The majority of the total amount of natural and semi-natural greenspace in the LBH (81%) can be attributed to eight large sites which are located in the area. This includes sites such as Cely Woods (65 hectares), Ingrebourne Hill (60 hectares) and Broadfields & Thames Chase Forest Centre (46 hectares) in the South Analysis Area as well as Pages Wood (43 hectares) in the Central Analysis Area.

These sites form part of the prevalent amount of woodlands identified across Havering. This is evidenced by the number of site observed as woods. Furthermore, the Thames Chase Community Forest also covers a large proportion of provision in LBH.

It is important to recognise that other open spaces such as parks and amenity greenspace also provide opportunities and activities associated with natural and semi-natural greenspace; particularly the country parks classified under parks and gardens. Such sites are not included here as a sites classification is based on its primary typology.

Designations

In terms of national designations, there are seven local nature reserves (LNRs) identified in the LBH:

- The Chase (44.15 hectares)
- The Manor (aka Dagnam Park) (76.96 hectares)
- Ingrebourne Valley (146.62 hectares)
- Cranham Brickfields (8.69 hectares)
- Cranham Marsh (12.97 hectares)
- Bedfords Park (86.54 hectares)
- Rainham Marsh (79.19 hectares)

The Rainham Marsh is not included within the amount of quantity of natural and semi-natural greenspace due to restricted access/opening times. However, it is recognised as being a unique and important form of provision; both locally and nationally. The site, managed by the RSPB, is home to a number of rare species and also forms part of the Inner Thames Marshes SSSI site.

Within LBH there are also three sites designated as Sites of Special Scientific Importance (SSSI). Such sites are recognised for their high natural importance for current and future generations. The three sites in Havering are:

- Ingrebourne Marshes
- Inner Thames Marshes
- Hornchurch Cutting

The Inner Thames Marshes SSSI predominantly covers the Rainham Marsh RSPB site whilst the Ingrebourne Marshes SSSI runs through the Hornchurch Country Park and Ingrebourne Hill open space sites.

5.3 Accessibility

Natural England's Accessible Natural Greenspace Standard (ANGSt) provides a set of benchmarks for ensuring access to places near to where people live. They recommend that people living in towns and cities should have:

