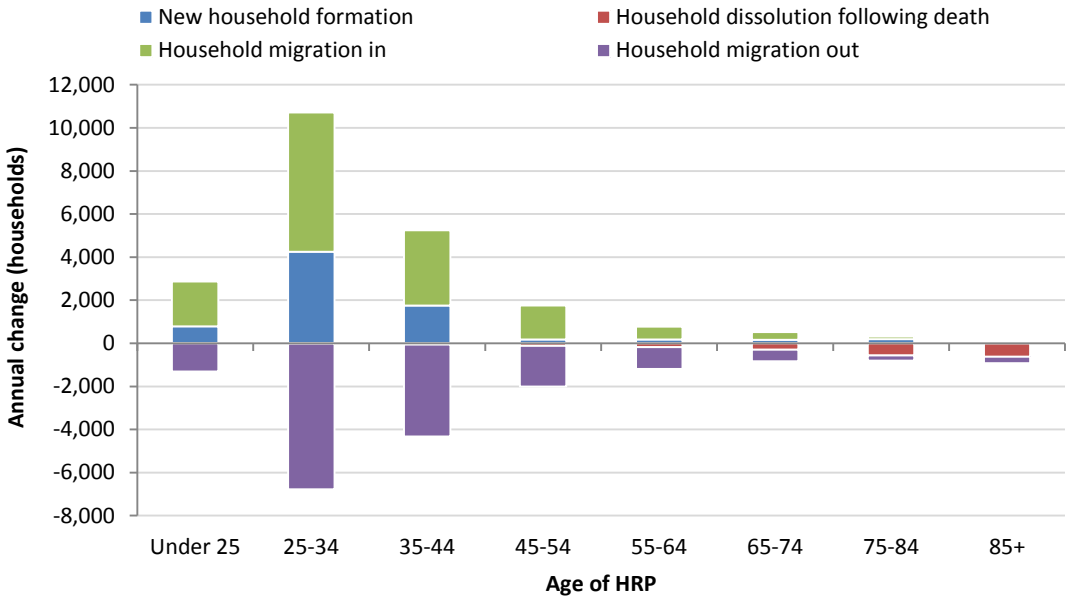
Change in Household Numbers by Age Cohort

4.79 To establish the proportion of newly forming households unable to buy or rent in the market area, it is necessary to consider the characteristics of the new households projected to form in Outer East London and Outer North East London each year over the period 2011-16 (Figure 39 and Figure 40) alongside the detailed information about household affordability (Figure 38).

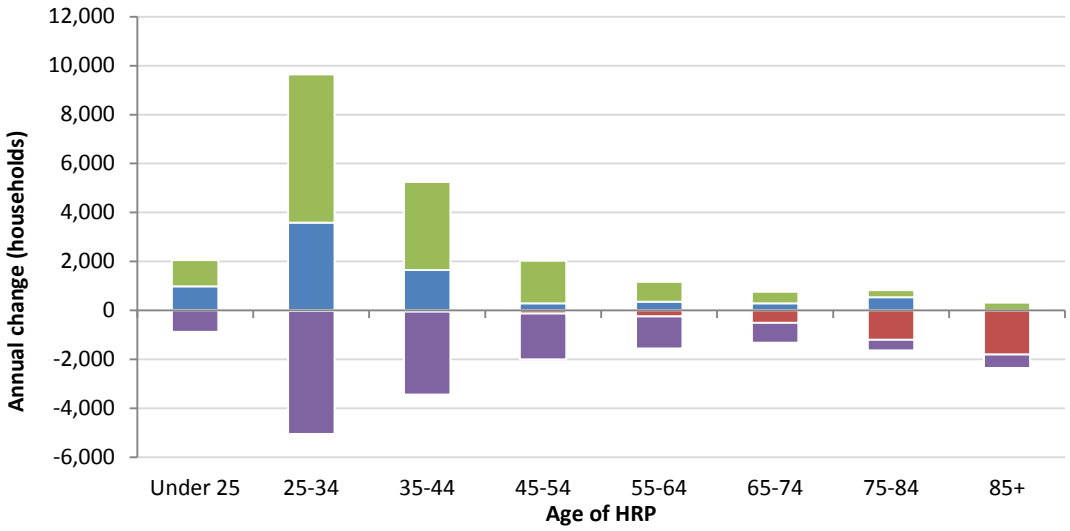
4.80 Figure 41 shows the age structure of each of the components of household change. Note that this analysis is based on changes within each age cohort, so comparisons are based on households born in the same year and relate to their age at the end of the period. Therefore all new households are properly counted, rather than only counting the increase in the number of households in each age group.

Figure 41: Annual change in household numbers in each age cohort by age of HRP (Source: ORS Housing Model)

Outer East London



Outer North East London



4.81 Together with information on household type, this provides a framework for the Model to establish the proportion of households who are unable to afford their housing costs.

4.82 The Model identifies that in Outer East London 37% of all newly forming households are unable to afford their housing costs, while the figure in Outer North East London is 34% (Figure 42) The Model shows that a similar proportion of households migrating to the area are unable to afford (36% in Outer East London and 33% in Outer North East London). Some of these households will be moving to social rented housing, but many others will be renting housing in the private rented sector with housing benefit support. Together, there are 8,097 new households each year who are unable to afford their housing costs in Outer East London and 7,245 in Outer North East London.

Figure 42: Affordability of new households over the initial 5-year period 2011-16 (Source: ORS Housing Model Note: Figures may not sum due to rounding**)**

	OUTER EAST LONDON			OUTER NORTH EAST LONDON		
	All households (annual average)	Households able to afford housing costs	Households unable to afford housing costs	All households (annual average)	Households able to afford housing costs	Households unable to afford housing costs
Newly forming households	7,442	4,722	2,720	7,517	4,956	2,561
In-migrant households moving to the area	14,755	9,377	5,377	14,357	9,673	4,684
All new households	**22,197**	**14,099**	**8,097**	**21,875**	**14,629**	**7,245**

4.83 Having established the need for affordable housing and the dwellings likely to be vacated, the PPG suggests that the total net need can be calculated by subtracting "total available stock from total gross need" (paragraph 29), but this over-simplifies what is a very complex system.

4.84 It is essential to recognise that some households who are unable to buy or rent in the market area when they first form may become able to afford their housing costs at a later date – for example:

- Two newly formed single person households may both be unable to afford housing, but together they might create a couple household that can afford suitable housing;
- Similarly, not all households that are unable to afford housing are allocated affordable housing;

» Some will choose to move to another housing market area and will therefore no longer require affordable housing.

4.85 In these cases, and others, the gross need will need adjusting.

4.86 The Model recognises these complexities, and through considering the need for affordable housing as part of a whole market analysis, it maintains consistency with the household projections and avoids any double counting.

4.87 Considering those components of household change which reduce the number of households resident in the area, the Model identifies 1,864 households in Outer East London and 3,964 household in Outer North East London are likely to dissolve following the death of all household members. Many of these households will own their homes outright; however 40% in Outer East London and 23% in Outer North East London are unable to afford market housing: most living in affordable housing.

4.88 When considering households moving away from the area, the Model identifies that an average of 16,303 households will leave Outer East London each year including 6,082 who are unable to afford their housing costs, while 14,276 households will leave Outer North East London including 4,503 who are unable to afford their housing costs. Some will be leaving social rented housing, which will become available for another household needing affordable housing. Whilst others will not vacate a social rented property, their needs will have been counted in the estimate of current need for affordable housing or at the time they were a new household (either newly forming or migrating in to the area). Given that they are now leaving the study area, they will no longer need affordable housing in the area and it is therefore important to discount their needs.

4.89 Figure 43 summarises the total household growth. In Outer East London this includes the 8,097 new households on average each year who are unable to afford their housing costs, but offsets this against the 6,826 households who will either vacate existing affordable housing or who will no longer constitute a need for affordable housing in Outer East London (as they have moved to live elsewhere). In Outer North East London, 7,245 new households will require affordable housing, outset against 5,395 households who will either vacate existing affordable housing or who will no longer constitute a need for affordable housing in Outer North East London.

Figure 43: Components of average annual household growth 2011-16 (Source: ORS Housing Model Note: Figures may not sum due to rounding**)**

	OUTER EAST LONDON			OUTER NORTH EAST LONDON		
	All households (annual average)	Households able to afford housing costs	Households unable to afford housing costs	All households (annual average)	Households able to afford housing costs	Households unable to afford housing costs
Newly forming households	7,442	4,722	2,720	7,517	4,956	2,561
In-migrant households moving to the area	14,755	9,377	5,377	14,357	9,673	4,684
All new households	**22,197**	**14,099**	**8,097**	**21,875**	**14,629**	**7,245**
Household dissolutions following death	1,864	1,120	744	3,964	3,071	892
Out-migrant households moving away from the area	16,303	10,222	6,082	14,276	9,773	4,503
All households no longer present	**18,168**	**11,342**	**6,826**	**18,239**	**12,844**	**5,395**
Average annual household growth 2011-16	**4,029**	**2,757**	**1,272**	**3,635**	**1,785**	**1,850**

4.90 Overall, the Model projects that household growth will yield a net increase of 1,272 households in Outer East London ad 1,850 households in outer North East London on average each year (over the period 2011-16) who are unable to afford their housing, which represents 32% of the household growth in outer East London and 51% in Outer North East London.

Projecting Future Needs of Existing Households

4.91 PPG also identifies that in addition to the needs of new households, it is also important to estimate "the number of existing households falling into need" (paragraph 25). Whilst established households that continue to live in the area will not contribute to household growth, changes in household circumstances (such as separating from a partner or the birth of a child) can lead to households who were previously able to afford housing falling into need. The needs of these households are counted by the Model, and it is estimated that an average of 1,267 established households fall into need each year in the Outer East London HMA and 953 established households fall into need each year in the Outer North East London HMA.

4.92 Finally, whilst the PPG recognises that established households' circumstances can deteriorate such that they fall into need, it is also important to recognise that established households' circumstances can improve. For example:

- When two people living as single person households join together to form a couple, pooling their resources may enable them to jointly afford their housing costs (even if neither could afford separately). Figure 38 showed that 46% of single person households aged under 25 in Newham could not afford housing, compared to 18% of couples of the same age; and for those aged 25 to 34, the proportions were 30% and 10% respectively.
- Households also tend to be more likely to afford housing as they get older, so young households forming in the early years of the projection may be able to afford later in the projection period. Figure 38 showed that 26% of couple families with dependent children

aged 25 to 34 in Havering could not afford housing, compared to 12% of such households aged 35 to 44.

4.93 Given this context, it is clear that we must also recognise these improved circumstances which can reduce the need for affordable housing over time, as households that were previously counted no longer need financial support. The Model identifies that the circumstances of 1,310 households in Outer East London and 1,579 households in Outer North East London improve each year such that they become able to afford their housing costs despite previously being unable to afford.

4.94 Therefore, considering the overall changing needs of existing households, there is an average net reduction of 43 households (1,267 less 1,310 = 43) needing affordable housing each year in Outer East London and a net reduction of 625 in Outer North East London.

Projecting Future Affordable Housing Need (average annual estimate)

4.95 Figure 44 provides a comprehensive summary of all of the components of household change that contribute to the projected level of affordable housing need. More detail on each is provided earlier in this Chapter.

Figure 44: Components of average annual household growth 2011-16 (Source: ORS Housing Model Note: Figures may not sum due to rounding**)**

	OUTER EAST LONDON			OUTER NORTH EAST LONDON		
	All households (annual average)	Households able to afford housing costs	Households unable to afford housing costs	All households (annual average)	Households able to afford housing costs	Households unable to afford housing costs
Newly forming households	7,442	4,722	2,720	7,517	4,956	2,561
In-migrant households moving to the area	14,755	9,377	5,377	14,357	9,673	4,684
All new households	**22,197**	**14,099**	**8,097**	**21,875**	**14,629**	**7,245**
Household dissolutions following death	1,864	1,120	744	3,964	3,071	892

Average annual household growth 2011-16	**4,029**	**2,757**	**1,272**	**3,635**	**1,785**	**1,850**
Existing households falling into need	-	-1,267	1,267	-	-953	953
Existing households climbing out of need	-	1,310	-1,310	-	1,579	-1,579
Change in existing households	**-**	**43**	**-43**	**-**	**625**	**-625**
Average annual need for market and affordable housing 2011-16	**4,029**	**2,800**	**1,229**	**3,635**	**2,411**	**1,225**

4.96 Based on the needs of new households and existing households, there is a projected increase in Outer East London of 1,229 households each year on average for the initial period 2011-16 who will need affordable housing. The equivalent figure in Outer North East London is 1,225 households per annum.

Assessing the Overall Need for Affordable Housing

Outer East London

4.97 Figure 45 brings together the information on assessing the unmet need for affordable housing in 2011, and the future affordable housing need arising over the 22-year period 2011-33.

Figure 45: Assessing total need for market and affordable housing in Outer East London 2011-2033 (Source: ORS Housing Model
Note: Figures may not sum due to rounding**)**

	Housing Need (households)		Overall Housing Need
	Market housing	Affordable housing	
Unmet need for affordable housing in 2011 (see Figure 36)			
Total unmet need for affordable housing	-	23,092	23,092
Supply of housing vacated	11,023	8,112	19,135
Overall impact of current affordable housing need	**-11,023**	**14,980**	**3,957**
Projected future housing need 2011-33			
Newly forming households	116,296	59,472	175,769
Household dissolutions following death	25,254	15,760	41,014
Net household growth within Outer East London HMA	**+91,042**	**+43,712**	**+134,755**
Impact of existing households falling into need	-37,555	+37,555	-
Impact of existing households climbing out of need	+35,505	-35,505	-
Impact of households migrating to/from the area	-32,114	-24,097	-56,211
Future need for market and affordable housing 2011-33	**+56,878**	**+21,666**	**+78,544**
Total need for market and affordable housing			
Projected impact of affordable housing need in 2011	-11,023	+14,980	+3,957
Future need for market and affordable housing 2011-33	+56,878	+21,666	+78,544
Total need for market and affordable housing	**+45,855**	**+36,646**	**+82,501**
Average annual need for housing	2,084	1,666	3,750
Proportion of need for market and affordable housing	**55.58%**	**44.42%**	**100.00%**

4.98 Figure 36 estimated there to be 23,092 households in need of affordable housing in 2014. However, as 8,112 of these already occupied an affordable home, our previous conclusion was therefore a net need from 14,980 households (23,902 less 8,112= 14,980) who need affordable housing and do not currently occupy affordable housing in the Outer East London HMA.

4.99 The 22-year projection period 2011-33 then adopts the approach that was previously outlined for the initial 5-year period of the projection. The Model identifies that the number of households in need of affordable housing will increase by 21,666 households over the period 2011-33, alongside an increase of 56,878 households able to afford market housing.

4.100 Overall, there will be a need to provide additional affordable housing for 36,646 households over the period 2011-33. This is equivalent to an average of 1,666 households or 1,700 dwellings per year. This equates to 44% of all provision.

4.101 Any losses from the current stock (such as demolition or clearance, or sales through Right to Buy) would increase the number of affordable dwellings needed by an equivalent amount.

Outer North East London

4.102 Figure 46 brings together the information for Outer North East London.

Figure 46: Assessing total need for market and affordable housing in Outer North East London 2011-2033 (Source: ORS Housing Model Note: Figures may not sum due to rounding**)**

	Housing Need (households)		Overall Housing Need
	Market housing	Affordable housing	
Unmet need for affordable housing in 2011 (see Figure 36)			
Total unmet need for affordable housing	-	15,722	15,722
Supply of housing vacated	7,875	4,892	12,767
Overall impact of current affordable housing need	**-7,875**	**+10,830**	**+2,955**
Projected future housing need 2011-33			
Newly forming households	113,494	63,426	176,920
Household dissolutions following death	64,218	17,707	81,925
Net household growth within Outer North East London HMA	**+49,276**	**+45,719**	**+94,995**
Impact of existing households falling into need	-24,980	+24,980	-
Impact of existing households climbing out of need	+43,845	-43,845	-
Impact of households migrating to/from the area	-10,283	+165	-10,117
Future need for market and affordable housing 2011-33	**+57,859**	**+27,020**	**+84,878**
Total need for market and affordable housing			
Projected impact of affordable housing need in 2011	-7,875	+10,830	+2,955
Future need for market and affordable housing 2011-33	+57,859	+27,020	+84,878
Total need for market and affordable housing	**49,984**	**37,850**	**+87,833**
Average annual need for housing	2,272	1,720	3,992
Proportion of need for market and affordable housing	**56.91%**	**43.09%**	**100.00%**

4.103 Figure 36 estimated there to be 15,722 households in need of affordable housing in 2011. However, as 4,892 of these already occupied an affordable home, our previous conclusion was therefore a net need from 10,830 households (15,722 less 4,852 = 10,830) who need affordable housing and do not currently occupy affordable housing in the Outer North East London HMA.

4.104 The Model then identifies that the number of households in need of affordable housing will increase by 27,020 households over the period 2011-33, alongside an increase of 57,859 households able to afford market housing.

4.105 Overall, there will be a need to provide additional affordable housing for 37,850 households over the period 2011-33. This is equivalent to an average of 1,720 households or 1,750 dwellings per year or 43.1% of the total household growth.

Borough Level Results

4.106 Figure 47 to Figure 51 show the components of affordable housing need for each borough.

Figure 47: Assessing total need for market and affordable housing in Newham 2011-2033 (Source: ORS Housing Model Note: Figures may not sum due to rounding**)**

	Housing Need (households)		Overall Housing Need
	Market housing	Affordable housing	
Unmet need for affordable housing in 2011 (see Figure 36)

Future Policy on Housing Benefit in the Private Rented Sector

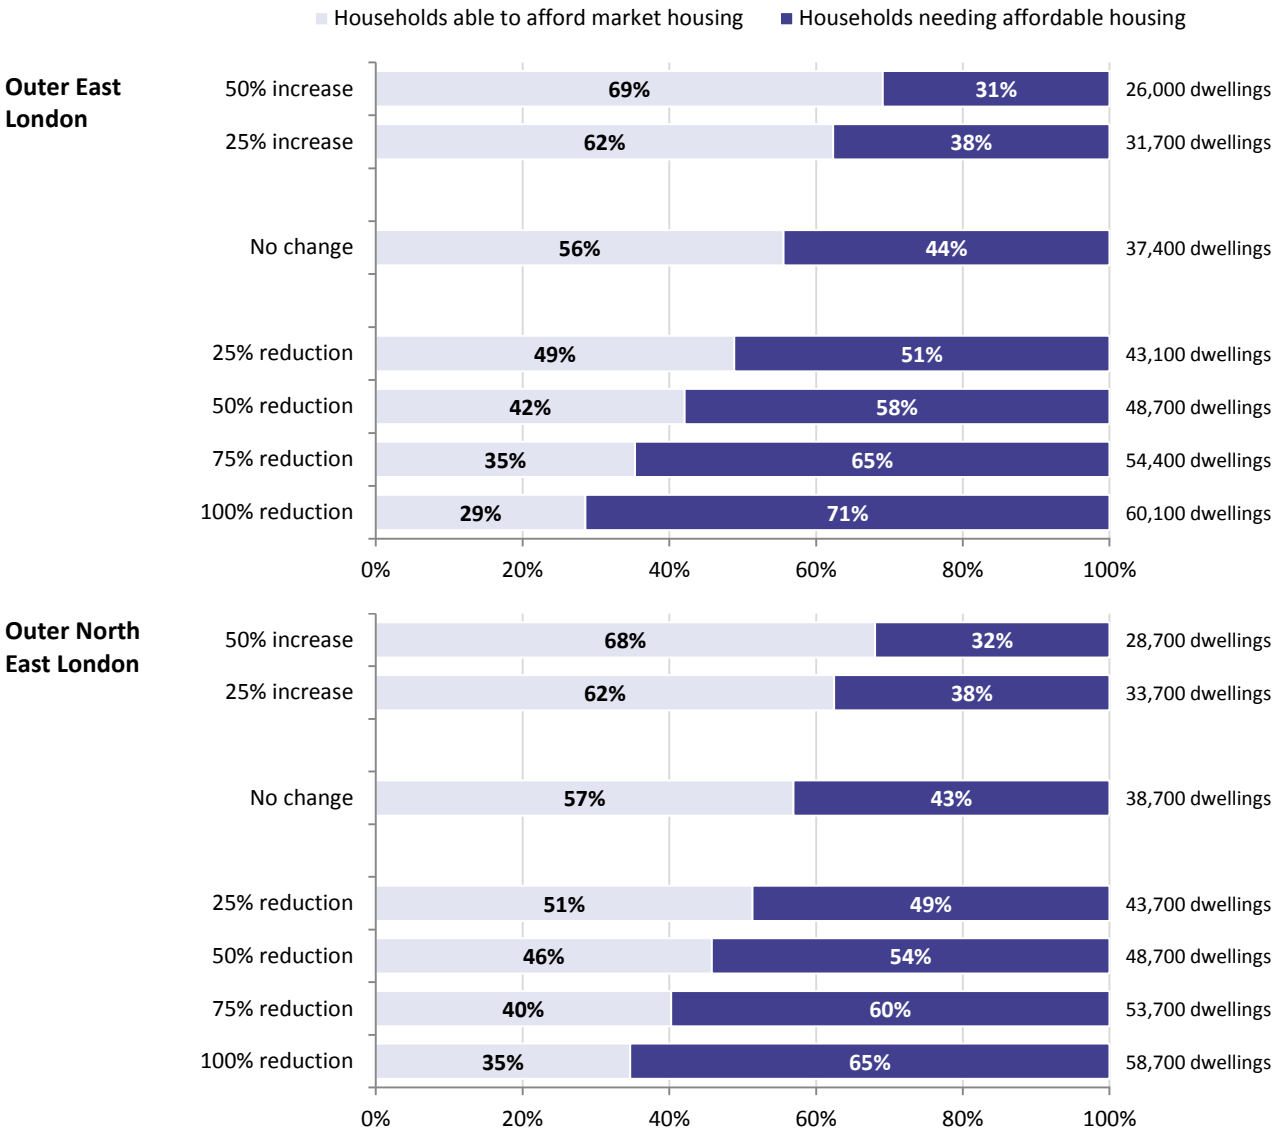
4.107 The Model also recognises the importance of housing benefit and the role of the private rented sector. The Model assumes that the level of housing benefit support provided to households living in the private rented sector will remain constant; however this is a national policy decision which is not in the control of the Council. At the time of writing, the cap for welfare claims from non working households in London is facing a reduction from £26,000 to £23,000 per annum. However, many housing benefit claimants in the private rented sector are in work, while others are in small households not affected by the cap.

4.108 It is important to note that private rented housing (with or without housing benefit) does not meet the definitions of affordable housing. However, many tenants that rent from a private landlord can only afford their housing costs as they receive housing benefit. These households aren't counted towards the need for affordable housing (as housing benefit enables them to afford their housing costs), but if housing benefit support was no longer provided (or if there wasn't sufficient private rented housing available at a price they could afford) then this would increase the need for affordable housing.

4.109 The model adopts a neutral position in relation to this housing benefit support, insofar as it assumes that the number of claimants in receipt of housing benefit in the private rented sector will remain constant. The model does not count any dwellings in the private rented sector as affordable housing supply; however it does assume that housing benefit will continue to help some households to afford their housing costs, and as a consequence these households will not need affordable housing.

4.110 To sensitivity test this position, Figure 52 shows the impact of reducing (or increasing) the number of households receiving housing benefit to enable them to live in the private rented sector.

Figure 52: Theoretical impact of reducing or increasing Housing Benefit support for households living in private rented housing: Balance between households able to afford market housing and households needing affordable housing 2011-33 and associated number of affordable dwellings



4.111 If no households were to receive housing benefit support in the private rented sector, almost three quarter (73%) of the growth in household numbers in Outer East London and two thirds (65%) in Outer North East London would need affordable housing.

Conclusions

Outer East London

4.112 Based on the household projections previously established, we have established the balance between the need for market housing and the need for affordable housing. This analysis has identified a need to increase the overall housing need by 3,957 households to take account of concealed families and homeless households that would not be captured by the household projections.

4.113 The housing mix analysis identified a need to provide 37,456 additional affordable homes over the 22-year period (an average of 1,666 households or 1,700 dwellings per year). This would provide for the current unmet needs for affordable housing in addition to the projected future growth in affordable housing need, but assumes that the level of housing benefit support provided to households living in the private rented sector remains constant.

Outer North East London

4.114 Based on the household projections previously established, we have established the balance between the need for market housing and the need for affordable housing. This analysis has identified a need to increase the overall housing need by 2,955 households to take account of concealed families and homeless households that would not be captured by the household projections.

4.115 The housing mix analysis identified a need to provide 37,850 additional affordable homes over the 22-year period (an average of 1,720 households or 1,750 dwellings per year). This would provide for the current unmet needs for affordable housing in addition to the projected future growth in affordable housing need, but assumes that the level of housing benefit support provided to households living in the private rented sector remains constant.

Size Mix

4.116 Figure 53 and Figure 49 sets out the housing mix in terms of property type and size for each of the local authority areas. Across the Outer East and Outer North East HMA's. In both HMA's around a half third of all affordable households to be provided require 3 bedrooms. The larger dwelling sizes are predominantly to address overcrowding amongst existing households.

Affordable Rent Levels and Housing Need

4.117 A key issue for areas such Outer East London and Outer North East London is how affordable rents can help to meet the needs of those households who cannot afford to meet their own housing costs. Across much of England, affordable rents set at 80% of market rents provide rented accommodation which is very close to the cost of social rents. In these areas we do not have to consider social rent and affordable rent as two different products between the rents associated with them are similar and they serve to meet the needs of the same households.

4.118 However, in Outer East London and Outer North East London there is a significant difference between potential affordable rents and social rents. Figure 55 shows median weekly rents for 2013/14. For the GLA SHMA 2013 it was assumed that households could rent a 4 bedroom property in London at less than £250 per week, but much higher rates currently apply.

Figure 55: Median Weekly Rent Values in Outer East London and Outer North East London (Source: Valuation Office Agency)

	Outer East London		Outer North East London		
	Newham	Waltham Forest	Barking and Dagenham	Havering	Redbridge
1 bedroom	£200.08	£196.15	£160.38	£155.77	£173.08
2 bedroom	£252.92	£253.85	£196.15	£200.08	£223.85
3 bedrooms	£311.54	£311.54	£265.38	£242.31	£300.00
4 or more bedrooms	£369.23	£380.77	£308.77	£357.69	£403.85

4.119 Figure 56 shows potential affordable rents in Outer East London and Outer North East London by bedroom size using 80% of market rents. This shows that at 80% of market rents, a 4 bedroom property will still cost between £247 and £323 per week. In the context of current benefit caps for non-working households of £500 per week this is still likely to be unaffordable and it should be remembered that the benefit cap is set to fall from £26,000 per annum to £23,000 per annum in

London . It should also be noted that potential affordable rents linked to market rents are subject to change over time and if market rents rise then affordable rents will also rise.

Figure 56: Potential Affordable rent Values in Outer East London and Outer North East London (Source: Valuation Office Agency)

	Outer East London		Outer North East London		
	Newham	Waltham Forest	Barking and Dagenham	Havering	Redbridge
1 bedroom	£160.06	£156.92	£128.30	£124.62	£138.46
2 bedroom	£202.34	£203.08	£156.92	£160.06	£179.08
3 bedrooms	£249.23	£249.23	£212.30	£193.85	£240.00
4 or more bedrooms	£295.38	£304.62	£247.02	£286.15	£323.08

4.120 Figure 57 shows the level of income required to be able to afford rents which are set at 80% market rents in Outer East London and Outer North East London under an assumptions that household devote 25% of their household income to housing costs. This requires an income of over £25,000 to be able to afford a 1 bedroom affordable rent property at 80% market rents. A 4 bedroom property would require an income of at least £51,000.

Figure 57: Income Required to Afford 80% Market Rents in Outer East London and Outer North East London (Source: Valuation Office Agency and ORS)

	Outer East London		Outer North East London		
	Newham	Waltham Forest	Barking and Dagenham	Havering	Redbridge
1 bedroom	£33,293	£32,639	£26,687	£25,920	£28,801
2 bedroom	£42,086	£42,241	£32,639	£33,293	£37,249
3 bedrooms	£51,840	£51,840	£44,159	£40,320	£49,920
4 or more bedrooms	£61,440	£63,360	£51,379	£59,520	£67,201

4.121 From the above calculations it is clear that affordable rent properties in Outer East London and Outer North East London set at 80% of market rents are going to be unaffordable to anyone other than relatively high earning households. To begin to address the needs of households who are identified as requiring social rent it is the case that the cost of the rents must fall within housing benefit thresholds for an area.

4.122 Figure 58 shows the Local Housing Allowance (LHA) rates for Outer East London and Outer North East London. Comparing these figures with those in Figure 56 shows that the affordable rents set at 80% of market rents in Outer East London and Outer North East London would be covered by the LHA rate.

Figure 58: Local Housing Allowance Rate in Outer East London and Outer North East London in 2015 (Source: Valuation Office Agency)

	Outer East London	Outer North East London
1 bedroom	£181.80	£155.57
2 bedroom	£229.58	£192.62
3 bedrooms	£286.98	£242.40
4 or more bedrooms	£331,61	£312.77

4.123 Overall, this leaves a complicated position for affordable rent in areas such as Outer East London and Outer North East London where market rents are so much higher than social rents. If affordable rents are set at 80% of market rents then their current level is so high that they will not be affordable to households who are typically seeking social rent. However, the rents do fall within the LHA caps and potentially could meet the needs of households who require social rent. However, the impact of the total benefit cap for non-working households does imply that it will be difficult to deliver affordable rent homes for larger dwellings which are consistent with the benefit cap.

Shared Ownership and Low Cost Home Ownership: Potential Market Size

4.124 It is also important to consider the role of other affordable housing products in Outer East London and Outer North East London. This section concentrates upon the potential role which could be played by shared ownership and low cost home ownership (LCHO) dwellings in meeting the overall housing needs of the areas.

4.125 We would note at the outset that as well as potentially helping households who are unable to afford market housing, both shared ownership and LCHO dwellings are often more affordable to those who can meet their own costs in the private rented sector, but who cannot afford to become owner occupiers. Therefore, they are helping to address market housing needs much more than affordable needs by allowing private renters to access owner occupation. However, it should be noted that the NPPF at paragraph 50 states that plan makers should seek;:

'To deliver a wide choice of high quality homes, widen opportunities for home ownership and create sustainable, inclusive and mixed communities, local planning authorities should:'

4.126 Therefore, the NPPF very specifically seeks to encourage home ownership and shared ownership and LCHO can be seen as playing a role in this alongside other government polices such as Help to Buy.

4.127 To understand the potential role of shared ownership and LCHO in helping to address housing needs, we firstly need to understand how the housing market is operating. Figure 59 shows the tenure pattern for Outer East London and Outer North East London at the time of the 2011 Census.

4.128 Clearly, private rented rates are significantly above the national average. However, a larger private rented sector alone cannot be taken as evidence of more households who could potentially benefit from shared ownership and LCHO. For example, areas with larger student populations will typically have larger private rented sectors and students will not typically qualify for intermediate housing.

Figure 59: Tenure in 2011 (Source: UK Census of Population 2011 Note: Figures may not sum due to rounding)

	Owned	Shared Ownership	Social rented	Private rented	Living rent free
Newham	33.3%	1.8%	29.6%	34.1%	1.2%
Waltham Forest	49.9%	1.1%	22.1%	25.9%	1.0%
Barking and Dagenham	46.4%	1.3%	33.7%	17.7%	1.0%
Havering	73.8%	0.6%	14.2%	10.6%	0.8%
Redbridge	63.6%	1.0%	11.4%	22.9%	1.2%
England	63.3%	0.8%	17.7%	16.8%	1.3%

4.129 Figure 60 shows that change in the owner occupation and private rented rates across Outer East London and Outer North East London in the period 2001-2011. It is clear that for all authorities the fall in owner occupation rates has been above the national average and that the growth in the private rented sector, with the exception of Havering, is at or above the national average.

Figure 60: Tenure Change from 2001 to 2011 (Source: UK Census of Population 2001 and 2011)

	Change in percentage owned occupied	Change in percentage private rented
Newham	-9.1%	16.3%
Waltham Forest	-8.2%	10.2%
Barking and Dagenham	-8.9%	12.0%
Havering	-5.0%	5.1%
Redbridge	-9.1%	16.3%
England	-4.7%	6.9%

4.130 The composition of the private rented sector is also important in assessing the potential role of shared ownership and LCHO in helping households in to owner occupation. An area where the private rented sector is dominated by households who are claiming housing benefit in the private rented sector will have far lower capacity for helping households into owner occupation. In these cases the private rented sector is not accommodating households who would have moved on to owner occupation in the past, but is instead accommodating households whose needs are more likely to be social rent.

4.131 Similarly, student households in the private rented sector would typically not qualify for shared ownership or LCHO products and therefore shouldn't be considered as potential purchasers.

4.132 Figure 61 takes this analysis forward to show the physical size of the private rented sector in each local authority when tenants in receipt of housing benefit and students are excluded. In total it is estimated that there are over 33,500 non student households who are paying their rent without support from housing benefit in the private rented sector in Outer East London and 24,000 household in Outer

North East London. Therefore, there are 57,500 household who aren't students and who are paying their private rents without government assistance. These household represent a group who could potentially benefit from shared ownership and LCHO.

Figure 61: Size of the Private Rent Sector by Local Authority (Source: UK Census of Population 2011 and DWP Benefit Statistics May 2011 Note: Figures may not sum due to rounding**)**

	Total private rented sector	Student households in private rent	Housing benefit tenants in private rent	All other private rent households
Newham	34,570	1,635	13,270	19,665
Waltham Forest	25,102	575	10,590	13,937
Barking and Dagenham	12,328	153	6,490	5,685
Havering	10,337	35	4,560	5,742
Redbridge	22,657	367	9,740	12,550
England	**3,715,924**	112,364	1,371,390	2,232,170

4.133 Figure 62 shows the potential size of the market for shared ownership and LCHO products in Outer East London and Outer North East London. For the calculations we assumed that owner occupation rates were held constant at their 2001 levels and then compared this with the actual number of owner occupiers in 2011 in each local authority. Therefore, for example, if owner occupation rates in Havering had remained at their 2001 levels of 78.8% (including shared ownership) then there would have been 4,660 more owner occupiers in the borough in 2011, which would represent 4,660 fewer private renters. Across the whole area, if owner occupation rates had been held constant at 2001 rates then there would have been 16,400 more owner occupiers in 2011 in Outer East London and 21,000 more in Outer North East London than was the case.

Figure 62: Additional Owner Occupiers in 2011 using 2001 Owner Occupation Rate (Source: UK Census of Population 2011. Note: Shared Ownership has been included in owner occupation Note: Figures may not sum due to rounding)

	Total private rented sector	Student households in private rent	Housing benefit tenants in private rent	Other private rent households	
				Would-be owners	Private rent through choice
Newham	34,570	1,635	13,270	8,648	11,017
Waltham Forest	25,102	575	10,590	7,707	6,230
Barking and Dagenham	12,328	153	6,490	5,744	-59
Havering	10,337	35	4,560	4,660	1,082
Redbridge	22,657	367	9,740	10,634	1,916
England	3,715,924	112,364	1,371,390	1,002,519	1,229,651

4.134 Therefore, these households can be seen as households who are currently renting privately, but who would previously have been owner occupiers. These households all represent households who could potentially benefit from shared ownership or LCHO and therefore there is strong potential for these products in both areas. In particular they are likely to be candidates for the Governments new Starter Homes scheme.

Households with Specific Needs

4.135 Paragraph 021 of the PPG contains issues regarding Households with Specific Needs and states:

> ***Households with specific needs***
>
> *There is no one source of information about disabled people who require adaptations in the home, either now or in the future.*
>
> *The Census provides information on the number of people with long-term limiting illness and plan makers can access information from the Department of Work and Pensions on the numbers of Disability Living Allowance/Attendance Allowance benefit claimants. Whilst these data can provide a good indication of the number of disabled people, not all of the people included within these counts will require adaptations in the home.*
>
> *Applications for Disabled Facilities Grant will provide an indication of levels of expressed need, although this could underestimate total need. If necessary, plan makers can engage with partners to better understand their housing requirements.*
>
> **Planning Practice Guidance 2014, paragraph 21**

4.136 Personal Independence Payments started to replace the Disability Living Allowance from April 2013, and these are awarded to people aged under 65 years who incur extra costs due to disability (although there is no upper age limit once awarded, providing that applicants continue to satisfy either the care or mobility conditions). Higher Mobility Component (HMC) is awarded when applicants have "other, more severe, walking difficulty" above the Lower Mobility Component (which is for supervision outdoors).

4.137 Attendance Allowance contributes to the cost of personal care for people who are physically or mentally disabled and who are aged 65 or over. It is paid at two different rates: a lower rate is paid for those who need help or constant supervision during the day, or supervision at night; a higher rate is paid where help or supervision throughout both day and night is needed, or if people are terminally ill.

4.138 Nevertheless, neither of these sources provides information about the need for adapted homes.

4.139 Disabled Facilities Grants (DFG) are normally provided to Councils and housing association tenants to adapt properties for individuals with health and/or mobility needs. Grants cover a range of works, such as:

- Widening doors and installing ramps;
- Improving access to rooms and facilities, for example stair lifts or a downstairs bathroom;
- Providing a heating system suitable for needs; and
- Adapting heating or lighting controls to make them easier to use.

4.140 Local data about DFGs was published by CLG in Live Table 314. But this data has now been discontinued. PPG notes that whilst patterns of DFG applications "provide an indication of expressed need" it cautions that this could "underestimate need". Of course, it is also important to recognise that DFGs typically relate to adaptations to the existing housing stock rather than new housing provision.

4.141 As previously noted, the Government's reform of Health and Adult Social Care is underpinned by a principle of sustaining people at home for as long as possible. This was reflected in the recent changes to building regulations relating to adaptations and wheelchair accessible homes that were published in the 2015 edition of Approved Document M: Volume 1 (Access to and use of dwellings)[15]. This introduces three categories of dwellings:

- Category 1: Visitable dwellings – Mandatory, broadly about accessibility to ALL properties
- Category 2: Accessible and adaptable dwellings – Optional, similar to Lifetime Homes
- Category 3: Wheelchair user dwellings – Optional, equivalent to wheelchair accessible standard.

4.142 Local authorities should identify the proportion of dwellings in new developments that should comply with the requirements for Category 2 and Category 3 as part of the Local Plan, based on the likely future need for housing for older and disabled people (including wheelchair user dwellings) and taking account of the overall impact on viability.

4.143 The demographic projections by the GLA show that the number of people aged 65 or over is projected to increase by around 31,600 persons in Outer East London and 33,400 In Outer North East London. Most of these older people will already live in the area and many will not move from their current homes; but those that do move home are likely to need accessible housing.

4.144 The London Plan (March 2015) Policy 3.8 Paragraph 3.48 (as amended by MALP Housing Standards Consultation Draft May 2015, subject to Examination beginning 21.10.15) states that 90% of new housing meets Building Regulation requirement M4(2)[16] 'accessible and adaptable dwellings' and 10% of new housing meets Building Regulation requirement M4(3) 'wheelchair user dwellings'. This applies to all tenures.

4.145 Given this context, the evidence supports the need for 90% of dwellings to meet Category 2 requirements, providing that this does not compromise viability. This approach has been adopted in Local Plans elsewhere.

4.146 The CLG guide to available disability data[17] shows that currently around 1-in-30 households in England (3.3%) have at least one wheelchair user, although the rate is notably higher for households living in affordable housing (7.1%). It is also important to recognise that these proportions are likely to increase over the period to 2033 in the context of the larger numbers of older people projected to be living in the area. The evidence therefore supports the need for 10% of market housing and 15% of affordable housing to meet Category 3 requirements. This recognises the changing demographics of the area and also provides an element of choice for households that need wheelchair user dwellings now as well as those households considering how their needs may change in future.

5. Market Signals

Considering the balance between housing need and supply

Chapter Summary

5.1 PPG identifies a range of housing market signals that should be considered when determining the future housing number and advises that these should be applied following the household projections. A worsening in market signals such as affordability or increased house prices could indicate the need for an uplift to the projected figures. The key points and conclusions of the assessment of market signals are:

- House prices over time as measured by lower quartile house prices adjusted for inflation show that the changes in house prices between 2001 and 2013 for Outer East London and Outer North East London are both close to the long-term average trends for England. That is, neither shows an increase of the kind which would suggest the need for an uplift to the projected figures. Similarly, the figures for affordability do not suggest the need for an uplift.
- Figures for average private sector rents in 2013-14 in both Outer East London and Outer North East London are above the national average. However, comparator areas have higher rents and have seen a sharper rise in rents in the past 5 years. Rents in the PRS do not suggest the need for an uplift.
- Overcrowding increased substantially between the 2001 Census and 2011 Census and is much higher than England. While comparators areas Ealing, Hillingdon and Hounslow have a higher rate of overcrowding, the proportion of overcrowded households has increased over the last 10 years at a rate much higher than the national average and that of any comparator area. Overcrowding suggests the need for an uplift to the projected figures.
- There is no definitive guidance on what level of uplift is appropriate. Taking into account the relative market signal indicators for the two areas and the available evidence views of the Eastleigh Inspector and the Greater London SHMA, it would seem to be reasonable to consider an uplift of:
  - 20% for Outer East London as the area experiences significant housing market pressures which are in line with other highly pressurised markets in London;
  - 15% for Outer North East London which experiences lower housing market pressures when compared with Outer East London, but does have similar pressures to London as a whole.

Defining Market Signals

5.2 While demographic trends are key to the assessment of OAN, it is also important to consider current Market Signals and how these may affect housing needs. PPG identifies a range of housing market

signals that should be considered when determining the future housing number. Key to this is how market signals should be taken into account:

> *The housing need number suggested by household projections (the starting point) should be adjusted to reflect appropriate market signals, as well as other market indicators of the balance between the demand for and supply of dwellings (Paragraph 019)*
>
> *A worsening trend in any of these indicators will require upward adjustment to planned housing numbers compared to ones based solely on household projections. (Paragraph 020)*
>
> **Planning Practice Guidance: Assessment of housing and economic development needs (March 2014)**

5.3 The Market Signals include:

- Land and house prices;
- Rents and affordability;
- Rate of development; and
- Overcrowding.

5.4 Furthermore, there are other issues that should be considered, for example the macro-economic climate (PAS OAN technical advice note, para 5.22). Further, there are wider market trends and drivers to consider. A full range of market signals are considered and their implications are considered especially where these may indicate undersupply relative to demand and the need to deviate from household projections.

5.5 PPG and the PAS OAN technical advice note emphasise the importance of considering indicators in the context of longer-term trends and looking at rates of change as well as absolute levels – for example, house prices in the housing market may be higher or lower than the national average, however the more important consideration is whether or not they are becoming more (or less) expensive at a rate that differs from the national rates or rates in similar areas.

> *Appropriate comparisons of indicators should be made. This includes comparison with longer term trends (both in absolute levels and rates of change) in the housing market area; similar demographic and economic areas; and nationally. (Paragraph 020)*
>
> **Planning Practice Guidance: Assessment of housing and economic development needs (March 2014)**

5.6 To identify areas with similar demographic and economic characteristics, we have analysed data from the ONS area classifications together with data from the CLG Index of Multiple Deprivation. The outcome of this analysis was that Outer East London shares similar demographic and economic characteristics with **Lambeth, Lewisham & Southwark**, **Barnet, Enfield & Haringey** and **Hackney & Tower Hamlets** and that Outer North East London shares similar demographic and economic characteristics with **Bexley, Bromley & Greenwich, Croydon, Merton & Sutton** and **Ealing, Hillingdon & Hounslow**. Therefore, in considering market signals, we have considered these borough council areas as appropriate comparators and compared them against the study areas.

House Prices and Affordability

5.7 House prices in England and Wales have been relatively volatile in the past 15 years. House prices have increased by 6.4% in the 12 months to April 2014; the fastest rises were in London (17.0%), the East of England (6.6%) and the South East (6.1%). The average UK house price in 2014 was £172,000 compared to the high of £181,500 in 2007. Average house price trends 2008-2014 (Source: ONS) show the price divergence between London and the rest of the UK.

Figure 63: Annual house price rates of change, UK all dwellings 2004-2014 (Source: Regulated Mortgage Survey. Note: Not seasonally adjusted)

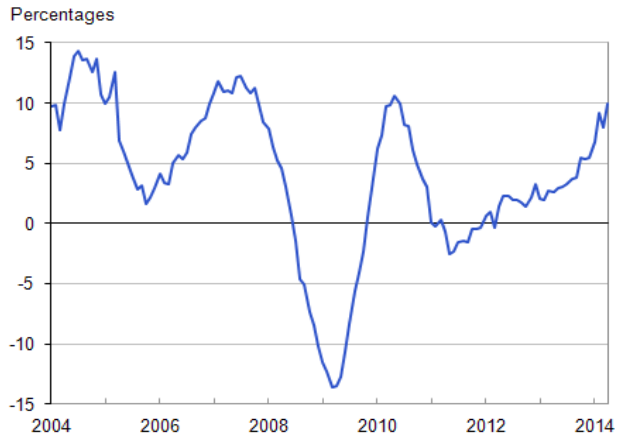

Figure 64: UK and London House Price Index 2008-2014 (Source: ONS)

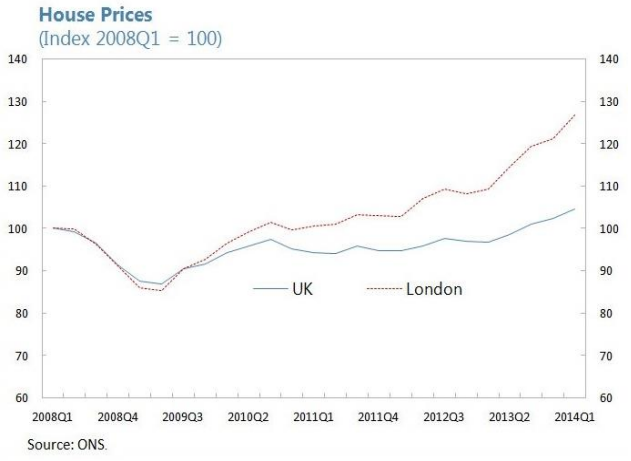

5.8 The Bank of England has overall responsibility for UK monetary policy: it has become concerned about the risks posed by house prices, high levels of borrowing and any housing 'bubble' to national economic recovery. In his speech at the Mansion House in June 2014, the Governor of the Bank said:

> *"The underlying dynamic of the housing market reflects a chronic shortage of housing supply, which the Bank of England can't tackle directly. Since we are not able to build a single house, I welcome the Chancellor's announcement tonight of measures to increase housing supply.*
>
> *To be clear, the Bank does not target asset price inflation in general or house prices in particular.*
>
> *It is indebtedness that concerns us.*
>
> *This is partly because over-extended borrowers could threaten the resilience of the core of the financial system since credit to households represents the lion's share of UK banks' domestic lending.*
>
> *It is also because rapid growth in or high levels of mortgage debt can affect the stability of the economy as a whole."*

5.9 The International Monetary Fund (IMF) has also highlighted concerns about these risks and especially the high borrowings of households relative to income, especially in London:

> *"The increase in the number of high loan-to-income (LTI) mortgages is more pronounced in London and among first-time buyers. As a result, an increasing number of households are vulnerable to negative income and interest rate shocks."*

5.10 However, while mortgage credit availability shows signs of stabilising closer to historic levels, the surge in prices may be cooling; the Council of Mortgage Lenders (CML) commentary on the Bank of England Credit Conditions Survey (Q4, 2014) suggests:

> *"Looking ahead, there are expectations of a small pickup in both mortgage demand and credit availability except at higher loan-to-value (LTV) ratios in the next quarter.*
>
> *The reported narrowing of risk appetite – with some lenders less willing to lend at LTVs above 90% and/or restricting their lending at high loan-to-income ratios – is potentially of greater importance for market developments.*
>
> *But looking ahead over the coming months, lenders expect mortgage credit availability to stabilise, mortgage spreads to narrow (for what would be the 10th successive quarter) and a modest pick-up in mortgage demand."*
>
> (Emphasis is the author's)

5.11 The Government has strengthened the existing powers of the Bank of England to recommend to regulators a limit on the proportion of high loan to income mortgages. From May 2015, lenders are prevented from extending more than 15% of their mortgages to customers needing to borrow 4.5 times their income.

5.12 The future for the housing market is difficult to predict, although long-term trends indicate continued demand issues from household growth, albeit with issues around affordability. The current Government policy towards national economy recovery, and the role played in this by the Bank of England, indicates that action may be taken to contain any housing price 'bubble'. Interest rates seem likely to rise in the medium term, and this could expose risk of those borrowing with high loan-to-value at low interest rates.

House Prices in Outer East London

5.13 House price trends (2000-2013) are shown in Figure 65 and Figure 66 shows lower quartile house prices adjusted for the impact of inflation. Therefore, the prices reflect real changes which have occurred since 2001 when removing the impact of background inflation.

5.14 It is clear that real house prices in Outer East London rose sharply in the period 2001-2007 (from £100,300 to £223,100 at 2012 values, a real increase of 122%), but they have progressively reduced since that time with real prices at around £193,600 in mid-2013 (at 2012 values).

Figure 65: House Price Trends: Lower Quartile Prices (Source: CLG Live Tables. Note: HMA figure derived using population weighted average of Local Authority data)

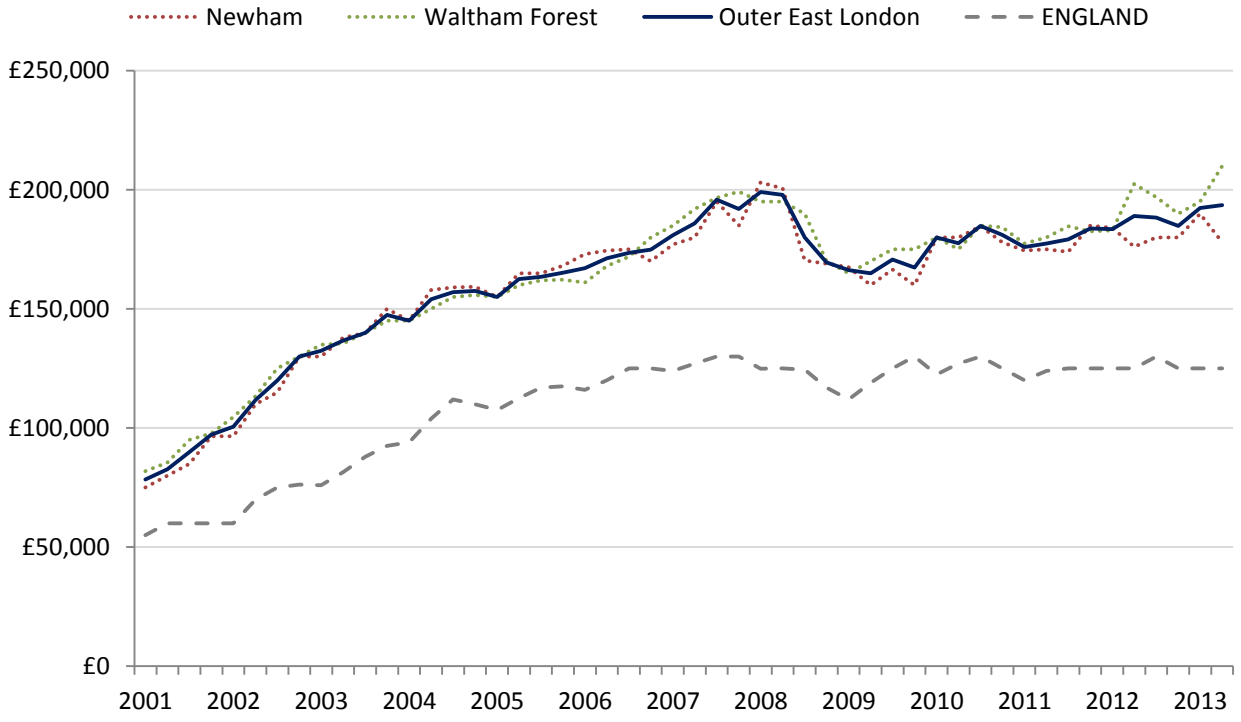

Figure 66: Real House Price Trends: Lower Quartile Prices adjusted to 2011 values using CPI (Source: CLG Live Tables; Bank of England. Note: HMA figure derived using population weighted average of Local Authority data

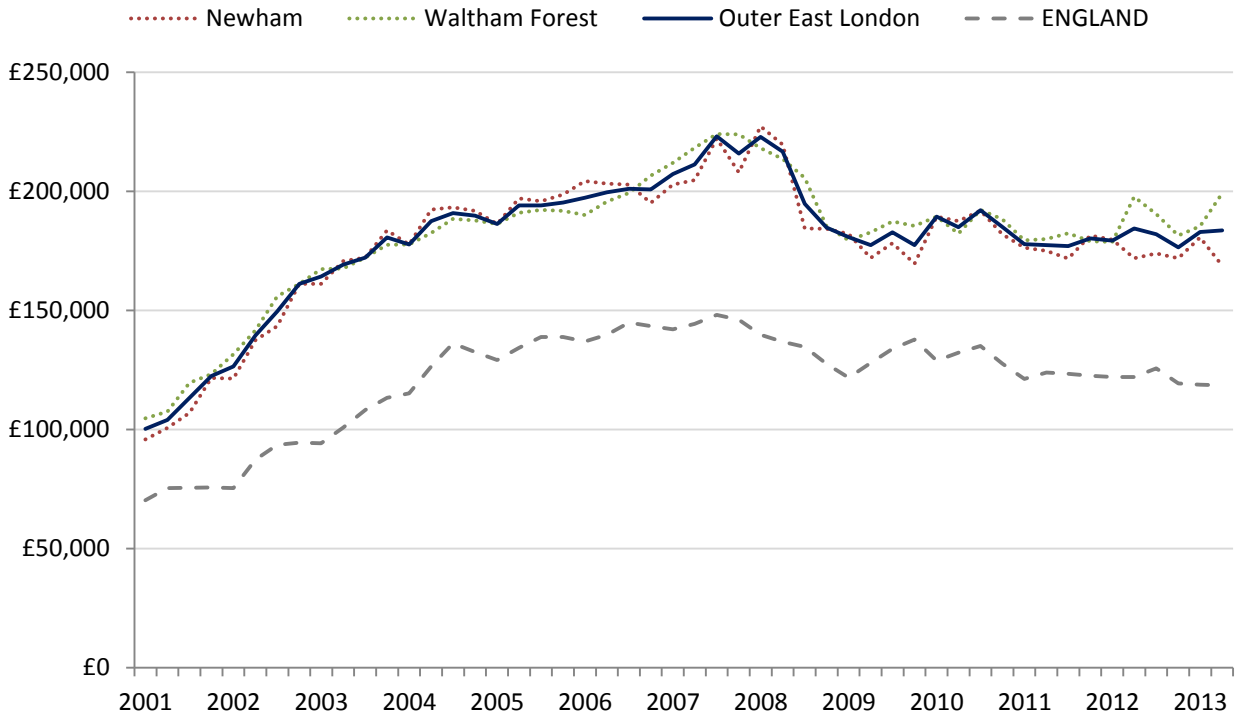
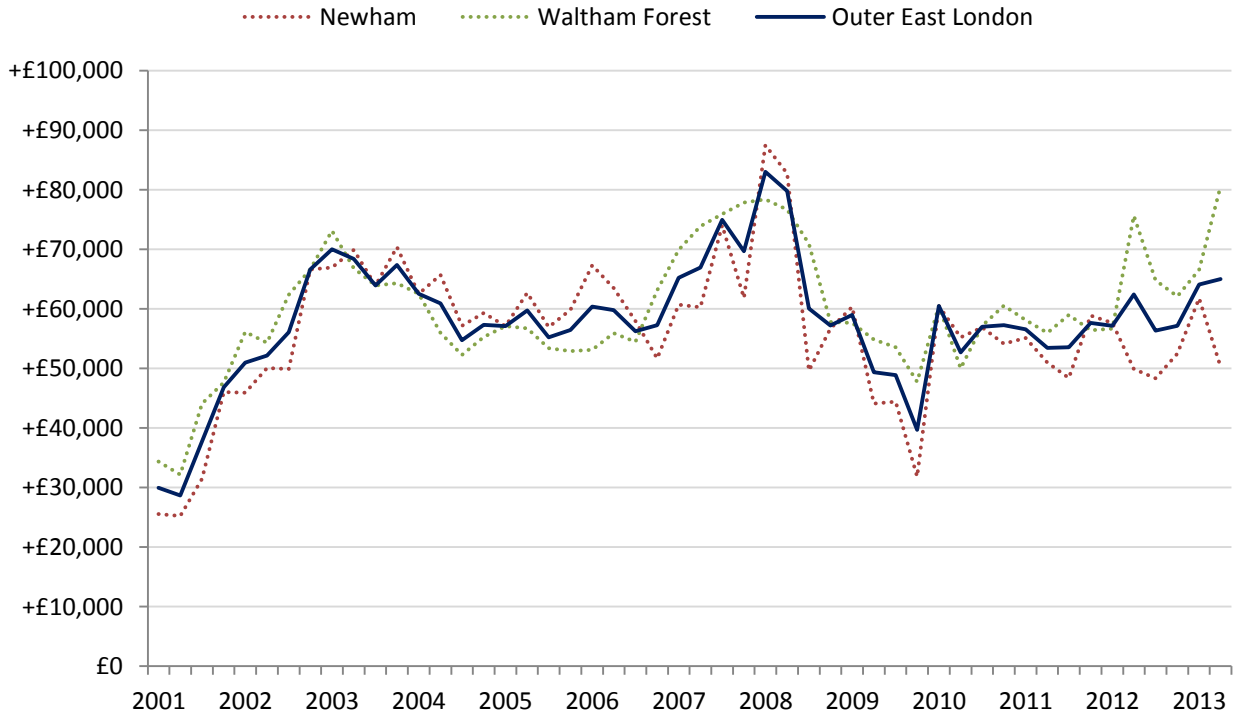


5.15 Figure 67 shows how real house prices in Outer East London have varied when compared with the English average. This shows that real house prices in the HMA are currently close to the long-term average trends.

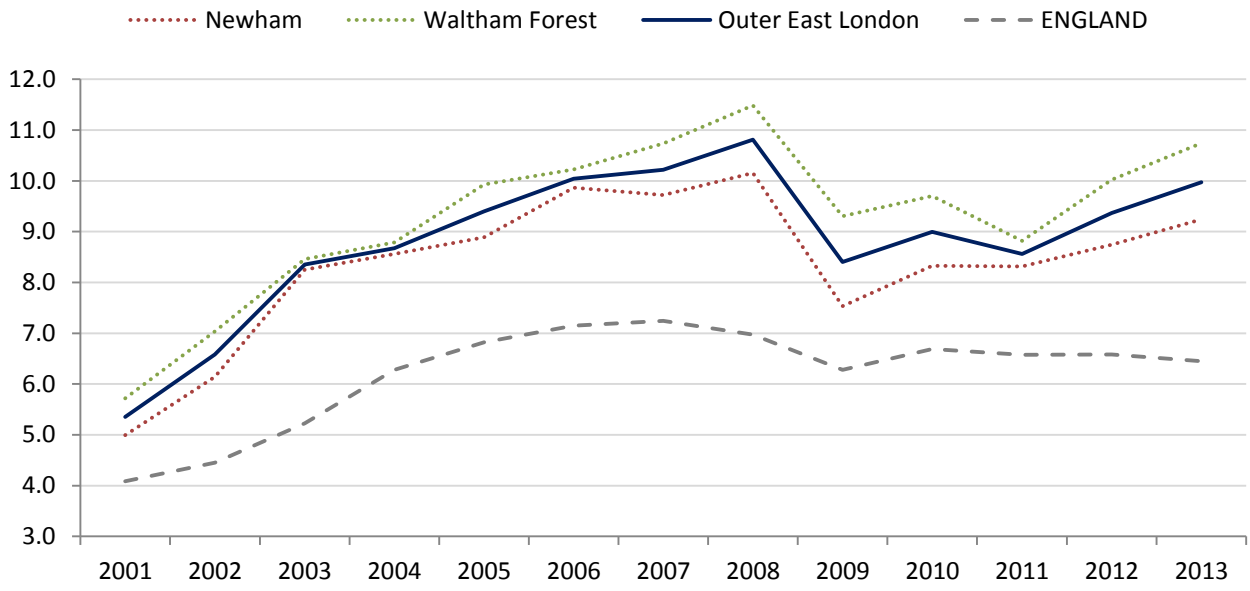
Figure 67: Real House Price Trends relative to England: Lower Quartile Prices adjusted to 2011 values using CPI (Source: CLG Live Tables; Bank of England. Note: HMA figure derived using population weighted average of Local Authority data)



Affordability in Outer East London

5.16 Figure 68 below shows the ratio of lower quartile house price to lower quartile earnings in Outer East London between 2001 and 2013. This long term trend for the HMA shows that affordability worsened in the period 2001-08 (when there was an increase in real house prices). Of course, it is also important to remember that affordability can be influenced by supply issues (e.g. lower housing delivery levels) and demand side issues (e.g. lower availability of mortgage finance for first time buyers).

Figure 68: Ratio of Lower Quartile House Price to Lower Quartile Earnings (Source: DCLG. Note: HMA figure derived using population weighted average of Local Authority data)



House Prices in Outer North East London

5.17 House price trends (2000-2013) are shown in Figure 69 and Figure 70 shows lower quartile house prices adjusted for the impact of inflation. Therefore, the prices reflect real changes which have occurred since 2001 when removing the impact of background inflation.

5.18 It is clear that real house prices in Outer North East London rose sharply in the period 2001-2007, but reduced in the period 2007-2009 and have remained relatively stable since 2011.

Figure 69: House Price Trends: Lower Quartile Prices (Source: CLG Live Tables. Note: HMA figure derived using population weighted average of Local Authority data)

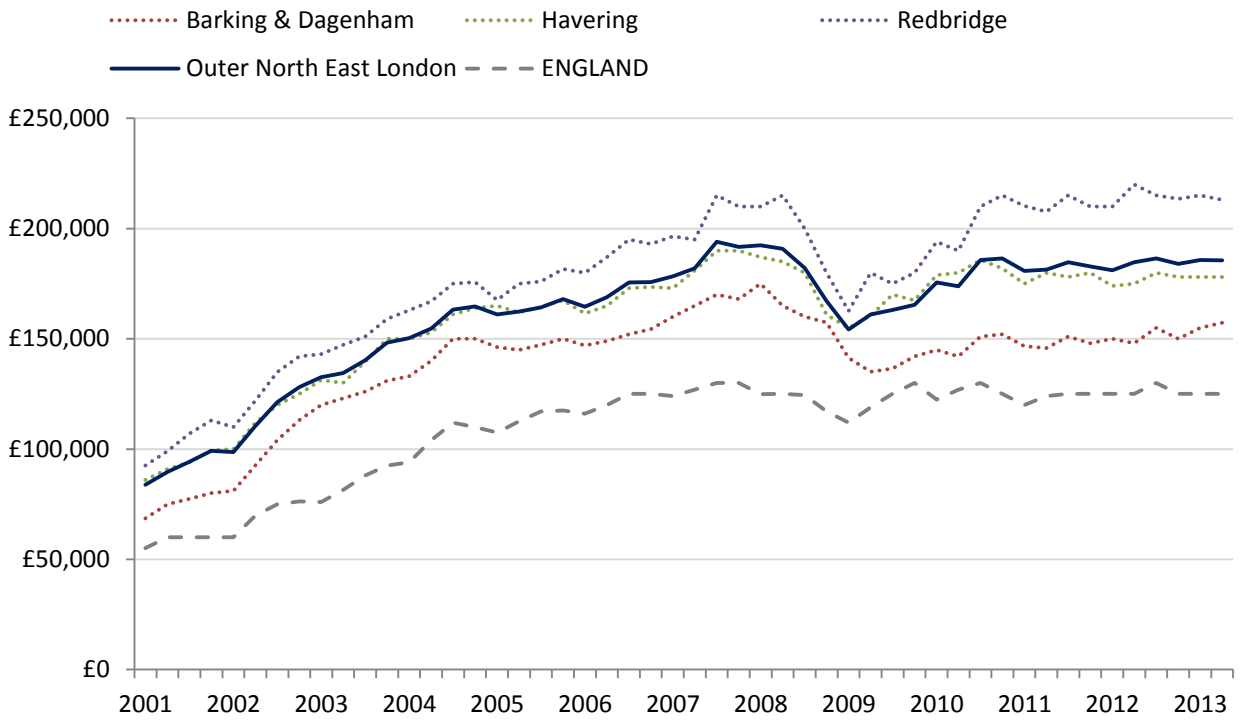


Figure 70: Real House Price Trends: Lower Quartile Prices adjusted to 2011 values using CPI (Source: CLG Live Tables; Bank of England. Note: HMA figure derived using population weighted average of Local Authority data

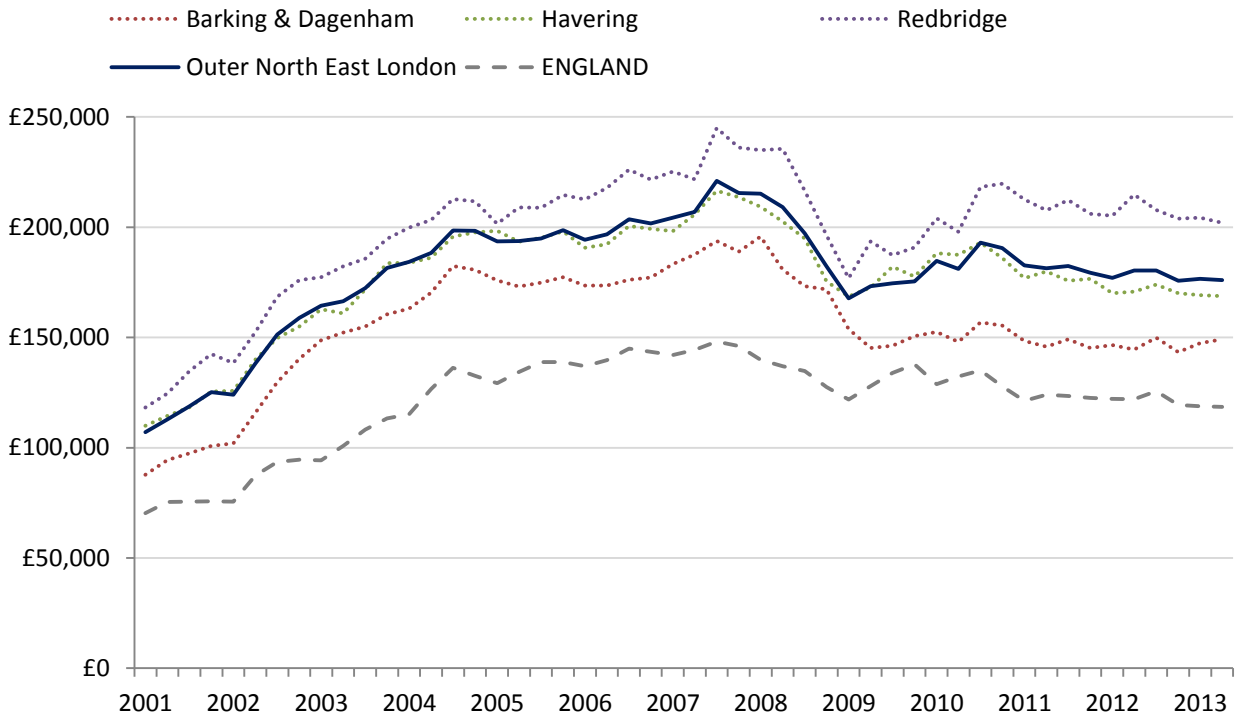
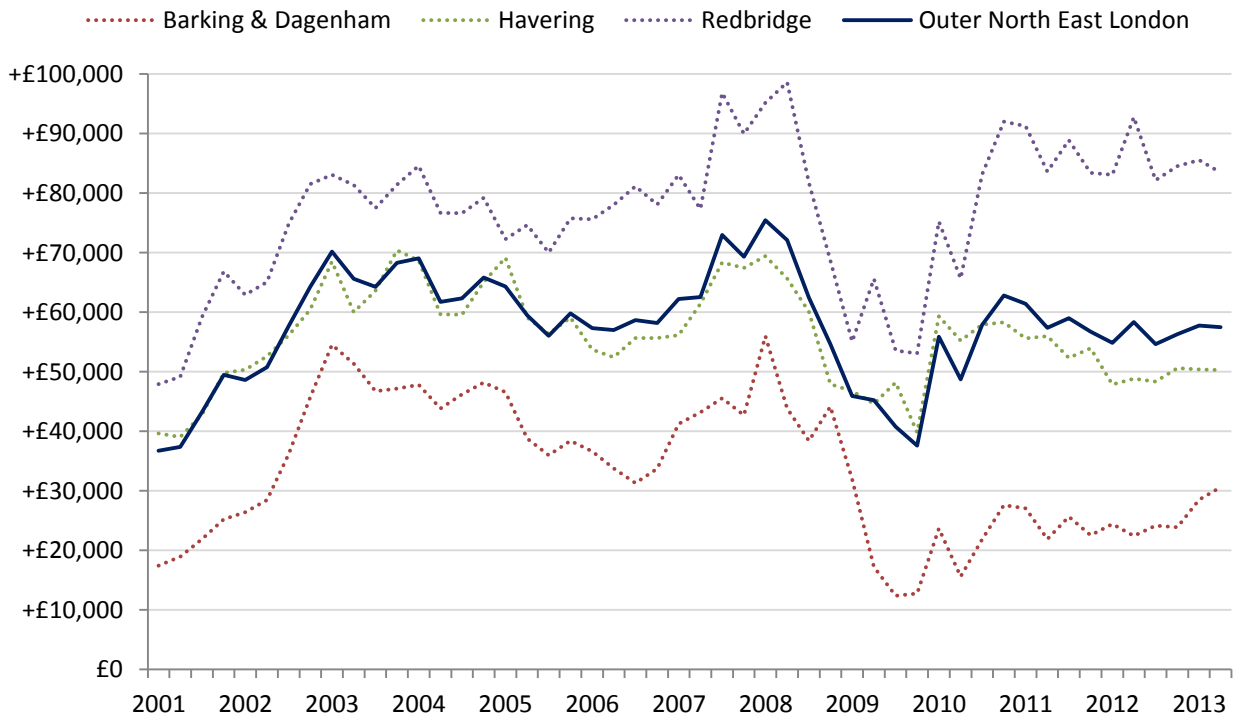


5.19 Figure 71 shows how real house prices in Outer North East London have varied when compared with the English average. This shows that real house prices in the HMA are currently close to the long-term average trends.

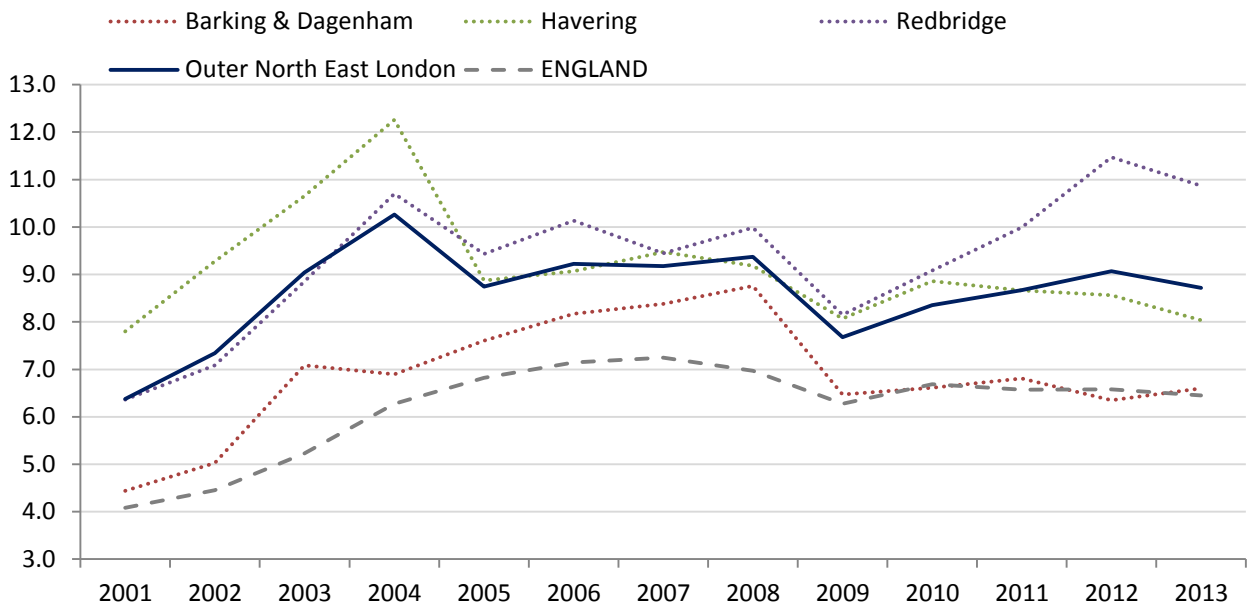
Figure 71: Real House Price Trends relative to England: Lower Quartile Prices adjusted to 2011 values using CPI (Source: CLG Live Tables; Bank of England. Note: HMA figure derived using population weighted average of Local Authority data)



Affordability in Outer North East London

5.20 Figure 72 below shows the ratio of lower quartile house price to lower quartile earnings in Outer North East London between 2001 and 2013. While affordability deteriorated in the period 2001-2004, the situation has improved since that time.

Figure 72: Ratio of Lower Quartile House Price to Lower Quartile Earnings (Source: DCLG. Note: HMA figure derived using population weighted average of Local Authority data)



Private Rent

5.21 The English Housing Survey 2013-14[18] identified that 19% (4.4 million) of households were renting from a private landlord, up from 18% in 2012-13 and 11% in 2003. Households aged 25-34 were more likely to be renting privately (48%) than buying a home, up from 45% in 2012-13 and 21% in 2003-04. Owner occupation in this age group dropped from 59% to 36% over the same 10 year period.

5.22 The growth of the Sector has been acknowledged as both a growing and long term option for meeting the nation's housing need. The Government published *"Improving the Private Rented Sector and Tackling Bad Practice: A guide for local authorities"* in March 2015[19], and the Forward by the Minister stated:

> *"The private rented sector is an important and growing part of our housing market, housing 4.4 million households in England. The quality of housing in the sector has improved dramatically over the last decade. It is now the second largest tenure and this growth is forecast to continue growing. I am proud of this growth as it shows increasing choice, improving standards whilst helping to keep rents affordable. The Government supports a bigger and better private rented sector and wants to see this growth continue."*

[18] https://www.gov.uk/government/statistics/english-housing-survey-2013-to-2014-headline-report
[19] https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/412921/Improving_private_rented_sector.pdf

5.23 Policy by both Government and Local Authorities is focussed on improving Management and Maintenance in the sector (via licensing or self-regulation schemes) and expanding supply[20] (including the Build to Rent investment scheme[21]).

5.24 Importantly, the Government sees the PRS having an important and long term role in meeting the housing need of the nation; and although the NPPF and PPG do not mention the current or future role of housing benefit, the policy to support low-income households in the private rented sector with housing benefit is long-standing and housing benefit is explicitly factored into the long-term forecasts for public spending.

5.25 Given this context, it is important for local authorities to recognise the role of the private rented sector at a local level. Assuming the release back into the market of many dwellings in the private rented sector currently occupied by tenants in receipt of housing benefit would have significant consequences; therefore it remains appropriate to recognise that the private rented sector will continue to make an important contribution towards providing housing options for households unable to afford their housing costs in future. Nevertheless, it is essential for local authorities to understand the full extent of the need for affordable housing in their areas and consider their policy responses accordingly.

Overcrowding

5.26 Overcrowding was considered in detail when establishing the need for affordable housing. PPG also identifies a series of other factors to monitor alongside overcrowding, including concealed and sharing households, homelessness and the numbers in temporary housing (paragraph 19):

> *Indicators on overcrowding, concealed and sharing households, homelessness and the numbers in temporary accommodation demonstrate un-met need for housing. Longer term increase in the number of such households may be a signal to consider increasing planned housing numbers.*

5.27 These were also considered when establishing the need for affordable housing, and the overall housing number was increased to take account of the needs of homeless households and concealed families with younger family representatives who would not have been counted as part of the household projections. This adjustment has already been incorporated as a response to the identified un-met need for housing, and can be considered as part of the response to market signals.

[20] https://www.gov.uk/government/publications/private-rented-homes-review-of-the-barriers-to-institutional-investment
[21] https://www.gov.uk/government/publications/build-to-rent-round-2-initial-due-diligence

Summary of Market Signals

5.28 As acknowledged earlier in this section, there is no single formula that can be used to consolidate the implications of this information; and furthermore the housing market signals will have been predominantly influenced by relatively recent housing market trends. Nevertheless, the indicators provide a context for considering the balance between housing need and supply.

Outer East London

5.29 In terms of headline outputs, the market signals when compared to relevant comparator areas show:

Figure 73: Summary of Market Signals

		Outer East London	Lambeth, Lewisham & Southwark	Barnet, Enfield & Haringey	Hackney & Tower Hamlets	England
INDICATORS RELATIING TO PRICE						
House prices						
Lower quartile house price	2012- 13 value	£188,600	£228,700	£228,300	£250,400	£126,200
	Relative to England	+49%	+81%	+81%	+98%	-
	2007-08 value	£193,200	£207,300	£211,800	£229,900	£128,000
	5-year change	-2%	+10%	+8%	+9%	-1%
Rents						
Average monthly rent	2013- 14 value	£1,029	£1,370	£1,294	£1,467	£720
	Relative to England	+43%	+90%	+80%	+104%	-
	2008 value	£718	£716	£793	£830	£501
	5-year change	+43%	+91%	+63%	+77%	+44%
Affordability						
Lower quartile house price to earnings	2013 ratio	10.0	9.5	10.9	9.8	6.5
	Relative to England	+55%	+47%	+68%	+51%	-
	2008 ratio	10.8	9.4	10.7	8.7	7.0
	5-year change	-8%	+1%	+2%	+13%	-7%
INDICATORS RELATIING TO QUANTITY						
Overcrowding						
Overcrowded households	2011 proportion	29.2%	25.9%	21.1%	33.5%	8.7%
	Relative to England	+234%	+196%	+141%	+283%	-
	2001 proportion	21.2%	21.6%	15.7%	28.4%	7.1%
	10-year change	+37%	+20%	+34%	+18%	+23%
Rate of development						
Increase in stock	2001-11 change	8.7%	10.9%	8.4%	24.1%	8.3%
	Relative to England	+4%	+31%	+1%	+189%	-

5.30 On the basis of this data we can conclude:

» **House Prices:** lower quartile prices are higher than the national average, with a lower quartile price of £188,600, compared to England's £126,200 (based on 2012-13 values). The current price in the HMA is lower than any of the comparator areas. Over the last 5-years, prices have increased in the comparator area, while falling in Outer East London;

- **Rents:** for average private sector rents in 2013-14, the study area is above the national average. However, again the comparator areas have higher rents and have seen a sharper rise in rents in the past 5 years;
- **Affordability:** (in terms of the ratio between lower quartile house prices and lower quartile earnings) is currently 'worse' in the study area than across England as a whole (10.0x cf. 6.5x), but is similar to the comparator areas. Furthermore, national affordability ratios have improved since 2008 at a similar rate to Outer East London;
- **Overcrowding:** (in terms of Census occupancy rates) shows that 29.2% of households in the study area are overcrowded based on an objective measure, which is much higher than England (8.7%). However, Tower Hamlets and Hackney have an even higher rate of overcrowding. Also, the proportion of overcrowded households has increased over the last 10 years at a rate much higher than the national average (+37% cf. +23%);
- **Rate of development:** (in terms of increase in dwelling stock over the last 10 years) shows that development has increased the stock size by +8.7%, which is higher than England (8.3%). This rate for the Outer East London is lower than comparator areas except for Barnet, Enfield and Haringey. Of course, these figures will inevitably be influenced by local constraints as well as individual policies.

Outer North East London

5.31 In terms of headline outputs, the market signals when compared to relevant comparator areas show:

Figure 74: Summary of Market Signals

		Outer North East London	Bexley, Bromley & Greenwich	Croydon, Merton & Sutton	Ealing, Hillingdon & Hounslow	England
INDICATORS RELATIING TO PRICE						
House prices						
Lower quartile house price	2012- 13 value	£185,200	£194,200	£194,500	£226,500	£126,200
	Relative to England	+47%	+54%	+54%	+79%	-
	2007-08 value	£190,000	£190,000	£191,600	£216,500	£128,000
	5-year change	-3%	+2%	+2%	+5%	-1%
Rents						
Average monthly rent	2013- 14 value	£965	£1,082	£1,131	£1,325	£720
	Relative to England	+34%	+50%	+57%	+84%	-
	2008 value	£709	£667	£726	£770	£501
	5-year change	+36%	+62%	+56%	+72%	+44%
Affordability						
Lower quartile house price to earnings	2013 ratio	8.7	9.4	9.3	10.2	6.5
	Relative to England	+35%	+45%	+44%	+58%	-
	2008 ratio	9.4	9.8	10.5	10.4	7.0
	5-year change	-7%	-4%	-11%	-2%	-7%
INDICATORS RELATIING TO QUANTITY						
Overcrowding						
Overcrowded households	2011 proportion	14.3%	11.6%	14.8%	20.6%	8.7%
	Relative to England	+63%	+32%	+70%	+136%	-
	2001 proportion	9.6%	8.6%	11.0%	15.7%	7.1%
	10-year change	+49%	+34%	+35%	+31%	+23%
Rate of development						
Increase in stock	2001-11 change	6.1%	5.6%	3.0%	7.5%	8.3%
	Relative to England	-27%	-33%	-64%	-11%	-

5.32 On the basis of this data we can conclude:

- **House Prices**: lower quartile prices are higher than the national average, with a lower quartile price of £185,200, compared to England's £126,200 (based on 2012-13 values). The current price in the HMA is lower than any of the comparator areas. Over the last 5-years, prices have increased in the comparator area, while falling in Outer North East London;
- **Rents**: for average private sector rents in 2013-14, the study area is above the national average. However, again the comparator areas have higher rents and have seen a sharper rise in rents in the past 5 years;
- **Affordability:** (in terms of the ratio between lower quartile house prices and lower quartile earnings) is currently 'worse' in the study area than across England as a whole

(8.7x cf. 6.5x), but is better than the comparator areas. Furthermore, national affordability ratios have improved since 2008 at a similar rate to Outer North East London;

» **Overcrowding:** (in terms of Census occupancy rates) shows that 14.3% of households in the study area are overcrowded based on an objective measure, which is much higher than England (8.7%). However, Ealing, Hillingdon and Hounslow have a higher rate of overcrowding. However, the proportion of overcrowded households has increased over the last 10 years at a rate much higher than the national average (+49% cf. +23%) and that of any comparator area;

» **Rate of development:** (in terms of increase in dwelling stock over the last 10 years) shows that development has increased the stock size by +6.1%, which is lower than England (8.3%). This rate for the Outer North East London is lower than comparator areas except Ealing, Hillingdon and Hounslow.

Conclusions on Market Signals

5.33 As previously noted, PPG suggests that *"household projections should be adjusted to reflect appropriate market signals"* where there is a *"worsening trend in any of these indicators"* (paragraphs 19-20). Whilst rents have increased in both HMAs, house prices have decreased since 2008, and consequently, affordability as measured by lower quarter house prices to earnings has improved in both HMAs. However, there are higher levels of overcrowding in both HMAs, so it is appropriate to consider an uplift to the household projection when establishing OAN in response to market signals. However, the indicators collectively show that circumstances in the Outer East London and Outer North East London HMAs are generally no worse than across other areas of London; so any uplift must be determined in this context.

5.34 There is no definitive guidance on what level of uplift is appropriate. Nevertheless, the Inspector examining the Eastleigh Local Plan judged 10% to be reasonable given the market signals identified for that HMA:

> *"It is very difficult to judge the appropriate scale of such an uplift … Exploration of an uplift of, say, 10% would be compatible with the "modest" pressure of market signals recognised in the SHMA itself."*

5.35 The PAS Objectively Assessed Need and Housing Targets Technical Advice Note (July 2015) supports this approach as a method to estimate the uplift and says that "*where the evidence suggest moderate under-provision…the projected housing need might be increased by 10%"*. We would also note that impact of market signals adjustments for the Greater London SHMA was an increase of 13.5%, although this was never explicitly labelled as a market signal adjustment.

5.36 Given the relative market signal indicators for the two areas and the views of the Eastleigh Inspector and the Greater London SHMA, it would seem to be reasonable to consider an uplift of 20% to be reasonable for Outer East London as the area experiences significant housing market pressures which are in line with other highly pressurised markets in London.

5.37 Meanwhile, Outer North East London experiences lower housing market pressures when compared with Outer East London, but does have similar pressures to London as a whole, so an uplift of around 15% would seem to be appropriate.

5.38 It is important to recognise that any uplifts applied when establishing housing need can have a cumulative impact. This was noted by the Inspector examining the County Durham Plan in his interim views (para 42):

…affordable housing need and market signals are amongst several factors, including future employment, which could lead to an upward adjustment in the housing need suggested by the DCLG projections. Given the significant upward adjustment already brought about by the jobs target, I consider any further upward adjustment in respect of affordable housing need and market signals would result in a calculation of OAN that is not grounded in realism in respect of associated population levels.

5.39 The compound impact of adjustments was also noted by the Inspector examining the Cornwall Local Plan in his interim views:

3.21 Any uplift on the demographic starting point such as the 7% addition for second/holiday homes that I am requiring (see below) would deliver some additional affordable housing and can be taken into account in judging whether any further uplift is justified. A very substantial uplift would raise the same concerns as I set out above in relation to market signals, but some further uplift should still be carefully considered by the Council.

5.40 This is important because we have already noted that a total of 4,036 dwelling in Outer East London and 3,021 dwellings in Outer North East London are required for concealed and homeless households. These households add 5% and 3.5% respective to the GLA long-term trend household projections. We wish to stress that the proposed 20% uplift for Outer East London and 15% for Outer North East London incorporate the 5% and 3.5% adjustment and are not in addition to them.

6. Objectively Assessed Need

Analysing the evidence to establish overall housing need

Chapter Summary

6.1 In this chapter, the figures from CLG household projections with GLA adjustments, affordable housing need, employment trends, and market signals are brought together to present the final OAN:

- Based upon the GLA 2014 round long-term trend migration projections the SHMA therefore identifies the Full Objective Assessed Need for Housing in the Outer East London HMA to be 96,100 dwellings over the 22-year Plan period 2011-33, equivalent to an average of 4,370 dwellings per year. This includes the Objectively Assessed Need for Affordable Housing of 37,400 dwellings over the same period, equivalent to an average of 1,700 dwellings per year.
- Based upon the GLA 2014 round long-term trend migration projections the SHMA therefore identifies the Full Objective Assessed Need for Housing in the Outer North East London HMA to be 99,800 dwellings over the 22-year Plan period 2011-33, equivalent to an average of 4,540 dwellings per year. This includes the Objectively Assessed Need for Affordable Housing of 38,600 dwellings over the same period, equivalent to an average of 1,760 dwellings per year.

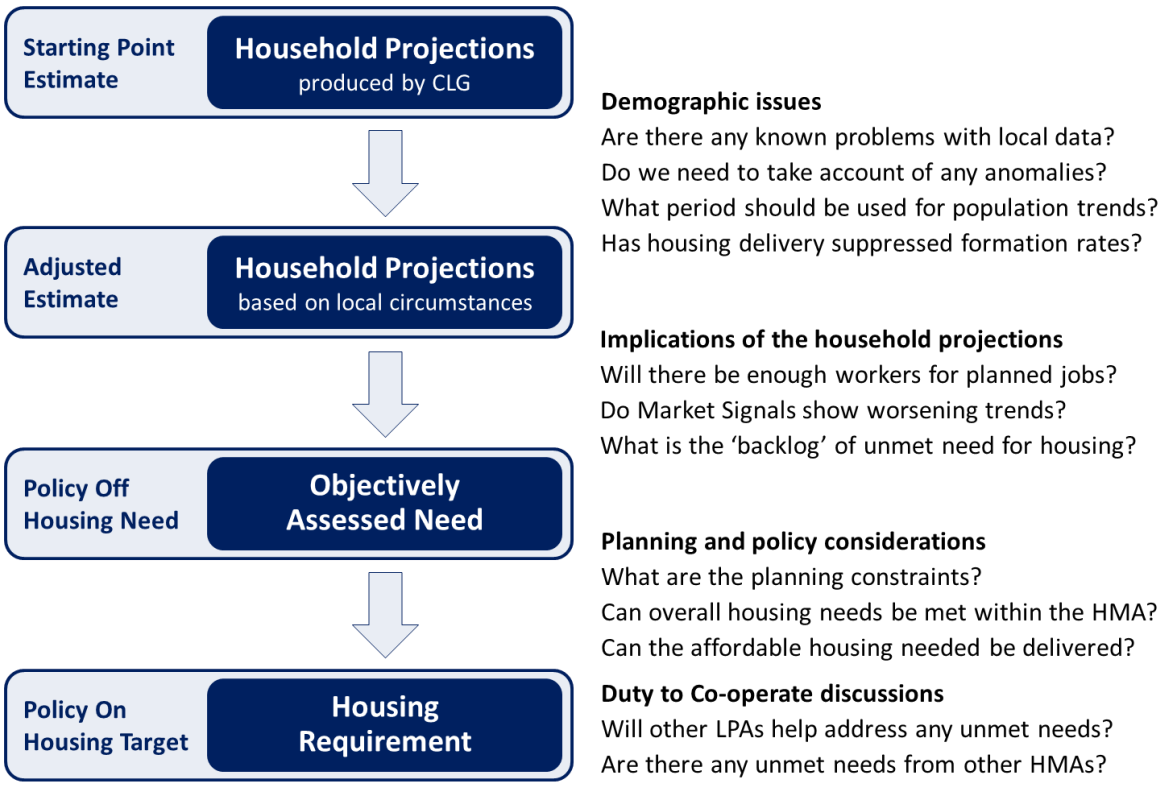
The Process for Assessing OAN

6.2 A key objective of this study is to establish the Objectively Assessed Need (OAN) for housing. The OAN identifies the future quantity of housing that is likely to be needed (both market and affordable) in the Housing Market Area (HMA) over the future plan period. It is important to recognise that the OAN does not take account of any possible constraints to future housing supply. Such factors will be subsequently considered by the local planning authorities before establishing the final Housing Requirement.

> *The assessment of development needs is an objective assessment of need based on facts and unbiased evidence. Plan makers should not apply constraints to the overall assessment of need, such as limitations imposed by the supply of land for new development, historic under performance, viability, infrastructure or environmental constraints. However, these considerations will need to be addressed when bringing evidence bases together to identify specific policies within development plans.*
>
> **Planning Practice Guidance (PPG), paragraph 4**

6.3 Figure 75 sets out the process for establishing the housing number for the HMA. It is a duplicate of Figure 11 repeated here for clarity of presentation. It starts with a demographic process to derive housing need from a consideration of population and household projections. To this, external market and macro-economic constraints are applied ('Market Signals') in order to ensure that an appropriate balance is achieved between the demand for and supply of dwellings.

Figure 75: Process for establishing a Housing Number for the HMA (Source: ORS based on NPPF and PPG)



National Context for England

6.4 The NPPF requires Local Planning Authorities to "ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area" and "identify the scale and mix of housing and the range of tenures that the local population is likely to need over the plan period which meets household and population projections, taking account of migration and demographic change" (paragraphs 47 and 159).

6.5 PPG further identifies that "household projections published by the Department for Communities and Local Government should provide the starting point estimate of overall housing need … The 2012-2037 Household Projections were published on 27 February 2015, and are the most up-to-date estimate of future household growth" (paragraphs 15-16).

Household Growth

6.6 The 2012-based CLG household projections show that the number of households in England will increase from 22.3 million to 27.5 million over the period 2012 to 2037. This represents a growth of 5.2 million households over 25 years, equivalent to an annual average of 210,000 households each year, and this provides the starting point estimate of overall housing need for England.

6.7 It should be noted that the annual average of 210,000 households is already much higher than current housing delivery: CLG data for April 2013 to March 2014 identifies that construction started on 133,900 dwellings and 112,400 dwellings were completed during the year. Therefore, to build sufficient homes to meet annual household growth would require housebuilding to increase by 57% – so providing for household growth in itself would require a significant step-change in the number of homes currently being built.

International Migration

6.8 The 2012-based CLG household projections are based on the ONS 2012-based sub-national population projections. These projections identify an average net gain of 151,600 persons each year due to international migration, and a net loss of 6,400 persons each year from England to other parts of the UK. Therefore, the 2012-based projections are based on net migration averaging 145,100 persons each year.

6.9 However, these estimates for future international migration may be too low. Oxford University research (March 2015) showed net international migration to be 565,000 persons over the 3-year period 2011-14, an average of 188,300 per annum; and net migration to England averaged 211,200 persons annually between the Census in 2001 and 2011. Both figures suggest that the 2012-based SNPP may underestimate international migration, which would have knock-on implications for projected population growth.

6.10 As previously noted, longer-term projections typically benefit from longer-term trends and therefore ORS routinely consider migration based on trends for the 10-year period 2001-11. On this basis, our trends are based on a period when net migration to England averaged 211,200 persons each year: 66,100 persons higher than assumed by the 2012-based SNPP, which represents an additional 29,000 households each year based on CLG average household sizes. Therefore, the approach taken for establishing migration based on longer-term trends would increase household growth for England from 210,000 households to 239,000 households each year on average.

Market Signals

6.11 The NPPF also sets out that "Plans should take account of market signals, such as land prices and housing affordability" (paragraph 17) and PPG identifies that "the housing need number suggested by household projections (the starting point) should be adjusted to reflect appropriate market signals".

6.12 The market signals identified include land prices, house prices, rents, affordability and the rate of development; but there is no formula that can be used to consolidate the implications of this data. Nevertheless, the likely consequence of housing affordability problems is an increase in overcrowding, concealed and sharing households, homelessness and the numbers in temporary accommodation. PPG identifies that these indicators *"demonstrate un-met need for housing"* and that *"longer term increase in the number of such households may be a signal to consider increasing planned housing numbers"* (paragraph 19).

6.13 The Census identified that the number of concealed families living in England increased from 161,000 families to 276,000 families over the decade 2001 to 2011, which represents a growth of 115,000 families over 10 years. Although many concealed families do not want separate housing (in particular where they have chosen to live together as extended families), others are forced to live together due to affordability difficulties or other constraints – and these concealed families will not be counted as part of the CLG household projections.

6.14 Concealed families with older family representatives will often be living with another family in order to receive help or support due to poor health. Concealed families with younger family representatives are more likely to demonstrate un-met need for housing. When we consider the growth of 115,000 families in England over the period 2001-11, over three quarters (87,100) have family representatives aged under 55, with substantial growth amongst those aged 25-34 in particular. This is a clear signal of

the need to increase the planned housing numbers in order to address the increase in concealed families over the last decade and also factor in their impact on current and future average household sizes.

6.15 Addressing the increase in concealed families would increase projected household growth by 87,100 over the 25-year period, an average of 3,500 households each year over the period 2012-37 (or higher if the need is addressed over a shorter period). Therefore, adjusting for longer-term migration trends and taking account of the market signals uplift for concealed families yields an average household growth for England of 242,500 each year.

Converting to Dwellings

6.16 Finally, in converting from households to dwellings we need to allow for a vacancy and second home rate as not all dwellings will be occupied. At the time of the 2011 Census this figure was 4.3% of all household spaces in England: we have applied this to future household growth, and on this basis the growth of 242,500 households would require the provision of **253,400 dwellings each year across England**. This is the average number of dwellings needed every year over the 25-year period 2012-37 and represents a 1.1% increase in the dwelling stock each year.

6.17 This takes account of household growth based on CLG 2012-based projections (the starting point); adjusts for long-term migration trends which assume a higher rate of net migration to England; responds to market signals through providing for the growth of concealed families; and takes account of vacant and second homes.

6.18 Whilst the uplift for market signals represents less than 2% of the projected household growth, the household growth itself is much higher than current rates of housing delivery. **The identified housing need of 253,400 dwellings requires current housebuilding rates to increase by 89%** (based on dwelling starts in 2013-14).

6.19 Development industry campaigners (such as Homes for Britain[22]) are supporting a position which requires 245,000 homes to be built in England every year, a figure derived from the Barker Review (2004)[23]. It is evident that objectively assessed need based on household projections which take account of longer-term migration trends together with a market signals adjustment for concealed families exceeds this target, so any further increase in housing numbers at a local level (such as adjustments which might be needed to deliver more affordable housing or provide extra workers) must be considered in this context.

Establishing Objectively Assessed Need for Outer East London and Outer North East London

6.20 The earlier part of this Chapter sets out the context for national change in households, and the underlying complexities and features around this. We now move on to the position for Outer East London. Our approach for this section follows the format of the earlier section, albeit with specific reference to the Outer East London HMA. Essentially, therefore, this section is concerned with:

- CLG 2012-based household projections (the starting point);

[22] http://www.homesforbritain.org.uk
[23] http://webarchive.nationalarchives.gov.uk/+/http:/www.hmtreasury.gov.uk/barker_review_of_housing_supply_recommendations.htm

- » GLA 2104 round household projections
- » Market signals, incorporating an uplift for concealed families;
- » Converting from household growth to a requirement for dwellings, taking account of vacancies and second homes.

6.21 In addition, we consider employment trends and the relationship between the jobs forecast and projected number of workers, and the need for affordable housing.

CLG Household Projections

6.22 The *"starting point"* estimate for OAN is the CLG household projections, and the latest published data is the 2012-based projections for period 2012-37. These projections suggest that household numbers across Outer East London will increase by 88,100 over the 22-year period 2011-33, an average of 4,000 per year. Meanwhile in Outer North East London the projected growth between 2011-33 in households is 106,800 or 4,850 per annum

6.23 However, the notes accompanying the CLG Household Projections explicitly state that:

> *"The 2012-based household projections are linked to the Office for National Statistics 2012-based sub-national population projections.* ***They are not an assessment of housing need*** *or do not take account of future policies, they are an indication of the likely increase in households given the* ***continuation of recent demographic trends****."*

6.24 The ONS 2012-based sub-national population projections are based on migration trends from the 5-year period before the projection base date; so trends for the period 2007-2012. Short-term migration trends are generally not appropriate for long-term planning, as they risk rolling-forward rates that are unduly high or unduly low. Projections based on long-term migration trends are likely to provide a more reliable estimate of future households.

GLA Adjustments

6.25 The GLA have calculated household projections also include scenarios using 5 and 12-year migration trends. On the basis of 12-year migration trends, **household numbers across Outer East London are projected to increase by 78,500 households over the 22-year period 2011-33, an average of 3,570 per year. For Outer North East London the projected growth is 84,900 households from 2011-33 or 3,860 per annum**

6.26 Whilst this projection is lower than the CLG 2012-based household projection (4,000 and 4,850 p.a.), as this scenario is based on long-term migration trends it gives the most reliable and appropriate demographic projection for establishing future housing need.

Affordable Housing Need

6.27 The SHMA has undertaken a comprehensive analysis of the existing unmet need for affordable housing. This analysis identified that overall housing need should be increased by 3,957 households in Outer East London and 2,955 households in Outer North East London to take account of concealed families and homeless households that would not be captured by the household projections. When the unmet needs from existing households living in unsuitable housing were also included, the analysis

established an overall need from 14,980 households in need of affordable housing in 2011 in Outer East London and 10,830 households in need of affordable housing in Outer North East London;

6.28 Based on the household projections, the SHMA has established the balance between the future need for market housing and affordable housing. The 22-year projection period 2011-33 identifies that **the number of households in the Outer East London HMA in need of affordable housing will increase by 36,650 households over the period 2011-33**, alongside an increase of 45,860 households able to afford market housing. For the same period **the number of households in the Outer North East London HMA in need of affordable housing will increase by 37,850 households over the period 2011-33**, alongside an increase of 49,980 households able to afford market housing.

6.29 Overall, there will be a need to provide additional affordable housing for 36,650 households in the Outer East London HMA and a need to provide an additional affordable housing for 37,850 households in the Outer North East London HMA. This would provide for the current unmet needs for affordable housing in addition to the projected future growth in affordable housing need, but assumes that the level of housing benefit support provided to households living in the private rented sector remains constant. Furthermore, any losses from the current stock (such as demolition or clearance, or sales through Right to Buy) would increase the number of affordable dwellings needed by an equivalent amount.

Employment Trends

6.30 While demographic trends are key to the assessment of OAN, it is also important to consider current Employment Trends and how the projected growth of the economically active population fits with the future changes in job numbers.

> *Plan makers should make an assessment of the likely change in job numbers based on past trends and/or economic forecasts as appropriate and also having regard to the growth of the working age population in the housing market area.*
>
> *Where the supply of working age population that is economically active (labour force supply) is less than the projected job growth, this could result in unsustainable commuting patterns (depending on public transport accessibility or other sustainable options such as walking or cycling) and could reduce the resilience of local businesses. In such circumstances, plan makers will need to consider how the location of new housing or infrastructure development could help address these problems.*
>
> **Planning Practice Guidance 2014, paragraph 18**

6.31 As noted in Chapter 2, it is not possible to define an HMA that is smaller than Greater London that is self-contained in terms of commuting – so if jobs and workers are to be in balance, the analysis must be undertaken for the whole of Greater London. These lower-tier HMAs covering Outer East London and Outer North East London will, therefore, contribute to balancing jobs and workers across the Greater London HMA, consistent with the London Plan.

Market Signals

6.32 As previously noted, PPG suggests that *"household projections should be adjusted to reflect appropriate market signals"* where there is a *"worsening trend in any of these indicators"* (paragraphs 19-20). Whilst house prices, rents and affordability have improved in both HMAs, there are higher levels of overcrowding – so it is appropriate to consider an uplift to the household projection when

establishing OAN in response to market signals. However, the indicators collectively show that circumstances in the Outer East London and Outer North East London HMAs are generally no worse than across other areas of London; so any uplift must be determined in this context.

6.33 Given the relative market signal indicators for the two areas and the views of the Eastleigh Inspector and the Greater London SHMA, it would seem to be reasonable to consider an uplift of 20% to be reasonable for Outer East London and an uplift of 15% for Outer North East London would seem to be appropriate.

Conclusions for Outer East London and Outer North East London

6.34 Note: The totals in the five tables in this section may not sum due to rounding.

6.35 Based upon the information set out above, Figure 76 summarises each of the stages for establishing the Full Objectively Assessed Need for Housing.

Figure 76: Full Objectively Assessed Need for Housing across Outer East London and Outer North East London 2011-33 (Note: Figures may not sum due to rounding)

	GLA 2014 Round Short-term trends (based on 5 years migration trends)		GLA 2014 Round Long-term trends (based on 10 years migration trends)	
	Total 2011-33	Annual 2011-33	Total 2011-33	Annual 2011-33
Newham	67,832	3,083	51,749	2,352
Waltham Forest	46,583	2,117	44,377	2,017
OUTER EAST LONDON	**114,415**	**5,201**	**96,126**	**4,369**
Barking & Dagenham	39,417	1,792	27,779	1,263
Havering	29,803	1,355	25,199	1,145
Redbridge	51,561	2,344	46,856	2,129
OUTER NORTH EAST LONDON	**120,782**	**5,489**	**99,834**	**4,538**

6.36 Of course, it is important to remember that *"establishing future need for housing is not an exact science"* (PPG paragraph 14). Whilst the OAN must be underwritten by robust evidence that is based on detailed analysis and informed by reasonable assumptions, the final conclusions should reflect the overall scale of the housing needed in the housing market area without seeking to be spuriously precise.

6.37 Figure 77 to Figure 80 show the size and tenure mix for the OAN for both long-term and short-term trends. The figures in the tables overleaf are initially derived in the same manner as the overall figures shown in Chapter 4, so for each local authority we have used their backlog of need, concealed households, and net new households who require affordable housing need.

6.38 The size mix by tenure is derived by analysing the type of households projected to live in each Borough with trend rates of growth being applied in the market sector. For affordable housing need the model is more complex and takes account of both overcrowded households who require to move to a larger dwelling and also under-occupying households who require to downsize. While Government polices such as those relating to the Spare Room Subsidy or Bedroom Tax are leading to more households downsizing, not all households will do so. Instead, we have modelled a gradual decline in the amount of under-occupation in the affordable housing sector.

6.39 It is also possible to calculate the affordability of social and Affordable Rent properties to households who require affordable housing. In the following figures we have made these assumptions:

- Households can spend up to 25% or 35% of their incomes on rents;
- Affordable Rents are set at 80% of median market rents; and
- Households who can afford the 80% of market rents, but not 100% market rents effectively comprise the intermediate housing need.

6.40 The figures for each borough set out the number of households who are able to afford housing of different sizes and tenures. Two different categories of need can be identified, those who can afford affordable housing for rent with housing benefit support, and those who can afford affordable housing for rent without housing benefit support and therefore intermediate housing, such as Low Cost Home Ownership (LCHO). The overall results clearly indicate that the vast majority of households who require affordable housing can only afford social housing if they receive housing benefit, others could afford social housing without benefit, but would need housing benefit support to afford housing at Affordable Rent levels.

6.41 The second category of need that can be identified is a group of 10%-15% of households who require affordable housing and have sufficient income to afford to meet the costs of Affordable Rents. This group therefore can be considered as intermediate housing need and some of these households could meet their needs via Low Cost Home Ownership products such as shared ownership.

Summary

6.42 Based upon the GLA 2014 round long-term trend migration projections the SHMA therefore identifies the Full Objective Assessed Need for Housing in the Outer East London HMA to be 96,100 dwellings over the 22-year Plan period 2011-33, equivalent to an average of 4,370 dwellings per year. This includes the Objectively Assessed Need for Affordable Housing of 37,400 dwellings over the same period, equivalent to an average of 1,700 dwellings per year.

6.43 Meanwhile, the SHMA therefore identifies the Full Objective Assessed Need for Housing in the Outer North East London HMA to be 99,800 dwellings over the 22-year Plan period 2011-33, equivalent to an average of 4,540 dwellings per year. Again, this includes the Objectively Assessed Need for Affordable Housing of 38,600 dwellings over the same period, equivalent to an average of 1,760 dwellings per year.

6.44 The distribution of future housing numbers across each of the Housing Market Areas is a policy decision that will need to take account of the supply of land for new development, viability, infrastructure and environmental constraints. This will need to be agreed between the local planning authorities under the Duty to Co-operate. Again we would caution that the GLA population and household projections potential overstate the projected population and household growth for London boroughs.

7. Housing Requirements

Considering the policy response to identified housing need

Chapter Summary

7.1 In line with PPG, the OAN does not take into account any constraints to delivering housing. Constraints such as land supply and Green Belt need to be considered in setting a final housing requirement. Important aspects of policy response that need to be considered are:

- The substantial need identified for affordable housing; the appropriate affordable housing targets and market housing led development to deliver the affordable housing.
- New PRS housing and the contribution which it can make to affordable housing.
- Housing for older people and in particular the need for an increase in the institutional population as that is not included in the OAN.
- The needs of Gypsies and Travellers including identifying "*a supply of specific deliverable sites*", noting that any needs identified as part of a Gypsy and Traveller and Travelling Showpeople Needs Assessment are a component of, and not additional to, the OAN figure identified by the SHMA.

Housing Shortfall

7.2 The Planning Advisory Service Good Plan Making Guide[24] identifies that the SHMA should "re-set the clock" and provide a new baseline assessment of all housing need. However, the SHMA must take account of 'backlog': any unmet need for housing that exists at the start of the plan period.

> *"Having an up-to-date, robust Strategic Housing Market Assessment should re-set the clock, and therefore carrying forward under-provision from a previous plan period would be 'double counting'. Make sure however that the Strategic Housing Market Assessment takes account of 'backlog' which is unmet need for housing that still exists at the start of the new plan period (for example, the needs of the homeless and other households living in unacceptable accommodation). The Strategic Housing Market Assessment should show all those in need. It is therefore vitally important to have a properly done Strategic Housing Market Assessment that has the right scope."* (page 49)

7.3 This SHMA has fully considered the unmet needs of homeless and other households living in unacceptable accommodation that will exist at the start of the new Plan period. However, it is also important to recognise that the GLA household projections that inform the SHMA have identified all housing need from a baseline date of 2013. Data from 2011-2013 is based on official household growth from household projections, which do not take account of any shortfall in the delivery of homes. It is therefore necessary to identify the extent of any under-provision during the period 2013-15 against the housing need identified by the SHMA, as this will also represent an unmet need for housing at the point of publication for this study.

[24] http://www.pas.gov.uk/documents/332612/6363137/Pages+from+FINAL+PAS+Good+Plan+Making+-6.pdf

7.4 Housing completions recorded to date, together with numbers currently forecast for the remainder of this period are shown in Figure 85 and show that none of the boroughs have meet their OAN for the past 2 years.

Figure 85: Housing completions recorded and forecast dwelling trajectory for the period 2013-15 (Source: LA Annual Monitoring Data and Forecast Dwelling Trajectories Note: Figures may not sum due to rounding**)**

	Barking and Dagenham	Havering	Newham	Redbridge	Waltham Forest
2013-14	868	966	2,082	204	389
2014-15	512	701	2,884	647	1,120
TOTAL 2013-15	**1,380**	**1,667**	**4,966**	**851**	**1,509**
Shortfall (surplus) against OAN 2013-15	**1,146**	**623**	**(262)**	**3,407**	**2,525**

7.5 Therefore, all boroughs except for Newham have a shortfall at the end of the 2014-15 period which will require an adjustment. This adjustment will ensure that the Plan will provide for all of the household growth projected for the period 2013-15, without it being constrained by any housing under-provision during this initial 2-year period.

7.6 The impact of this adjustment will be to phase the projected growth slightly differently to the demographic projections, but it will not change the overall number of dwellings needed by 2033 or the projected population. Nevertheless, higher rates of housing delivery will need to be achieved over the Plan period to address this shortfall.

7.7 It is also important to consider the relationship between current under-provision and market signals. Market signal indicators reflect past trends and will therefore be influenced by recent housing supply, so any under-provision is likely to have had an effect. If current housing delivery was keeping pace with household growth (with the necessary allowance for vacant and second homes) then the market signals should indicate less imbalance in the housing market, which would impact on the need for any uplift. However, for this study the market signals data relates to 2013 or earlier and therefore, there is no overlap with the shortfall from 2013-15.

7.8 In summary, the SHMA has identified that:

- Under-provision during the period 2013-15 will represent an unmet need for housing, so higher rates of housing delivery will need to be achieved over the Plan period to address this shortfall and
- Market signals indicate that there is some imbalance in the housing market based on current rates of housing delivery, so higher rates of housing delivery will need to be achieved over the Plan period to respond to this imbalance. However, the market signals information is based on data which predates 2013 and therefore will not overlap with more recent shortfalls.

The Plan-making Process

7.9 The SHMA has established the Full Objectively Assessed Need for Housing in Outer East London to be 96,100 dwellings and to be 99,800 dwellings in Outer North East London over the 22-year period 2011-33, however this figure will need to be tested through the statutory Plan-making process.

7.10 This is confirmed by Planning Practice Guidance for housing and economic land availability assessment, which states that "housing requirement figures in up-to-date adopted Local Plans should be used as the starting point for calculating the five year supply" (paragraph 30). This point was further emphasised in a letter from the Housing Minister to the Planning Inspectorate in December 2014:

> *"Many councils have now completed Strategic Housing Market Assessments either for their own area or jointly with their neighbours. The publication of a locally agreed assessment provides important new evidence and where appropriate will prompt councils to consider revising their housing requirements in their Local Plans. We would expect councils to actively consider this new evidence over time and, where over a reasonable period they do not, Inspectors could justifiably question the approach to housing land supply.*
>
> *"However, the outcome of a Strategic Housing Market Assessment is untested and should not automatically be seen as a proxy for a final housing requirement in Local Plans. It does not immediately or in itself invalidate housing numbers in existing Local Plans.*
>
> *"Councils will need to consider Strategic Housing Market Assessment evidence carefully and take adequate time to consider whether there are environmental and policy constraints, such as Green Belt, which will impact on their overall final housing requirement. They also need to consider whether there are opportunities to co-operate with neighbouring planning authorities to meet needs across housing market areas. Only after these considerations are complete will the council's approach be tested at examination by an Inspector. Clearly each council will need to work through this process to take account of particular local circumstances in responding to Strategic Housing Market Assessments."*

Affordable Housing Need

7.11 The SHMA has identified a substantial need for affordable housing:

- For Outer East London we identified a need for 37,400 affordable homes over the period 2011-33; and
- For Outer North East London we identified a need for 38,600 affordable homes over the period 2011-33.

7.12 Given the level of affordable housing need identified, it will be important to maximise the amount of affordable housing that can be delivered through market housing led developments. Key to this is the economic viability of such developments, as this will inevitably determine (and limit) the amount of affordable housing that individual schemes are able to deliver.

7.13 As part of their strategic planning and housing enabling functions, the Councils will need to consider the most appropriate affordable housing target in order to provide as much affordable housing as possible without compromising overall housing delivery. This target should provide certainty to market housing developers about the level of affordable housing that will be required on schemes, and the Councils should ensure that this target is achieved wherever possible in order to increase the effective rate of affordable housing delivery.

7.14 PPG identifies that Councils should also consider *"an increase in the total housing figure"* where this could *"help deliver the required number of affordable homes"*; although this would not be an adjustment to the OAN, but a policy response to be considered in the local plan:

> *The total affordable housing need should then be considered in the context of its likely delivery as a proportion of mixed market and affordable housing developments, given the probable percentage of affordable housing to be delivered by market housing led developments. An increase in the total housing figures included in the local plan should be considered where it could help deliver the required number of affordable homes. (Paragraph 029)*
>
> **Planning Practice Guidance: Assessment of housing and economic development needs (March 2014)**

7.15 It will therefore be important for the Councils to consider the need for any further uplift once the affordable housing target has been established. However, as confirmed by the Inspector examining the Cornwall Local Plan in his preliminary findings[25] (paragraphs 3.20-21):

> *"National guidance requires **consideration** of an uplift; it does not automatically require a mechanistic increase in the overall housing requirement to achieve all affordable housing needs based on the proportions required from market sites. The realism of achieving the intended benefit of additional affordable housing from any such uplift is relevant at this stage, otherwise any increase may not achieve its purpose.*
>
> *Any uplift on the demographic starting point … would deliver some additional affordable housing and can be taken into account in judging whether any further uplift is justified."*

7.16 Given that the identified OAN already incorporates an uplift of 20% for Outer East London and 15% for Outer North East London on the baseline household projections; this will contribute to increasing the supply of affordable homes through market housing led developments. The Councils will need to consider whether there is sufficient justification for any further increase in the total housing figures included in their Local Plans (beyond the identified OAN) as part of their policy response to meeting the identified need for affordable housing; although it will be important for them to consider the implications of providing a higher level of market housing than identified by the OAN, in particular the consequences on the balance between jobs and workers.

7.17 The contribution towards affordable housing delivery that can be achieved through market housing led developments shouldn't be considered in isolation. The Government has launched a series of new initiatives in the past 5 years to attempt to boost the supply of homes, including affordable homes. The key Homes and Communities Agency (HCA) investment programmes include:

- **Affordable Homes Programme:** the flagship HCA investment programme(s) for new affordable homes – the 2015-18 programme intends to support the building of 43,821 new affordable homes across 2,697 schemes in England
- **Affordable Homes Guarantees Programme:** guaranteeing up to £10bn of housing providers' debt in order to bring schemes forward
- **Care and Support Specialised Housing Fund:** funding used to accelerate the development of the specialised housing market such as Older People and those with disabilities
- **Community Right to Build:** (Outside London) including some provision for affordable homes
- **Empty Homes programme**
- **Estate Regeneration Programme:** often creating mixed tenure communities

[25] https://www.cornwall.gov.uk/media/12843214/ID05-Preliminary-Findings-June-2015-2-.pdf

» **Get Britain Building:** aiming to unlock locally-backed stalled sites holding planning permission and including affordable homes

7.18 However, there are currently a number of constraints that are affecting the delivery of new affordable housing; although there is also a range of other initiatives that may help increase delivery in future.

Constraints affecting the delivery of new affordable housing	Other initiatives potentially increasing the delivery of new affordable housing
Welfare reform Most stakeholders (including private landlords, house builders, local authorities and RPs) are concerned at the impact of benefit reform and the risk to their revenue. Credit rating agencies have also signalled concerns. **Registered Providers** Many RPs have become more risk averse in their approach to developing new homes. The move to Affordable Rent as opposed to Social Rent housing and the resultant reduction in grant rates has made delivery more challenging. Grant level reductions in the AHP 2015-18 have, arguably, increased risk perceptions further. **Stock rationalisation by Registered Providers** The new regulatory framework for RPs continues the emphasis on economic regulation. This could, potentially, reduce current supply of affordable housing. Already, sector trends indicate many associations are identifying under-performing stock with a view to rationalisation. **Extension of Right to Buy (RTB) to Registered Providers** The Government pledge to introduce an RTB for RP tenants mean many associations will need to assess the risk to their Business Plans and this might reduce appetite for new development. **Rent Formula Reform** The Chancellor announced reductions in rents of 1% per year from 2016/17. The reduction in revenue may impact on housing association capacity for new development.	**Councils building more new homes** Many Councils are now trying to bring new rental schemes forward following reform of the HRA system. **New 'for profit' providers** Over 30 'for profit' providers to deliver AHP homes have so far registered with the HCA, mainly in order to deliver non-grant affordable housing. There is arguably potential for increased supply of affordable homes for rent by 'for profit' providers. **Co-operative Housing** Given current delivery constraints, co-operative housing has been identified as a further alternative supply for households unable to access ownership or affordable housing. The Confederation of Co-operative Housing, working with RPs, is currently trying to bring schemes forward. The HCA has held back funding for Co-operative Housing in the previous AHP.

7.19 Consideration also needs to be given to the amount of affordable housing to be delivered as intermediate housing, in particular low cost home ownership. No assessment of low cost home ownership has been made in the SHMA because while based on affordability there is in theory a substantial market, in practice the market is usually small, possibly because of reasons such as prospective buyers not understanding the product.

7.20 The Government also sees the growth in the private rented sector as positive. Whilst private rented housing (with or without housing benefit) does not meet the definitions of affordable housing, it offers a flexible form of tenure and meets a wide range of housing needs. The sector also has an important role to play given that many tenants that rent from a private landlord can only afford their housing costs as they receive housing benefit. If there isn't sufficient private rented housing available at a price these households can afford, the need for affordable housing would be even higher.

7.21 A Government task force was established in 2013 to encourage and support build-to-let investment[26]. The HCA also has several investment programmes to help bring schemes forward. These include a £1

[26] https://www.gov.uk/government/publications/2010-to-2015-government-policy-rented-housing-sector/2010-to-2015-government-policy-rented-housing-sector#appendix-9-private-rented-sector

billion Build to Rent Fund, which will provide equity finance for purpose-built private rented housing, alongside a £10 billion debt guarantee scheme to support the provision of these new homes. New supply of private rented housing therefore seems likely from various sources, despite current volumes being relatively low:

- **Registered Providers** are potential key players in the delivery of new PRS supply and recently several have begun to enter the market in significant scale[27], particularly in response to the Build to Rent Fund, although other institutional funding is also being sought. Overall, although interest is high, it remains unclear as to the scale of development which may deliver.
- **Local Authorities** can also enable new PRS supply to come forward investing local authority land, providing financial support (such as loan guarantees), and joint ventures with housing associations, developers or private investors under the Localism Act. Whilst LA initiatives may contribute to new build PRS, these will take time to deliver significant numbers of units.
- **Local Enterprise Partnerships** are another potential source of new build PRS homes[28]. The Growing Places Fund provides £500 million to enable the development of local funds to promote economic growth and address infrastructure constraints in order to enable the delivery of jobs and houses. Any funding for housing, however, has to compete with other priorities e.g. skills and infrastructure. However, LEPs could potentially enable new PRS housing delivery and some attempts have been made in this regard to increase supply.
- **Insurance companies** and **pension funds** have been expanding into property lending in recent years; especially schemes in London. Nearly a quarter of new UK commercial property finance came from non-bank lenders in 2013.

7.22 National Government policy is also focussed on improving the quality of both management and stock in the private rented sector, and local councils also have a range of enforcement powers. This is particularly important given the number of low income households that rent from a private landlord.

7.23 It is also important to note the Starter Home initiative. The NPPF identifies that local authorities should seek to *"widen opportunities for home ownership"* (paragraph 50). Given this context, the Housing and Planning Bill 2015 contains proposals to further this policy of encouraging home ownership through promoting Starter Homes to provide properties that are more affordable to first time buyers. The Bill defines *"a new affordable home"* as including starter homes. Critics of the Bill argue that starter homes would displace affordable rented homes because the development industry will favour them, and that they may be sold on the open market after five years. Consequently, they argue, the starter homes would be unaffordable to the majority of first time buyers leaving them and other families without the opportunity for home ownership or to be able to access affordable renting. The Bill includes clauses stating that local authorities will have a general duty to promote the supply of Starter Homes through planning.

7.24 As it is too early to be able to assess the effects of the starter home initiative on the housing need figures in this SHMA, only basic figures are presented here. The Bill defines a Starter Home as a new

[27] http://www.insidehousing.co.uk/business/development/transactions/lq-to-launch-prs-subsidiary/7009701.article

[28] https://www.gov.uk/government/publications/growing-places-fund-prospectus

dwelling, only available for purchase by qualifying first-time buyers, which is to be sold at a discount of at least 20% of the market value and for less than the price cap (of £450,000 in Greater London), and is subject to restrictions on sale or letting for the initial 5-year period of occupancy. For a property costing £450,000, a 5% deposit would be £22,500 and a 10% deposit £45,000.

7.25 Given the substantial need for affordable housing identified across both Outer East London and Outer North East London, the Councils will need to consider the most appropriate affordable housing target as part of their strategic planning and housing enabling functions. However, it will also be important for the Councils to consider all of the options available to help deliver more affordable homes in the area.

Older People

7.26 Planning Practice Guidance for Housing and Economic Land Availability Assessment states the following in relation to housing for older people:

> ***How should local planning authorities deal with housing for older people?***
>
> *Older people have a wide range of different housing needs, ranging from suitable and appropriately located market housing through to residential institutions (Use Class C2). Local planning authorities should count housing provided for older people, including residential institutions in Use Class C2, against their housing requirement. The approach taken, which may include site allocations, should be clearly set out in the Local Plan.*
>
> **Planning Practice Guidance for Housing and Economic Land Availability Assessment 2014, paragraph 37**

7.27 On this basis, the Councils will need to consider the most appropriate way to count the supply of bedspaces in residential institutions (Use Class C2) as part of their overall housing monitoring, and decide whether this should form part of the overall housing supply.

7.28 It is important to recognise that the identified OAN does not include the projected increase of institutional population, which represents a growth of 406 persons over the 22-year period 2011-33 in Outer East London and 700 in Outer North East London. This increase in institutional population is a consequence of the CLG and GLA approach to establishing the household population[29], which assumes *"that the share of the institutional population stays at 2011 levels by age, sex and relationship status for the over 75s"* on the basis that *"ageing population will lead to greater level of population aged over 75 in residential care homes"*.

7.29 On this basis, if bedspaces in residential institutions in Use Class C2 are counted within the housing supply then the increase in institutional population aged 75 or over would need to be counted as a component of the housing requirement (in addition to the assessed OAN). If these bedspaces are <u>not</u> counted within the housing supply, then there is no need to include the increase in institutional population as part of the housing requirement.

7.30 Nevertheless, older people are living longer, healthier lives, and the specialist housing offered today may not be appropriate in future years and the Government's reform of Health and Adult Social Care is underpinned by a principle of sustaining people at home for as long as possible. Therefore, despite

[29] Household Projections 2012-based: Methodological Report, Department for Communities and Local Government, February 2015

the ageing population, current policy means that the number of care homes and nursing homes may actually decline, as people are supported to continue living in their own homes for longer.

7.31 Although the institutional population is projected to increase by 406 persons in Outer East London and 700 persons in Outer North East London period (based on the CLG and GLA assumption that there will be a *"greater level of population aged over 75 in residential care homes"*), it does not necessarily follow that all of this need should be provided as additional bedspaces in residential institutions in Use Class C2 – but any reduction in the growth of institutional population aged 75 or over would need to be offset against higher growth for these age groups in the household population; which would yield more households than assumed when establishing the OAN.

7.32 On this basis, if fewer older people are expected to live in communal establishments than is currently projected, the needs of any additional older people in the household population would need to be counted in addition to the assessed OAN.

Gypsies and Travellers

7.33 Planning Policy for Traveller Sites (PPTS) came into force in March 2012 and was updated in August 2015. This document sets out the Government's policy for Gypsies and Travellers and represents the only policy for a particular household group which is not directly covered by the NPPF. However, at paragraph 1 PPTS notes that:

> *This document sets out the Government's planning policy for traveller sites. It should be read in conjunction with the National Planning Policy Framework.*
>
> **Planning Policy for Traveller Sites, paragraph 1**

7.34 An April 2015 High Court Judgement, '*Wenman v SSCLG and Waverley Borough Council*', has clarified the relationship between Gypsy and Traveller and Travelling Showpeople Needs Assessments and OAN. At paragraphs 42 and 43, the Judgement notes:

> *"42. However, under the PPTS, there is specific provision for local planning authorities to assess the need for gypsy pitches, and to provide sites to meet that need, which includes the requirement to "identify, and update annually, a supply of specific deliverable sites sufficient to provide five years' worth of sites against their local set targets" (paragraph 9(a)). These provisions have a direct parallel in paragraph 47 NPPF which requires local planning authorities to use their evidence base to ensure that the policies in their Local Plan meet the full objectively assessed needs for housing in their area, and requires, inter alia, that they "identify and update annually a supply of specific deliverable sites sufficient to provide five years' worth of housing".*
>
> *"43. The rationale behind the specific requirement for a five year supply figure under paragraph 9 PPTS must have been to ensure that attention was given to meeting the special needs of travellers. Housing provision for this sub-group was not just to be subsumed within the general housing supply figures for the area. Therefore it seems to me most unlikely that the housing needs and supply figures for travellers assessed under the PPTS are to be included in the housing needs and supply figures under paragraph 47 NPPF, as this would amount to double counting."*

7.35 The position proposed by the judgement is correct in that Gypsy and Traveller and Travelling Showpeople households will form part of the household projections, concealed households and market signals which underwrite the OAN calculation. The needs of these households are counted as part of the overall OAN; therefore any needs identified as part of a Gypsy and Traveller and Travelling Showpeople Needs Assessment are a component of, and not additional to, the OAN figure identified by the SHMA.

7.36 This also means that any land supply for pitches and plots should be counted towards the general 5-year land supply as the needs they are addressing are included within the housing OAN.

Appendix B

Glossary of Terms

Definitions

Affordability is a measure of whether housing may be afforded by certain groups of households.

Affordable housing includes social rented and intermediate housing, provided to specified eligible households whose needs are not met by the market. For the purpose of this report we have used the definition in the National Planning Policy Framework 2012

Census Output Area is the smallest area for which UK Census of Population statistics are produced. Each Census Output Area had a population of around 250 people with around 100 dwellings at the time of the 2001 Census.

ECO underpins the Green Deal and places obligations on energy companies to facilitate installation of energy efficiency measures in homes. ECO fits within the Green Deal framework where Green Deal finance alone is not enough.

Equity is the difference between the selling price of a house and the value of the outstanding mortgage.

Green Deal is a market led framework that will allow individuals and businesses to make energy efficiency improvements to their buildings at no upfront cost. Finance needed for the improvements is repaid, in instalments, attached to an electricity bill.

A household is one person living alone, or two or more people living together at the same address who share at least one meal a day together or who share a living room.

Household formation refers to the process whereby individuals in the population form separate households. 'Gross' or 'new' household formation refers to households that form over a period of time, conventionally one year. This is equal to the number of households existing at the end of the year that did not exist as separate households at the beginning of the year (not counting 'successor' households, when the former head of household dies or departs). 'Net' household formation is the net growth in households resulting from new households forming less the number of existing households dissolving (e.g. through death or joining up with other households).

A Housing Association or **Registered Provider** is an independent not-for-profit body that primarily provides low-cost "social or affordable housing" for people in housing need.

Housing demand is the quantity of housing that households are willing and able to buy or rent.

Household income includes all salaries, benefits and pensions, before deductions such as tax and National Insurance.

House in Multiple Occupation are currently defined by the Housing Act 2004 as:

- an entire house or flat which is let to three or more tenants who form two or more households and who share a kitchen, bathroom or toilet;

- a house which has been converted entirely into bedsits or other non-self-contained accommodation and which is let to three or more tenants who form two or more households and who share kitchen, bathroom or toilet facilities;
- a converted house which contains one or more flats which are not wholly self-contained (i.e. the flat does not contain within it a kitchen, bathroom and toilet) and which is occupied by three or more tenants who form two or more households; and
- a building which is converted entirely into self-contained flats if the conversion did not meet the standards of the 1991 Building Regulations and more than one-third of the flats are let on short-term tenancies.

Housing market areas are geographical areas in which a substantial majority of the employed population both live and work and where those moving house without changing employment choose to stay.

Housing need is the quantity of housing required for households who are unable to access suitable housing without financial assistance.

Housing requirements encompasses both housing demand and housing need, and is therefore the quantity of housing necessary for all households to have access to suitable housing, irrespective of their ability to pay.

Housing type refers to the type of dwelling, for example, flat, house, specialist accommodation.

Intermediate affordable housing is housing at prices and rents above those of social rent, but below market price or rents, and which meet the criteria for affordable housing set out above. These include shared equity products (e.g. HomeBuy), other low cost home ownership products and intermediate rent.

Lending multiplier is the number of times a household's gross annual income a mortgage lender will normally be willing to lend. The most common multipliers quoted are 3.5 times income for a one-income household and 2.9 times total income for dual income households.

Low cost home ownership or **Shared ownership** is intermediate affordable housing designed to help people who wish to buy their own home, but cannot afford to buy outright (with a mortgage). Through this type of scheme you buy a share in the property with a Housing Association or other organisation.

Lower quartile means the value below which one quarter of the cases falls. In relation to house prices, it means the price of the house that is one-quarter of the way up the ranking from the cheapest to the most expensive.

Lower Super Output Area is a group of around 5-6 Census Output Areas and is the smallest geography for many Government statistics. Each Lower Super Output Area had a population of around 1,250 people with around 500 dwellings at the time of the 2001 Census.

Market housing is private housing for rent or for sale, where the price is set in the open market.

Migration is the movement of people between geographical areas. In this context it could be either local authority districts, or wider housing market areas. The rate of migration is usually measured as an annual number of individuals, living in the defined area at a point in time, who were not resident there one year earlier. Gross migration refers to the number of individuals moving into or out of the authority. Net migration is the difference between gross in-migration and gross out-migration.

A projection of housing needs or requirements is a calculation of numbers expected in some future year or years based on the extrapolation of existing conditions and assumptions. For example, household projections calculate the number and composition of households expected at some future date(s) given the

projected number of residents, broken down by age, sex and marital status, and an extrapolation of recent trends in the propensity of different groups to form separate households.

Registered Social Landlord/Registered Provider see Housing Association.

Secondary data is existing information that someone else has collected. Data from administrative systems and some research projects are made available for others to summarise and analyse for their own purposes (e.g. Census, national surveys).

Shared ownership see Low Cost Home Ownership.

Social rented housing is provided by social landlords and rented for less than would be paid if renting privately.

Specialised housing refers to specially designed housing (such as mobility or wheelchair accommodation, hostels or group homes) or housing specifically designated for particular groups (such as retirement housing).

Table of Figures

1. Havering SHMA Update

1.1 Opinion Research Services (ORS) was jointly commissioned in 2015 by the Outer North East London local authorities (London Boroughs of Barking and Dagenham, Havering, Newham and Redbridge) to prepare a Strategic Housing Market Assessment (SHMA) to establish the Objectively Assessed Need for housing across the Area.

1.2 The purpose of the study is to update the Objectively Assessed Needs for the London Borough of Havering in light of new official data released since the time of the original study. In particular, it focuses on role tof new population and household projections from CLG and the GLA for Havering.

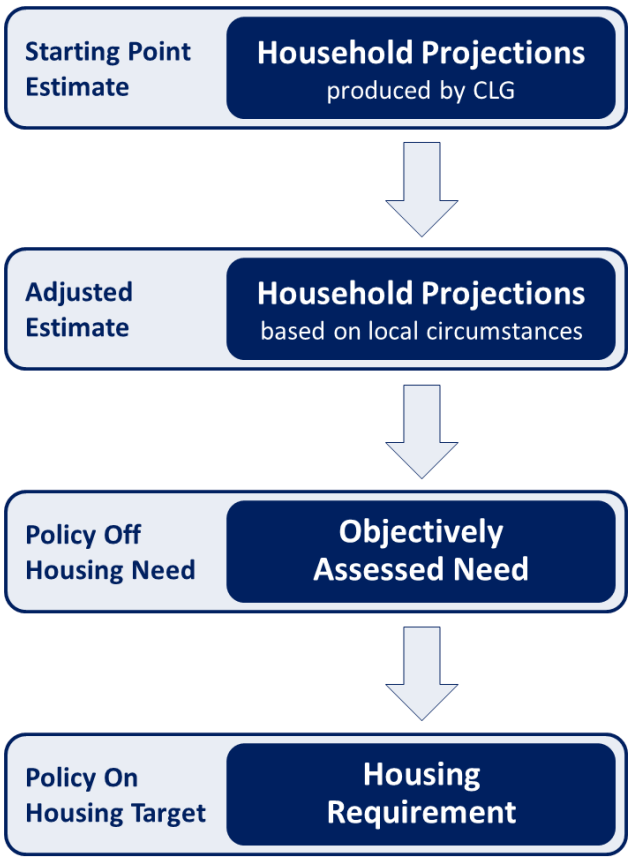
Process for Establishing Objectively Assessed Need

1.3 The Objective Assessment of Need identifies the quantity of housing needed (both market and affordable) in the Housing Market Area over future plan periods. This evidence assists with the production of the Local Plan (which sets out the spatial policy for a local area).

1.4 Figure 1 sets out the process for establishing the housing number for the Housing Market Area. It starts with a demographic process to derive housing need from a consideration of population and household projections. This chapter therefore considers the most appropriate demographic projection on which to base future housing need.

1.5 To establish the Objectively Assessed Need (OAN), external market and macro-economic constraints are applied to the demographic projections ('Market Signals') in order to ensure that an appropriate balance is achieved between the demand for and supply of dwellings. Nevertheless, it is important to recognise that the OAN does not take account of any possible constraints to future housing supply. Such factors should subsequently be considered by the local planning authorities as part of the plan-making process in order to establish the appropriate Housing Requirement and planned housing number.

Figure 1: Process for establishing the housing number for the HMA (Source: ORS based on NPPF and PPG)



Official Household Projections

1.6 Planning Practice Guidance published in March 2014 places emphasis on the role of CLG Household Projections as the appropriate starting point in determining objectively assessed need. PPG was updated in February 2015 following the publication of the 2012-based Household Projections. CLG household projections were further updated in July 2016 to be the 2014 based, but no subsequent update to PPG has yet occurred.

> *Household projections published by the Department for Communities and Local Government should provide the starting point estimate of overall housing need.*
>
> *The household projections are produced by applying projected household representative rates to the population projections published by the Office for National Statistics.*
>
> **Planning Practice Guidance 2014, paragraph 15**

> *The 2012-2037 Household Projections were published on 27 February 2015, and are the most up-to-date estimate of future household growth.*
>
> **Planning Practice Guidance 2015, paragraph 16**

1.7 Given this context, Figure 2 sets out the 2014-based household projections together with previous household projections that CLG has produced for the area. The projections have varied over time, with the most recent set of projections showing the highest projected rates of growth. Each set of household

projections will be influenced by a wide range of underlying data and trend-based assumptions, and it is important to consider the range of projected growth and not simply defer to the most recent data.

Figure 2: CLG Household Projections for Havering: annual average growth (Source: CLG Household Projections Note: Figures may not sum due to rounding**)**

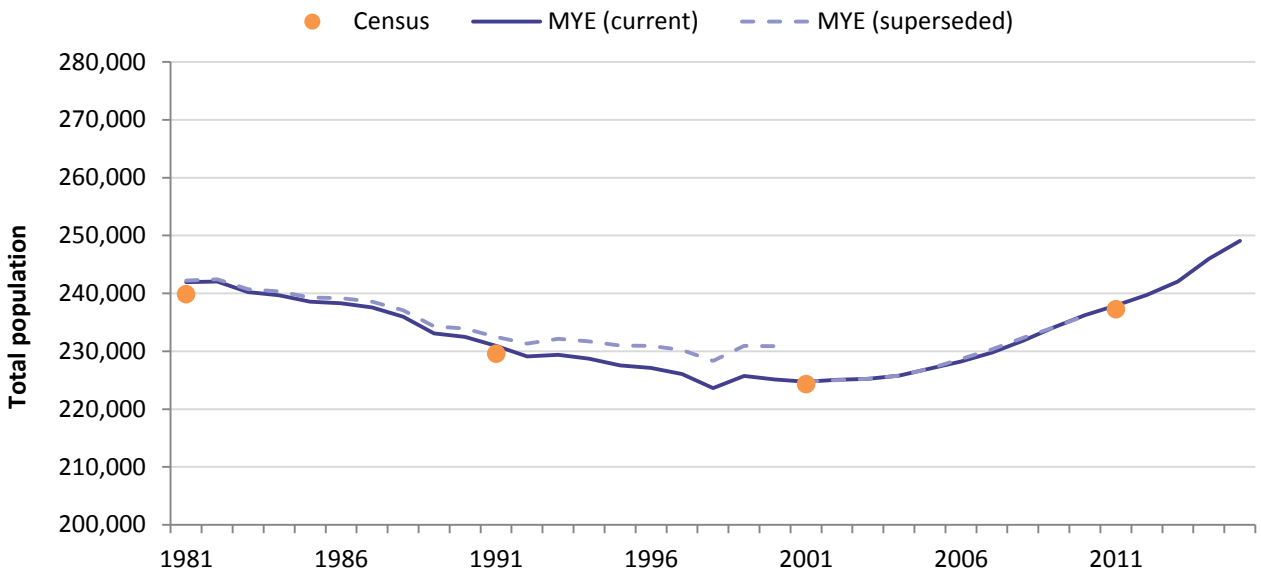
	2014-based		2012-based		2011-based interim	
	10 years 2014-24	25 years 2014-39	10 years 2012-22	25 years 2012-37	10 years 2011-21	25 years Not published
Havering	1,255	1,318	1,162	1,306	1,163	-

1.8 The CLG 2014-based household projections show an increase of 1,318 households each year over the 25-year period 2014-39, and a marginally lower rate (1,255 p.a.) in the initial 10-year period. These figures project forward over the normal 25-year period and supersede both the 2012-based household projections (which projected a household growth of 1,306 per year from 2012-37) and the interim 2011-based household projections (which projected growth of 1,163 per year from 2011-21). The differences are largely due to changes in the ONS population projections on which the CLG household projections are based; although there have also been changes to household representative rates.

Population Trends

1.9 Figure 3 shows the current and historic mid-year population estimates and Census estimates for Havering since 1981. The data shows that the local authority's' populations fell throughout the 1980s and 1990s. However, since 2001 Havering has seen a sharp growth in their populations which has continued since the 2011 Census.

Figure 3: Havering official population estimates for the period 1981-2015 (Source: UK Census of Population 1981, 1991, 2001 and 2011; ONS Mid-Year Estimates, including data since superseded)

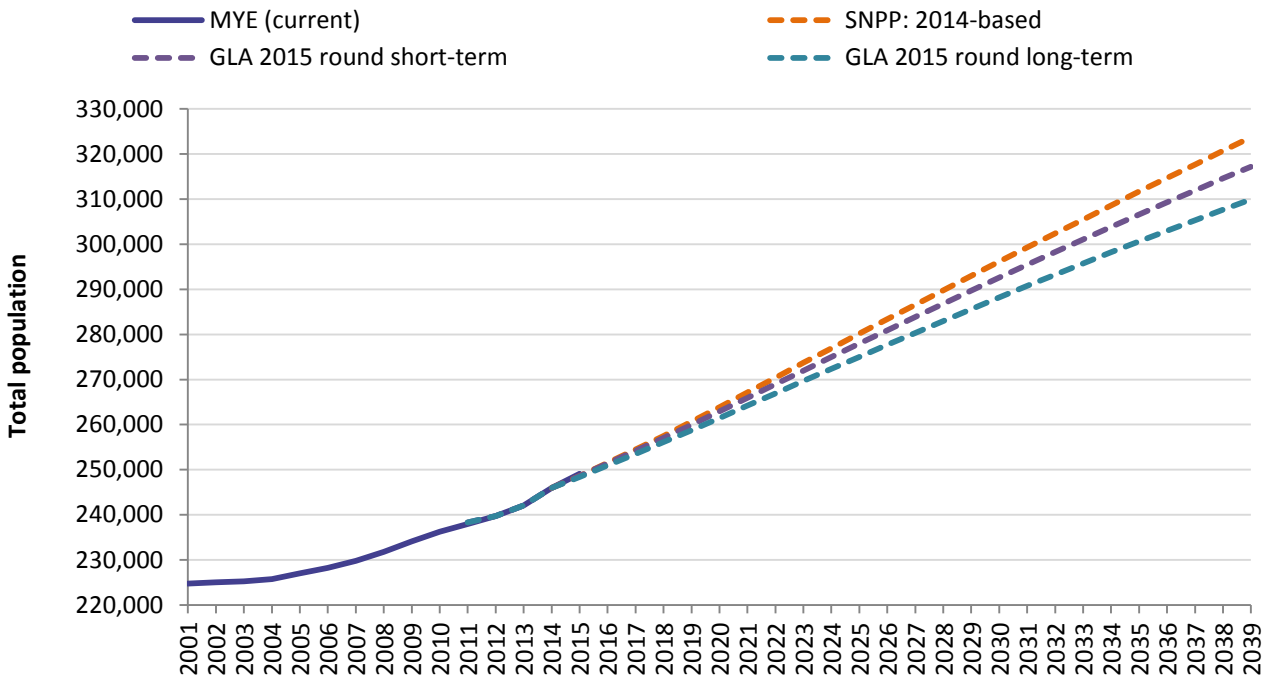


Population Projections

1.10 Having considered past population growth and its components, both the ONS and the GLA have produced population projections for Havering. Figure 4 shows all of the official estimates and projections for population in one chart for Havering. The GLA short-term 2015 round data is underwritten by migration to

and from Havering from 2009-2014, the long-term trend uses migration data from 2002-14. SNPP 2014 also uses migration data from 2009-14 for migration trends, but has different assumptions for how past errors in population estimates are treated . It is clear that the GLA 2015 round long-term round shows a lower rate of growth with an assumption of slightly lower in-migration to Havering and higher out-migration from Havering.

Figure 4: Official population estimates and projections for Havering for the period 2001-2039 (Source: ONS and GLA)



Official Household Projections

1.11 Planning Practice Guidance published in March 2014 places emphasis on the role of CLG Household Projections as the appropriate starting point in determining objectively assessed need. However, the Guidance does allow for the use of sensitivity testing of CLG Household projections to 'test' whether these are appropriate, allowing for alternative assumptions to be used.

1.12 In the case of London we consider it appropriate to acknowledge the role of the GLA's own household projections. The GLA projections are more specific to London than those undertaken by CLG. Therefore, they form a more credible basis for planning in London than CLG's projections.

> *Household projections published by the Department for Communities and Local Government should provide the starting point estimate of overall housing need.*
>
> *The household projections are produced by applying projected household representative rates to the population projections published by the Office for National Statistics.*
>
> **Planning Practice Guidance 2014, section 3**

> *Plan makers may consider sensitivity testing, specific to their local circumstances, based on alternative assumptions in relation to the underlying demographic projections and household formation rates. Account should also be taken of the most recent demographic evidence including the latest Office of National Statistics population estimates*
>
> *Any local changes would need to be clearly explained and justified on the basis of established sources of robust evidence.*
>
> **Planning Practice Guidance 2014, section 3**

1.13 Given this context, Figure 5 sets out the range of household projections that CLG and GLA has produced for the boroughs for both 10 and 25 year periods.

Figure 5: CLG and GLA Household Projections for North East London: annual average growth (Source: CLG Household Projections Note: Figures may not sum due to rounding**)**

	CLG 2014-based		GLA 2015 Round Short-term trends		GLA 2015 Round Long-term trends	
	10 years 2014-24	25 years 2014-39	10 years 2011-21	25 years 2011-36	10 years 2011-21	25 years 2011-36
Havering	1,255	1,318	1,065	1,238	1,026	1,183

1.14 It is clear that the GLA projections using long-term trends for migration are lower than both the CLG 2012 based and GLA short-term trend migration models. The GLA projections indicate that the last 5 years for London have seen high levels of net migration and that a return to longer-term trends would see this figure being reduced.

1.15 We would also note that the GLA 2015 round projections for Havering are higher than the GLA 2014 round projections. In the 2014 round projections the 25 year short-term trend model showed an annual growth of 1,181 households and the long-term growth showed a growth of 1,000 households per annum. The reason for the change in the household projections is that the 2015 rounded added migration from 2013-14 to the projections, while removing the migration from 2001-02. The period 2001-02 was a relatively low figure for migration and the period 2013-14 was a relatively high figure for migration. This therefore led to the projected future migration being higher in the 0215 round, which in tunr has increased the projected household growth.

1.16 Across England as a whole we have taken the view that on balance, we consider that:

- 5-year trend migration scenarios are unlikely to be robust: they have the potential to roll-forward short-term trends that are unduly high or low and therefore are unlikely to provide a robust basis for long-term planning.
- 10-12-year trend migration scenarios are more likely to capture both highs and lows and are not as dependent on trends that may be unlikely to be repeated. **Therefore, we favour using 10-12 migration trends as the basis for our analysis.**

1.17 The 2015 Outer North East London SHMA used the GLA long-term trend migration scenario as the basis for its central estimates. However, it is important to recognise that no one scenario will provide a definitive assessment of the future population and therefore we hsensitivity tested the figures using the short-term trend analysis form the GLA.

Household Projections and Dwellings

1.18 Using the GLA household projections, we can establish the projected number of additional households. The projected increase in households across the area is summarised in Figure 6.

1.19 Figure 6 also provides an estimate of dwelling numbers, which takes account of vacancies and second homes based on the proportion of dwellings without a usually resident household identified by the 2011 Census. This identified a rate of 2.1% for Havering.

Figure 6: Projected households and dwellings over the 22-year period 2011-33 (Note: Dwelling numbers derived based on proportion of dwellings without a usually resident household in 2011 Census Note: Figures may not sum due to rounding)

	GLA 2015 Round Short-term trends		GLA 2015 Round Long-term trends	
	Households 22 years 2011-33	Dwellings 22 years 2011-33	Households 22 years 2011-33	Dwellings 22 years 2011-33
Havering	1,212	1,238	1,162	1,187

1.20 While ORS consider that the GLA population and household projections utilised more local information than those produced by the ONS and CLG, we note two key points around their use in Outer North East London.

1.21 The first issue relates to the treatment of Unattributable Population Change (UPC) in the GLA's population projections. UPC is an accountancy adjustment to reflect the difference between MYE and Census population estimates. In their population projections, the GLA allocate the UPC to international migration.

1.22 As a general rule, ORS would agree with this approach. However, the UPC figures should be treated with caution because some of the change may be due to other factors such as an under-estimate of the 2001 population. If the 2001 population was an under-estimate then the population growth between 2001 and 2011 wouldn't have been so high.

1.23 A second point to highlight is that the GLA household projections use the household representative rates from CLG 2012 based projections. While household sizes have risen in almost all London authorities except for Havering since 1991, the CLG household representative rates see household sizes falling rapidly in the future. While some of this change can be attributed to an ageing population it does represent a striking reversal of recent trends and should be treated with caution. However, the importance of this issue for havering is less than for almost any other London borough.

Summary of Market Signals

1.24 PPG identifies a range of housing market signals that should be considered when determining the future housing number and advises that these should be applied following the household projections. A worsening in market signals such as affordability or increased house prices could indicate the need for an uplift to the projected figures. The Outer North East London Strategic Housing Market Assessment identified the following key points for market signals:

» House prices over time as measured by lower quartile house prices adjusted for inflation show that the changes in house prices between 2001 and 2013 for Outer E Outer North East London are both close to the long-term average trends for England.

» Figures for average private sector rents in 2013-14 in both Outer North East London were above the national average. However, comparator areas have higher rents and have seen a sharper rise in rents in the past 5 years. Rents in the PRS do not suggest the need for an uplift.

» Overcrowding increased substantially between the 2001 Census and 2011 Census and is much higher than England. While comparators areas Ealing, Hillingdon and Hounslow have a higher rate of overcrowding, the proportion of overcrowded households has increased over the last 10 years at a rate much higher than the national average and that of any comparator area. Overcrowding suggests the need for an uplift to the projected figures.

1.25 The SHMA 2015 noted that there is no definitive guidance on what level of uplift is appropriate. It concluded that a 15% uplift for Outer North East London, including Havering, was appropriate. Since this report was written ORS have been involved in the Examination on Public of the Luton and Camden Local Plans. At the Luton Local Plan the Home Builders Federation accepted a 10% uplift for the combined Central Bedfordshire and Luton HMA was appropriate for the area, while at the Camden Local Plan EIP the Home Builders Federation agreed that a 20% uplift was appropriate. On this basis, this would indicate that a 15% for Havering is appropriate because its market signals are worse than those for Central Bedfordshire and Luton combined, but better than those for Camden.

Conclusions for OAN for Havering

1.26 Based upon the information set out above, Figure 7 summarises each of the stages for establishing the Full Objectively Assessed Need for Housing for Havering.

Figure 7: Full Objectively Assessed Need for Havering 2011-33 (Note: Figures may not sum due to rounding)

	GLA 2015 Round Short-term trends (based on 5 years migration trends)		GLA 2015 Round Long-term trends (based on 10 years migration trends)	
	Total 2011-33	Annual 2011-33	Total 2011-33	Annual 2011-33
Havering	31,328	1,424	30,052	1,366

1.27 We would note that these OAN figures are higher than those in the Outer North East London SHMA 2015. The short-term trend model in that study provided an OAN of 29,800 and the long-term trend model gave an OAN figure of 25,200 over the 22 year period for Havering. The explanation for this difference is solely due to the higher migration in the 2015 round GLA projections which lead to a higher projection of household growth. This one change alone in the assumptions around migration to Havering sees the long-term trend model projected an additional OAN of 4,850 dwellings over the 22 years.

Size and Tenure Mix

1.28 Figure 8 below shows the identified size mix for market and affordable housing in Havering using both the 2014 and 2015 round GLA long-term trend migration figures for comparison purposes. This takes account of both overcrowded households who require a move to a larger dwelling and also under-occupying households who require downsizing. While Government polices such as those relating to the Spare Room Subsidy or Bedroom Tax are leading to more households downsizing, not all households will do so. Instead, we have modelled a gradual decline in the amount of under-occupation in the affordable housing sector.

1.29 For both the 2014 and 2015 round data, the evidence points to a high need for 3 bedroom properties in both the market and affordable sectors. The main driver of this need in the affordable sector is the need to address overcrowded households in Havering who require larger affordable housing. Meanwhile, in the

market sector the need for 3 bedroom properties is by past trends for the type of dwellings occupied in Havering and changing household types. In particular a growing number of households are projected to fall in to the Couples with Children or Other Household Type categories. These households typically occupy larger dwellings and the past growth in HMOs in Havering has seen many larger dwellings being occupied by households which don't contain a single family.

1.30 We would note that these figures do not include the potential impact of increased right to buy sales due to Registered Providers now being subject to this scheme or any consideration of the impact of Starter Homes being considered as affordable housing, as set out in the Housing and Planning Act.

Figure 8: Full Objectively Assessed Need for Housing; Size and Tenure Mix across Havering for 2011-33[1]

	Havering	
	GLA 2014	GLA 2015
MARKET HOUSING		
1 bedroom	900	1,590
2 bedrooms	2,600	3,030
3 bedrooms	10,900	12,490
4 bedrooms	2,400	2,260
5+ bedrooms	300	160
Total Market Housing	**17,000**	**19,530**
AFFORDABLE HOUSING		
1 bedroom	900	640
2 bedrooms	2,400	2,850
3 bedrooms	4,100	5,400
4 bedrooms	700	1,610
5+ bedrooms	100	20
Total Affordable Housing	**8,200**	**10,520**
TOTAL	**25,200**	**30,050**

1.31 It is possible to calculate the affordability of properties to households who require affordable housing. In Figure 9 we have made the following assumptions:

- Households can spend up to 35% of their gross incomes on rents;
- Affordable Rents are set at a range of 80% of median market rents up to the maximum LHA rate; and
- Households who can afford the 80% of market rents, but not 100% market rents effectively comprise the intermediate housing need, e.g. Low Cost Home Ownership.

1.32 Figure 9 sets out the number of households who are able to afford housing of different sizes and tenures. Two different categories of need can be identified, those who can afford affordable housing for rent with housing benefit support, and those who can afford affordable housing for rent without housing benefit support and therefore intermediate housing, such as Low Cost Home Ownership (LCHO). The overall

[1] The size and tenure mix is split between flats and houses to provide a guide, but in reality it is recognised that most future housing developments in Havering may be flats.

results clearly indicate that the vast majority of households who require affordable housing can only afford social housing if they receive housing benefit, others could afford social housing without benefit, but would need housing benefit support to afford housing at Affordable Rent levels. This should be possible provided that Affordable Rent levels are contained within the level covered by housing benefit and the benefit cap is not breached.

1.33 The second category of need that can be identified is a group of around 20% of households who require affordable housing and have sufficient income to afford to meet the costs of Affordable Rents. This group therefore can be considered as intermediate housing need and some of these households could meet their needs via Low Cost Home Ownership products such as shared ownership.

Figure 9: Affordable housing mix by household affordability to 2011-2033 (Source: ORS Housing Model. Note: Figures may not sum due to rounding)

HAVERING Long Term Trend period 2011-33	Unable to afford Target rent	Unable to afford "affordable rent" but can afford target rent	Able to afford "Affordable rents"	Total Affordable

10. Annex 3 - Sites with Planning Permission 22

1 Introduction

1.1 This position statement has been prepared to support the Proposed Submission Local Plan.

1.2 The purpose of the paper is to provide further details on:

- The planning policy context relating to housing need and supply
- Past housing delivery in Havering
- The need for new housing in Havering
- The various sources of housing supply in Havering
- How the Council will increase the supply of housing through the Local Plan
- The Council's proposed approach to size and mix

1.3 This statement should be considered alongside the other key evidence base documents including:

- The London Strategic Housing Market Assessment 2013
- The Strategic Housing Land Availability Assessment 2013
- The Outer North East London Strategic Housing Market Assessment 2016
- The Outer North East London Strategic Housing Market Assessment: Update for Havering 2016
- The Havering Green Belt Study 2016

2 Policy Context

2.1 National Planning Policy

2.1 The National Planning Policy Framework (NPPF) sets out the Government's Planning policies for England and how these are expected to be applied. The Havering Local Plan is required to be consistent with the Framework.

2.2 The NPPF states that to boost significantly the supply of housing, local planning authorities should:

- use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in this Framework, including identifying key sites which are critical to the delivery of the housing strategy over the plan period;
- identify and update annually a supply of specific deliverable sites sufficient to provide five years' worth of housing against their housing requirements with an additional buffer of 5% (moved forward from later in the plan period) to ensure choice and competition in the market for land. Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply and to ensure choice and competition in the market for land;
- identify a supply of specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15;
- for market and affordable housing, illustrate the expected rate of housing delivery through a housing trajectory for the plan period and set out a housing implementation strategy for the full range of housing describing how they will maintain delivery of a five-year supply of housing land to meet their housing target; and

2.3 When preparing Local Plans the NPPF states that local planning authorities (LPAs) should have a clear understanding of housing needs in their area. They should:

- prepare a Strategic Housing Market Assessment to assess their full housing needs, working with neighbouring authorities where housing market areas cross administrative boundaries. The Strategic Housing Market Assessment should identify the scale and mix of housing and the range of tenures that the local population is likely to need over the plan period.
- prepare a Strategic Housing Land Availability Assessment to establish realistic assumptions about the availability, suitability and the likely economic viability of land to meet the identified need for housing over the plan period.

2.2 The London Plan

2.4 The Mayor of London is responsible for preparing the London Plan, which forms part of the Development Plan for the Havering. Havering's Local Plan is required to be in general conformity with the Mayor's Plan.

2.5 The London Plan was originally published in 2011. In 2013 the Mayor undertook a London-wide Strategic Housing Land Availability Assessment (SHLAA) and Strategic Housing Market Assessment (SHMA) as key evidence base documents to inform the Further Alterations to the London Plan published in 2015.

2.6 The London SHMA 2013 sets out an estimate of London's current and future housing requirements. The central projection in the SHMA indicates that London will require between 49,000 (2015-2036) and 62,000 (2015-2026) more homes a year. This range incorporates different levels of population change over the period, the time taken to address current need (backlog) and the anticipated under delivery between 2013 and 2015. The 2015-2036 figure of 49,000 additional homes a year provides the basis for the detailed housing need figures set out in the London Plan.

2.7 The London SHLAA 2013 assesses London's capacity for new residential development. It shows that over the period 2015 to 2025, London has capacity for at least 420,000 additional homes or 42,000 per annum. The SHLAA formed the foundation for the revised housing targets for each borough set out in the London Plan.

2.8 Havering's Housing target, as set out in the London Plan, is a minimum of 11,701 over the period 2015-2025, which equates to minimum annual average housing target of 1,170. This target took effect from the 2015/16 reporting year.

2.9 Policy 3.3 in The London Plan (increasing Housing Supply) states that Boroughs should seek to achieve and exceed the minimum borough annual average housing target. It also states that if a target beyond 2025 is required, boroughs should roll forward the current target until it is replaced by a revised London Plan housing target.

2.10 Policy 3.3 goes on to state that Boroughs should draw on the housing benchmarks in developing their housing targets, augmented where possible with extra housing capacity to close the gap between identified housing need (49,000 homes per annum) and supply (42,000 homes per annum) in line with the requirement of the NPPF.

3 Past Housing Delivery in Havering

3.1 As part of the preparation of the Proposed Submission Local Plan, a full review of past housing completions has been completed and is set out in Table 3.1.

Table 3.1

Year	Housing Target	Net Private Completions	Net Affordable Completions	Net Completions	Housing target variance
2004/05	350	355	113	**468**	+118
2005/06	350	635	76	**711**	+361
2006/07	350	256	204	**460**	+110
2007/08	535	365	238	**603**	+68
2008/09	535	336	301	**637**	+102
2009/10	535	160	288	**448**	-87
2010/11	535	141	93	**234**	-311
2011/12	970	210	235	**445**	-525
2012/13	970	154	144	**298**	-672
2013/14	970	645	272	**917**	-53
2014/15	970	409	329	**738**	-232
2015/16	1,170	758	205	**963**	-207
2016/17	1,170			**Not yet known**	

3.2 The NPPF introduces a buffer requirement for the 5 year supply of housing land of 5% or 20% depending on past performance. The NPPF states that a 20% buffer will be applied where there is a persistent record of under delivery.

3.3 There is no definitive guidance on what constitutes 'persistent' under delivery. However, the NPPF is clear that a longer term view of housing delivery should be used to assess an authority's record, as this will account for the peaks and troughs of the housing market cycle. Judge Lewis in the Cotswold judgement (EWHC 3719 27 November 2013) said that persistent under delivery "should not be a temporary or short lived fluctuation".

3.4 Table 3.1 shows that over the period 2004/05 to 2015/16 Havering has met or exceeded its target in 5 years, and under delivered in 7 years. Havering's delivery record is characterised by a mixture of over and under delivery connected to the peaks and troughs of the housing market cycle. Many of the years in which Havering under delivered were in aftermath of the 2008 financial crisis or in the recession which followed. As this has passed, the number of dwellings completed has increased and has moved in a positive direction. This suggests that Havering's past under delivery is not 'persistent' but is instead linked to cyclical fluctuations linked to wider economic factors.

3.5 Havering's record in terms of cumulative under delivery is also mixed. While the total cumulative under delivery figure of 1,318 since 2004/5 is clearly significant, it should also be noted that the majority of this cumulative under delivery occurred in the years between 2010 and 2013. 2010/11 and 2012/13 were both years in which the building of residential dwellings across the UK was at very low levels as a result of the wider position of the UK economy. Indeed, Havering had a net record of cumulative

over delivery against its housing targets until the year 2011/12. Havering's cumulative under delivery can be considered as representative of a short period of very low delivery rather than 'persistent' under delivery i.e. sustained low delivery over a prolonged period.

3.6 It should also be noted that Havering has significantly increased its levels of housing delivery since 2013/14. This marks a step change from the level of housing delivery in the decade before this and demonstrates that Havering is making serious efforts to boost its housing delivery. In light of the commentary above, the 5 year housing land supply calculations as set out in section 5.2 of this statement have been based upon a 5% buffer.

3.7 In the 2016 Housing White Paper, the Government outlined plans for a new method to assess a borough's housing delivery record. According to these proposals boroughs that failed to deliver 95% of their housing target would need to produce an action plan, addressing the reasons for under delivery and the initiatives needed to solve this. Boroughs that fail to deliver 85% of their housing target would need to apply a 20 per cent buffer on their five year housing land supply calculations. The proposal is that this would be assessed on a three year basis, initially between the 2014/15 and 2016/17 reporting years. Full completions data for Havering is not yet available for the 2016/17 reporting year, however in line with this emerging approach the Council has produced an initial action plan as part of this statement (section 5).

4 Havering's Housing Need

4.1 Havering forms part of both the London-wide housing market area and the outer north east London sub housing market area with the London Boroughs of Barking and Dagenham and Redbridge. In line with the requirements of the National Planning Policy Framework, the Council has worked with these authorities to prepare a Strategic Housing Market Assessment.

4.2 The Outer North East London SHMA indicates that Havering's full objectively assessed housing need is for 25,200 new homes over the period 2011-2033 or 1,145 homes per annum. Since the initial SHMA was undertaken, updated population projections have been published by the GLA. The updated population projections were reflected in an update of the SHMA which identified an increased housing need in Havering of 30,052 new homes over the period 2011-2033 (1,366 new homes per year).

4.3 The SHMA also idenitifies the need for affordable housing and the size of properties required. Of the 30,052 new homes needed 35% are required to be affordable. The breakdown by size and tenure mix is detailed in Table 4.1 below. The Council's proposed approach to size mix is set out in Section 6.

Table 4.1 Havering's Objectively Assessed Housing Need (Outer North East London SHMA – Update for Havering 2016)

	Number	Percentage (%)
Market Housing		
1 Bedroom	1,590	8%
2 Bedrooms	3,030	15.5%
3 Bedrooms	12,490	64%
4 Bedrooms	2,260	11.5%
5 Bedrooms +	160	1%
TOTAL MARKET HOUSING	**19,530**	**100%**
Affordable Housing		
1 Bedroom	640	6%
2 Bedrooms	2,840	27%
3 Bedrooms	5,400	51%
4 Bedrooms	1,610	15.5%
5 Bedrooms +	20	Less than .5%
TOTAL AFFORDABLE HOUSING	**10,520**	**100%**
TOTAL	30,050	

5 Housing Supply

5.1 Sources of Supply

5.1 This section provides details of the various sources of housing supply in Havering as well as the actions that the Council is taking to ensure an increase in housing delivery.

5.2 The 2013 London Strategic Land Availability Assessment, as detailed previously, identified Havering's housing capacity as 11,701 dwellings over the 2015-2025 plan period. The SHLAA is an essential component of the evidence for Havering's Local Plan, however it should be recognised that the London SHLAA is now over three years old and the GLA are now in the process of undertaking a new Assessment.

5.3 In order to ensure that the Proposed Submission Local Plan is based on up to-date housing data it has been necessary to review Havering's housing supply position.

5.4 The key sources of supply that have been included in Havering's housing trajectory are:

- Large sites (over 0.25ha) with planning permission;
- Council Housing Estates Regeneration Sites;
- Large sites within the Romford Strategic Development Area (Housing Zone);
- Large sites within the Rainham and Beam Park Strategic Development Area (Housing Zone);
- Large opportunity sites outside of the two Strategic Development Areas;
- Sites with 'live' planning applications that have yet to be determined;
- Site that have been submitted for pre-application discussions with the Council and where the principle of residential development is accepted;
- Developed sites within the Green Belt (previously known as Major Developed Sites)
- Small sites (under 0.25ha); and
- Vacant units returning to use.

5.5 These are expanded on below and full list of sites is set out in Annexes 1 and 2.

Large sites with planning permission

5.6 The Council has granted planning permission for over 2,800 residential units which are either under construction or yet to be built. These sites are included in the housing trajectory in line with the NPPF which states that sites with planning permission should be considered deliverable until permission expires, unless there is clear evidence that schemes will not be implemented within five years. A list of all sites with planning permission is set out in Annex 3.

Council Housing Estates Regeneration Sites

5.7 Further growth will be accommodated from major regeneration of the Council's own housing estates. The Council is planning to build a significant number of new homes in one of the most ambitious local authority home building programmes in the country. The initial programme focuses on 12 sites across the borough delivering over 2,000 additional homes.

Large sites within the Romford Strategic Development Area (Housing Zone)

5.8 The arrival of Crossrail in 2018/9 alongside the relative affordability of this area are key drivers of growth. They have already placed Romford firmly in the minds of investors and developers who are keen to realise its opportunities. The Mayor of London has already recognised this and in early 2016 Romford was granted Housing Zone Status which will provide significant investment in order to accelerate the delivery of new homes. The area's significant growth potential is recognised through its anticipated designation by the Mayor of London as an Opportunity Area in the new London Plan.

5.9 There are a number of opportunity sites within the Romford Strategic Development Area which can accommodate housing growth. There is an increased demand for homes in east London, and with areas closer to central London becoming unaffordable to many both demand and values will grow, especially with the arrival of Crossrail.

Large sites within the Rainham and Beam Park Strategic Development Area (Housing Zone)

5.10 Rainham and Beam Park Strategic Development Area is a major growth and regeneration area and provides the opportunity to establish an exciting new residential neighbourhood linked to the delivery of a new railway station on the existing Essex Thameside line at Beam Park.

5.11 The area falls within the London Riverside Opportunity Area, identified in the London Plan as having the capacity to provide a significant number of new homes and jobs. In June 2015, following a successful bidding process, Rainham and Beam Park was identified as one of the GLA's Housing Zones which is providing much needed investment to help secure and accelerate the delivery of new homes by overcoming barriers to development and supporting the provision of social and physical infrastructure in the area to create attractive new places to live.

5.12 There are a number of development opportunities within public and private ownership. The GLA are an important land owner in the area and are bringing forward the Beam Park site for residential and mixed use development with Persimmon and L&Q.

5.13 The Council is actively acquiring land along the A1306 corridor and will be procuring a development partner to bring forward these sites in joint venture partnership with Mercury Land Holdings. Outline applications are currently being brought forward for these sites.

Large opportunity sites outside of the two Strategic Development Areas

5.14 Outside of the two Strategic Development Areas, the Council has identified a number of opportunity sites which have the potential to contribute to the supply of housing in Havering. These sites are listed in Annex 1.

Sites with 'live' planning applications that have yet to be determined

5.15 Residential development proposals that have been submitted for planning permission have been included in the trajectory where the principle of residential development is accepted. These applications are still to be determined by the Council.

Site that have been submitted for pre-application discussions

5.16 The Council has undertaken a review of recent pre-application discussions where the principle of residential development has been accepted. This has assisted in identifying sites where there is an active interest in bringing forward development .

Developed sites within the Green Belt

5.17 There are two key sites within the Green Belt which were identified within Havering's 2008 Local Development Framework as Major Developed Sites in the Green Belt. The Council recognises that the redevelopment of these sites could make a significant contribution to the supply of housing. The two sites are St Georges Hospital in Hornchurch which in no longer in use and has planning permission for residential redevelopment and Quarles Campus, Harold Hill which has been in educational use.

Small sites

5.18 The London SHLAA 2013 estimates (based on previous housing delivery) that on average 151 new homes will be delivered each year from small sites. However, this is considered to be a conservative estimate. The Council has undertaken a more recent review of completions over the last 5 years and found that on average 186 new homes have been delivered each year from small sites. This has been used as a broad estimate within the housing trajectory. Small sites that have already been granted planning permission have not been included in the trajectory in order to avoid double counting.

Vacant units returning to use

5.19 These are, according to the Government, dwellings which have been unoccupied and substantially unfurnished for over six months. The 2013 London SHLAA estimates that 26 vacant units will be returned to use per annum in Havering. These vacant units returning to use form part of the London Plan housing target and have therefore been incorporated into the housing trajectory.