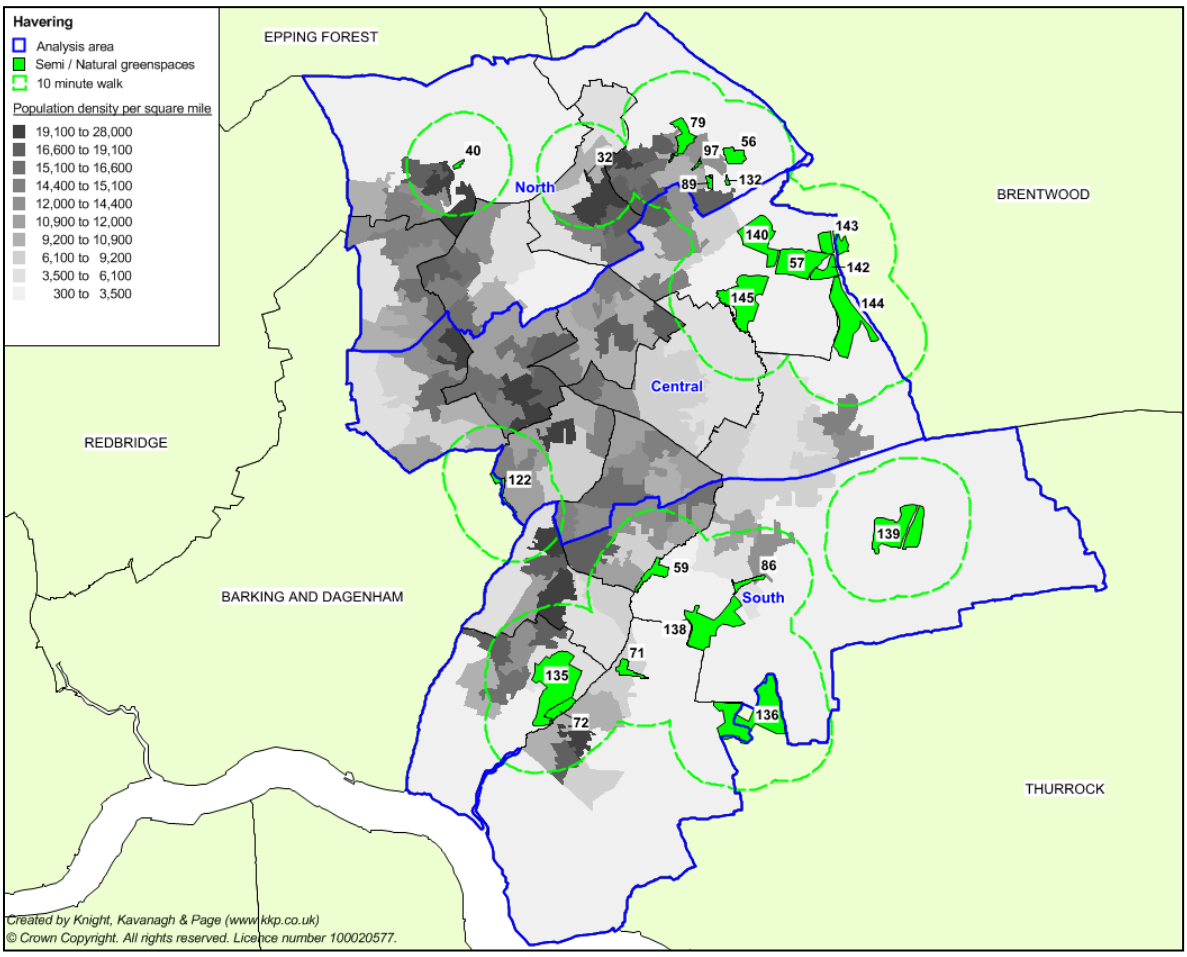
- An accessible natural greenspace of at least two hectares in size, no more than 300 metres (five minutes walk) from home.
- At least one accessible 20 hectare site within two kilometres of home.
- One accessible 100 hectare site within five kilometres of home.
- One accessible 500 hectare site within ten kilometres of home.
- One hectare of statutory Local Nature Reserves per thousand population.

On this basis a population such as LBH (247,714*) is recommended to have approximately 247 hectares of LNR. Currently a total of 455 hectares is identified†.

This study, in order to comply with guidance uses locally informed standards. It does not focus on the ANGSt Standard for accessibility as this uses a different methodology for identifying accessible natural greenspace to that advocated in the Companion Guidance. Findings from the Communities Survey found the most common travel time expected by respondents in order to access a natural space was up to 30 minutes by transport (38%). Recently published guidance by Fields In Trust (FIT) suggests an approximate catchment guideline of a 10 minute walk. As a result, for the purpose of mapping a 10 minute walk time and a 30 minute drive time catchment have been applied.

Figure 5.1 and 5.2 show the standards applied to natural and semi-natural greenspace to help inform where deficiencies in provision may be located.

Figure 5.1: Natural and semi-natural greenspace with 10 minute walk time mapped against analysis areas



* Greater London Authority Mid-Year Estimate 2015
† Not all LNRs identified in the study are classified as natural and semi-natural greenspace; for example some are categorised as parks. Size of LNR designation may also vary from the open space site.

Figure 5.2: Natural and semi-natural greenspace with 30 minute drive time mapped against analysis areas