Future Sources of Housing Supply

5.20 The Council consider that there will be other sources of housing supply across the borough. Consideration has been given to the role of the borough's district centres and their potential for residential intensification. A review of sites in the district centres has found that whilst there may be some scope for intensification, it is unlikely that development will come forward in the early part of the plan due to land ownership issues and the availability of sites. However, the Council's positive strategy within the Local Plan would support such development if it were to come forward.

5.21 A further source of supply may arise from the One Public Estates Programme which takes a holistic view of public sector land and property requirements so that surplus land can be released for other uses.

5.2 Havering's approach to land supply

5.22 This section sets out the deliverable housing land supply position for the ten year period 2016/17-2026/27.

5.23 Havering has based its 5 year housing land supply calculations on the borough's London Plan housing targets. This is in line with the Planning Inspector's guidance in relation to the 2011 London Plan and precedents set by other London Boroughs.

Table 5.1 5 Year Land Supply Calculation

Housing Target	5,850 (1,170 x 5)
5 % buffer	292.5 (5% of 5850)
Under-delivery since 2015	207 (Refer to Table 3.1)
TOTAL	**6,349**

Table 5.2 Havering's Housing Supply

	Net Completions 0-5 years (2016-21)	Net Completions 5-10 years (2021-26)
Planning permission granted - not yet completed	2,181	623
Council Estate Regeneration Sites	-264	1,413
Rainham and Beam Park Strategic Development Area Sites	611	1,398
Romford Strategic Development Area Sites	690	2,416
Planning applications awaiting decision	216	N/A
Sites submitted for pre-application discussions	354	N/A
Other sites	227	192
Small sites	930	930

	Net Completions 0-5 years (2016-21)	Net Completions 5-10 years (2021-26)
Vacant units returning to use	130	130
	5,075	**7,102**

5.24 Tables 5.1 and 5.2 demonstrate that Havering currently has 4 years of housing land supply based. This is based on a housing target of 1,170 units per annum and includes a 5% buffer in addition to previous under delivery. Despite its best efforts, Havering has been unable to identify a sufficient supply of housing land to meet this target in the first five years. However, table 5.2 demonstrates that over the first 10 years of the Local Plan Havering does have sufficient land capacity to meet the required supply of housing. Havering will seek to meet the required housing supply over the 2016 to 2026 period so that at least 12,177 dwellings are delivered in the first 10 years of the plan.

5.25 The Council is therefore adopting a stepped approach which will see an increase in housing deliver over the ten year period with the later years (5-10) seeing an increased housing delivery which will compensate for the lower levels of delivery in the first 5 years.

5.26 This approach has been adopted as the majority of deliverable sites in the borough are projected to come forward in the 2021 to 2026 period, Havering's land supply is largely made up of large brownfield sites within the Romford and Rainham and Beam Park Strategic Development Areas. The Council is doing everything possible to bring forward sites as quickly as possible however, these sites have a longer lead in time than smaller sites, and there are a number of site specific constraints.

5.27 Havering Council's estate regeneration programme, which involves the delivery of over 1,800 net additional units will, again, take time to deliver. This is because the process of buying back properties sold through right to buy and consulting and decanting residents takes a significant amount of time. The existing units will also need to be demolished, which both delays the start of construction and reduces the five year land supply figure through the initial loss of dwellings.

5.28 The proposed approach recognises that there has been a step change in net completions since 2013/14, but that meeting the housing target still represents a significant challenge in the short term. This is Havering's preferred option as it would set a realistic annual monitoring target while also planning to meet the minimum housing targets as set by the London Plan over the 10 year period.

5.29 In seeking to address the shortage of housing land supply, the Council has given full consideration to other options. In particular, the Council has looked at the scope for the Green Belt to provide land for new homes. A Green Belt Study has been undertaken as part of the evidence base for the Local Plan and has reviewed all of the Green Belt in Havering against the purposes of the Green Belt as set out in the NPPF. The Council is satisfied that all of the Green Belt in Havering fulfils its purpose.

5.30 The Council is firmly of the view that unmet housing need does not constitute very special circumstances justifying inappropriate development within the Green Belt. This approach is supported by National planning policy and by the Mayor of London through the London Plan.

5.31 The Council is also concerned that any release of Green Belt could undermine the delivery of housing on key brownfield sites within Rainham and Beam Park and Romford, both of which are important regeneration areas with committed funding programmes and which offer significant opportunities for new homes.

5.32 Opportunities for new housing do exist on previously developed sites within the Green Belt at St Georges Hospital and Quarles Campus. Both sites were previously identified in the Local Development Framework as Major Developed Sites within the Green Belt. The St Georges site has planning permission.

6 Size Mix

6.1 The SHMA determined the housing mix in terms of size for affordable housing to be around 50% for 3 bedroom properties and 10% for 4 bedrooms or more for the period 2011-13. This is supported as the baseline position.

6.2 The assessment for the larger dwelling mix in the SHMA is based on the following four key assumptions:

a. The continued under-occupation of larger properties by smaller households.
b. Current over-crowding in the 2 bedroom social housing stock.
c. Growth in family households
d. Other household types. This category covers both single persons living together and also categories such as 3 generations of a family living together.

6.3 Each of these assumptions and further supporting evidence is explored in further detail below.

The continued under-occupation of larger properties by smaller households

6.4 Many households in Havering would have previously been allocated family housing when they had dependent children and were in need of a larger property. The Council's strategy is to reduce the backlog of under-occupation. As the Council cannot force people to move from their homes, one of the ways of achieving this is to ensure that there are sufficient, or smaller high quality properties that meet their needs and will be desirable to move to once their children have left home.

6.5 It is therefore important that the Council still support an element of smaller properties as set out in section 4.5 of the Housing Strategy 2014-17 which can be found at https://www.havering.gov.uk/Documents/Housing/housing-strategy-havering-2014-17.Pdf.

6.6 The housing need and demand data shown in Table 6.1 is derived from those residents who are on the Council's housing register wishing to move into smaller alternative affordable housing. It shows that the majority of the need is for 1 bedroom and 2 bedroom properties at 56% and 41% respectively. It should be stressed that these figures represent current needs for households who have identified that they wish to downsize. In practise there are many more under-occupying households in the social rented sector in Havering with the 2011 Census indicating that there were a total of 4,300 who had more bedrooms than were technically required under the bedroom standard assessment. Any increase in the rate of downsizing will free larger properties.

Table 6.1 Havering's under-occupying households on the housing register – as at 31st January 2017

Current Bedroom size	Bedroom size required			
	1 bedroom	2 bedroom	3 bedrooms	Total
2 bedroom	91	0	0	**91**
3 bedrooms	19	77	0	**96**
4 bedrooms	0	3	5	**8**
Total	**110 (56%)**	**80 (41%)**	**5**	**195**

Current over-crowding in the 2 bedroom social housing stock.

6.7 Households that are over-crowded in a 2 bedroom property will benefit from the provision of 3 bedroom properties as it will allow them to move to a more suitably sized dwelling. This will also free up the 2 bedroom property to meet the needs of another household.

6.8 The housing need and demand data shown in Table 6.2 is derived from those residents who are on the Council's housing register who are overcrowded and seeking to move into larger alternative affordable social housing. It is in line with the SHMA assumption that households are overcrowded in 2 bedroom properties and therefore require 3 bedroom properties (47%). The majority of these are in smaller 2 bed 3 person accommodation whose needs can be met in larger 2 bed 4 person properties. In addition, the data show that there are a considerable number of households who are overcrowded in 1 bedroom properties and therefore require 2 bedroom properties too (46%). Again we would note that these figures only consider households who are currently seeking to move. The 2011 Census indicated that there were a total of 1,300 households in the social rented sector in Havering who were overcrowded when assessed against the bedroom standard and the SHMA assumed that all overcrowded household require to move, not just those on the transfer list.

Table 6.2 Havering's overcrowded households on the housing register – as at 31st January 2017

Current Bedroom size	Bedroom size required					
	1 bedroom	2 bedroom	3 bedrooms	4 bedrooms	5 bedrooms	Total
1 bedroom	0	264	2	0	0	266
2 bedroom	0	0	269	3	1	273
3 bedrooms	0	0	0	33	1	34
4 bedrooms	0	0	0	0	2	2
Total	**0**	**264 (46%)**	**271 (47%)**	**36 (6%)**	**4**	**575**

Growth in family households

6.9 The strongest growth in the Havering household projections is for lone parent and couple households with children. While many of these households will initially require a 2 bedroom property, the size of some of the households will grow over time to the point that they will require 3 or more bedroom properties.

6.10 Table 6.3 shows the breakdown of the housing need by size mix based on Havering housing register which supports the assumption that many of the households initially require a 2 bedroom property (43%). It is also accepted that over time as they grow, they will require larger accommodation. Some of this need can be met in a larger 2 bedroom 4 person property.

Table 6.3 Havering's housing register need – as at 31st January 2017

Bedroom size	Number	Percentage (%)
1 bedroom	601	27%
2 bedrooms	937	43%
3 bedrooms	562	26%
4 bedrooms	72	3%
5 bedrooms	7	1%
Total	**2179**	

6.11 Table 6.4 also shows the breakdown of the housing need by size mix based on Havering households currently accommodated in temporary accommodation who are waiting to move into settled affordable accommodation. The current main need is for 44% of 2 bedroom properties.

Table 6.4 Havering households in temporary accommodation

Bedroom size	Number	Percentage (%)
1 bedroom	301	28%
2 bedrooms	468	44%
3 bedrooms	254	24%
4 bedrooms	36	3%
5 bedrooms	5	
Total	**1064**	

6.12 Therefore, with the current demand data suggesting a high need for 2 bedroom properties, it is important that we are also able to accommodate these families in the immediate period of the Local Plan leading up to 2033.

Other household types

6.13 This category covers both single persons living together and also categories such as 3 generations of a family living together. This category of household type has been rising recently and will include some who are considered to be in affordable housing need in the grounds of affordability in the SHMA figures. While sharing single persons under 35 years will not typically be considered for social housing allocations, many will still require affordable housing. Their need is more likely to be met through the provision of good quality and well managed houses in multiple occupation (HMOs). In addition, the maximum housing benefit they can get is the rate for renting a single room in a shared house, likely to be in a HMO instead of a 3 bed house let to sharers.

Proposed approach to size mix

6.14 The Council is committed to providing a range a mix of affordable properties that provide a range of options for our residents and which meet their needs.

6.15 The key findings of the SHMA in relation to size mix show that over the Plan period there is a significant need for 3 bedroom properties. However, this can vary over the short and medium term and the current housing need and demand evidence indicates a comparatively significant need for 2 bedroom properties.

6.16 The evidence from both the SHMA and our current housing register is showing that the Council's priority through the Local Plan should be for 2 and 3 bed properties, with 1 bed properties less of a priority.

6.17 To create mixed and balanced communities, the Council considers it necessary to support a mix of affordable housing sizes. The starting point for negotiations on individual sites will be:

Table 6.5 Approach to size mix

	1 bed	2 bed	3 bed	4bed plus
Intermediate	10%	40% - but with preference for higher % of 2 bed 4 person	40%	10%

	1 bed	2 bed	3 bed	4bed plus
Social/ Affordable	10%	40% but with preference for higher % of 2 bed 4 person	40%	10%

7 Conclusion

7.1 The Council is making every effort to identify and bring forward suitable housing sites to exceed the London Plan housing target and meet housing need. Despite these efforts, the Council has been unable to identity sufficient deliverable housing sites to meet its housing need.

7.2 Sufficient land has been identified to meet the minimum London Plan housing targets in the first ten years of the Plan period. However, the Council cannot identify a five year land supply. Havering is therefore employing a staggered approach to housing delivery and will seek to meet and exceed the London Plan housing target of 11,701 over a ten year period (2015/16 to 2025/26)

7.3 Havering is doing everything possible to bring forward development as quickly as possible, but constrains and lead in times on large sites mean that the identified sites will deliver the majority of their units over the second five years of the Local Plan.

7.4 In addition to the specific sites identified in Annex 1. The Proposed Submission Local Plan sets out a positive approach to growth and welcomes applications for sustainable residential development on suitable brownfield sites.

1 Introduction

1.1.1 The London Borough of Havering (LB Havering) commissioned Peter Brett Associates LLP (PBA) in 2014 to undertake an assessment of the retail and commercial leisure needs to 2031.The study comes at an important time in retailing and town centres, with town centres facing increasing challenges and customers becoming increasingly discerning about their shopping habits. There is a widespread consensus that many town centres will need to adapt to 'futureproof' their long-term vitality and viability.

1.2 Terms of Reference

1.2.1 The agreed terms of reference with the Council, in summary, are as follows:

- Undertake an assessment of the existing supply of retail and leisure floorspace for the existing identified centres within the Borough and review their performance
- Identify spending patterns across the Borough for both retail (food and non-food) and leisure activities
- Assess the need (both quantitative and qualitative) for new retail and leisure floorspace to 2031, and the potential growth in population and expenditure
- Provide a set of core recommendations in respect of the potential strategies to accommodate need, hierarchy of centres and an approach to defining key boundaries for centres in the Local Plan

1.2.2 The methodology used by PBA is robust and up to date. Furthermore, this study is undertaken in accordance with the NPPF and the PPG in determining our recommendations to the Council.

1.3 Structure of the Study

1.3.1 In response to the agreed terms of reference, our study is set out as follows:

- The remainder of this section briefly summarises the national and local policy context within which this study has been prepared;
- **Section 2** sets out our view on how town centres are changing, providing important context to the remainder of the study;
- **Section 3** sets out a summary assessment of existing retail and leisure provision in Romford metropolitan centre and each of the Borough's district centres — Hornchurch, Upminster, Collier Row, Elm Park, Harold Hill and Rainham, including a 'health check' assessment of their current performance, as well as a summary of out-of-centre retail and leisure development in the Borough;
- **Section 4** sets out a summary of where residents in the Borough are currently undertaking their spending on retail and leisure goods, informed by the findings of a household survey of spending patterns undertaken in support of the study;
- **Section 5** sets out the quantitative need for additional retail floorspace, split between convenience (food) goods and comparison (non-food) goods, and also discusses the qualitative need for additional retail floorspace in each of the main centres in the Borough;

- **Section 6** sets out a qualitative and quantitative assessment of the need for additional commercial leisure uses (such as cafes and restaurants, cinemas and health and fitness facilities); and

- **Section 7** draws together the findings of the previous sections to set out a series of recommendations, both Borough-wide and specific to each centre.

1.3.2 This report is supported by **Volume 2** of the study, which contains appendices to the study as follows:

- **Appendix A** contains full 'health check' assessments of the town and district centres in the Borough (building on the summaries set out in Section 3 of Volume 1);

- **Appendix B** provides a plan of the study area which we have used as the basis of our assessment;

- **Appendix C** sets out quantitative retail capacity data tables;

- **Appendix D** provides a summary of our methodology for calculating quantitative retail need;

- **Appendix E** provides a summary of the technical inputs into our retail and leisure capacity forecasts; and

- **Appendix F** sets out quantitative commercial leisure capacity data tables.

1.3.3 Finally, Volume 3 of the study sets out the detailed household survey tables which have been used to inform the recommendations and outputs of this study.

1.4 National Planning Policy

National Planning Policy Framework

1.4.1 The National Planning Policy Framework (NPPF) was published by the Government in March 2012 and replaces all previous Planning Policy Statements and Planning Policy Guidance Notes. At the heart of the National Planning Policy Framework is a presumption in favour of sustainable development, which for plan-making this means that:

- *"local planning authorities should positively seek opportunities to meet the development needs of their area;*

- *Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change, unless:*

  - *Any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole; or*

  - *Specific policies in this Framework indicate development should be restricted." (paragraph 14)*

1.4.2 In order to be considered sound, Local Plans should be positively prepared (i.e. based on a strategy which seeks to meet objectively assessed development and infrastructure requirements), justified (i.e. the most appropriate strategy, when considered against the reasonable alternatives), effective (i.e. deliverable and based on joint working) and consistent with national policy (paragraph 182).

1.4.3 Paragraph 22 states that planning policies should be positive, promote competitive town centre environments and set out policies for the management and growth of centres. This includes a requirement that *'needs for retail, leisure, office and other main town centre uses are met in full and are not compromised by limited site availability'*. This introduces a challenge for local authorities to maximise central opportunities.

1.4.4 The NPPF also requires Local Plans to be based on adequate, up-to-date and relevant evidence about the economic, social and environmental characteristics and prospects of the area. In terms of a retail evidence base, paragraph 161 states that they should assess:

- the needs for land or floorspace for economic development, including both the quantitative and qualitative needs for all foreseeable types of economic activity over the plan period, including for retail and leisure development;
- the role and function of town centres and the relationship between them, including any trends in the performance of the centres;
- the capacity of existing centres to accommodate new town centre development;
- locations of deprivation which may benefit from planned remedial action.

National Planning Policy Guidance

1.4.5 The Government recently published the Planning Practice Guidance (PPG) in order to provide further guidance on and support to the policies contained within the NPPF. The PPG is a web based resource, which will be actively managed by the DCLG in order to allow for any necessary updates to be issued as soon as possible. The guidance will continue to be subject to a regular review process.

1.4.6 The PPG is set out thematically. Matters associated with town centre uses are set out in the section 'Ensuring the vitality of town centres'. This section states that a positive vision or strategy for town centres, articulated through the Local Plan, is key to ensuring successful town centres, which enable sustainable economic growth and provide a wider range of social and environmental benefits. It also states that any strategy should be based on evidence of the current state of town centres and opportunities to meet development needs and support their viability and vitality. Strategies should also identify changes in the hierarchy of town centres, including where a town centre is in decline. In these cases, strategies should seek to manage decline positively to encourage economic activity and achieve an appropriate mix of uses commensurate with a realistic future for that town centre.

1.4.7 The PPG also provides further guidance in terms of the interpretation of the NPPF's sequential and impact tests (discussed above), including how they should be applied to both plan-making and decision-taking. A stage-by-stage guide to undertaking an impact test is also provided.

Changes to Permitted Development Rights

1.4.8 The Town and Country Planning (General Permitted Development) (Amendment) (England) Order 2013 came into force on 30 May 2013. This order amends the Town and Country Planning (General Permitted Development) Order 1995. The aim of the policy is to reform the planning system so as to support "sustainable development" by encouraging the reuse of vacant property and by allowing building owners to unlock the value of their assets through a change of use. This reform is intended to make the planning system less bureaucratic and more responsive to changing demand.

1.4.9 The revised permitted development Rights have significant implications for High Streets and town centres. The most significant aspect of the revised policy is that property owners no

longer need to apply for planning permission if the change of use is within the same class or, in some cases, the change of use is to dwellings. The Permitted Development Rights allows the change of use of retail units (A1) to professional and financial services (A2) without seeking planning consent or the conversion of office space (B1) to residential dwellings (C3). This kind of conversion requires prior approval from the Local Authority. New Permitted Development Rights that came into force in April 2014 permit the conversion of A1 and A2 space to C3 (Single residential Dwelling). Up to 150 square meters of A1/A2 space can be converted to residential use subject to prior approval. The amendment also introduced a new use class CA which permits the change of use of a retail unit to a bank or building society without applying for planning permission.

1.4.10 It is important to note that some areas are exempt from Permitted Development Rights. This includes Conservation Areas, World Heritage Sites and Areas of Outstanding Natural Beauty.

1.5 Regional Planning Context

London Plan and Revised Early Minor Alterations

1.5.1 LB Havering's location within Greater London means that the London Plan also forms part of the development plan, and guides the strategic development of individual London Boroughs. The London Plan was adopted in July 2011 and the Revised Early Minor Alterations were adopted in 2013.

1.5.2 The London Plan identifies five types of town centres; international, metropolitan, major, district, local and neighbourhood. Havering's town centres are classified as follows: Romford is a metropolitan centre, whilst Collier Row, Elm Park, Harold Hill, Hornchurch, Rainham and Upminster are all defined as district centres.

1.5.3 Policy 2.15 of the London Plan seeks to coordinate the development of a network of town centres across London. Town centres are designated as areas of commercial intensification and residential development. As such, development proposals in town centres should 'sustain and enhance the viability and vitality of town centres', accommodate economic and/ or housing growth, support and enhance the competitiveness, quality and diversity of town centre retail, leisure, arts, cultural and other consumer services and public services.

1.5.4 In preparing their LDF, Boroughs should identify town centre boundaries, primary and secondary shopping frontages. Furthermore, local authorities should, in co-ordination with neighbouring authorities, identify other smaller centres that cater to the day to day needs of residents and establish themselves as the focus of local neighbourhoods. Local authorities should also proactively manage declining town centres by encouraging a wider range of services, diversification and improving environmental quality.

1.5.5 Policy 4.6 focuses on the provision and enhancement of sports, cultural and entertainment uses. The mayor seeks to support London's arts, cultural, professional sporting and entertainment enterprises. In developing LDFs, local authorities should designate and develop cultural quarters and identify, manage and co-ordinate local and evening and night-time entertainment activities.

1.5.6 Policy 4.7 deals with retail and town centre development. The mayor supports a 'strong partnership approach' to assessing the retail, commercial, cultural and leisure capacity in town centres. In developing LDFs, local authorities should:

- Identify future levels of retail, leisure and other commercial floorspace need in light of integrated strategic and local assessments;
- Undertake regular town centre health checks to inform strategic and local policy and implementation;

- Take a proactive partnership approach to identify capacity and bring forward development within or, where appropriate, on the edge of town centres; and

- Firmly resist inappropriate out of centre development; manage existing out of centre retail and leisure development in line with the sequential approach; seeking to reduce car dependency; improve public transport, cycling and walking access; and promote more sustainable forms of development.

1.5.7 Policy 4.8 seeks to develop successful and diverse retail centres. These centres should meet the needs of Londoners and should be easily accessible. This includes supporting additional comparison goods shopping in international, metropolitan and major centres and convenience retailing in smaller centres. The policy also provides a framework for maintaining and enhancing local shopping and specialist shops. Boroughs should also identify areas under served by convenience goods and support local markets.

Further Alterations to the London Plan

1.5.8 In March 2015, the Mayor published Further Alterations to the London Plan (FALP). The purpose of these alterations was to respond to housing and employment issues stemming from the projected increase in London's population since the publication of the 2011 London Plan. The scope of these alterations include: accommodating changes in national policy and making clear links to the National Planning Policy Framework, providing a robust short and medium term planning framework and making factual corrections. The alterations also take into considerations advice given to the Mayor by organisations such as the Outer London Commission.

1.5.9 The changes include the promotion of Stratford to an International centre and the designation of Elm Park as a District Centre subject to monitoring.

1.6 Local Planning Context

Local Development Framework Core Strategy

1.6.1 This section sets out the current local policy position, however the emerging Local Plan will replace the key documents in the in the Local Development Framework.

1.6.2 The Havering Core Strategy was adopted in July 2008 and forms part of the Borough's Local Development Framework. The Core Strategy sets out the Borough's development framework up to 2020. The objective of the Core Strategy is to balance economic growth and the provision of affordable housing in the Borough with the protection and improvement of the Borough's historic and natural environmental quality. .

1.6.3 Policy CP4 – Town Centres sets out Havering's town centre hierarchy. It is important to note that the Core Strategy does not directly align with the London Plan's classifications of centres as the London Plan does not distinguish between major and minor district centres. Romford is defined as a 'metropolitan centre' In both the Core Strategy and London Plan, Hornchurch and Upminster are designated as 'major district' centres, while Collier Row, Elm Park, Harold Hill and Rainham are 'minor district' centres. In addition, Havering has 11 major local centres and 68 minor local centres.

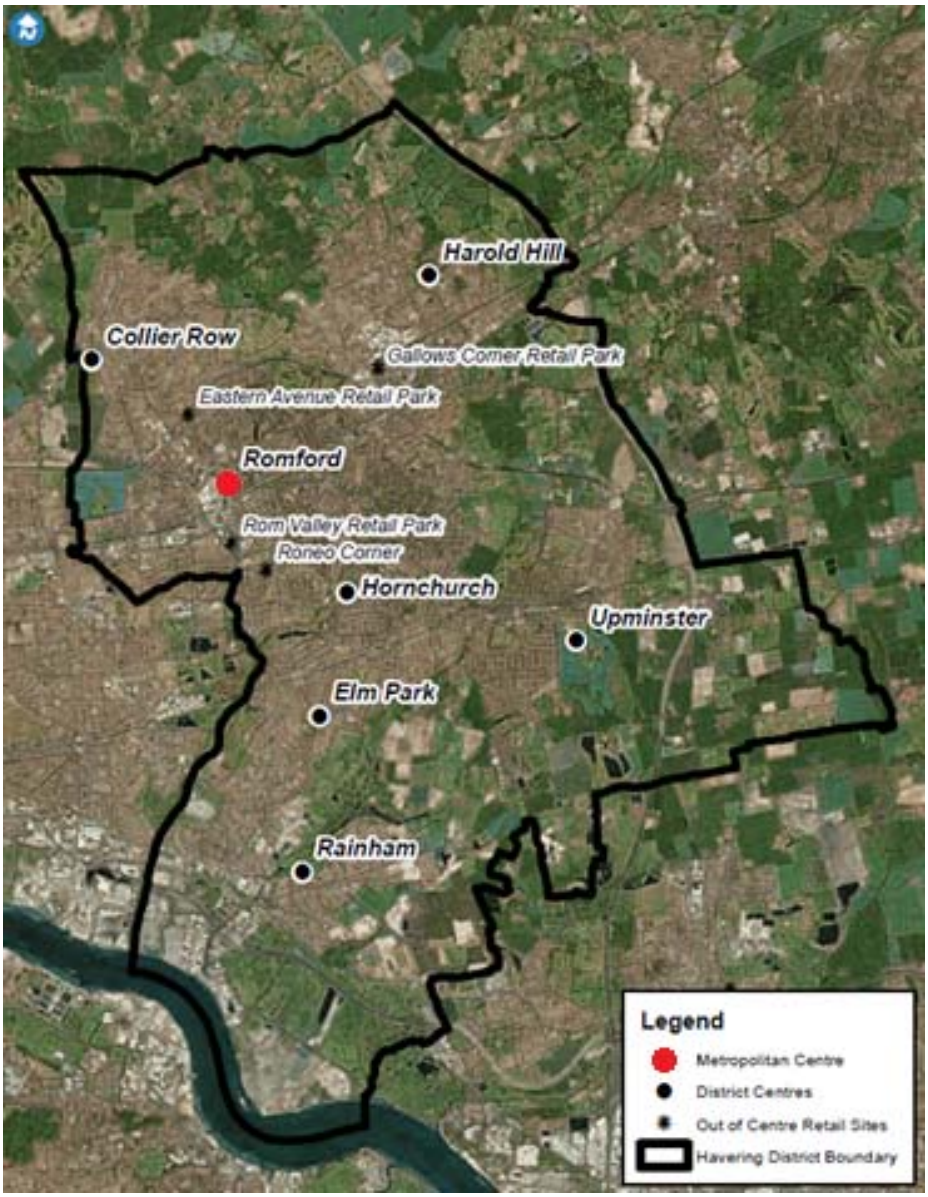
1.6.4 The Council aims to strengthen Romford's position as "East London's premier town Centre. Hornchurch's role is as the borough's cultural capital will be supplemented by the promotion of small to medium sized retail, culture, leisure and residential uses. Upminster functions as Havering's second retail destination after Romford. According to the policy, the strategy for Upminster will be one of consolidation with some small to medium retail and leisure developments permitted. The more significant development opportunities in the town are located in edge of centre sites.

1.6.5 Rainham is situated within the London Riverside Regeneration Area and part of the London Riverside Opportunity Area identified by the Mayor. The regeneration scheme aims to revitalise the area and enhancing its heritage through investments in transport links and mixed use developments. Although Rainham already includes a large Tesco and a number of small shops, the regeneration scheme might require the addition of small scale convenience retail within the regeneration area.

1.6.6 The Core Strategy states Elm Park will continue to function as a predominantly convenience goods focused retail centre. The strategy for Collier Row and Harold Hill is to continue to support the centres by consolidating their current retail offer.

1.6.7 The location of each of the centres in the Borough is shown at Figure 1. We have also added the principal out-of-centre retail locations, which are discussed further in Section 3.

Figure 1.1 - Hierarchy of Centres in LB Havering



1.7 Romford Area Action Plan

1.7.1 The Romford Area Action Plan was adopted in October 2008 and provides the planning framework for the future development and regeneration of Romford metropolitan centre up to 2020. The AAP forms part of the Borough's LDF. The AAP encapsulates a number of policies touching on various aspects including retail, leisure, heritage, accessibility and functionality.

2 Context for Town Centres

2.1 Introduction

2.1.1 This study is being prepared in the midst of a renewed focus on the role and function of the high street, in the context of the recent, sustained economic downturn, continued attraction of out-of-town facilities as alternative shopping destinations, and the increasing popularity of online shopping. A number of independent studies have recently been published considering the future role and function of the high street, most significantly The Portas Review, The Grimsey Review and Beyond Retail's 'Redefining the Shape and Purpose of Town Centres'; we briefly summarise each of these below. We then continue to review the key trends which are likely to influence the demand for new retail floorspace over the study period.

2.2 Published Research

The Portas Review (2011)

2.2.1 In May 2011, retail expert Mary Portas was appointed by the Government to lead an independent review into the future of the high street, largely in response to the stagnation and decline of town centres nationally, seen as a consequence of reduced spending on the high street. The report, published in December 2011, suggest a number of measures to tackle the further decline of the high street.

2.2.2 Amongst 27 separate recommendations in the report, there is a call to strengthen planning policy in favour of 'town centre first' following the publication of the draft NPPF. The core recommendations included:

- **Run town centres like businesses:** by strengthening the management of high streets through 'Town Teams', developing the 'Business Improvements Districts' (BID) model and encouraging new markets;
- **Get the basics right:** by looking at how the business rate system could better support small businesses and independent retailers, encouraging affordable town centre car parking and looking at further opportunities to 'deregulate' the high street and relax local authority restrictions that hold local businesses back.
- **Level the playing field:** by making explicit within the NPPF a presumption in favour to town centre development, introduce Secretary of State 'exceptional sign off'; and encouraging large retailers to show their support for high streets by mentoring local businesses;
- **Define landlords' role and responsibilities:** by encouraging a 'contract of care' between landlords and their commercial tenants, looking at disincentives for landlords leaving properties vacant, and empowering local authorities where landlords are negligent and making proactive use of Compulsory Purchase Order powers; and
- **Give communities greater say:** by including the high street in neighbourhood planning, directing more developer funding to supporting community groups, and, encouraging innovative community uses of empty high street spaces.

Government response to the Portas Review (2012)

2.2.3 The Government published its formal response to the Portas Review in March 2012, which accepted virtually all of Portas' recommendations. It announced that 24 'Portas Pilot' towns secured funding to set up Town Teams to create plans for the future of their high streets and

trail some of the recommendations made in the Portas Review. In addition, the Government will provide investment to help BIDs access loans for their set-up costs, as well as funding for a High Street Innovation Fund (to help bring entrepreneurs back to their communities) and also a 'Future High Street X Fund' (to reward towns which are delivering innovative plans to bring their town centres back to life).

2.2.4 The Government however did not support the call to introduce Secretary of State 'exceptional sign off' for all new out-of-town developments and require all large new developments to have an 'affordable shops' quota. The Government states that LPAs are best placed to understand local needs and 'exceptional sign off is contrary to the Government's ethos of devolution. As such, the Government will continue to use its call-in powers sparingly.

The Grimsey Review (2013)

2.2.5 Bill Grimsey, the former boss of DIY chain Wickes and food retailer Iceland published his report 'The Grimsey Review: An alternative future for the High Street' in September 2013.This report was developed as an 'alternative response' to the recommendations of the Portas Review. The report makes a total of 31 wide-ranging recommendations, including encouraging more people to live in town centres, appointing a High Streets Minister, and freezing car parking charges for a year.

Beyond Retail: Redefining the Shape & Purpose of Town Centres (2013)

2.2.6 Arising from the key recommendations in the Portas Review, the Government supported the establishment of an industry 'task force' to analyse retail property issues relating to town centres. The task force included representatives from the banking, property, retail and public sectors, and the findings of the task force's report were presented in the 'Beyond Retail' report published in November 2013.

2.2.7 The report outlines a 'future vision' of high streets, based on five key observations:

- Market polarisation, resulting in **three broad types of town centre offer** (strong centres with a wide retail and leisure offer; convenience food and service-based centres with an element of fashion and comparison goods; and localised convenience and everyday needs-focussed centres);
- A local authority will have a '**clear vision'** of the role and function of their town centres, and the position of their respective retail offers in the hierarchy of centres;
- **Active intervention** on the part of the local authority should be encouraged by a more flexible planning environment, including reduced regulation and a mix of public and private sector funding models;
- A **'re-basing' of occupational costs** (in terms of rents and rates), to encourage an improved retail and leisure mix of profitable multiple and independent operators, supported by local employment and residential development in close proximity to town centres, and providing a flexible approach to car park pricing to assist in completion with out-of-town developments.
- **Technology** as a critical enabler of future town centre relevance and vitality.

2.2.8 Based on this 'vision', the report makes a number of recommendations, and we consider those particularly pertinent to be:

- Develop **strong and dynamic leadership**, led at the local authority level but also including business and community involvement, to bring about long-term change in town centre functions;

- Undertake bold, **strategic land assembly**, to assemble redevelopment opportunities of scale and worth;
- Provide **greater flexibility** in the planning system to enable redundant retail premises to be converted to 'more economically productive uses';
- Consider the mechanisms to **address funding gaps** to encourage local authorities to commit to long-term planning for town centres; and
- Town centres must take advantage of **technology** to assist in marketing, driving footfall, and assisting independents and SMEs; and
- The **business rate system** should be reviewed, and new retail valuation guidance should be published.

2.3 Market Context

2.3.1 The market context for town centres, and retail in particular, is evolving. The role of the town centre is not as clearly defined as it has historically been, and indications are that the town centres which have weathered the recent economic downturn (discussed further below) are those which have a diverse range of uses. In this section we discuss the key changes in the retail market which are considered likely to have the biggest implications on centres in LB Havering over the study period. These include:

- Polarisation to higher-order centres
- Growth of the convenience goods centre
- Growth in commercial leisure provision.

Key trend: polarisation to higher-order centres

2.3.2 The 'polarisation trend' refers to the preference of retailers to concentrate trading activities in larger schemes, within larger centres. Retailers recognise that greater efficiency can be achieved by having a strategic network of large stores offering a full range of their products, rather than a network of smaller-format stores which are only able to offer a limited range of products. Other trends discussed in this section, in particular the economic downturn and the growth in online shopping, have further amplified the need for retailers to have fewer physical stores. The 'polarisation trend' is also driven by customers, who have become more discerning and are increasingly prepared to travel further afield. There is therefore a concentration of comparison goods expenditure in a smaller number of larger centres. CBRE estimated that by 2008 half the population shopped in just 70 or so major locations, down from 200 locations 30 years ago[1].

2.3.3 However, this trend does mean that smaller centres may be required to potentially refocus their role and function away from solely being shopping destinations to incorporate a much broader retail, leisure, culture and residential offer.

2.3.4 The result of this trend, according to Deloitte[2], is that retailers are beginning to reassess their store portfolios: *'The increasing costs of operating stores, changes in consumer behaviours, and the growing online opportunity, coupled with the rise of shopping centres with larger catchment areas and improvements in infrastructure facilitating travel suggest that retailers will need fewer stores in the future'*

[1] CBRE UK Retail Briefing, September 2008

[2] Deloitte, 'The Changing Face of Retail', 2011

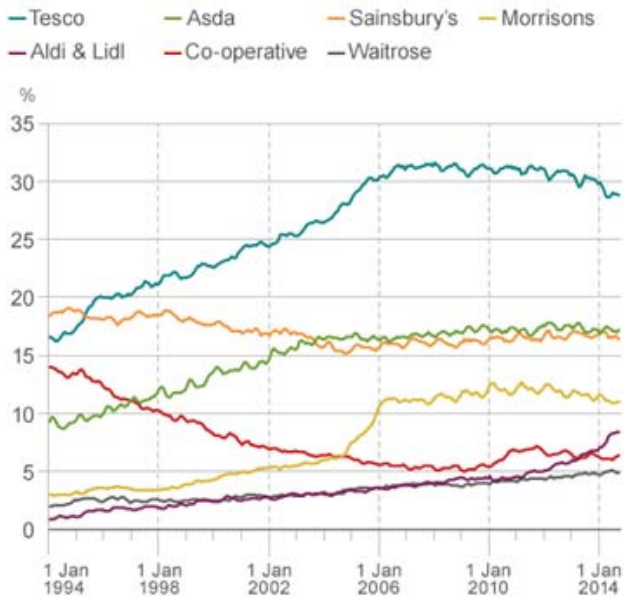
2.3.5 The implications for this on town centres is that many retailers will, in the medium to longer term, seek to downsize their portfolios, particularly in smaller centres. Deloitte consider that this will have three principal impacts on retail property:

- Firstly, **increased availability** of property as vacancy rates increase;
- Secondly, **decreasing prime retail rents** (with the exception of central London); and
- Thirdly, **increased flexibility in rental terms**, with retailers demanding better terms, including shorter leases, rent-free periods, earlier break clauses, and monthly rental arrangements.

Key trend: growth of the convenience goods sector

2.3.6 The convenience goods sector has, during the economic downturn, become a key driver of growth. The sector has traditionally been dominated by the 'big four' supermarket operators of Asda, Morrisons, Tesco and Sainsbury's, but increasingly both higher-quality operators (Waitrose, Marks & Spencer) and discount retailers (Aldi, Lidl) are making inroads into the market share of the 'big four'. The discount retailers have posted significant year-on-year growth in recent years and beginning to emerge as increasingly important forces in the convenience goods market. We expect these retailers to continue to take market share from the 'big four' supermarket operators in future years (see Figure 2.1).

Figure 2.1 - Leading Supermarkets' Market Share, 1994-2014



Source: Kantar Worldpanel

2.3.7 The sector has often been the beneficiary of floorspace becoming available in town and city centres as a result of comparison goods retailers entering administration. For example, Iceland acquired 57 former Woolworths stores in early 2009, and recently Morrisons acquired a number of stores formerly operated by Blockbuster as part of their 'M Local' network of smaller-format stores. Tesco Express, Sainsbury's Local, and Waitrose have significantly expanded store numbers in recent years.

2.3.8 Large foodstores (i.e. typically those with a net retail area of at least 25,000 sq.ft / 2,300 sqm) have historically been the primary driver of growth in the convenience goods sector. However, there is evidence of an increasing move by convenience goods operators away from opening

larger-format stores towards smaller supermarkets and establishing a network of 'top up' convenience goods shopping facilities (often referred to as 'c-stores'), often located in town centres, or district/ neighbourhood shopping parades. Both Sainsbury's and Tesco now have more c-stores than large supermarkets3 and the 'big four' operators appear to be favouring these formats over large supermarkets. In summer 2014, Tesco announced plans to develop 4,000 houses on land formerly earmarked by the company for supermarkets, mostly in the south-east of England[4].

Figure 2.2 - Example 'C store' formats operated by Tesco, Sainsbury's and Morrisons

2.3.9 Verdict Research[5] comment that: *'The second dip of the double-dip recession in 2012 has knocked consumer confidence and shoppers are sticking more tightly than ever to their budgets. They are shopping little and often and sticking more tightly than ever to their budgets… increasing fuel prices, deterring out-of-town trips, and the move towards online food shopping each feed into this trend towards top-up shopping. Out-of-town space is increasingly difficult for grocers to make profitable'*.

2.3.10 Verdict consider that the proportion of convenience goods floorspace which will be accounted for by 'smaller stores' will increase from 37.6% in 2007 to 41.6% by 2017. The majority of floorspace will continue to be accounted for by 'superstores' (53% of floorspace by 2017), with 'food specialists' and off-licences continuing to have their market share reduced. Industry body IGD predicts that the convenience goods market will grow by 29% between 2012 and 2017, from £33.9bn to £43.6bn, and the main retail operators are responding quickly by opening new stores.

Key trend: growth in commercial leisure

2.3.11 Most commentators predict that commercial leisure, such as cafes, bars, restaurants and cinemas, will constitute a growing share of town centre floorspace. This is partly a replacement activity for reduced demand for space for traditional retail, and partly driven by demand the shift to leisure expenditure as discretionary household expenditure rises.

2.3.12 When considering leisure expenditure available to households, spending on food and drink typically accounts for upwards of 50% of total leisure spending, compared to around 15% on 'cultural services' (e.g. going to the cinema, theatre, art galleries or live music) and under 10% on hotels, 'games of chance' (such as bingo) and recreation/sporting services.

2.3.13 There is scope for town centres to capitalise on this, redefining their function as 'destinations' in their own right. This, in turn, can have wider positive implications on the performance of the town centres in question: residents and visitors spend longer in the centre, undertake 'linked trips' between retail, leisure and other uses, and increase their dwell-time in the centre. The development of a strong commercial leisure offer can also help to increase footfall outside of

[3] Daily Telegraph, 12 January 2014

[4] Daily Telegraph, 18 July 2014

[5] Verdict Research 'Food & Grocery Retailing in the UK' Market Report

retail hours, for example in early evenings, particularly if the leisure offer also includes facilities such as cinemas.

2.4 Economic Context

2.4.1 The recent downturn in the economy had a number of clear changes on the retail landscape in the UK, with a series of high-profile retailers entering administration, and a general trend towards discount retailers increasing their representation — both in the comparison goods sector (for example, Poundland, 99p Stores and Wilkinson) and the convenience goods sector (for example, the continued expansion, and strong trading performance of, 'deep discount' retailers such as Aldi and Lidl). The downturn also affected consumer spending, with a greater reluctance to spend amongst consumers on non-essential goods. As a result, forecast levels of growth in consumer spending remain generally subdued, particularly in the short term.

2.4.2 It has been widely documented that online shopping has increased at a rapid pace in recent years — particularly in the comparison goods sector. Online shopping is perceived to offer a number of significant advantages over 'traditional', high street-format shopping — including lower prices (as there are lower operating 'overheads' for online retailers compared with those in a town centre), a wider variety of choice, and the ability for customers to easily search out bargains — including second hand goods. While unfavourable economic conditions are forcing many retailers to scale back on physical retail space, their online operations allow them to reach a much wider customer base. However, the competition is not as straight forward as 'online shopping versus the high street'; new technologies are promoting an integration between the two shopping channels, to the point where a town centre than embraces digital technologies can find itself in a strong position.

2.4.3 Returning to the bigger picture, Internet sales have been rising much more rapidly than general retail sales in recent years. The average value of weekly retail sales on the internet was forecast at £844m in December 2012. The ONS forecast that online sales accounted for 9.4% of all retail sales in October 2012, which increased to 10.5% in October 2013 (equivalent to a year-on-year increase of 1.1 percentage points). Experian consider that this pattern is likely to remain the case for the foreseeable future, commenting in their Retail Planner Briefing Note (October 2013) that:

> *'We retain our assumption that non-store retailing will increase at a faster pace than total retail sales well into the long term. There were 52.7 million internet users in the UK (representing 84.1% of the population) in mid-year 2012… growth momentum will be sustained as new technology such as browsing and purchasing through mobile phones and the development of interactive TV shopping boost internet retailing'.*

2.4.4 However, Experian consider that at the turn of the next decade, growth in online shopping is expected to begins to plateau, stating that they *expect 'the SFT[6] market share [to] continue to increase over the forecast period[7] although the pace of e-commerce growth will moderate markedly after about 2020'*.

2.4.5 The outputs of this study specifically take into account this anticipated growth in online shopping — based on the most up-to-date Experian guidance we remove the proportion of total expenditure which is expected to be diverted towards online shopping, before presenting the final updated quantitative floorspace requirements for the Borough[8]. In Figure 2.3, we

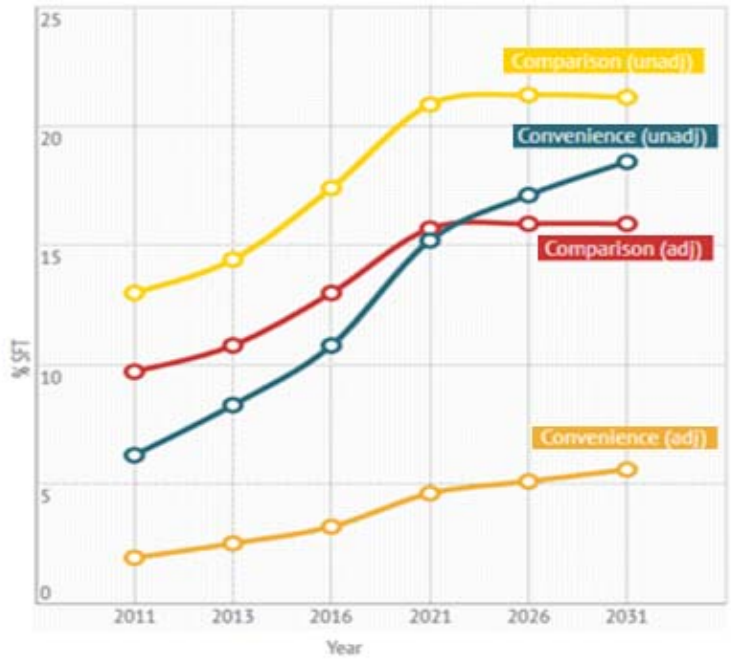
[6] 'Special Forms of Trading', which includes online shopping as well as sales from markets and mail order.

[7] Experian currently project up to 2030.

[8] The figures which we use are Experian's 'adjusted' comparison (non-food) and convenience (food) goods forecasts, which make a deduction on Experian's 'baseline' figures in order to take account of internet goods sales from store space (such as through 'Click & Collect', as discussed below). For comparison goods, Experian apply a discount of 25% to calculate the 'adjusted' figure, and for convenience goods this figure is 70%. The latter figure is particularly high because many online food shopping transactions placed with Sainsbury's, Tesco, Asda and Waitrose are 'picked' from the shelves of the nearest large store of the retailer. Convenience goods retailers

present the projected growth in online comparison and convenience goods shopping over the course of the study period to 2026, based on the forecasts provided by Experian. For reference, both the 'unadjusted' and the 'adjusted' figures are shown[9], although for the purposes of our study we solely rely on the latter set of figures.

Figure 2.1 - Forecast of non-store retailing ('Special Forms of Trading') market share to 2030



Source: Experian Retail Planner Briefing Note 11, October 2013, Appendix 3. SFT includes spending on online shopping, mail order / catalogue shopping, and markets. 'Adjusted' figures include a reduction for store-picked online transactions.

2.4.6 This forecast growth in online spending does not equate to a redundant future for 'bricks and mortar' stores. There is a role for physical outlets to act as 'showrooms' for online retailers[10]. A physical presence on the high street improves the visibility of businesses; 12 out of the top 20 e-commerce businesses in the UK have a physical presence on the high street (Figure 2.4).

Figure 2.4 - Top 20 e-commerce websites in the UK, 2013

Source: IMRG Experian Hitwise Hot Shops List, 2013

are increasingly choosing to instead fulfil orders from warehouses known as 'dark stores' — although this trend remains in its infancy.

[9] See footnote 8

[10] This is where customers visit 'bricks and mortar' stores to look at / try on a product, before using technology such as smartphones to check whether the product is available elsewhere (in another store, or online) for a cheaper price.

2.4.7 The growth in the 'Click & Collect' method of online shopping is a further relatively new trend, but one which looks set to play an increasing role over future years. Like 'showrooming'', it is also one where the physical outlet of the store can still be used to drive footfall. The 'click & collect' concept is such that a customer orders and pays for the desired product online, and then collects the product from the nearest large branch of the retailer in question. This approach is being rolled out by an increasing number of retailers. Recent research by the British Retail Consortium indicates that 60% of 'click & collect' transactions result in an additional purchase in the store.

2.4.8 Recent trends indicate that major retailers are becoming more willing to embrace the challenge posed by online and mobile technology, putting into place technology such as better mobile websites, offering free instore wi-fi, or in-store technology points where a customer can order a product online which may be sold out or not available within the store. This may be particularly applicable for smaller town centres where many retailers' stores are quite small and may not be able to carry the full range of products available.

2.4.9 There is, therefore, a role for 'bricks and mortar' stores, but there is an acute challenge for middle-order centres which will need to be embraced. The role and function of high streets — particularly those outside the higher-order shopping centres — are likely to need to consider uses beyond that of traditional retail activity in order to remain vital and viable.

2.5 Implications for LB Havering

2.5.1 There is little doubt that recent years have seen challenges to 'traditional' store-based shopping on a scale never previously witnessed. These challenges will continue to grow over the Council's Plan period, and in order for the centres in the Borough to perform strongly and meet local needs, they will need to adapt to, and embrace, these challenges. However, it is quite clear that there remains a role for store-based shopping — and for town centres. Experian forecast that store-based shopping is still expected to expand at an average of 1.9% per annum in capita terms to 2030, and online sales will begin to plateau.

2.5.2 In our view, the most successful town centres will be the ones that adapt to the changes in shopping habits, which move away from solely being shopping destinations to those which offer a broad range of retail, leisure, cultural and civic services to enable residents to have multiple reasons to visit a town centre, and to spend longer amounts of time in the centres. Successful town centres will need to embrace and work alongside multi-channelling retailing, through the availability of free wi-fi, promotional offers, 'click & collect' hubs, and so on. There will need to be a willingness for the higher-order centres in the Borough to embrace the wider changes in shopping and spending patterns, and capitalise on them rather than compete with them.

2.5.3 There will also be an important role for niche / curated retail destinations, which are able to compete with advances in online / mobile technology because they offer a different experience, one based around high standards of customer service, and a unique retail offer which cannot be matched online. Related to this, we therefore expect that place marketing and 'selling' the offer of a town centre will become of increasing importance.

3 Existing Performance of Network of Centres

3.1 Introduction

3.1.1 In this section we set out our assessment of the seven highest-order centres in the Borough, as follows:

- The Metropolitan Centre of **Romford**; and
- The District Centres of **Collier Row, Elm Park, Harold Hill, Hornchurch, Rainham and Upminster**.

3.1.2 Based on available evidence and our own analysis, the performance of each centre has been assessed against indicators of town centre vitality and viability set out in the Planning Practice Guidance, which can be summarised as follows:

Figure 3.1 - Extract from 'PPG'

Vitality and viability of town centres: key indicators
• Diversity of uses • Proportion of vacant street level property • Retailer representation and intentions to change representation • Pedestrian flows • Accessibility • Perception of safety and occurrence of crime • State of town centre environmental quality

Source: Planning Practice Guidance (section: 'Ensuring the vitality of town centres', para 005)

3.1.3 Further details of our approach, and a more detailed assessment, are set out at **Appendix A** of **Volume 2** of our Study. In our assessment below, we provide a brief summary of the performance of each centre against each of the PPG indicators, using a 'traffic light' system which is designed to identify areas where a centre is performing particularly strongly – or alternatively is considered to be underperforming.

3.2 Romford (Metropolitan Centre)

3.2.1 As a designated Metropolitan Centre, Romford is the principal shopping destination for residents within the Borough and visitors from further afield. The centre has a strong comparison and convenience offer alongside commercial leisure uses which include gyms, cafes, cinemas, amusement arcades and restaurants. The town centre is anchored by three main shopping centres (The Liberty, the Mercury and the Brewery) in addition to a popular market and high street retail units. The diversity of uses for the centre, as supplied by Experian Goad, is set out in Tables 3.1 and 3.2.

Table 3.1 - Diversity of Uses in Romford Metropolitan Centre (Number of Units)

	No. of Units	% of total	% UK average	% Difference to UK average
Convenience	50	9.1	9.0	0.1
Comparison	229	41.9	40.5	1.4
Service and Miscellaneous	212	38.8	36.9	1.9
Vacant	56	10.2	12.5	-2.3

Table 3.2 - Diversity of Uses in Romford Metropolitan Centre (Gross Floorspace)

	Gross Floorspace (sqm)[11]	% of total	% UK average	% Difference to UK average
Convenience	27,920	15.2	18.1	-2.9
Comparison	105,120	57.3	45.6	11.7
Services and Miscellaneous	36,080	19.7	24.8	-5.1
Vacant	14,200	7.7	10.5	-2.8

Source: Experian Goad

3.2.2 Romford enjoys good representation from national multiple retailers, as would be expected for a centre of its role and function. These include anchor stores Primark, Marks and Spencer, Next and Debenhams alongside younger fashion retailers H&M, Topman/Topshop and Superdry. Generally speaking the offer is firmly mid-market; there is an absence of upper-middle or higher end retailers. Primark and Marks & Spencer are both important anchors on South Street, which otherwise has a generally poor quality retail offer for what is such a prominent location in the town centre. There is also a good convenience offer in the town centre, with large branches of Asda (Mercury Gardens) and Sainsbury's (The Brewery), Iceland (Market Place) plus Aldi and Lidl supermarkets to the north and southern end of the centre respectively. In addition, both BHS and Marks & Spencer food offer.

3.2.3 The retail offer is further complemented by restaurant operators Nandos, Frankie & Benny's and Pizza Express. Fast food chains McDonalds, Subway, KFC also have representation within the centre, and there are a number of public houses such as Yates' and Wetherspoons located on South Street. The offer also includes a range of independent cafes. There is also a good range of supporting retail services, two cinemas and a theatre. The centre also has an important civic function.

3.2.4 While there is strong representation of national multiple retailers within the town centre, there are also significant presence of independent retailers – however for the most part this is consigned to the secondary areas of the town centre. Some parts of the centre have an over-concentration of low-grade retail uses, with the extensive number of hot-food takeaways on Victoria Road being the most noticeable example of this.

[11] Floorspace includes allowances for internal upper floors within shop units.

3.2.5 The vacancy rate at the time of our visit to the centre was 7%, some way below the UK average of 12.5%. It is positive to note that the vacancy rate has decreased slightly since the most recent Experian Goad centre survey was completed in 2013.

3.2.6 Pedestrian circulation within the primary retail frontage is generally good – a lot of retail activity takes place in pedestrianized streets or covered shopping centres. Market Place is also a vibrant and well used civic space especially on market days. The Liberty was particularly busy at the time of our visit, reflecting the generally good 'prime pitch' offer of the retailers in this location. As would be expected, secondary areas of the town centre do not benefit from such high levels of footfall, although no area was observed that was exceptionally quiet.

3.2.7 The centre has good access to the surrounding region and Central London. Romford's railway station is located on South Street, a short distance from the primary shopping area, and is served by services on the London Liverpool Street – Shenfield line with additional of-peak services to Southend and Colchester. Starting in 2018, Crossrail services will serve the station linking Romford to Reading via Central London. Numerous bus routes serve Romford connecting the town to the surrounding network of district centres. The centre also has good car parking provision which include eight Council owned car parks and five privately managed car parks. The centre feels generally safe during the daytime, although the fact that the much of the town centre is accessed by underpasses from the surrounding area due to the ring road that encircles the centre is not ideal. There is a small concentration of bars/nightclubs along South Street which contributes to the centre's night time economy.

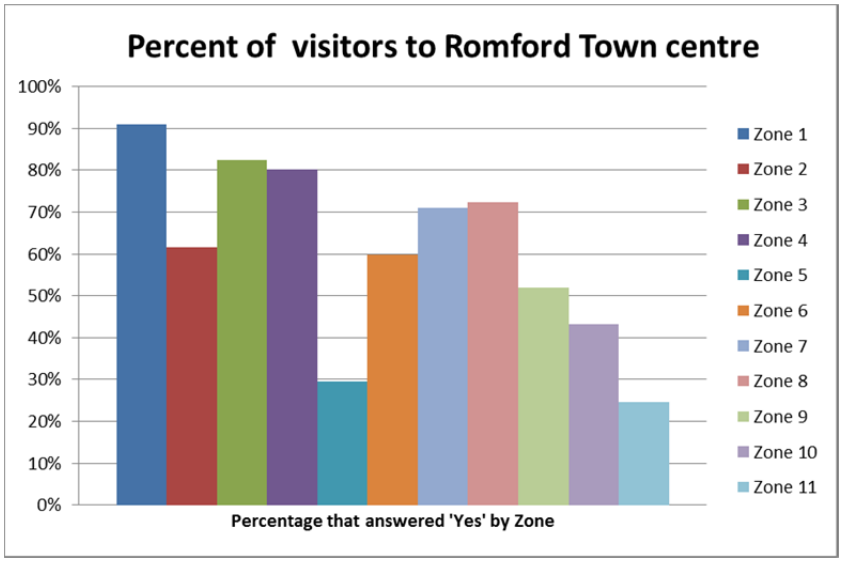
3.2.8 The central retail core is generally of good quality, with the Liberty centre, the Brewery and the Mercury Mall in particular offering a high-quality shopping environment. Recent improvements in the public realm such as the pavement widening works along Victoria Road and South Street have also improved the appearance of the town centre. The Council secured funding for these improvements from TfL. Romford generally has good architectural diversity spanning historic buildings such as the Havering Museum and St Edward the Confessor Church to more contemporary buildings such as the Liberty Centre. The most notable shortcoming of the town centre is a lack of significant green space and sitting areas.

Customer Perceptions of Romford Metropolitan Centre

3.2.9 As part of the household survey of shopping patterns which was undertaken in support of this study (which we discuss further in Section 4), respondents were asked a number of questions in respect of their views whether they visited Romford metropolitan centre for shopping / leisure activities, what they liked about the town centre, and what could be improved. We set out a summary of these findings below; the full results are included within the household survey data at Volume 3 of the report.

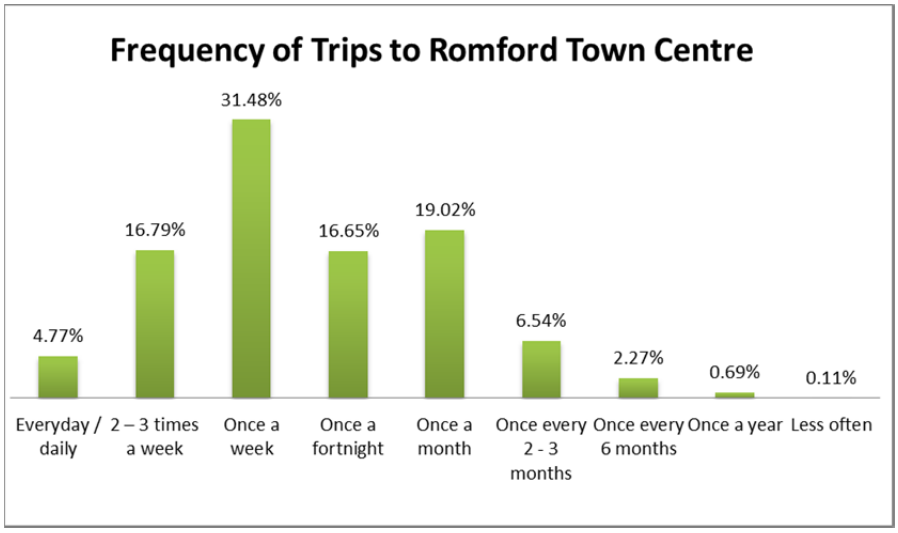
3.2.10 When asked whether they visited Romford metropolitan centre regularly for shopping, leisure or work 59% of survey respondents stated they did. The proportion of residents who said they did visit the town centre regularly varied between the 11 survey zones (refer to Appendix B) which we have used for the purpose of our analysis (see **Figure 3.2**). This data shows that as a general trend Romford metropolitan centre draws high amounts of trade from those zones in the immediate vicinity (the town centre falls within zone 1), with numbers of visits decreasing as proximity to Lakeside increases. A low proportion of respondents from Zones 5 (30%) and 11 (25%) which are closest to Lakeside shopping centre said they visited Romford. Fewer residents from Zone 2 do visit the centre than the other surrounding Zones. This could possibly be attributed to the strong leisure offer in Hornchurch district centre.

Figure 3.2 - Visitors to Romford Metropolitan Centre by Zone



3.2.11 Out of those who stated that they did visit the centre, the majority of respondents (32%) said they visited Romford on a weekly basis. The frequency of visits to Romford undertaken by the total number of respondents is outlined below. This table shows that most people visit the centre on a regular basis once a week, 2-3 times a week or once a month.

Figure 3.3 - Frequency of trips to Romford Metropolitan Centre



3.2.12 When asked what they liked about Romford metropolitan centre the main reasons respondents gave were; close to home (39%), good range of chain stores (31%), good range of independent stores (18%) and nothing/very little (12%). A particularly high number of respondents (55%) from Zone 9 (Dagenham) commented that Romford contains a good range of chain stores. Other reasons that respondents gave included the following:

- Close to work/en-route to work

- Good or free car parking[12]
- Good bus service/accessible public transport
- Markets
- Restaurants/cafes
- Attractive environment
- Compact centre
- Undercover/sheltered areas

3.2.13 When asked what things could be improved about Romford metropolitan centre, 52% of respondents gave no answer, suggesting a reasonable level of satisfaction amongst users of the centre. Out of the reminder of the responses, the most popular improvements suggested by respondents included:

- Cheaper parking (12%)
- More parking (8%)
- Improvement to the market (6%)
- Cleaner Streets/removal of litter (5%)
- Better choice of shops in general (4%)
- Improve appearance/environment of centre (3%)
- More independent shops (3%)
- Better street furniture/floral displays (2%)
- More control on other anti-social behaviour (2%)

3.3 Collier Row (District Centre)

3.3.1 The district centre is located in the north west of the Borough. The centre generally caters to the day to day needs of local residents, with representation geared towards the provision of convenience goods, hot food and some services. Retail activity is centred around Collier Row Road, Clockhouse Lane and Chase Cross Road. The offering in the town centre is generally towards the lower end of the market, especially when the provision of hot food take aways and charity shops is taken into consideration.

3.3.2 The majority of retailers and food outlets are independently owned. The convenience offer within Collier Row is headed by a Tesco Metro (in an attractive art deco former cinema), alongside Costcutter and Londis. Other national multiples present include Boots, Lloyds Pharmacy, Lloyds Bank, Post Office, Greggs, Coral, a JD Wetherspoon operated pub, Domino's Pizza and Pizza Hut. There are 11 vacant units in the centre, equivalent to 15% of all units, above the UK average of 12.5%. The diversity of uses for the centre is set out at Table 3.3.

[12] Parking is also shown as where the centre could improve

Table 3.3 - Diversity of Uses in Collier Row (Number of Units)

	No. of Units	% of total	% UK average	% Difference to UK average

Comparison	2,700	27.6	45.6	-18.0
Service and Miscellaneous	3,850	39.3	24.8	14.5
Vacant	1,070	10.9	10.5	0.4

Source: Experian Goad

3.3.3 Pedestrian flows were observed to be generally good, aided by the linear nature of the centre. The centre is served by six routes, and can thus be considered generally accessible. Environmental quality in the district centre is generally good and the Council has also invested in upgrading the public realm which has added to the centre's attractiveness.

3.4 Elm Park (District Centre)

3.4.1 Elm Park District Centre is located in the south western part of the Borough and is accessible by public transport via the London Underground district line and four bus routes. The centre is split into two distinctive areas located on either side of Elm Park underground station at each end of The Broadway. To the north the main shopping frontages include The Broadway and the junction of Elm Park Avenue/St. Nicholas Avenue/The Broadway. The environmental quality of this area is generally good as there has been extensive public ream investment — however the presence of vacant buildings does undermine environmental quality. To the south the main retail frontages are Station Parade and Tadworth Parade. The environmental quality and perception of safety in this area is quite poor due to a high number of vacant units and concentration of take-aways which remain closed during the day time.

3.4.2 The centre meets day to day shopping needs for residents and as a whole provides a good range of convenience stores including Co-operative Food, Tesco Express and Sainsbury's Local as well as an extensive range of local services. The comparison retail offer is at the lower end of the market and, since the local pub was recently converted to a supermarket the evening economy is now limited to a small number of restaurants and eleven take-aways. The centre had a vacancy rate of 14% at 1 October 2014 this is higher than the current National Average of 12.5%. Whilst the vacancy rate should be monitored, we consider that overall Elm Park is able to meet day-to-day shopping needs to a generally good extent, and, with some improvement to the visual appearance of the centre, will offer generally positive vitality and viability.

3.5 Harold Hill (District Centre)

3.5.1 Harold Hill is a small district centre, occupying the ground floor of a purpose-built 1950s council-owned residential estate to the north-east of the Borough. Most of the retail units are independently owned though a handful of familiar High Street names have established themselves in the centre. The main focus of the retail offer is the provision of convenience goods and some services such as banking and hairdressing. In addition the centre also offers a restaurant; café and hot food takeaways. National retailers/operators present in the centre include Iceland, Co-Operative Food and Sainsbury's Local supermarkets, plus Superdrug, Boots, Boots Opticians, Halifax, Santander, Natwest, William Hill and Ladbrokes.

Table 3.5 - Diversity of Uses in Harold Hill (Number of Units)

	No. of Units	% of total	% UK average	% Difference to UK average
Convenience	15	22.4	9.0	13.4
Comparison	20	29.9	40.5	-10.6
Service and Miscellaneous	21	31.4	36.9	-5.5
Vacant	11	16.4	12.5	3.9

Source: Experian Goad

Table 3.6 - Diversity of Uses in Harold Hill (Floorspace)

	Floorspace (m^2)	% of total	% UK average	% Difference to UK average
Convenience	2,990	32.6	18.1	14.5
Comparison	3,080	33.6	45.6	-12.0
Service and Miscellaneous	2,440	26.6	24.8	1.8
Vacant	650	7.1	10.5	-3.4

Source: Experian Goad

3.5.2 **The diversity of** uses for Harold Hill is presented at **Table 3.4**. At the time of our visit the vacancy rate was 20% and therefore considerably above the UK average, although this partly reflects the renovation works being undertaken to facilitate the creation of a new library within the centre. Once this is considered then the vacancy rate falls to 5.6%. Notwithstanding this, the vacancy rate should be carefully monitored by the Council.

3.5.3 The district centre is of good environmental quality. While the development of the new Harold Hill library is a welcome addition to the eastern arcade, the number of vacancies within the western arcade diminishes the overall quality of the district centre. The centre is served by four bus routes, which is considered to represent a good level of accessibility given the role and function of Harold Hill as a district centre.

3.6 Hornchurch (District Centre)

3.6.1 Hornchurch district centre is located in the centre of the Borough and is accessible by public transport via national rail services, London Underground's District Line and seven bus routes

though it is important to note that there are only half hourly services (Mon-Sat up to 8pm) to Emerson Park from Romford and Upminster and the tube station is not in the town centre. The focal point of the centre is the junction where the three main shopping Streets- the High Street, Station Lane and North Street intersect. The environmental quality of the centre is good, a number of key sites have been redeveloped to a high standard and there has been recent significant investment in the public realm including traffic calming measures using funds from Transport for London under its Major Schemes 'branding'. The current vacancy rate of 6% is less than half the UK average, and there are no particularly prominent vacant units within the primary shopping area (although we note that there has been a slight increase in the vacancy rate since the Experian Goad centre survey was completed in 2013).

Table 3.7 - Diversity of Uses in Hornchurch (Number of Units)

	No. of Units	%of total	% UK average	% Difference to UK average

	Gross Floorspace (m^2)	% of total	% UK average	% Difference to UK average
Comparison	5,340	18.3	18.1	0.2
Convenience	10,060	34.4	45.6	11.2
Service and Miscellaneous	12,930	44.2	24.8	19.4
Vacant	920	3.1	10.5	7.4

Source: Experian Goad

3.6.2 The retail offer contains a good diversity of comparison, convenience and service retail uses as well as an impressive commercial leisure offer which makes the centre a borough-wide leisure destination for eating and drinking and lends it a stronger 'evening economy' than might typically be expected for a district centre. The convenience offer is rather limited and the fact that the prominently-sited former Little Waitrose store has stood vacant for over a year suggests a lack of demand from retailers. The offer is anchored by a Sainsbury's supermarket supplemented by Iceland food store and a range of small convenience stores. The comparison offer is at the mid-range of the market, there are a number of national multiple retailers however there is also a high proportion of charity shops and discount stores which account for 22% of the comparison offer. The centre's leisure offer is focused on eating and drinking out and as such there is a vibrant evening economy. There is a high number of independent restaurants and national multiple outlets including Nando's, Zizzi, Ask, Prezzo, Starbucks, Costa and a JD Wetherspoon pub. A consequence of this is that much of the centre does not benefit from strong levels of footfall during retail trading hours.

3.6.3 It is important to note that Hornchurch is widely regarded as Havering's culture centre. The cultural offer includes the Fairkytes Art Centre and the Queens Theatre.

3.7 Rainham (District Centre)

3.7.1 Rainham is a small district centre which is anchored by a large Tesco Extra supermarket. The size of the supermarket is such that it offers many of the services and facilities which one may associate with a 'typical' district centre, such as a pharmacy, opticians, photo processing, travel money etc, alongside an extensive food and non-food retail offer. The store is open 24 hours when trading regulations permit. Elsewhere in the centre (which benefits from a direct pedestrian link to/from the Tesco store), the offer of the centre includes two convenience shops, estate agents, betting shops, a bank, a footwear store, a second-hand furniture shop and takeaway restaurants with the majority of units operated by independent operators. There are a number of gaps in the retail and services offer, including café and restaurant provision and clothing retailers, and a number of vacant premises were observed on Upminster Road. A new library (pictured above) is a positive addition to the centre, which benefits from its setting within the Rainham conservation area.

3.7.2 At the time of the district centre visit pedestrian activity was generally low while Tesco appeared to be trading well at the time.

3.7.3 Rainham is served by four bus routes and a train station. The mainline service runs from Fenchurch Street to Southend. Pedestrian navigation has been enhanced by the provision of way finding directional signs. The town centre has two main car parks: the first at the train station and the second adjacent to the Tesco supermarket.

3.7.4 Rainham district centre is performing adequately: the Tesco store appears to be trading successfully and offers an extensive product range. The recently-completed Rainham Library is evidently a positive addition to the centre. There are no areas of significant concern in respect of the performance of the centre.

3.8 Upminster (District Centre)

3.8.1 Upminster District Centre is located in the south eastern part of the Borough and is accessible by public transport via National Rail services, the London Underground district line and four bus routes. The main retail frontage extends south along the B1421 (comprising Station Road and Corbets Tey Road) from Upminster rail and underground station at the northern end of the centre and two secondary retail frontages, St. Marys Lane and Springfield Gardens both run east off the B1421. The environmental quality is good in most of the centre which contains a mix of architectural styles reflecting both civic and commercial functions.

3.8.2 The vacancy rate in the centre is low, at 7%, although has increased since the most recent Experian Goad centre survey of the centre in 2013, which identified a vacancy rate of 5%.

Table 3.9 - Diversity of Uses in Upminster (Number of Units)

	No. of Units	%of total	% UK average	% Difference to UK average
Convenience	14	8.1	9.0	-0.9
Comparison	62	36.1	40.5	-4.4
Service and Miscellaneous	87	50.6	36.9	13.7
Vacant	9	5.2	12.5	-7.3

Source: Experian Goad

Table 3.10 - Diversity of Uses in Upminster (Gross Floorspace)

	Gross Floorspace (m^2)	% of total	% UK average	% Difference to UK average
Comparison	7,250	25.9	18.1	7.8
Convenience	11,000	39.3	45.6	-6.3
Service and Miscellaneous	8,980	32.1	24.8	7.3
Vacant	780	2.8	10.5	-7.7

Source: Experian Goad

3.8.3 The environmental quality is good in most of the centre which contains a mix of architectural styles reflecting both civic and commercial functions. The environmental quality of the junction where the B1421 intersects with St. Mary's Lane is poor however: the heavy traffic at the junction reduces safety and acts as a barrier to the flow of pedestrians; there is also a small concentration of vacant units.

3.8.4 Overall the centre contains a good mix of commercial, civic and residential uses which contribute to the centre's vitality. The retail offer is, as would be expected in a district centre, geared towards meeting day-to-day uses, with a range of comparison, convenience and service retail uses. The centre has a diverse convenience offer including both high-end (Waitrose, Marks and Spencer's Simply Food) and budget food stores (Aldi, Iceland) as well as a range of independent convenience shops. The comparison offer accounts for 24% of all units and is in the mid-range of the market however there are only a handful of national multiple comparison retailers (including Clarks, Superdrug and Boots). The Roomes department store (which principally sells fashion and homeware) acts as an anchor store to the northern end of the centre, whilst the foodstores anchor the central and eastern ends. The Waitrose store does not appear to be encouraging strong levels of pedestrian flow from the rest of the centre however, which is partly likely to reflect the fact that much of the rest of the retail offer along St Mary's Lane is of poorer quality, including a number of take-away units.

3.8.5 The leisure offer comprises the local leisure centre and a number of independent and national chain eating and drinking outlets which mostly are positioned in the middle of the market.

3.8.6 Whilst Upminster generally benefits from positive vitality and viability there is some scope for improvement in the quality of the retail offer and for the centre to be better integrated through upgrading of the public realm.

3.9 Out-of-Centre Representation

3.9.1 Not all of the retail provision in the Borough is concentrated in the network of town centres. In common with elsewhere in the country, the established town centres compete for expenditure with retail parks and freestanding retail warehouses, as well as a network of large format out-of-centre convenience goods floorspace. Typically this floorspace offers 'bulky goods' retailing, such as DIY goods and furniture – although there is increasing demand from 'high street' retailers to take space in such developments where planning restrictions allow (or can be relaxed). **Table 3.11** summarises the main out-of-centre retail and leisure floorspace provision in the Borough.

Table 3.11 - Main Out-of-Centre Retail Floorspace LB Havering

Store / Retail or Leisure Park Name	Main retailers / Operators	Floor Area (Gross)
Gallows Corner Retail Park	Argos, Halfords, Harvey's, DFS, Furniture Village, Next	65,000sq.ft/ 6,039 sqm
Rom Valley Retail Park	Carpetright, Dreams Bed Superstores, Pets At Home, Mothercare World.	92,557sq.ft/ 8,5999 sqm
Eastern Avenue Retail Park	PC World, Curry's, Poundstretcher	110,000sq.ft/ 10,219sqm
Roneo Corner	B&Q (also an adjacent Tesco Extra supermarket)	72,000sq.ft/ 6,689sqm

Source: PBA desktop research (excluding standalone foodstores)

3.10 Surrounding Centres

3.10.1 Surrounding Havering is a competing network of centres which can be expected to provide competition to centres within the Borough for expenditure. We expect the principal centres which compete with destinations in Havering to be **Lakeside, Chelmsford, Brentwood, Stratford and Ilford**, whilst smaller centres may also play a more limited role in meeting some residents' day to day shopping needs. We consider the competing centres below. Some of these centres fall within the study area which we have used as the basis of our assessment, which we discuss further in the following section.

Lakeside

3.10.2 Lakeside is designated as a new regional centre in the Thurrock Core Strategy, which supports the transformation of the northern part of the Lakeside Basin into a new regional centre. Lakeside incorporates the Lakeside Shopping Centre (LSC) as well as Lakeside Retail Park and Junction Retail Park, and a number of large, freestanding stores including Ikea, Costco and Tesco Extra. There is a strong and established retail offer, which benefits from good levels of accessibility from the national road network.

3.10.3 The main role of Lakeside at present is as a comparison shopping destination; and LSC in particular is a fashion and department store-led established comparison goods shopping destination. The shopping centre is anchored by large branches of House of Fraser, Marks & Spencer and Debenhams, with an extensive range of supporting clothing & fashion retailers, ranging from budget to upmarket. The retail parks also have a good representation of national retailers, and whilst this is principally 'bulky goods' in nature there is a shift towards 'town centre'-format retailers establishing a trading presence here; for example Lakeside Retail Park includes representation from Next, Sports Direct and Costa Coffee, whilst Junction Retail Park has TK Maxx and 'outlet' stores from Marks & Spencer and Gap.

3.10.4 LSC has benefited from recent improvements to its food and drink offer in this respect through the creation of an exterior family dining destination overlooking the central lake. There are a number of coffee shops located in LSC, and drive-through restaurants in the vicinity of the retail parks. Lakeside offers extensive family entertainment and dining options (all of which are run by national multiple operators). This is designed to complement the retail offering and reinforce LSC's role as a comprehensive retail and entertainment venue. Restaurant operators within the shopping centre include Las Iguanas, Nandos, Strada, Café Rouge, Giraffe and

Wagamama. Elsewhere in the centre there are branches of Pizza Hut, Yo Sushi, Gourmet Burger Kitchen and Taco Bell.

3.10.5 However Lakeside scores poorly in terms of representation in other service sector categories, such as banks/building societies, hair & beauty salons, travel agents and dry cleaners. This reflects Lakeside's current role as a comparison goods shopping-led destination, rather than a 'traditional' town centre.

Chelmsford

3.10.6 Chelmsford is a strong regional shopping destination, with good representation from national retailers, and a significant civic, cultural and leisure destination. We expect Chelmsford to reinforce its position as a regional-level shopping centre with the recent commencement of construction of a new retail and leisure development in the city centre. The development will be anchored by a John Lewis department store, alongside 25 further retail outlets, a cinema and new restaurants. The scheme is expected to commence trading in 2015.

3.10.7 Chelmsford has a number of national hotel chains present within the town centre and the edge of centre. This includes the budget chain Travelodge as well as 2 hotels operated by Best Western. Chelmsford also has an 8-screen Odeon cinema with the independent Chelmsford City Theatres screening additional art house films as well as being the city's main live music and theatre venue. Additional family entertainment includes the 36 lane, Tenpin bowling alley. The facility includes a pool hall, a laser tag room and a café. Chelmsford has a strong representation of national multiple restaurant operators in the town centre. This includes representation from Pizza Express, Prezzo, Pizza Hut, Zizzi's, Café Rouge, Giraffe and Nandos.

Brentwood

3.10.8 Brentwood is the main town in the borough of Brentwood and is defined as a town centre in the Brentwood Local Plan. The centre has a good convenience goods provision, which includes a Sainsbury's, Co-op and Iceland as well as independent specialist retailers. The comparison goods offer is also adequate, with a reasonable provision of clothing and footwear retailers, including small branches of Marks & Spencer and Next. The retail provision in the centre is supported by a good provision of services uses, including a range of coffee shops and restaurants such as Starbucks and Zizzi. National restaurant operators in the town centre include Nandos, Pizza Express, Prezzo and Chimichanga.

Dagenham

3.10.9 Dagenham is classified as a district centre in both the London Plan (2011) and the Barking and Dagenham Core Strategy. The town centre appears to cater primarily for local needs especially day to day convenience shopping. The high street has a significant number of hot food take away units and convenience shops. The presence of national multiple retailers is generally low though there a few exceptions such as Lidl's, Iceland and Tesco Express. The Heathway Shopping Centre contains additional retail outlets though they are general mid to down market. These outlets include Phones 4U, Boots, Peacocks, 99p Store and Wilko. There appear to be few leisure amenities available within the district centre.

Basildon

3.10.10 Basildon is defined as a regional town centre in the emerging Basildon Borough Local Plan. The centre has a good diversity of uses, with a mixture orientated towards comparison goods retailers. Clothing and fashion retailers are principally concentrated in the Eastgate Centre, with key department stores including Marks & Spencer and BHS in Town Square. There is also a large Asda supermarket and a popular market. While retail diversity is strong, the town centre offers very limited leisure and evening economy options – a fact that is noted in the

representations made to the council on its emerging Core Strategy consultation. The Towngate Theatre is the only cultural venue within the town centre and there is a noticeable absence of family dining options.

Stratford

3.10.11 Stratford is designated as a Major Centre in the Newham Core Strategy (2012) and in the 2011 London Plan (though the 2014 Further Alterations draft of the London plan promotes Stratford to a Metropolitan Centre with considerations in place to prompting it to an International Centre in future). The retail offer at Stratford is dominated by the Westfield Stratford City Development. The shopping centre is offers a wide, high quality mix of retail and leisure amenities in a modern, good quality environment. In all there are over 300 retail units – anchored by Marks and Spencer, Waitrose and John Lewis in addition to High Street brands such as Zara, Uniqlo, the Kooples, Topman/ Topshop and Hugo Boss. Stratford also features a high number of fast food and casual dining options and a cinema. There are also three low to mid-range hotels present within the development.

Ilford

3.10.12 Ilford is designated as a Metropolitan Centre in the London Plan (2011). Retailing in Ilford town centre is mainly focused around the High Road and the Exchange Shopping Centre. The retail offer in the shopping centre is generally mid to down market. Anchor tenants at the Exchange Shopping Centre include Debenhams, Marks and Spencer, Wilco and TK Maxx. Additional retailers include Peacocks, the 99p Sore and Deichmann's. Elsewhere in the town centre there is retailer representation from Argos, Sainsbury's, and Primark. The town centre also has a modest restaurant offer and a cinema. Ilford High Street appears to benefit from a pleasant built environment.

4 Existing Shopping Patterns

Read this section alongside:
- Volume 2, Appendix B (Study Area plan)
- Volume 2, Appendix C (Quantitative retail need tables - Tables CM1 to CM5 and CV1 to CV5)
- Volume 3 (Household survey results)

4.1 Introduction

4.1.1 In this section we set out where residents in the Borough are currently undertaking their spending on convenience (food), comparison (non-food) and leisure goods, establishing how much is spent at centres in the Borough and how much 'leaks' to destinations further afield. We also set out the study area which has been used as the basis of our assessment, and assess the extent of growth in spending on retail and leisure goods which can be expected to come forward over the course of the study period.

4.1.2 The findings of this section are informed by a household telephone survey of shopping and leisure patterns, which was undertaken by NEMS Market Research during August / September 2014. The NEMS data is provided in full at **Volume 3** to this study. The approach to these studies is described in full below.

4.2 Definition of Study Area

4.2.1 In order to establish where residents in different parts of the Borough are currently undertaking their retail and leisure spending, it is necessary to firstly define a study area; and secondly split this study area into zones in order for a sufficiently fine-grain of analysis of spending patterns to be provided. The highest order centre in Havering, Romford, is identified as a Metropolitan Centre in the London Plan, and our health check assessment of the town centre has confirmed that it has a strong retail and leisure trade draw. Accordingly it can be expected that Romford can be expected to draw trade from an area wider than the administrative boundaries of the Borough. We have therefore adopted a study area which extends beyond these boundaries, reflecting what we consider to be a 'natural' catchment for Romford, having regard to competing surrounding centres. The study area thus extends into parts of LB Barking & Dagenham; LB Redbridge, as well as the Essex boroughs of Epping Forest and Brentwood. LB Havering is included in its entirety.

4.2.2 Figure 4.1[13] shows the boundaries of the study area we have adopted for the purposes of our study; these are largely unchanged from the Council's previous study, although we have extended the study area eastwards to cover the Brentwood / Shenfield urban area (this forms a new zone, zone 11). Figure 4.1 also shows how the study area has been sub-divided in order to get an accurate indication of spending patterns for residents in different parts of the Borough, and shows a total of five survey zones, as follows:

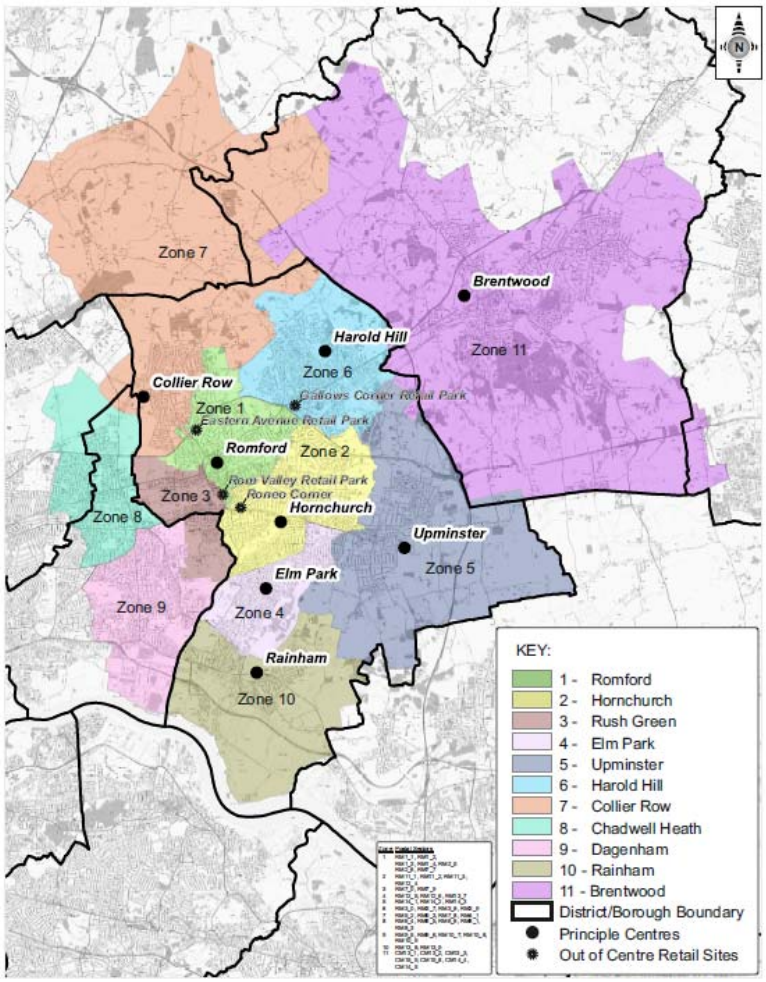
[13] A larger version of the plan shown at Figure 4.1 is provided at **Appendix B**

Table 4.1 - List of Study Area Zones

Zone	Zone name		Zone	Zone name
Zone 1	Romford		Zone 7	Collier Row
Zone 2	Hornchurch		Zone 8	Chadwell Heath
Zone 3	Rush Green		Zone 9	Dagenham
Zone 4	Elm Park		Zone 10	Rainham
Zone 5	Upminster		Zone 11	Brentwood
Zone 6	Harold Hill			

4.2.3 We therefore use these study zones as the basis of our assessment in the remainder of this report. The zones which contain all or parts of the administrative area of LB Havering are zones 1 to 7 inclusive, and zone 10. Therefore, reflecting the nature of this study as an evidence base document for the Council – it is in these zones which we focus our attention.

Figure 4.1 - Study Area



4.3 Current and Future Spending in the Study Area

4.3.1 Appendix C (Volume 2) sets out the growth in population and expenditure on comparison and convenience goods in the study area, over the study period to 2031. Table CM1 (for comparison goods) and Table CV1 (for convenience goods) both show that:

- The study area population at 2014 is 442,231 persons
- This will increase to 462,169 persons by 2017; 488,678 persons by 2021; 520,315 persons by 2026, 563,975 persons by 2029, and 547,846 persons by 2031 (ONS Population Projections).
- This is equivalent to a growth in population of 105,615 persons.

4.3.2 **Table CM2** shows the per capita expenditure on comparison goods across the study area. Annual personal spending on comparison goods differentiates quite considerably across the study area, ranging from £1,925 in zone 9 (Dagenham), to £3,695 in zone 11 (Brentwood) at 2014. The average per capita expenditure on comparison goods for LB Havering zones is £2,987.

4.3.3 **Table CM3** multiples the population forecasts in **Table CM1** to the per capita expenditure forecasts in **Table CM2**. It shows that, having made allowance for 'special forms of trading' (such as online shopping, and using SFT discount rates set out in Experian Retail Planner Briefing Note 12), there is currently £1,182.80m of comparison goods expenditure available to residents in the catchment area. This will increase over the course of the study period as shown in **Table 4.2**.

Table 4.2 - Comparison goods expenditure growth in study area

Interval	2014	2017	2021	2026	2029	2031
Total comparison goods expenditure, inc SFT deduction (£m)	1,191.69	1,375.51	1,603.71	2,005.09	2,285.28	2,493.22

Source: Table CM3, Appendix C

4.3.4 **Table CV3 of Appendix C** multiplies the population forecasts in **Table CV1** (which are identical to those presented in **Table CM1**) to the per capita spending on convenience goods shown in **Table CV2**. Per capita spending on convenience goods ranges from £1,569 in zone 9 (Dagenham) to £2,236 in zone 5 (Upminster) at 2014. The average per capita expenditure on convenience goods for LB Havering is £1,976. Having made allowance for SFT, **Table CV3** shows that total convenience goods expenditure will increase as shown in **Table 4.3.**

Table 4.3 - Convenience goods expenditure growth in study area

Interval	2014	2017	2021	2026	2029	2031
Total convenience goods expenditure, inc SFT deduction (£m)	808.18	840.80	899.19	979.38	1,025.53	1,055.39

Source: Table CV3, Appendix C

4.4 Patterns of Comparison Goods Spending

4.4.1 The household survey identifies where residents in the study are currently undertaking their shopping. **Table CM4 (Appendix C)** sets out where residents are undertaking their comparison goods shopping in percentage form, and **Table CM5** converts these percentages into monetary values, by applying the percentages in **Table CM4** to the total expenditure figures in **Table CM3**.

4.4.2 Of importance is the proportion of expenditure which is retained within the study area, as it is this proportion which is used to inform our estimates of future retail capacity. The row 'total for study area' in **Table CM5** shows that, of the total £1,191.69m which is available to residents in the study area, £780.22m is retained by centres and stores within the study area, with the remaining £411.47m 'leaking' to destinations outside the study area. In other words, the study area retains 65% of total comparison goods expenditure available. The results of the household survey confirm that most of the remaining expenditure 'leaks' to Lakeside, a short distance outside the boundaries of the study area; we return to discuss this further below.

4.4.3 Table CM5 identifies that within the study area:

- **Romford metropolitan centre** draws a total of £374m comparison goods turnover from the study area, equivalent to 31% of total comparison goods expenditure, and – as would be expected – is the most popular destination for comparison goods spending in the study area by some margin;
- There are a number of **retail parks** in Romford which compete with the town centre for expenditure. In total these retail parks (Gallows Corner, Eastern Avenue and other smaller developments) account for £125m of spending;
- **Brentwood** is the second most popular destination for comparison goods spending in the study area, drawing £86m of spending, although virtually all of this comes from residents in the Brentwood zone, with little evidence of expenditure flows from residents in LB Havering;
- Similarly, **Dagenham** draws £40m of spending, but this is largely from residents outside Havering;
- **Hornchurch** is the second most popular comparison goods shopping destination within LB Havering, drawing £32m of spending, and the centre draws trade from a number of zones across the study area.
- **Upminster** attracts a slightly lower turnover of £28m, although proportionally more of its turnover comes from its local catchment, compared to the wider trade draw of Hornchurch;
- The comparison goods turnover of **Rainham** of £15m is largely accounted for by the presence of a Tesco Extra supermarket;
- **Elm Park** and **Harold Hill** do not act as significant comparison goods shopping destinations, drawing turnovers of £3m and £5m respectively.

Expenditure Leakage

4.4.4 The remaining £411.47m of comparison goods expenditure is spent at destinations outside the study area, with most popular destination by some margin being Lakeside, which accounts for £261m of spending, equivalent to 22% of total available comparison goods expenditure — therefore making Lakeside the second-most popular comparison goods shopping destination for residents in the study area. Trade is drawn to Lakeside from each of the 11 survey zones,

but it is noteworthy that for residents in parts of LB Havering, Lakeside is a closer or equidistant comparison goods shopping destination than Romford metropolitan centre.

4.4.5 Elsewhere, £23m of comparison goods expenditure is spent in central London, £27m in Basildon (mostly from residents outside LB Havering), £19m is spent in Stratford, East London (including at Westfield Stratford City), £19m at Bluewater, and £18m in Ilford.

Spending Patterns by Zone

4.4.6 Clearly, spending patterns are not uniform across the study area. **Table 4.4** summarises where residents in each part of the study area are undertaking their comparison goods spending. This helps to determine the extent of catchment areas of individual centres within the study area.

Table 4.4 - Summary of Comparison Goods Spending Patterns by Zone

Zone	Principal comparison goods shopping destinations	Summary of patterns of spending
Zone 1 Romford	Romford metropolitan centre (£67m); Lakeside (£11m); Gallows Corner Retail Park (£6m)	▪ Of the £112m comparison goods expenditure available to residents in the zone, £81m is spent in Romford — split between £67m in the town centre, and the remainder in retail parks and other destinations. The town centre therefore attracts a good level of support from residents who live in the local area, and also appears to be withstanding pressure from competing retail park developments. ▪ Most of the remaining expenditure is accounted for by Lakeside (£11m) and the Tesco Extra store at Bryant Avenue, Romford (£5m). ▪ There are limited expenditure flows to Hornchurch and Upminster (£2m each).
Zone 2 Hornchurch	Romford metropolitan centre (£51m); Lakeside (£43m); Hornchurch (£13m)	▪ Of the £163m comparison goods expenditure available to residents in the zone, £79m is spent in Romford, including £51m in the town centre. It is the most popular comparison goods shopping destination for residents in this zone. ▪ Romford faces stronger competition from Lakeside, which draws £43m of spending from residents in this zone. ▪ Hornchurch itself only attracts £13m of comparison goods spending, reflecting its limited function as a comparison goods shopping destination. ▪ £5m of spending goes to central London, the most from any individual zone.
Zone 3 Rush Green	Romford metropolitan centre (£24m); Lakeside (£4m); Eastern Avenue Retail Park (£3m)	▪ Of the £42m comparison goods expenditure available to residents in the zone, £31m is spent at stores in Romford, including £24m in the town centre. There is no other centre competing for expenditure to any significant degree, although there are some modest flows to Lakeside (£4m). Romford therefore enjoys a dominant position over residents' spending patterns in this zone.
Zone 4 Elm Park	Lakeside (£25m); Romford metropolitan centre (£24m); Hornchurch (£8m)	▪ There is £82m of comparison goods expenditure available to residents of this zone, which is largely split evenly between Romford metropolitan centre (£24m) and Lakeside (£25m). ▪ A further £8m is spent at retail parks in Romford. ▪ Hornchurch also attracts £8m of spending from residents in zone 4, the highest turnover it draws from any zone other than its 'local' zone (zone 2).
Zone 5 Upminster	Lakeside (£47m); Upminster (£14m); Romford	▪ There is £95m of comparison goods expenditure available to residents in this zone. Romford does not draw significant amounts of trade in comparison to Lakeside, which draws £47m

	metropolitan centre (£10m)	of spending. ▪ By contrast Romford draws £15m, including £10m to the town centre. ▪ Upminster town centre draws £14m of spending, which is considered to represent a reasonable performance given the comparison goods offer of the centre is largely restricted to day-to-day uses. ▪ A further £4m of spending goes to Hornchurch, and £4m to Bluewater Shopping Centre.
Zone 6 Harold Hill	Romford metropolitan centre (£37m); Gallows Corner Retail Park (£15m); Lakeside (£15m)	▪ Of the £95m comparison goods expenditure available, Romford accounts for £57m and is the most popular comparison goods shopping destination. The town centre draws £37m of spending, and Gallows Corner Retail Park also draws £15m of spending. ▪ Lakeside also draws £15m of spending from this zone. ▪ Harold Hill is the only centre in this zone. Our health check analysis has confirmed this is not a major comparison goods shopping destination but it nevertheless draws £3m of spending from residents in the zone. ▪ No other destinations draw significant amounts of comparison goods spending.
Zone 7 Collier Row	Romford metropolitan centre (£47m); Eastern Avenue Retail Park (£11m); Gallows Corner Retail Park (£9m)	▪ There is £92m of comparison goods expenditure available to residents in this zone, and Romford accounts for the majority (£71m) of this spending, with £47m spent in the town centre. ▪ Gallows Corner and Eastern Avenue Retail Parks draw £9m and £11m of spending respectively.
Zone 8 Chadwell Heath	Romford metropolitan centre (£57m); Lakeside (£10m); Ilford (£10m)	▪ There is £127m of comparison goods expenditure available to residents in this zone. Romford is again the most popular destination for comparison goods shopping, attracting £68m of turnover, with the vast majority of this (£57m) accounted for by the town centre. ▪ The remaining spending is split between a number of other destinations including Lakeside (£10m), Ilford (£10m), Goodmayes' retail parks (£8m), Dagenham (£6m) and central London (£5m).
Zone 9 Dagenham	Romford metropolitan centre (£35m); Dagenham town centre (£30m); Lakeside (£28m)	▪ The £120m comparison goods expenditure available to this zone is relatively equally between three destinations: Romford metropolitan centre (£35m), Dagenham town centre (£30m) and Lakeside (£28m). There are also limited flows of expenditure to retail parks in Romford, and also in Beckton.
Zone 10 Rainham	Lakeside (£30m); Rainham (£9m); Romford metropolitan centre (£8m)	▪ Of the £53m of comparison goods expenditure which is available to residents in this zone, the majority of spending is accounted for by Lakeside (£30m), which is geographically in closer proximity to many residents than shopping facilities in Romford. ▪ Reflecting this, Romford attracts only £9m of spending from this zone, of which £8m is spent in the town centre. ▪ £9m of expenditure also flows to Rainham, chiefly to the non-food offer in the Tesco Extra store.
Zone 11 Brentwood	Brentwood (£81m); Lakeside (£39m); Basildon (£27m)	▪ Zone 11 covers an extensive geographical area, with £210m of comparison goods spending available to residents in the zone. Brentwood town centre accounts for the greatest proportion of spending (£81m), but there are also significant expenditure flows to Lakeside (£39m), Basildon (£27m) and Chelmsford (£10m). ▪ Centres in LB Havering attract some expenditure from this zone, with Romford drawing £24m of spending in total, including £14m to Romford metropolitan centre and £8m to Gallows Corner.

Source: Table CM5, Appendix C

4.4.7 From our analysis, it can be seen that Romford draws trade from across the study area. Using the household survey results we can define a 'core catchment' and 'secondary catchment' of Romford metropolitan centre, as shown in Table 4.5. From the 'core catchment' zones, Romford does not face any significant competition for expenditure and thus enjoys a dominant trading position. From the 'secondary catchment' zones, Romford metropolitan centre remains an important comparison goods shopping destination for many residents, but faces a greater degree of competition for expenditure from other locations in the surrounding network of centres.

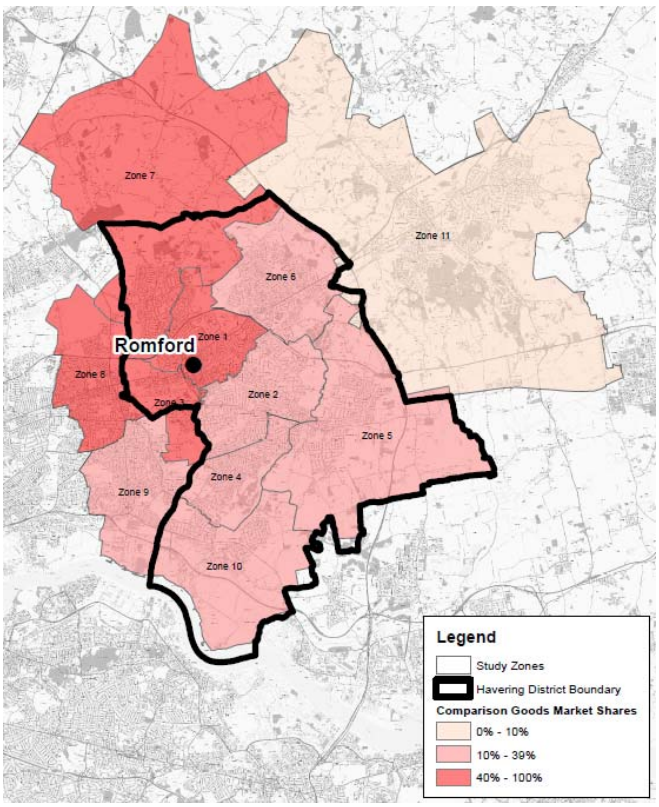
Table 4.5 - Romford Core and Secondary Catchment Area

Romford metropolitan centre core catchment area (market share 40%+)		**Romford metropolitan centre secondary catchment area (market share 10-39%)**	
Zone	**Market share %**	**Zone**	**Market share %**
Zone 1 (Romford)	60%	Zone 2 (Hornchurch)	31%
Zone 3 (Rush Green)	56%	Zone 4 (Elm Park)	28%
Zone 7 (Collier Row)	51%	Zone 5 (Upminster)	11%
Zone 8 (Chadwell Hth)	45%	Zone 6 (Harold Hill)	39%
		Zone 9 (Dagenham)	29%
		Zone 10 (Rainham)	16%

Source: Table CM4, Appendix C

4.4.8 The findings of Table 4.4 are shown visually in Figure 4.2.

Figure 4.2 - Comparison Goods Market Share of Romford Metropolitan Centre



Source: Table CM4, Appendix C

4.4.9 For the most part, the retail parks in Romford do not act as significant competition to the town centre. However their contribution to their spending patterns is not insubstantial – when aggregated, Romford's retail parks account for a 24% market share from zone 7, a 20% market share from zone 6, a 19% market share from zone 3, a 17% market share from zone 2, and a 12% market share from zone 1, enough for them to act as 'secondary' shopping locations in each of these zones.

4.4.10 The remaining centres in the Borough do not generate significant market shares as they are not higher-order comparison goods shopping destinations. Nevertheless Hornchurch acts as a secondary shopping destination for residents in zone 4 (market share 10%), and Upminster for residents in zone 5 (market share 15%). Rainham also attracts a 16% market share from its 'local' zone (zone 10), largely on account of the strong non-food offer within the large Tesco Extra store. Beyond their immediate zones, the trade draw attracted to each of the district centres is generally limited.

4.5 Patterns of Convenience Goods Spending

4.5.1 The household telephone survey also assessed patterns of convenience goods shopping across the study area. Convenience goods shopping is generally a more localised activity, although residents are sometimes prepared to travel further afield if they have preference for a particular supermarket brand. It is apparent that there is a good network of foodstores across the Borough, including provision in Romford metropolitan centre and the district centres.

4.5.2 **Table CV5 of Appendix C** shows that of the £808.18m convenience goods expenditure which is available to residents of the study area, the vast majority - £749.85m, or 93% - is retained within the study area. Clearly this represents a high level of expenditure retention and suggests that for the most part, residents' shopping needs are being provided for at the local level.

4.5.3 A more useful analysis is to look at 'local' retention rates – i.e. how much of the expenditure available to residents in each of the five survey zones is actually spent in those survey zones, or whether residents are travelling longer distances to undertake their convenience goods shopping. The 'localised' retention rate can be seen in Table CV4, by looking at the row 'sub-total' for each survey zone. Table CV4 shows that:

- **Zone 1 (Romford)** has a localised retention of 64%, and most of this is accounted for by the Asda and Sainsbury's stores in Romford metropolitan centre. The majority of the rest of the market share is directed to the large Tesco Extra stores at Hornchurch (Roneo Corner) and Romford (Bryant Avenue) which are a short distance outside the zone boundary. We do not therefore consider the retention rate for central Romford represents cause for concern.

- **Zone 2 (Hornchurch)** has a localised retention of 69%, with the Tesco and Sainsbury's stores both attracting good levels of support from local residents. Other residents shop in nearby stores in Romford (Sainsbury's and Asda in the town centre, or the Tesco Extra store at Bryant Avenue), or Aldi in Upminster.

- **Zone 3 (Rush Green)** has a localised retention rate of 7%, as there are no major centres or foodstores in this zone. Most residents travel the short distance to Romford or Hornchurch to meet their convenience goods shopping needs, although notwithstanding this there may be a deficiency of smaller-format convenience goods provision within this area.

- **Zone 4 (Elm Park)** has a higher localised retention rate of 21% on account of the presence of the Tesco supermarket at Airfield Way, which, whilst relatively limited in size, does enable some residents' shopping needs to be met. The majority of residents prefer to travel to larger stores further afield however, chiefly to the Tesco Extra store in Rainham and the nearby Sainsbury's in Hornchurch. Zone 4 contains Elm Park district

centre, but as this is only served by small c-store format supermarkets, does not result in a particularly high localised retention rate.

- **Zone 5 (Upminster)** has a localised retention rate of 58%, with the majority of this accounted for by the Aldi and Waitrose supermarkets in Upminster district centre. Both of these supermarkets are relatively small in size. Outside the zone, the most popular destination for convenience goods shopping is Sainsbury's in Hornchurch.

- **Zone 6 (Harold Hill)** has a localised retention rate of 67%, largely accounted for by the presence of the Tesco Extra store at Bryant Avenue, which draws almost half of all convenience goods spending for this zone. Foodstores in Romford attract a market share of 18% from this zone.

- **Zone 7 (Collier Row)** has a localised retention rate of 26%, which is mostly accounted for by the Tesco Metro store within the district centre, and it is clear this store has a dominant influence over shopping patterns in the zone. Foodstores in zone 1 (Romford) attract a market share of just under 50% from this zone, with the Aldi supermarket at Marlborough Road attracting a 22% market share. The Tesco Extra store at Bryant Avenue (zone 6) also attracts a market share of 17%.

- **Zone 8 (Chadwell Heath)** has a localised retention rate of 48%, aided by the presence of two large supermarkets within the zone (Tesco Extra in Goodmayes, and Sainsbury's in Chadwell Heath). 15% of residents undertake their food shopping in Romford, and 20% travel to stores in Dagenham.

- **Zone 9 (Dagenham)** has a localised retention of 63%, of which approximately half is accounted for by the Asda store in Dagenham. Residents in this zone do not look towards stores in Havering to any significant extent, with the exception of some modest flows of expenditure to stores in Rainham and Hornchurch.

- **Zone 10 (Rainham)** retains 53% of convenience goods expenditure, chiefly on account of the Tesco Extra store in Rainham district centre. 17% of expenditure flows to Dagenham, 10% to Romford and 9% to Hornchurch.

- **Zone 11 (Brentwood)** is largely self-contained in terms of convenience shopping patterns but some residents travel to the Tesco Extra store at Bryant Avenue as this operator is not represented with a large-format store in Brentwood.

4.5.4 The fluctuations in the localised retention rates are not, in themselves, cause for concern, given the dense urban nature of much of the study area which means that many zones only cover a small geographic area and that, in practice, travelling to a foodstore in a neighbouring survey zone is not a lengthy trip. However, there are also instances where they may point to a local deficiency, and therefore we have regard to these localised retention rates in developing our strategic recommendations.

4.5.5 Drawing the above analysis together, **Table 4.6** summarises the most popular convenience goods shopping destinations by zone. The stores with attract a 'dominant' market share (over 30% from any one zone) and a 'secondary' market share (10 to 30%) are highlighted. It can be seen that in zones 1 to 5, residents benefit from the choice of a number of large supermarkets, and therefore all of the most popular destinations attract secondary levels of market share. In zones 6, 9, 10, and 11, one supermarket exerts a dominant influence over shopping patterns, indicating that in these areas consumer choice is more limited.

Table 4.6 - Most Popular Convenience Goods Destinations

	Most popular convenience shopping location	Second-most popular convenience shopping location	Third-most popular convenience shopping location
Zone 1	Tesco Extra, Bryant Avenue (17%)	Sainsbury's, The Brewery (16%)	Asda, Mercury Gardens (12%)
Zone 2	Tesco Extra, Roneo Corner (29%)	Sainsbury's, Hornchurch (27%)	Asda, Mercury Gardens (9%)
Zone 3	Tesco Extra, Roneo Corner (26%)	Sainsbury's, The Brewery (16%)	Asda, Mercury Gardens, (11%)
Zone 4	Tesco, Airfield Way, Elm Park (21%)	Tesco Extra, Rainham (21%)	Sainsbury's, Hornchurch (15%)
Zone 5	Aldi, Upminster (25%)	Waitrose, Upminster (15%)	Tesco Extra, Bryant Avenue (8%)
Zone 6	Tesco Extra, Bryant Avenue (45%)	Iceland, Harold Hill (8%)	Asda, Mercury Gardens (6%)
Zone 7	Tesco Metro, Collier Row (21%)	Tesco Extra, Bryant Avenue (17%)	Asda, Mercury Gardens (10%)
Zone 8	Sainsbury's, Chadwell Heath (23%)	Tesco Extra, Goodmayes (16%)	Morrisons, Becontree Heath (11%)
Zone 9	Asda, Dagenham (35%)	Morrisons, Becontree Heath (8%)	Tesco Extra, Rainham (5%)
Zone 10	Tesco Extra, Rainham (44%)	Asda, Dagenham (8%)	Tesco Express, Rainham (8%)
Zone 11	Sainsbury's, Brentwood (48%)	Other foodstores, Brentwood (20%)	Tesco Extra, Bryant Avenue (7%)

Source: Table CV4, Appendix C

4.5.6 Having identified where residents in the study area are currently undertaking their shopping, the next step of the study is to assess the quantitative need for additional retail floorspace, and we consider this in the following section.

5 Need for Retail Floorspace

Read this section alongside:
- Volume 2, Appendix C (Quantitative retail need tables)
- Volume 2, Appendix D (Quantitative retail need methodology)
- Volume 2, Appendix E (Summary of technical inputs)

5.1 Introduction

5.1.1 In the previous section we set out the current patterns of retail spending in the study area, based on the findings of the household telephone survey of shopping patterns. Having considered this, in this section we set out the 'need' for additional retail floorspace over the course of the study period to 2031, having regard to both quantitative capacity forecasts (**sections 5.3 to 5.5**) and qualitative observations (**section 5.6**). At the outset we emphasise that capacity forecasts should be subject to regular review throughout the Council's Plan period, in order to ensure an up-to-date evidence base which is based on accurate economic and market trends. We also advise that longer-term quantitative forecasts set out in this assessment (post-2021) should be treated as indicative.

5.1.2 We therefore firstly consider the quantitative need for retail floorspace in the Borough over the study period. Our assessment is based on a standard methodology (see **Appendix D of Volume 2** for a summary of our approach), and is based on up-to-date empirical forecasts.

5.1.3 The quantitative need forecasts are derived from the total amount of comparison and convenience goods expenditure which is retained within the Borough. In the previous section we have identified the total amount of expenditure which is retained within the study area — but for the purposes of our quantitative forecasts this needs to be adjusted further to remove those parts of the study area which are outside the administrative boundaries of the Borough. Therefore, for the purposes of our quantitative need assessment, we adopt the total expenditure retained within zones 1 to 7 (inclusive) and zone 10 as these most closely align with the administrative boundaries of the Borough. **Table 5.1** summarises the expenditure retention from these zones, relative to that of the wider study area.

Table 5.1 - Summary of Expenditure Retention

	Expenditure retained within study area (£m)	Expenditure retained within study area (%)	Expenditure retained within LB Havering (Zones 1-7 & Zone 10)	Expenditure retained within LB Havering (Zones 1-7 & Zone 10)
Comparison goods	780.22	65%	624.01	52%
Convenience goods	749.85	93%	501.35	62%

Source: Table CM5, Table CM6, Table CV5, Table CV7, Appendix C

5.1.4 Therefore the purposes of our assessment we adopt the retention rates shown in the final column of **Table 5.1** – i.e. 52% for comparison goods and 62% for convenience goods. We assume that these retention rates will remain unchanged over the study period for the purposes of our 'baseline' assessment, but for the comparison goods capacity forecasts we also assume that there is scope for Romford to further improve its market share over the course of the study period, in line with its designation as a Metropolitan Centre. We return to discuss this below.

5.2 Claims on Expenditure

5.2.1 We have set out in the previous section that 'special forms of trading' such as online shopping is removed from our baseline expenditure forecasts, in line with current forecasts of growth in this sector set out in Experian's Retail Planner Briefing Note 11. The total expenditure figures summarised in **Table 5.1** make allowance for this.

5.2.2 In addition to SFT there are two further claims on expenditure growth which need to be taken into account in our capacity projections: commitments to new retail floorspace (which are schemes under construction at the time of the household survey, or extant planning permissions which would result in additional retail floorspace); and sales density growth (which is the growth in turnover for existing retailers within the study area).

Commitments to New Retail Floorspace

5.2.3 From monitoring data provided to us by the Council, we have identified two schemes which benefit from planning permission for new retail floorspace — the redevelopment of the former Romford Ice Rink at Rom Valley Way, Romford, to form a Morrisons supermarket, and the mixed-use redevelopment of the former Decathlon store at Angel Way, Romford, which includes residential, food & drink and hotel uses, as well as both comparison and convenience goods floorspace. In **Table 5.2** we set out the floorspace and estimated turnover of these commitments, which informs our capacity forecasts.

Table 5.2 - Commitments to New Retail Floorspace

	Comparison goods floorspace		Convenience goods floorspace	
	Net sales area (sqm)	Turnover, 2017	Net sales area (sqm)	Turnover, 2017
Morrisons, Rom Valley Way, Romford	752	4.27	3,008	36.17
Former Decathlon, Angel Way, Romford	762	5.58	1,172	14.69
Total	**1,514**	**9.84**	**4,180**	**50.86**

Source: Table CM7, Table CV7, Appendix C

Sales Density Growth

5.2.4 Sales density growth (also known as floorspace productivity growth) is the amount of expenditure which is 'ring fenced' for existing floorspace to improve its turnover each year. Allowances for sales density growth are linked to expenditure growth; **Table 5.3** summarises the expenditure growth rates we have used for the purposes of our assessment. It should be noted that, owing to the low forecast levels of expenditure growth for the convenience goods sector, we do not forecast any sales density growth in this sector until 2016 onwards.

Table 5.3 - Sales Density Growth Rates

	Comparison goods sales density growth (% per annum)	Convenience goods sales density growth (% per annum)
To 2016	1.7%	0%
2016 onwards	1.7%	0.3%

Source: Table CM6, Table CV7, Appendix C

5.2.5 This is a blanket sales density growth for all floorspace across the Borough. Inevitably, different types of floorspace have different ability to absorb expenditure growth – relatively modern floorspace (for example much of that in Romford metropolitan centre, and to a lesser extent the larger district centres) is better equipped than older property stock (for example some of the stock in secondary areas of Romford metropolitan centre). Given this is a Borough-wide study, a blanket approach is considered robust.

5.3 Over-Trading of Floorspace

5.3.1 'Over-trading' refers to the both the performance of centres and stores within a catchment when related to 'benchmark' (i.e. expected) turnovers, as well as more qualitative indicators such as overcrowding and congestion in stores. It is therefore both a quantitative and qualitative indicator of need.

5.3.2 Quantitatively, for comparison goods floorspace, we do not consider it appropriate to make allowance for the over-trading of town centre floorspace. For convenience goods floorspace, we have undertaken a detailed trading assessment of each of the principal foodstores across the Borough (principally foodstores with a net sales area upwards of 500 sqm, or those with a significant turnover from their local zones), and compared their trading performance with an expected 'benchmark' turnover (that is, the turnover the store would be expected to achieve if trading at company average turnover per sqm rates). Although this exercise is reliant on the use of operator average data in terms of the split between convenience and comparison goods floorspace within the stores (except in some stores where we have adjusted this based on our own estimate of sales mix from having visited the stores), and is based on national average sales densities, it nevertheless provides a robust, and industry-accepted, method of assessing current trading performance.

5.3.3 Our assessment of foodstore trading performance is set out at **Table CV6 of Appendix C**. This shows that, on aggregate, foodstores across the Borough are presently trading strongly, with a handful of foodstores trading significantly in excess of company average levels. **Table CV6** shows that:

- Foodstores in the Romford Central area are trading, on aggregate, at about £8m above average. Whilst it would appear that the Asda store at Mercury Gardens is trading strongly, this is counterbalanced by the Sainsbury's store at The Brewery which appears to be under-trading by a similar amount; the two largely cancel each other out. The Aldi store at Marlborough Road is also trading strongly, at about £13m above company averages.

- All foodstores in zone 2 (Hornchurch) are trading at above benchmark levels, with the Tesco Extra store at Roneo Corner trading at £17m above average, and Sainsbury's in Hornchurch trading at £9m above average. In total foodstores in this zone are trading at £32m above average.

- The Aldi store in Upminster (zone 3) appears to be trading very strongly, at three times the company average. The Waitrose and Marks & Spencer Simply Food stores within Upminster District Centre both appear to be trading at just below company average levels.

- The Tesco Extra store at Bryant Avenue is another store which is trading very strongly, at above £26m above its benchmark level. The Tesco Metro store in Collier Row is also trading well, at about £11m above average.

- The Tesco Extra store in Rainham appears to have a trading performance more aligned to company average levels, but nevertheless trades at £4m above benchmark.

5.3.4 **Table CV6** shows that on aggregate foodstores across the Borough are over-trading at approximately £97.6m above company average levels – we therefore factor this trading performance into our capacity assessment.

5.4 Comparison Goods Needs Assessment

5.4.1 Drawing the above inputs together, **Table CM6 of Appendix C** shows the quantitative need for additional comparison goods floorspace in the Borough over the study period to 2031, based on current shopping patterns, and making allowance for sales density growth as discussed above. The table is structured as follows:

- **Row A** shows the total population of the study area at the interval years of 2014, 2017, 2021, 2026, 2029 and 2031.
- **Row B** shows the total comparison goods expenditure available to the study area at the same interval years.
- **Row C** shows the proportion of comparison goods expenditure which is retained within centres within LB Havering, which, as shown in Table 5.1, amounts to 52% of total comparison goods expenditure. This is shown in monetary terms in **Row D**, at the base year of 2014 and equivalent figures for each of the interval years under a 'no development' scenario (i.e. assuming that current shopping patterns remain unchanged over the duration of the study period);
- **Row E** shows the amount of expenditure which 'leaks' to destinations outside the District, and is the product of Row B minus Row D;
- **Row F** and **Row G** show in percentage terms (Row F) and monetary terms (Row G), the amount of inflow into the Borough. We have made no allowance for inflow of expenditure into our capacity forecasts and therefore these rows remain blank.
- **Row H** shows the total comparison goods turnover of destinations in the Borough (i.e., the retained expenditure, plus the inflow). This is held constant over the study period to 2031, and the growth in retained expenditure (the 'initial surplus') is shown in **Row I.** Row I therefore shows that by 2017 there will be £96.26m of surplus comparison goods expenditure in the SA, and by 2031 we forecast this figure to increase to £681.53m.
- **Rows J and K** summarise the 'claims' on comparison goods expenditure, as summarised in **Section 5.2** and **Section 5.3.** Row J shows that sales density growth accounts for £32.37m by 2017 and £207.08m by 2031. Row K shows that the comparison goods commitments discussed above amount to a 'claim' of £9.89m at 2017 and we increase the turnover of these in line with sales density growth rates. **Row L** is a summary of Rows J and K.
- **Rows M to R** finally summarise the surplus expenditure capacity available in the SA for new comparison goods floorspace, and convert this expenditure to physical floorspace requirements:
  - **Row M** shows the 'initial surplus' of comparison goods expenditure which is available to the District over the period to 2031 (as per Row I)
  - **Row N** then subtracts the total 'claims' on capacity (as per Row L)
  - **Row O** shows the residual expenditure, in monetary terms, which is available to support new comparison goods floorspace. There is a positive residual for each of the interval periods – so there is surplus capacity to support new floorspace for each interval period.

- **Row P** shows the sales density, i.e. the turnover per sqm, which is used to translate the residual expenditure to a floorspace requirement. For the purposes of our assessment we have used a turnover of £7,000 per sqm at 2014, which increases in line with our sales density growth estimates, to £9,323 per sqm by 2031. As the majority of the comparison goods floorspace in the Borough is accounted for by Romford metropolitan centre, which is a higher-order metropolitan centre and therefore likely to be the focus for future comparison goods development, it is appropriate to allow for a reasonably high sales density when calculating the scope for new floorspace.

- **Row Q** shows the net comparison goods floorspace for the Borough, by applying Row O to Row P. Finally, using a gross:net ratio of 70%, **Row R** translates the net requirements to a gross figure.

5.4.2 In **Table CM7 of Appendix C**, we test the comparison goods floorspace requirements which would arise if centres in the Borough were able to achieve an uplift in the amount of expenditure which is retained over the course of the study period, from the current retention rate of 52% to 57% by the end of the study period in 2031. Whilst a 5 percentage points uplift may not, on paper, seem a significant amount, Table CM7 shows that it delivers a significantly larger floorspace requirement than under the 'constant market share' scenario. Any uplift in floorspace will be related to the ability of Romford to deliver quality new comparison goods retail floorspace, reflective of its role as a Metropolitan centre. Given the aspirations of Lakeside for its own centre, we consider that any aggregate uplift over and beyond the 5 percentage points will be difficult to achieve.

5.4.3 For ease of reference, **Table 5.4** summarises the quantitative need for additional comparison goods as identified in **Table CM**6 and **Table CM7 of Appendix C**. The requirements summarised in **Table 5.4** are cumulative, and are based on the assumption that current patterns of shopping will remain unchanged for the duration of the study period.

Table 5.4 - Summary of Comparison Goods Need to 2031

Interval	2017	2021	2026	2029	2031
Comparison goods floorspace req't (sqm net) – static retention	7,300	16,100	*32,000*	*42,300*	*49,500*
Comparison goods floorspace req't (sqm net) – increasing retention	7,300	21,500	*38,200*	*54,000*	*62,000*

Source: Table CM6, Appendix C. Figures are cumulative. Figures in italics are indicative.

5.4.4 Therefore, the Council should make provision for between 16,100 and 21,500 sqm net additional comparison goods floorspace in the period to 2021, and indicatively between 49,500 and 62,000 sqm net by 2031. These figures should be kept under regular review throughout the study period.

5.5 Convenience Goods Needs Assessment

5.5.1 **Table CV7 of Appendix C** sets out the quantitative requirements for additional convenience goods floorspace for the Borough over the study period to 2031. The structure of the table follows that of **Table CM6**, so we do not repeat our description of the steps here. There is an additional row in the table (Row O) which builds in the trading performance of existing foodstores into the capacity projections, in order to take into account the over-trading of the foodstores across the Borough which we have identified above.

5.5.2 **Table 5.5** summarises the quantitative convenience goods floorspace requirements, and identifies that, based on the current shopping patterns and trading performance of foodstores, there is a quantitative need for 7,500 sqm net additional convenience goods floorspace by 2021, increasing to an indicative requirement of 13,200 sqm net by 2031. This represents a quantitative need over the course of the study period, some of which should be developed in line with our qualitative recommendations (see below). On account of the strong Borough-wide retention rate, we do not test an 'increasing retention' requirement for convenience goods floorspace.

5.5.3 It should be noted that the requirement decreases between 2014 and 2017 as by 2017 the two extant planning commitments for new convenience goods floorspace have been taken into account in by 2017 (albeit it is appreciated that they might not be fully completed or occupied by 2017).

Table 5.5 - Summary of Convenience Goods Need to 2031

Interval	2014	2017	2021	2026	2029	2031
Convenience goods floorspace req't (sqm net)	7,300	5,200	7,500	*10,600*	*12,200*	*13,200*

Source: Table CV7, Appendix C. Figures are cumulative. Figures in italics are indicative.

5.6 Qualitative Need Assessment

5.6.1 Both the NPPF and the PPG are silent on the weight to be attached to qualitative retail floorspace needs, and how such needs should be assessed. We therefore revert back to the guidance in the preceding CLG Practice Guidance, which advises that qualitative factors to take into account include identifying gaps in local provision; consumer choice and competition; over-trading; 'location-specific issues', and quality of existing provision. Below we therefore present a discussion of these criteria, which largely overlap with one another, informed by our health check assessments of the town centres (**Section 3**) and our review of the current patterns of shopping (**Section 4).**

Qualitative Comparison Goods Needs

5.6.2 Gaps in provision are ultimately subjective; what one particular shopper may consider a gap in provision may not be of particular concern to another. Ultimately, centres need to be able to meet as many day-to-day shopping needs of local residents as possible, to help minimise expenditure leakage and promote sustainable patterns of shopping.

5.6.3 Our health check assessment and the results of the household survey indicate that Romford metropolitan centre generally does a good job of meeting residents' comparison goods shopping needs. It draws a strong market share from 10 of the 11 survey zones, and is the dominant comparison goods shopping destination for four of those zones. Its influence over shopping patterns lessens in the southern half of the study area as residents in these areas benefit from good proximity to Lakeside. As our study has identified, Lakeside has ambitious plans for further enhancement of its retail offer over the course of the Council's plan period, including the transformation of the shopping centre and adjacent developments into a fully-fledged 'town centre'. Each of the 11 survey zones loses market share to Lakeside, ranging from 8% (zones 7 and 8) to 58% (zone 10). Romford cannot be complacent therefore; ongoing upgrading of its retail offer – including the modernisation of existing floorspace – will need to take place throughout the Plan period to ensure it retains its popularity as a comparison goods shopping destination.

5.6.4 The Liberty Centre sets a good benchmark for the type of shopping development which modern retailers seek to locate in. The units are generally large, the shopping environment is welcoming, and the centre is well-connected with the surrounding retail offer and public

transport networks. The older parts of the Liberty Centre (such as Stewards Walk) appear dated however. Despite not being relatively old, Mercury Mall does not offer the same quality retail environment, and this is reflected by a weaker tenant mix (although the presence of Asda is an important 'anchor' store). There are a good number of 'anchor' stores located throughout the town centre which help to disperse footfall across a wide area.

5.6.5 South Street, whilst historically the main thoroughfare, is in need of investment and upgrading of many of its units, in order to remain competitive and an integral part of the town centre. Some of the units in this location are low-grade retail and other uses (such as amusement arcades, pawnbrokers and so on) which do not reflect the primary shopping frontage allocation of this area. Many units are on the small side. The improvement in the quality of the retail offer along the pedestrianised section of South Street is therefore considered to represent both a priority and an opportunity for the Council over the course of the study period in order to cement Romford's currently-strong trading position; whilst we have not assessed land ownership in this area, it is considered that amalgamation of units to increase their attractiveness to the retail market should be reviewed as an option.

5.6.6 The Brewery is a positive addition to the town centre through its provision of larger-format retail units, but does turn its back on the centre to a large extent. Better integration of this development would be beneficial – particularly because the extensive car parking which serves this site is likely to represent the principal opportunity for the town centre in the future (we return to discuss this later in the report).

5.6.7 The fashion offer of Romford metropolitan centre is good, with a healthy representation of mid-market retailers such as Gap, H&M, Next and so on. There is little to distinguish the retail offer from that of competing centres, and the attraction of a greater variety of mid-to-upper market retailers to the centre (examples might include Zara, Pull & Bear, Urban Outfitters and Lakeland) will help to 'shore up' the retention rate in the medium to long term and fend off the risk of further market share being lost to Lakeside. Generally speaking, retailer demand is linked to quality of provision; with the development of modern, larger-floorplan retail floorspace (which could involve the modernisation / amalgamation of existing retail premises), we would expect that there is scope for further retailers to be attracted to the town centre, particularly if opportunities are provided within/adjacent to the existing primary shopping area.

5.6.8 We have established that the district centres in Havering do not act as significant comparison goods shopping destinations in their own right. However, they play an important role in meeting local shopping needs and therefore their function as comparison goods shopping destinations should continue to be supported. Indeed, there is considerable difference in the offer of the larger district centres – Hornchurch and Upminster – with smaller centres such as Elm Park. Hornchurch seems to draw trade from a moderate catchment area. These centres do not compete with Romford (and Lakeside) per se, but rather offer a complementary role. There are gaps in the retail offer – none of the centres have particularly strong clothing & footwear provision for example — but unless the Council wishes for the centres to operate at a higher position in the District's retail hierarchy, we would not expect this situation to significantly change over the course of the study period.

5.6.9 The main opportunity for the district centres lies with the opportunity to create a more specialist retail offer which offers an alternative to the national multiples-focused offer in Romford metropolitan centre. There is scope for Hornchurch to further develop this role, building on its existing strengths as a leisure-based destination.

5.6.10 A further constraint to the district centres significantly altering their role and function is a lack of suitable sites for significant expansion of their retail offer. Whilst we are aware of potential opportunity sites in Hornchurch, other centres are generally quite constrained in terms of their ability to accommodate a substantial amount of retail floorspace (i.e. of the scale which would change their role and function as a district centre). We therefore expect these centres to operate with incremental improvements to their retail offer coming forward, which should be

supported by the Council providing they are of an appropriate scale in relation to the role and function of the centre in question.

5.6.11 For all centres, reflecting national planning guidance, any new development should be directed towards town centres in the first instance.

Qualitative Convenience Goods Needs

5.6.12 The household survey confirms that the Borough is served by a good network of foodstores, with Romford metropolitan centre and surrounding urban area particularly well served for. The household survey also confirms that the existing network of foodstores are, for the most part, trading strongly, with the majority of stores trading above company average levels – significantly so, in some cases. The identified over-trading in itself is an indication that there is pent-up demand for additional provision.

5.6.13 Romford metropolitan centre has two large foodstores anchoring the western and eastern ends of the town centre – Sainsbury's at The Brewery, M&S at the Liberty and and Asda at Mercury Mall. There are also Aldi and Lidl discount supermarkets and smaller c-stores. The offer in this part of the study area will be further enhanced through the development of a Morrisons supermarket on the site of the former Romford Ice Rink, which will provide further consumer choice and competition. Having regard to this outstanding permission, we do not consider there to be a qualitative need for additional convenience goods provision in the vicinity of Romford metropolitan centre.

5.6.14 Upminster is served by three supermarkets within the district centre boundary (Waitrose, Aldi and Marks & Spencer Simply Food), and whilst none of the stores are especially large, they are considered to be of a scale which will enable many residents' top-up and larger shopping needs to be met. The Aldi store is trading very strongly, but the Waitrose and M&S stores – both of which are in slightly peripheral locations within the centre boundary – are performing less well. We do not consider there to be a pressing need for further provision in this area.

5.6.15 Similarly, Hornchurch district centre offers Sainsbury's and Iceland supermarkets, and whilst the former is the only large supermarket in the town centre (and is over-trading) and thus occupies a monopolistic position over shopping patterns in the town centre, realistically we are not aware of any opportunity sites which could accommodate comparable-sized provision. The out-of-centre Tesco Extra store is also trading strongly, but given the identified constraints, we would expect future provision in Hornchurch town centre to be smaller-sized c-store developments.

5.6.16 There are qualitative opportunities in some of the smaller district centres. Elm Park is only served by small convenience stores, and would benefit from some larger-format provision (in terms of a medium-format supermarket, up to 1,000 sqm net), ideally located within or adjacent to the district centre, to reduce expenditure leakage to Hornchurch and Rainham. Similarly, Harold Hill has limited provision at present – although we are aware that there is an undetermined planning application for a Lidl foodstore in this area. In Rainham, there is a lack of consumer choice and the household survey results confirm that the Tesco Extra store occupies a monopolistic position over shopping patterns in this part of the Borough. We do not consider there to be an urgent requirement for additional provision in Collier Row.

5.7 Summary of Retail Need

5.7.1 Our capacity assessment has identified a need for the following amounts of floorspace:

- **Comparison goods:** between 16,100 and 21.500 sqm net additional comparison goods floorspace by 2021, increasing to between 49,500 sqm net and 62,000 sqm net by 2031.

- **Convenience goods:** up to 7,500 sqm net by 2021, increasing to 13,200 sqm net by 2031.

5.7.2 Our qualitative assessment identifies that, for comparison goods shopping provision, there is a need to improve the quality of the retail stock in Romford metropolitan centre in order to 'future proof' the town centre and protect its role and function as a Metropolitan Centre, and in the first instance the focus for this improvement needs to be South Street, where modernisation and amalgamation of units to create larger-format developments should be considered a priority. Improvements to the quality of the retail provision should in turn assist in diversifying the quality of the retail offer, and a key aspiration of the Council should be to seek the attraction of more middle/upper-middle-order comparison goods retailers to the centre in the short-to-medium term.

5.7.3 We do not consider there to be a pressing qualitative need for additional provision elsewhere in the Borough. However there is scope for the diversity of uses in all of the smaller centres to be improved, and therefore in instances where applications come forward which seek to provide additional comparison goods floorspace, they should be supported provided they are suitably located and are of an appropriate scale.

5.7.4 Turning to qualitative convenience goods needs (which have no specific timescale), when assessing current provision within centres and the patterns of shopping identified in the household survey, we consider that:

- There is no requirement for any additional large-format foodstore provision within or in the vicinity of Romford metropolitan centre, or Upminster district centre;
- There is a requirement for additional provision within or on the edge of Hornchurch district centre (if a suitable site can be identified) to improve consumer choice and reduce the over-trading of the existing foodstores in the area;
- There is a requirement for provision of a small to medium-sized foodstore in the Elm Park area (indicatively up to 1,000 sqm net), which should if possible be located within or adjacent to the district centre;
- There is a requirement for an additional small to medium sized foodstore in the Harold Hill area which should be locate within or adjacent to the district centre.
- There is a requirement for additional foodstore provision in the Rainham area to improve consumer choice and assist in meeting the future growth needs of this area;
- There is no qualitative requirement for additional provision in the Collier Row area.

6 Need for Commercial Leisure Floorspace

Read this section alongside:
- Volume 2, Appendix F (Summary of technical inputs)
- Volume 2, Appendix G (Quantitative leisure tables)

6.1 Introduction

6.1.1 In this section we provide a summary of the scope for additional commercial leisure and other town centre uses which can be supported in the study area. Our findings are informed by an assessment of the growth of expenditure on leisure goods spending which is expected to come forward in the study area over the period to 2031, supported by the findings of the household survey of shopping and leisure patterns, as discussed previously in the report. We have also taken into consideration of findings from the previous Retail and Commercial Leisure Study (2012). The comments set out in this section should be read in conjunction with the leisure capacity quantitative tables set out at **Appendix G to Volume 2**.

6.2 Expenditure Growth in the Leisure Services Sector

6.2.1 Experian provide 2012-based per capita spending on the following key commercial leisure sectors:

- Accommodation services (e.g. hotels, room hire);
- Cultural services (e.g. cinema, theatre, museums, tv subscriptions);
- Games of chance (.e.g. lottery, bingo, bookmakers);
- Hairdressing salons and personal grooming / beauty establishments;
- Recreational and sporting services; and
- Restaurants and cafes

6.2.2 By applying the per capita figure to the projected population growth in the study area, the amount of total expenditure growth in each of these sectors can be identified. This is summarised in **Table 6.1**.

Table 6.1 - Growth in Commercial Leisure Sectors to 2031

	Spending, 2014 (£m)	Spending, 2021 (£m)	Spending, 2029 (£m)	Spending, 2031 (£m)	Growth in spending, 2014-31 (£m)
Accommodation services	50.57	61.75	74.89	78.39	27.82
Cultural services	115.16	140.88	171.03	179.02	63.86
Games of chance	54.37	66.66	81.01	84.81	30.43
Hairdressing & beauty	35.19	42.90	51.99	54.41	19.22
Recreational & sporting services	55.00	67.14	81.43	85.23	30.23
Restaurants & cafes	423.75	518.07	628.77	658.14	234.39

Source: Table LC3, Appendix G.

6.2.3 Table 6.1 shows that the majority of growth in the commercial leisure sector will come forward in the restaurants and cafes category, which will experience growth of over £234m over the course of the study period. Spending in cultural services and games of chance will increase by £64m and £30m respectively. There is therefore significant opportunity for centres in Havering to capitalise on this growth of expenditure, building on and enhancing what is, in the Borough's largest centres, already a generally good level of representation from commercial leisure operators.

6.2.4 Whilst 60% of those surveyed do most of their household's fashion shopping in Romford, linked trips are uncommon, with only 38% of those surveyed combining shopping with other activities.

6.2.5 As with the retail sector, it is possible to assess patterns of commercial leisure spending through the household survey of spending patterns which was undertaken in support of this study. An estimate of the quantitative need for new food & drink floorspace can also be forecast.

6.3 Restaurants and Cafes

Existing Provision

6.3.1 The food and drink offer varies from centre to centre across the Borough. Generally, the smaller centres have a high provision of A5 (fast food and takeaways) and a smaller proportion of restaurants, cafes (A3) and drinking establishments (A4). Romford, as would be expected, has the highest number of café and restaurant uses as well as the highest diversity of these uses in terms of the range of options available.

Romford

6.3.2 As a metropolitan centre Romford has a good provision of A3 and A5 uses. In total there are 67 A3 and A5 units within the centre, with good representation from national restaurant and fast food chain operators. This includes fast food operators such as KFC, McDonalds, Burger King and Subway as well as a number of casual dining, family oriented options including Frankie & Bennie's, Toby Carvery, Pizza Express, Zizzi and Nandos. National multiple operators within Romford are principally located within the primary retail frontage and the Liberty (mostly cafes) and the Brewery (where there is a broader mix in the vicinity of the cinema). It was generally felt that the first floor leisure uses at The Brewery are poorly integrated with the rest of the shopping centre and the wider town centre. There is noticeably

high number of hot food take-aways within parts of the town centre – especially in the peripheral shopping areas i.e. along North Street, London Road, southern end of South Street and Victoria Road. In all, we assed Romford's offer to be fairly basic as it mainly addressed the budget family and core youth markets. The centre could benefit from a higher quality of restaurants.

6.3.3 The branded coffee shop offer in Romford metropolitan centre includes two Starbucks outlets at the Brewery and The Liberty Shopping Centre and 3 Costa Coffee outlets located – one located within the Brewery and the remaining two located in the town centre.

6.3.4 Romford also has a good number of drinking (A4) establishments within the town centre, mostly concentrated around the South Street area, where there are also three nightclubs.

6.3.5 Reviewing the findings of the household survey, of those residents who stated they spend money on visiting restaurants, 34.1% of Zone 1 residents spend money on restaurants within Romford metropolitan centre. Romford's appeal extends beyond the immediate area however, with the town centre also drawing market share from 28.5% of Zone 3 residents, 28.2% of Zone 9 residents and 27.6% of Zone 7 residents. Indeed, the centre attracts a significant amount of spend from all zones except Zone 11 (where residents prefer to use facilities in Brentwood) – this largely reflects the trends seen in retail spending patterns. Expenditure on cafes and pubs is similarly consistent: 35.4% of Zone 1 residents spend their money on cafes and drinking establishments within Romford. As with restaurants, Romford attracts a significant amount of spend from neighbouring zones, including Zone 3 (28.1%), Zone 8 (23.3%) and Zone 6 (20.0%).

Hornchurch

6.3.6 The food and drink offer in Hornchurch is strong for a centre of its size and when considering its defined role and function as a district centre. In total there are 30 restaurants and take away facilities within the district centre, of which nine are A5 uses. National operators represented in the district centre include casual dining mid-range operators such as Zizzi, Ask, Chimichanga, Nandos and Prezzo. The fast food offer includes KFC, McDonalds, Wimpy and Subway. Café operators Starbucks and Costa Coffee complete the offer. There are seven pubs and bars within the centre.

6.3.7 49.5% of Zone 2 residents and 40.3% of Zone 4 residents spend money on restaurants within Hornchurch. Hornchurch also attracts expenditure from surrounding zones including 29.5% of Zone 3 residents and 19.6% of Zone 10 residents. The expenditure on cafes and drinking establishments in Hornchurch is broadly similar to the expenditure on restaurants. 44.9% of Zone 4 residents, 40.8% of Zone 2 residents and 19.7% of Zone 10 residents visit cafes and bars within Hornchurch. Given its role and function as a district centre we consider these to represent good levels of market share attraction and confirmation that Hornchurch plays an important role as an evening destination.

Upminster

6.3.8 Upminster has a total of 29 A3 and A5 units within the district centre. The number of hot food takeaways within the district centre is high. While the centre has a fairly high number of restaurants and cafes, the offer is narrow and mostly consists of Chinese, Indian and Italian restaurants. National restaurant operators present within the town centre include Prezzo and Pizza Express while the fast food offering is represented by Subway, Wimpy and Papa John's Pizza as well as an extensive number of independent operators. Finally café operators within Upminster include Costa Coffee and Café Nero. Upminster also has two pubs within the town centre. Restaurants in Upminster have a localised catchment area with 50.6% of Zone 5 residents spending the most amount of money within the district centre but limited trade is drawn from beyond this. 48.2% of Zone 5 residents spent money on cafes and bars within the centre but again results from other zones are negligible. Nevertheless the results indicate that Upminster is doing respectable job of meeting local commercial leisure needs.

Collier Row

6.3.9 Collier Row has 16 A3 and A5 units. The bulk of the food and drink offer is dominated by hot food takeaways. There are only two restaurants within the district centre. National operators present within the centre are Pizza Hut and Domino's Pizza, both of which are takeaways. The rest of the fast food and restaurant offer is given over to independent operators. Collier Row has no cafes but it does have a pub. Only 5.6% of Zone 7 residents spend money on restaurants in Collier Row. The centre does not attract any spending from residents of the surrounding zones. For expenditure on cafes and drinking establishments, only 12.3% of Zone 7 residents use facilities in the district centre. Again, Collier Row does not attract any spending from residents in the surrounding zones.

Harold Hill

6.3.10 Harold Hill has five A3 and A5 units within the centre. There are no national restaurant or café operators within the centre. The offer includes two takeaway restaurants, two cafes and a restaurant. The centre has no drinking establishments. The centre only attracts 1.6% of spending from residents in Zone 10, and small amounts from neighbouring zones. Cafes and drinking establishments within the centre attract 3.1% of the resident's expenditure in Zone 7 and 2.3% in Zone 6. Provision in the district centre can thus be considered to be limited.

Rainham

6.3.11 Rainham has a total of seven A3 and A5 units within the town centre, of these 4 are A5 units. The only national restaurant operator is Pizza Hut. The centre also has three pubs. In terms of expenditure on restaurants 12.7% of Zone 10 residents spend money within the centre. There is also limited spending from residents of Zone 4 (1.0%) and Zone 9 (1.4%). 12.4% of residents of Zone 10 spent money on pubs and cafes within Rainham followed by Zone 4 (1.2%) and Zone 3 (0.6%).

Elm Park

6.3.12 Elm Park has a total of 17 A3 and A5 units within the centre. The town centre is dominated by independent takeaways, the only national multiple operator is Dominos. According to the telephone household survey, there is very limited spending on A3 and A5 uses in Elm Park. However, 3.38% of Zone 10 residents spent money on bars and pubs in the centre.

Growth in Spending

6.3.13 Compared to retail, food and drink spending is much more mobile, due to the trend for people to travel longer distances to socialise, and since there are no constraints connected with transporting goods to the home. **Table 6.2** sets out the extent of expenditure retention of destinations in LB Havering.

Table 6.2 - Summary of Retention of Food and Drink Spending in Study area

	Spending, 2014 (£m)	Spending, 2014 (%)
Total spending in LB Havering	230.60	54%
Total spending at centres outside LB Havering	193.15	46%
Overall total	423.75	100%

Source: Table LC6, Appendix G

6.3.14 On aggregate therefore, centres in LB Havering retain 54% of the total food and drink spending which is available to the study area. The main competition for expenditure for the Borough is Lakeside, Dagenham, and Brentwood, with the latter exerting considerably more influence over spending patterns in the study area for food and drink spending than it does for retail spending. Reflecting the ease of access which much of the Borough benefits from into central London, and the strength of the offer in this location, it is not surprising to see many residents of the Borough choose to direct their spending to facilities here. The figures need to be considered in the context of the fact that people tend to spend more on food and drink when they are visiting destinations (for example, on a day trip). Therefore, we would not expect the study area to retain 100% of available expenditure — but nevertheless we consider there to be some scope for improvement in the level of expenditure retention over the course of the study period.

6.3.15 In **Appendix G**, we set out summaries of spending patterns on the two different types of food and drink spending:

- **Table LC4** shows the market shares for spending on restaurants (with and without survey responses for 'don't know / don't undertake this type of activity'); and
- **Tables LC5** shows the market shares for spending in pubs, bars, cafes and coffee shops.

Indicative Need for Additional Provision

6.3.16 As set out above, there is a total of £423.75m of expenditure available to residents in the study area for spending on food and drink in 2014. Table LC3 of Appendix G shows that this will increase to £518.07m in 2021 and £658.14m in 2031. We have estimated that 54% of this expenditure is retained by facilities within LB Havering, and we therefore use this retention rate as the basis for calculating an indicative floorspace requirement for A3, A4 and A5 floorspace. As with the retail capacity forecasts, we advise that forecasts beyond 2021 are considered indicative. The capacity forecasts shown in Table 6.3 apply to development in use classes A3, A4 and A5.

Table 6.3 - Indicative A3, A4 and A5 Floorspace Need to 2031

Interval	2017	2021	2026	2029	2031
Food & drink floorspace req't (sqm gross)	3,200	6,400	*10,800*	*13,400*	*15,100*

Source: Table LC6, Appendix G. Figures are cumulative/rounded. Figures in italics are indicative.

6.3.17 Table 6.3 shows that there is a requirement for 6,400 sqm gross additional food & drink floorspace by 2021, increasing to an indicative requirement of 15,100 sqm gross by 2031. Reflecting the existing hierarchy of centres, we would expect identified requirements in the first instance to be directed towards Romford metropolitan centre where, whilst there an existing reasonable level of representation in the town centre, it is largely concentrated in one area (The Brewery and to a lesser extent South Street) and further diversification of the range and quality of restaurant uses in particular would benefit the wider vitality and viability of the town centre. The current offer largely focuses on the family market. Therefore, there is potential to support additional floorspace within the town centre, especially where outdoor seating is possible, for example at Market Place – which according to the Needs Assessment is "not currently fulfilling its potential as a large public space".

6.3.18 Diversification of the commercial food & drink offer could be achieved in Upminster town centre, where there is a slight over-reliance on take-away restaurants at present. However, we appreciate that Hornchurch is likely to be meeting some of Upminster's needs due to the close proximity of the centres. Further provision in Hornchurch would help solidify what is

already a strong offer and this should be supported given Hornchurch's well-established role as an evening destination, although we are not aware of any sites within the district centre which could accommodate a significant amount of floorspace. Any additional provision should not undermine the more important requirement to deliver additional floorspace and qualitative improvements to Romford metropolitan centre.

6.3.19 Elsewhere, we would expect development to be more limited – but supportable, provided it was within or well-related to existing centres, and of an appropriate scale. The development of commercial leisure facilities at the Borough's network of out-of-town retail sites should be resisted.

6.4 Cinema and Theatre provision

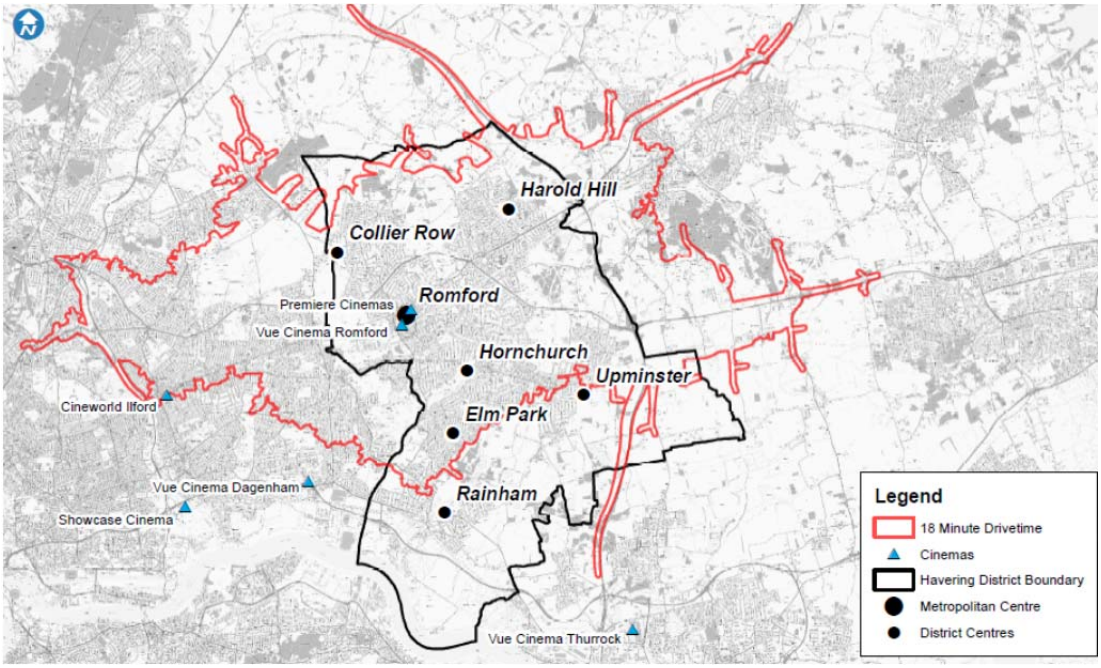
6.4.1 The Borough has two cinema facilities which are both located within Romford metropolitan centre. The first is a 16 screen cinema operated by Vue Cinemas at The Brewery. The second is an eight screen facility operated by budget operator, Premier Cinemas at the Mercury Mall Shopping Centre.

6.4.2 According to the results of the household survey, both cinemas attract a good level of support from across all zones, although the significantly bigger Vue cinema attracts the highest proportion of visits on aggregate: 36.5% of Zone 2 residents, 30.3% of Zone 3 and 25.2% of Zone 1 residents visited Vue Cinema. The cinema also attracts good levels of support from residents in all other zones. The Premier Cinema, whilst smaller, attracts 24.0% of visits from Zone 1 residents, 23.2% of Zone 3, 18.0% of Zone 6 and 17.8% of Zone 4.

6.4.3 Key locations outside the Borough which residents look to include the Vue cinemas in Dagenham and Lakeside, as well as facilities in central London. Furthermore, there is a cinema planned at Brentwood which would impact on the cinema spending patterns.

6.4.4 Cinema operators make use of 'screen density' in order to make decisions on expansion or where to locate cinemas. In Havering the total number of screens from both cinema facilities is 24. Clearly, Havering's cinema trade is not restricted to the Borough's administrative boundaries. If we assess cinema provision within an 18-mnute drive time (Figure 9), then the population within this catchment area is 454,292, representing a screen density of 5.3 screens per 100,000 people, compared to a UK average of 6.0 screens per 100,000.

Figure 6.1 - Cinema Provision within and surrounding LB Havering



6.4.5 This would suggest that – whilst not pressing – there is likely to be a need for additional cinema capacity over the course of the study period. When looking at the location of existing facilities within and surrounding the Borough, the qualitative gap in provision is in the vicinity of Hornchurch / Upminster, and the delivery of an appropriately-sized cinema facility one of these centres would help to further diversity uses and encourage patronage throughout the daytime and evening. We would envisage that should a cinema come forward in these locations, it would be of the specialist / independent operator nature (which would also address a qualitative deficiency of this type of facility in the Borough). Operators such as Curzon and Picturehouse are increasingly looking towards smaller centres to provide localised, small scale (two to three screen) developments, and there may be scope for such a development to be accommodated in this part of the Borough.

6.4.6 Over the longer-term, aligned with the growth agenda within and outside the Borough, consideration may also need to be given to provision to serve the Rainham area.

6.4.7 The Borough also has two theatres, Queens Theatre in Hornchurch and Brookside Theatre in Romford. Both theatres host a variety of shows including plays, pantomimes, musicals and music concerts. The Brookside Theatre attracts 2.5% of the market share from Zone 5 and 2.0% of Zone 7 residents. Queens Theatre however attracts a wider audience and as such is the Borough's main theatre provision. 5.1% of Zone 4 residents, 3.7% of Zone 7 and 3.0% of Zone 5 residents visited the Queens theatre. The Queens Theatre also attracts modest support from the surrounding zones except Zone 11. Patronage to theatre facilities is, as a rule, considerably more limited than to cinemas, and we consider that current provision in the Borough is sufficient.

6.5 Gym & Leisure Centres

6.5.1 There are 15 gyms and leisure facilities located within the Borough. The location and type of activity on offer is outlined in **Table 6.4**.

Table 6.4 - Gym & leisure centre provision in LB Havering

Gym/ Leisure Centre	Location	Type	Facilities
Central Park Leisure Centre	Harold Hill	Public	Swimming pool, fitness suite, spa, indoor courts, outdoor spots area, crèche, group exercise studios
Chafford Sports Complex	Rainham	Public	2 swimming pools, sports hall, fitness suites, outdoor playing fields, group exercise studios
Hornchurch Sports Centre	Hornchurch	Public	2 swimming pools, sports hall, fitness suite, group exercise studios, café, crèche, squash courts
Go30	Romford	Private	Fitness suite, beauty therapy, café, group exercise studios
Virgin Active Romford	Romford	Private	Fitness suite, swimming pool, café, crèche, spa, group exercise studio
Fitness First Romford	Romford	Private	Fitness suite, group exercise, spa, group exercise studio, sauna
LDG Fitness Centre	Romford	Private	Fitness suite, group exercise, martial arts/ boxing
Better Gym Romford	Romford	Private	Fitness suite, group exercise studios
Ab Salute Gym Romford	Romford	Private	Fitness suite, group exercise studio
Abbs Cross Health and Fitness Centre	Elm Park	Private	Swimming Pool, fitness suite, group exercise studios, sports hall, playing fields
YMCA Romford	Romford	Private	Fitness suite, group exercise studios
Infitness Gym	Upminster	Private	Fitness suite
Girls Allowed Gym	Hornchurch	Private	Fitness suite, group exercise studios
Gymophobics	Hornchurch	Private	Fitness suite, group exercise studios
David Lloyd Gidea Park	Romford	Private	Indoor and outdoor swimming pools, group exercise studios, sports hall, café

Source: PBA desktop research, October 2014

6.5.2 Spending on health and fitness appears to be localized — i.e. residents visited the leisure or gym facility closest to them. Romford is a notable exception. The centre attracted visitors to its gym and leisure facilities from all zones, with visitors perhaps using health and fitness facilities in association with other uses in the centre. 25.1% of Zone 3 residents and 24.7% of Zone 1 residents spent money in health and fitness facilities in Romford. Due to the number of gyms present within Romford, the centre also attracts some expenditure from all other zones.

6.5.3 The Business in Sport and Leisure (BISL) handbook 2009) states that 12% of the UK population has a gym membership. The resident population of the borough is 242,000 (ONS Sub-National Projections, 2012). Assuming that gym memberships are in line with the national average, then there are a total of 29,040. As detailed in Table 6.4 above there are 15 major health and fitness facilities in Havering. This gives an average of 1,936 members per facility.

6.5.4 The BISL handbook states that in March 2008 there were 5,775 private facilities with a membership of 7.2 million members. This gives an average of 1,251 members per facility. In this regard the average number of members per facility in Havering is significantly higher than

the national average. This in turn indicates that there is a need in the short to medium-term for additional facilities.

6.5.5 From our headline assessment the current facilities are generally of good to high quality. The council-owned Chafford Sports Complex and Hornchurch Sports Centre offer a wide range of facilities and activities. While the majority of health and fitness facilities are privately-operated we are aware that the council intends to improve the sports and fitness offer in the Borough through the development of a new leisure centre in Romford. Currently Romford has no swimming pool. The new facility will include an ice rink (to replace the Romford Ice Arena), a swimming pool, a fitness suite and group exercise studios.

6.5.6 From our assessment it is apparent that there is a lack of private health and fitness facilities in the southernmost part of the Borough, particularly around Rainham. We would expect residents elsewhere to look towards the network of facilities in Romford, Hornchurch and Upminster.

6.6 Family Entertainment

6.6.1 'Family entertainment' (which includes facilities such as ten-pin bowling and ice-skating) provision in the Borough is mostly focused around the Romford area. There are two bowling facilities within the borough; the first is in Romford and the second on the outskirts of the Borough near Collier Row. The Namco Funscape facility is located within the Brewery, and offers ten pin bowling, a pool hall and dining facilities. The second bowling facility, Rollerbowl is located within the City Pavilion complex, a purpose-built leisure complex located between Chadwell Heath and Hainault, which includes a 34-lane bowling alley, a bar and restaurant.

6.6.2 Havering's sole ice rink the Romford Ice Arena closed in April 2014 to make way for a new Morrisons supermarket which is currently under construction. The granting of planning permission for the new Morrisons was aligned to the delivery of a modern replacement facility within Romford metropolitan centre, which is more centrally-located and will assist in bringing footfall into the town centre. The replacement facility will also include a competition-length swimming pool, gym and other facilities, and therefore will be a significant improvement on the offer which it is replacing.

6.6.3 The results of the household survey identify Romford as the most popular family entertainment destination. Romford attracted visits from residents in all zones most notably 39.4% of Zone 1 residents, 37.0% of Zone 3 residents and 33.0% of Zone 4 residents.

6.7 Games of Chance

6.7.1 Compared to other commercial leisure facilities discussed in this report, games of chance (such as bingo and gambling) are a fairly niche activity. Indeed, based on the results of the household survey, the vast majority of Borough residents do not participate in these activities.

6.7.2 There are two main bingo halls in the borough. Both facilities are operated by Mecca Bingo and are located in Romford and Hornchurch. Romford's facility attracts market share from a number of zones including Zone 3 (6.5%), Zone 2 (3.2%), Zone 1 (3.2%) and Zone 9 (4.9%). Hornchurch's facility attracts market share from a number of zones including Zone 4 (5.6%), Zone 2 (5.3%) and Zone 5 (2.9%). According to the household survey results, it was evident that Dagenham was the principal competing out-of-borough centre for games of chance particularly for residents located to the south of Havering. Dagenham has a large bingo hall, again operated by Mecca Bingo. Dagenham mainly attracted residents from Zone 9 (6.4%) and Zone 10 (5.7%).

6.8 Hotel Provision

6.8.1 Hotel provision in the borough varies from small inns and guesthouses to national hotel chains though the offer predominantly consists of independently owned and operated accommodation. The offer generally falls towards the budget end of the spectrum. The hotel operators present in Havering are budget hotel chains Travelodge and Premier Inn.

6.8.2 Romford has five hotels within and around the town centre including a Travelodge and two Premier Inn's. The Travelodge is located in Market Place, and has 242 rooms. In keeping with the "budget" business model, the hotel has comparatively few facilities. Premier Inn has two hotels in the Borough – Premier Inn Romford Central and Premier Inn Romford West. Premier Inn Romford West has 88 rooms and is located on Whalebone Lane North on the edge of the Borough, adjacent to the A12 at Chadwell Heath (and is thus some distance from any of the Borough's defined centres), while Premier Inn Romford Central has 196 rooms and is located in the town centre within Mercury Gardens. While similarly priced, Premier Inn's Romford hotels do have on site restaurants which distinguish them from Travelodge's offer.

6.8.3 A major mixed use hotel, retail and residential development was granted planning permission though appeal in November 2009. The development will be located at Angel Way Retail Park and includes a 63 bedroom hotel. This development is yet to commence, and we are not aware whether an operator has been secured. While planning permission for the development has lapsed, the developer has recently applied for an extension of time limit. The application is yet to be decided by the Council.

6.8.4 Rainham hosts the Borough's only other chain hotel. Premier Inn Rainham is located on New Road, some distance outside the urban area near the village of Wennington. The Premier Inn in Rainham is similar to the Romford hotels in that it offers an on-site restaurant in addition to free parking. The hotel has 230 rooms.

6.8.5 With the exception of the two hotels in Romford metropolitan centre, none of the other centres in the Borough benefit from hotel provision within or close to the rest of the retail and leisure offer. Whilst it is not within the remit of this study to undertake a full appraisal of the need for additional hotel facilities, the Council may wish to consider a fuller assessment of the market demand for additional hotel provision as these facilities, where well-located, play important roles in contributing to the wider vitality and viability of centres, through generating footfall and spin-off 'linked trips' to local retailers and café/restaurant facilities. In particular, we note the lack of mid/upmarket hotel chains in the Borough at present.

6.9 Summary of Commercial Leisure Needs

6.9.1 We have undertaken a quantitative and qualitative assessment of commercial leisure needs for LB Havering. This has identified the following:

- An indicative quantitative need of up to 6,400 sqm gross A3, A4 and A5 commercial leisure floorspace across the Borough over the period to 2021, increasing to 21,000 sqm by 2031
- Scope for further enhancement of the A3 and A4 offer in Romford metropolitan centre, to further diversify the range and quality of the town centre offer and enhance cross-town centre footfall in the evening, and to diversify the market orientation of South Street away from the dominance of drinking establishments and nightclubs.
- Scope for further enhancement of the food and drink offer in all of the district centres, with a particular emphasis on moving the offer in Upminster away from take-aways, and continuing to support Hornchurch's important role and function as an 'evening economy' destination, through additional development of an appropriate scale.

- A need for additional cinema provision, having regard to the qualitative deficiency of specialist / boutique operators in the Borough at present, which should be directed towards Hornchurch or Upminster as preference/

- A short-to-medium term need for additional gym/leisure facilities, although this need will partly be met by the opening of the new Council-operated facility in Romford metropolitan centre. There is a need for privately-run facilities in the southern part of the Borough, which should be aligned to a district centre if possible.

- From our headline assessment, it appears that there is a need for additional hotel provision, particularly in Romford metropolitan centre, although this may in part be met should the Angel Way site be developed. There is a lack of mid/upmarket hotels in the Borough at present, with existing provision concentrated in the budget market, and, in some cases, poorly-related to existing centres. It is recommended that a full assessment of the need for additional hotel provision is undertaken by the Council.

- We do not consider there to be a need for additional games of chance or family entertainment facilities.

7 Recommendations

7.1.1 In this Section, we set out our core recommendations considering quantitative need, how this need could be met within the LB Havering, provide advice on a network of centres and some initial strategy advice (considering qualitative factors). Finally, we provide policy advice on the approach that we recommend is adopted when considering boundaries within a development plan and provide our advice on monitoring.

7.2 Quantitative Need for New Floorspace

7.2.1 Our quantitative assessment has revealed that there is a comparison goods need for between 16,100 and 21,500 sqm net additional comparison goods floorspace by 2021, increasing to between 49,500 sqm net and 62,000 sqm net by 2031. The lower figure is based on a constant market share, with the higher figure based on a theoretical increase in market share. It is our advice that the lower constant market share need should be planned for, given the level of competition that exists in the area.

7.2.2 The convenience goods assessment has demonstrated a need for up to 7,500 sqm net by 2021, increasing to 13,200 sqm net by 2031. This is based on a constant market share, but allows for significant overtrading of existing floorspace. This effectively means that much of this floorspace need is generated by diverted 'pent up' demand from existing facilities, rather than through expenditure and population growth.

7.2.3 Our assessment has also revealed an indicative quantitative need of up to 6,400 sqm gross A3, A4 and A5 commercial leisure floorspace across the Borough over the period to 2021, increasing to 21,000 sqm gross by 2031.

7.3 Meeting Quantitative Needs in LB Havering

7.3.1 We have stated clearly the longer term figures should be treated indicatively, although the NPPF requires needs for town centre uses to be met in full. Furthermore, amongst other things, our review of market trends indicates a polarisation trend occurring in the comparison sector with spending gravitating towards those larger centres that have more choice. As such, the Council will need to carefully consider how it meets the needs that exist - particularly in a situation where central sites are scarce, or challenging to develop. Therefore, we think it is helpful to set out the practical implications of our need assessment for the Council under the three sectors we have assessed.

Comparison Goods Sector

7.3.2 A floorspace output from a quantitative need assessment is generated directly from a monetary value (i.e. expenditure growth) and is conventionally based on a constant market share of spending in a given catchment. Planning policy is not very effective at responding to monetary values and that is the reason why the monetary value is translated into a floorspace figure (which is our quantitative need output). Considering the monetary concept further within the comparison sector, if the empirical forecasts are correct then the additional money available will need to be spent somewhere (remembering we have already taken into account growth in spending through the Internet and an allowance for existing shops to improve their turnover). As such, if it isn't in existing shops and no new comparison floorspace comes forward, then will leave the catchment - which will have a consequential effect of reducing the market share of the area.

7.3.3 The primary need for additional floorspace is within the comparison goods sector, which is a function of Romford being a large centre and as such attracting a high market share of the expenditure growth that has been estimated. Irrespective of the quantitative outputs, in our

view, there are three realistic alternatives for a local authority to meet its comparison goods needs:

- **Meet its need through floorspace**: this is the development option and would result in the needs set out in our study being built in full during the plan period with sites being allocated using the sequential test, and taking into account impact where necessary. Given uncertainty over longer term forecasts, we consider that plans should consider the needs to Romford and the district centres first but then consider safeguarding areas in the designated centres for the longer term needs beyond 2021

- **Meet its needs (in part or full) through improved turnover performance of existing floorspace**: our assessment assumes existing floorspace will increase its comparison goods turnover year on year by 1.7% which is a blanket approach across all floorspace. We acknowledge that there is scope, under certain conditions, for existing floorspace to improve its turnover beyond this allowance. The ability to achieve this higher rate is dependent on two things:

  - Firstly, the quality and configuration of existing floorspace is important, with modern floorspace with larger footplates better equipped to improve their level of sales per sqm.

  - Secondly, whether there are qualitative interventions that could take place to make more customers visit a centre, have an increased dwell time and therefore spend more money in existing shops.

  To measure the effect of this approach is particularly difficult, because it will depend on a number of factors. However, given that most town centres have a mix of modern and dated floorspace, we consider achieving an increased turnover per sqm beyond our allowance will only be possible with significant intervention under our second point above.

- **Accept a reducing market share**: in certain locations, it might be considered difficult, if not impossible, to keep the market share of a centre the same over the longer term given the polarisation trend being observed in the non-food sector and potentially the lack of available or suitable central sites. If out of centre is not appropriate (for example due to impact) or there is lack of demand, then under these circumstances, it might be acceptable to plan for a reducing market share (which may well reduce any quantitative need that exists, or even result in some uses coming out of retail altogether). Effectively this is a form of 'managed decline', which could in the longer term improve the vitality and viability of a centre.

7.3.4 Our study has set out an assessment of comparison goods need based on a constant market share across the whole Borough. In the interests in proper planning and ensuring self-containment where possible, we think this is an appropriate starting point. Furthermore, it can be measured in a straightforward manner (i.e. *build X sqm by Y*). However, the Council, through its Local Plan preparation, consultation and engagement with key stakeholders may wish to consider the second and third points above. This will require the Plan to monitor its performance against the need outputs that we have identified.

7.3.5 In respect of accommodating the comparison goods needs that we have identified, the sequential test should be applied and we would expect the largest proportion to be accommodated with Romford metropolitan centre with more modest allocations being directed to the district centres. It is also possible that some of the need that has been identified can be met through re-occupation of vacant floorspace.

Convenience Goods Sector

7.3.6 The above issue applies less to the convenience sector because the need is primarily generated through overtrading of existing floorspace. The sector is going through unprecedented change, with a shift towards smaller supermarkets and convenience stores. This means that to meet this need, we expect a number of smaller development will be needed in a range of locations. Furthermore, a proportion of this need is likely to be accommodated through conversion of existing premises rather than new developments and would not require any policy intervention. In terms of developments, we consider the Local Plan preparation should consider how convenience goods developments can be accommodated within mixed use developments in central locations, applying the sequential test.

A3, A4 and A5 Leisure Sector

7.3.7 The quantitative leisure outputs for A3, A4 and A5 uses and needs to be considered alongside qualitative factors (see below). However, again like the convenience sector, it is expected that this floorspace will be accommodated part through conversion of existing premises – or re-occupation of vacant floorspace – and part through new development. Again, we consider that the Local Plan preparation should consider how improved how an improved food and drink offer can form part of mixed use developments (typically ground floors of residential led developments), whilst applying the sequential test.

7.4 Network of Centres & Initial Vision/Strategy Advice

7.4.1 Based on our assessment, we consider that the network of centres within the Borough should remain as currently identified given that the centres largely fulfil the functions that they have been awarded within the development plan. Our assessment has identified a series of qualitative factors for each centre, which we consider could form the basis of a town centre vision or strategy and should be combined with a strategy to meet the Borough's retail and leisure needs. However, as advised by the PPG, a positive vision or strategy should be articulated through the Local Plan. Therefore, our advice below is based on the evidence collected and will need to be tested and assessed in further detail as the Local Plan is prepared. We address each of the designated centres in turn.

Romford

7.4.2 Romford is the largest centre in the Borough and benefits from a strong comparison goods retail function. Our initial review of the composition of the town centre is that outward expansion of retail and other town centre uses should be resisted, with the ring road forming a logical town centre boundary. Most of the retailing activity takes place north of the railway with the area to the south performing a secondary role.

7.4.3 There is a quantitative and qualitative need for additional and improved food and drink floorspace across the town centre. Much of the existing food and drink offer is concentrated in The Brewery development and is 'hidden' from the rest of the town centre. The southern section of South Street - in vicinity of the train station – could be a potential location for additional food and drink floorspace, capitalising on recent investment made by the Council in this area.

7.4.4 In our view, improvement and upgrading of the retail premises along South Street should be a priority for the Council early in the plan period. Improved configuration of units could be expected to account for some of the identified quantitative/qualitative needs that we have identified due to an improved turnover per sqm through better floorplates and a better mix of retailers. It will be necessary to consider how asset management could achieve this aim. Similarly the street market at Market Place could be gently nurtured towards providing a mix of

goods that is unique among competing markets in the area. This would further diversify the retail offer.

7.4.5 A potential site for additional comparison goods floorspace provision could be the intensification of The Brewery development given the large surface level car park that exists. But this will need to be undertaken as part of a programme of works to better integrate this development with the rest of town centre, such as shared public realm or directional signposting. We would expect any development would require a strong anchor store.

7.4.6 Finally, we expect that the footfall within the town centre may change when Morrison's opens and we recommend that the situation is monitored.

Upminster

7.4.7 Generally, Upmister is a vital and viable town centre and we recommend only limited intervention is necessary to maintain the centre's role and function. There are no obvious development sites for future expansion so we expect that the focus should be on supporting existing retailers through ensuring the collective 'identity' of the centre is strengthened. In terms of physical improvements, integration could be improved between the Waitrose store and the rest of the centre.