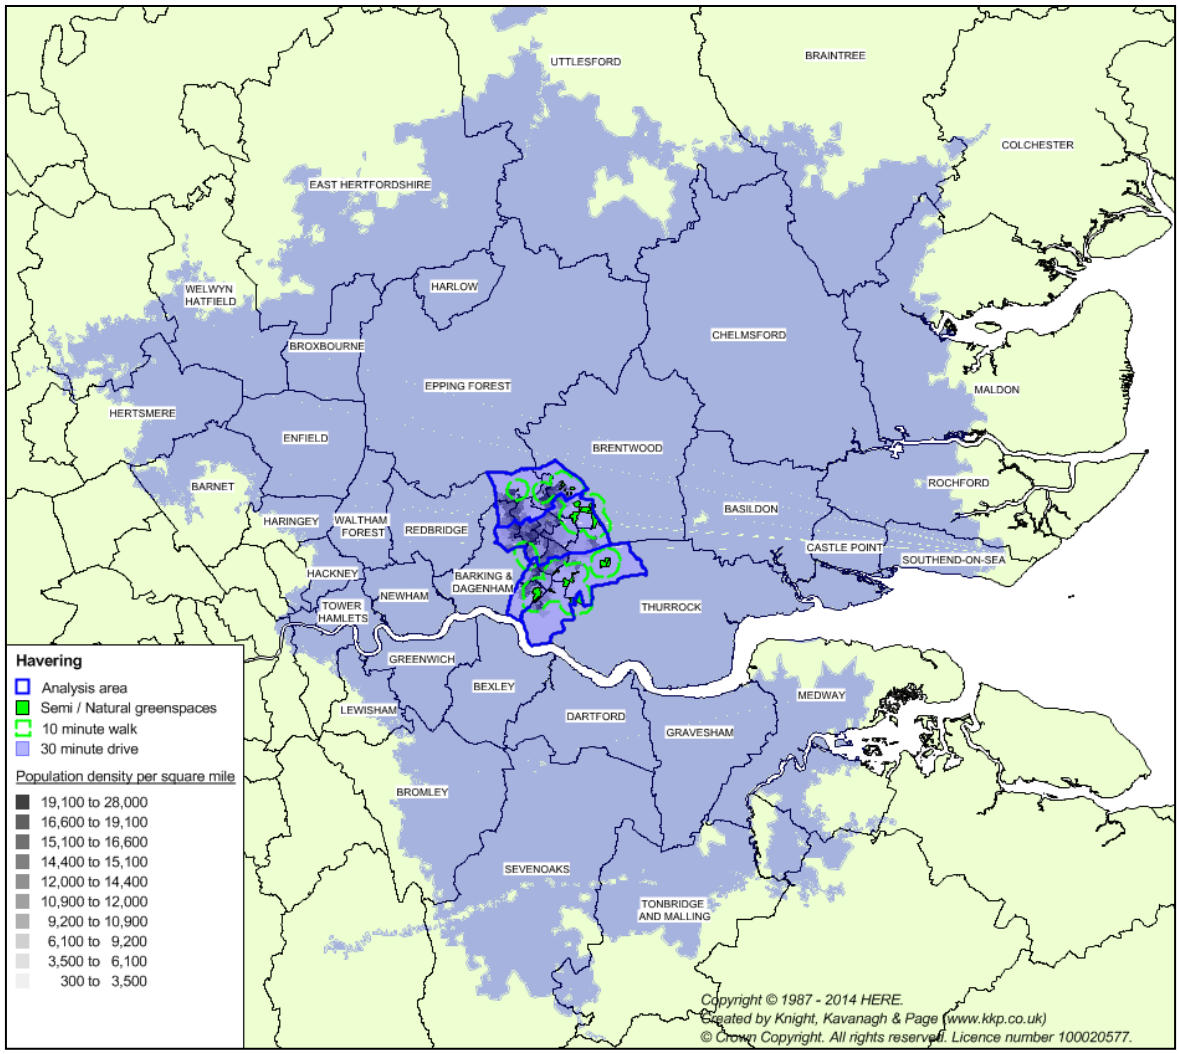


Table 5.2: Key to sites mapped

Site ID	Site name	Analysis area	Quality score	Value score
32	Straight Road Woodlands	North

143	Jackson's Wood	Central		
144	Folkes Lane Woodland	Central		
145	Pages Wood	Central		
146	Holden's Wood	Out		

Figure 5.2 shows all analysis areas are covered by the 30 minute drive time. Many surrounding neighbouring local authorities are also likely to be served by provision; particularly given the large size of some sites leading to a stronger characteristic as forms of destination sites.