Hornchurch

7.4.8 Hornchurch provides the leisure and cultural focus of the Borough and this function is clearly important with a number of restaurants present within the town. In our view, the quality of the retail offer does not match that of the leisure and as such, some better quality retail operators within the town would improve its vitality and viability, although this aspiration will be subject to demand and availability of premises.

7.4.9 Sainsbury's has dominant trading position within the town and is overtrading. Therefore, if a second operator could be introduced into the centre this would be beneficial to consumer choice and would help claw back trade travelling to out of centre locations. This aspiration is subject to a suitable site in the town centre being available, given that edge and out of centre sites would not achieve the same outcome.

7.4.10 Based on our assessment, we are aware of underused sites on North Street – for example, Scottish Mutual House or the telephone exchange. As there is no cinema in Hornchurch, the potential for a mixed use scheme to include a small cinema (Curzon/Everyman) plus other supporting uses - would complement theatre further along the road. If this is an option, linkages with centre would need to be strengthened.

Elm Park

7.4.11 Elm Park will need to be monitored carefully by Council given its potential removal from London Plan 'district centre' level. We expect that the centre would benefit from a small supermarket, for example up to 1,000 sqm net, ideally towards the eastern side of the centre to help rebalance footfall and improve vitality and viability.

Collier Row

7.4.12 We have no specific recommendations in respect of Colliers Row, other than a suggestion that the Council continues to monitor its vitality and viability and seek to protect its convenience function from competition from out of centre developments that could draw significant amounts of footfall from centre.

Harold Hill

7.4.13 We are aware that the Council is investing significantly in this centre through the provision of new library within the centre itself. Two significant new residential developments to the north and east of the centre will deliver new footfall and support existing retailers. Vacancy rate appears high on face value but reduces significantly once the library works are factored in.

Rainham

7.4.14 Rainham is a functional centre that is dominated by Tesco. Improved linkages between Tesco and rest of the centre should be explored. We would expect the potential for further development in the area will be largely driven by the residential growth. However, there are qualitative needs to provide an improved consumer choice for retail and other services beyond the Tesco store.

7.5 Defining Boundaries

7.5.1 The NPPF requires local authorities to define the extent of town centres and primary shopping areas, based on a clear designation of primary and secondary frontages in designated centres. Based on the definitions in Annex 2 of the NPPF, the methodology for defining such boundaries and frontages ought to start centrally and work outwards. If we are considering the position now, the approach is as follows:

- Define first primary frontages as those frontages that include a high proportion of retail uses (including food, drinks, clothing and household goods). In our view, these ought to represent the frontages with most daytime footfall;
- Then define secondary frontages as those frontages that include town centre uses, but have a wider diversity of non-retail uses, such as restaurants, cinemas and businesses;
- Using the primary and second frontages, the primary shopping area should be defined as area where retail is concentrated by plotting the area around primary retail frontages and adjoining and closely-related secondary frontages. It does not necessary follow that secondary frontages fall within the primary shopping area, but often they do. This area typically represents the 'retail heart' of a town.
- Finally, the town centre boundary should be plotted that incorporates all of the primary shopping area and areas predominantly occupied by main town centre uses within or adjacent to the primary shopping area. So this means the area will incorporate any adjacent non-retail town centre uses, such as leisure uses, offices, arts, cultural and tourism uses.

7.5.2 It is possible for smaller centres that the primary shopping area will be identical to the town centre boundary.

7.5.3 It will always be necessary to consider whether there is a requirement to intervene in policy terms to change these areas from what is currently on the ground, for example to facilitate development by expanding a primary shopping area, or to encourage diversification of uses away from solely retail by reducing a primary frontage and converting it to secondary. In any event, the eventual boundaries will need to be tested and consulted upon as the Council's Local Plan is prepared.

7.6 Monitoring

7.6.1 This study provides the Council with its floorspace needs requirements to 2031. To establish whether the requirements for new floorspace (by type) are being met and more generally to monitor the performance, the Council should monitor:

- planning permissions for retail floorspace - by type, amount (sqm gross and net), location and retailer;
- completions of retail floorspace - by type, amount, location and retailer;
- mix of uses, including vacancies; and
- health checks of designated centres

7.6.2 The monitoring recommended above is relatively straightforward and should be conducted on a rolling basis for items (i) and (ii) and annually or every two years for items (iii) to (vi). Time series data can thus be produced and continually updated, starting with this study or possibly with earlier work undertaken by the Council. Contingent on the timetabling of the Council's Local Plan, such updating will prove to be valuable when this evidence is tested at examination in public.

7.6.3 This report provides a robust indication of the current position. The recommendations set out in this report may need to be adjusted, in the future, due to changing market conditions, demographic changes and the impact of developments elsewhere. They may also need to be adjusted if standard assumptions, in particular those relating to expenditure growth and e-tailing, change. The role of monitoring is crucial in highlighting changes in the assumptions that underpin this study and we recommend regular monitoring to the Council.

Appendix A Centre Health Checks

Appendix: Collier Row District Centre Health Check

PPG indicator	Summary for Collier Row District Centre	Traffic light score
Diversity of uses	Collier Row is a district centre located in the North Western part of the Borough. The centre appears to have an adequate diversity of uses that mostly caters to the day to day needs of the residents. The main retail frontage is along Collier Row Road with some units fronting Clockhouse Lane and Chase Cross Road. Generally, representation is geared towards convenience and service operators. The provision of comparison goods by national multiple retailers is largely limited. There seems to be fairly high provision of hot food take-aways within the district centre. In addition there are a number of services offered within the centre including a funeral home, banks, a post office, solicitors, hair salons and estate agents. There commercial leisure space within the town centre with the exception of a pub and two restaurants. Key retailers in the town include Tesco Metro, Boots Costcutters and Londis. With the exception of the Tesco, the retail units within the town centre are mostly small in size. There seemed to be no significant cultural or leisure amenities within the town centre. Similarly, the evening economy appears to be limited to the pub and two restaurants. The offering in the town centre is generally on the lower end of the market especially when the provision of hot food take aways and charity shops is taken into consideration.	
Proportion of vacant street level property	The Experian Goad survey undertaken in January 2014 identified nine vacant units. This puts the proportion of vacant units at 12.2%. At the time of the town centre visits in October 2014 however the number of vacant units stood at 11. The proportion of vacant properties has therefore grown and currently stands at 14.8%. This figure is higher than the current national average of 12.5%. There are no particular concentrations of vacant properties within the town centre though there is some evidence of clustering along Clockhouse Lane. At the same time there appears to be small scale additions to the retail mix within the town centre with the development of two retail units along Collier Row Lane which have yet to be occupied.	
Retailer representation and intentions to change representation	The majority of retailers and food outlets are independently owned. The convenience offer within Collier Row is dominated by Tesco Metro alongside Costcutter and Londis. There are no national multiple clothing and footwear retailers within the town centre except for charity shops and some independent shops. Other national multiples present include Boots, Lloyds Pharmacy, Lloyds Bank, a Post Office, Greggs, Coral Betting, a JD Wetherspoon operated pub, Domino's Pizza and Pizza Hut.	
Pedestrian flows	The flow of pedestrians within the town centre is generally good. The town centre is largely linear in nature with most of the retail units located along Collier Row Road which makes pedestrian circulation easy. While vehicular traffic moves fairly fast along the road, it is not difficult to cross from one side of the street to another. Collier Row generally has the highest amount of footfall within the town centre.	
Accessibility	Collier Row is fairly accessible from the surrounding centres such as Romford and Dagenham. The centre does not have a train station but it is served by six bus routes. Parking within the town centre is limited to pay and display parking spaces along Collier Row Road though there is a large off-street parking along rex Close behind the Tesco	

Appendix: Collier Row District Centre Health Check

PPG indicator	Summary for Collier Row District Centre	Traffic light score
	Supermarket.	
Perception of safety/ occurrence of crime	The perception crime within the district centre appears to be fairly low. There were no obvious signs of neglect or vandalism and the linear nature of the town centre increase instances of passive surveillance. The limited evening economy may perhaps make the town centre seem isolated at night. Particular areas of concern include the area at the corner of Chase Cross Road and Clockhouse Lane due to the vacant retail units.	
State of district centre environmental quality	The environmental quality of the district centre is generally good. The buildings within the district centre have a coherent architectural style which makes the town centre a pleasant place to visit. The public realm is generally clean and tidy. There seems to have been some investment within the district centre public realm with such improvements as new street lights, wide pavements and new benches along Collier Row Road.	

Appendix: Elm Park District Centre Health check

PPG indicator	Summary for Elm Park District Centre	Traffic light score
Diversity of uses	Elm Park is located in the south western part of the Borough. The major retail frontages are located either side of Elm Park Underground Station. To the South the main retail frontages are Station Parade and Tadworth Parade. To the North the majority of retail units are located along the Broadway or front onto the junction of Elm Park Avenue/St. Nicholas Avenue/The Broadway. The centre has good diversity of convenience, comparison and service uses which cater for daily shopping needs. The convenience offer comprises national multiple retailers as well as a range of independent stores including general convenience stores, a bakery and butchers. National multiples present include Co-op food, Tesco Metro and Sainsbury's Local. The comparison offer is comprised of independent stores mainly selling hardware, homeware and gift ware, however there is also a jeweller, pet shop, and cycle shop. Elm Park offers a diverse range of local services including a bank, funeral directors, mortgage centre, laptop repair, shop mobility centre, tailors, dry cleaners, travel agents, betting office and hair/beauty salons. There is no cultural or commercial leisure offer in the centre however the centre comprises four independent cafes. The evening economy is limited to a few restaurants and a total of eleven take-aways which account for 10% of all units.	
Proportion of vacant street level property	The number of vacancies within Elm Park District Centre was 16 when we undertook the town centre survey in October 2014. This is equivalent to 14% of the total number of units which is above the national average of 12.5%. There are two main areas where concentrations of vacant units have accumulated. There is a noticeably high number of vacant units along Station Parade as well as a number of vacant units either side of Nicholas Avenue.	
Retailer representation and intentions to change representation	Elm Park provides a strong local independent retail offer of local services and a diverse convenience offer. The comparison offer however is towards the lower end of the market. A high proportion of the comparison units are charity shops and discount home ware stores. There are no national multiple comparison retailers. The only National Multiple retailers present in the centre are Greggs, Dominoes, Co-op, Tesco and Sainsbury's.	
Pedestrian flows	There was relatively weak pedestrian footfall along the main retail frontages both to the north and south of Elm Park Underground Station. The pedestrian footfall was however stronger to the north of the station along streets with cafes and restaurants which seemed to generate more activity.	
Accessibility	The flow of pedestrians through the town centre is constrained by the original layout of the centre. The roundabouts at either end of The Broadway act as a barriers to pedestrian accessibility although the pedestrian crossings do help address this. The provision of off-road car parking at each end of The Broadway make local shops and services more convenient to access for car users. The centre is well connected to the London transport system and the rest of the Borough via the District Line and four bus routes (165, 252, 365, 372) that serve the centre.	

Appendix: Elm Park District Centre Health check

PPG indicator	Summary for Elm Park District Centre	Traffic light score
Perception of safety/ occurrence of crime	The perception of safety is also markedly different either side of the rail station. There is almost no perception of crime along the main shopping frontages to the north of the station. Since most of the shops are located along main roads there is plenty of natural surveillance. The only area of concern is the car park located off St. Nicholas Avenue. The car park is highly enclosed with dead frontages on three out of four sides since the only non-domestic building fronting onto the car park is vacant. The two main shopping frontages to the south of the station, Station Parade and Tadworth Parade both show signs that create a higher perception of crime. Station Parade feels particularly unsafe since it is highly enclosed, set back from the main road behind a relatively high brick wall with very limited natural surveillance. This part of the centre appears neglected, on our visit nearly half of the shops fronts were covered with security shutters either because units were vacant or occupied by take-aways which only opened in the evening. Similarly along Tadworth Parade the concentration of take-away units covered with security shutters create an impression of neglect and reduce the perception of safety.	
State of town centre environmental quality	The properties fronting on to either side of The Broadway are uniform in architectural style and have sufficient architectural detailing to create visual interest. These frontages are of a consistent height which creates a good sense of enclosure. This part of the centre is relatively free from litter and there is evidence of recent investment in upgraded paving and new street furniture. Overall this part of the centre has a good environmental quality. At the southern end of The Broadway the frontages of buildings along Tadworth Parade and Station Parade contain very little detailing and create no visual interest. The properties either side of Station Parade appear to be in a state of decay which gives the area a very poor environmental quality. At the northern end of the Broadway the buildings fronting on to the roundabout represent a variety of architectural styles. This informality creates visual interest although the appearance of some key buildings could be dramatically improved with maintenance. Again there are signs of recent investment in the form of improved paving and new street furniture. Consistent elements including the street lights and new paving and street furniture help to create uniformity between different parts of the centre.	

Appendix: Harold Hill District Centre Health Check

PPG indicator	Summary for Harold Hill District Centre	Traffic light score
Diversity of uses	Harold Hill district centre is a district centre focusing primarily on the provision of convenience goods and some services such as banking and hairdressing. In addition the centre also offers a restaurant; café and hot food take aways. The centre largely serves local residents. The centre is mixed-use as it is located within a medium density housing scheme. The centre offers a Sainsbury's Local, Iceland, Co-Operative Food, a butchers, a news agents, a discount supermarket, a charity shop, a café and restaurant. Most of the retail units are independently owned though familiar High Street names have established themselves in the centre. Services offered within the town centre include Banking (Halifax, Santander, Lloyds and NatWest), as well as a barber shop, hairdressers, Boots Optician, a post office and a dry cleaners. The centre also contains the Council's housing office. The district centre is therefore suited to meeting the day to day needs of the local residents. However the town centre lacks significant clothing and footwear retailers although this would be expected for a centre of its size. Furthermore, leisure options are limited to the café, an American themed restaurant and a few take-away restaurants. The relocated Harold Hill Library that is currently under construction will improve the diversity of uses in the district centre.	
Proportion of vacant street level property	At the time the Experian Goad survey was done (September 2012) the proportion of vacant units stood at 11 units or 15.3% of the retail offer. It is important to note that since the survey was carried out two larger retail units have been subdivided into smaller shops. Furthermore, five shop units have been closed down or demolished in order to make way for the new Harold Hill library. At the time of the district centre health check in October 2014, the proportion of vacant properties was found to be 14 units or 19.7% of the retail offer. This is significantly higher than the national average of 12.5% and is an area of concern.	
Retailer representation and intentions to change representation	For a district centre of its size there appears to be good representation of national multiple retailers. Convenience goods retailers include Iceland, Co-Operative Food and Sainsbury's Local. The convenience offer is represented by Superdrug, Boots and Boots Opticians. Furthermore, there are a number of national multiples offering banking services (Halifax, Santander and Natwest) in addition to bookmakers William Hill and Ladbrokes. It is however clear that the bulk of the retail offer within the centre is made up of independent retailers.	
Pedestrian flows	Pedestrian circulation within the district centre is generally good. Most of the retail units front Hilldene Avenue and Franham Road – the concentration of pedestrians is also highest in here. The centre is generally well laid out making navigation easy. However, the two arcades on the eastern and western sides of the town centre appear to be relatively underused.	
Accessibility	Accessibility to the centre is fairly good. Currently, four bus routes (including a night bus) serve Harold Hill district centre. The district centre seems to have adequate on-street parking for car users. The centre also has bicycle racks though the surrounding streets lacked bicycle lanes. While it is assumed that a number of shoppers would visit the centre on foot or by bus, it is important to note that a significant number of people live in the flats above the shops.	

Appendix: Harold Hill District Centre Health Check

PPG indicator	Summary for Harold Hill District Centre	Traffic light score
Perception of safety/ occurrence of crime	Perception of crime within the district centre is low. During the time of the visit the centre appeared to have significant footfall. While the centre does not have much of an evening economy, the presence of a residential night time population indicates that there is some evening activity and that occurrence of crime may be low though we have not had access to any local crime statistics. The only area of concern would be the two arcades. While the eastern arcade will benefit from the addition of the new library, the western arcade could potentially attract criminal activity.	
State of district centre environmental quality	The district centre is of relatively good environmental quality. The centre itself appears to have been developed as a comprehensive mixed-use scheme. The layout therefore allows for easy circulation and navigation while maximising visibility from Hilldene Avenue. In general the retail units appear suited for modern requirements. Some of the larger units have been sub-divided into smaller units which are likely to better suit local demand. As mentioned earlier the arcades are the main area of concern. While the eastern Arcade will benefit from the new library, the western arcade seems to suffer from high vacancy rates which degrade the overall character and appearance of the district centre.	

Appendix: Hornchurch District Centre Healthcheck

PPG indicator	Summary for Hornchurch District Centre	Traffic light score
Diversity of uses	Hornchurch District Centre is located in the centre of the Borough. The main shopping frontage is the High Street which runs through the town centre east to west. The other key retail frontages include Station Lane and North Street which both intersect with the High Street forming a major junction and gateway into the town centre. The centre has a good diversity of comparison, convenience and service retail uses as well as an impressive commercial leisure offer. The centre caters for day to day shopping needs as well as being a leisure destination for eating and drinking. The convenience offer is anchored by Sainsbury's supermarket located on the High Street. Approximately 25% of the floorspace is dedicated to comparison goods including home ware, DVD's, books and cards. The convenience offer is supplemented by an Iceland food store and a range of independent shops including general convenience stores, a bakery and butchers. There is a substantial comparison offer which accounts for 24% off all units (51 units) and is comprised of both independent stores and national multiple retailers. The centre also contains a good variety of local services including a DVLA driving centre, gym, dentists, solicitors, banks, Post Office, estate agents, betting office, opticians, travel agents and numerous hair and beauty salons. The centre has a high proportion of estate agents which account for 5% of all units. Hornchurch is largely seen as Havering's cultural centre and includes the Fairkytes Art Centre and the Queens Theatre. Commercial leisure uses account for a quarter of all units. The leisure offer which is focused on eating out comprises a bingo hall, a number of traditional pubs, bars, cafes and both national multiple outlets and independent restaurants. As such, the centre has a relatively active evening economy.	
Proportion of vacant street level property	The vacancy rate in Hornchurch was remarkably low at just 2% (equivalent to 5 out of 207 units) when the last GOAD survey was undertaken in August 2013. The vacancy rate had increased to 6% with a total of 12 vacant units when we undertook the town centre survey in October 2014. Despite the vacancy rate more than doubling over 14 months it remains well under the national average of 12.5%. Three of the five units which were vacant as of August 2014 have been re-occupied suggesting a strong uptake of smaller retail units. The former Waitrose store has remained vacant for the last 14 months suggesting a lack of interest in the centre by supermarket operators.	
Retailer representation and intentions to change representation	Within the comparison category, independent stores account for the majority of the units. National multiple retailers present include Superdrug, Boots, Argos, Shoe Zone, Peacocks and Clinton Cards. There are a high proportion of discount stores and charity shops within the centre which account for 22% off all the comparison units. The eating and drinking out offer is at the middle-to-higher end of the market. There is a range of high quality independently owned cafés and restaurants as well as national chain outlets including: Zizi, Ask, Prezzo, Starbucks, Costa and a JD Wetherspoon pub.	
Pedestrian flows	The flow of pedestrians moving East to West along the High Street is supported by the linear layout of the centre. The flow of pedestrians North to South however is constrained by the high volume of traffic moving along the High Street through the centre. The junction in the centre of the High Street also acts as a significant barrier to pedestrian access. Despite the introduction of pedestrian crossings it is difficult to navigate and poses a risk to pedestrian safety. Pedestrian footfall was relatively strong along the High Street with the greatest	

Appendix: Hornchurch District Centre Healthcheck

PPG indicator	Summary for Hornchurch District Centre	Traffic light score
	concentration of pedestrians around the junction of the High Street/North Street/Station Lane. Footfall along Station Lane was considerably weaker due to the low concentration of retail units and services.	
Accessibility	The centre is integrated into the wider London Transport Network via a range of public transport modes which connect Hornchurch to other centres and destinations in the Borough. Hornchurch underground station is a ten minute walk South of the centre and is served by the district line. Emerson Park rail station has fairly frequent services (every 30 minutes Monday to Saturday) to Romford and Upminster and is located an equal distance North of the centre. The centre is also served by seven bus routes (no's. 165, 193, 248, 252, 256, 370, 372) which connect the centre to Romford, Rainham, Thurrock, Lakeside shopping centre, Ockendon, Upminster, Elm Park and Harold Hill.	
Perception of safety/ occurrence of crime	There is generally a very low perception of crime within the centre. The majority of properties are occupied providing active frontages and appear well maintained. The high concentration of evening leisure uses ensure that the centre is well used throughout the evening and the associated natural surveillance reduces the perception of crime. The only areas of concern include the Mecca Bingo car park, this area has limited natural surveillance and the presence of CCTV cameras gives a reduced perception of safety. The other area of concern is the route from Hornchurch Station to the town centre. There is limited natural surveillance along much of this route since the frontage is made up of residential properties interspersed with retail units sets back from the main path which create inactive frontages.	
State of town centre environmental quality	The environmental quality of the centre is generally very good. The buildings and shop fronts along the main retail frontages are well maintained and on the site visit there was very little litter. There is evidence of significant investment in new paving, street furniture and traffic calming measures funded by Transport for London in order to improve the environmental quality for pedestrians. There is also evidence of private sector investment. A number of key properties fronting onto the main junction have been redeveloped mainly for leisure uses with new residential use above. The centre contains a mix of architectural styles. The restaurant units on North Street occupy small thatch cottages which represent the oldest buildings in the centre.	

Appendix: Rainham District Centre Health Check

PPG indicator	Summary for Rainham District Centre	Traffic light score
Diversity of uses	Rainham is classified as a District centre. There is a low diversity of use at the centre. The Tesco Extra is the principal attraction in the centre. The large supermarket is open 24 hours a day 6 days a week. The services offered in the supermarket include a café, a pharmacy, photo shop, an optician, a filling station, a car wash and a bureau de change. In addition to selling a wide variety of convenience goods, the supermarket also contains extensive clothing, electronics and home goods section. Tesco's Click and Collect service is also available from this store. The supermarket effectively offers many of the services that would traditionally occupy the district centre. The district centre does not contain significant retail developments except for a small number of convenience shops, a footwear shop, and a second hand furniture store. The rest of the units are dedicated to service provides including Barclays Banks, bookmakers, a funeral home, letting agents and an optician. There are also a number of hot food take-aways and a handful of pubs and restaurants. The cultural offer in Rainham is restricted to the historic sites and museums around the town centre including Rainham Hall and the Church of St Helen and St Giles. There are no cinemas or theatres. Similarly, the evening economy is dominated by a handful of pubs.	
Proportion of vacant street level property	There were no Experian Goad surveys produced for Rainham district centre. At the time of the survey in September, there were six vacant units, mostly along Upminster Road. This translates into a vacancy rate of 14.2%. The concentration of vacant units along Upminster Road is a source of concern as it is visibly affecting the rest of the town centre.	
Retailer representation and intentions to change representation	Tesco is the district's main national multiple retailer. Other national chains present are Pizza Hut, Barclays and Coral Betting. The rest of the retail offer is accounted for by independent retailers.	
Pedestrian flows	The district centre is small and compact. Pedestrian circulation is therefore relatively easy and is aided by overhead directional signs. As the town has retained its historic character walking is fairly pleasant and is marked by various local landmarks such as Church of St Helen and St Giles, the Rainham War Memorial and the new Library. There is a direct pedestrian link between the main shopping frontage along Upminster Road the Tesco Extra which makes pedestrian circulation around the centre easier. At the time of the visit pedestrian activity within the town centre was generally low. The Tesco however seemed to have fairly high customer activity. This in part could be due to the relatively low retail diversity within the town centre compared to the Tesco. The presence of the Tesco may imply that a high proportion of visitors to the centre do so by car.	

Appendix: Rainham District Centre Health Check

PPG indicator	Summary for Rainham District Centre	Traffic light score
Accessibility	Rainham is on the mainline train service from London's Fenchurch Street Station to Southend. The town centre is in Zone Six of the London Travel Zone. The town is served by four bus routes. The train station is close to the town centre is opposite the new Rainham Library which marks the entry way to the district centre. While the district centre is small, there are way-finding directional signs that point out specific historic sites within the town centre. The bulk of the town centre's parking provision is at the Tesco supermarket with a small council owned parking facility next to it. Rainham Station also has a small NPC-managed car park. On street parking is available along Upminster Road.	
Perception of safety/ occurrence of crime	The perception of crime was assessed to be low during the day time. While some parts of the town centre such as Broadway Road may be active during the evenings due to the presence of two pubs, we envisage that the rest of the town centre with the exception of the Tesco has little night time activity. The lack of a significant evening economy therefore diminishes the perception of safety at night.	
State of town centre environmental quality	The district centre can broadly be considered to be of good quality. The historic setting of the town has been preserved and enhanced with such civic buildings as the new Rainham Library. There is comparatively little traffic congestion and noise levels are low. The architectural diversity in the centre has been well preserved. The Grade 1 listed Church of St Helen and St Giles and Rainham Hall define Rainham's townscape and act as strong focal points for the district centre. This is further enhanced by the open green space surrounding these buildings. More recently there have been public realm improvements at the corner of Broadway and Upminster roads resulting in a new public space centred on the Rainham War Memorial. These improvements include new paving and benches. While there are a number of well-preserved buildings in the district centre (specifically along Broadway), the empty shop units on Upminster Road diminish the attractiveness of the district centre.	

Appendix: Romford Town Centre Health Check

PPG indicator	Summary for Romford Town Centre	Traffic light score
Diversity of uses	Romford is the principle shopping and leisure destination in the Borough of Havering. There is a strong comparison and convenience retail offer. Romford can therefore be considered to have a good diversity of uses. In many respects Romford can be considered to serve shopping needs of the Borough's residents and indeed residents from the surrounding area reflecting its designation as a Metropolitan Centre in the London Plan. While there is a strong comparison goods focus within the town centre, Romford also includes a number of convenience goods outlets as well. The town centre is hemmed in by a network of roads that include Waterloo Road, St Edwards Way, Mercury Gardens and Thurloe Gardens. Due to the network of ring roads around the centre and the size of the main retail area, Romford town centre seems to function as four distinct centres with the central retail core encompassing the primary retail frontage and, London Road, North Street and the area south of the railway viaduct (including South Street/ Victoria Road/ Atlanta Boulevard) acting as neighbourhood shopping centres. While the quality of retail in the town centre core is generally high, the quality begins to fall around the edge of centre sites. The council continues to try and improve on Romford's leisure provision. In general there is good retailer representation from most mid-level national multiple retailers. The town centre features two cinema complexes a number of restaurants, drinking establishments, gyms and a growing number of cafes. The central core area is anchored by a number of shopping centres namely the Brewery, the Mercury, and the Liberty. In addition the town centre also encompasses a shopping arcade – the Quadrant Arcade and the Romford Shopping Hall. The two shopping centres, the Mercury and the Liberty act as the town centre's primary retail pitch. The two shopping centres are connected to each other through a pedestrian subway underneath Mercury Gardens. The retail mix at the Liberty almost exclusively consists of comparison goods and is generally of higher quality than the Mercury. Generally, the retail offer at the Liberty consists of mid-range, national multiple retailers including BHS, Marks and Spencer, Topman/ Topshop, H&M and Swarovski. The Mercury has a strong emphasis on comparison goods but also includes a large Asda supermarket and Poundland as well as home goods retailers such as Tiger and Wilco. The Mercury also hosts a cinema complex and a bingo hall. The Brewery is a fairly recent development containing large format retail and leisure uses. The development is anchored by a large Sainsbury's supermarket offering a wide range of both convenience goods and comparison goods (TV's Toys, Clothing etc.), a large gym, restaurants and other shops including Mamas & Papas, Gap, Boots and Carphone Warehouse. The leisure offer includes a cinema and two children's amusement arcades. There is a marked change in the quality of retail in the peripheral areas surrounding the Brewery i.e. the North Western portion of the town centre. This area around the High Street is designated as a secondary retail frontage is dominated mainly by local retailers and includes, a Salvation Army charity shop, dry cleaners, an Afro-Caribbean convenience shop and hair salons. This is similarly mirrored in the area around London Road. In this shopping area in particular, the London Road effectively disconnects this area from the rest of the prime shopping pitch. The parade of shops along London Road which include a number of hot food take away establishments, car and motorcycle dealerships and a pub effectively function as a neighbourhood centre. The main convenience goods retailers in the town centre are Asda, Sainsbury's, Iceland, and Aldi with Lidl anchoring the Southern portion of the town centre boundary. Romford Market has historically played a significant part in the historical development of the town and continues to do so today. Currently the market operates three days a week within Market Place. Initial talks with market stall holders seem to suggest that the market is in decline. The number of stall holders seems to be falling partly due to competition from discount retailers (Aldi, Iceland and the 99p Store have a presence in Market Place) and changing consumer shopping habits. Presently, the market offers a fairly wide range of products including fresh fruit and vegetables, clothing, jewellery, toys and other specialty items. As mentioned earlier, the peripheral shopping areas tend to act as neighbourhood shopping zones. The area around North Street (towards the North East of the town centre boundary) is generally made up of a parade of small shops, including hot food take-aways and convenience shops. The	

Appendix: Romford Town Centre Health Check

PPG indicator	Summary for Romford Town Centre	Traffic light score
	street also includes a large Matalan and a recently opened Sainsbury's Local. In general there does North Street does seem to have an overprovision of take away establishments. This is similarly echoed in the shopping area along London Road where the quality of retail and eating establishments are generally of a lower quality. These areas therefore have a largely secondary role and function. The area south of the railway viaduct appears to function independently from the primary retail core. The area falls within the town centre boundary with much of it designated as a secondary retail frontage. Anchor stores in the area include a fairly large Lidl and a Fitness First. Unlike the retail core, the retail offer consists mainly of independent, locally owned shops with the offer consisting primarily of convenience shops, restaurants and a number of hot food take-aways. This is particularly apparent around Victoria Road. In general all Supermarkets with the exception of Iceland seemed fairly busy during the time of the town centre visit. The Asda and Sainsbury's in particular had a wide variety of comparison goods on sales which included clothing and televisions. The food and retail offer appears to adequately serve Romford's comparison and convenience needs. There is an under-provision of cultural amenities in the town centre with the exception of the Havering Museum. Fast links to Central London perhaps means that expenditure on cultural and leisure amenities (such as theatres) is spent in Central London. The proliferation of discount shopping chains (Poundland, 99p Stores) some of which have more than one town centre location is a source of concern which might need to be monitored.	
Proportion of vacant street level property	The most recent Experian Goad Survey undertaken in January 2014 identified a total of 41 vacant units which was the equivalent of 7.6% vacancy rate of the total retail offer. At the time of our visit in September 2014 this figure stood at 37 units or 6.9% of the retail offer. There is therefore a decrease in the number of vacant units within the town centre itself and the surrounding retail areas. It is important to note that a number of retail units along Swan Walk while vacant are currently under renovation. This is the only significant concentration of vacant retail units. At the same time individual retail units within the Romford Shopping Hall were not counted though at the time of the visit the shopping hall seemed to be trading quite well. New retailers within this area that took up vacant properties include Home Bargains in Market Place and Sainsbury's along North Street. Other units have become vacant on account of the national chains entering administration, a recent example of this being the fashion retailer La Senza. Other vacant units were taken up by independent retailers within the town centre. This level of churn is not uncommon in any centre. In general the vacant units within the town centre have varied in size from a large restaurant unit within the Brewery and a three story building within Market Place to smaller units around the town centre.	

Appendix: Romford Town Centre Health Check

PPG indicator	Summary for Romford Town Centre	Traffic light score
Retailer representation and intentions to change representation	Romford town centre enjoys good national multiple retailer representation. The central retail core includes several anchor stores offering a typical High Street mix of shops. At the Brewery key retailers present include a Sainsbury's Supermarket, The Range, Boots, 99p Store, Mamas and Papas, Gap and JD Sports. This is addition to commercial leisure brands such as Virgin Active, Vue Cinemas and Namco Funscapes. Dining options at the Brewery also include Zizzi, Nandos, Pizza Express, McDonalds and Frankie & Benny's. The offer at the Brewery is therefore aimed at a mid-market clientele. At the Liberty Centre, there is an emphasis on a fashion-oriented shopping mix. Retailers present include River island, Primark, Marks and Spencer, BHS, Sports Direct, HMV, Debenhams, New Look, Topman/ Topshop, H&M, Anne Summers and Superdry. Other retailers include Office, Swarovski, Ernest Jones, Accessorize, the Carphone Warehouse, Holland and Barrett and GNC. In addition there is a travel agent (Flight Centre), newsagents (WH Smith) and a hair salon (Supercuts) within the centre. The Mercury Shopping Centre is directly connected to the Liberty via an underground tunnel. The Mercury appears to have a much greater representation of independent retailers than the other two shopping centres. The retail offer is also slightly more down market than then other two retailers. Retail floorspace is dominated by the large Asda supermarket. Other retailers present include Wilkinson, Poundland, Game, Superdrug, Peacock, Blue Inc, Tiger, Warren James Jeweller and Thompson Travel. The centre also has fast food representation from McDonalds and Subway and a Toni & Guy hair salon. Independent retailers include home furnishing shops, a pawn broker and cafes. Elsewhere within the primary shopping frontage, there appears to be greater proportion of independent retailers than the shopping centres. However, there are still a number of national multiples. Retailers located around Market Place include, Iceland, Argos, and the 99p Store. The area around South Street includes, Tesco Express, Thompson Travel, Ladbrokes, Coral Betting, McDonalds. South Street is alos the location of a number of banks and financial service institutions including HSBC, Santander, NatWest, Halifax, Barclays, Nationwide, The Royal bank of Scotland and Lloyds. From our general observations, the retail units appeared to be flexible and cater for the different retail needs within Romford. This includes large stores for supermarket chains and department stores, to small shop units within the Romford Shopping Hall that catered to independent retailers.	
Pedestrian flows	Pedestrian circulation within the town centre is generally good. The majority of the primary retail frontage benefits from being located with a pedestrianized shopping area or a covered shopping centre/ arcade. The pedestrianized shopping zone is generally of good quality and provides an attractive setting for sopping activity. The market area in particular looked vibrant and appeared to have high pedestrian footfall. The Brewery, Parts of the Mercury and The Liberty appeared to all have a high volume of pedestrian activity moving through it. During market days, Market Place also seems to be a popular and well used civic space However, the network of ring roads surrounding the central retail core continues to act as a barrier, effectively cutting off the centre from the surrounding residential areas.	
Accessibility	Romford town centre is highly accessible from various locations within the borough as well as Central London and the surrounding region. Romford station is located within the town centre boundary and falls under Zone 6 of the London Travel Zone. The station is located on the Shenfield – London Liverpool Street railway line. There are frequent train services to Upminster, Southend and Colchester. Romford Station will also be served by Crossrail when services begin in 2018 and will connect the town to Shenfield to Reading via Central London. There are regular bus services linking Romford town centre to the surrounding areas. The town centre is collectively served by 24 bus routes (including night busses) linking Romford to the main	

Appendix: Romford Town Centre Health Check

PPG indicator	Summary for Romford Town Centre	Traffic light score
	town centres in the borough, East London and Central London. A bus interchange is located next to the train station in addition to several bus stops located around the town centre. The provision for car parking within the and around the town centre appears to be quite high. In total there are 13 public car parks within or on the edge of Romford town centre. The largest of these car parks is the Brewery car park with over 1,700 car parking spaces. The Mercury and the Liberty also offer large car parks. The council owns eight of the public car parks. On-street pay and display car parking is also provided in the surrounding streets.	
Perception of safety/ occurrence of crime	Generally, the perception of crime within the town centre is low. The town centre appeared to be clean and there was no evidence of graffiti or vandalism. The presence of cafes, bars, nightclubs and restaurants around the primary frontage suggests a fairly strong and active evening economy. This reduces the perception of crime and encourages night time visitors to the centre. However, some parts of the town centre are perhaps more vulnerable to crime than others. Such areas include the car park area adjacent to Angel Way and the northern part of North Street. The network of pedestrian underpasses while fairly well maintained were also a source of concern, especially at night.	
State of town centre environmental quality	The town centre is generally inward looking due to the high levels of traffic that flow along the perimeter of the town centre - most notably along St Edwards Way and Mercury Gardens. The town centre is generally of reasonable quality and appearance though the quality varies from one part of the town centre to another. The central retail core (including the Primary retail Frontage, the Brewery, the Mercury and the Liberty) are areas of fairly high architectural quality. The Council has undertaken a programme of public realm improvement works that have enhanced the appearance of certain parts of the town centre such as Market Place and more recently, Victoria Road and South Street. This has included new paving and street furniture. The town centre is generally inward looking due to the high levels of traffic that flow along the perimeter of the town centre - most notably along St Edwards Way and Mercury Gardens. As a historic market town, Romford has good architectural diversity. While some newer developments such as the Brewery could perhaps be better integrated with the urban fabric many historic buildings occupy prominent positions within the town centre. These include the Havering Museum and St Edward the Confessor Church within Market Place. This coupled with the pedestrianized nature of the main shopping streets makes the town centre an enjoyable place to visit for the most part. Some areas of concern include, the abandoned building site at the end of North Street generally brings down the quality of the town centre while perhaps encouraging anti-social behaviour. The same can be said of the car park behind the Salvation Army charity shop. While the car park is still in use, its location could potentially be redeveloped so as to introduce life and vitality into the north western part of the town centre. While improvements have been made to make the circulation of pedestrian easier and more pleasurable, there is a lack of significant green space within the centre. A comprehensive landscaping scheme may improve the town centre quality particularly around the South Street/ Victoria Road junction.	

Appendix: Upminster District Centre Healthcheck

PPG indicator	Summary for Upminster District Centre	Traffic light score
Diversity of uses	Upminster centre is located in the south east of the Borough. The main shopping frontage is Station Road/Corbets Tey Road (B1421). Other key retail frontages include St. Marys Lane and Springfield Gardens which both run East off the B1421. The centre has a good diversity of comparison, convenience and service retail uses which cater for the day to day shopping needs of residents. The centre also has good range of both public and commercial leisure uses. The centre has a diverse convenience offer including both high end and budget food stores. There are two supermarkets (Waitrose and Aldi) supplemented by an Iceland food store, Marks and Spencer simply food store and a range of independent shops including general convenience stores, a bakery and butchers. There is a range of local services and facilities including estate agents, dry cleaners, petrol station, opticians and numerous hair/beauty salons. There is a substantial comparison offer which accounts for 25% of all units. This is comprised of mainly local independent retailers with very few national multiple retailers. There is a concentration of charity shops and discount stores which represent 5% of all units. The centre has a good range of public and commercial leisure uses including a leisure centre, Upminster Park, numerous pubs, restaurants and cafes.	
Proportion of vacant street level property	The vacancy rate in Upminster was low by national standards at just 5% when the last GOAD survey was undertaken in August 2013. The vacancy rate had increased to 7% with a total of 14 vacant units when we undertook the town centre survey in October 2014. Despite the increased vacancy rate it remains well under the national average of 12.5%.	
Retailer representation and intentions to change representation	Within the comparison retail category independent stores account for the majority of the units. The only National Multiple comparison retailers present include Clarks and Boots. The national multiple convenience retailers present include Marks and Spencer, Waitrose, Aldi and Iceland. The eating and drinking offer is positioned in the middle of the market and is comprised of a mix of independently owned cafés and restaurants as well as National chain outlets including Costa, Café Nero, Prezzo, Pizza Express, Subway and Greggs.	
Pedestrian flows	Pedestrian footfall was relatively week along some sections of Station Road/Corbets Tey Road. Pedestrian footfall was strongest along the northern end of the B1421 around the station and along the section of the B1421 opposite Upminster Park where complimentary leisure/transport functions create increased lingering time. Pedestrian footfall was very weak along Marys Lane and Springfield Gardens, these streets have a low concentration of retail uses and are surrounded by primarily residential uses.	
Accessibility	The flow of pedestrians moving north to south along the B1421 is supported by the linear layout of the centre. The flow of pedestrians moving between each side of the road is significantly constrained by heavy traffic. Although there are pedestrian crossings, these are controlled by traffic lights which prioritise the flow of vehicular traffic. The lower section of the B1421 opposite Upminster Park is more accessible and safer for pedestrians due to the presence of on street car parking and pedestrian priority crossings. Upminster centre is well integrated into the wider London transport network via a range of public transport modes which connect it to other centres and destinations in the Borough. Upminster train station is located along Station Road at the northern end of the centre. The station is served by the District Line and train services also run in to London Fenchurch Street Station approximately every 10 minutes. The centre is also served by four bus routes	

Appendix: Upminster District Centre Healthcheck

PPG indicator	Summary for Upminster District Centre	Traffic light score
	(no's. 248, 346, 347, 370) which connect the centre to Romford, Lakeside shopping centre, Hornchurch, Cranham and Corbets Tay.	
Perception of safety/ occurrence of crime	There is generally a very low perception of crime within the centre. The majority of units along all three retail frontages are occupied providing active frontages which appear well maintained. There was little evidence to suggest the occurrence of crime when we undertook the site visit. We did not record any broken windows or similar vandalism and CCTV was not prominent throughout the centre.	
State of town centre environmental quality	The environmental quality of the centre is generally good. The main shopping streets were relatively free of litter on our site visit. Corbets Tey Road (B1421) is an attractive shopping parade, with coordinated street furniture including and planting. Station Road (B1421) is also an attractive shopping parade and there is evidence of recent private sector investment in the centre. The retail units at the northern end of Station Road occupied by Marks and Spencer's simply food and M&Co fashion store are both examples of recent developments. The centre contains a broad mix of architectural styles and types of building which give the centre a unique character. Buildings of note include Trinity United Reform Church, the old Upminster school building, the Phancem Pharmacy building on St. Marys Lane and the building at the junction of Corbets Tey Road and St. Marys Road.

Aggregate overtrading of foodstores in Borough							**97.61**

Notes
Foodstores listed are 'main' food shopping destinations with a meaningful market share, as listed in Table CV4 and Table CV5
No sales area data is available for Iceland in Harold Hill.
The proportion of convenience floorspace is informed by company average food / non-food splits in Verdict's 2010 UK Grocery Retailers document, updated by PBA through site visits where appropriate.
Average sales densities are goods based sales densities derived from Verdict's UK Grocery Retailers Report
A positive figure indicates that the store is overtrading compared to company averages
All monetary values held constant at 2012 prices.

Notes
Total comparison goods expenditure retained by stores in LB Havering (total for zones 1, 2, 3, 4, 5, 6, 7 and 10)
No inflow is applied.
Sales efficiency growth of 0.3% per annum applied, 2016 onwards
Turnover per sq.m at 2014 PBA estimate. Turnover per sq.m increased to 2031 in line with sales effiency growth rate.
Total requirement shown is cumulative.
Gross: net ratio of 65% applied.
All monetary values held constant at 2012 prices.

Commitments (Row K)	2017	2021	2026	2029	2031
Morrisons, Romford	36.17	36.60	37.16	37.49	37.72
Angel Way, Romford	14.69	14.87	15.09	15.23	15.32
Total	*50.86*	*51.47*	*52.25*	*52.72*	*53.04*

*Base turnover is turnover at 2014, in 2012 prices. It is assumed the commitments will commence trading between 2015 and 2017.

Appendix D Quantitative Need Methodology

Appendix: Quantitative Need Methodology

Summary of methodology

Our methodology for forecasting convenience (food) and comparison (non-food) retail needs follows a widely-adopted step-by-step methodology. The key steps of this are set out below, and should be read alongside the analysis in the main study report.

The technical inputs into each stage of the methodology which we have used for the purposes of this study are presented overleaf.

Step 1	Estimate the population growth over the course of the study period for each of the study area zones, using population projections agreed with the Council at the inception of the study. Define appropriate 'forecast years' at which to assess quantitative need.
Step 2	Establish the base year per capita (per head) spending on convenience (food) and comparison (non-food) goods, using published data sources. Apply appropriate growth rates to establish the expenditure per head in the forecast years.
Step 3	Calculate the 'pot' of expenditure within the study area at each of the forecast years by combining the population figures (calculated at **Step 1**) with the expenditure figures (calculated at **Step 2**), and making an allowance for Special Forms of Trading (SFT) such as internet / mobile shopping, catalogue shopping, and so on. SFT is increased in the forecast years to reflect the latest economic forecasts.
Step 4	Calculate the study area spending by applying the market share data from the household telephone survey to the overall 'pot' of expenditure (calculated at **Step 3**)
Step 5	Allow for any 'inflow' of expenditure from beyond the study area, if appropriate.
Step 6	Calculate the sales densities of existing retail floorspace, to assess turnover performance in the base year, and if appropriate make allowance for over or under-trading of this floorspace (i.e. the difference between the household survey-derived turnovers and the 'benchmark' turnovers)
Step 7	Project the spending forecasts forward to the forecast years.
Step 8	Make allowances for sales density growth (i.e. money ring-fenced to allow for the growth in productivity / turnover of existing retailers), and/or any commitments to new retail floorspace (i.e. extant planning permissions, or schemes under construction)
Step 9	Draw together steps 1 to 8 to assess whether there is any excess expenditure growth in the forecast years which can be translated into a quantitative need for new retail floorspace, by applying a typical sales density for new floorspace figure to the excess expenditure figure.
Step 10	Assess alternative policy scenarios, and / or the sensitivity testing of key assumptions.

Appendix E Technical Inputs

Appendix: Technical inputs into capacity forecasts

<table>
<tr><th>Data</th><th>Source</th><th>How we have used the data</th></tr>
<tr><td>Base Population</td><td>Experian</td><td>Experian's MMG3 software provides 2012-based population forecasts at postcode sector level. The postcode sector populations are grouped together to form the study zones used for the purpose of our analysis.</td></tr>
<tr><td>Population Projections</td><td>NNJPU / Experian</td><td>The NNJPU have provided population projections at authority level for the study period to 2031. We have applied the growth rate derived from these population projections to each corresponding survey zone (e.g., zone 4, which covers Corby, uses the growth rate for Corby Borough). For zones within the NNCA but outside the administrative area of North Northamptonshire, Experian's MMG software provides annual population projections over the period to 2031, and we use these forecasts where applicable.</td></tr>
<tr><td>Base Per Capita Expenditure</td><td>Experian</td><td>Experian's MMG software provides per capita annual expenditure in each zone of the study area on convenience (food), comparison (non-food) and commercial leisure.</td></tr>
<tr><td>Retail and leisure expenditure growth forecasts</td><td>Experian</td><td>We have adopted expenditure growth rates from Experian Retail Planner Briefing Note 12 (Figures 1a and 1b), as follows:

<table>
<tr><th></th><th>Comparison goods</th><th>Convenience goods</th><th>Commercial leisure</th></tr>
<tr><td>2012-13</td><td>2.60%</td><td>-0.50%</td><td>-0.60%</td></tr>
<tr><td>2013-14</td><td>4.60%</td><td>-1.30%</td><td>0.00%</td></tr>
<tr><td>2014-15</td><td>5.60%</td><td>-0.50%</td><td>2.10%</td></tr>
<tr><td>2015-16</td><td>4.40%</td><td>0.50%</td><td>2.80%</td></tr>
<tr><td>2016-17</td><td>3.10%</td><td>0.40%</td><td>1.30%</td></tr>
<tr><td>2017-21*</td><td>3.10%</td><td>0.60%</td><td>1.10%</td></tr>
<tr><td>2021-31*</td><td>3.30%</td><td>0.60%</td><td>1.30%</td></tr>
</table>
*per annum growth rates</td></tr>
<tr><td>Base Year Special Forms of Trading (SFT)</td><td>Experian / Household survey</td><td>Special Forms of Trading refers to the amount of money not spent in bricks and mortar retail floorspace (includes internet, temporary markets etc...). Experian's Retail Planner Briefing Note 12 (Appendix 3) advises the following SFT discounts at the base year of the study:

Comparison goods (2014): 11.7%
Convenience goods (2014): 2.6%

For the purposes of our assessment we used the 'adjusted' figure presented by Experian, which makes allowance for store-picked online shopping transactions.</td></tr>
<tr><td>Growth in SFT</td><td>Experian</td><td>Experian's Retail Planner Briefing Note 12 (Appendix 3) advises the following SFT discounts at the study forecast years:

<table>
<tr><th></th><th>Comparison goods</th><th>Convenience goods</th></tr>
<tr><td>2017</td><td>14.0%</td><td>3.3%</td></tr>
<tr><td>2021</td><td>15.9%</td><td>4.4%</td></tr>
<tr><td>2026</td><td>15.9%</td><td>5.0%</td></tr>
<tr><td>2031</td><td>15.5%</td><td>5.6%</td></tr>
</table>
For the purposes of our assessment we used the 'adjusted' figure presented by Experian, which makes allowance for store-picked online shopping transactions. Experian do not project SFT to 2031 and therefore the 2026 is held constant for the remainder of the study period.</td></tr>
<tr><td>Retailer productivity changes</td><td>Experian/PBBI</td><td>Experian's forecast of retailer productivity changes outstrips the per capita expenditure growth figures highlighted above. We have therefore assumed the following productivity changes for the purposes of our quantitative analysis:

Comparison goods: 1.7% per annum, 2014-31
Convenience goods: 0% per annum, 2014-16; 0.3% per annum, 2016-31.</td></tr>
</table>

Notes
Source: Experian MMG for 2012 base data

The following expenditure growth rates are applied (source: Experian Retail Planner Briefing Note 12, October 2014, Figures 1a and 1b):

2012-13	-0.60%	
2013-14	0.00%	
2014-15	2.10%	
2015-16	2.80%	
2016-17	1.30%	
2017-21	1.10%	
2021-31	1.30%	per annum

All monetary values are held constant at 2012 prices.

Introduction

1.1 Research Background & Objectives

To conduct a survey amongst residents in the Havering area to assess shopping habits for main food and grocery, top-up, non-food shopping and leisure activities.

1.2 Research Methodology

A total of 1,102 telephone interviews were conducted between Thursday 28th August 2014 and Saturday 6th September 2014. Interviews were conducted using NEMS in-house CATI (Computer Assisted Telephone Interviewing) Unit. Respondents were contacted during the day and in the evening. All respondents were the main shopper in the household, determined using a preliminary filter question.

1.3 Sampling

1.3.1 Survey Area

The survey area was segmented into 11 zones, defined using postcode sectors. The zone details were:

Zone	Postcode Sectors	Number of Interviews
01	RM1 1, RM1 2, RM1 3, RM1 4, RM2 5, RM2 6, RM7 7	100
02	RM11 1, RM11 2, RM11 3, RM12 4	100
03	RM7 0, RM7 9	100
04	RM12 5, RM12 6, RM13 7	100
05	RM14 1, RM14 2, RM14 3	101
06	RM3 0, RM3 7, RM3 8, RM3 9	100
07	RM4 1, RM5 2, RM5 3, RM7 8,	100
08	RM6 4, RM6 5, RM6 6, RM8 1, RM8 3	100
09	RM9 5, RM9 6, RM10 7, RM10 8, RM10 9	100
10	RM13 8. RM13 9	100
11	CM13 1, CM13 2, CM13 3, CM14 4, RM14 5, RM15 8, RM15 9	101
Total		**1102**

1.3.2 Telephone Numbers

All available telephone numbers are used to obtain the sample of interviews. This includes published telephone numbers (land-lines and some mobile numbers) but is supplemented with ex-directory numbers as the demographic profile of this sub-set is different to the demographics of the published numbers sample. Ex-directory numbers are randomly generated using the published numbers as a 'seed'. Business numbers are de-duped and excluded.

We don't screen against the TPS (Telephone Preference Service) database, again because the demographic profile of TPS registered numbers is slightly different to the rest of the population. In addition, there is no legal requirement to screen against TPS registered numbers; market research is not classified as unsolicited sales and marketing.

1.3.3 Sample Profile

It should be noted that as per the survey's requirements, the profile of respondents is that of the main shopper / person responsible for most of the food shopping in the household. As such it will always differ from the demographic profile of all adults within the survey area. With any survey among the main shopper / person responsible for most of the food shopping in the household the profile is typically biased more towards females and older people. The age of the main shopper / person responsible for most of the food shopping in the household is becoming older due to the financial constraints on young people setting up home.

A number of measures are put in place to ensure the sample is representative of the profile of the person responsible for most of the food / shopping in the household.

First of all interviewing is normally spread over a relatively long period of time, certainly longer than the theoretical minimum time it would take. This allows us time to call back people who weren't in when we made the first phone call. If we only interview people who are at home the first time we call we over-represent people who stay at home the most; these people tend to be older / less economically active.

We also control the age profile of respondents; this is a two-stage process. First of all we look at the age profile of the survey area according to the latest Census figures. Using a by-product from additional data we collect from a weekly telephone survey of a representative sample of all adults across the country we know the age profile of the main-shopper in any given area. This information is from data based on in excess of 100,000 interviews and is regularly

updated and is therefore probably the most accurate and up to date information of its kind.

Stratified random sampling helps ensure that the sample is as representative as possible. While the system dials the next random selected number for interviewers, all calls are made by interviewers; no automated call handling systems are used.

1.3.4 Time of Interviewing

Approximately two-thirds of all calls are made outside normal working hours.

1.3.5 Monitoring of Calls

At least 5% of telephone interviews are randomly and remotely monitored by Team Leaders to ensure the interviewing is conducted to the requisite standard. Both the dialogue and on-screen entries are monitored and evaluated. Interviewers are offered re-training should these standards not be met.

1.4 Weightings

To correct the small differences between the sample profile and population profile, the data was weighted. The population is of the main shopper in the household. Weightings have been applied to age bands based on an estimated age profile of main shoppers (see section 1.3.3 for details). The weighted totals differ occasionally from the adjusted population due to rounding error. Details of the age weightings are given in the table below:

Age	Main Shopper Profile (%)	Interviews Achieved	Age Weightings
18-24	5.58%	23	2.6050
25-34	16.77%	48	3.7525
35-44	19.09%	137	1.4983
45-54	18.07%	250	0.7770
55-64	17.05%	175	1.0475
65+	23.44%	442	0.5701
(Refused)	n/a	27	1.0000
Total		**1102**	

Further weightings were then applied to adjust zone samples to be representative by population. Details of those weightings are given in the table below:

Zone	Population *	Interviews Achieved	Interviews Achieved (Weighted by Age)	Zone Weightings
01	31008	100	96.251	1.0564
02	39635	100	118.616	1.0957
03	13093	100	96.383	0.4455
04	22327	100	112.76	0.6493
05	22432	101	90.386	0.8138
06	31872	100	91.435	1.1430
07	24230	100	82.597	0.9619
08	42004	100	80.832	1.7040
09	45565	100	119.389	1.2515
10	15962	100	111.074	0.4712
11	47887	101	102.125	1.5376
Total	**336015**	**1102**

1.5 Statistical Accuracy

As with any data collection where a sample is being drawn to represent a population, there is potentially a difference between the response from the sample and the true situation in the population as a whole. Many steps have been taken to help minimise this difference (e.g. random sample selection, questionnaire construction etc) but there is always potentially a difference between the sample and population – this is known as the standard error.

The standard error can be estimated using statistical calculations based on the sample size, the population size and the level of response measured (as you would expect you can potentially get a larger error in a 50% response than say a 10% response simply because of the magnitude of the numbers).

To help understand the significance of this error, it is normally expressed as a confidence interval for the results. Clearly to have 100% accuracy of the results would require you to sample the entire population. The usual confidence interval used is 95% - this means that you can be confident that in 19 out of 20 instances the actual population behaviour will be within the confidence interval range.

For example, if 50% of a sample of 1102 answers "Yes" to a question, we can be 95% sure that between 47.0% and 53.0% of the population holds the same opinion (i.e. +/- 3.0%). The following is a guide showing confidence intervals attached to various sample sizes from the study:

%ge Response	95% confidence interval
10%	±1.8%
20%	±2.4%
30%	±2.7%
40%	±2.9%
50%	±3.0%

1.6 Data Tables

Tables are presented in question order with the question number analysed shown at the top of the table. Those questions where the respondent is prompted with a list of possible answers are indicated in the question text with a suffix of [PR].

The sample size for each question and corresponding column criteria is shown at the base of each table. A description of the criteria determining to whom the question applies is shown in italics directly below the question text; if there is no such text evident then the question base is the full study sample. If the tabulated data is weighted (indicated in the header of the tabulations), in addition to the sample base, the weighted base is also shown at the bottom of each table.

Unless indicated otherwise in the footer of the tabulations, all percentages are calculated down the column. Arithmetic rounding to whole numbers may mean that columns of percentages do not sum to exactly 100%. Zero per cent denotes a percentage of less than 0.05%.

Percentages are calculated on the number of respondents and not the number of responses. This means that where more than one answer can be given to a question the sum of percentages may exceed 100%. All such multi-response questions are indicated in the tabulated by a suffix of [MR] on the question text.

Where appropriate to the question, means are shown at the bottom of response tables. These are calculated in one of two ways: if the data is captured to a coded response a weighted mean is calculated and the code weightings are shown as a prefix above the question text; if actual specific values were captured from respondents these individual numbers are used to calculate the mean.

Limitations

URS Infrastructure & Environment UK Limited ("URS") has prepared this Report for the sole use of London Borough of Havering ("Client") in accordance with the Agreement under which our services were performed (Proposal dated and submitted to London Borough of Havering in May 2014). No other warranty, expressed or implied, is made as to the professional advice included in this Report or any other services provided by URS. This Report is confidential and may not be disclosed by the Client nor relied upon by any other party without the prior and express written agreement of URS.

The conclusions and recommendations contained in this Report are based upon information provided by others and upon the assumption that all relevant information has been provided by those parties from whom it has been requested and that such information is accurate. Information obtained by URS has not been independently verified by URS, unless otherwise stated in the Report.

The methodology adopted and the sources of information used by URS in providing its services are outlined in this Report. The work described in this Report was undertaken between July 2014 and March 2015 and is based on the conditions encountered and the information available during the said period of time. The scope of this Report and the services are accordingly factually limited by these circumstances.

Where assessments of works or costs identified in this Report are made, such assessments are based upon the information available at the time and where appropriate are subject to further investigations or information which may become available.

URS disclaim any undertaking or obligation to advise any person of any change in any matter affecting the Report, which may come or be brought to URS' attention after the date of the Report.

Certain statements made in the Report that are not historical facts may constitute estimates, projections or other forward-looking statements and even though they are based on reasonable assumptions as of the date of the Report, such forward-looking statements by their nature involve risks and uncertainties that could cause actual results to differ materially from the results predicted. URS specifically does not guarantee or warrant any estimate or projections contained in this Report.

EXECUTIVE SUMMARY

1. Introduction

URS Infrastructure and Environment UK Ltd (URS) was commissioned by London Borough of Havering in July 2014 to undertake an employment land review (ELR) of the borough. The ELR assesses the quantity, quality and viability of the borough's employment land to form an evidence base to support the review of policies and preparation of Havering's Local Plan.

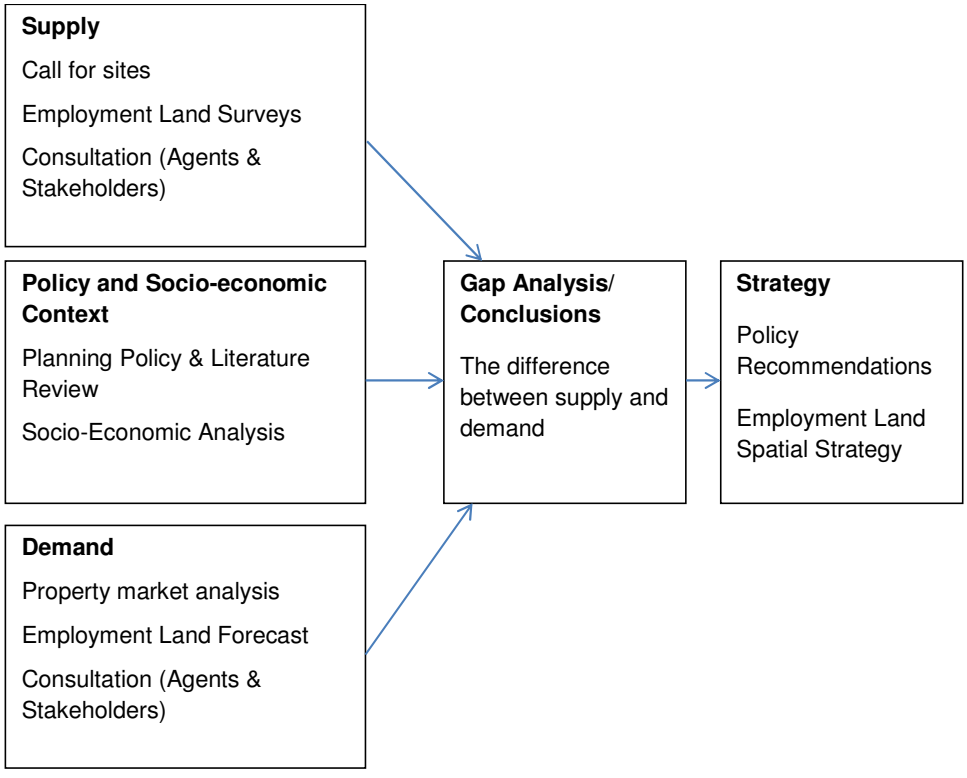
2. Context

The National Planning Policy Framework (NPPF) outlines the principles that Local Planning Authorities should follow in preparing their evidence base to inform employment land policies. The Greater London Authority's (GLA) Land for Industry and Transport Supplementary Planning Guidance (SPG) provides more London specific directions on employment provision requirements.

The need for Local Planning Authorities to produce an up to date ELR and the suggested format is outlined in National Planning Practice Guidance (NPPG) published on the 6th March 2014. One of the key changes outlined in the NPPG includes a requirement for a 'call for sites' to identify sites with the potential to address economic development in the Borough. Accordingly a call for sites process was completed as part of this study and consideration is given to either existing employment sites proposed by the site owner for change of use to non-employment uses or new sites with potential to meet economic development needs.

The main research elements of this employment land study are summarised in **Figure E1**. The methodology has been developed to conform to the NPPG. Each element is reviewed briefly in the following sub-sections.

Figure E1 Approach to the Employment Land Review



Source: URS (2014)

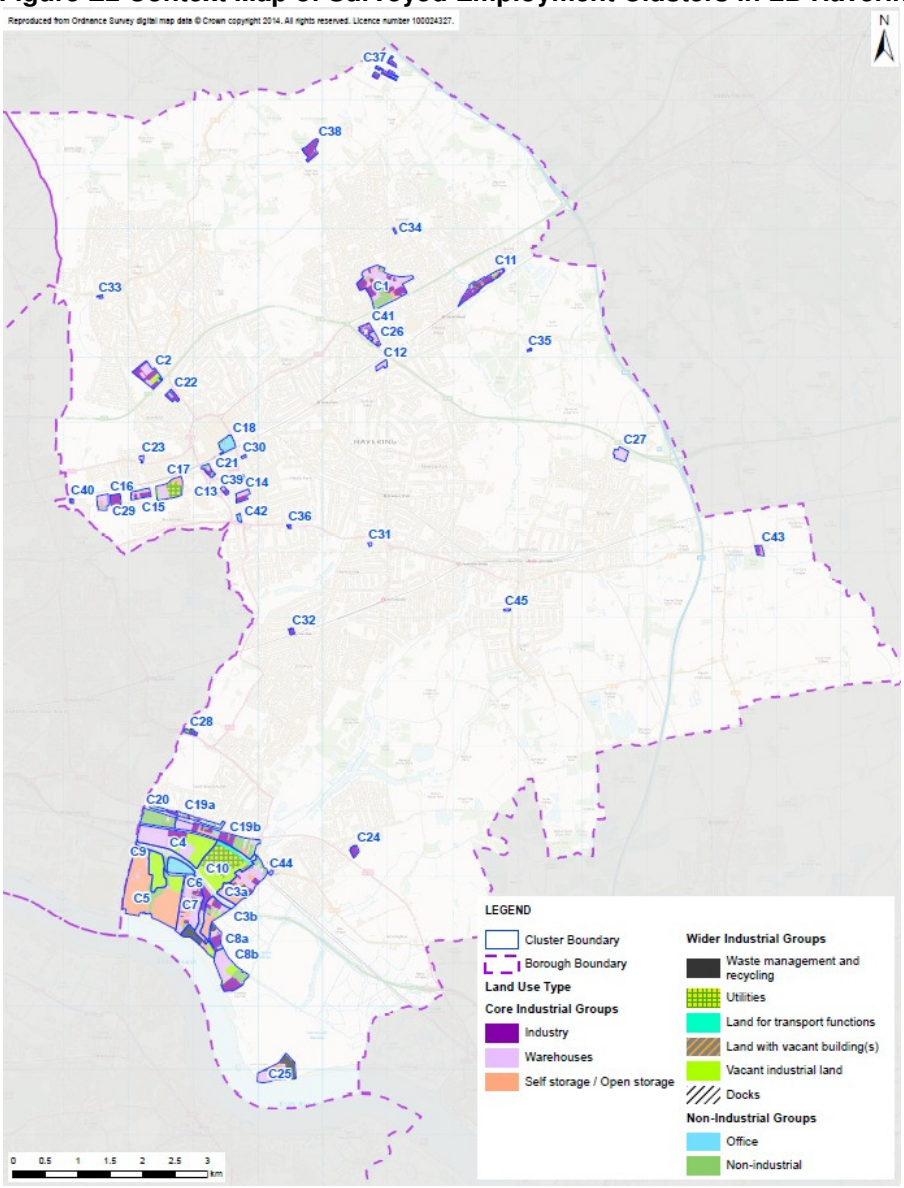
3. Supply Assessment

A field survey of employment land in LB Havering was carried out to assess its suitability for continued employment use. Sites that came forward through the call for sites were also assessed. The list of clusters included:

- Clusters surveyed as per the 2006 ELR, which were drawn from the council's Unitary Development Plan (UDP)
- Clusters identified in Havering's Core Strategy and Development Control Policies Development Plan Document (DPD), Site Specific Allocations DPD and Romford Area Action Plan adopted in 2008; and
- Clusters over 0.25 ha in size, as per NPPG paragraph 11

In total 48 employment clusters were surveyed. An overview of all clusters is given in **Figure E2**:

Figure E2 Context Map of Surveyed Employment Clusters in LB Havering



Source: URS (2015)

The majority of designated employment clusters are well functioning, predominantly industrial, clusters of employment land. Most have good/ very good access to the strategic road network and are in adequate condition, being identified as either in very good, good or average condition. The surveyed 'non-designated' clusters were more mixed in quality with several performing well and others identifiable as being of poor overall quality. The Romford Office Quarter was observed to be mostly performing well, having good access to facilities and amenities, public transport, the strategic road network, and good parking facilities. The relatively high vacancy rates suggests that demand for the type of units marketed here may be declining, though in the medium to long term demand for office space may pick up as a result of Crossrail and improved connectivity with central London markets.

4. Property Market Assessment

LB Havering's office and industrial land market were assessed in the context of the wider property market area (PMA). This corresponds to the NPPG which states that needs should be assessed in relation to the relevant functional economic market area (FEMA)[1]. The findings are based on the key conclusions of a consultation exercise with local property market agents and key stakeholders.

Our assessment concluded that demand levels for industrial premises are stable, as a whole, having experienced a fall at the onset of the economic downturn. Demand and take-up of second-hand stock is considered to be somewhat more muted. Although new high-quality premises have recently been built, second hand stock dominates the market at present. Whilst occupiers demand a range of premises, there is a noted shortage of large distribution facilities or available land to build such premises, meaning that when demand for such premises arises, occupiers have to look elsewhere in the PMA. The presence of poorer quality premises in some locations may provide opportunities for refurbishment or redevelopment to ensure the needs of occupiers are met and the supply-demand balance maintained.

Based on consultation and review of information sources it is assessed that take-up rates of office floorspace in Havering has been slow in recent years, and demand is currently not strong, with relatively few enquiries being received. Where demand exists, good quality premises are required with good links to public transport and amenities. The supply of office premises in Havering is not considerable and is largely concentrated within the Romford Office Quarter, where a number of good quality premises are available. In conclusion, the supply of B1 floorspace generally meets demand in the Havering local office market in the current to short term period. The key gap is in affordable, serviced office accommodation to meet the needs of small start-up companies.

5. Demand Assessment

To project future demand the following factors were assessed:

- Sub-regional floorspace trends;
- Historic and forecast employment based on macro-economic forecasting; and
- Assessment of other local factors not contained within existing data such as transport improvements and the effects of the recession based on consultation with market agents.

The results of the employment land demand forecast are shown below. Industrial land demand is shown in **Table E2** and Office demand in **Table E3**.

[1] NPPG, paragraph 009 Reference ID: 2a-009-20140306

Table E2 Industrial Employment Land Demand, 2012-2031

Demand for industrial land use	*Low*	*Medium* (hectares)	*High*
A. Supply of industrial land occupied by B-use class, including land for utilities, bus and rail depots, and waste management		375.0	
B. Current vacant industrial land 2014		37.0	
C. Total occupied industrial land and developable land (A+B)		412.0	
D. Land demand to 2031	-5.8	-5.2	-4.7
E. Additional demand for waste and recycling facilities 2014 to 2031		0.0	
F. Optimum frictional vacant land at 2031 (5% of A+D+E)[2]	18.5	18.5	18.5
G. Excess vacant land (includes optimal levels of frictional land (F) minus existing vacant land (B)	-18.6	-18.5	-18.5
H. Gross demand for industrial land 2014-2031 (A+D+E+G)	350.7	351.2	351.8
I. Net demand for industrial employment land 2014-31 (H-D)	**-24.3**	**-23.8**	**-23.2**
J. Net change per annum (ha)	-1.3	-1.3	-1.2

Source: URS (2015); GLA London's Industrial Land Baseline (2010); East London Waste Plan (2012)
Figures may not appear to sum due to rounding

Table E3 Office Floorspace Demand, 2014 - 2031

Demand for office floorspace	*Low*	*Medium* (m^2)	*High*
A. Actual (Gross) B1 Floorspace		154,000	
B. Current Estimated Vacant Floorspace		30,800	
C. Demand for B1 floorspace 2031	26,979	29,977	32,974
D. Optimum frictional vacancy in 2031 (8% of A + C)	14,478	14,718	14,958
E. Oversupply of vacant floorspace (D – B))	-16,322	-16,082	-15,842
F. Gross demand for B1 floorspace 2014-2031 (A+C+E)	164,657	167,895	171,132
G. Net demand for B1 floorspace 2014-2031 (F – A)	10,657	13,895	17,132

Source: URS (2015) Figures may not appear to sum due to rounding

The implications of this analysis is that there is a surplus of employment land in the region of between -**24.3ha** and -**23.2ha** and demand for between approximately +**10,657m²** and +**17,132m²** additional office floorspace in LB Havering over the planning period.

[2] The Land for Industry and Transport SPG (2012) paragraph 3.7identifies 5% as the optimal frictional vacancy rate for industrial land in order for the market to work efficiently.

6. Conclusions

Office

There is approximately 154,000m^2 of gross office floorspace in LB Havering, the majority of which is located in Romford Town Centre's Office Quarter. Our forecasting exercise estimated that there is additional demand for between approximately 10,657m^2 and 17,132m^2 of office floorspace in the planning period to 2031 (see Table E3). The projected growth in office floorspace is mainly attributed to ongoing demand for space within Romford Town Centre, and to a lesser extent demand from SMEs for smaller units in Romford. Consultations, analysis of the property market and policy evidence indicate that Havering contains some older office stock, which once vacant proves difficult to re-let given that characteristics may no longer appeal to modern occupiers. It is thus important that a measured approach is taken to encouraging refurbishment or site redevelopment to provide modern floorspace.

Medium term initiatives such as Crossrail and demand stimulated from potential outmigration from central London will likely lead to there being continued, though ultimately modest, demand for office space in LB Havering.

Industrial

There is a total of 375ha of land currently in industrial use in LB Havering (see Table 7.9). Total industrial floorspace is estimated to be in the region of 700,000m^2. We estimate that net demand over the planning period is between -24.3ha and -23.2ha of industrial land. This means that approximately 24 hectares of existing industrial land in LB Havering could be released for other uses while still providing sufficient industrial land in the Borough to meet future demand.

Some existing industrial clusters in LB Havering have been identified through recent Council policies and strategies as potentially appropriate for release or change of use to enable wider regeneration benefits to be achieved. These sites amount to around 19.5 hectares which is around 80% of the projected release figure of 24 hectares. The sites with potential for release of change of use to include the following:

- Rainham West (Clusters 19a and b) 15.4 ha
- Crow Lane Site 3 (Cluster 17) 2.7 ha
- Bridge Close (Cluster 21) – 1.4 ha

Rainham West, with the exception of the Rainham Steel office building, is identified by the LB Havering as a site that could be released for housing. The Council has submitted a funding bid to the GLA for 'housing zone' status. This funding would provide finance to unlock the site. Its redevelopment for housing would help the LB Havering meet its increased housing targets and wider regeneration goals.

7. Recommendations

Based on the research conducted throughout the study the following policy recommendations are made. Further justification of each recommendation is made in the full report at Section 8:

R1 The demand assessment estimates that there is net additional demand for between 10,657m^2 and 17,132m^2 of B1 floorspace in LB Havering over the Local Plan period to 2031. The most suitable location in the borough to accommodate this forecast demand is Romford Town Centre. Other complementary town centre uses could be introduced on underutilised sites within the Romford Office Quarter/Station Quarter, as long as the total quantum of office floor space within Havering as a whole is not reduced or the viability or functionality of the existing stock undermined.

R2 To help ensure there is sufficient capacity to meet projected demand for industrial land in LB Havering to 2031 the following existing designated employment land should continue to be protected:

a) All existing Strategic Industrial Land (SIL), which includes the following:

- **Harold Hill (Cluster 1)**
- **King George Close (Cluster 2)**
- **Ferry Lane North (Cluster 3a and b)**
- **Beam Reach 5 (Cluster 4)**
- **Ford (Cluster 5)**
- **CEME (Cluster 6)**
- **Fairview Estate (Cluster 7)**
- **Ferry Lane South (Cluster 8a and b)**
- **Beam Reach 6 (Cluster 9)**
- **Rainham SIL Infill (Cluster 10)**

b) The following Secondary Employment Areas (SEAs):

- **Harold Wood (Cluster 11)**
- **Hillman Close (Cluster 12)[3]**
- **The Seedbed Centre, Romford (Cluster 13)**
- **Lyon Road (Cluster 14)**
- **Crow Lane Site 2 – Danes Road (Cluster 15)**
- **Crow Lane Site 1 (Cluster 16)**
- **Crow Lane Site 3 (Cluster 17) Retain the 2.4 ha of the site that is in Royal Mail use. The remaining 7.94 ha is recommended for release (see recommendation 4 below)**

The Council should consider renaming the Secondary Employment Areas (SEA) as 'Locally Significant Industrial Sites' (LSIS) as per the London Plan definition.

R3 The Council should consider re-designating the Freightmaster Estate (Cluster 25) as Strategic Industrial Land (SIL).

R4 To help meet housing and wider regeneration objectives the Council could consider a change of use away from industrial employment uses at the following industrial clusters that total approximately 19.5 hectares:

- **Crow Lane Site 3 (Cluster 17) – 2.7 hectares**
- **Rainham West (North) (Cluster 19a) – 1.7 hectares**
- **Rainham West (South) Cluster 19b – 13.7 hectares (all of the cluster except the Rainham Steel Building)**
- **Bridge Close (Cluster 21) – 1.4 hectares**

[3]Also known as Stafford Industrial Estate

R5 To help retain an appropriate balance of supply and demand of industrial land over the planning period, the Council could consider a more flexible approach to changes of use away from industrial uses at a limited amount of industrial employment land not designated as SIL or SEA. The decision on which land to release should be based on certain criteria listed below being met. The loss of employment use in non SIL or SEA sites should not lower the overall industrial capacity of the borough significantly below that estimated by this study to be necessary to meet anticipated need over the planning period. This means that along with the 19.5 hectares of industrial land recommended for release in Recommendation 4 above an additional 4 to 5 hectares would be appropriate to release over the planning period.

To help ensure that not too much industrial land is released the Council could introduce a policy in the updated Local Plan that states that industrial land will only be released if all of the following criteria are met:

- **The existing employment land use causes detrimental effects to the amenity of the nearby area – particularly where residential uses are adversely affected;**
- **There is evidenced to be no market interest in the site following one year of active marketing;**
- **The change of use from industrial employment uses will not lower the industrial capacity of the borough below that estimated to be necessary to meet projected demand over the planning period as estimated by the most up to date ELR (i.e. this study).**

R6 Monitoring: The Council should monitor changes of employment land through planning permissions to ensure that sufficient land is available for economic growth over the planned period, 2014 to 2031.

1 INTRODUCTION

1.1 Study Objectives

URS Infrastructure and Environment UK Ltd (URS) was commissioned by London Borough of Havering in July 2014 to undertake an employment land review (ELR) of the borough. The ELR assesses the quantity, quality and viability of the borough's employment land to form an evidence base to support the review of policies and preparation of Havering's Local Plan. The ELR will be used by the Borough to inform its future approach to the provision, protection, release or enhancement of employment land and premises. The review updates and builds on the existing employment land evidence base and the 2006 Employment Land Review.

1.2 Policy Context

The National Planning Policy Framework (NPPF)[4] outlines the principles that Local Planning Authorities should follow in preparing their evidence base to inform employment land policies. The Greater London Authority's (GLA) Land for Industry and Transport Supplementary Planning Guidance (SPG)[5] provides more London specific directions on employment provision requirements.

The need for Local Planning Authorities to produce an up to date ELR and the suggested format is outlined in National Planning Practice Guidance (NPPG) published on the 6th March 2014. The NPPG updates the suggested methodology for producing an employment land evidence base. It supersedes the former guidance - the 2004 ODPM Employment Land Review Guidance Note. One of the key changes outlined in the NPPG includes a requirement for a 'call for sites' to identify sites with the potential to address economic development in the Borough. Accordingly a call for sites process was completed as part of this study and consideration is given to either existing employment sites proposed by the site owner for change of use to non-employment uses or new sites with potential to meet economic development needs.

The NPPG also suggests that studies take account of wider employment uses such as utilities, land for transport and waste management. The Council have separately commissioned a Retail Study to be undertaken in parallel which will consider retail and leisure growth over the Local Plan period and, like the ELR, this will inform policy formation. The methodology applied in this review complies with the principles outlined in the NPPF, NPPG and GLA Land for Industry and Transport SPG.

1.3 Study Area

The process for selecting existing and potential employment sites to survey corresponds to the guidance in the NPPG. This includes all those clusters surveyed as part of the 2006 ELR and a number of clusters comprising non-designated employment land over 0.25 hectares[6]. In total 48 employment clusters were assessed as part of the study. These fall within four groups of employment area type:

1. Strategic Industrial Locations (SIL) comprising:
    a. Rainham Employment Area;
    b. Harold Hill Industrial Estate, and;

[4] NPPF, paragraphs 160 to 161
[5] Greater London Authority (GLA) 2010, Land for Industry and Transport Supplementary Planning Guidance (SPG)
[6] NPPG, paragraph 011 reference ID: 2a-011-20140306

c. King George Close Estate, Romford.

2. Secondary Employment Areas (SEA)[7] comprising:

   a. Crow Lane in Romford (three sites);

   b. Harold Wood Industrial Estate;

   c. Hillman Close;

   d. Lyon Road, and;

   e. The Seedbed Centre.

3. Other designated clusters including the Romford Office Quarter, as designated in the Romford Area Action Plan (AAP) 2008; and Beam Park and Rainham West, which are designated as Site Specific Areas under SSA11 and SSA12 respectively

4. Non-designated employment land clusters. There are two types of clusters:

   a. Clusters which have been de-designated from employment use through the 2008 LB Havering Core Strategy, including: Chesham Close, Spring Gardens, Bridge Close and Victoria Road all located in Romford; and Lambs Lane, Coldharbour Lane Commercial Centre, and New Road Employment Area all located in the Rainham area; and

   b. Other employment land clusters over 0.25 hectares as per the NPPG requirement. These were not designated prior to 2008 LB Havering Core Strategy. These include the clusters of Bryant Avenue Industrial Estate (Southend Arterial Road), a caravan storage site in the east of the borough off the A127, Dagenham Rd Pumping Station/Kilnbridge Waste Transfer Site, and 178 – 208 Crow Lane.

5. A call for sites process was followed as per the NPPG and responses were assessed but no additional new sites with potential for employment uses were identified by site promoters.

We explain the selection of these clusters further in **Section 5** and present the locations in **Figure 2.2**.

1.4 Report Structure

This report sets out our final findings and policy recommendations for employment land in LB Havering, taking into account the future economic development of the area. The report is structured as follows:

- **Section 2** details our approach
- **Section 3** sets out the national, regional and local policy context of particular relevance to employment land issues
- **Section 4** provides a high level analysis of socio-economic and local business baseline conditions in LB Havering benchmarked against relative geographies
- **Section 5** summarises the key qualitative and quantitative results of the employment land cluster appraisals

[7] SEAs share characteristics and attributes and are directly comparable to Locally Significant Industrial Sites (LSIS) as per the London Plan employment land designation terminology. However, to avoid confusion they are still referred to as SEAs in this report.

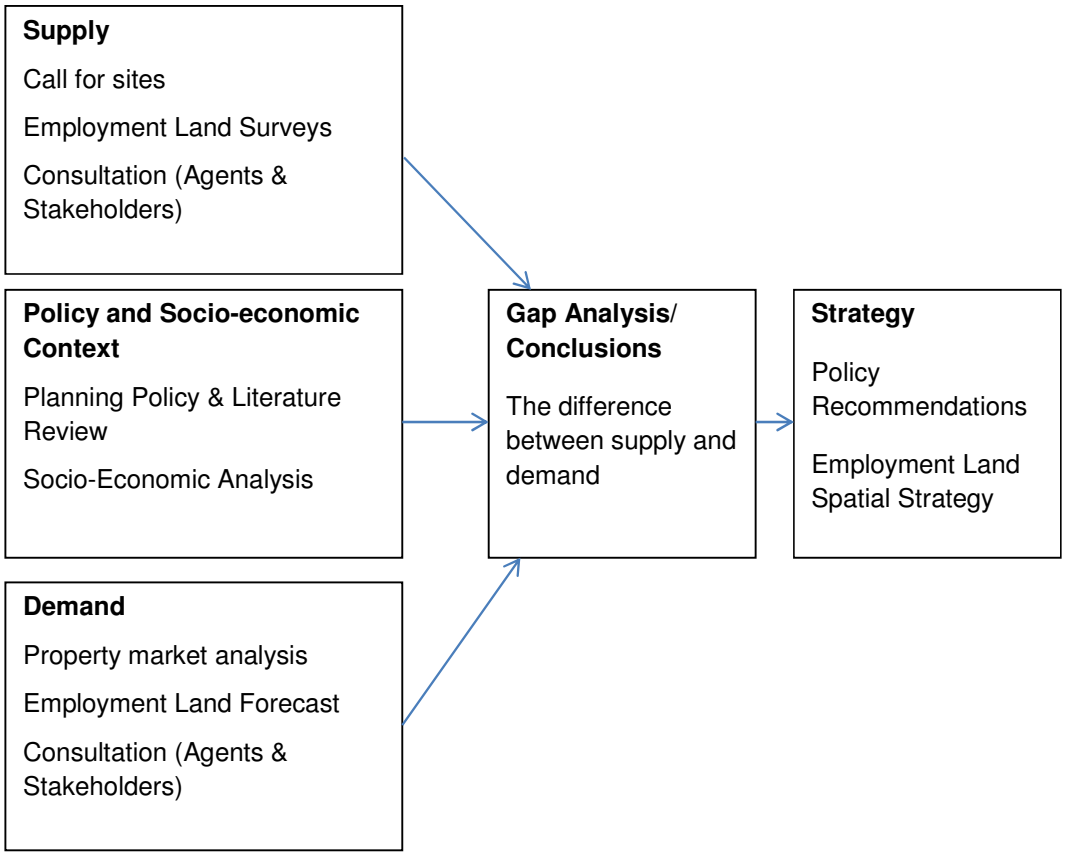
- **Section 6** provides an overview of the employment land market including the historical and expected future trends in the commercial and industrial property sectors based on the views of local market agents and stakeholders gained through a consultation exercise
- **Section 7** forecasts the demand for employment land
- **Section 8** sets out our overall conclusions; and presents our suggested recommendations for the future management of employment land in LB Havering.

2 APPROACH

2.1 Introduction

This section sets out the main research elements of this employment land study as illustrated in **Figure 2.1**. The methodology has been developed to conform to the NPPG. Each element is reviewed briefly in the following sub-sections.