The 10 minute walk time map shows that the majority of provision is located on the outskirts of the densely populated areas of LBH. Given sites are of natural and semi-natural provision it is not unusual for such sites to be in these locations. Furthermore, a number of these sites are large in size and provide a role not just locally but regionally. For example, The Thames Chase Community Forest and Rainham Marsh are situated in the area. Such sites offer a recognised high level of provision that individuals are willing to travel in order to access.

The more densely populated areas, not covered by walk time catchments of natural and semi-natural greenspace, contain sites classified as other forms of open space; particularly amenity greenspace and parks and gardens. Sites of these types of provision are likely to include features and opportunities associated with natural and semi-natural greenspace. It is therefore unlikely that new forms of natural and semi-natural greenspace provision will be required to meet this gap. However, ensuring that such sites include features and the long-term quality and access to the larger surrounding sites should be ensured.

The management and maintenance at most identified natural and semi-natural sites is split in terms of responsibility. In addition to the Council, the Thames Chase Trust and the Forestry Commission both have an active role in the management and maintenance of natural and semi-greenspace in LBH. Approximately over 340 hectares of natural and semi-natural greenspace is highlighted as being managed by the Trust; accounting for over 75% of total provision identified.

5.4 Quality

To determine whether sites are high or low quality (as recommended by the Companion Guidance) scores from the site assessments are colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results of the quality assessment for natural and semi-natural greenspace in LBH. A threshold of 50% is applied in order to identify high and low quality. Further explanation of how the quality scores are derived can be found in Part 2 (Methodology).

Natural and semi-natural greenspace has a slightly lower quality threshold than other open space typologies. This reflects the characteristic of this kind of provision. For instance, natural and semi-natural sites can be intentionally without ancillary facilities in order to reduce misuse/inappropriate behaviour whilst encouraging greater conservation and promotion of flora and fauna activity.

Table 5.3: Quality rating for natural and semi-natural greenspace by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <50%	High >50%
Central	110	31%	51%	67%	36%	1	6
North	110	18%	39%	54%	38%	4	3
South	110	53%	72%	86%	33%	-	8
HAVERING	110	**18%**	**53%**	**86%**	**56%**	**5**	**17**

A total of 17 natural and semi-natural sites (77%) in LBH rate above the threshold set for quality. However, there are five sites that rate below the quality threshold applied:

- Haunted House Woods (18%)
- Straight Road Woodlands (24%)
- Should of Mutton Woods (30%)
- The Chase (31%)
- Sage Wood (39%)

The two lowest scoring sites (Haunted House Woods and Straight Road Woodlands) are observed as having an issue with litter. At time of the site visits both sites appeared to have evidence of fly tipping. Generally all five sites are viewed as having a poorer overall appearance in terms of cleanliness with access to quality pathways also being limited. Furthermore, Shoulder of Mutton Wood scores lower as it is noted as having large gaps in its boundary fencing during the time of visits.

Sites scoring above the threshold are observed as being attractive and generally well maintained; offering plenty of good quality ancillary features such as bins, benches, parking and pathways. They are considered to be well used by people for recreational purposes whilst also offering significant opportunities for wildlife promotion. Sites scoring particularly high include:

- Cely Woods (86%)
- Broadfields & Thames Chase Forest Centre (81%)
- Ingrebourne Hill (81%)

All three sites are observed as having excellent features and facilities. For instance, each has the added benefit of car parking whilst the other features on site (e.g. pathways, signage, information, seating etc) are viewed as being to an excellent standard. All three sites are also identified as being managed by the Forestry Commission as part of the Thames Chase Community Woodland and Trust.

In general sites rating above the threshold for quality are viewed as being well maintained with access to a number of other features and facilities on site.

Whilst not classified within natural and semi-natural greenspace, the country parks within Havering are also regularly recognised through consultation as being high quality forms of open space provision which contribute to the perception and opportunities associated with natural greenspace.

5.5 Value

To determine whether sites are high or low value (as recommended by the Companion Guidance) scores from site assessments have been colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results of the value assessment for natural and semi-natural greenspace in LBH. A threshold of 20% is applied in order to identify high and low value. Further explanation of how the value scores are derived can be found in Part 2 (Methodology).