Figure 2.1 Approach to the Employment Land Review



Source: URS (2015)

2.2 Policy and Socio-economic Context

Our employment land review begins with a review of the policy framework and the socio-economic context.

The policy review takes account of relevant national, regional and local policies and strategies as these have the potential to influence future supply and demand for employment land. The socio-economic profile is benchmarked with the Property Market Area (PMA) (see **Section 6.2**) in order to provide a picture of the borough's economic make-up, and its comparative opportunities and threats. The profile covered a review of historical employment information for the borough, including information on workforce characteristics, occupation, earnings and travel to work information, and analysis on key sectors. To develop this profile a number of information sources are reviewed including Census data, ONS Annual Population Survey, Annual Business Inquiry and the Local Labour Force Survey.

2.3 Supply Assessment

A field survey of employment land in LB Havering was carried out to assess its suitability for continued employment use. The list of clusters were selected and agreed in consultation with the Council. The list consist of:

- Clusters surveyed as per the 2006 ELR, which were drawn from the council's Unitary Development Plan (UDP), including those retained and those since de-designated for employment use in Havering's 2008 LDF [8].
- Clusters identified in Havering's Core Strategy and Development Control Policies Development Plan Document (DPD), Site Specific Allocations DPD and Romford Area Action Plan adopted in 2008; and
- Clusters over 0.25 ha in size, as per NPPG paragraph 11, considered suitable for survey identified using the London Industrial Baseline Study (URS and DTZ on behalf of the Greater London Authority (GLA), 2010).

In total 48 employment clusters were identified and surveyed. During the survey, three clusters were considered to contain distinct areas of character and natural geographic divisions. This meant that, including cluster sub-divisions, 51 cluster areas were surveyed and analysed. An overview of all clusters is given in **Figure 2.2**:

In drawing the clusters boundaries we have noted that the GLA defines SIL boundaries for King George's Close and Rainham Employment Area slightly differently to the LB Havering's adopted LDF Proposals Map. For King George's Close the GLA's SIL boundary includes a strip of land to the south of the arterial road which is currently in retail use. The GLA SIL boundary for Rainham Employment Area includes land adjacent to the north in the Rainham West cluster, south of New Road, which LB Havering de-designated in 2007, and excludes a small parcel of land at the southern tip of Ferry Lane South cluster, which is included in LB Havering's adopted LDF Proposals Map. All land within the GLA SIL boundaries are however captured in our cluster survey. Following adoption of the Local Plan we suggest that the Council submits the revised SIL and LSIS policy layers to the GLA in a compatible GIS format so that there is a consistent understanding of the geographic extent of these policy areas.

The survey covered the use classes B1, B2 and B8. Throughout this report employment land is referred to as land in office (B1), comprising B1a (Office) and B1b (Research and Development) but not B1c (Light Industry) as this use class shares characteristics more similar to industrial uses; industry (B2) comprising industry (B2) uses and B1c (Light Industry); and warehouse use (B8). Each cluster was surveyed and appraised against an agreed set of economic, planning and property market criteria, in line with National Planning Practice Guidance (2014) and the Land for Industry and Transport SPG (2012).

To ensure consistency, surveyors used a survey manual, a structured survey questionnaire and a map of each employment cluster. The survey questionnaire used Land for Industry and Transport SPG criteria. The questionnaire included a series of close-ended and open-ended questions and captured quantitative and qualitative information. Once the surveys were complete (week beginning 29th September, 2014) the survey data was entered into a database and written up for analysis.

[8] Surveying the same clusters in 2006 allows us to make direct comparisons with how the employment land market has changed. An emphasis of our survey involved identifying changes in land use from the 2006 ELR and 2010 London Industrial Land Baseline mapping.

2.4 Property Market Assessment - Consultation

We consulted with local property market agents, key stakeholders involved in economic development and regeneration in order to better understand the local demand and supply characteristics of the employment land market and the land and premises-related drivers and constraints to businesses operating in the borough.

Commercial Agent Consultation

To help enhance the understanding of the supply and demand characteristics of the local employment land market, the views of local property market agents, key land owners and other key stakeholders were sought. It was considered more effective and efficient to speak to a group of commercial property agents rather than speaking only to one commercial agent in order to broaden and moderate the response compared to that which would have been received by contacting just one commercial agent. Approximately 5 local commercial agents and developers were contacted.

The exercise supplemented desk-based research and survey findings, and sought to test the emerging findings and conclusions relating to the demand and provision of office and industrial sites and premises in LB Havering. Consultation with local property agents took the form of a semi-structured interview by telephone around topics including: LB Havering employment property market area; the demand and supply of sites and premises, the characteristics of sites and their suitability for employment uses; opportunities and constraints to growth; and inward investment and regeneration. The outputs of the consultation exercise are an important piece of evidence that provides real market intelligence from professionals working day to day with commercial property in LB Havering and is a key consideration to inform the policy recommendations.

Stakeholder Consultation

A key exercise of the research programme was to consult with relevant local business groups, business support organisations, and economic and regeneration organisations active in LB Havering. The exercise supplemented desk-based research and survey findings, and sought to test the emerging findings and conclusions relating to the demand and provision of office and industrial sites and premises. Consultation took the form of a semi-structured interview by telephone around topics including: business needs; the demand and supply of sites and premises, their characteristics and their suitability; opportunities and constraints to growth; inward investment and regeneration; supporting an entrepreneurial culture; labour force structure, education and skills; and economic inclusion.

2.5 Demand Assessment

A number of different techniques can be used for forecasting future demand of employment land. Each has strengths and weaknesses. The decision was therefore taken after consultation with LB Havering to adopt a synthesis approach that is based on the trends of the following factors:

- Sub-regional floorspace trends;
- Historic and forecast employment based on macro-economic forecasting; and
- Assessment of other local factors not contained within existing data such as transport improvements and the effects of the recession.

For the purpose of this study we have used data from the following local authority boundaries of a defined Property Market Area (PMA), as suggested by property market agents[9], to measure the trends of the above three factors:

- LB Havering;
- LB Barking and Dagenham;
- LB Newham, and;
- Brentwood Borough Council.

By contrast our assessment found that for office property, demand is typically localised and therefore the PMA can be best defined as the LB Havering.

Valuations Office Agency (VOA) experimental commercial floorspace data released by the VOA in May 2012 and covering the period 2000 to 2012 was used to assess the changes in floorspace between 2000 and 2012 (the most up to date information) for the four boroughs within the PMA. Historic trends were then used as the basis for a linear forecast of demand to 2031.

The linear floorspace forecast was then adjusted using employment forecasts (2012 – 2031) published by the Greater London Authority. The final step, to further increase the robustness of the analysis, was to take account and adjust the employment land forecast using information on the economic, property market trends not included in the data and future policy direction in LB Havering. This is made in relation to the wider economy and helps to present the potential future growth in a series of different potential scenarios.

2.6 Gap Analysis, Conclusions and Recommendations

The final chapter draws together all of the previous research elements and makes a comparison of the current supply of employment land in the borough of LB Havering with the projected demand for employment land up to 2031. This involves an assessment of the balance between supply and demand, and informs the position of whether there should be retention or release or employment land.

The recommendations are informed by all preceding analysis: the socio-economic profile of the borough, field surveys, the economic development and planning policy context, property market analysis, demand projections and consultations findings. The recommendations describe by use class type and spatially where land for employment uses should be provided. All recommendations are fully justified.

[9] Initially Thurrock was also identified as potentially part of the PM. However, this was removed after consultation with agents and analysis of data as the effect of the London Gateway development has a distorting effect on the employment projections relevant to Havering.

3 POLICY REVIEW

3.1 Introduction

This section provides an overview of relevant planning and economic development policy which informs this employment land review.

3.2 National Planning Policy

National Planning Policy Framework (NPPF)

The NPPF condenses all planning policy statements into a single all-encompassing planning framework with the intention of making the planning system less complex and more accessible. The National Planning Policy Framework was published and came into effect on 27th March 2012.

The NPPF describes the Government's vision for building a strong, competitive economy. It sets out a presumption in favour of sustainable development in the absence of a local plan or where the plan is silent or indeterminate. This means that the ELR and Local Plan should present robust evidence to support clearly defined allocations of land for employment to avoid applications for alternative use being granted on the basis they are sustainable development. In relation to economic and employment land it states the following:

> *The Government is committed to ensuring that the planning system does everything it can to support sustainable economic growth. Planning should operate to encourage and not act as an impediment to sustainable growth.*
>
> *Therefore significant weight should be placed on the need to support economic growth through the planning system.*
>
> *To help achieve economic growth, local planning authorities should plan proactively to meet the development needs of business and support an economy fit for the 21st century.*
>
> *Investment in business should not be over-burdened by the combined requirements of planning policy expectations. Planning policies should recognise and seek to address potential barriers to investment, including a poor environment or any lack of infrastructure, services or housing. In drawing up Local Plans, local planning authorities should:*
>
> - *Set out a clear economic vision and strategy for their area which positively and proactively encourages sustainable economic growth;*
> - *Set criteria, or identify strategic sites, for local and inward investment to match the strategy and to meet anticipated needs over the plan period;*
> - *Support existing business sectors, taking account of whether they are expanding or contracting and, where possible, identify and plan for new or emerging sectors likely to locate in their area. Policies should be flexible enough to accommodate needs not anticipated in the plan and to allow a rapid response to changes in economic circumstances;*
> - *Plan positively for the location, promotion and expansion of clusters or networks of knowledge driven, creative or high technology industries;*

- *Identify priority areas for economic regeneration, infrastructure provision and environmental enhancement; and facilitate flexible working practices such as the integration of residential and commercial uses within the same unit.*

Planning policies should avoid the long term protection of sites allocated for employment use where there is no reasonable prospect of a site being used for that purpose. Land allocations should be regularly reviewed. Where there is no reasonable prospect of a site being used for the allocated employment use, applications for alternative uses of land or buildings should be treated on their merits having regard to market signals and the relative need for different land uses to support sustainable local communities. (NPPF, page 6-7). URS considers the status and justification for the ongoing protection of SILs and SEAs as part of Sections 5 and 8.

National Planning Practice Guidance NPPG (March 2014)

On the 6th March 2014 the Government published new National Planning Practice Guidance (NPPG) on 'Housing and Economic Development Needs Assessments' and 'Housing and Economic Land Availability Assessments' amongst others. This guidance replaces the ODPM Employment Land Reviews: Guidance Note (2004).

In economic development terms 'need' relates to the amount of economic development floorspace required based on quantitative assessment and an understanding of the qualitative requirements market segments. The NPPG requires need assessment to be based on an objective assessment of the facts and should not be biased or influenced by constraints to the overall assessment or limitations imposed by the supply of land for new development, historic under performance, viability, infrastructure or environmental constraints. Although it is recognised that such evidence will need to be addressed when identifying specific policies within development plans.

It is recognised that there is no one methodological approach for the assessment of need. However, the NPPG advises that in understanding the current market in relation to economic uses plan makers should liaise closely with the business community to understand their current and potential future requirements.

To provide an understanding of the underlying requirements for office, general business and warehousing sites the NPPG emphasises the importance of considering projections (based on past trends) and forecasts (based on future scenarios) and identify occurrences where sites have been developed for specialist economic uses. The NPPG requires plan makers to consider sectoral and employment forecasts and projections, demographically derived assessments of future employment needs, past take-up of employment land and property and/or future property market requirements, consultation and studies of business trends and statistics.

Analysing supply and demand concurrently enables conclusions to be drawn on whether there is a mismatch between quantitative and qualitative supply of and demand for employment sites. This in turn enables an understanding of which market segments are over-supplied to be derived and those which are undersupplied. By comparing availability of stock with particular requirements 'gaps' in local employment land provision can be identified.

The NPPG identifies that when translating employment and output forecasts into land requirements there are four key relationships that need to be quantified including:

- Standard Industrial Classification sectors to use classes;
- Standard Industrial Classification sectors to type of property;

- Employment to floorspace (employment density); and
- Floorspace to site area (plot ratio based on industry proxies).

The NPPG guidance on 'Housing and Economic Land Availability Assessment' sets out a general methodology for assessing land availability but focuses primarily on the assessment of housing rather than employment land.

With relevance to this study the NPPG requires local planning authorities to work with other local authorities within the functional economic market area when assessing availability of land in line with the duty to cooperate. The NPPG also requires plan makers to be proactive in identifying as wide a range of sites as possible, including existing sites that could be improved, intensified or changed. Sites which have particular policy constraints should be included in assessments however constraints should be set out clearly and tested with conclusions drawn on whether constraints can be overcome.

The assessment of the suitability of sites for development should be guided by the development plan, emerging plan policy and national policy, as well as market and industry requirements. The NPPG notes that when assessing sites against the adopted development plan, regard should be had to how up to date the plan policies are. Sites in existing development plans, or with planning permission, will generally be considered suitable for development although it may be necessary to assess whether circumstances have changed which would alter their suitability, in addition to the other factors identified in the NPPG.

New Permitted Development Rights

Supporting the Government's effort to increase housing supply is an amendment to permitted development rights, which allows the change of use from B1(a) office to residential (C3) without the need for planning permission. These came into force in spring 2013 and have the purpose of supporting and enabling growth. The new permitted development rights will initially be time-limited for three years. Local authorities were given an opportunity to seek an exemption from office to residential uses for specific geographies where there is evidence to suggest there could be a 'loss of a nationally significant area of economic activity' or 'substantial adverse economic consequences at the local authority level which are not offset by the positive benefits the new rights would bring'. LB Havering were unsuccessful in their application for an exemption. The potential impacts of this change are explored in the Property Market Assessment (Section 6) and Policy Recommendations (Section 8).

3.3 Regional Planning Policy

The Coalition Government of 2010 announced that national Planning Policy Statement 11: Regional Spatial Strategies would be abolished under the Localism Bill (introduced to Parliament in Dec 2010). However, the guidance letter[10] states that the London Plan will continue to provide the planning framework for the London boroughs.

London Plan 2011 and Revised Early Minor Alterations 2013

The London Plan (July 2011) is the spatial strategy for Greater London spanning the next twenty years to 2031. It replaces the previous London Plan (2004). It sets out an integrated social, economic and environmental framework for the future development of London. The relevant policies are stated below.

[10] Chief Planning Officers Letter: Revocation of Regional Strategies, DCLG, 6 July 2010

An overall strategic policy of the Plan is contained within six detailed objectives. Those relevant to guide the Councils in the development of their employment policies within their local development plan include the following:

- Objective 1 - A city that meets the challenges of economic and population growth in ways that ensure a sustainable, good and improving quality of life and sufficient high quality homes and neighbourhoods for all Londoners, and help tackle the huge issue of deprivation and inequality among Londoners, including inequality in health outcomes.

- Objective 2 - An internationally competitive and successful city with a strong and diverse economy and an entrepreneurial spirit that benefit all Londoners and all parts of London; a city which is at the leading edge of innovation and research and which is comfortable with – and makes the most of – its rich heritage and cultural resources.

- Objective 5 - A city that becomes a world leader in improving the environment locally and globally, taking the lead in tackling climate change, reducing pollution, developing a low carbon economy, consuming fewer resources and using them more effectively.

The London Plan identifies outer London as an area that requires specific strategic guidance to ensure that it contributes effectively to the overall prosperity of the capital. Havering is within outer London. Policy 2.6 sets out the overall vision for Outer London. It states:

- *'The Mayor will, and boroughs and other stakeholders should, work to realise the potential of outer London, recognising and building upon its great diversity and varied strengths by providing locally sensitive approaches through LDFs and other development frameworks to enhance and promote its distinct existing and emerging strategic and local economic opportunities, and transport requirements'.*

Policy 2.7 sets out the Economic policies for Outer London. These include:

- *'enabling existing sources of growth to perform more effectively, and increasing the competitive attractiveness of outer London for new sectors or those with the potential for step changes in output.*

- *ensuring that appropriate weight is given to wider economic as well as more local environmental and other objectives when considering business and residential development proposals*

- *consolidating and developing the strengths of outer London's office market through mixed use redevelopment and encouraging new provision in competitive locations, including through the use of land use 'swaps'*

- *managing and improving the stock of industrial capacity to meet both strategic and local needs, including those of small and medium sized enterprises (SMEs), start-ups and businesses requiring more affordable workspace*

Policy 2.12: 'Opportunity Areas and Areas for Intensification' states that '*development proposals within opportunity areas and intensification areas should:*

- *Support the strategic policy directions for the opportunity areas an intensification areas set out in Annex 1, and where relevant, in adopted opportunity area planning frameworks*

- *Seek to optimise residential and non-residential output and densities, provide necessary social and other infrastructure to sustain growth, and, where appropriate, contain a mix of uses; and*

- *Contribute towards meeting (or where appropriate, exceeding) the minimum guidelines for housing and/or indicative estimates for employment capacity set out in Annex 1, tested as appropriate through opportunity area planning frameworks and/or local development frameworks.'*

Policy 2.13 refers to Opportunity Areas, such as London Riverside, in the East London sub-region and states that; *'Planning frameworks, investment plans and other spatial interventions for these areas (opportunity areas) should focus on implementation, identifying both the opportunities and challenges that need resolving such as land use, infrastructure, access, energy requirements, spatial integration, regeneration, investment, land assembly and phasing'.*

Integral to Policy 2.13 is Annex 1, which outlines how broad principles of the London Plan should be applied to specific Opportunity and Intensification Areas including indicative estimates of employment capacity and minimum guidelines for new homes to 2031. The London Riverside Opportunity Area covers Barking Riverside, Dagenham Dock, South Dagenham, Beam Reach, Beam Park and Rainham West sites with scope for intensification in Barking town centre, Rainham Village and South Hornchurch.

Across the opportunity area capacity is for 14,000 jobs and 25,000 homes. To deliver this growth '*substantial improvements in public transport will be needed, building on plans for increased capacity on the C2C rail line, and East London Transit schemes to serve London Riverside, exploring the potential for additional stations, for example at Beam Park along the current rail corridor, and extended bus services.'* At South Dagenham, along the A1306 East, and in Rainham the Plan states that there is potential to deliver more compact, residential-led mixed urban communities.

In terms of employment land *'the development strategy includes managed release of some surplus industrial land for housing and other complementary uses, and consolidating the offer of the remaining industrial land including promotion of a Green Enterprise District incorporating the London Sustainable Industrial Park at Dagenham Dock. The core employment areas have the potential to be developed as a leading centre for innovation and high-tech manufacturing, and for the growth sector of environmental technology',*

Policy 2.15 refers to Town Centres and states that they should be; *'the main foci beyond the Central Activities Zone for commercial development and intensification...'.* The London Plan defines Romford as a Metropolitan Centre which is second in the hierarchy of four types of town centre.

Policy 2.16 encourages London boroughs to develop plans for strategic development centres in outer London. This is designed to help; *'create a distinct and attractive business offer and public realm through design and mixed use development as well as any more specialist forms of accommodation'*. It suggests at Table 2.1 that Havering could be a potential strategic development centre for logistics and that London Riverside (partly in Havering) could be a centre for industry/green enterprise.

The London Plan also defines the Strategic Industrial Location (SIL) framework as *'intended to reconcile the demand for, and supply of, productive industrial land in London'*. There are two types of SILs: Industrial Business Parks IBPs and Preferred Industrial Locations (PIL). PILs are described as locations *'particularly suitable for general industrial, light industrial, storage and distribution, waste management, recycling, some transport related functions, utilities, wholesale markets and other industrial related activities'*, of which LB Havering has three; Dagenham Dock/Rainham

Employment Area (partly in Barking and Dagenham) King George Close Estate, Romford, and Harold Hill Industrial Estate.

Paragraph 2.82 is relevant to LB Havering. It states: *'Innovations to make more effective use of land should be encouraged and there is particular need to develop consolidation centres and accommodate freight break bulk points more efficiently as a part of the freight hierarchy. It will be particularly important to secure and enhance strategic provision in east London, especially… in east London, north and south of the Thames'*.

In terms of office development Policy 4.2 'Offices' states that *"The Mayor will and Boroughs and other stakeholders should:*

- *Support the management and mixed use development and redevelopment of office provision to improve London's competitiveness and to address the wider objectives of this Plan, including enhancing its varied attractions for businesses of different types and sizes including small and medium sized enterprises.*
- *Recognise and address strategic as well as local differences in implementing this policy to:*
    - *Meet the distinct needs of the central London office market… by sustaining and developing its unique and dynamic clusters of 'world city' and other specialist functions and business environments;*
    - *Consolidate and extend the strengths of the diverse office markets elsewhere in the capital by promoting their competitive advantages, focusing new development on viable locations with good public transport, enhancing the business environment including through mixed use redevelopment, and supporting managed conversion of surplus capacity to more viable, complementary uses;*
    - *Encourage renewal and modernisation of the existing office stock in viable locations to improve its quality and flexibility; and seek increases in the current stock where there is authoritative, strategic and local evidence of sustained demand for office based activities in the context of Policies 2.7, 2.9, 2.13, 2.15–2.17";*

Policy 4.4, Managing Industrial Land and Premises, states that the Mayor will work with boroughs and other partners to:

a. *'adopt a rigorous approach to industrial land management to ensure a sufficient stock of land and premises to meet the future needs of different types of industrial and related uses in different parts of London, including for good quality and affordable space*

b. *plan, monitor and manage release of surplus industrial land where this is compatible with a) above, so that it can contribute to strategic and local planning objectives, especially those to provide more housing, and, in appropriate locations, to provide social infrastructure and to contribute to town centre renewal.'*

Following this, the London Plan states that *'LDFs should demonstrate how the borough stock of industrial land and premises in strategic industrial locations locally significant industrial sites and other industrial sites will be planned and managed in local circumstances in line with this strategic policy and the location strategy in Chapter 2, taking account of:*

a. *the need to identify and protect locally significant industrial sites where justified by evidence of demand*

b. *strategic and local criteria to manage these and other industrial sites*

c. *the borough level groupings for transfer of industrial land to other uses...and strategic monitoring benchmarks for industrial land release in supplementary planning guidance*

d. *the need for strategic and local provision for waste management, transport facilities (including inter-modal freight interchanges), logistics and wholesale markets within London and the wider city region; and to accommodate demand for workspace for small and medium sized enterprises and for new and emerging industrial sectors including the need to identify sufficient capacity for renewable energy generation*

e. *quality and fitness for purpose of sites*

f. *accessibility to the strategic road network and potential for transport of goods by rail and/or water transport*

g. *accessibility to the local workforce by public transport, walking and cycling*

h. *integrated strategic and local assessments of industrial demand to justify retention and inform release of industrial capacity in order to achieve efficient use of land*

i. *the potential for surplus industrial land to help meet strategic and local requirements for a mix of other uses such as housing and, in appropriate locations, to provide social infrastructure and to contribute to town centre renewal.'*

In particular interest, point 'c' of this policy refers to Havering as a 'Managed Transfer' Borough; that is a borough which is considered to '*typically have a greater supply of vacant industrial sites relative to demand and should generally adopt a rigorous but sensitively managed approach to transfer'* . However, it is important to note that this changed to 'limited transfer' in the 2012 Land for Industry and Transport SPG (see below).

A key evidence base document for the London Plan is the 2010 GLA London Industrial Land Baseline Study, undertaken by URS/DTZ. This is discussed in more detail later in this section.

Further Alterations to the London Plan (FALP) 2015

On 10 March 2015, the Mayor published (adopted) the Further Alterations to the London Plan (FALP). The FALP sets out London's development goals up to 2036 and has been prepared primarily to address key housing and employment issues emerging from an analysis of the 2011 Census. The census data indicates that there is to be a substantial increase in the capital's population. London's population is expected to increase by 87,000 per annum and by 2036 London's total population is expected reach 10.11 million.

The most significant alteration is to housing targets. The Mayor has increased the overall housing target set out in the 2011 London Plan (32,210) to 42,000 net additional homes per annum- an increase of approximately 30%. The alterations also propose higher housing targets for the majority of the London Boroughs. In Havering the ten year housing target has increased to 1,170 net additional homes per annum – an increase of 21%.

It is expected that additional homes will be provided through higher housing densities on previously developed land and on sites within and around transport hubs – such as Crossrail. In particular, the identified Opportunity Areas and Areas of Intensification are expected to make a significant contribution. To ensure that housing output is optimised the FALP states that employment capacities should, if necessary, be reviewed in the light of strategic and local employment projections.

From an employment perspective the FALP recognises that the Inner London area is increasingly becoming the home of new and emerging sectors of the economy. This leads to particular clustering and accommodation requirements. Accordingly, Policy 2.9 has been amended to include a requirement to ensure that appropriate workspaces for the area's changing economy are made available.

GLA Land for Industry and Transport Supplementary Planning Guidance (SPG) 2012

The SPG was published in September 2012. LB Havering is in the 'limited transfer' of industrial land category. Its key objectives are to ensure the provision of sufficient land, suitably located, for the development of an expanded transport system. Key policies from the London Plan that form the basis for the SPG are Policies 2.17 Strategic Industrial Locations. 4.4 Managing Industrial Land and Premises and 6.2 Providing Public Transport Capacity and Safeguarding Land for Transport.

The SPG has a number of relevant themes for this ELR, including:

- *Managing release in the context of demand arising from non-industry uses;*
- *There is increasing demand for industrial land from a range of other important industrial type functions. The distribution of release must take full account of other land use priorities and be managed carefully to ensure that a balance is struck between retaining sufficient industrial land in appropriate locations and releasing land to other uses;*
- *Strategic Industrial Locations and Locally Significant Industrial Sites should in general be protected, and release of industrial land through development management should generally be focussed on smaller sites outside of the SIL framework;*
- *The requirements for utilities also represent established uses of industrial land and their land requirement should be planned for to accommodate growth;*
- *Need for an integrated/partnership approach to employment land provision;*
- *A partnership approach and strategic perspective is required in order to keep inner London sustained and to meet the demands of the Central Activities Zone and Canary Wharf for locally accessible, industrial type activities, e.g. including food and drink preparation, printing, publishing, local distribution activities and 'just-in-time' services;*
- *Central and inner London boroughs face strong competition from other higher value land uses, particularly commercial offices, residential and retailing. Boroughs around the Central Activities Zone (CAZ) should consider industrial uses servicing the needs of central London; and*
- *In outer London boroughs should manage and improve the stock of industrial capacity to meet both strategic and local needs, including those of small and medium sized enterprises (SMEs), start-ups and businesses requiring more affordable workspace. Parts of outer London have economic functions in*

logistics, industry and green enterprise that are of greater than sub-regional importance.

The SPG highlights the important role that logistics plays in supporting London's economy and, drawing on URS research, identifies six principal logistics property market areas that serve the city. One lies within LB Havering's administrative boundaries – the Thames Gateway property market area.

Annex 1 of the draft SPG sets out the indicative industrial land release benchmarks for 2011-2031 for Havering is -34ha (-1.7ha pa).

Annex 2 of the draft SPG gives indicative land demand for waste management and recycling. For Havering the waste apportionment to 2031 (London Plan 2011) is 467,000 tonnes per annum (pa); the waste transfer station capacity is 855,513 tonnes pa which is well above demand. The net additional indicative land requirement for waste apportioned to 2031 is therefore 10.4ha. This estimate is an approximate and indicative land requirement only and Boroughs, waste authorities and other partners, in collaboration with the GLA, should determine the actual requirements of industrial land needed to manage waste apportioned in the London Plan Sub Regional Planning Policy. This target is effectively superseded by the East London Waste Strategy as described below.

Joint Waste Development Plan Document for the East London Waste Authority Boroughs (2011), Adopted February 2012.

The East London Waste Authority, incorporating the London Borough of Havering along with Barking and Dagenham, Newham and Redbridge have recently adopted a Joint Waste Development Plan Document (JWDD). This establishes a framework of policies, including development control policies and planning strategy to 2021 for sustainable waste management which enables the adequate provision of waste management facilities (including disposal) in appropriate locations.

The Joint Waste DPD is part of each borough's Local Development Framework, however it differs from other borough DPDs in that it sets waste management targets and allocates sites suitable for waste development for implementation across all of the four boroughs.

The strategic objectives of the JWDD are to:

- *'Deliver sustainable development by driving waste management up the waste hierarchy, addressing waste as a resource and looking to disposal as the last option, while recognising that disposal must be adequately catered for;*
- *Work towards meeting targets set out in the Waste Strategy for England 2007, and the London Plan;*
- *Enable the provision of a range of waste technologies;*
- *Enable the provision of facilities to allow for net self-sufficiency in the ELWA Boroughs in accordance with the London Plan;*
- *Enable waste to be managed in one of the nearest appropriate installations without endangering health or harming the environment;*
- *Integrate waste planning with other spatial concerns, including regeneration plans;*

- *Reverse the historical trend of the ELWA area being the dumping ground for London's waste; and*
- *Encourage our communities to take more responsibility for their waste.'*

Taking into account the reduced apportionment in the London Plan (2011) the JWDD notes that the ELWA boroughs will need to provide sufficient waste management capacity for:

- 1.573 million tonnes of MSW and C&I waste at 2021
- 1.267 million tonnes of C,E&D waste at 2020; and
- 0.095 million tonnes of hazardous waste at 2020.Local Planning Policy.

Havering's annual permitted tonnage capacity is measured as 396,500 for recycling; 202,000 for composting; and 207,600 for recovery. The total permitted capacity of waste transfer stations is much larger than the projected demand for the borough, and therefore LB Havering has sufficient capacity to meet the waste apportionment set out in the London Plan.

There are two types of waste sites identified in the JWDD: Schedule 1 lists waste sites which are safeguarded; and Schedule 2 lists those areas within which potentially available and suitable sites for waste management facilities can be located.

Policy W2, Waste Management Capacity, Apportionment & Site Allocation, provides site specific policy in support of the JWDD objectives. The policy states that ELWA boroughs will meet the London Plan apportionment by:

i) *Safeguarding the capacity of existing waste management facilities listed in Schedule 1 and encouraging increased processing of waste at these facilities, to run at a higher figure towards the licensed capacity; and*

ii) *Approving strategic waste management facilities where it will contribute to the ELWA boroughs meeting the London Plan apportionment on sites within the locations listed in Schedule 2.*

Policy W2 goes on to say *'Where the applicant can demonstrate there are no opportunities within these preferred areas for a waste management facility, sites within designated industrial areas as identified in borough Local Development Frameworks will be considered.*

Planning permission will only be granted for new waste water and sewage treatment plant, extensions to existing works, or facilities for the co-disposal of sewage with other wastes, where development is either needed to treat waste arisings from within the East London Waste Authority area or in the case of arisings from elsewhere the need cannot practicably and reasonably be met at another site – subject to the relevant borough's policy/guidance and Policy W5 [which provides general considerations with regard to waste proposals].*'*

The Joint East London Waste Strategy identifies three waste sites for LB Havering to meet expected demand over the planning period. These sites are as follows:

- Ferry Lane North - existing waste site to be redeveloped – 0.5 to 1.5ha
- Gerpins Lane – rural site in Greenbelt to be used as a composting facility – 1.5 to 5 ha

- Hall Farm – former landfill site in rural location to be used as a composting facility – 19 ha

The London Strategic Housing Land Availability Assessment (2013)

The Greater London Authority coordinated a Strategic Housing Land Availability Assessment study to provide an indication of London-wide housing capacity at borough level across London. The SHLAA identified sites with potential for housing, giving consideration to their housing potential and the timeframe for when they are likely to be developed. The study also considered theoretical constraints and probability of development on large identified sites. SHLAA studies are highlighted as a key evidence base through the NPPF and the London SHLAA forms a key part of the evidence base for The Further Alterations to the London Plan.

In addition analysis of existing information such as the London Development Database (LDD), to ensure the SHLAA captured all potential sites, the GLA carried out a London wide call for sites, jointly with the boroughs. Based on the findings of this analysis the study identified that sites in LB Havering had capacity to provide 11,701 homes over the period 2015-25, or 1,170 homes annually. Around 85% of these homes are within 'large sites' or those over 0.25 hectares in size.

London Riverside Opportunity Area Planning Framework (OAPF), Consultation Draft, February 2015

The draft OAPF sets out London Riverside's potential for transformation in terms of jobs and homes and supporting facilities. The vision includes 26,500 new homes and 16,000 new jobs; improved transport connections to and within the area; and to become a world leading centre for green enterprise.

The draft OAPF considers the historical, geographic and social contexts and puts forward strategies to guide regeneration. The area is recognised for strengths in the land available for re-use, open space, and good road and rail routes between Central London and Canary Wharf, and the Thames Estuary. There are opportunities too through proximity to the Olympics legacy area and the Enterprise Zone based on the Royal Docks; deep water port facilities and the national road network. Broadly, the area however suffers from relatively deprived communities and with low levels of development activity.

An element of residential development is proposed in Rainham West (Cluster C19) at Havering College and Dover's Corner. Intensified employment development is identified for key sites within the Rainham employment area SIL. These sites include the Ford site and Ferry Lane North. Also, a third of the Rainham West Cluster is proposed to be re-developed for non-employment uses.

Public Transport Accessibility Levels (PTALs) are shown to be generally relatively low. The historic land uses, patterns of movement and the railway lines have resulted in relatively poor local connectivity south of the A1306. The level of accessibility resulting from the funded and planned interventions including East London Transit (2010 & 2013) do not significantly increase accessibility or reduce the severance in the area and transport measures are therefore recommended, such as enhanced bus capacity and connectivity and a new station at Beam Park. A new station would considerably improve public transport accessibility for the South Dagenham development sites and enable higher levels of development density. Other proposals aim to improve freight transport and passenger transport. (The draft SPG proposes intermodal freight facilities with river freight at the Ford and Beam Reach 6).

The OAPF also includes a masterplan for Rainham village - sites along the New Road – with the purpose being to demonstrate how design principles can be applied and is not

intended to be prescriptive. A revised draft London Riverside OAPF was published for consultation by the GLA in February 2015.

3.4 Local Planning Policy

LB Havering is currently revising it's LDF and commencing preparation of the New Havering Local Plan. When adopted, the Local Plan will replace the Core Strategy Development Plan Document (DPD), Development Control Policies, Site Specific Allocations DPD and Romford Area Action Plan, which were adopted in 2008. These documents are included below for completeness, however, this study will provide evidence for the new Havering Local Plan.

LB Havering Core Strategy and Development Control Policies DPDs 2008

The Core Strategy and Development Control Policies DPDs were adopted by the Council in 2008. The Core Strategy has the purpose of setting out the Council's vision and objectives for the borough up to 2020 and provides the framework for all the other documents that form Havering's Local Development Framework (LDF). The following provides an overview of the relevant planning policies:

Forming an overarching principle, Core Policy 3 (CP3) Employment, sets out that:

- *'A range of employment sites will be available to meet the needs of business and provide local employment opportunities by:*
    - *ensuring sufficient land is allocated within Strategic Industrial Locations and Secondary Employment Areas and protecting this for business, industrial and some warehousing uses*
    - *in the Beam Reach Business Park, prioritising advance manufacturing uses and other modern industries in the B1 (b) (c) and B2 use classes which provide a similar quality and intensity of employment*
    - *focusing office development within Romford Town Centre and the district centres*
    - *maximising the potential of creative industry in Hornchurch (DC24)*
    - *seeking contributions towards the provision of employment training and support, and local employment access schemes.'*

In terms of development control (DC), several detailed policies are relevant to employment land and sites. These are:

- DC9 – Strategic Industrial Locations (SIL)
- DC10 – Secondary Employment Areas (SEA)
- DC11 – Non-Designated Sites
- DC12 – Offices, and
- DC13 – Access to Employment Opportunities.

LB Havering Site Specific Allocations Development Plan Document 2008

Adopted in 2008, the Site Specific Allocations document sets out the specific allocations for individual sites across the borough, to steer their future development. The exception to this are sites in Romford Town Centre identified in the Romford Area Action Plan (see

below), sites for waste management identified in the Joint Waste Development Plan Document and specific sites/preferred areas for minerals extraction identified in a separate Minerals Development Plan Document.

Of the 19 Site Specific Allocations (SSAs) listed in the document, two SSAs are relevant for this employment land review. SSA11 – Beam Park, recommends residential and ancillary education, community, leisure, recreation and retail uses will be allowed within the Beam Park site. SSA12 - Rainham West, contains a specific requirement for employment floorspace to be provided, such that 33% of the site area must be developed for B1 (a, b, or c) or B8 land use. SSA12 is not specific about the location of the 33% of the site area, which is recommended for protection.

Romford Area Action Plan (AAP) 2008

Adopted in 2008, The Romford Area Action Plan (AAP) DPD is a key document within Havering's LDF. The vision of the AAP is to promote and enhance Romford's position as East London's premier town centre, to make the town centre a vibrant place where an increasing number of people want to live and work. The AAP also aims to ensure that high quality design-led development contributes positively to Romford's attractiveness as a commercial, cultural and residential town.

The objectives for the Area Action Plan are drawn predominantly from the earlier Romford Urban Strategy. Encompassing four policy themes, the AAP has several objectives which are set out below:

- **Connecting Romford**
    - Enhance access to Romford, improve connectivity with the town centre and address future parking shortages by improving the public transport network, reducing car congestion, improving interchange facilities and improving conditions for cyclists and pedestrians.
- **Cultural Destination Romford**
    - Promote Romford as a cultural destination for all by focusing on strengthening and diversifying Romford's Market, managing and diversifying the evening economy, and respecting and enhancing Romford's heritage.
- **Commercial Romford**
    - Create a vital and viable town centre that provides for the diverse needs of all of the local community.
    - Support and enhance Romford's strength as a commercial centre by creating conditions which are favourable to attracting higher quality retailers, seeking the regeneration of North Street, South Street, High Street and the Romford Office Quarter and enhancing the image of Romford as a major retail and employment location.
- **Liveable Romford**
    - To maximise the provision of high quality housing of all tenures in the town centre.
    - Encourage more residents to live in Romford by ensuring the centre provides the necessary facilities and services that are required for

balanced and sustainable communities including leisure facilities, comparison and convenience retailing and community services.

- Enhance the town centres existing green spaces and biodiversity value and promote the development of new, high quality open spaces in the town centre to make Romford town centre a better place to live.

- Promote high quality design-led development that improves the attractiveness of the town centre and creates a safe environment for all.

3.5 Local Strategies

Housing Zone Bid

The GLA launched the Housing Zones initiative to accelerate housing delivery in areas with high development potential. They invited bids from London boroughs to a £400 million programme, jointly funded by the GLA and national government. The aim is to create around 20 housing zones across London, delivering 50,000 new homes and over 100,000 associated jobs over the next ten years. Delivery in these areas will be supported by a menu of planning and financial measures. In September 2014 LB Havering submitted a proposal for Housing Zone Funding for Rainham and Beam Park. The funding would provide finance to unlock the site. Its redevelopment for housing would help the LB Havering meet its increased housing targets and wider regeneration goals.

Corporate Plan 2014-2015

In 2008, the Council launched The 'Living Ambition' Vision; a long term strategy to provide Havering's residents with *'the highest possible quality of life, in a borough that thrives on its links to the heart of the capital, without ever losing the natural environment, historic identity and local way of life that makes Havering unique'*.

The vision is broken down into five theme-based goals covering environment, learning, towns and communities, individuals and value. Each theme has a strategic objective, namely:

1. A clean, safe and green borough

2. Champion education and learning for all

3. Economic, social and cultural opportunities in thriving towns and villages

4. Value and enhance the lives of our residents; and

5. High customer satisfaction and a stable council tax.

Havering's Corporate Plan 2014-15 presents these strategic objectives alongside the strategic outcomes they will produce, the key activities that will support delivery of these objectives, and the measures and targets that will be used to assess how far these objectives have been met.

As part of the third strategic objective the following actions are stated: to implement new offer of support and promote investment in Havering; and to review and deliver Harold Hill, Rainham and Romford regeneration programmes. A key measure of the success of these actions will be an increase in the number of businesses accessing advice through regeneration initiatives, from 666 in 2012 to 800 by 2015. These outcomes will be delivered in felt across the borough to benefit all residents and businesses but also, in particular, at Harold Hill, Hornchurch, Rainham and Romford.

3.6 Evidence Base Documents

The documents of relevance to this Employment Land Review are reviewed below, in order of spatial coverage and recentness.

GLA London Industrial Land Baseline, 2010

Prepared by URS in association with DTZ, this report provides a comprehensive analysis of London's supply of land in industrial and related uses such as warehousing for logistics, waste management, utilities, wholesale markets and vacant land including times series data 2001-2006-2010. Backed by field surveys and Geographic Information System (GIS) mapping, the study provides a valuable input into related studies on industrial land demand and the London Plan's Examination in Public. The study assists the GLA, LDA, TfL, boroughs and other partners to implement a rigorous strategy for industrial land management and investment, and to plan, monitor and manage release of surplus land to contribute to strategic and local planning objectives.

The study found that in 2010 in Havering:

- *There was 498 hectares of industrial land*
- *Of the total, 96 hectares was occupied by industry*
- *Of the total, 174.6 hectares was occupied by warehouses*
- *Of the total, 161.2 hectares was occupied by wider industrial land uses (such as utilities and waste facilities)*
- *Of the total, 78.3 hectares was vacant*[11]
- *LB Havering lost 43 hectares of industrial land to other uses from 2006 to 2010*
- *More industrial land changed to non-industrial use in the North East London sub-region in the four years between 2006 and 2010 than was recommended for release in the London Industrial Land Release Benchmarks report (URS, 2007) although the amount of release remains within the recommended amount of release over twenty years (2006 to 2026).*

Mayor's Economic Development Strategy for Greater London 2010

In May 2010, the Mayor of London published a new Economic Development Strategy (EDS). The purpose of the Strategy is to provide relevant stakeholders, public authorities and interested parties, with a vision for London's future, an analysis of the economy and policy directions for achieving its ambitions; and to clarify roles and responsibilities with other partners who make a major contribution to developing London's economy.

The Economic Development Strategy (EDS) is framed around five central economic objectives, which are;

- *'Promote London as a city that excels as a world capital of business, the world's top international visitor destination, and the world's leading international centre of learning and creativity.*
- *Ensure that it has the most competitive business environment in the world*

[11] This included land in Beam Reach which is now under development for industrial uses

- *To make London one of the world's leading low carbon capitals by 2025 and a global leader in carbon finance.*
- *Give all Londoners the opportunity to take part in London's economic success, access sustainable employment and progress in their careers; and*
- *to attract the investment in infrastructure and regeneration which London needs, to maximise the benefits from this investment and in particular from the opportunity created by the 2012 Olympic and Paralympic Games and their legacy'*.

The Strategy states that the Mayor wants to maximise London's share of the Carbon Trading global market: if London captured even 1 per cent of this new market it would be worth about £3.7 billion per annum. In order to do this, the Mayor considers that London should play to its existing strengths in financial services; business services – including consulting, engineering, architectural and legal services, research, design and product development.

GLA London Office Policy Review, 2012

The purpose of the annual London Office Policy Review to provide planning policy makers with up to date information on the supply and demand for offices in London, including the planning pipeline, and to provide analysis of the operation of the office market and its relationship with planning policy.

The main findings of the 2012 report were that London has adjusted well to the difficult market conditions experienced since the downturn of late 2007 and 2008, and that the general outlook for the city's future as a global financial centre is optimistic. The impacts of the recession are considered to be cyclical in nature, and a recovery is predicted. However, the report acknowledges that structural changes are taking place in the market, and that the rate of growth in office jobs in the period to 2036 is likely to be around half the rate which has prevailed over the last two decades.

Of particular relevance to Havering is the emergence of a polycentric office market in the Outer London (OL) area, and the marginalisation of some OL centres. Investment in infrastructure, and most notably Crossrail, is seen as a driver of this polycentricity, encouraging the dispersal of office development and creating a strong East-West axis across the city. However it is considered that this axis is likely to lead to the intensification of office activity around key transport hubs, such as Kings Cross, Paddington and Tottenham Court Road, and is less likely to have the same impact on existing office centres in OL.

Another relevant issue highlighted in the study is the contraction of public sector employment since 2009 (11% between 2009 and 2011) and the associated rationalisation of public sector office requirements. This has the potential to impact on centres which rely, to some extent, on these occupiers to bolster their commercial office supply. New working patterns, characterised by a greater number of employees working from home, is also identified as having an impact on the demand for office floorspace.

The study reports that LB Havering contains 180,000m^2 (estimated in the 2014 at 153,000m^2 at 2011) of office floorspace, which is one of the lowest concentrations of the Outer London boroughs. Romford is 'recommended to support offices only in the context of mixed-use schemes led by other uses'. The report identifies Harold Hill, Hornchurch and Upminster as centres which serve local demand and have minimal prospect of becoming strategic office centres. It is recommended that these centres are removed from further consideration for monitoring.

In 2014, London Office Floorspace Projections were published, updating the 2012 report in light of the most recent available data. This report estimates that office employment in the borough will increase by 4,000, from 9,000 in 2011 to 13,000 by 2036.

Outer London Commission: Third Report, 2014

The Outer London Commission was established by the Mayor in 2008 to explore how different parts of Outer London can better realise their economic potential, especially its town centres, as well as opportunity and intensification areas and industrial locations. The Outer London Commission's Third Report is a compendium of research and analysis on the outer London economy intended to inform the preparation of Further Alterations to the London Plan and the finalisation of the Town Centres Supplementary Planning Guidance.

The report found that the perception that outer London was economically underperforming in relation to the outer metropolitan area between 2003 and 2007 was misleading. There was no clear pattern of economic out-performance by the outer metropolitan area but there was some evidence that it performed better on quality of environment issues, a potential lesson for outer London areas.

The report states that low-rent industrial activities have an important part to play in London's economy and that they should not be forced to relocate from metropolitan London locations because of competition from higher land values. Rather the planning system should take account not just of issues associated with economic linkages and supply chains but also indirect adverse impacts such as environmental and transport capacity costs associated with a rise in commercial vehicle traffic if they have to relocate further afield.

The report found that, of the outer London area in 2002, the Thames Gateway boroughs were most reliant on traditional manufacturing activities as of 2002.

3.7 Summary

The NPPF replaced PSSs as of March 27th 2012, with the aim to make the planning system less complex and to promote sustainable growth. The NPPF recognises that the planning system plays an important role in promoting economic growth and building a strong, competitive economy. Key regional policy on employment land-use is contained in the London Plan (2011) and GLA Land for Industry and Transport SPG (2012). The latter document superseded a previous Industrial Capacity SPG, published in 2008. The London Plan sets out its vision for the North London sub-region, of which LB Havering is a part of, which centres around; optimising the development of its Opportunity Areas; tackling barriers to work and social exclusion; managing the release of surplus industrial land and; planning effectively for transport improvements.

Defining industrial employment as activities relating to manufacturing and wholesale distribution, the GLA's Industrial Capacity SPG (2012) seeks to ensure that an adequate stock of land for industrial use remains whilst the release of surplus industrial land is monitored and managed, so planning objectives can be met effectively. The London Plan 2011 and SPG categorises LB Havering as a borough for 'Managed Transfer' and take a permissive approach to release to other uses, whilst adhering to the SIL framework in protecting London's principal industrial locations. Policy 3 of the SPG also highlights the need to protect 'Locally Significant Industrial' sites.

LB Havering changed from a borough of 'Managed Transfer' of industrial land in the 2011 London Plan to a borough of Limited Transfer of employment land in the 2012 Land for Industry and Transport SPG. The SPG provides guidance for outer London boroughs to manage and improve the stock of industrial capacity to meet both strategic

and local needs, including those of small and medium sized enterprises (SMEs), start-ups and businesses requiring more affordable workspace. The document identifies that parts of outer London have economic functions in logistics, industry and green enterprise that are of greater than sub-regional importance.

The draft London Riverside OAPF illustrates the potential the Rainham employment area has for job growth, attraction of green enterprise, as a location for freight transfer and higher density development, and the transport measures required to support growth. It also provides an indicative masterplan for Rainham West applying OAPF development and design principles.

At a local policy level, Havering has an adopted LDF (2008) and is currently in the process of updating the adopted suite of development plan documents into a new Havering Local Plan. The LDF designates 20 employment land areas including SILs, SEAs, SSAs, AAP sites and the Romford Office Quarter.

4 SOCIO-ECONOMIC PROFILE

4.1 Introduction

This section profiles LB Havering using key socio-economic indicators. The analysis informs an understanding of the local economic strengths and weaknesses that may impact upon employment land demand. Key indicators profiled include:

- Population, including the working population, and skill and occupational profile of residents;
- Commuting patterns;
- The workplace economy, by business stock and size; and
- Workplace employment by industry sector.

To provide a comparative assessment LB Havering is benchmarked against London-wide average.

4.2 Population

Demand for housing, retail, community facilities and employment sites and premises will be driven in part by the resident population. Latest population estimates show that LB Havering has grown from 237,232 at the 2011 Census to 242,080 in 2013 - a 2.0% increase over the two-year time period. This is lower than the Greater London average of 3.0% and reflects a population with an elderly demographic[12]. GLA population projections for LB Havering suggest that by 2029 the borough's population will grow by over 30,000, or 15.5%, to 279,550[13]. The implication is a likely growth in demand for land for housing, community facilities, infrastructure and employment land over the Local Plan period.

4.3 Workforce and employment

The latest statistics from the Office for National Statistics (ONS) show that LB Havering has approximately 152,300 working age residents (men and women aged 16 to 64), which represent approximately 62.9% of the resident population. This proportion is slightly lower than the London-wide average of 64.9%[14].

ONS record 121,800 (80.0%) working age residents being economically active with 112,800 people in employment. This proportion is slightly above the economic activity rate for London (76.8%). The higher rate of economic activity in Havering is reflected in the lower rates of Job Seeker's Allowance (JSA) which for LB Havering was 2.1% of the working-age population, slightly below the London average of 2.5%.[15] The number of people in employment has notably decreased from 81.1% in 2008, in line with regional and national trends, which is likely to reflect the impact of the economic downturn[16].

4.4 Earnings

The Annual Survey of Hours and Earnings (ASHE) (2013) record the average gross weekly earnings of LB Havering residents as £598; £15 lower than the average earnings by London residents.

[12] ONS mid-year population estimates for local authorities in the UK, 2013
[13] GLA, 2013 round trend-based population projections, central scenario
[14] ONS annual population survey, April 2013-March 2014, from ONS August 2014
[15] ONS claimant count, proportion of resident population aged 16-64 estimates, July 2014
[16] ONS mid-year population estimates for 2010. From ONS March 2012

ASHE record an average gross weekly earnings of those people working within LB Havering of £582, which implies an earnings differential in favour of jobs outside LB Havering, which could be a driver for out-commuting from the borough.

Table 4.1 Resident and Workplace Earnings 2011

Earnings	Havering (%)	London (%)
Resident-based	598	613
Workplace-based	582	658

Source: ONS Annual Survey of Hours and Earnings – Resident and Workplace Analysis (2013)

4.5 Skills and Training

LB Havering residents generally maintain lower levels of highly skilled qualifications in comparison to the rest of London. Though the majority of working age residents (69.2%) obtained their GCSEs[17] only 24.7% are educated to a degree level and above – significantly lower than the proportion for London as a whole. The proportion of residents with no qualifications is slightly higher in Havering (8.2%) than in London (7.8%), but lower than the national rate (9.1%). Nationally, however, there is a higher rate of residents educated to degree level and above (35%). The relatively low education profile in Havering could contribute to a lower value-added economy and comparatively low workplace earnings within the borough.

Table 4.2 Skills and Training 2013

Qualification Level[18]	Havering (%)	London (%)
NVQ4 +	24.7	49.1
NVQ3 +	48.2	64.0
NVQ2 +	69.2	75.6
NVQ1 +	84.9	84.2
Other Qualifications	6.9	8.0
No Qualifications	8.2	7.8

Source: ONS Annual Population Survey (Jan 2013 - Dec 2013)

4.6 Occupational Classifications

The table below sets out the occupation of Havering residents compared with London averages. The following points are observed:

- SOC 2010 major group 1-3, includes the highest skills base, and is the largest actual number of occupations represented in Havering. The proportion of the resident workforce who hold such positions in line with the London average (53.7% compared with 54.2%). Managers, directors and senior officials are slightly under-represented amongst Havering's population, relative to London.

- SOC 2010 major group 4-5: The proportion of Havering residents in employment who hold these levels of occupations is again in line with the London-wide average. The administrative and secretarial occupations are

[17] Percentage of pupils achieving 5 or more A*-C grade passes at GCSE or equivalent.
[18] NVQ 4 - HND, Degree and Higher Degree; NVQ 3 equivalent - 2 or more A levels, advanced GNVQ, NVQ 3, 2; NVQ 2 equivalent - 5 or more GCSEs at grades A-C, intermediate GNVQ, NVQ 2; NVQ 1 equivalent - fewer than 5 GCSEs at grades A-C, foundation GNVQ, NVQ 1; No qualifications - no formal qualifications held.

slightly under-represented, with 8.1% of the working population compared with 10.3% across London.

- SOC 2010 major group 6-7 and 8-9: These SOC groups form the smallest of the four groupings, together making up less than a quarter (22.7%) of all occupations. Process, plant and machine operatives are slightly less represented in Havering (3.4%) than in London (4/1%), and there is a significantly higher proportion of Havering residents in elementary occupations (12.9% compared with 8.6% across London).

Table 4.3 Employment by Occupation

		Havering		London
SOC Group	Occupation	Actual	%	%
1	1 Managers, directors and senior officials	12,600	11.0	12.0
	2 Professional occupations	27,300	23.9	24.3
	3 Associate professional & technical	21,100	18.5	18.0
2	4 Administrative & secretarial	9,300	8.1	10.3
	5 Skilled trades occupations	9,000	7.8	7.7
3	6 Caring, leisure and Other Service occs	8,500	7.4	7.5
	7 Sales and customer service occs	7,200	6.3	6.9
4	8 Process plant & machine operatives	3,900	3.4	4.1
	9 Elementary occupations	14,700	12.9	8.6
	Total	113,600	-	-

Source: ONS annual population survey (June 2013 - June 2014)
Note 1: SOC = Standard Classification of Occupation, 2000

4.7 Travel to Work

Of Havering residents currently in employment, 34.8% live and work in LB Havering[19]. The most recent data on travel to work patterns is provided through origin-destination statistics collated from the Census in 2011. While the total figures for employment may be more than three years old, the figures give a good indication of the pattern of movement of residents and workers into and out of Havering.

Most popular workplace destinations outside the borough for residents are the City of London (13.4% of the working age), Barking and Dagenham (7.7%), Tower Hamlets (5.9%) and Redbridge (5.3%), though there are strong links with the surrounding boroughs of Newham, Thurrock and Brentwood (10.8% in total) as well. There is a weaker relationship with Epping District (1.2%).

Comparatively there is a strong out-commuting flow: of the 91,856 residents in employment, 59,928 leave the borough to work outside, but only 31,781 people commute to LB Havering to work. This indicates a strong net out-commuting effect of 30.6% (based on all resident workers). Residents of East London and Essex boroughs comprise the main source of in-commuting especially residents from Barking and Dagenham (6,554 people or 20.6%), Redbridge (3,760, 11.8%) and Thurrock (3,429, 10.8%).

[19] 31,928 of 91,856 in employment as of 2011 data.

The ONS origin-destination commuting data therefore suggests a strong relationship between Havering and its surrounding boroughs – in particular with East and inner London, but also with Thurrock and Brentwood in Essex.

The job density[20] for LB Havering is estimated at 0.56 compared with 0.92 for London, which supports the strong out-commuting flow and indicates that, broadly speaking, Havering as a place to live outperforms its qualities as a place to do business. However, this is not to say LB Havering does not have economic strengths and opportunities, and we will comment on these when we consider the economic growth potential for the borough (**Section 7**).

4.8 Business

Stock and Scale

The latest known business registrations data is from ONS which records 7,650 VAT or PAYE-based enterprises in LB Havering in 2013[21]. Small and micro businesses contribute significantly to employment within LB Havering, with 6,925 of the 7,650 companies (90.5%) employing up to nine employees (typically termed micro businesses)[22], in line with the London average[23].

Table 4.4 VAT and PAYE by Size Band

	LB Havering		London	
Employment Size	**Number of Businesses**	**% of total**	**Number of Businesses**	**% of total**
1 to 9 (Micro)	6,925	90.5	359,155	89.6
10 to 49 (Small)	590	7.7	33,440	8.3
50 to 249 (Medium)	115	1.5	6,500	1.6
250 + (Large)	20	0.3	1,835	0.5
Total	**7,650**	**-**	**400,930**	**-**

Source: UK Business Activity, Size and Location; ONS Oct 2014

By size of business, micro businesses also provide the majority of employment opportunities: micro businesses provide 90.5% of the borough's total employment compared with large companies (employment over 250) which number only 20 and represent 0.3% of all employment opportunities in Havering.[24]

4.9 Business Registrations and De-registration

VAT registration - de-registrations rates for LB Havering provide an indication of the entrepreneurial characteristics of the borough. On balance over the course of a year the net gain in registrations in LB Havering are lower than Greater London. Published data indicates that in 2011 there were 1,005 registrations and 845 de-registrations resulting

[20] The numbers of jobs per resident aged 16-64. For example, a job density of 1.0 would mean that there is one job for every resident aged 16-64.
[21] Traders may be registered below the VAT threshold, which in 2008/09 was £67,000 per year. This estimate of business stock is therefore likely to be lower than the actual number of businesses located in the borough.
[22] Including sole proprietorships and or partnerships comprising only the self-employed owner-manager(s), and companies comprising only an employee director.
[23] Number of local units in VAT and/or PAYE based enterprises in 2010 (UK Business Activity, Size and Location; ONS Sept 2010)
[24] UK Business Count; ONS November 2014

in a net gain in LB Havering's business stock of 160, or 2.0%[25]. This is higher than the national figure of 1.5%, but lower than the London-wide average of 4.2%.

Employment Sectors

Our analysis of the current picture of LB Havering benchmarked against London is based on the ONS Business Register and Employment Survey (BRES), Standard Industrial Classification (SIC), for 2012. This data covers employment within LB Havering, rather than employment of the resident workforce as illustrated in the SOC analysis in **Table 4.3**.

Table 4.5 Employment by Broad Industry Sector

	Havering		London	
Sector	**Employment**	**% of Total**	**Employment**	**% of Total**
1 : Agriculture, forestry & fishing	8	0.0	793	0.0
2 : Mining, quarrying & utilities	1,125	1.5	28,904	0.7
3 : Manufacturing	3,620	4.9	110,327	2.5
4 : Construction	6,173	8.3	152,367	3.4

Total	74,115	100.0	4,446,521	100.0

Source: ONS Business Register and Employment Survey (2012 data, as of August 2014)

At this high level those sectors which align most closely with the employment land uses B1a/b, B1c/B2 and B8 are: 11. Financial & insurance, 14. Business administration and support services and 13. Professional, scientific/technical (which aligns most closely with B1a and B1b uses); 3. Manufacturing (which aligns to factory uses i.e. B2); and 8. Transport & storage (which aligns with warehousing). The professional, scientific and technical sector could align research and development or office.

From above it can be seen that:

[25] Births and deaths of enterprises as a percentage of enterprise stock; ONS 2011.

- Manufacturing employment in LB Havering accounts for 3,620, or 4.9% of the total. This is much larger than the London-wide average of 2.5%. The construction (8.3%) and motor trades (2.1%) sectors also account for a larger proportion of employees in Havering than across London.

- Transport & storage (8. which aligns with warehousing) employment measures 4,334, or 5.8%, in LB Havering, which is above the London-wide average of 4.9%. Employment in wholesale is also slightly above the London average, at 3.7%.

- Employment in business administration is in line with the London-wide average. However other office-related sectors including the financial & insurance sector and information and communication are significantly under-represented by comparison with London.

- The professional, scientific and technical sector is vastly under-represented in LB Havering (3.2%) compared with London (7.1%), perhaps an indication of the lower skills, lower wage economy, and the distance from higher education establishments, typically associated with research and development.

- There is relatively high level of employment in the education and health sectors (27.5% compared with 18.4% across London). This may contribute to the low job density within the borough as these sectors tend not to have local supply chains.

- These findings contrast with the resident-based SOC analysis in **Table 4.3**, suggesting that there is a disparity between the occupations of Havering residents and the employment available within the borough. For example, the SOC analysis indicates that over half (53.7%) of residents work in managerial or professional occupations, whereas the BRES data shows that office-related sectors such as finance and insurance, and information and communication, are under-represented within the borough. This supports the analysis in paragraph 4.7 which demonstrates a strong out-commuting flow from LB Havering.

4.10 Summary

Analysis of the resident workforce found that the occupational profile of LB Havering residents is broadly in line with the London average. However, there are some signs of a low-wage economy in Havering, such as relatively high proportions of low educational attainment; lower earnings of workplace jobs compared with residents earnings; and a strong out-commuting flow, suggesting that those holding higher qualification are more mobile financially and occupationally, and take up positions outside the borough.

This is supported by analysis of employment within the borough, which shows that office-based employment sectors are significantly under-represented in comparison to the London average. This suggests a disparity between the occupation of residents and the employment available within the borough, and indicates that many residents employed in management, professional and technical professions commute outside of the borough for work.

Employment within the borough is marked by relatively high proportions in manufacturing, construction, motor trades, and transport and storage, as well as retail, health and education. The industrial re-structuring which has occurred across London, and in particular East London, over the past few decades has led to a strong decline of manufacturing and shift to service sectors more broadly, and may have led to LB Havering losing out comparatively in terms of job growth.

Many of these factors are self-re-enforcing. However, the analysis presented here also suggests that to achieve economic growth the borough can play to the comparative advantages it has such as the labour skills set, the wage economy and location advantages. Playing to strengths would mean that local residents benefit from investment and employment opportunities. This section has introduced the profile of LB Havering with the most up to date data, benchmarked against London. The most meaningful indicators for this ELR are however change in employment land and employment, and we analyse how these have changed over the past ten years in **Section 7**.

5 QUALITY AND CHARACTERISTICS OF EMPLOYMENT LAND

5.1 Introduction

This section provides a summary of the key findings of the field survey and desk research and identifies the suitability of land and premises in LB Havering for employment uses (B1a-c, B2 and B8). The results are summarised to provide an overview of conditions of employment clusters and individual development sites.

5.2 Employment Clusters

Based on the adopted LB Havering Local Development Framework Proposals Map (2008), GLA London Industrial Land Baseline 2010 report mapping, and the Council's and consultancy team's knowledge of the area, 45 employment clusters throughout LB Havering were identified and mapped (see This section sets out the main research elements of this employment land study as illustrated in **Figure 2.1**. The methodology has been developed to conform to the NPPG. Each element is reviewed briefly in the following sub-sections.

Figure 2.1). Employment clusters were defined through identifying Local Development Framework site designations and proposals that currently, or have the potential to, accommodate a significant quantum of industrial/warehousing (B2/B8) or office (B1) floorspace and through a review of non-designated land known to still contain such a quantum of space.

Table 5.1 below lists the clusters that were surveyed against the site appraisal criteria set by URS, drawn primarily from the Land for Industry and Transport SPG, and subsequently agreed with the Council. Criteria were further tailored based on the consultancy team's experience and the specific context within Havering.

During the survey, three clusters were considered to contain distinct areas of character and contained natural geographic divisions, such as transport infrastructure – clusters 3 Ferry Lane North, 8 Ferry Lane South, and 19 Rainham West. For these three clusters it was considered to be more appropriate to survey the distinct areas separately. Our assessment and analysis presented in this chapter is therefore of 48 employment land clusters.

The 48 clusters comprise a total area of 442.8ha, with the amount of vacant land totalling 56.2ha (**Table 5.1**). The majority of surveyed land was SIL (320.6ha); 30.4ha were of SEA designation; 43.1ha were Other-designated, either as a Site Specific Allocations (SSA) or an AAP; and 48.7ha are Non-designated. It should be noted that the majority of Other-designated land was not designated for B-use class employment. As noted under paragraph 3.4 of this report, site specific allocations policy SSA11 recommends residential and ancillary education, community, leisure, recreation and retail uses at Beam Park; and SSA12, Rainham West (south of the A1306, New Road), contains a specific requirement for employment floorspace to be provided such that 33% of the site area must be developed for B1 (a, b, or c) or B8 land use, which based on an area measurement is equivalent to 7.4ha for B-use class employment or 21.2ha of non B-use class employment. The total area of surveyed employment clusters designated for B-use classes is 360ha.

Within the employment land clusters other non-employment uses were observed. The detailed survey of these clusters as part of this study identified that 56.9ha of land within B-use class designated areas was in non-employment use. This equates to around 15% of the land within Havering's designated employment areas was, in 2010, of other non-industrial employment such as office, retail, residential, leisure and community uses, but also areas of road infrastructure within Rainham SIL.

It is important to note that our employment cluster surveyed figure of 442.8ha, as set out in **Table 5.1**, differs to the industrial employment land figure of 498ha in the GLA 2010 London Industrial Land Baseline (as set out in Chapter 3 of this report) for two main reasons:

1. A different definition of employment land.

   The 2010 Baseline figure of 498ha includes 'core' industrial employment land, defined by industry and warehousing uses only (B2 and B8 use classes), plus 'wider' industrial employment land, including land for utilities, transport functions and waste management. Unlike our 2014 survey, the 2010 Baseline does not include office (B1 use class) land uses or designations such as the Romford Office Quarter.

   The 2010 Baseline figure includes designated and non-designated core and wider industrial employment land, and includes a large number of utility sites and waste management sites such as the Coldharbour Lane land fill site, which in 2010 was measured to be 58ha (though this site is not included in the Table 5.1 figure below so this can be seen as a main differentiator between the two sets of figures).

   By comparison our estimate of 442.8ha of land contained within the 48 employment clusters includes not only employment land uses such as office, industrial and warehousing; and utilities, transport functions and waste management; but also residential, retail, leisure and community uses, which may lie within the cluster.

2. A different process and set of parameters used in identifying and estimating the area of employment land.

   The 2010 Baseline figure was estimated primarily using Cities Revealed Land Use mapping. The Cities Revealed mapping captured all sites under one hectare and therefore included lone B2/B8 units outside of employment designated areas.

   Comparatively our survey of 48 clusters, identified from the LDF documents and through the requirement of the NPPG to consider all employment land over 0.25ha, captured all designated employment land, significant de-designated employment land in the 2008 LDF, plus other non-designated employment sites where B-use classes were the main land use.

The comparative analysis of the quality and characteristics of clusters for employment use in this Section is carried out on the basis of the quantity of land contained within the boundaries of the 48 clusters surveyed, as per **Figure 2.2.**

Source: URS LB Havering Employment Land Field Survey 2014
Note 1: All cluster areas have been re-calculated in 2014
Note 2: Includes developable and undevelopable vacant land. Further explanations are given in Table 7.8

5.3 Call for Sites

In accordance with the requirements of the National Planning Practice Guidance[26], a Call for Sites exercise was undertaken whereby, through various means, landowners or developers were asked to submit sites with prospective employment and non-employment use for consideration.

The exercise identified no sites with prospective employment use that were additional to those clusters surveyed and identified above in **Table 5.1**. One submission for redevelopment employment use is within the Freightmaster Estate (Cluster 25) and adjoining land for an extension to an existing waste processing facility. There were also two submissions related to prospective development within designated employment areas for Hillman Close (Cluster 11) and at part of Crow Lane Site 3 (Cluster 17), both for redevelopment of employment land for non-industrial use (residential development).

5.4 Strategic Transport Access

The strategic transport accessibility of employment areas was determined both through desk based research and site visits. Criteria used to assess this include:

- Strategic road access
- Access to public transport
- Access to wharves; and
- Availability of parking.

[26] NPPG paragraph 006 Reference ID: 3-006-20140306

Strategic Road Access

Sites with good/very good strategic road access include those that can be accessed directly or almost immediately from either a Transport for London Road (TLR), the Strategic Route Network, or Main Distributor Roads, as defined by Havering's Network Management Strategy, 2006.

The 33 clusters in **Table 5.2** were considered to have good/very good strategic road access and constitute 90% of the employment cluster areas surveyed. This included all clusters designated as lying within SILs. Among other designated employment areas, clusters which weren't considered to have good/very good strategic road access included the three SEAs on Crow Lane and Harold Wood (Cluster 11), all SEAs. These four clusters did have direct access to secondary distributor roads, meaning that access is adequate.

Table 5.2 Employment Clusters with Good/Very Good Strategic Road Access

Access to Public Transport

Access to public transport for employment sites was assessed during the site survey visits and through subsequent desk-based research.

Sites that were considered to have good or very good access to public transport had PTALs (Public Transport Accessibility Levels) ranging from 4 to 6b[27]. These included eight clusters, shown in **Table 5.3**.

Table 5.3 Employment Clusters with Good or Very Good Public Transport Access

		Total	**13.1**
		% of surveyed employment land	**3.0**

Source: Transport for London Planning Information Database (accessed at webptals.org.uk)

It is evident that the employment clusters in the vicinity of Romford Town Centre are well served by public transport with both the Romford Office Quarter, Seedbed Centre (containing concentrations of B1 users who make greater use of public transport) and South Street having 'good or very good' access. Access to public transport in the south of the Borough is poor, though bus services do provide access to many. In outer London boroughs, travel to work by private transport is likely to be more commonplace than in inner London areas and access to public transport is likely to be comparatively less of a factor in defining a well-functioning industrial employment cluster/area.

Improvements to public transport provision in the Borough include a new station at Beam Park on the London-Tilbury-Southend railway line to maximise the future development potential of the south of the Borough.

[27] Employment clusters were designated with the PTAL level that they predominantly fell within.

Access to Wharves

Two clusters have direct access to safeguarded wharves in LB Havering:

- Fairview Estate (Cluster 7) which has direct access to Phoenix Wharf[28]; and
- Ferry Lane South (Cluster 8a) which has direct access to the Halfway Wharf (formerly Tilda Rice).

Both of the wharves are used for industrial purposes, by their respective occupiers, however neither wharf is currently actively used for river transport. The GLA's Safeguarded Wharves Review 2013 (Final Recommendation) noted that there was a reasonable prospect for river-use being resumed at Halfway Wharf.

5.5 Servicing and Parking

Servicing of Businesses

For clusters where B1c/B2/B8 land-use predominates, it is important that there is designated and adequate space for the servicing of businesses. The suitability of existing servicing arrangements within each cluster was assessed during the field survey.

The field survey identified eight clusters where servicing was deemed to be Inadequate, all of which are non-designated clusters of industrial land – the remainder of clusters having currently adequate servicing for businesses needs. These clusters are listed in **Table 5.4** and account for 3% of the surveyed employment land.

Table 5.4 Clusters where Servicing of Businesses is Inadequate

URS Cluster No.	*Employment Area/Cluster Name*	*Employment Cluster Area (ha)*
C21	Bridge Close	2.1
C24	Lambs Lane	1.7
C26	Bryant Avenue Industrial Estate (Southend Arterial Road)	2.0
C32	Rear of Broadway Parade, Elm Park	0.6
C33	Workshops at rear of Collier Row Road Filling Station	0.3
C38	Broxhill Road Vehicle Breakers Yd	4.4
C39	55 Brentwood Road Vehicle Repair Workshops	0.2
C41	Bryant Avenue Workshops	3.2
	Total	**14.5**
	% of surveyed employment land	**3.3**

Source: URS LB Havering Employment Land Field Survey 2014

Either high density and/or poor layout of premises at all of the clusters was observed to be the main factor in servicing of businesses being judged as inadequate.

[28] Phoenix Wharf is earmarked in the GLA's Safeguarded Wharves Review – Final Recommendation 2013 for having its safeguarding removed "in view of surplus (wharf) capacity in NE London".

Availability of Parking

For employment land clusters in outer London, it is important that there is adequate parking space to accommodate for the needs of businesses within the cluster and the increased likelihood that employees will travel to work by car, given that public transport accessibility is generally lower (with the exception in this case of employment clusters close to or within Romford Town Centre). The availability and type of parking within each cluster was assessed during the field survey.

Fifteen clusters were identified in the field survey as having inadequate parking arrangements. These clusters are listed in **Table 5.5** and account for 11% of the surveyed employment land. It is notable that, with some exceptions, these clusters are located in areas with a low PTAL rating, i.e. lower levels of access to public transport, which in combination could produce a number of accessibility issues.

Table 5.5 Clusters where Parking is Inadequate

URS Cluster No.	*Employment Area/Cluster Name*	*Designated*	*Area (ha)*
C3a	Ferry Lane North (a)	SIL	25.5

C42	South Street Offices (Neopost)	Non designated	0.6
		Total	**46.7**
		% of surveyed employment land	**10.6**

Source: URS LB Havering Employment Land Field Survey 2014

In the case of Ferry Lane North (a) (Cluster 3a) it should be noted that parking was noted to be a problem only in the western part of the cluster (Denver and Allbright Industrial Estates), with mostly new and adequate parking facilities at premises in the eastern part. The cluster is also close to Rainham Station for train and bus services. facilities at the SEA Crow Lane Site 2 (Cluster 15) were deemed inadequate at the time of survey, it is recognised that this may in part be due to the existence of car-related businesses in the cluster, and that businesses may generally have sufficient parking for their own needs.

5.6 Condition of Employment Areas

Employment Areas in Very Good and Good Condition

In total 23 out of 48 surveyed employment clusters were considered to be in good or very good condition. To receive this designation over 50% of sites within the employment cluster had to fulfil the following criteria:

Building condition

Very good – buildings in immaculate state, no signs of paint coming off, windows and window frames in very good condition, immediate surrounding/grounds well kept.

Good – building in good conditions, small areas where paint might come off, etc., grounds in reasonable state.

Quality of environment

Very good – the streets and the public realm within and surrounding the area are of very good quality. There is enough street lighting and no perceived safety issues. The

business area is not polluted by noise or air pollution from neighbouring uses and/or heavy street traffic.

Good – the streets and public realm within and surrounding the business area are of good quality. Nothing in the local environment seems disturbing but it does not reach the 'very good' standard (some litter, street furniture shows signs of aging, etc.). There are no perceived safety issues.

Table 5.6 below lists the employment clusters with a majority (50-100%) of sites that were in Good and Very Good condition.

Employment Areas with sites in Poor or Very Poor Condition

Of the surveyed employment clusters, 17 were recorded to have a majority (50-100%) of sites in poor or very poor condition. To receive this designation clusters had to fulfil the following criteria:

Building condition

Poor – paint coming off, some cracks, windows in poor state, surroundings are poorly kept.

Very poor – building still in use but in very poor condition; paint coming off in large areas, some windows broken, surroundings not maintained and/or littered and/or cluttered with rubbish.

Quality of environment

Poor – the streets and the public realm within and surrounding the cluster are of poor quality (some potholes, some litter, poorly maintained or damaged street furniture). There is not enough street lighting and some perceived safety issues. The business area might be polluted by some noise or air pollution from neighbouring uses and/or heavy street traffic.

Very poor – the streets and the public realm within and surrounding the cluster are of very poor quality (potholes, litter on street, not collected rubbish, etc.) There is not enough street lighting and there are perceived safety issues. There is noise and/or air pollution from neighbouring uses and/or heavy street traffic.

Employment Areas with sites in Average Condition

Of the surveyed employment clusters 12 of 33 were recorded to have a majority of sites in average condition. To receive this designation clusters would not fulfil the conditions

necessary either to warrant designation as a Good/Very good cluster or a Poor/Very poor cluster (as set out above in **Sections 5.5** and **5.5**).

Conclusions on Conditions of Employment Areas

All clusters currently designated as SIL were in either Good/Very Good condition or Average condition in the field survey. With the exception of Crow Lane Site 2 (Danes Road), all SEAs were recorded as being in Very Good/Good condition or Average condition. These findings indicate that designated employment areas within LB Havering contain mostly good quality sites with similarly good environmental quality. Although several SIL and SEA clusters rank within the Average category, this should be considered within the context that LB Havering's quantum of stock of designated employment land ranks among the highest of all London Boroughs, and it should not be surprising that building stock is varied and environmental quality less than ideal at some locations. Having a stock of poorer quality premises and land can also be a positive as it ensures that there is scope for redevelopment of sites to provide new floorspace when such demand arises. Rainham West (South) (Cluster 19b) is an example of a cluster that contains a variable quality of sites and premises yet provides good opportunities for small, cost-conscious, businesses to move into the Borough whilst benefitting from the good strategic road access that the cluster provides. The Poor/Very Poor quality clusters are almost entirely non-designated employment land areas, with most other such areas ranking within the Average condition category.

5.7 Bad Neighbour Uses and Impact on Residential Uses

A site was perceived as having a negative impact on the neighbouring uses if its use was associated with at least two of the following list; noise pollution, air pollution, smell, HGV traffic, significant car traffic.

In total 29 of the 48 employment clusters surveyed containing predominantly B2 and/or B8 uses lie within close proximity to surrounding/nearby residential or other sensitive uses. Of these, only five clusters were perceived as having bad neighbour features, which might impact on neighbouring sensitive uses.

		% of surveyed employment land		**3.6**

Source: URS LB Havering Employment Land Field Survey 2014

The findings show that although around 25% of the surveyed employment clusters by area lie close to residential areas only five clusters, comprising 4% of the surveyed area, were perceived to contain two or more bad neighbour characteristics. Although two of these clusters are SEAs, the characteristics were generally noted to be either noise or the generation of significant car traffic, often associated with the presence of car-related businesses. As many of the businesses perceived to be generating these are non-industrial occupiers (*sui generis*), it is possible that better enforcement regarding uses permitted within the SEAs could address this problem. It is recognised at Harold Wood (Cluster 11) that the valuable (observed) high employment levels on the site and intensity of use of the cluster vis-à-vis its residential location may mean that such bad neighbour characteristics would be difficult to eliminate completely.

5.8 Presence of Non-B class Occupiers

Through recording the presence of individual land uses/occupiers during the field survey, clusters were identified where over 10% of the cluster area was occupied by non-B class land uses, usually *sui generis* or retail activities. These clusters are listed in **Table 5.10**. *Sui generis* activities include a range of industries which, though they may be employment generating, do not fall in the B1, B2 or B8 use class order but nevertheless are often associated with industrial sites in particular, such as petrol filling stations premises selling and/or displaying motor vehicles, taxi businesses and scrap yards.

Source: URS LB Havering Employment Land Field Survey 2014.
Note that this list is not a ranking of the clusters

Clusters which contain a significant presence of non-B use class occupiers include one SIL clusters and two SEAs. Harold Hill (Cluster 1) SIL is a very mixed employment area and, given relatively recent development of land for industry in the cluster, it is not believed the presence of supplementary non-industrial employment-type uses has jeopardised so far its functioning capability. The two SEAs (Cluster 12 and Cluster 15) contain a presence of *sui generis* users (mostly car related). Future monitoring and effective application of policies going forward should ensure that further increases in the presence of such uses does not jeopardise the integrity of the SIL/SEA designations. Rainham West (North) contains only non-industrial *sui generis* occupiers and is located close to housing so it remains unsuitable as a designated employment area.

5.9 Vacant and Derelict Land

The 2010 GLA Industrial Land Baseline study identified 78.3ha of vacant industrial land in LB Havering, of which 75.0ha were in designated employment areas. The field survey of employment land clusters undertaken by URS in October 2014 has concluded that only 56.1ha of land remained vacant, of which 37.0ha were considered to be developable.

Taking these observations into account **Table 7.8** presents an updated October 2014 picture of the employment land which were surveyed to be vacant in the 2010 London Industrial Land Baseline study.

5.10 Floorspace Vacancy

The URS 2014 survey observed estimated vacancy rates of up to 20% in some clusters, however in SILs and SEAs, vacancy rates were typically estimated to be lower (5-10%). Office (B1) and industrial/warehousing (B1c/B2/B8) vacancy rates is assessed in greater detail in **Section 6**.

5.11 Romford Office Quarter

The Romford Office Quarter (Cluster 18) was observed to have positive characteristics. Access to facilities and amenities, and public transport were considered to be very good; access to the strategic road network was also observed to be good; and all premises were observed to have adequate parking (whether as part of their site or in adjacent paid car parks).

Premises were observed to be in good condition. The environment and public realm surrounding the cluster was also considered to be good, although some potential for improvement was observed. Although relatively high rates of vacancy were observed from the survey, premises were all adequately marketed and no dereliction was recorded.

The office quarter is judged to be well-functioning; however, the relatively high vacancy rate observed during the survey and supported in our subsequent analysis (see **Table 6.2**) suggests that demand for these type of units has been weakened in the past few years, notably as a consequence of the economic downturn which began in 2008. Analysis of the office property market suggests that the short term nature of demand for office units is toward smaller units and more flexible leasing arrangements, and this is discussed in **Section 6**. We consider that Crossrail will have a positive impact on demand (discussed further in **Section 7.7**), and conclude that in the medium to long term the benefits of improved connectivity may impact positively on demand for larger floor plate office space of the kind the exists in the Romford Office Quarter, but also on the demand for smaller office units above shops and within mixed use regeneration schemes in Romford Town Centre.

5.12 Conclusions

URS qualitative survey of employment land in LB Havering comprised of a field visit of 48 employment clusters combined with elements of desk research (including consultations with property market agents). This assessment was carried out against site appraisal criteria set by URS and subsequently agreed with the Council. A comparative analysis of the quality and characteristics of clusters for employment uses was undertaken on the basis of the quantity of land contained within the lined boundaries of clusters.

With regards to designated employment clusters (SILs and SEAs as listed in Table 5.1) it is concluded that the majority are well functioning, predominantly industrial, clusters of employment land. Most have good/ very good access to the strategic road network and are in adequate condition, being identified as either in very good, good or average condition. Although some SIL/SEA clusters lie in close proximity to residential areas, very few of these possess bad neighbour characteristics or, where these are evident, generally arise from the presence of non-B2/B8 uses. Of the surveyed clusters, five of the 19 SIL/SEAs areas surveyed were observed to contain a significant presence of non-B class uses though it was recorded that these uses did not generally compromise the overall functionality of the clusters. At these SIL clusters in particular, effective monitoring of uses and effective application of policies should continue to be undertaken by the Council.

The surveyed 'non-designated' or 'other designated' clusters (excluding Romford Office Quarter, which is considered separately) were more mixed in quality with several performing well and others identifiable as being of poor overall quality. Among the clusters either identified as performing well, or meeting criteria suitable for potentially being designated for employment use, are; Rainham West (South) (Cluster 19b), Bridge Close (Cluster 21) and Beam Park (Cluster 20), which is significantly underused as a TfL salt storage depot. Of others, the Bryant Avenue Industrial Estate (Clusters 26 and 41) is noteworthy as a cluster that, whilst generally performing well, contained a high-presence of non B-class occupiers and was situated close to residential areas.

The Romford Office Quarter (Cluster 18) was observed to be mostly performing well, having good access to facilities and amenities, public transport, the strategic road network, and good parking facilities. The relatively high vacancy rates observed during survey and supported in our subsequent analysis suggests that demand for the type of units marketed here may be declining, though in the medium to long term demand for all types of office space may pick up as a result of Crossrail and improved connectivity with central London markets.

With regards to vacancy, there has been a decrease from that recorded in the 2010 GLA London Industrial Land Baseline study as land has since been built out. Our survey of employment land clusters concluded that 56.1ha of land was currently vacant of which 37.0ha were considered to be developable. Floorspace vacancy rates of up to 20% were recorded in some clusters during the survey, however in SILs and SEAs, vacancy rates were typically estimated to be lower (5% to 10%).

6 EMPLOYMENT LAND AND PROPERTY MARKET ASSESSMENT

6.1 Introduction

This section examines LB Havering's office and industrial land market within the context of the wider property market area (PMA). This corresponds to the NPPG which states that needs should be assessed in relation to the relevant functional economic market area (FEMA)[29]. The findings are based on the key conclusions of a consultation exercise with local property market agents and key stakeholders. This represents a 'bottom up' perspective on demand. Perceptions of those working within the office and industrial land market were sought to establish their impressions of the strengths and weaknesses of the commercial property available in LB Havering to potential occupiers[30]. The list of consultees contacted and the questions they were asked is given at **Appendix A.** This section provides the qualitative market intelligence dimension which is harder to draw out in the long-term 'top down' projections of demand in Section 7. It also helps to ensure that the recommendations of Section 8 are grounded in market reality.

6.2 Approach

This section is structured as follows:

- An assessment of what the relevant property market areas are for occupiers of industrial and office space in Havering
- An overview of the supply of industrial and office space in the borough
- Demand factors for industrial space and office space including potential impact of changes to permitted development rights allowing conversion of office to residential uses
- Key sectors with potential for growth in LB Havering and any particular commercial occupier needs
- Results of consultation with key stakeholders
- Conclusion on how supply meets current demand for commercial space and recommendations for the local employment market

As well as consultation this section reviews information from relevant property market reports and other recently published research to build an understanding of the Havering employment land market. The commercial agents, market analysts, property managers and developers that provided data for this chapter through phone conversations and written research include:

- Bidwells
- Altus Edwin Hill
- SBH Page Read
- Glennys
- Kemsleys

[29] NPPG, paragraph 009 Reference ID: 2a-009-20140306
[30] URS contacted the commercial property agents, developers and property management companies that are most active in Havering and asked them to contribute to this study via an informal set of questions.

- London Office Policy Review 2012
- Key stakeholders consulted include:
- Havering Chamber of Commerce
- Federation of Small Businesses (Essex Division)
- London Riverside Business Improvement District (BID)
- LB Havering Economic Development
- LB Havering Property Manager

6.3 Property Market Areas

Although the primary focus of this study is LB Havering, the market area for commercial property is generally not limited by local authority boundaries. Factors relevant to business operations are often more of an influence, such as proximity to labour supply, transport links, site availability and consumer markets. A property market area (PMA) could typically be an area of search for a potential office or industrial occupier. The PMA in this study is the same as the FEMA as defined in the NPPG.

The demand forecasts in Section 7 evaluate demand trends of commercial space in Brent in the context of the wider PMA; therefore it is important to gain an understanding from commercial property agents of what they consider to be the relevant PMA for industrial and office space in Havering.

For LB Havering the PMA for office, industry and warehousing is considered by the consultants and property market agents to comprise:

- LB Havering
- LB Barking and Dagenham
- LB Newham, and
- Brentwood Borough

This geography has been determined via assessment of accessibility, the primary labour market catchments and locations of comparable premises, and confirmed through our discussions with property market agents active in the outer East London and Essex sub-region. Initially Thurrock was also identified as potentially part of the PMA. However, this was removed after consultation with agents and analysis of data as the effect of the London Gateway development has a distorting effect on the employment projections relevant to Havering. It was also felt by property agents that most industrial inquiries in Havering were linked to the London market and those occupiers seeking properties in Thurrock had specific requirements to be close to the Essex market or London Gateway. These boroughs have similar characteristics and are considered a single market area for B1c/B2 and B8 use classes.

6.3.1 Office PMA

According to market agents and the findings of the research Havering has a relatively small office market focussed on Romford office quarter and some small stand-alone office buildings within industrial estates. Offices mainly fulfil localised office demand (e.g. solicitors, local financial services etc.) It therefore has similar characteristics to LB Barking and Dagenham, LB Newham and Brentwood. Brentwood is a more vibrant local competitor with higher rents linked to the more affluent out of London Essex office market. Despite the prominence of the Romford Office Quarter as an office location within Havering, property agents consider that businesses are unlikely to specifically

choose to locate in Romford vis-à-vis the other main office locations in the PMA, principally Stratford and the Royal Docks in Newham.

6.3.2 Industrial PMA

The Havering Industrial PMA is consistent with the Land for Industry and Transport SPG (2011) which found that Havering was influenced by the Thames Gateway industrial property market area, which on the north side of the Thames Gateway extends through Newham, Barking and Dagenham and Havering and into Essex[31]. See Figure 6.1 below for an indication of PMAs from the Land for Industry and Transport SPG (2011).

Havering's industrial areas have seen major change over the last two decades, with increased emphasis as a logistics location, although demand for light industrial and manufacturing uses are still present. The area also offers a large range of sites and can accommodate most industry land and premises requirements.

The A13 is a key transport corridor which runs the length of London Riverside from inner London through to Thurrock. The A13 is one spoke of London's highway network which radiates from central London to it's periphery. It provides a link to the strategic highway network (M25 motorways). This pattern defines the prominent vehicular movement in and out of inner London, so although the Thames Gateway covers both north and south of the River Thames, there is acknowledged to be weak economic relationships between East London/South Essex and North Kent. This is primarily due to the historic geography of the respective markets and, increasingly congestion issues of the Dartford-Thurrock River Crossing A282 trunk road[32]. There are a variety of options currently being explored to improve the connectivity between the north and south halves of East London. These include bridge crossings and improved ferry services. These are explored in more detail at 7.8.1 below.

North of LB Havering are the districts of Brentwood and Epping. Brentwood and Epping Forest District are part of the London Arc[33] considered to be the key engine of the Essex's growth, given their proximity to London. The A12 is a key arterial route which runs through Havering and connects with Brentwood's main employment area (the town of Brentwood), which has purpose built office developments with good connectivity to London and wider Essex. The industrial land market becomes more localised further into Essex with industrial occupiers generally linked more to local supply chains rather than national markets. The District of Epping Forest however is comparatively less well connected with the main population and employment land sites located along the west side of the M11. In Epping Forest a large proportion of allocated sites are either generalised industrial areas or warehouse distribution parks (a feature of proximity to the M11 and M25). The commercial property markets of Brentwood are considered to have a stronger geographical and market alignment to LB Havering, and therefore included in the PMA, but not Epping Forest District, which is excluded from the PMA geography.

[31] Especially the B8 market, which in terms of floorspace requirements is the largest use class in LB Havering
[32] The crossing suffers from significant levels of congestion, with over 50 million vehicles using it each year. Congestion remains a significant problem and the situation is anticipated to worsen as a result of forecast traffic growth. It is estimated that congestion and delays at the Crossing cost the UK economy £40 million a year and the absence of viable alternative routes exacerbates the disruption.

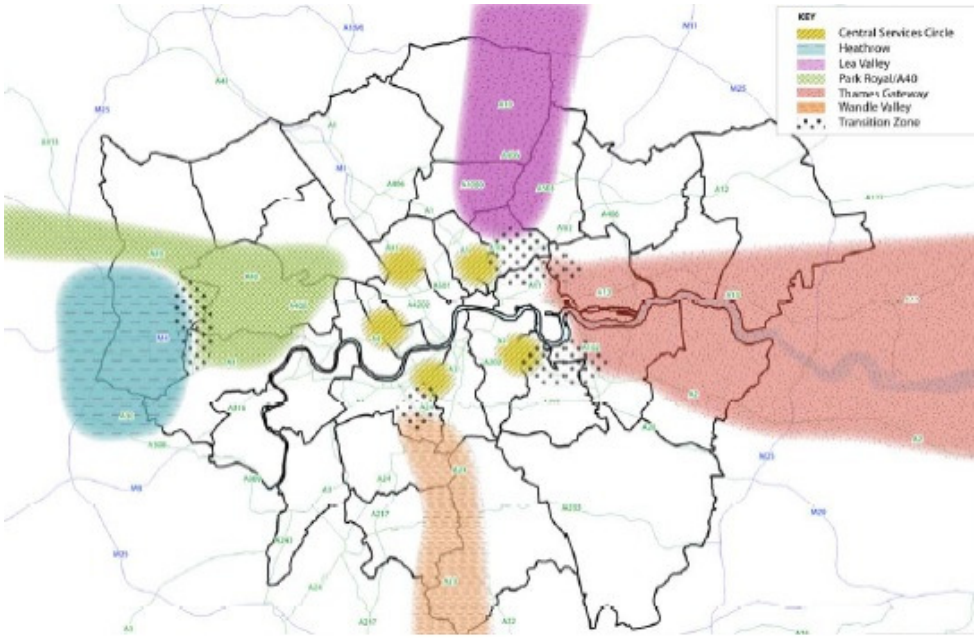
Figure 6.1 Key Industrial Property Market Areas in London



Source: GLA Land for Industry SPG (2011)

6.4 Supply of Employment Sites and Premises in LB Havering

Industrial/Warehousing (B1c/B2/B8) Premises

There is approximately 375 hectares or 700,000 m^2 of industrial floorspace in LB Havering. The existing local market supply of industrial (B1c/B2) property in the Borough has been decreasing in recent years as land has been lost to B8 and also other non-employment uses, such as residential. This has generally occurred where there has been a lack of demand for mostly B2 sites/premises outside the designated employment areas, i.e. SILs and SEA, at places such as New Road North. Losses of floorspace have been observed at several locations in the Borough, e.g. Spring Gardens. Victoria Road has been mainly redeveloped for residential/non-industrial uses although not on the north side within the Ring Road.

New or 'grade A' stock (suitable for either B1c, B2 or B8 uses) is provided within all three Strategic Industrial Locations in the Borough; at Chancerygate Business Centre in King George's Close; Falcon Business Centre and Ashton Gate in Harold Hill (Cluster 1); Easter Park (in Ferry Lane South, C8b) and Beam Reach 5 (Cluster 4). There are few examples of new stock in the SEAs. Specifically for light-industrial and storage units (B1c), 'grade A' space is found within The Seedbed Centre.

Second-hand warehousing (B8) stock is distributed throughout the SILs, with particular examples being at the Fairview Estate and within Harold Hill. A further concentration of such stock is to be found within the Borough's SEAs, such as at Lyon Road and Harold Wood. The majority of second-hand industrial (B1c/B2) stock is considered to be of poor to average quality, and is found predominantly within the SEAs, non-designated locations, and to an extent within the SILs, such as at the Ferry Lane North portion of Rainham SIL.

Agents indicate that, for the size of the market, whilst there is a good supply of both new and second-hand industrial/warehousing stock across the Borough, vacancy rates are generally low. Agents estimate that rates are between 5 and 10%. Detailed Borough level information on the availability of vacant industrial/warehousing units/floorspace has

been provided by LB Havering and is shown in the table below. This indicates that the vacancy rate is low at around approximately 8%[34].

Table 6.1 Industrial/Warehousing (B1c/B2/B8) Availability – Sept to Nov 2014

Size Range (m^2)	*Number of Vacant Units*	*Vacant Floorspace (m^2)*
0 - <100	8	662
100 - <250	4	808
250 - <500	9	3,348
500 - <1000	5	3,891
>1000	7	46,779
Total	**77**	**55,488**

Source: LB Havering (2014)

Yards

Yards for open storage and other industrial/warehousing purposes are found mostly within the Rainham SIL, at some of the SEAs (e.g. Harold Wood), and within Rainham West. They are mostly located away from residential uses, owing to the often bad neighbour issues associated with their use.

Detailed borough level information on the availability of vacant industrial/warehousing units/floorspace has been provided by LB Havering. This information indicates that there are currently ten yards known to be available within the Borough, representing a good to low level of availability.

Industrial Rental Values

Agents suggested the following industrial rental values applied in the PMA:

- Second hand units - £5-6 per ft^2
- New units over 500 sq m - £8.50 per ft^2
- Better quality units in Barking Riverside - £9.50 per ft^2
- Big sheds - £7.50 per ft^2

Office (B1a/b) premises

The VOA indicates that the office sector occupied 154,000m^2 of floorspace in LB Havering in 2012, with around 75% in commercial sector use and 25% used for non-commercial uses i.e. the public sector.

The vast majority of office floorspace in the Borough is second hand accommodation, with many larger buildings having been built to accommodate (or with the aim to accommodate) a lone occupier, e.g. financial and business service industries or public sector bodies. Medium to large commercial premises, of good specification, are found within the Romford Office Quarter enabling medium-sized enterprises to locate in the Borough if they wish. Serviced offices, providing small and flexible business space, are also available at locations in Romford Town Centre. Occupiers generally require short leases, with one agent indicating that a typical lease period is in the realm of a three-year terms with a six month break clause. Several consultees suggested that with the changing economy, which has more focus on footloose, smaller sized companies using

[34] This rate does not include floorspace which is unoccupied but not actively marketed.

the internet as their main tool for business there is an increasingly high demand for affordable flexible workspace with short term contracts.

Romford office market expanded in the 1980 and 1990s with large purpose built offices built serving regional and national office market demand (many were linked to E-On). See Image 6.1 below for an example. However, when E-On moved out of the borough and due to the economic downturn and changing business practices (e.g. rationalisation of office services, offshoring and rise of internet) demand for large purpose built offices rapidly declined. As a result there are relatively high vacancy rates for office in Romford office quarter.

Image 6.1 Example of large floorplate office building in Romford (Cluster 18) in relatively lower demand now due to changing business needs

Source: URS (2014)

Office Rental Values

Rental values range between £9 per ft^2 for second hand premises, and between £12 and £13 per ft^2 for the best quality (prime) workspace, such as within Romford Office Quarter. Investment yields are typically around 6.5%, although there has been a lack of investment activity in the last five years. Comparatively, closer to London, LB Newham has achieved prime rents of £21 per ft^2. Anecdotal evidence suggested that the difference in rents is a contributing factor to office relocations from LB Newham to LB Havering.

To tempt speculative developers to build in Havering it was suggested by agents that rental values of around £17 to £18 per ft^2 would be required. The fact that this level of rent is not being achieved at the moment in Romford explains why in the short term there is relatively little office development interest from developers. However, consultees felt that with improvements to the Town Centre environment as expected to be delivered in the medium term as proposed in the Romford AAP and Romford Development Framework and improved transport accessibility to Central London with Crossrail then these higher levels of rent could be achieved and therefore speculative development incentivised.

Agents indicate that while vacancy rates across much of the Borough are moderate, rates are, to a large extent, influenced by the low volume of stock i.e. if a medium-large business or public sector occupier vacates a premises then the overall vacancy rate is impacted to a greater degree than it would be in a larger market. Vacancy rate for commercial office floorspace is around 20%[35].

The future supply of office floorspace is perceived as being stable, with no major developments currently in the pipeline. There is however a potential for a contraction in supply related to potential mixed-use redevelopments of office sites.

6.5 Demand for Employment Sites and Premises in LB Havering

Industrial/Warehousing (B1c/B2/B8)

As with most areas with strong linkages to Central London, the demand for good quality industrial and warehousing accommodation has held up well in spite of the onset of the global economic downturn. Occupiers generally demand:

- Adequate access to the strategic road network
- Off road loading/unloading
- Lack of disturbance from residential uses (e.g. rush hour traffic)
- Adequate parking provision, and
- 24 hour access.

Local agents indicate that new sites and premises for B8 occupiers, which meet these requirements, are in demand. Examples are Easter Park at Ferry Lane South (Cluster 8b - recent take-up of land) and Beam Reach 5 (Cluster 4, Tesco Distribution Centre – one of the largest transactions in the PMA in the last three years). Other areas close to the M25, including the neighbouring Borough of Thurrock, do have a larger stock of high-quality premises however and are somewhat better placed to capture demand. Opportunities for developing such premises in Havering are mostly limited to redevelopments of typically small industrial estates (such as at Lamson Road in Ferry Lane North, Cluster 3a), or restricted owing to multiple land ownership issues.

With regard to second hand accommodation, the number of enquiries decreased substantially throughout the economic downturn but has since returned to previous levels across the East London area. Demand arises largely from small-scale warehousing (B8) and, more rarely, production (B2) businesses – sole traders being an important traditional source of demand for small units. Although within the non-industrial *sui generis* use class, vehicle servicing and repairing remains an important sector, with these businesses having a particularly strong presence in; SEAs such as Harold Wood and Crow Lane 2; 2007's de-designated employment areas; and also within the Rainham SIL at Ferry Lane North and Salamon's Way.

Short-term leases are a key feature of the market, as is the case across much of Greater London. In the SILs and SEAs, short leases are attractive because they offer flexibility to occupiers (particularly in times of economic uncertainty) and due to the security offered by the employment area designation there is a high likelihood that the leases will be available for renewal at a future date. However short terms leases are less attractive in areas under pressure from competing higher land value uses (.e. residential) because there is a higher likelihood that the leases will not be renewed. Agents indicate that this may act to hinder levels of take-up at non-designated employment locations, even if premises are fit for purpose.

[35] This rate includes floorspace which is unoccupied but not actively marketed.

Demand is also high for properties which are not disturbed by, and do not cause disturbance to local residential properties. Industrial uses can create noise, smell, heavy traffic, and some are required to operate on a 24-hour basis. These 'bad neighbour uses' can cause excessive disturbance to local residents, which may lead to restrictive measures being placed on the industrial uses. In addition the supply and delivery of goods requires a national road network, and one, which is not subject to the type of traffic associated with residential uses. Although Havering is relatively fortunate in having good access to the national road network, road congestion is considered to be an issue at some locations, particularly along the A12 towards Junction 28 of the M25, and along the A13 in particular when there are congestion issues at the Dartford Crossing.

Specifically, within Rainham SIL, there is evidence of demand for small units. The Business Improvement District (BID) in Rainham has led to improvements in the trading practices and physical environment of key estates which may further stimulate demand for premises in the SIL, or at least within certain estates. CEME's innovation centre has had high take up but, according to consultees, there is a reluctance of business to move on from these high quality premises units. As a result there is thought to be pent up demand for smaller B1c/B2/8 unit space for start-up/young and growing businesses.

The green enterprise concept and high value manufacturing sector, which are targeted uses for the Rainham SIL, has experienced a relatively low take up so far. However, green enterprise related enquiries are starting to increase. The proposals for redevelopment of the Freightmaster estate for advanced recycling could have a knock on effect in stimulating more demand in the Rainham SIL area. Currently most enquiries tend to be for mostly traditional waste management use.

Office (B1a/b)

In the context of the PMA Romford and Havering is not seen as a particularly significant office location. Most of the demand comes from local office occupiers. Local property agents confirmed that a range of businesses typically demand/require office space in the Borough, including accountancy firms, public and voluntary sector organisations, architectural practices and training organisations (e.g. at Cluster 6 CEME).

Premises required, where demand exists, are generally small (ranging from less than 250m^2 at Harold Hill) to up to 2,500m^2 (Romford Office Quarter). Although quality requirements vary depending on the needs of the occupier, most businesses demand medium to high specification premises, regardless of size. Small serviced offices were noted by several consultees as being in demand, with a trend away from large office floorplates in the short term, as the larger businesses consolidate their operations at fewer locations.

As is known to be the case elsewhere in London, the Disability Discrimination Act (DDA) is having an impact on the demand for modern premises. The DDA requires that employers provide adequate access for disabled users by including ramped access, widened doorways and suitable sanitary facilities. These facilities are difficult to retro-fit to older buildings, and this is thought to have led to increased demand for modern office facilities, making older office units more difficult to let.

Although there is currently considered to be a relatively low level of demand for (and supply of) B1 premises generally in Havering, there is evidence of demand for serviced office space both at Romford Office Quarter, where the majority of B1 transactions take place. There has been some demand, from SME occupiers, for flexible workspace elsewhere in Romford Town Centre (primarily along South Street and above shops for example), though in line with the wider trend for the Borough, demand is considered to have been fairly muted in recent years.

Consultations have identified that there has been some interest in the redevelopment of low density sites in Romford Office Quarter for residentially-led mixed use schemes that would include some office floorspace.

There has been some change of use of offices to residential under the permitted development change order. Most agents felt that this has occurred in offices that are not in demand from office occupiers and therefore that there is no threat to the supply of office accommodation to meet business needs.

6.6 Conclusion - Balance of Supply and Demand

Industrial/Warehousing (B1c/B2/B8)

Our assessment has concluded that demand levels for industrial premises are stable, as a whole, having experienced a fall at the onset of the economic downturn. There are successful examples of high-specification developments (Beam Reach 5 and Easter Park) and demand for medium-large premises remains. Most requirements are for warehouses with good observed take-up of vacant land and new premises. Demand and take-up of second-hand stock is considered to be somewhat more muted.

Although new high-quality premises have recently been built, second hand stock dominates the market at present. Whilst occupiers demand a range of premises, there is a noted shortage of large distribution facilities or available land to build such premises, meaning that when demand for such premises arises, occupiers have to look elsewhere in the PMA.

Vacancy rates are generally considered to be low within the SILs, somewhat higher in the SEAs (though still low), and high in the de-designated employment areas. This points to there being a good level of churn of supply and demand for stock in protected locations, close to major road arteries and away from residential and other sensitive land uses. Consultees suggested that there was a relative lack of availability of good quality lower cost space for SMEs.

In conclusion, whilst it is likely that some demand from occupiers requiring large premises may be 'lost' to other boroughs in the PMA, supply generally meets demand, with vacancy rates appearing to have remained low. The presence of poorer quality premises in some locations may provide opportunities for refurbishment or redevelopment to ensure the needs of occupiers are met and the supply-demand balance maintained.

Office (B1a/b)

Based on consultation and review of information sources it is assessed that take-up rates of office floorspace in Havering has been slow in recent years, and demand is currently not strong, with relatively few enquiries being received. Where demand exists, good quality premises are required with good links to public transport and amenities. There is some evidence of demand for serviced offices within business centres, with good occupancy levels at such premises in Romford Town Centre.

The supply of office premises in Havering is not considerable and is largely concentrated within the Romford Office Quarter, where a number of good quality premises are available. This area was the only location highlighted as experiencing much demand, though small office units within the SILs do attract interest. The vast majority of the available stock is second hand, varying in age, with some relatively new stock at Melville Court (Harold Hill) and some refurbished serviced office space in the Romford Office Quarter. Short-term leases are generally offered, with most businesses being content with such tenure arrangements in the present economic climate. Over 50% of premises available for let are less than 2,500 ft^2, with current vacancy rates standing at 12%, having increased since the onset of the economic downturn.

In conclusion, the supply of B1 floorspace generally meets demand in the Havering local office market in the current to short term period. The key gap is in affordable, serviced office accommodation to meet the needs of small start-up companies. The generally good quality of premises supplied meets the demands of most prospective traditional office occupiers. The fact that the local B1 market remains small, and has been small historically, may suggest that it is largely in a state of equilibrium, with no speculative developments in the pipeline that are likely to stimulate the market. This is mainly a result of the low rental values between 12 and 13 per $ft^{2.}$ With improvements to the environment of Romford town Centre spurred by the Romford AAP and Development framework and introduction of Crossrail this could change. The prime office location in the Borough, Romford Town Centre retains the fundamental conditions for maintaining a presence as an outer London office location.

7 DEMAND FORECAST

7.1 Introduction

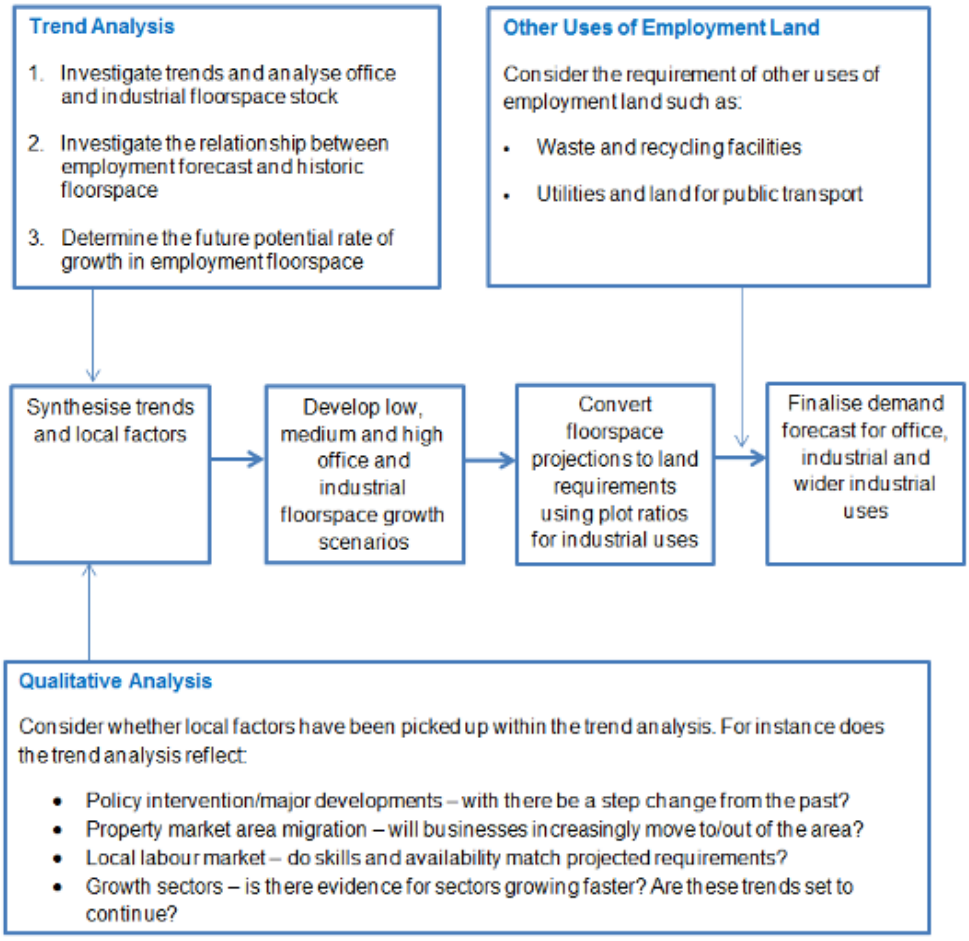
This section projects the future demand for industrial and office land in LB Havering for the period 2013 and 2031.

7.2 Methodology

Our approach to estimating demand for industrial land and office space is compliant with the National Planning Policy Framework (NPPF), National Planning Practice Guidance (NPPG), Employment Land Reviews: Guidance Note (2004) which although cancelled by the NPPG still provides a detailed guidance on ELR best practice and the GLA Land for Industry and Transport SPG (Sept 2012).

Our approach synthesises published employment projections with historic floorspace trends and local economic drivers of the property market area (PMA) in which LB Havering industrial and office markets operate, to provide a borough wide projection of employment floorspace. For industrial uses projected floorspace is converted to land demand using plot ratios. We do not convert the floorspace requirement for office space into land as plot ratios for office vary significantly, in particular storey heights, meaning that the conversion to land can be unreliable. Our methodology is set out below:

Figure 7.1 Industrial and Office Land Demand Forecasting Methodology



Source: URS (2014)

7.3 Property Market Area

Industrial and Office property markets rarely correspond to local government administrative boundaries. Businesses searching for sites or premises will typically consider a number of similar locations. This area is termed the 'property market area' (PMA). The PMA will often have similar characteristics such as the labour market structure, access to market areas and suppliers, rental values, appropriate size and grade of stock. The NPPG states that needs should be assessed in relation to the relevant functional economic market area (FEMA)[36]. The FEA as defined in the NPPG can be viewed as the PMA as defined in this study.

For the purpose of this study we have used data from the following local authority boundaries of a defined Property Market Area (PMA), as suggested by property market agents, to measure the trends of the above three factors:

- LB Havering;
- LB Barking and Dagenham;
- LB Newham, and;
- Brentwood Borough Council.

As described at section 6.3 above Thurrock is not included in the PMA in terms of data used in the demand forecast because it was considered by market agents to be a separate sub-market due to the effects of the London Gateway. However, Thurrock does share similar characteristics to the PMA as described above. Data on historic business floorspace, historic employment and forecast employment is analysed for each of the above four PMA boroughs. The trends across the PMA for each of these factors then feeds into the overall employment land demand forecast.

7.4 Historic Trends in Floorspace

The NPPG describes how future trends for employment land should be forecast[37]. This includes an assessment of past take-up of employment land. The Valuation Office Agency (VOA) records the amount of floorspace in an area for tax purposes (the assessment of business rates) by building type. VOA data is considered to be a reliable source of data between 1998 and 2008. However, difficulties can occur in comparing raw VOA data due to the revaluation of properties that occurred in 2004. This causes discontinuities in the quantum of floorspace between 2004 and 2005. Also, 2008 is the latest available data which is five years old at the time of writing this report. Importantly the 2008 data does not include floorspace data collected since the current economic downturn.

To counter these issues we have used experimental commercial floorspace data released by the VOA in May 2012 and covering the period 2000 to 2012[38]. Although the VOA states that they are currently evaluating this data set it is considered a robust enough dataset to analyse trends in employment floorspace across the PMA for the purposes of this ELR.

The historic employment floorspace trend across the PMA and LB Havering is shown at **Table 7.1**. **Figure 7.2** shows the trends for the PMA.

[36] NPPG, paragraph 009 Reference ID: 2a-009-20140306
[37] NPPG, paragraph 033 Reference ID: 2a-033-20140306
[38] This is available at: http://www.voa.gov.uk/corporate/statisticalReleases/120517_CRLFloorspace.html

Table 7.1 Change in Industrial and Office Floorspace 2000 to 2012

	Business Type	2000 m^2	2012 m^2	Diff (%)	CAGR
LB Havering	Office	162,000	154,000	-4.9%	-0.4%
	Industrial	680,000	670,000	-1.5%	-0.1%
PMA	Office	598,000	647,000	8.2%	0.7%
	Industrial	3,099,000	2,791,000	-9.9%	-0.9%

Source: URS; VOA Business Floorspace (Experimental Statistics) 2012.
Note: CAGR: Compound Annual Growth Rate. Figures may not sum due to rounding.

Figure 7.2 Change in Industrial and Office Floorspace ('000 m^2)

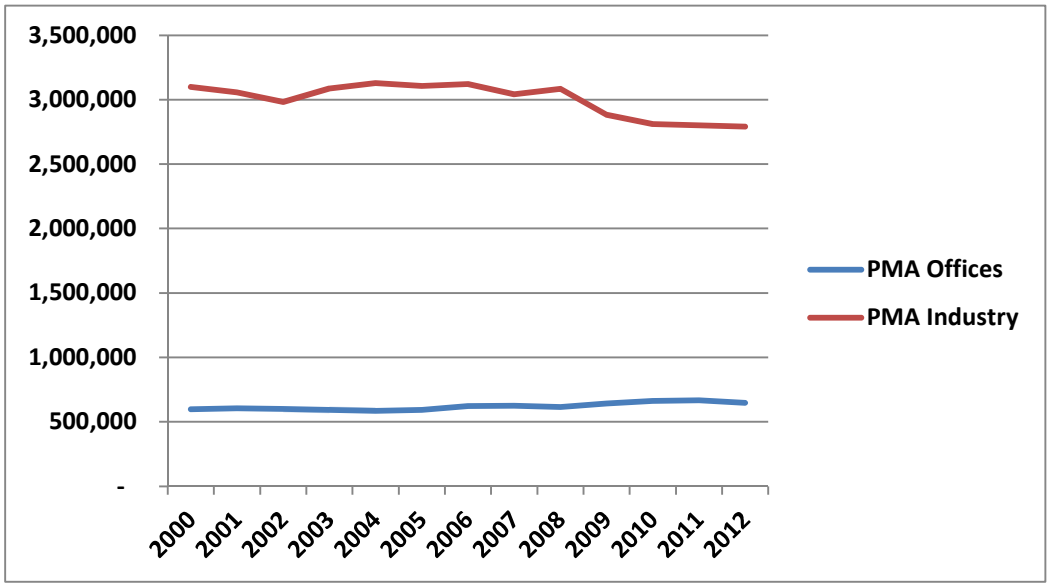


Table 7.1 and **Figure 7.2** shows that there has been a decline in industrial floorspace and an increase in office floorspace across the PMA. The industrial and office trends for the PMA feed into the synthesis demand forecast as shown at section 7.7 below. This includes the CAGR of -0.9% for industrial uses and +0.7% for offices.

7.5 Historic Employment Growth

The NPPG describes how employment land trends can be analysed by looking at labour demand[39]. This includes an assessment of historic employment growth. Historic employment data is drawn from the Annual Business Inquiry (ABI) between 2000 and 2008 and the Business Register and Employment Survey between 2008 and 2011. Both datasets are compiled by the Office for National Statistics (ONS). They are both expressed at a Standard Industrial Classification (SIC) level, not by use class. To estimate employment by use industrial land class (office, industry and warehousing uses, as per our ELR definition) we have identified those sectors which typically operate from B1, B2 and B8 use classes. The linking of sector to use class draws upon our work for other London boroughs in which we have determined employment land by relevant

[39] NPPG, paragraph 033 Reference ID: 2a-033-20140306

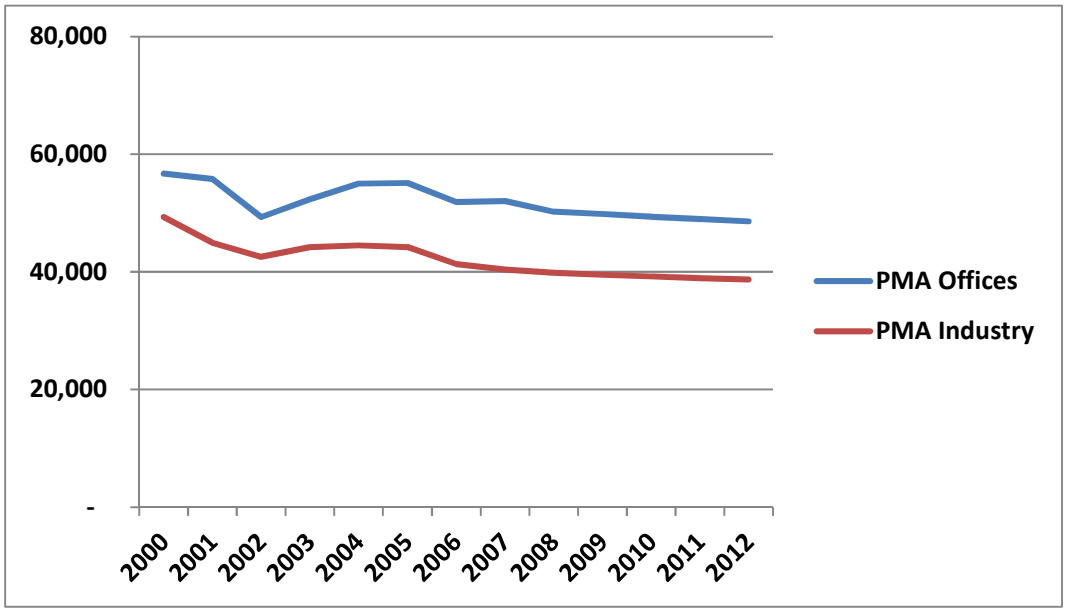
sector[40]. By this approach we estimate workplaces employment by use class as set out in **Table 7.2** and **Figure 7.3**.

Table 7.2 Historic Employment 2000 to 2012

Area	Business Type	2000	2012	Diff %	CAGR
Havering	Office	15,977	15,667	-1.9%	-0.2%
	Industrial	13,997	10,360	-26.0%	-2.5%
PMA	Office	56,668	48,554	-14.3%	-1.3%
	Industrial	49,294	38,712	-21.5%	-2.0%

Source: URS; ONS 2014[41]. Figures may not sum due to rounding.

Figure 7.3 Historic Employment 2000 to 2012



The historic employment trend CAGRs used to inform the synthesis employment land demand forecast are -1.3% for office and -2.0% for industrial uses.

7.6 Employment Projections

The NPPG outlines how employment land should be forecast using assessments of future employment projections (labour demand)[42]. Employment forecasts for London boroughs are produced by GLA Economics and the most recent forecasts were issued in GLA Economics in April 2013. The forecasts are considered the most robust available information on future employment trends by London borough. They are based on a

[40] For example see the London Industrial Land Release Benchmarks and North East and South East Baseline, URS (2007)

[41] Note: The BRES data SIC codes are not identical to the ABI SIC codes so to ensure consistency the actual rate of change for each year between 2008 and 2011 in the BRES data was applied to the known ABI data from 2008 onwards.

[42] NPPG, paragraph 033 Reference ID: 2a-033-20140306

'triangulation' process, which marries macro-economic employment forecasts on a regional level to micro-economic factors at borough level. These include:

- Trend analysis of the major employment sectors in each borough taking account of the effects of the recent recession and prospects for future growth;
- Transport improvements planned for each borough; and
- The availability of land for the development of new office employment sites in each borough (the forecasts assume that vacant industrial sites become residential over the time period).

The April 2013 GLA forecasts take account of the recent economic downturn through the assessment of more recent employment data which has led overall to less optimistic projections of future employment growth[43]. The employment forecasts for Brentwood are taken from the 2012 Heart of Essex Economic Futures Study[44]

Table 7.3 presents the employment forecasts across the PMA.

Table 7.3 Employment Forecasts

Area	*Use Class*	2013	2031	CAGR 2013-31
Havering	Office	9,104	11,449	1.3%
	Industrial	15,633	13,639	-0.8%
PMA	Office	41,440	50,235	1.1%
	Industrial	50,781	46,056	-0.5%

Source: URS; GLA Borough Employment Projections (November 2009); Heart f Essex Economic Futures (July 2012)
Figures may not sum due to rounding

[43] GLA Employment Projections 2013 only publishes overall borough employment forecasts and does not produce forecasts by industrial or office uses. Therefore to covert the overall employment forecasts to industrial and office land uses the relevant proportion of industrial and office employment of total forecast employment from the London Employment Time Series publication (GLA, 2010) is taken and then applied to the overall employment forecasts as shown in GLA Employment Projections 2013.
[44] NLP, July 2012, Heart of Essex Economic Futures Study

Figure 7.4 Employment Forecast 2013 to 2031

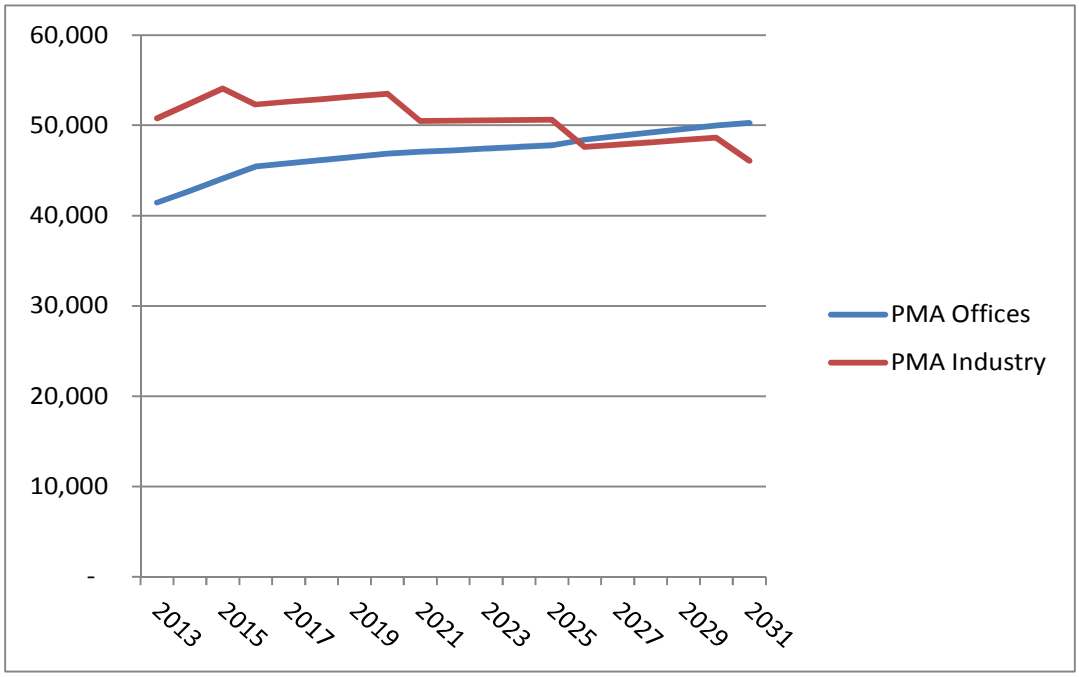


Table 7.3 shows that office employment in LB Havering is forecast to grow at a slightly higher rate than the PMA (1.3% per annum compared with 1.1%, respectively) and see a relatively stronger contraction in B2/8 employment than compared with the PMA (-0.8% and -0.5% respectively). These 'top down' economic trends do not build in a 'bottom up' understanding of likely future local circumstances which are considered at **section 7.8** below.

The PMA employment forecast trend CAGRs used to inform the synthesis employment land demand forecast are +1.1% for office and -0.5% for industrial uses

7.7 Synthesis Forecast

Our synthesis forecast approach takes trends in historic floorspace provision as a basis for forecasting future employment land demand. The historic floorspace trends are projected by a linear function and adjusted for regional economic changes by incorporating an adjustment factor. The adjustment factor is the ratio of forecast employment to historic employment.

The adjustment factor is then applied to historic change in floorspace to determine the floorspace forecast. The results are shown in **Table 7.4**. The table shows the historic trend based on past floorspace changes, historic and forecasted annual employment changes for B use classes, the adjustment term and the adjusted average annual floorspace demand for the period 2013 to 2031. This CAGR for historic floorspace and employment and forecast employment are taken from preceding tables.

Table 7.4 Synthesis Forecast for Employment Floorspace

Business type	*Floorspace CAGR* 2000-2012	*Employment CAGR* 2000-2012	*Employment CAGR* 2013 - 2031	*Adjusted average annual floorspace demand*
Office (PMA)	0.7%	-1.3%[45]	1.1%	0.8%
Industrial (PMA)	-0.9%	-2.0%	-0.5%	-0.2%

Source: URS calculations 2015. Figures may not sum due to rounding

Table 7.4 above shows the synthesised demand trend for offices and industrial uses between 2013 and 2031 projected office floorspacetrend is 0.8% per annum and the industrial trend is -0.2% per annum. These annual growth rate estimates are derived from a 'top down' assessment of demand. The next step in the process is to perform a 'bottom up' assessment of likely demand and then to consider whether the 'top down' estimates could be revised upwards or downwards to reflect a more localised understanding of likely future demand.

7.8 Bottom up adjustment of the Synthesis Forecast

The bottom up demand assessment is derived from market intelligence gained through the literature review, local research and consultation with local property market agents and key stakeholders. Factors considered include the following:

- The impact of any major new developments and infrastructure plans;
- Property market trends within the PMA; and
- Impact of the recession.

We summarise below the comparative advantages or disadvantages of LB Havering in relation to the wider PMA, to illustrate the degree to which Havering could compete for economic growth and the inward investment arising across the PMA.

7.8.1 Impact of Major Projects

Consented Proposals

Crossrail: Crossrail will deliver a high frequency, high capacity service to 37 stations linking Maidenhead and Heathrow in the west to Shenfield and Abbey Wood in the East. Crossrail will stop at Romford. It will bring an additional 1.5 million people within 45 minutes commuting distance of London's key business districts[46].The improved connectivity is expected to have significant economic effects across London. These could include a positive shift in demand from businesses that require good public transport links, especially those seeking to access the West End and west of London, which is a key difference to the current rail network[47].

According to the 2012 Crossrail Property and Regeneration Study, Crossrail could create £5.5 billion in added value to residential and commercial real estate along its

[45] The reason there appears to be potentially contradictory trends in the historic office employment and floorspace is mainly due to a large amount of speculative office development constructed at Newham in the last eight years to support Stratford City and the Olympics. It may be that there is a lag period while actual employment catches up with the supply of office floorspace. This is reflected in the positive GLA employment office forecasts for the PMA. It is therefore not appropriate to adjust this trend in the syntheses exercise.
[46] www.crossrail.co.uk
[47] Currently trains terminate at Liverpool Street.

route between 2012 and 2021[48]. The study, along with the 2014 Crossrail Development Pipeline Study[49] suggests that Crossrail is already having a positive impact on investment decisions and at many locations Crossrail will be influential in supporting and influencing new development. In regards to Havering the study suggests that in outer London locations such as Romford the impact on the commercial office market will be less significant than in Central London. However Romford is placed in the middle category of likely positive impacts and it is likely that most of the positive impacts relate to increased residential values. However, positive benefits include the increased attraction of the area to commuters and hence employees, and the geographically larger labour pool available to employers.

It is expected that Crossrail will lead to a greater 'sense of place' in Romford. This would likely be achieved through investment in public realm and through a multiplier effect of local spend by new residents seeking to live in Romford due to its improved connectivity. This raising of the profile of Romford could over time encourage investment in local employment schemes both in terms of new office accommodation for people who want to be located closer to home or related to firms seeking to provide services to the increased population such as financial and professional services. Also new logistics, distribution and food and drink manufacturing firms could choose to locate closer to this expanded and improved residential and employment market. Therefore over time Crossrail is likely to have a marginal positive effect on demand for industrial and office space and the top down demand forecast can therefore be adjusted upwards.

London Gateway: London Gateway is a port and logistics development on the north bank of the River Thames in Thurrock, Essex. It is 20 miles (32 km) east of central London. Outline planning permission has been granted for a total of 880,000 m^2 of employment uses. Construction began in February 2010 and is expected to take several years, with the port and logistics park completed in stages. The project comprises a new deep-water port, which is able to handle the biggest container ships in the world, as well as one of Europe's largest logistics parks. The distribution park will cover a total area of 300 hectares. It will accommodate buildings in excess of 93,000 m^2 and will provide access by road and railways to London and the rest of Great Britain[50]. According to the views of commercial property agents consulted the project once complete is likely to stimulate further demand for industrial and logistics units in Havering. Accordingly the demand forecast has been adjusted upwards for industrial uses.

Lakeside: Thurrock have a vision for the Lakeside Basin as a new regional town centre. Outline planning permission was granted in April 2014 for a £180m scheme to extend the centre north and eastwards, providing 30-40 new retail stores including space for new café/restaurant facilities resulting in a net gain of 40,000m^2 GIA; a new bus station, which together with the adjacent Chafford Hundred Rail Station, to form a new transport interchange facility; improved pedestrian and cycle routes. The Environmental Statement accompanying the planning permission states the potential for 1,130 jobs during the construction period, and once operational over 6,000 direct permanent jobs in the local economy and around 1,250 seasonal jobs [51]. The benefits arising from these jobs will mostly fall to retail and logistics. However, many of the brands are expected to be national/international and may already have their logistics operations set up and functioning to managed supply requirements from the existing Lakeside. The site developer has said construction could start as early as 2015 which means the leisure development could open in 2017[52]. Given the likely benefits to the logistics market we expect some of the effects to spill over into Havering and so we therefore adjust the employment synthesis forecast accordingly.

[51] Lakeside Shopping Centre: Extension Proposals Planning Summary December 2011
[52] http://www.theretailbulletin.com/news/outline_planning_permission_granted_for_leisure_development_at_intu_lakeside_03-04-14/

Proposals yet to be Consented or in Concept Phase

Beam Park Station: There are aspirations for a Beam Park rail station, which is contingent on Cluster 20 (Beam Park) coming forward for development. Higher density housing here would also see the bus network and capacity improved southwards into Rainham Employment Area, which could improve the areas connectivity and attractiveness for B2/B8 use classes. Given the uncertainty over these projects occurring at this stage, we do not adjust the employment synthesis forecast by this factor.

A Lower Thames Crossing: There are currently two proposals to improve connectivity between the north and south banks of the Thames Estuary East of Dartford. In July 2014 the Department for Transport announced that they were committed to a lower Thames crossing and that Option A – a crossing close to the existing Dartford Crossing and Option C – Linking the M2 to the M25 east of Gravesend[53] are the two shortlisted options. Havering had responded to earlier consultation in mid-2013 setting out its preference for Option A. The existing Dartford-Thurrock River Crossing A282 trunk road is a key link in the strategic road network, which facilitates the movement of goods and people. The crossing suffers from significant levels of congestion, with over 50 million vehicles using it each year. Congestion remains a significant problem and the situation is anticipated to worsen as a result of forecast traffic growth[54]. The absence of viable alternative routes exacerbates the disruption. For locations outside the immediate crossing route such as LB Havering, there are expected to be access and reliability benefits as traffic from Chanel ports bifurcates along the M25, M20 and M2. An indicative timeframe for completion is at least ten years. It is thought that Havering's B8 use classes especially would benefit. Given that there is a firm commitment to the project the demand forecast is adjusted upwards accordingly.

East of Silvertown River Crossing: Transport for London is investigating the potential for an additional river crossing east of Silvertown and west of Dartford to ease road congestion and improve connectivity. There are currently a number of options being considered including a new tunnel at Silvertown, a new ferry at Woolwich, a bridge and ferries at Gallions Reach and a bridge between Belvedere and Rainham[55]. The Belvedere Bridge option is likely to have impacts in terms of employment land in Havering and the Council has very strongly objected to this option in its consultation response submitted in October 2014. However, given the lack of certainty at this stage of which option will be pursued and based on the views of market agents no adjustments are proposed for the demand forecast.

7.8.2 PMA Migration & Regeneration Initiatives

Property market agents have indicated that there could be a migration of industry from LB Newham and other central boroughs of London which have land constraint issues. As a result business could move to outer London boroughs. Property market agents confirmed that there was likely to be some migration of industry away from London's central activities zone (CAZ) to outer London borough locations over time. It is thought that LB Havering could benefit from this effect. Over the longer term, the release of industrial land could translate as an increase in land values, especially in inner London boroughs and businesses pushed out to outer London Boroughs such as Havering. This effect of property migration has also, to some extent, been captured in the historic floorspace change and employment projections. The impact on demand is therefore thought to be limited although some minor upward adjustment is made.

[53] https://www.gov.uk/government/news/next-steps-for-lower-thames-crossing-announced
[54] It is estimated that congestion and delays at the crossing cost the UK economy £40 million a year (Dartford River Crossing Study Report (Department for Transport, Route Options for the new Lower Thames Crossing, July 2014)
[55] TFL, River Crossings: East of Silvertown Crossings: Technical Documentation (Atkins June 2014)

The Romford Area Action Plan (AAP) vision is to promote and enhance Romford's position as East London's premier town centre. The document includes objectives to support and enhance the local economy. The council is preparing a business growth strategy and there are intentions to work closer with and support local businesses and strengthen partnership working across organisations.

In terms of physical regeneration, Romford Urban Integration study proposes three masterplans to enhance the public realm of Romford Town Centre designed to improve areas north and south of the station alongside the arrival of Crossrail. Around the station area – a key gateway to Romford - proposals are for a new station forecourt, new piazzas, reconfiguration of the bus lay-by, improved pedestrian flow, linkages and environmental improvements. There is also a masterplan to green the Romford ring-road by soft planting, improving pedestrian sub-ways and an attention to enhancing safety and designing out crime. These improvements are likely to have a positive impact on perception of place. The intention is to implement timescale is within five to ten years; however, realisation of these masterplans are constrained by lack of funding. The impact on demand is thought to be on offices located in Romford Town Centre, though this is unlikely to result in a step change in demand.

The overall effect of regeneration strategies and active Council intervention could lead to an increase in demand for office floorspace.

7.8.3 Local Factor Summary

Table 7.5 presents the combined effects of the local factors on the demand forecasts. We presents in a format of either a positive impact on demand (↑), a negative impact on forecasts (↓) or no overall impact (↔). Each factor is given a weighting of +/-10% of the CAGR, depending on the direction of the arrow. The result of this exercise produces an adjusted forecast.

Table 7.5 Summary of Local Factors and Impact on Synthesis Forecast

	Office	***Industry/Warehousing***
CAGR Forecast	*0.8%*	*-0.24%*
Major projects	↑	↑
PMA migration & Regeneration Initiatives	↑	↑
Adjusted CAGR Forecast	*0.9%*	*-0.19%*

Source: URS (2015)

7.8.4 Sensitivity

To account for potential variations in our synthesis of projections based on employment, floorspace and local factors we introduce high and low growth scenarios to our demand projections +/-0.1 either side of our best estimates (medium growth scenario).

Our low to high growth scenarios also provide some flexibility to any potential changes in demand (up or down) arising from, for example, variations in plot ratios; variations in the impact of Crossrail; the realisation of a potential new station at Beam Park; the expansion of Lakeside; or consent for a new Lower Thames Crossing or crossing east of Silvertown. The impact of some or a combination of these development proposals could provide a step in demand and it is recommended that the council monitor employment land demand and supply. We provide a specific recommendation to the monitoring of employment land in **Section 8**.

The three growth scenarios, including the impact of local factors, are presented in **Table 7.6.**

Table 7.6 Growth Projections with Local Factors and Sensitivity

	Adjusted CAGR	
	Office	***Industrial/Warehousing***
Low Growth Scenario	0.85%	-0.17%
Medium Growth Scenario	0.94%	-0.19%
High Growth Scenario	1.03%	-0.21%

7.9 The Forecast for Industrial and Office Premises

The net growth in demand for office and industrial floorspace over the planning period, 2014 to 2031 is set out in **Table 7.7.** Net growth refers to the balance of commercial space once new development and the loss of premises (either demolished or changed use) has been taken into account.

The table shows that the net requirement employment floorspace in LB Havering by 2031 is estimated to be between 26,700m^2 and 33,300m^2 for office space, and -21,300m^2 to -25,900m^2 additional floorspace for industry and warehousing. Given the stage of the current economic cycle it is likely that short-term growth will be at a lower rate than the long-term average.

Table 7.7 Long Term Office and Industrial Floorspace Demand Forecast ('000m^2)

	Additional Floorspace Requirements at 2031		
	Net Low Sc.	Net Med Sc.	Net High Sc.
Office	26.7	30.0	33.3
Industry/ Wareh'g	-21.3	-23.6	-25.9
Total	5.5	6.4	7.3

7.10 Development Pipeline

Analysis of LB Havering employment planning application data taken from the London Development Database (for April 2012 to August 2014) shows there is a negative development pipeline for both offices (B1a and B1b) and industrial uses (B1c, B2 and B8). This generally relates to planning permissions not started and is assumed to relate to the falling demand for industrial and office space linked to the recent economic downturn. Most of these applications are for change of use from employment to residential or other mixed use. The headline development pipeline figures are as follows:

- Offices (B1a) -1,836 m^2
- Industrial (B1b,c, B2 and B8) -11,065m^2

The office pipeline can be left as floorspace as it is not always clear what plot ratios should be used due to offices either being high density town centre offices with multiple levels or lower density 'out of town' business park office developments. The industrial floorspace figure can be converted to land by using the plot ratio 0.5[56]. This results in approximately -2 ha of industrial land that has permission to be released from industrial

[56] DCLG (2004) Employment Land Review Guidance p.47

use. Office and Industrial development pipeline will be factored into the policy recommendations as described in Section 8.

7.11 Other Users of Industrial or Office Land

7.11.1 Waste Management and Recycling

The Joint East London Waste Strategy adopted in February 2012 identifies three waste sites for LB Havering to meet expected demand over the planning period. These sites are as follows:

- Ferry Lane North - existing waste site to be redeveloped – 0.5 to 1.5ha
- Gerpins Lane – rural site in Greenbelt to be used as a composting facility – 1.5 to 5 ha
- Hall Farm – former landfill site in rural location to be used as a composting facility – 19 ha

As none of the above sites are additional sites that could be located in employment land no adjustment is made to the demand forecast.

7.11.2 Utilities, & Land for Public Transport

The GLA London's Industrial Land Baseline (2010) measured 81.7ha of land. Our observations did not identify any new land allocated for utilities, waste or public transport since the 2010 study. The release of a gas utilities site at Crow Lane (Cluster 17) was identified by the site owner, National Grid, through the call for sites process. The area of the site is approximately 5.24 ha and it is considered surplus to operational requirements.

7.11.3 Vacant Land

Information on vacant land and land with vacant buildings within employment areas was collected during the field survey. It was then measured using Geographic Information Systems (GIS) software. The estimated vacant land is shown in table 7.8 below. The total developable vacant land was calculated by taking away vacant land that is effectively undevelopable, such as nature reserves or land that has natural constraints such as topographical or watercourses running through it. The developable vacant land is 37 hectares and this is factored into the forecast for employment land requirement to 2031 as shown in Table 7.9.

Table 7.8 Estimated Vacant Land in LB Havering 2031

7.12 The Forecast for Industrial Land to 2031

The NPPG, states that where possible employment floorspace should be converted to employment land using plot ratios[57]. Office development can vary considerably (from three to ten plus storeys) so therefore it is not suitable to convert the demand projections from floorspace into office land requirements. By comparison development density (plot ratio and storeys) tends to be static for industry and warehousing premises, and a plot ratio of 1:0.45 (land to premises, over one storey) can be applied. This ratio means that over one hectare of land one can typically expect the footprint of an industrial or warehouse building to take up 0.45 hectares. Using this ratio we calculate that the additional demand for industrial and warehousing floorspace, set out in **Figure 7.7**, is the equivalent of -5.8ha, -5.2ha or -4.7ha (low, medium and high growth scenarios respectively).

[57] National Planning Practice Guidance (NPPG) paragraph 034 reference ID: 2a-034-20140306

The demand forecasts set out in **Table 7.9** take into account the demand for waste and recycling land and the need to retain an appropriate level of vacant or derelict land while sites are prepared for new occupiers (termed frictional vacancy[58]). The vacant developable land is shown in Table 7.8.

Table 7.9 Industrial Employment Land Demand, 2012-2031

	Low	*Medium*	*High*
Demand for industrial land use		**(hectares)**	
A. Supply of industrial land occupied by B-use class, including land for utilities, bus and rail depots, and waste management		375.0	
B. Current vacant industrial land 2014		37.0	
C. Total occupied industrial land and developable land (A+B)		412.0	
D. Land demand to 2031	-5.8	-5.2	-4.7
E. Additional demand for waste and recycling facilities 2014 to 2031		0.0	
F. Optimum frictional vacant land at 2031 (5% of A+D+E)[59]	18.5	18.5	18.5
G. Excess vacant land (includes optimal levels of frictional land (F) minus existing vacant land (B)	-18.6	-18.5	-18.5
H. Gross demand for industrial land 2014-2031 (A+D+E+G)	350.7	351.2	351.8
I. Net demand for industrial employment land 2014-31 (H-D)	**-24.3**	**-23.8**	**-23.2**
J. Net change per annum (ha)	-1.3	-1.3	-1.2

Source: URS (2015); GLA London's Industrial Land Baseline (2010); East London Waste Plan (2012)
Figures may not appear to sum due to rounding

The implications of this analysis is that there is a surplus of employment land in the region of between 24.3ha and 23.2ha, depending on the demand scenario. The median scenario is for -23.8 between 2014 and 2031 or -1.3 p.a. This is deemed the most likely to occur and so forms the basis of the policy recommendations outlined at section 8.

[58] See paragraph 3.7 of the Land for Industry and Transport Draft SPG (Mayor of London; February 2012) for a fuller explanation of frictional vacancy
[59] The Land for Industry and Transport SPG (2012) paragraph 3.7identifies 5% as the optimal frictional vacancy rate for industrial land in order for the market to work efficiently.

7.13 The Forecast for Office Floorspace to 2031

Table 7.10 shows up to 2031 there is additional (net) demand for between approximately 10,657m^2 and 17,132m^2 office floorspace in LB Havering. It is expected that this floorspace would primarily meet the needs of local businesses.

Table 7.10 Office Floorspace Demand, 2014 - 2031

	Low	***Medium***	***High***
Demand for office floorspace		(m^2)	
A. Actual (Gross) B1 Floorspace		154,000	
B. Current Estimated Vacant Floorspace		30,800	
C. Demand for B1 floorspace 2031	26,979	29,977	32,974
D. Optimum frictional vacancy in 2031 (8% of A + C)	14,478	14,718	14,958
E. Oversupply of vacant floorspace (D – B))	-16,322	-16,082	-15,842
F. Gross demand for B1 floorspace 2014-2031 (A+C+E)	164,657	167,895	171,132
G. Net demand for B1 floorspace 2014-2031 (F – A)	10,657	13,895	17,132

Source: URS (2015) Figures may not appear to sum due to rounding

Because of the vast range of densities of office developed in Havering and similar locations, and the fact that many offices are coming forward as part of mixed use development, it is not meaningful to translate floorspace (square metres) into land requirements (hectares). The stock for offices, is therefore represented in terms of floorspace (per square metre).

8 CONCLUSIONS

8.1 Introduction

This section sets out conclusions and recommendations for the employment land review building upon findings from previous sections of the report.

8.2 Conclusions

8.2.1 *Office Land Use (B1)*

There is approximately 154,000m^2 of gross office floorspace in LB Havering, the majority of which is located in Romford Town Centre's Office Quarter. Our forecasting exercise estimated that there is additional demand for between approximately 10,657m^2 and 17,132m^2 of office floorspace in the planning period to 2031 (see **Table 7.10**). The projected growth in office floorspace is mainly attributed to ongoing demand for space within Romford Town Centre, and to a lesser extent demand from SMEs for smaller units in Romford.

The property market analysis of Chapter 6 indicates that office market in Havering is mostly supplying the demands of small to medium sized companies. Most of these companies are linked to the local market, for example solicitors firms, recruitment firms, local financial advisors and brokers and public and voluntary sector and education linked companies. There was traditionally also a significant element of larger nationally focussed businesses seeking a key location in the South East of England close to London. This explains why many of the offices in the Romford Office quarter are large floorplate purpose built office buildings. However since these larger purpose-built office buildings were constructed in the 1980s and 1990s demand from these types of office occupier have significantly reduced. This explains why many of the larger office buildings in the Romford Office quarter are vacant or have changed use in past years. This reduction in demand for larger offices is due to structural changes in the economy, with a reduction in headcount at larger firms due to a combination of off-shoring, home working and reduction in administrative staff due to technological advances and cost cutting exercises.

Despite this Romford has intrinsic strengths as a potential office location. Occupiers are attracted by the relatively modest rents, in comparison to locations closer to the City and Canary Wharf. The locational strengths of Romford Town Centre lie in its high public transport accessibility levels (PTAL), range of facilities and amenities, good quality of environment, proximity to rural areas, relatively lower property prices than some other areas of London and access to a wide labour force.

In recent years the office market in Havering has suffered due to the recession and the change in permitted development rights allowing conversion of offices to residential. However, the research and consultation with commercial agents and stakeholders (Chapter 6) suggests that despite this there are grounds for optimism in the future. As explored in section 7.8 of the demand exercise, there are regeneration initiatives and major infrastructure projects that could positively change the conditions and environment in Romford. These could lead to a stimulation of demand for offices. These factors include Crossrail, which should have a long term beneficial catalytic effect through encouraging commercial investment in Romford. Also the Romford AAP and evolving Romford Development Framework should lead to an improved public realm, environment and quality of office stock which modern office occupiers require.

One element that will be important to occur to stimulate office demand will be the upgrading of office stock to accommodate the needs of modern occupiers. This includes provision of more flexible, affordable space. The property market analysis suggests there is significant demand for serviced and flexible workspace to meet the needs of start-ups and growing businesses. However, in the medium to longer term, the research

suggests that there will also be reversal of the trend of decreasing demand for larger floor plate offices, such as those present within the Romford Office Quarter. This is due to the expected benefits associated with Crossrail and the Romford regeneration initiative.

Outside Romford Town Centre office space is in limited supply, found mostly in the Rainham and Harold Hill SILs. Space here is variable in quality, ranging from good quality incubator space at CEME, and purpose office built floorspace in Harold Hill, to large 1960's buildings meant to house lone occupiers. Both Rainham SIL and Harold Hill SILs are first and foremost industrial locations and the characteristics of the SILs are more in line with serving industrial uses than office uses. Uses within these areas therefore tend to be stand alone buildings. These premises, regardless of quality, are generally affordable, owing to the mostly poor public transport accessibility serving them and their location away from town centres (poor access to amenities).

Vacancy levels are relatively high (approximately 20%), both within and outside Romford Town Centre indicating that supply is currently sufficient to meet demand. The relatively high vacancy rates observed during survey was supported in our property market area analysis suggests that demand for the type of units marketed here is, at present, relatively weak, though weak demand is expected to partly a characteristic of the recent economic downturn.

Consultations, analysis of the property market and policy evidence indicate that Havering contains some older office stock, which once vacant proves difficult to re-let given that characteristics may no longer appeal to modern occupiers. It is thus important that a measured approach is taken to encouraging refurbishment or site redevelopment to provide modern floorspace.

Medium term initiatives such as Crossrail and demand stimulated from potential outmigration from central London will likely lead to there being continued, though ultimately modest, demand for office space in LB Havering.

8.2.2 *Industrial Land Use (B1c/B2/B8)*

There is a total of 375ha of land currently in industrial use in LB Havering (see **Table 7.9**). Total industrial floorspace is estimated to be in the region of 700,000m^2. This can be broken down into land that it designated as Strategic Industrial Land (SIL), Secondary Employment Land (SEA), Site Specific Allocations (SSA) and non-designated employment land. The breakdown in percentages terms is as follows:

- SIL (75%)
- SEA (8.2%)
- SSA (4.3%)
- Non-designated (12.4%)

Our forecast shows that there is projected to be an decrease in demand for industrial land in the period 2014 to 2031 of between approximately -6ha and -5ha (not including frictional floorspace). This is due largely to a forecast decrease in industrial employment as projected by the GLA and a corresponding continuation of a historic declining trend in industrial floorspace take-up as shown at **Table 7.1**.

To derive the net demand we also take account of the supply-side position. As shown in **Table 7.8** there is 56.1ha of vacant land in the Borough. However, only 37ha of the vacant industrial land is considered to be developable with the remainder being nature reserves or having topographical issues. Once this developable vacant industrial land and demand for other uses such as waste, recycling and utilities is taken into account (0ha, as explained in **Section 7.10**), we estimate that net demand over the planning period is between -24.3ha and -23.2ha of industrial land. This means that approximately

24 hectares of existing industrial land in LB Havering could be released for other uses while still providing sufficient industrial land in the Borough to meet future demand.

In general the past decade or so has seen a sustained period of consolidation of underused industrial land across London and especially in the East London sub-region. This has resulted in a significant amount of vacant industrial land and buildings released to non-employment uses, where it no longer fulfils the needs of modern businesses. This is partly due to the application of strategic policies on industrial land release as contained in the London Plan, individual London Boroughs Local Development Plans and effective development management. According to the market agents consulted this has resulted in a position of relative equilibrium in the local industrial land market with supply largely meeting demand. While this provides evidence of the success of the London wide employment land policy it also suggests that future spatial planning policy efforts should be focussed on stabilising the supply of industrial land so that capacity is retained to meet the future needs of industrial and logistics firms over the planning period. This can be challenging in the face of significant pressures to meet housing targets and corresponding pressures from housing developers for change of use at existing employment sites, as outlined in the policy and literature review (Chapter 4).

On the supply-side, our qualitative appraisal of employment clusters evidenced by the field survey and the consultation with market agents and stakeholders, indicates that the current supply of industrial premises is generally considered to be appropriate for the needs of occupiers in the Borough. The Borough's three SILs and seven SEAs are judged to have the key strategic characteristics required by employment land activities. These characteristics include good/ very good access to the strategic road network, very good/ good or average condition and a lack of incompatible land uses that create bad neighbour issues.

Some existing industrial clusters in LB Havering have been identified through recent Council policies and strategies as potentially appropriate for release or change of use to enable wider regeneration benefits to be achieved. These sites amount to around 19.5 hectares which is around 80% of the projected release figure of 24 hectares. The sites with potential for release of change of use to include the following:

- Rainham West (Clusters 19a and b) 15.4 ha
- Crow Lane Site 3 (Cluster 17) 2.7 ha
- Bridge Close (Cluster 21) – 1.4 ha

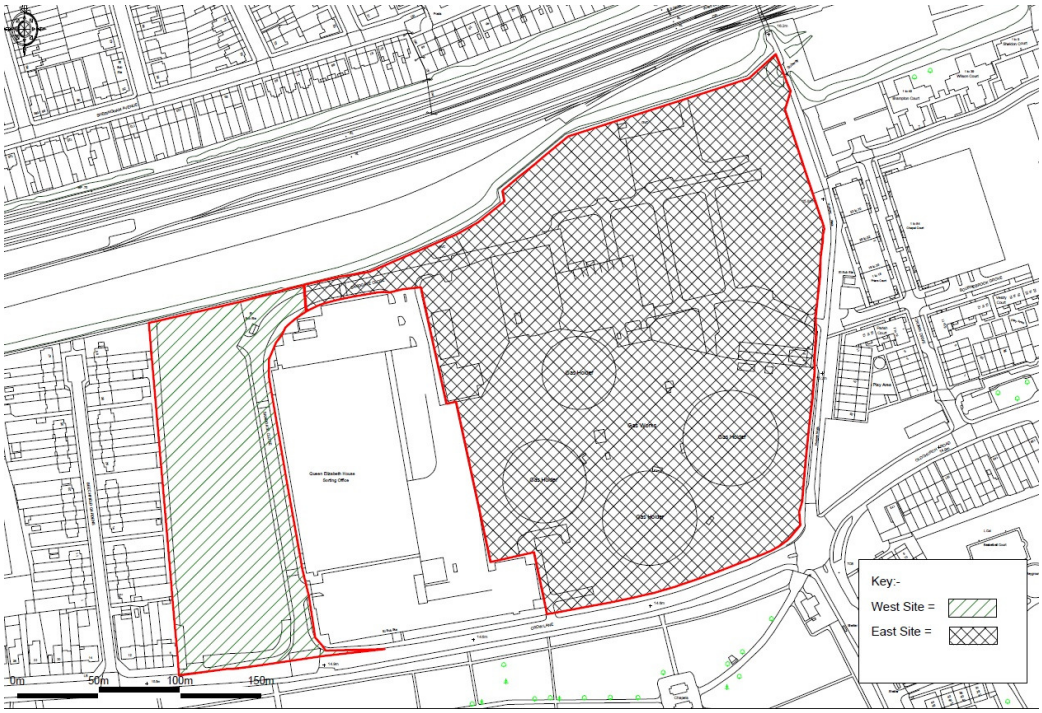
Rainham West, with the exception of the Rainham Steel office building, is identified by the LB Havering as a site that could be released for housing. The Council has submitted a funding bid to the GLA for 'housing zone' status for Rainham and Beam Park. This funding would provide finance to unlock the Rainham West site and wider area (including Beam Park). Its redevelopment for housing would help the LB Havering meet its increased housing targets and wider regeneration goals. An element of the site has already been redeveloped for housing (for example the Climate Change Passivhouse development in centre of site). The Rainham West site was included as a site specific allocation (SSA12) for mainly residential led redevelopment

in the 2008 LB Havering Core Strategy. Beam Park (Cluster 20) is part of the same regeneration initiative and has already been earmarked for redevelopment by the site owner and the Council as a residential site. It currently has temporary storage uses on it so is not considered as part of the overall industrial land supply and therefore is not included in the release figures.

Bridge Close (Cluster 21) is a fragmented industrial cluster in Romford Town Centre which has been earmarked through the Romford Development Framework for redevelopment for mixed use office and residential. The cluster is not a designated employment site but does remain predominantly in B use class.

An area covering approximately 7.94 ha of the Crow Lane Site 3 has been put forward through the call for sites process for release and redevelopment for other uses. The Eastern portion of the site is a gas utilities use and is approximately 5.3 ha. The land owner, National Grid, states that the site is surplus to operational requirements. The western portion of the site is 2.7 ha and is currently vacant. The Council feel that both parts of the site are unlikely to be redeveloped for industrial uses[60]. Therefore it is appropriate to recommend their release from industrial employment use. The remaining 2.4 hectare of the site is a Royal Mail sorting office and could be retained as SEA. The sites proposed for release through the call for sites process are shown below:

Figure 8.1: Crow Lane Site 3 (Cluster 17) Romford: Call for Sites Proposal



Source: URS 2015

The findings of the field survey and consultation with market agents found that generally speaking non-designated industrial employment clusters are less appropriate for industrial uses than the designated industrial land (SIL and SEA). However, it should be noted that most of these sites are occupied and appear to be meeting a local business need. Some of the non-designated sites have issues such as; poor servicing arrangements; poorer quality of premises and environment; access via residential areas; or have higher rates of vacancy.

Non-designated clusters assessed in this study can be broken down into the following typologies (these typologies are defined further in Chapter 5). Percentages of the total non-designated stock are also provided:

- Industrial and logistics estates (69.9%)

[60] In terms of the gap analysis, only the western portion of the site (2.7 ha) is considered as industrial land release as the eastern portion is a utilities site and not in B use.

- Sites fulfilling an individual or specialist service often with *sui generis* uses such as breakers yards, auto mechanics and wider industrial uses such as utilities sites (27.7%)

- Royal Mail sites and depots (2.7%)

Some of these non-designated clusters could potentially be released to non-industrial uses if certain criteria are met or if the Council consider their release would allow other objectives to be met. These criteria are outlined in the policy recommendations (Recommendation 5) section below.

To further enhance the business environment of LB Havering some areas of designated industrial employment land which could benefit from better estate management, environmental improvements and protection against re-development for retail and *sui generis* uses. Clusters which could benefit from such improvements include:

- Rainham West (South), which has seen an increase in *sui generis* uses and lack of market demand for redevelopment of key sites;

- Harold Wood, which has some parts low environmental quality and evidence of vacant premises, premises in poor quality and a plot of vacant land, and poor internal accessibility; and

- Crow Lane 2.

I addition, the following site could benefit from comprehensive redevelopment:

- Salamon's Way at Ferry Lane North; This cluster was assessed during the field survey to have poor quality public realm. This is likely to reduce the attractiveness to new occupiers and so there is an opportunity cost in not redeveloping it to attract higher value businesses.

London Riverside BID, set up in 2008, has been popular among businesses and successful in implementing positive change within the local estates by improving the cleanliness of estates and operators, deterring crime, enhancing the public realm, providing a coordinated voice to represent the interests of local business community and promoting business opportunity. The good practice learnt at the Rainham Employment Area SIL could be applied at other key clusters.

The qualitative survey of designated industrial employment land evidenced that some areas could benefit from better estate management and protection against re-development for non-industrial uses (including retail, trade-counter, car dealerships and *sui generis* uses). If this trend is allowed to continue unchecked then employment areas may become further eroded, as landowners may seek to take advantage of precedents set by neighbouring site owners to secure higher land values for their sites.

8.3 Recommendations

The employment land use strategy recommendations below are presented in the format of a recommendation and then supporting a justification and rationale. The specific recommendations build upon our conclusions presented above. A summary of the recommendations are set out in **Table 8.1**.

Please note that this is one of a number of evidence base documents the Council will be considering that will feed into and inform its Local Plan evidence base. These are URS' independent recommendations and the Council will subsequently consider these before drafting its own Local Plan policies.

8.3.1 ***B1 Offices***

R1 The demand assessment estimates that there is net additional demand for between 10,657m^2 and 17,132m^2 of B1 floorspace in LB Havering over the Local Plan period to 2031. The most suitable location in the borough to accommodate this forecast demand is Romford Town Centre. This includes space both within and outside of the Romford Office Quarter/Station Quarter (Cluster 18). Other complementary town centre uses could be introduced on underutilised sites within the Romford Office Quarter/Station Quarter, as long as the total quantum of office floor space within Havering as a whole is not reduced or the viability or functionality of the existing stock undermined.

According to feedback from the commercial agent and stakeholder consultation exercise there is also an opportunity to promote flexible and smaller size office workspace units to accommodate the needs of smaller and medium size businesses. This affordable and flexible business space should be promoted within Romford Office Quarter where there is capacity, as well as elsewhere in Romford Town Centre, including above shops and as part of mixed use regeneration schemes.

Justification

The recent economic downturn affected demand for new B1 premises in the short term. This has been exacerbated by the conversion of some office premises to residential uses through the temporary change to the permitted development order. This may give the impression that in the short term demand for offices is declining. However the forecasting exercise in this study sets out a longer-term view. It suggests that up to 2031 there is net additional demand for around 10,500m^2 to 17,000m^2 of B1 floorspace in the borough. This view of a modest positive demand over the next 17 years was confirmed by property market agents. Although in London the office market is generally a growing sector the LB Havering is a smaller office market and less integrated into the wider London office market due to its distance from Central London. However, Havering stands to benefit from office occupiers seeking better value office accommodation as office rents rise closer to the City centre and land availability reduces as employment land comes under pressure from higher value uses such as residential. Crossrail should also have a modest beneficial effect on the local office market.

Agents confirmed that enquiries from potential office occupiers looking in LB Havering are overwhelmingly focused on the Romford Town Centre office market. The Romford Office Quarter is considered to have positive characteristics including good access to facilities and amenities, good access to public transport and good access to the strategic road network. In addition, all premises were observed at the time of URS' surveys to have adequate parking (whether as part of their site or in adjacent paid car parks). Premises, although some are now slightly dated, were observed to be in good condition. The environment and public realm surrounding the cluster was also considered to be good.

While there has been higher than average vacancy rates in the Romford Office Quarter/Station Quarter since 2008 (mainly as result of the economic downturn) it is considered by market agents that Crossrail will have a positive impact on demand over the medium to long term and larger floor plate office occupiers will be seeking space there. Consultations reveal that there is also an existing and forecast demand for smaller office units above shops and within mixed use regeneration schemes in Romford Town Centre.

8.3.2 ***B2 and B8 General Industrial, and Storage and Distribution***

R2 To help ensure there is sufficient capacity to meet projected demand for industrial land in LB Havering to 2031 the following existing designated employment land should continue to be protected:

c) All existing Strategic Industrial Land (SIL), which includes the following:

- **Harold Hill (Cluster 1)**
- **King George Close (Cluster 2)**
- **Ferry Lane North (Cluster 3a and b)**
- **Beam Reach 5 (Cluster 4)**
- **Ford (Cluster 5)**
- **CEME (Cluster 6)**
- **Fairview Estate (Cluster 7)**
- **Ferry Lane South (Cluster 8a and b)**
- **Beam Reach 6 (Cluster 9)**
- **Rainham SIL Infill (Cluster 10)**

d) The following Secondary Employment Areas (SEAs):

- **Harold Wood (Cluster 11)**
- **Hillman Close (Cluster 12)**[61]
- **The Seedbed Centre, Romford (Cluster 13)**
- **Lyon Road (Cluster 14)**
- **Crow Lane Site 2 – Danes Road (Cluster 15)**
- **Crow Lane Site 1 (Cluster 16)**
- **Crow Lane Site 3 (Cluster 17) Retain the 2.4 ha of the site that is in Royal Mail use. The remaining 7.94 h is recommended for release (see recommendation 4 below)**

The Council should consider renaming the Secondary Employment Areas (SEA) as 'Locally Significant Industrial Sites' (LSIS) as per the London Plan definition.

Justification

Over the Local Plan period to 2031 there is projected to be gross demand for approximately 350 ha of Industrial land (B2 and B8) in LB Havering (see **Table 7.9**). There is currently approximately 375 hectares of industrial land. In line with the principles of the NPPF this demand should be accommodated at the most appropriate locations for these uses within the borough. The NPPG states that Councils should identify a future supply of land which is suitable, available and achievable for economic development uses over the plan period[62]. The vast majority of existing SIL and SEA sites remain the most suitable location for accommodating this industrial and warehousing demand. This corresponds to the principles set out in London Plan Policy 2.17.

[61] Also known as Stafford Industrial Estate
[62] NPPG paragraph 001 Reference ID: 3-001-20140306

Retention as SIL

Land currently allocated as SIL should be protected. Rainham Employment Area SIL (Clusters 3 to 10) forms the Borough's key industrial area, comprising a wide range of premises, as well as vacant land, suitable for a range of modern industrial occupiers. New premises have recently been built (for example in Ferry Lane South – Cluster 8b). This provides evidence that demand is strong. The distance of the majority of the SIL from residential areas and its direct access to the strategic road network ensures that it will remain an attractive location for industrial users over the plan period and beyond.

The **Harold Hill Estate (Cluster 1)** is an established SIL, with a good internal layout and clean environment for businesses to operate in. The estates within the SIL cater for both B1 and B2/B8 occupiers, with land and high quality floorspace available to attract new occupiers. Building quality is mostly very good, with excellent access to the strategic road network via the adjacent A12.

King George Close (Cluster 2) is a small but well functioning industrial area, providing premises and internal environment consistent with its SIL designation. A 1.5 hectare cleared site with planning permission for 32 B1(c), B2 and B8 units totalling 15,404 m^2 has been sold by commercial developer Chancerygate. This indicates that demand for good quality premises can be met at this location. Although close to a residential area, the layout of the SIL and quality of its occupiers ensures that there is no impact on these properties.

Retention as SEA

The designated SEAs listed below are well functioning industrial employment areas where there is on ongoing demand for space to service industrial and logistical occupiers. These areas generally benefit from good servicing, high occupancy levels and good accessibility. A brief justification for each cluster is set out below:

Harold Wood Industrial Estate (Cluster 11): The cluster is actually split into three areas providing small scale floorspace units for SMEs. The estate has a mix of uses including manufacturing, some small scale warehousing office and office, as well as a significant presence of *sui generis* (car repairs/servicing businesses). Although similar in character, two of the estates contain some poorer quality buildings and, although vacancy is generally low, there may be opportunities to improve the estate environment through better management, especially improving internal roads quality and layout and landscaping. Parking and loading was considered to be adequate. There is a small vacant plot of land for development, otherwise the cluster was considered to be activity used and it would be difficult to accommodate further or larger premises. Overall, the cluster was considered to be an important local general industrial estate.

Hillman Close (Stafford Industrial Estate) (Cluster 12): The cluster consists of a single, fairly recently built estate suitable for either B2 or B8 occupiers. The cluster is occupied mostly by B8 users with some trade counter retail warehouse presence. Although close to housing, the cluster is well segregated and functions well on the whole. The cluster is well laid out and well managed, with dedicated parking within cluster and loading bays. The cluster has good access to the strategic road network (A127). The site was suggested for release to residential uses by the site owner through the call for sites process. However, it is considered that this would be inappropriate given the site is a well-functioning, sustainable industrial estate and its release would cumulatively lead to a lowering of capacity to meet the employment needs of the Borough.

The Seedbed Centre (Cluster 13): A purpose built SME/incubator cluster, which had low vacancy at the time of survey. The cluster has high quality premises and good quality public realm. Evidence of occupancy by higher value added industries such as

digital media, although generally light industrial in nature. Units are small and targeted at start-up businesses or niche businesses.

Lyon Road (Cluster 14): The cluster is a mostly well used and active industrial estate, accommodating SMEs. Exceptions are a builder's yard and a car rental garage. There are several small units marketed for warehouse use but appropriate for either B1c/B2/B8. The cluster functions well in terms of types of unit, building size and condition, provision of parking and loading bays, and proximity to the strategic road network.

Crow Lane (Clusters 15, 16 and 17): The clusters act as general industrial estates for local businesses and provide employment land for varied uses containing mostly SMEs involved in manufacturing, a number of *sui generis* uses (mostly automotive repair) and utilities. Across all clusters vacancy was observed to be low. Buildings are generally good condition and the environment is generally good with decent quality of internal roads, and dedicated parking is provided and opportunities for on-street parking. There are opportunities to improve the internal public realm and potentially encourage better circulation of vehicles. As shown in Figure 8.1 above, 7.94 ha of the Crow Lane Site 3 (Cluster 17) is promoted for release from industrial use and redevelopment for residential uses by the site promoter through the call for sites process. The site is a mixed site with a utilities (gas holders) site to the east, a Royal Mail sorting office in the middle and a vacant former industrial site in the west. It is considered that the vacant western site and eastern utilities site (see Figure 8.1 above) could be suitable for release to meet regeneration objectives (See recommendation 4 below). The Royal Mail sorting office in the centre of the the site should be retained as industrial uses.

R3 The Council should consider re-designating the Freightmaster Estate (Cluster 25) as Strategic Industrial Land (SIL).

Justification

The Freightmaster Estate is an isolated but active and well-functioning logistics and industrial estate. It is primarily focussed on the waste and recycling sector. There is a proposal made through the Call for Sites process to redevelop part of the eastern section of the site for an enhanced waste processing and recycling plant. As technological advances are made in the waste sector there is an aspiration to move towards manufacturing of increasingly valuable and complex products from recycled materials. This high growth sector can therefore generate direct employment benefits for Havering and spillover benefits for other local supply chain firms. Although there is little threat of redevelopment of the site for non-industrial uses such as residential, the site currently performs functions characteristic of SIL. Designating it as SIL will therefore formalise and further protect the industrial uses within it. It is known that there is an aspiration to potentially decommission and remediate the site to allow integration with the Rainham Marshes Nature Reserve. However, it is understood that this is likely to be a long term option so in the meantime this active employment site should be supported to generate economic benefits for the Borough.

R4 To help meet housing and wider regeneration objectives the Council could consider a change of use away from industrial employment uses at the following industrial clusters that total approximately 19.5 hectares:

- **Crow Lane Site 3 (Cluster 17) – 2.7 hectares**[63]
- **Rainham West (North) (Cluster 19a) – 1.7 hectares**

[63] This release figure does not include the 5.24 ha eastern portion of the site which is a Gas utilities site that is surplus to operational requirements. This portion of the site is not currently in traditional B use. The demand forecasting exercise focussed on B uses in arriving at an overall target industrial land release figure for the borough so it is appropriate to exclude the utilities site from the industrial land release figure.

- **Rainham West (South) Cluster 19b – 13.7 hectares (all of the cluster except the Rainham Steel Building)**
- **Bridge Close (Cluster 21) – 1.4 hectares**

Total land release = 19.5 hectares

Justification

As described in the conclusion section above (paragraph 8.2.2) the existing industrial employment clusters listed above have been identified through LB Havering strategies as appropriate for release to enable wider regeneration benefits. If these industrial employment sites are released or a change of use is permitted that would equal around 80% of the projected release figure of 24 hectares as set out in Table 7.9.

Rainham West, with the exception of the Rainham Steel office building, is a key site in the Council's Rainham and Beam Park Housing Zone bid. The proposals for the Housing Zone include 3,635 new homes including 1,050 new affordable homes, and high quality development on 50ha of underused land. It will create a new urban linear park, new pedestrian and cycle routes, a new railway station, new primary schools and leisure facilities. The release of the industrial elements of this site will also allow the boundaries of the Rainham SIL to the south to be consolidated, helping maintain the integrity of that industrial employment designation while helping to maintain residential amenity in the Rainham west area. The Council should aim to assist in the relocation of any existing remaining industrial businesses into new accommodation or sites within the Rainham SIL.