Table 5.4: Value scores for natural and semi-natural greenspace by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <20%	High >20%
Central	104	19%	32%	52%	33%	1	6
North	104	12%	25%	41%	29%	2	5
South	104	29%	45%	64%	35%	-	8
HAVERING	**104**	**12%**	**35%**	**64%**	**52%**	**3**	**19**

The majority of natural and semi-natural greenspaces (86%) rate above the threshold for value. Only three sites rate below the threshold; Straight Road Woodlands (12%), Haunted House Woods (17%) and The Chase (19%).

All three sites score below the threshold for both value and quality. They do not appear to be particularly well used although the habitat opportunities they provide are recognised; The Chase is noted as being a Local Nature Reserve. The low quality scores show them to be lacking in general maintenance and cleanliness in comparison to other sites. For example, all three are observed as having an issue with litter and/or fly tipping.

The highest scoring site for value is the Broadfields & Thames Chase Forest Centre (64%). The site is extensive and attractive, offering various opportunities to a range people and activities (e.g. nature enthusiasts, tourists, families).

5.6 Summary

Natural and semi-natural greenspace summary

- LBH has 22 natural and semi-natural greenspace sites covering 441 hectares. The area also contains the nationally recognised Rainham Marshes RSPB Reserve.
- The 30 minute drive time accessibility standard shows no shortfalls. However, gaps are highlighted from the 10 minute walk time catchment; mostly the densely populated areas. New natural sites are not thought to be required to meet this gap but there may be a need to ensure that other types of open spaces contain such associated features.
- There are seven designated LNRs in LBH which means the area sufficiently meets the ANGSt standard recommended for provision.
- Natural greenspace sites are of good quality with 77% rating above the threshold.
- Sites rating below the threshold are due to a poor general appearance and cleanliness. Often other issues are observed such as litter and fly tipping.
- Nearly all sites rate above the threshold for value. Only three score below the threshold; Straight Road Woodlands, Shoulder of Mutton and The Chase. These also rate low for quality. However, their role as habitat provision is acknowledged.
- Higher scoring sites for value, such as Broadfields & Thames Chase Forest Centre, provide an excellent range of opportunities and uses for visitors.

PART 6: AMENITY GREENSPACE

6.1 Introduction

This is defined as sites offering opportunities for informal activities close to home or work or enhancement of the appearance of residential or other areas. It includes informal recreation spaces, housing green spaces, village greens and other incidental space.

6.2 Current provision

There are 54 amenity greenspace sites in LBH; equivalent to over 129 hectares of provision. Sites are most often found within areas of housing and function as informal recreation space or open space along highways that provide a visual amenity. A number of recreation grounds and playing fields are also classified as amenity greenspace.

Table 6.1: Distribution of amenity greenspace sites by analysis area

Analysis area	Amenity greenspace		
	Number	Size (ha)	Current standard (ha per 1,000 population)
Central	20	44.85	0.39
North	16	47.20	0.68
South	18	37.02	0.56
HAVERING	**54**	**129.06**	**0.52**

Of the 54 sites, three are identified as potentially having restricted or limited access:

- A12/Whitelands Way
- Rainham Creekside Path
- The Dell

It is uncertain whether these sites are publicly accessible. All three appear to be fenced or locked with no obvious access being noted.

Site sizes of provision vary from the smallest incidental highway verge open space, such as South End Road Land at 0.05 hectares, to the largest, Upminster Hall Playing Field, at over 13 hectares.

It is important to note that whilst a large proportion of provision may be considered as being small grassed areas or visual landscaped space, there is some variation of sites within this typology. For example playing fields, such as Brittons Playing Field and King Georges Playing Field are included under amenity greenspace. These serve a different purpose to smaller grassed areas and verges; often providing an extended range of opportunities for recreational activities due to their size and facilities.

6.3 Accessibility

Findings from the Communities Survey found the most common travel time expected by respondents in order to access amenity greenspace is less than a five minute walk (22%). This is followed closely by a 5-10 minute walk (19%) and an 11-15 minute walk (19%). An approximate catchment guideline of a five minute walk is suggested by guidance published by Fields In Trust (FIT).