An area covering approximately 2.7ha of the **Crow Lane Site 3** has been put forward through the call for sites process for release and redevelopment for residential uses. The site is currently a vacant site that was formerly part of the National grid infrastructure. As an industrial site it creates negative impacts on surrounding residential uses in terms of HGV traffic and noise. The site is cleared and we understand remediated to a level that makes it potentially feasible for housing development but it is likely to remain vacant due to viability constraints if it is continued to be protected for employment uses. Therefore its release from industrial employment is appropriate.

The eastern portion of the Crow Lane site (Site 3) (approximately 5.24 ha) is also recommended for release. It is a gas utilities site that is surplus to operational requirements. However, this figure is not included in the overall industrial land release total as described above. This is because this portion of the site is in utilities use not industrial use. The GLA policy on land for utilities is outlined in the Land for Industry and Transport SPG (2012). At paragraph 7.4 it states that no new capacity is required for gas utilities infrastructure. National Grid have stated that the site is surplus to operational requirements and therefore release of the site is appropriate and should not lower the industrial capacity of the borough to meet projected demand.

Bridge Close is a mixed town centre industrial estate with older buildings. It has several non-industrial uses within it including a gym and several places of worship. It is a fragmented industrial cluster with poor parking, poor quality environment and buildings that are no longer fit for purpose for modern business occupiers. It is earmarked in the emerging Romford Development Framework as a site that could be released from industrial employment uses and redeveloped for mainly high density residential (around 650 units). The most current proposals outlined in the Draft Romford Development Framework also include proposals for around 950 m^2 of office uses.

R5 To help retain an appropriate balance of supply and demand of industrial land over the planning period, the Council could consider a more flexible approach to changes of use away from industrial uses at a limited amount of industrial employment land not designated as SIL or SEA. The decision on which land to release should be based on certain criteria listed below being met.

The loss of employment use in non SIL or SEA sites should not lower the overall industrial capacity of the borough significantly below that estimated by this study to be necessary to meet anticipated need over the planning period. This means that along with the 19.5 hectares of industrial land recommended for release in Recommendation 4 above an additional 4 to 5 hectares would be appropriate to change from employment use over the planning period.

To help ensure that not too much industrial land changes use the Council could introduce a policy in the updated Local Plan that states that industrial land will only move to alternative uses if all of the following criteria are met:

- **The existing employment land use causes detrimental effects to the amenity of the nearby area – particularly where residential uses are adversely affected;**
- **There is evidenced to be no market interest in the site following a period of active marketing;**
- **The change of use from industrial employment uses will not lower the industrial capacity of the borough below that estimated to be necessary to meet projected demand over the planning period as estimated by the most up to date ELR (i.e. this study).**

Justification

The NPPG describes how Councils in their evidence base should; '*Identify a future quantity of land or floorspace required for economic development needs*'[64]. That figure has been identified in this study as approximately 350 hectares. Because there is currently 375 hectares of industrial land in the Borough it means that approximately 25 hectares could be released over the planning period to 2031. This corresponds to the NPPF which states that; '*planning policies should avoid the long term protection of sites allocated for employment use where there is no reasonable prospect of a site being used for that purpose*'[65].

However, it is also important that not too much industrial land is released as this could hinder the long term economic prospects of the Borough. For example companies seeking to start a business in LB Havering in the future may not have sufficient land or premises to do so. In this case those companies would likely seek accommodation in another area. This would contradict the NPPF as defined at paragraph 7 which states that the planning system should ensure that '*sufficient land of the right type is available in the right places and at the right time to support growth and innovation*'[66]. As discussed in recommendation 4 above, approximately 80% of the projected release figure has already been identified at a variety of existing industrial sites. This leaves around 4 to 5 additional hectares that could be released at non-designated sites in LB Havering over the planning period.

There are around 50 hectares of non-designated employment sites assessed in this study. The majority of these sites surveyed and assessed in Section 5 perform adequately as employment areas. They are generally meeting a local business need. These non-designated sites are currently not protected by planning policy. To avoid a potential over release of industrial land it is therefore recommended that a new policy is introduced in the updated Havering Local Plan that protects existing employment land that is predominantly industrial. This land could only be released to non-industrial uses if all of the criteria listed above are met.

The first criterion to be tested is whether the existing industrial site causes unacceptable impacts on surrounding land uses. For example, where an industrial site is surrounded

[64] NPPG, paragraph 003 reference ID: 2a-003-20140306
[65] NPPF, paragraph 022: reference ID: 2a-022-20140306
[66] NPPF, paragraph 007: reference ID: 2a-007-20140306

by residential areas and impacts such as HGV traffic and noise impacts negatively impact the amenity of that residential area it could be appropriate to permit change of use away from industrial uses.

The second criterion to be tested is whether there is a lack of market demand for industrial uses at the site. To demonstrate a lack of market demand the applicant should submit evidence that the site is vacant and a thorough marketing exercise at realistic prices for the area has been sustained over a 12 month period. Marketing must be through a commercial agent at a price that genuinely reflects the market value in relation to use, condition, quality and location of floorspace. It must be demonstrated that consideration has been given to alternative layouts and business uses, including smaller premises with short term flexible leases appropriate for SMEs.

The third criterion to be tested is whether the release of industrial land would lower the industrial capacity of the borough below that identified in this study as necessary to meet future demand. In broad terms this means that approximately 24 hectares in total of the current supply could be released. The overall level of release could be tested through effective monitoring of change of use from industrial to non-industrial uses. See recommendation 6 below for further details on a suggested approach to monitoring of employment land change of use.

Four **Royal Mail** occupied sites were assessed as part of the study. They are all isolated purpose built sites within predominantly residential areas which if reactivated for industrial uses would cause negative impacts on the surrounding residential uses. Three of the sites (C31, C44, C45) have been promoted for release to residential uses by the Royal Mail as part of the call for sites process. Given the overall negative demand of 24 hectares over the planning period and the fact that these sites total only 1 hectare and are within residential areas it would be appropriate to permit their release to housing.

R6 Monitoring: The Council should monitor changes of employment land through planning permissions to ensure that sufficient land is available for economic growth over the planned period, 2014 to 2031.

Justification

It is important that appropriate and sufficient monitoring mechanisms are embedded within the plan making process in order to record the change in employment land available for economic growth. The aim of the monitoring of employment land is to ensure that overall an approximate quantum of appropriate employment land supply is retained in the borough to meet the level of projected demand indicated in this study. As described in Recommendation 5 above this is to guard against too much industrial land being released to higher value uses such as residential as this could restrict the economic potential of the Borough. Also, the relative lack of developable land in London and the high price differential between industrial land and residential land means it is likely that '*once industrial land has gone, it has gone forever*'. The NPPG states that the ELR should be updated roughly every five years [67]. However in the periods in between ELRs the Council should regularly review how much employment land has been lost. The Annual Monitoring Report is likely to be the most appropriate framework for this monitoring and review exercise.

8.4 Summary of Report Recommendations per Cluster

Table 8.1 provides a summary of report recommendations per cluster. Indicatively, the table also sets shows the total quantum of industrial employment land release, based on our calculations of existing site uses. Total land release is in line with the outcome of the employment land forecasting exercise. However, it relates to the recommendations made in Recommendation 4 only as Recommendation 5 does not specify release of

[67] NPPG, paragraph 037 reference ID: 2a-037-20140306

individual sites but rather suggests a criteria based approach to release of non SIL and SEA sites.

As part of its annual monitoring reporting (AMR) process, the Council should carefully and regularly monitor and manage information on employment land release for industrial employment land uses as well as the total quantum of office floorspace completions within the local office market.

The right most column 'Total industrial employment land for release' or change of use is our estimate of the total land which is in industrial land use, as of October 2014 when the ELR survey was carried out. The figures in this column have been calculated by one of three methods:

The potential industrial land release or change of use by cluster is set out in **Table 8.1** below. The total release of land is 19.5ha, which when combined with a further 4 to 5 hectares of release at non SIL and SEA sites according to criteria being met as outlined in Recommendation 5 is in line with the forecast net demand for industrial employment land (-23.2ha to -24.3ha, see **Table 7.9**). As per R6 above, we recommend that the council closely monitor the changes of employment land over the plan period.

Table 8.1 Summary of Report Recommendations per Cluster

URS Cluster No.	*Employment Area/ Name of Cluster*	*Adopted LDF (2008) Designation / Site Proposals*	*ELR Recommendations 2014*	*Total industrial employment land for release / change of use (ha) (Approx.)*

Commercial Property Agents Consultation

Dear Sir/Madam

The London Borough of Havering has instructed URS Infrastructure and Environment Ltd to carry out a survey of employment land across the borough.

The survey of employment land will collect information used to inform the development of land use policies and sustainable growth, required as part of Havering's Local Development Plan, which is currently being prepared by the Borough. Information will be kept strictly confidential and not released to any other organisation or company.

Basic Information

Agent Name	
Contact Tel/email:	

Questions

Property Market Area (PMA)
The PMA is defined as a geographic area where the market for offices, factories and warehouses has similar characteristics. For example, to estimate demand for employment uses in Havering we would typically look at data from a property market area including LB Barking and Dagenham, Newham and Brentwood. Looking at data from a broader area avoids the results being skewed by a single event i.e. a large occupier may have recently left its premises and just looking at data for a specific area would lead to a false conclusion on overall demand.

1. Define the PMA in Havering for:

a. Offices

b. Industrial/warehousing/logistics

Demand and Supply Characteristics of Havering's Employment Land/Premises

2. What is the demand outlook (by type i.e. B1, B2, B8)? What is the demand for work-live space, including type and size of unit? What specific demands are there for affordable workspace, space for creative industries and other growth sectors within the borough?

3. Are you aware of any particular unmet needs e.g. small start-up space or specific sectors such as the knowledge economy, high tech or pharmaceuticals? Are companies seeking mainly second hand, refurbished or brand new office accommodation (take up levels)?

4. Are there any other factors that could affect demand, e.g. Crossrail, Regeneration plans for Thames Gateway, Beam Park Rail etc.?

5. Are you aware of any large developments in the pipeline or companies planning to leave the borough in future?

6. What are the typical rental values, yields and land prices for B1, B2 and B8?

7. What are typical current vacancy rates (industrial/office), by area and/or particular estates if possible.

8. What is the likelihood of a conversion of office premises to residential under the new Permitted Development Rights? Do you have any views on particular sites, e.g. sites that should be released for uses other than employment or proposals that are unrealistic?

Stakeholder Consultation 2014

Dear Sir/Madam

The London Borough of Havering has instructed URS Infrastructure and Environment Ltd to carry out a survey of employment land across the borough.

The survey of employment land will collect information used to inform the development of land use policies and sustainable growth, required as part of Havering's Local Development Plan, which is currently being prepared by the Borough. Information will be kept strictly confidential and not released to any other organisation or company.

Basic Information

Stakeholder Name	
Contact Tel/email:	

Questions

Demand and Supply Characteristics of Havering's Employment Land/Premises

1. Are you aware of any particular unmet needs (by sector) or issues with the current supply of employment premises?

2. What is the demand outlook (by type i.e. Industry and Warehouses, Offices)?

Business Support

3. Any suggestions for how to support businesses?

4. Any suggestions for how to promote inward investment?

5. Any suggestions for how to build an entrepreneurial culture in Havering?

6. Any suggestions for how to improve economic inclusion?

PART 1: INTRODUCTION

This is the Open Space Assessment Report prepared by Knight Kavanagh & Page (KKP) for London Borough of Havering (LBH). It focuses on reporting the findings of the research, consultation, site assessments, data analysis and GIS mapping that underpin the study.

The Assessment Report provides detail with regard to what provision exists in the area, its condition, distribution and overall quality. It considers the demand for provision up to 2032 based upon population distribution, planned growth and consultation findings. The Strategy (to follow the assessment reports for open spaces) will give direction on the future provision of accessible, high quality, sustainable provision for open spaces in London Borough of Havering.

The methodology used in this assessment is based on that originally set out in Planning Policy Guidance 17 (PPG17) Companion Guide; Assessing Needs and Opportunities published in September 2002. Whilst PPG17 has now been replaced by the National Planning Policy Framework (NPPF), it is still recognised as best practice providing a sound methodology.

This assessment has been commissioned as a key part of the evidence base for the Local Plan. In order for such planning documents and policies to be 'sound' local authorities are required to carry out a robust assessment of need for open space, sport and recreation facilities.

In accordance with best practice recommendations a size threshold of 0.2 hectares has been applied to the inclusion of some typologies within the study. This means that, in general, sites that fall below this threshold are not audited. The table below details the open space typologies included within the study:

Table 1.1: Open space typology definitions

	Typology	Primary purpose
Greenspaces	Parks and gardens	Accessible, high quality opportunities for informal recreation and community events.
	Natural and semi-natural greenspaces	Wildlife conservation, biodiversity and environmental education and awareness. Includes urban woodland and beaches, where appropriate.
	Amenity greenspace	Opportunities for informal activities close to home or work or enhancement of the appearance of residential or other areas.
	Provision for children and young people	Areas designed primarily for play and social interaction involving children and young people, such as equipped play areas, MUGAs, skateboard areas and teenage shelters.
	Allotments	Opportunities for those people who wish to do so to grow their own produce as part of the long term promotion of sustainability, health and social inclusion.
	Green corridors	Walking, cycling or horse riding, whether for leisure purposes or travel, and opportunities for wildlife migration.
	Cemeteries, disused churchyards and other burial grounds	Quiet contemplation and burial of the dead, often linked to the promotion of wildlife conservation and biodiversity.
Civic spaces	Civic and market squares and other hard surfaced areas designed for pedestrians including the promenade	Providing a setting for civic buidings, public demonstrations and community events.

1.1 Report structure

Open spaces

This report considers the supply and demand issues for open space provision across London Borough of Havering. Each part contains relevant typology specific data. Further description of the methodology used can be found in Part 2. The report as a whole covers the predominant issues for all open spaces as defined in best practice guidance:

Part 3: General open space summary
Part 4: Parks and gardens
Part 5: Natural/ semi-natural greenspace
Part 6: Amenity greenspace
Part 7: Provision for children/young people
Part 8: Allotments
Part 9: Cemeteries/churchyards
Part 10: Civic space

Associated strategies

The study sits alongside the Playing Pitch Strategy (PPS) and the Indoor Sport and Leisure Facility Strategy which are also being undertaken by KKP (provided in separate reports). The open space typology of formal outdoor sports is covered within the associated PPS. The PPS is undertaken in accordance with the methodology provided in Sport England's Draft Guidance 'Developing a Playing Pitch Strategy' for assessing demand and supply for outdoor sports facilities (2013). The Indoor Sport and Leisure Facility Strategy is in accordance with Sport England's Assessing Needs and Opportunities Guide (ANOG) for Indoor and Outdoor Sports Facilities 2014.

1.2 National context

National Planning Policy Framework

The NPPF sets out the planning policies for England. It details how these are expected to be applied to the planning system and provides a framework to produce distinct local and neighbourhood plans, reflecting the needs and priorities of local communities.

It states that the purpose of the planning system is to contribute to the achievement of sustainable development. It establishes that the planning system needs to focus on three themes of sustainable development: economic, social and environmental. A presumption in favour of sustainable development is a key aspect for any plan-making and decision-taking processes. In relation to plan-making the NPPF sets out that Local Plans should meet objectively assessed needs.

Under paragraph 73 of the NPPF, it is set out that planning policies should be based on robust and up-to-date assessments of the needs for open space, sports and recreation facilities and opportunities for new provision. Specific needs and quantitative and qualitative deficiencies and surpluses in local areas should also be identified. This information should be used to inform what provision is required in an area.

As a prerequisite paragraph 74 of the NPPF states existing open space, sports and recreation sites, including playing fields, should not be built on unless:

- An assessment has been undertaken, which has clearly shown the site to be surplus to requirements; or
- The loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; or
- The development is for alternative sports and recreational provision, the needs for which clearly outweigh the loss.

The London Plan 2015 (consolidated with alterations since 2011)

The London Plan is the strategic plan for the development of London. It intends London to continue being a 'global city', or business capital, while also improving Londoners' standard of living and the places where people live. The main direction of the London Plan is to plan for a predicted rise of 1.25 million people by 2031. It seeks provision of an average of 33,400 homes per year across London.

The plan sets the tone for an alternative vision for London, taking on a broader, fairer, more inspired set of considerations and values. The improvement of London in this way should bring a set of new benefits, new growth and new enterprise.

Key influences on policy direction include a change in age of the population (more younger and older people); persistent problems of poverty and polarization and a changing climate.

Local Borough plans must all conform to the policies and direction of The London Plan. The policies most relevant to this assessment report are set out below.

Policy 7.1: Lifetime Neighbourhoods	C. Development should enable people to live healthy, active lives; should maximize the opportunity for community diversity, inclusion and cohesion; and should contribute to people's sense of place, safety and security. Places of work and leisure, streets, neighbourhoods, parks and open spaces should be designed to meet the needs of the community at all stages of people's lives, and should meet the principles of lifetime neighbourhoods.
Policy 7.6. B: Architecture	F. Buildings and structures should: provide high quality indoor and outdoor spaces and integrate well with the surrounding streets and open spaces
Policy 7.17: Metropolitan Open Land	A. The Mayor strongly supports the current extent of Metropolitan Open Land (MOL), its extension in appropriate circumstances and its protection from development having an adverse impact on the openness of MOL.
Policy 7.18: Protecting Open Space and Addressing Deficiency	A. The Mayor supports the creation of new open space in London to ensure satisfactory levels of local provision to address areas of deficiency. B. The loss of protected open spaces must be resisted unless equivalent or better quality provision is made within the local catchment area. Replacement of one type of open space with another is unacceptable unless an up to date needs assessment shows that this would be appropriate. C. When assessing local open space needs LDFs should: a include appropriate designations and policies for the protection open space to address deficiencies b identify areas of open space deficiency, using the open space categorisation set out in Table 7.2 as a benchmark for all the different types of open space identified therein c ensure that future publically accessible open space needs are planned for in areas with the potential for substantial change such as opportunity areas, regeneration areas, intensification areas and other local areas. d ensure that open space needs are planned in accordance with green infrastructure strategies to deliver multiple benefits. D. Boroughs should undertake audits of all forms of open space and assessments of need. These should be both qualitative and quantitative, and have regard to the cross borough nature and use of many of these open spaces.

Open spaces are also referenced under Policy 7.5: Public Realm; The quality of the public realm has a significant influence on quality of life because it affects people's sense of place, security and belonging, as well as having an influence on a range of health and social factors. For this reason, public and private open spaces, and the buildings that frame those spaces, should contribute to the highest standards of comfort, security and ease of movement possible. This is particularly important in high density development

The contribution of open spaces, parks and green corridors is recognised in paragraph 7.62 as being crucial to the richness of London's biodiversity. These sites of rich biodiversity and other green spaces are highlighted as having a significant role in assisting biodiversity to adapt to climate change and its impacts.

1.3 Local context

This study and its findings a key part of the evidence base for the Council's emerging Local Plan. They form an integral part of identifying and regulating the open space infrastructure. Through recognising open space provision in plan form, it can be assessed in terms of quantity, quality and accessibility, whilst strengthening its presence in planning policy for the future and maximising opportunities for investment.

Havering Local Development Framework

Havering's Local Development Framework (LDF) is a portfolio of documents intended to provide for the future planning of the borough. The previous 2005 Open Space Assessment formed part of the evidence base for the LDF Current policies for open space and recreation are set out in the LDF include:

Core Strategy and Development Control Policies (2008)

Core Strategy (2008) policy CP7 'Recreation and Leisure' promotes the provision of high quality recreational open space and signposts to the Parks and Open Spaces Strategy.

Policy DC20 'Access to Recreation and Leisure Including Open Spaces' and DC21 'Major Developments and Open Space, Recreation and Leisure Facilities' detail the Councils approach to existing provision and accessibility standards. The latter also sets out the requirements for new open space provision and their maintenance within new developments.

The Core Strategy and Development Control Policies Development Plan Document will be replaced by the Local Plan once it is adopted.

Romford Area Action Plan (2008)

The Area Action Plan (AAP) sets out the policies and proposals to deliver growth, stimulate regeneration and protect Romford's assets. It reflects, and builds upon, the extensive work that the Council and its partners have undertaken in preparing the Romford Urban Strategy which was adopted in April 2005. Overall, the Area Action Plan will promote and enhance Romford's position as east London's premier town centre

Paragraph 5.56 details that the 2005 Open Space Assessment noted the lack of open space, trees and plants in Romford. Subsequently one of the strategic objectives for Romford town centre is set out as being; *enhance the town centres existing green spaces and biodiversity value and promote the development of new, high quality open spaces in the town centre to make Romford town centre a better place to live*.

Site Specific Allocations (2008)

The document sets out the specific allocations for individual sites across the borough except for sites in Romford Town Centre which will be identified in the Romford Area Action Plan.

Paragraph 3.13 references PPG17's recommendation that assessments and audits will allow local authorities to identify specific needs and quantitative or qualitative deficits or surpluses of open space, sport and recreational facilities.

It goes on to summarise that Havering has a relatively good quantity of public parks but that there are local pockets of deficiency across the borough; in particularly that there is a deficiency in access to dedicated children play areas.

As part of the vision for how Havering will change and develop by 2020, it is set out that *Havering will continue to be a safe place for residents, users of public open spaces, commercial enterprises and those employed within the borough as new developments will be designed to increase the safety of the borough's public and private realms*.

Parks and Open Spaces Strategy (2013-2015)

The strategy sets out an overview and analysis to the existing provision and supporting services. It details an ambition for provision to be *'to transform lives through participation in, and enjoyments of, our parks and open spaces'*.

Guiding the document are four principles:

Principle 1: Community Empowerment - promote more active engagement in service delivery, from consultation, to volunteering, to devolving services to the local community

Principle 2: Work in Partnership – continue to work with our partners, internal and external, and regionally across borough boundaries, to achieve shared objectives

Principle 3: Inclusion and Cohesion – be smarter about collecting information on our customers and communities. Target new audiences and broaden access to our services, breaking down barrier to engagement where these exist, facilitating social progress and improved quality of life

Principle 4: Good Value Service – continue to develop innovative, modern and efficient methods of service delivery, thereby maintaining the high quality of our services against a backdrop of reduced budgets, and ensuring that activities are evaluated effectively to retain a focus on outcomes for local people

These principles relate to three broad objectives which sit beneath the overarching framework of the Havering Cultural Strategy. An action plan for each of the objectives is set out within the document itself.

Objective 1: Health and Wellbeing
Support a high standard of mental, physical and emotional health for all by increasing the number of people using our parks and spaces , for sport and physical activity, to socialise, to be part of the community, and for pleasure, reflection and relaxation

Objective 2: Learning and Development
Support learning opportunities for all, by enabling people to take part in new activities within our parks and open space, and to encourage enquiry, exploration and learning about our environment

Objective 3: Towns and Communities
Enriching our towns and communities, through protection and investment in our parks and open spaces, encouraging biodiversity, increasing usage of our parks as community spaces, and supporting the regeneration of local areas

PART 2: METHODOLOGY

This section details the methodology undertaken as part of the study. The key stages are:

- 2.1 - Analysis areas
- 2.2 - Auditing local provision
- 2.3 - Quality and value
- 2.4 - Quality and value thresholds
- 2.5 - Identifying local need
- 2.6 - Accessibility standards

2.1 Analysis areas

The study area covered by the report is London Borough of Havering Council boundary. Further to this, sub areas or analysis areas have been created to allow a more localised assessment of provision in addition to examination of open space surplus and deficiencies at a more local level. Use of analysis areas also allows local circumstances and issues to be taken into account.

Havering is divided into three analysis areas

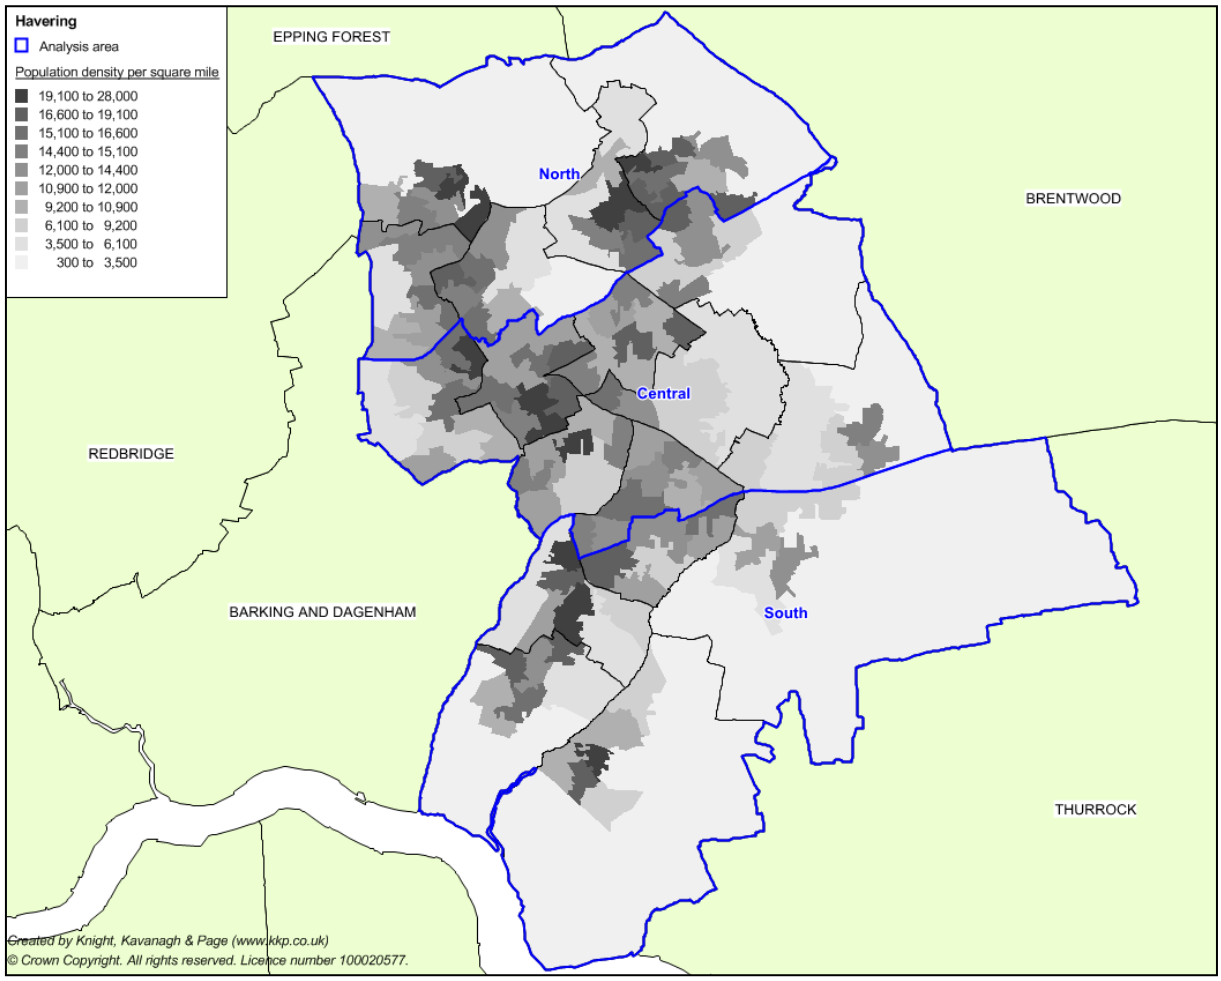
Table 2.1: Population by analysis area

Analysis area	Ward	Population (2016)*
Central	Brooklands	113,629
	Cranham	
	Emerson Park	
	Harold Wood	
	Hylands	
	Romford Town	
	St Andrew's	
	Squirrel's Heath	
North	Gooshays	69,247
	Havering Park	
	Heaton	
	Mawneys	
	Pettits	
South	Elm Park	66,024
	Hacton	
	Rainham and Wennington	
	South Hornchurch	
	Upminster	
HAVERING		**248,900**

Figure 2.1 overleaf shows the map of analysis areas with population density.

* Source: GLA 2015 round ward population projections - SHLAA-based; Capped Household Size model

Figure 2.1: Analysis areas in London Borough of Havering



2.2 Auditing local provision (supply)

The site audit for this study was undertaken by the KKP Field Research Team. Open space sites (including provision for children and young people) are identified, mapped and assessed to evaluate site value and quality. Only sites publically accessible are included (i.e. private sites or land which people cannot access are not included). Each site is classified based on its primary open space purpose, so that each type of space is counted only once. The audit, and the report, utilise the following typologies in accordance with best practice:

1. Parks and gardens
2. Natural and semi-natural greenspace
3. Amenity greenspace
4. Provision for children and young people
5. Allotments
6. Cemeteries/churchyards
7. Civic space

The provision of formal outdoor sports is contained within the associated PPS. The amount and quality of such provision is not included in the total figures for open space (as a different methodology is prescribed).

In accordance with best practice recommendations a size threshold of 0.2 hectares has been applied to the inclusion of some typologies within the study. Sites of a smaller size, particularly for the typologies of amenity greenspace and natural and semi-natural greenspace, tend to have a different role often visual and considered as offering less recreational use (e.g. small incremental grassed areas such as highway verges). Subsequently sites below 0.2 hectares for these typologies are not audited. However, any sites below the threshold (i.e. those that are identified through consultation as being of significance) are included. The table below details the threshold for each typology:

Typology	Size threshold
Parks and gardens	no threshold
Natural and semi-natural greenspace	0.2 ha
Amenity greenspace	0.2 ha
Provision for children and young people	no threshold
Allotments	no threshold
Cemeteries/churchyards	no threshold
Civic space	no threshold

Database development

All information relating to open spaces is collated in the project open space database (supplied as an Excel electronic file). All sites assessed, identified and assessed as part of the audit are recorded on it. The database details for each site are as follows:

Data held on open spaces database (summary)

- KKP reference number (used for mapping)
- Site name
- Ownership
- Management
- Typology
- Size (hectares)
- Site visit data

Sites are primarily identified by KKP in the audit using official site names, where possible, and/or secondly using road names and locations.

2.3 Quality and value

Each type of open space receives separate quality and value scores. This also allows for application of a high and low quality/value matrix to further help determine prioritisation of investment and to identify sites that may be surplus within and to a particular open space typology. Quality and value are fundamentally different and can be unrelated. For example, a high quality space may be inaccessible and, thus, be of little value; while, if a rundown (poor quality) space may be the only one in an area and thus be immensely valuable. As a result, quality and value are also treated separately in terms of scoring.

Analysis of quality

Data collated from site visits is initially based upon those derived from the Green Flag Award scheme (a national standard for parks and green spaces in England and Wales, operated by Keep Britain Tidy). This is utilised to calculate a quality score for each site visited. Scores in the database are presented as percentage figures. The quality criteria used for the open space assessments carried out for all open space typologies are summarised in the following table.

Quality criteria for open space site visit (score)

- Physical access, e.g. public transport links, directional signposts,
- Personal security, e.g. site is overlooked, natural surveillance
- Access-social, e.g. appropriate minimum entrance widths
- Parking, e.g. availability, specific, disabled parking
- Information signage, e.g. presence of up to date site information, notice boards
- Equipment and facilities, e.g. assessment of both adequacy and maintenance of provision such as seats, benches, bins, toilets
- Location value, e.g. proximity of housing, other greenspace
- Site problems, e.g. presence of vandalism, graffiti
- Healthy, safe and secure, e.g. fencing, gates, staff on site
- Maintenance and cleanliness, e.g. condition of general landscape & features
- Groups that the site meets the needs of, e.g. elderly, young people
- Site potential

For the provision for children and young people, criteria are also built around Green Flag. It is a non technical visual assessment of the whole site, including general equipment and surface quality/appearance plus an assessment of, for example, bench and bin provision. This differs, for example, from an independent Royal Society for the prevention of Accidents (RosPA) review, which is a more technical assessment of equipment in terms of play and risk assessment grade.

Analysis of value

Site visit data plus desk based research is calculated to provide value scores for each site identified. Value is defined in best practice guidance in relation to the following three issues:

- Context of the site i.e. its accessibility, scarcity value and historic value.
- Level and type of use.
- The wider benefits it generates for people, biodiversity and the wider environment.

The value criteria set for audit assessment is derived as:

Value criteria for open space site visits (score)

- Level of use (observations only), e.g., evidence of different user types (e.g. dog walkers, joggers, children) throughout day, located near school and/or community facility
- Context of site in relation to other open spaces
- Structural and landscape benefits, e.g., well located, high quality defining the identity/ area
- Ecological benefits, e.g., supports/promotes biodiversity and wildlife habitats
- Educational benefits, e.g., provides learning opportunities on nature/historic landscapes
- Social inclusion and health benefits, e.g., promotes civic pride, community ownership and a sense of belonging; helping to promote well-being
- Cultural and heritage benefits, e.g., historic elements/links (e.g. listed building, statues) and high profile symbols of local area
- Amenity benefits and a sense of place, e.g., attractive places that are safe and well maintained; helping to create specific neighbourhoods and landmarks
- Economic benefits, e.g., enhances property values, promotes economic activity and attracts people from near and far

Value - non site visit criteria (score)

- Designated site such as LNR or SSSI
- Educational programme in place
- Historic site
- Listed building or historical monument on site
- Registered 'friends of' group to the site

Children's and young people play provision is scored for value as part of the audit assessment. Value, in particular is recognised in terms of size of sites and the range of equipment it hosts. For instance, a small site with only one or two items is likely to be of a lower value than a site with a variety of equipment catering for wider age ranges.

2.4 Quality and value thresholds

To determine whether sites are high or low quality (as recommended by guidance); the results of the site assessments are colour-coded against a baseline threshold (high being green and low being red). The primary aim of applying a threshold is to identify sites where investment and/or improvements are required. It can also be used to set an aspirational quality standard to be achieved at some point in the future and to inform decisions around the need to further protect sites from future development (particularly when applied with its respective value score in a matrix format).

The baseline threshold for assessing quality can often be set around 66%; based on the pass rate for Green Flag criteria (site visit criteria also being based on Green Flag). This is the only national benchmark available for quality of parks and open spaces. However, the site visit criteria used for Green Flag is not appropriate for every open space typology as it is designed to represent a sufficiently high standard of site. Quality thresholds are, thus, worked out so as to better reflect average scores for each typology. Consequently the baseline threshold for certain typologies is amended to better reflect this.

For value there is no national guidance on the setting of thresholds. The 20% threshold applied is derived from our experience and knowledge in assessing the perceived value of sites. Whilst 20% may initially seem low it is relative score - designed to reflect those sites that meet more than one aspect of the criteria used for assessing value (as detailed earlier). A table setting out the quality and value scores for each typology is provided overleaf.

Table 2.2: Quality and value thresholds by typology

Typology	Quality threshold	Value threshold
Parks and gardens	60%	20%
Natural and semi-natural greenspace	50%	20%
Amenity greenspace	50%	20%
Provision for children and young people	60%	20%
Allotments	50%	20%
Cemeteries/churchyards	60%	20%
Civic space	50%	20%

2.5 Identifying local need (demand)

Consultation to identify local need for open space provision has been carried out via a combination of face-to-face meetings, surveys and telephone interviews. It has also been conducted with key local authority officers. A workshop for parks users and friends of group was held as well as creation of an online community survey used to gather the wider views of local people (further detail is set out in the appendix). The findings of the consultation and survey carried out are used, reviewed and interpreted to further support the results of the quality and value assessment.

2.6 Accessibility standards

Accessibility standards for different types of provision are a tool to identify communities currently not served by existing facilities. It is recognised that factors that underpin catchment areas vary from person to person, day to day and hour to hour. For the purposes of this process this problem is overcome by accepting the concept of 'effective catchments', defined as the distance that would be travelled by the majority of users.

Guidance is offered by the Greater London Authority (GLA) (2008): 'Open Space Strategies: Best Practice Guidance' with regard to appropriate catchment areas for authorities to adopt. However, in order to make accessibility standards more locally specific to Havering, we propose to use data from the survey consultation to set appropriate catchments. The following standards are recorded from the survey in relation to how far individuals are willing to travel to access different types of open space provision.

Table 2.3: Accessibility standards to travel to open space provision

Typology	Applied standard
Parks and gardens	15 minute walk time (1,200m)
Natural and semi-natural	10 minute walk time (800m)
	30 minute drive time
Amenity greenspace	5 minute (400m) & 10 minute (800m) walk time
Provision for children and young people	10 minute walk time (800m)
Allotments	10 minute walk time (800m)
Cemeteries	No standard set
Civic spaces	No standard set

Most typologies are set as having an accessibility standard of a 10 minute walk time. However, for certain typologies, such as amenity greenspace, accessibility is deemed to be more locally based. Subsequently a shorter accessibility standard has been applied.

For other forms of provision such as parks and gardens and natural and semi-natural greenspace a willingness to travel further is highlighted. Therefore, a slightly longer distance of standard is applied.

No standard is set for the typologies of cemeteries or civic spaces. It is difficult to assess such typologies against catchment areas due to their nature and usage. For cemeteries, provision should be determined by demand for burial space.

PART 3: GENERAL OPEN SPACE SUMMARY

This section describes trends from the quality and value ratings for each typology in Havering. It also includes a summary of the 192 responses from the local communities' survey (further detail on the geographic breakdown of returns is provided in the appendices).

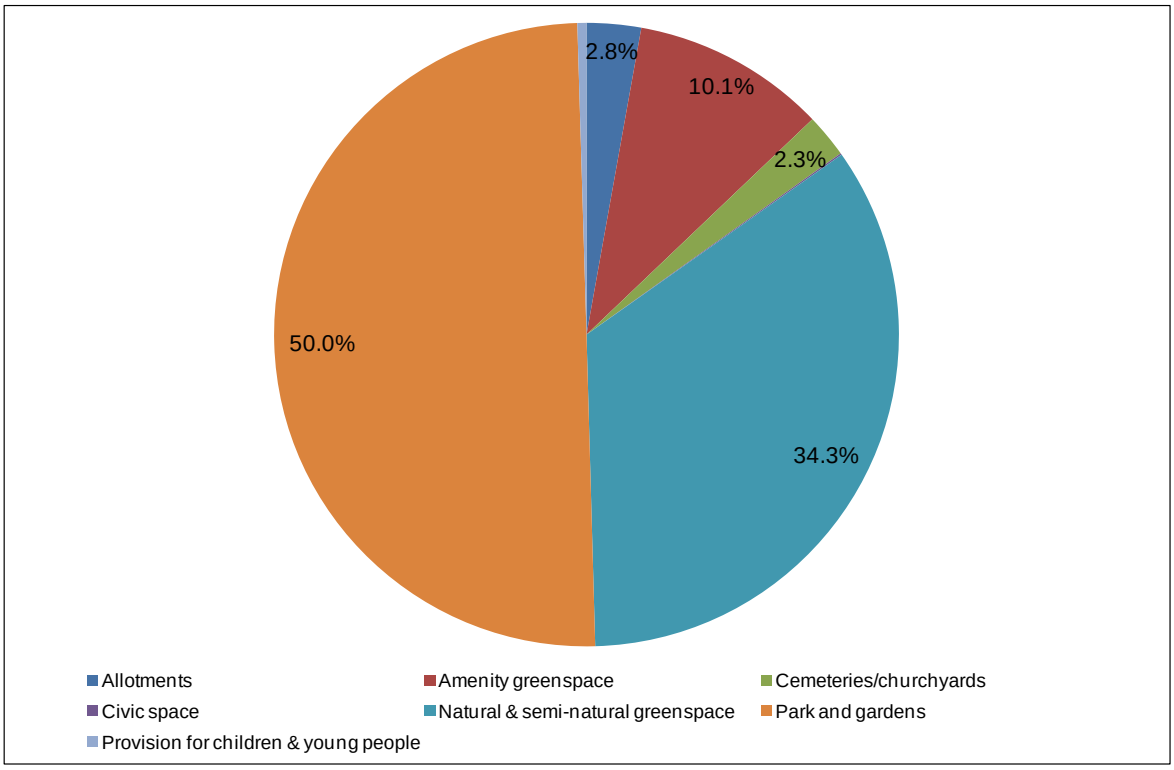
Whilst a valuable tool the communities survey is only a small part of the process, its role is to supplement best practice and widely accepted industry standards. The survey ran for six weeks from 23rd September to the 4th November with a further extension to the end of November. Links to the survey were made available via the council's website and on social media outlets. No demographic information (e.g. gender, age and ethnicity) was asked for as part of the survey questioning at the request of the Council.

Direct consultation with specific open space user groups such as the parks forum network and allotment associations was also undertaken as part of the study. Information from these groups is set out in the relevant typology sections of the report.

Overview

A total of 176 open space sites are identified and included within the audit for Havering. A breakdown of the number of sites and amount of provision per typology is set out below.

Figure 3.1: Percentage breakdown of provision



This provides a total of over 1,283 hectares of open space. The largest contributors to provision are park and gardens (641 hectares) and natural and semi-natural greenspace (442 hectares); accounting for 50.0% and 34.3% respectively.

Table 3.1: Overview of open space provision

Open space typology	Number of sites	Total amount (hectares)*
Allotments	27	36
Amenity greenspace	54	129
Cemeteries/churchyards	6	29
Civic space	3	>1
Natural & semi-natural greenspace	22	442
Park and gardens	24	641
Provision for children & young people	40	6

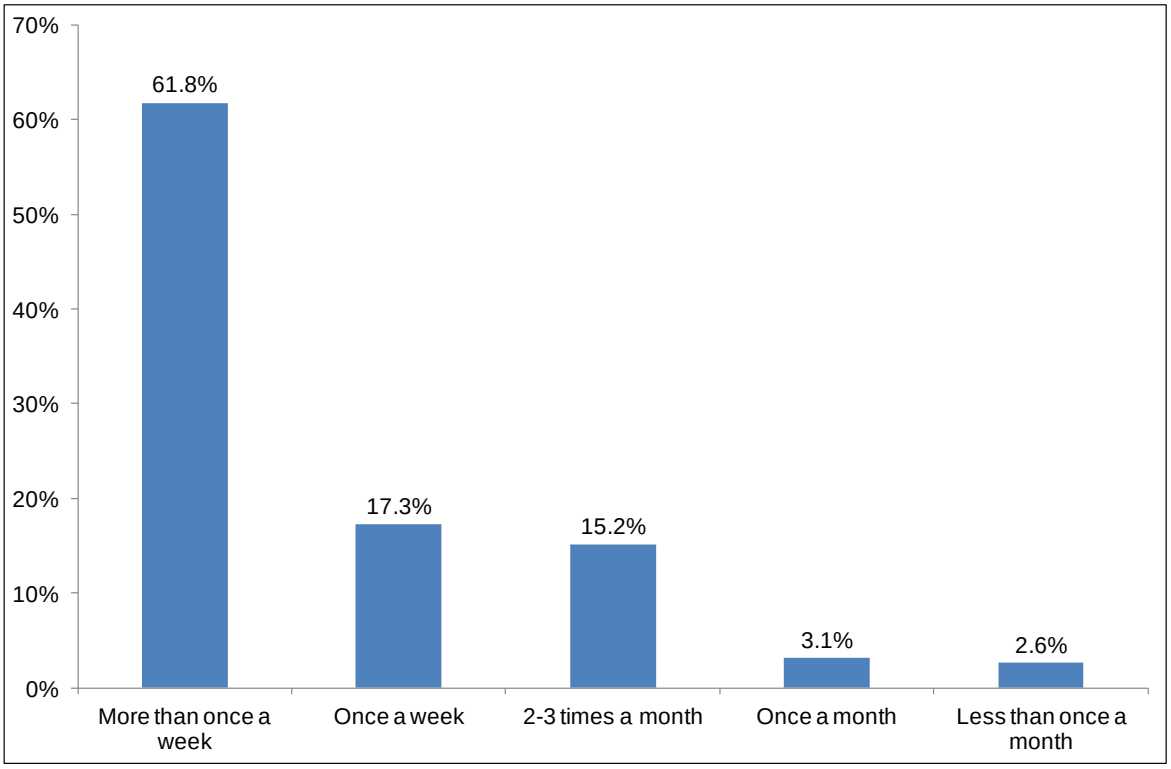
3.1 Usage

Survey participants were asked how often they visit a type of open space. All respondents identify accessing some form of open space provision. Most respondents identify that they visit a form of open space more than once a week (62%).

By far the most common forms of open space provision respondents' visit are parks and gardens. This is followed closely by sites classified as natural and semi-natural greenspace. From the returns several sites are specifically cited with the most frequently mentioned sites being:

- Harrow Lodge Park
- Hornchurch Country Park
- Raphael's Park
- Thames Chase
- Bedford Park
- Upminster Park

Figure 3.1; Frequency of visits to open space in the previous 12 months



* Rounded to the nearest whole number

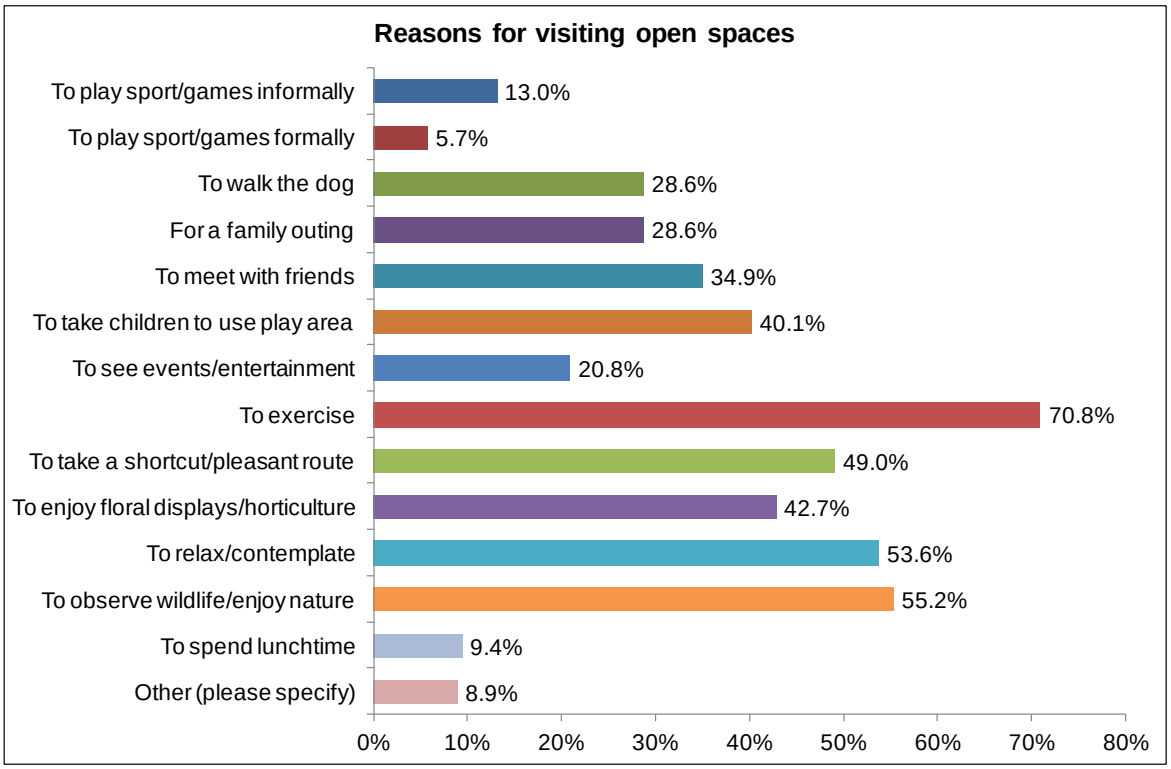
Respondents suggest the most popular reason for visiting an open space in the LBH is to exercise (71%). Followed by reasons such as to observe wildlife/enjoy nature (55%) and to relax and contemplate (54%).

Other common reasons for visiting open spaces include taking a shortcut/pleasant route (49%), to enjoy floral displays/horticulture (43%) and to take children to visit and use play facilities (40%).

Such responses may also correspond with why provision such as parks and gardens and natural and semi-natural greenspace are cited as popular forms of provision to visit.

The results also show the role of open spaces in the context of social interaction and health benefit and the value of open spaces as focal points for local communities.

Figure 3.2: Reasons for visiting open space sites in previous 12 months

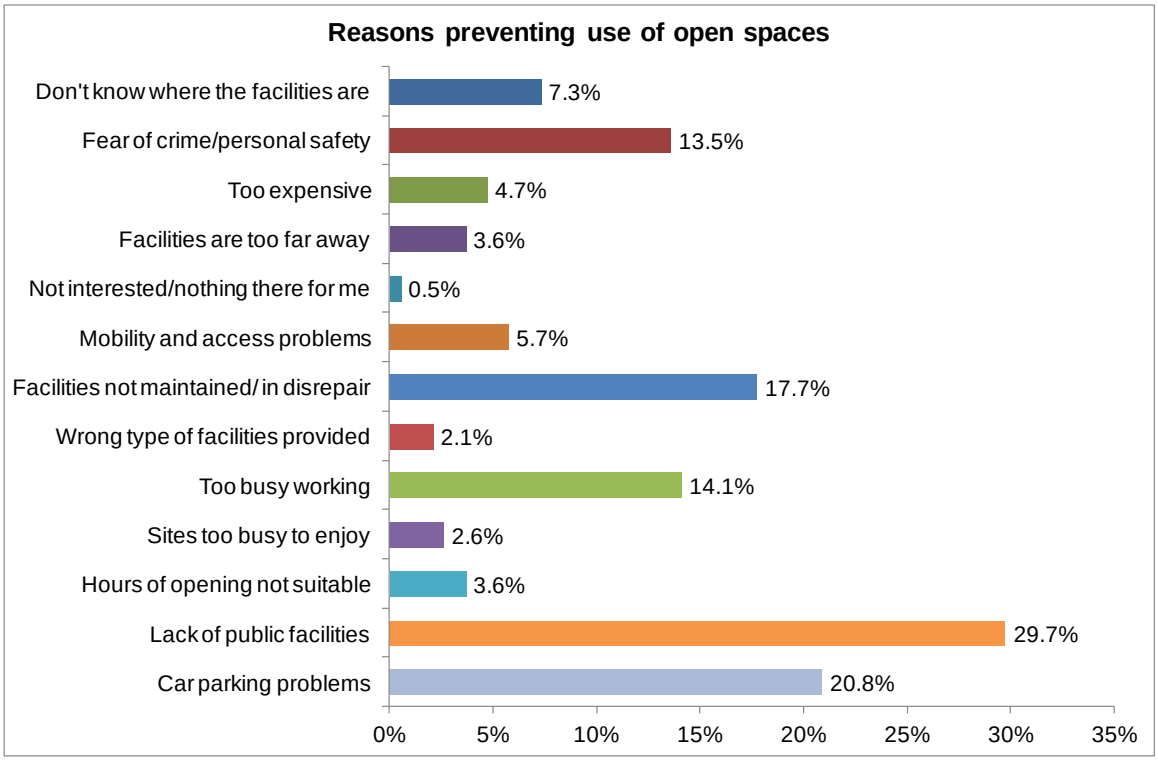


As part of the survey, respondents were asked what the main reasons might be which prevent them from using open spaces. A lack of public facilities at sites such as toilets or a cafe was the most common reason given (30%). Postcode data from these respondents tells us that greater percentages are from the following Hornchurch and Upminster postcode areas:

- RM11 (19%)
- RM12 (14%)
- RM14 (16%)

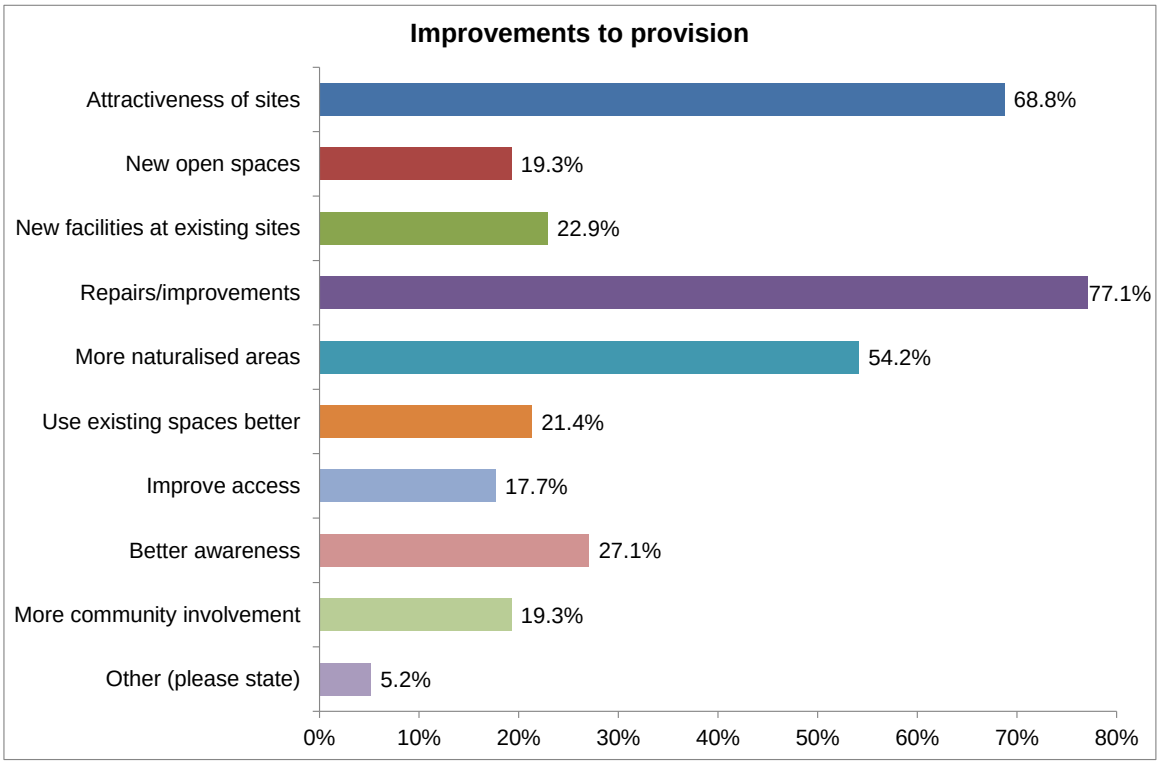
The areas are served by sites such as Harrow Lodge Park and Hornchurch Country Park. Both of which contain toilet and visitor facilities. The results may be a reflection towards local perceptions or a lack of awareness. Other common responses include car parking problems (21%) and facilities perceived to be not well maintained (18%).

Figure 3.3: Reasons preventing use of open space sites in previous 12 months



Respondents were asked which improvements to open spaces they consider the most important.

Figure 3.4: Site improvements



The two most common answers were for repairs and improvements (77%) and improving attractiveness of existing sites (69%). Another popular answer was for more naturalised areas (54%).

3.2 Accessibility

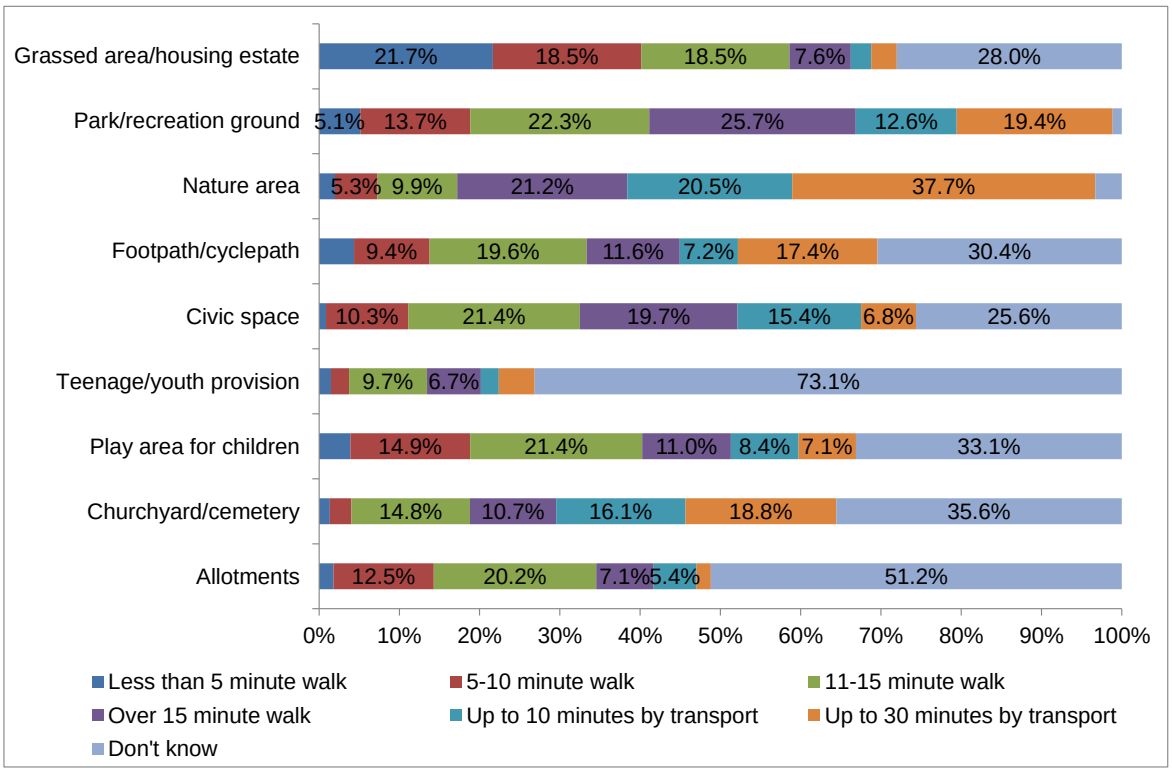
Results from the survey shows that most individuals travel by walking (82%) in order to access different types of open space provision. This is closely followed by those that drive (72%). A breakdown of the distances willing to travel is set out for each typology below.

Table 3.1: Mode of travel to open spaces

Mode of transport	Percentage of respondents
Walk	82%
Cycle	19%
Drive	72%
Public transport	28%

A preference can be seen to walk distances in order to access certain typologies particularly for parks, grassed areas at housing estates, play provision and civic space.

Figure 3.5: Time willing to travel to open space sites



There is however for some typologies a clear willingness to travel a greater distance by transport. For instance, respondents indicate more of a preference for travel up to 30 minutes by transport in order to access natural and semi-natural provision.

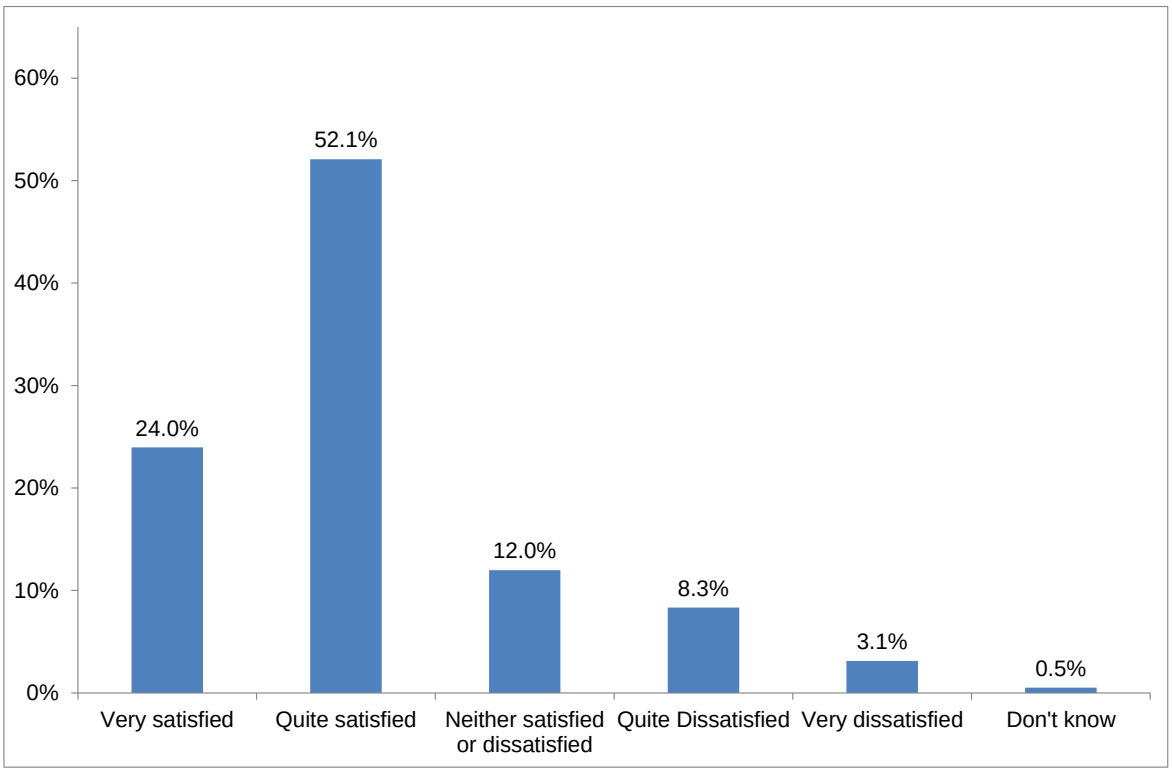
The higher proportion of don't know responses is not unusual for the typologies of teenage provision and allotments. Both forms of provision have a niche user attraction. Therefore, it is not unexpected for the general public to not have an opinion.

3.3 Satisfaction

In general, respondents consider the availability and quality of provision to be to a satisfactory level. Most respondents (52%) indicate they are quite satisfied with open spaces in terms of availability and quality. Furthermore, an additional 24% are very satisfied.

Only a small percentage of survey participants cite being quite dissatisfied (8%) or very dissatisfied (3%) with the availability and quality of open space provision.

Figure 3.6: Satisfaction with open spaces



3.4 Quality

The methodology for assessing quality is set out in Part 2. The table overleaf summarises the results of all the quality assessment for open spaces across Havering. A total of 171 sites receive a rating for quality and value out of the 176 site included in the audit. Sites not receiving a quality and value score were either not viewable at the time of the visit or only added to the study at a late stage.

Most assessed open spaces in LBH (73%) rate above the quality thresholds set. Proportionally a higher percentage of parks and gardens (92%) rate above the threshold for quality. This is a reflection of their excellent appearance and high standard.

Amenity greenspace has a higher proportion of sites to rate below the threshold than compared to other typologies; half of provision scores low for quality. This is thought to reflect the difference in the wide range and type of sites classified under this typology; as some sites are without additional features or facilities in comparison to others.

Table 3.2: Quality scores for all open space typologies

Typology	Threshold	Scores			No. of sites	
		Lowest score	Average score	Highest score	Low	High
Allotments	50%	36%	53%	70%	4	18
Amenity greenspace	40%	9%	48%	75%	27	27
Cemeteries/churchyards	50%	66%	73%	89%	1	5
Provision for children & young people	60%	30%	66%	90%	8	32
Civic space	50%	51%	53%	56%	-	3
Natural & semi-natural greenspace	50%	18%	53%	86%	5	17
Park and gardens	60%	31%	71%	93%	2	22
TOTAL	**-**	**9%**	**59%**	**93%**	**47**	**124**

Four sites, all allotments, could not be accessed and therefore do not receive a score for quality or value. In addition, due to late inclusion an allotment and civic space do not receive a quality or value rating.

3.5 Value

The methodology for assessing value is set out in Part 2 (Methodology). The table below summarises the results of the value assessment for open spaces across Havering.

The majority of sites (88%) are assessed as being above the threshold for value. That nearly all typologies rate high for value reflects their role in and importance to local communities and environments.

Amenity greenspaces have a slightly higher proportion of low value provision. This reflects a lack of ancillary features at some sites leading to a lack of recreational use in comparison to other sites. The typology also contains a number of smaller sized sites. However, the value these provide in offering a visual and recreational amenity as well as a break in the built form can still be important.

A high value site is considered to be one that is well used by the local community, well maintained (with a balance for conservation), provides a safe environment and has features of interest; for example play equipment and landscaping. Sites that provide for a cross section of users and have a multi-functional use are considered a higher value than those offering limited functions and that are thought of as bland and unattractive.

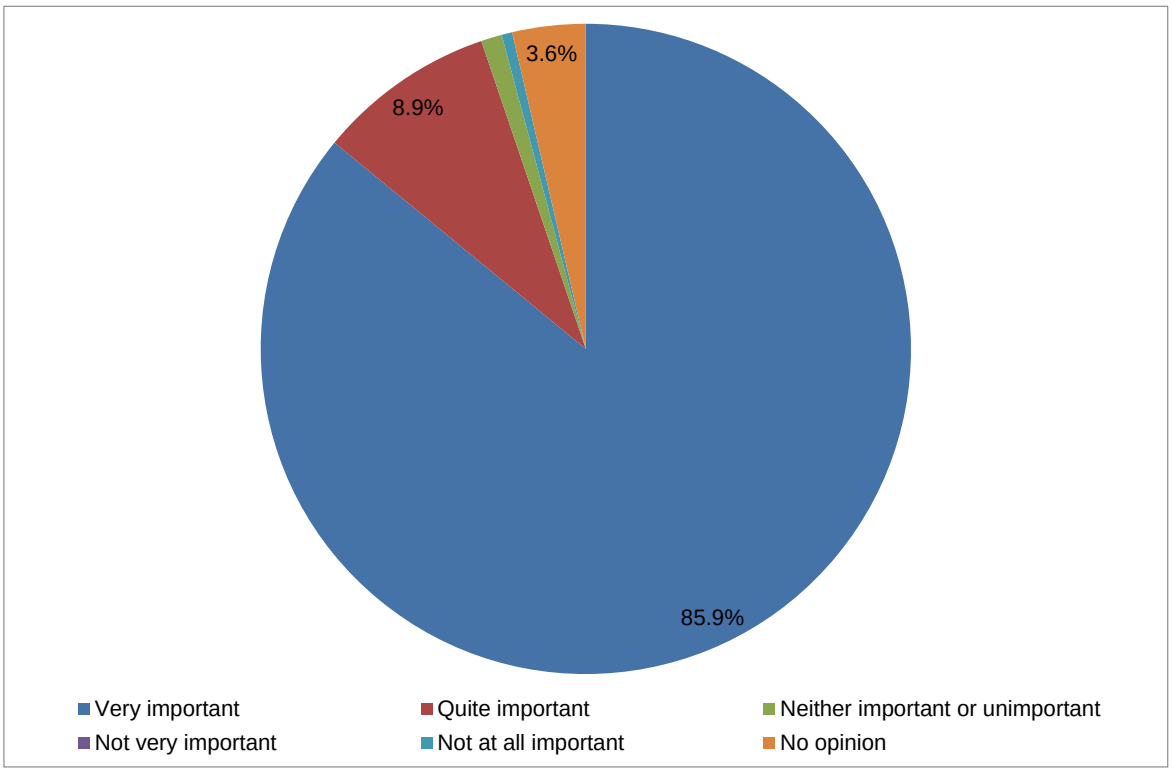
Table 3.3: Value scores for all open space typologies

Typology	Threshold	Scores			No. of sites	
		Lowest score	Average score	Highest score	Low	High
Allotments	20%	28%	37%	48%	-	22
Amenity greenspace	20%	4%	29%	61%	17	37
Cemeteries/churchyards	20%	30%	43%	59%	-	6
Provision for children & young people	20%	36%	60%	87%	-	40
Civic space	20%	42%	49%	53%	-	3
Natural & semi-natural greenspace	20%	12%	35%	64%	3	19
Park and gardens	20%	15%	54%	77%	1	23
TOTAL	**20%**	**4%**	**44%**	**87%**	**21**	**150**

Four sites, all allotments, could not be accessed and therefore do not receive a score for quality or value. In addition, due to late inclusion an allotment and civic space do not receive a quality or value rating.

The majority of survey respondents (86%) view open spaces as very important; reflecting the high value placed on such provision and its continuing role and use as open spaces. A further 9% considers provision as being quite important. Only a small proportion views open space as either not very (10%) or not at all important (9%).

Figure 3.8: Importance of open spaces



3.6 Summary

General summary

- In total 176 sites in LBH are identified as open space provision. This is equivalent to over 1,200 hectares.
- Most typologies are set as having an accessibility standard of a 10 minute walk time. For certain typologies, such as play or amenity greenspace, a lower walk time of 5 minutes is applied. For others like natural greenspace greater distances are set.
- Nearly three fifths of all open spaces (73%) rate above the thresholds set for quality. Most noticeably, more parks and gardens score above the thresholds for quality than others.
- Conversely amenity greenspace has fewer sites scoring above the threshold. This tends to be due to the wider range and forms of provision of this type often with no features.
- The majority of all open spaces (88%) are assessed as being above the threshold for value. This reflects the importance of open space provision and its role offering social, environmental and health benefits.

PART 4: PARKS AND GARDENS

4.1 Introduction

This typology covers urban parks, country parks and formal gardens (including designed landscapes), which provide accessible high quality opportunities for informal recreation and community events.

4.2 Current provision

There are 24 sites classified as parks and gardens in the LBH, the equivalent of over 641 hectares. No site size threshold has been applied and, as such, all sites have been included within the typology.

Table 4.1: Distribution of parks by analysis area

Analysis area	Parks and gardens		
	Number of sites	Total hectarage	Current standard (ha per 1,000 population)
Central	12	115.18	1.01
North	7	334.55	4.83
South	5	191.34	2.89
HAVERING	**24**	**641.07**	**2.58**

All analysis areas are identified as having provision of parks and gardens. The highest volume of provision (334 hectares) is to be found in the North Analysis Area. This is predominantly due to the location of Dagnam Park in this Area. At over 128 hectares it is the single largest park site in LBH. Subsequently the North Analysis Area also has a significantly greater proportion of provision per 1,000 head of population than the other analysis areas.

Other significant sized sites include Bedford's Park (86 hectares) and Havering Country Park (68 hectares) in the North Analysis Area and Harrow Lodge Park (53 hectares) in the Central Analysis Area as well as Hornchurch Country Park (119 hectares) and Belhus Woods Country Park (57 hectares) in the South Analysis Area. The latter is an Essex County Council owned site; a large proportion of which falls within Thurrock local authority area. Given its close proximity the site and its hectare size is counted within the figures for LBH.

Many of the sites classified as parks and gardens will also provide a secondary role to the provision of natural and semi-natural greenspace. For instance, larger sites such as Dagnam Park, Havering Country Park, Hornchurch Country Park and Belhus Wood Country Park all provide opportunities and functions often associated with natural greenspace. For the purpose of the study such sites are identified and categorised by their primary role.

4.3 Accessibility

Consultation and findings from the Communities Survey found that most respondents would expect to travel over a 15 minute walk (26%) to access a park, although this was closely followed by an 11-15 minute walk (22%). For the purpose of mapping, a 15 minute walk time has been applied.

Figure 4.1 shows the standard applied to parks and gardens to help inform where deficiencies in provision may be located.

Figure 4.1: Parks and gardens mapped against analysis area

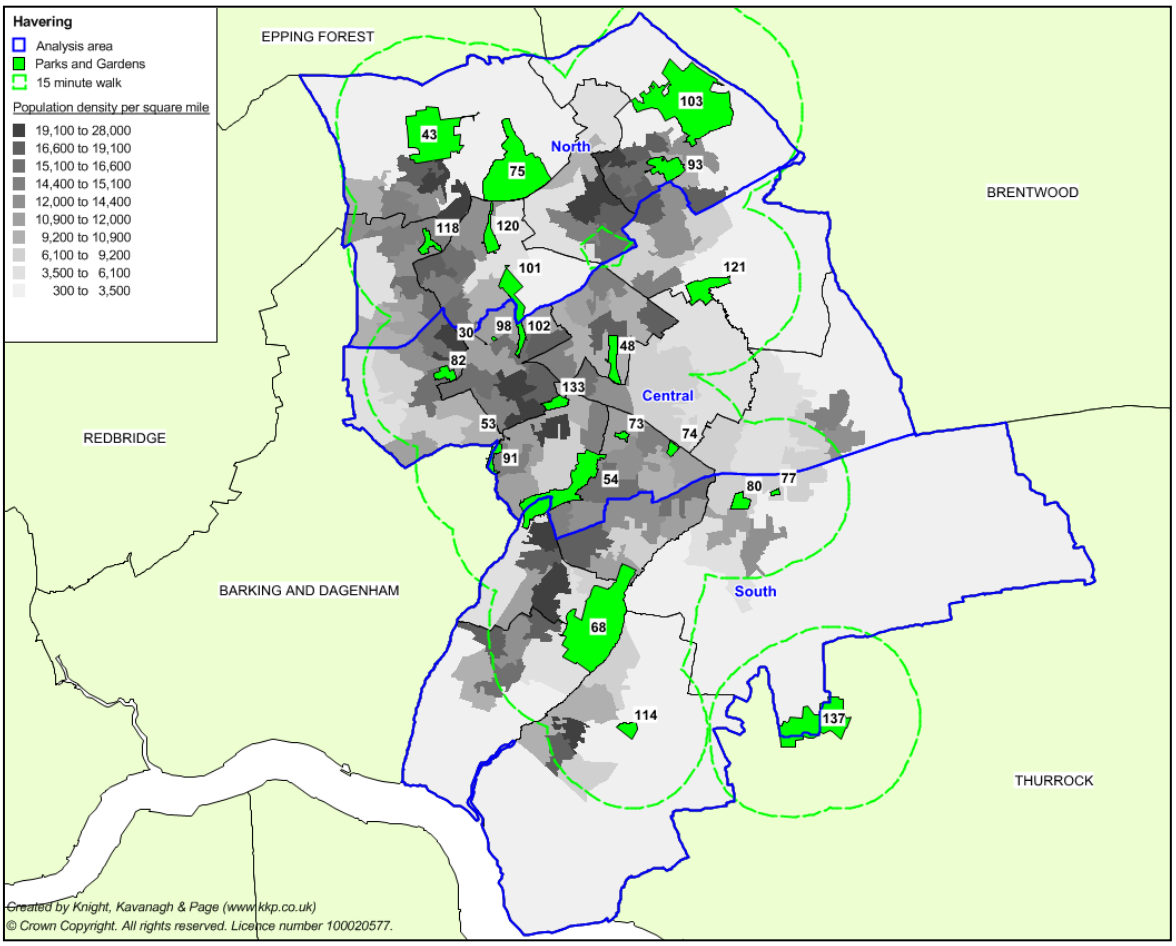


Table 4.2: Key to sites mapped

Site ID	Site name	Analysis area	Quality score	Value score
30	Romford Library Gardens	Central		
43	Havering Country Park	North		
48	Haynes Park	Central		
53	Havering Well Garden	Central		
54	Harrow Lodge Park	Central		
68	Hornchurch C.P.	South		

Site ID	Site name	Analysis area	Quality score	Value score
73	Langton's Gardens	Central		
74	St Andrews Park	Central		
75	Bedford's Park	North		
77	Clockhouse Gardens	South		
80	Upminster Park	South		
82	Cottons Park	Central		
91	Grenfell Park	Central		
93	Central Park	North		
98	Coronation Gardens	Central		
101	Raphael Park	North		
102	Lodge Farm Park	Central		
103	Dagnam Park	North		
114	Spring Farm Park	South		
118	Lawns Park	North		
120	Rise Park	North		
121	Harold Wood Park	Central		
133	Hylands Park	Central		
137	Belhus Woods Country Park	South		

There is generally a good coverage of parks based on a 15 minute walk time. The majority of areas that are densely populated are covered by the walk time catchment.

Slight catchment gaps are noted to the east of the Central Analysis Area and to the south west of the South Analysis Area. However, both gaps are covered by the catchments of other open space provision particularly amenity greenspace and natural and semi-natural greenspace. For example, the gap in the Central Analysis Area is served by Folkes Land Woodland and amenity greenspace such as Upminster Hall Playing Fields and Cranham Playing Fields. Similarly the Ingrebourne Hill site and amenity greenspace sites such as Mardyke Open Space and Brookway Playsite help to meet the identified gap. There are also gaps noted to east and south of the South Analysis Area. However, these appear to be areas of low population density. New forms of parks provision, in terms of accessibility, are not thought to be required to meet such catchment gaps.

Furthermore, no issue with regard to a deficiency in the amount of parks and gardens is highlighted either through consultation or via the Communities Survey results.

Council managed sites, including parks and gardens, are managed as part of the councils portfolio of open spaces. Sites reportedly receive regular visits which include regimes such as grass cutting, weeding and general site preservation (e.g. bench refurbishment, path checks).

4.4 Quality

To determine whether sites are high or low quality (as recommended by the Companion Guidance); scores from site assessments are colour-coded against a baseline threshold (high being green and low being red). The table overleaf summarises the results of the quality assessment for parks in LBH. A threshold of 60% is applied in order to identify high and low quality. Further explanation of how the quality scores and thresholds are derived can be found in Part 2 (Methodology).

Table 4.3: Quality ratings for parks by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <60%	High >60%
Central	147	31%	65%	92%	61%	2	11
North	147	61%	71%	93%	32%	-	7
South	147	75%	84%	93%	18%	-	5
HAVERING	**147**	**31%**	**71%**	**93%**	**62%**	**2**	**22**

Of the 24 park and garden sites in Havering 22 rate above the threshold whilst only two rate below; demonstrating the generally high standard of existing provision.

The Central Analysis Area is the only area to have any sites that rate below the threshold for quality; the sites are Havering Well Garden (42%) and Grenfell Park (31%). Both score low for maintenance and appearance due to litter and dog foul being observed at the time of the site visits. Pathways on site also appear poorer in comparison to other sites which may limit comfort of use by some users.

There is evidently a high standard of parks provision across Havering. Sites assessed as being of particularly high quality and rated well above the 60% threshold include:

- Upminster Park (93%)
- Raphael Park (93%)
- Harrow Lodge Park (92%)
- Bellhus Wood Country Park (88%) (outside of LBH)
- Romford Library Gardens (84%)
- Havering Country Park (71%)
- Hornchurch Country Park (68%)

Upminster Park and Raphael Park are the highest scoring sites in LBH for quality with 93%. Both are highlighted as having excellent landscaped features as well as a range of facilities such as equipped play provision for children, opportunities to purchase refreshments and sporting activities. Raphael Park is especially highlighted during consultation as a site of excellent quality that is popular for visiting.

Other park sites recognised during consultation as being to a very good standard in terms of quality are Bedfords Park, Langtons Gardens, Harrow Lodge Park, Havering Country Park and Hornchurch Country Park. Again sites are seen as being aesthetically pleasing and well maintained with plenty of appeal to a variety of users for different reasons; play, exercise, wildlife and relaxation.

The maintenance and general appearance of the sites is also very good reflecting the status of many of the sites as being Green Flag Award accredited.

Langton Gardens has in 2015 received grants from the Heritage Lottery Fund (HLF) and the Big Lottery Fund. Funding was successfully achieved in order to help restore the site to its former glory and help reconnect it to the adjacent Fielders Field. Some of the restoration works on site include new entrances to improve public access, new wildlife habitats, seating and signage, a refreshment kiosk and toilets as well as the repairing of footpaths.

Raphael Park also successfully underwent redevelopment in 2014 with the help of HLF. This assisted in restoring and improving entrances, new planting, seating and a restaurant on site. The recent improvements are likely to explain the high number of comments and regular reference to the site throughout consultation.

Feedback from the consultation also asked users about any weaknesses of parks provision. The most common concerns highlighted were issues regarding litter and dog foul. In addition, some comments raised the issue of a lack of toilet facilities in general on sites.

Rise Park was specifically identified as a site in need of some attention. It rates just above the threshold for quality from the site visits. However, consultation highlights that the pavilion on site is derelict and in need of addressing. The facility can be an area of the park for young people to 'hang out' and occasionally misuse. The car park at the site can also suffer from misuse as well. Regeneration of the facility is part of the Friends of Rise Parks ambition to provide greater facilities/features for young people.

Green Flag

The Green Flag Award scheme is licensed and managed by Keep Britain Tidy. It provides national standards for parks and greenspaces across England and Wales. Public service agreements, identified by the Department for Communities and Local Government (DCLG) highlight the importance placed on Green Flag status as an indicator of high quality. This in turn impacts upon the way parks and gardens are managed and maintained.

A survey by improvement charity GreenSpace highlights that parks with a Green Flag Award provide more satisfaction to members of the public compared to those without it. Its survey of 16,000 park users found that more than 90% of Green Flag Award park visitors were very satisfied or satisfied with their chosen site, compared to 65% of visitors to non-Green Flag parks.

To gain the award sites must be maintained to a high standard. Currently there are ten sites in Havering that have Green Flag Award status. These include:

- Bedfords Park
- Belhus Wood Country Park
- Cottons Park
- Harold Wood Park
- Hylands Park
- Lawns Park
- Lodge Farm Park
- Raphael Park
- St Andrews Park
- Upminster Park

The work of both Council maintenance team/contractors and the Friends of Groups located at sites are important to their continuing achievement. A worry over a lack of new friends joining existing friends of groups was mentioned during consultation. This maybe something that requires further investigation and attention in the near future.

4.5 Value

To determine whether sites are high or low value (as recommended by the Companion Guidance); the scores from the site assessments have been colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results of the value assessment for parks in LBH. A threshold of 20% is applied in order to identify high and low value. Further explanation of how the value scores are derived can be found in Part 2 (Methodology).

Table 4.4: Value scores for parks by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <20%	High >20%
Central	110	17%	46%	72%	46%	1	11
North	110	34%	50%	70%	36%	-	7
South	110	38%	60%	70%	32%	-	5
HAVERING	**110**	**17%**	**50%**	**72%**	**62%**	**1**	**23**

Nearly all parks are assessed as being of high value from the site visit assessments. This is fully supported from the findings of the consultation. All sites rating above the threshold demonstrate the high social inclusion, health benefits, ecological value and sense of place that Havering parks and gardens offer. The high value of sites is reflected and most likely partly a result of the added benefit provided by the 14 park sites identified as having a Friends of Group.

Havering Well Garden is the only site to rate below the threshold for value. The site also scores below the threshold for quality. Its low quality score and apparent level of use in addition to the issues of litter observed at the site results in its low value rating.

One of the key aspects of the value placed on parks provision is that they can provide opportunities for local communities and people to socialise. The ability for people to undertake a range of different activities such as exercise, dog walking or taking children to the play area are frequently recognised.

4.6 Summary

Parks and gardens

- 24 sites are classified as parks and gardens totalling 641 hectares.
- Catchment gaps are noted to the east of the Central Analysis Area and to the south west of the South Analysis Area. This is thought to be sufficiently serviced by other forms of open space such as amenity greenspace which provide opportunities to recreation.
- Nearly all parks score both above and below the threshold for quality. The lowest scoring site is Grenfell Park. Issues with litter are highlighted.
- High scoring sites for quality, such as Upminster Park and Raphael Park, do so due to the wide range of features they contain and the excellent standards of provision.
- There are several sites with Green Flag Award status.
- All sites (except one) are assessed as being of high value, with the important social interaction, health benefits, ecological value and sense of place sites offer being recognised.

PART 5: NATURAL AND SEMI-NATURAL GREENSPACE

5.1 Introduction

The natural and semi-natural greenspace typology can include woodland (coniferous, deciduous, mixed) and scrub, grassland (e.g. down-land, meadow), heath or moor, wetlands (e.g. marsh, fen), wastelands (including disturbed ground), and bare rock habitats (e.g. cliffs, quarries, pits) and commons. Such sites are often associated with providing wildlife conservation, biodiversity and environmental education and awareness.

5.2 Current provision

In total 22 sites are identified as natural and semi-natural greenspace, totalling over 441 hectares of provision. These totals do not include all provision in the area as a site size threshold of 0.2 hectares has been applied. Sites smaller than this are likely to be of less or only limited recreational value to residents. However, they may still make a wider contribution to health and wellbeing; especially for instance in terms of mitigating climate change.

Table 5.1: Distribution of natural and semi-natural greenspace by analysis area

Analysis area	Natural and semi-natural greenspace		
	Number	Size (ha)	Current standard (ha per 1,000 population)
Central	7	177.03	1.56
North	7	26.43	0.38
South	8	238.33	3.61
HAVERING	**22**	**441.79**	**1.77**

In addition there are two sites located just outside the authority boundary in Thurrock; Coombe Woods (18.9 hectares) and Holden's Wood (36.5 hectares). Neither site is included in the quantity of provision. However, both are given a quality and value score.

Most provision is located in the South Analysis Area (238 hectares); followed by the Central Analysis Area (177 hectares). Subsequently the South Analysis Area has the greater proportion of provision per 1,000 population with 3.61 hectares. This is significantly higher standard than the Central Analysis Area (1.56 hectares per 1,000 population) and the North Analysis Area (0.38 hectares per 1,000 population).