As a result, for the purpose of mapping a five minute walk time and a 10 minute walk time catchment have been applied. Figure 6.1 and 6.2 show the standards applied to help inform where deficiencies in provision may be located.

Figure 6.1: Amenity greenspace with five minute walk time mapped against analysis area

119	The Dell	Central		
125	Lilliput Road Open Space	Central		
126	Lessa Playsite and Open Space	South		
127	Cornflower Way Open Space	Central		
128	Park Lane Recreation Ground	Central		
129	Rainham Creekside Path	South		
131	Elliot Playing Field	Central		
134	Maytree Close	South		
151	Gooshays Garden	North		

Catchment mapping with a 10 minute walk time applied shows a generally good level of coverage across LBH.

Against the five minute walk time catchment there are some noticeable gaps to the Central Analysis Area as well as to parts of the North Analysis Area (i.e. areas not covered by the catchment of a site). However, such gaps are observed as containing provision of other open space types. The catchment gap to the North area is served by sites such as Havering Country Park and Lawns Park. Similarly the gaps in the Central area contain Lodge Farm Park and Cotton Park. It is, as per a number of the other typologies, unlikely that new provision is required as the area is served by other forms of open space provision.

6.4 Quality

To determine whether sites are high or low quality (as recommended by the Companion Guidance); the scores from site assessments have been colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results of the quality assessment for amenity greenspaces in LBH. A threshold of 50% is applied in order to identify high and low quality. Further explanation of how the quality scores and thresholds are derived can be found in Part 2 (Methodology).

Table 6.3: Quality ratings for amenity greenspaces by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <40%	High >40%
Central	114	9%	46%	75%	66%	11	9
North	114	11%	49%	75%	64%	7	9
South	114	16%	49%	80%	64%	9	9
HAVERING	**114**	**9%**	**48%**	**75%**	**66%**	**27**	**27**

The proportion of sites to rate above or below the threshold in LBH is equal. Proportionally, more sites in the Central Analysis Area rate below the threshold (55%). This is a slightly greater proportion than the other analysis areas. In addition to having two of the sites previously highlighted as having restricted or limited access. The analysis area also has a number of sites poorer in appearance due to a lack of apparent maintenance. For example, Rush Green Open Space (18%) and Cornflower Way Open Space (32%) are both viewed as having a lower level of general appearance and cleanliness.

However, it is important to recognise that despite rating below the threshold for quality, they may still have the potential to be important to the community. For instance, if a site is the only form of open space in that local area it may be of high value given it is the only provision of its type. It may also provide an aesthetically pleasing function.

Some of the lowest scoring amenity greenspace sites in LBH are:

- A12/Whitelands Way (9%)
- Keats Avenue (11%)
- Briscoe Road (16%)
- Rush Green Open Space (18%)
- Maytree Close (18%)

Most sites that rate low for quality are observed as being fairly basic pockets of green space. These tend to lack ancillary facilities to encourage extensive recreational use. Keats Avenue is noted as being slightly overgrown and having broken glass. It is also one of only a few sites highlighted through consultation as a site viewed as being poorer in general quality and appearance. Evidence of litter and fly tipping is also observed at Maytree Close Terrace.

The only other site showing sign of misuse is North Hill Recreation Ground where evidence of motorbikes/quads was observed. Despite this, the site still scores above the threshold for quality.

The highest scoring sites for quality in LBH are:

- Windmill Field (80%)
- King Georges Playing Field (75%)
- Queens Theatre Grounds (75%)
- Brittons Playing Field (73%)
- Painsbrook Play & Open Space (72%)
- Painsbrook Open Space (70%)

High scoring sites, such as the ones above, reflect the range of ancillary facilities available as well as the good standard of appearance and maintenance found at such sites. They also have plenty of ancillary facilities such as bins, benches, picnic tables and in some cases parking. Features such as these contribute to their overall quality and help to create more opportunities and reasons for people to access such provision.

Despite being one of the highest rating sites; the Queens Theater Green is perceived to be one of the worst open space sites from the workshop consultation. This is likely to be due to it being seen by participants as a form of provision similar to a park (although it is classified as an amenity greenspace). Its prominent position next to the theater is also likely to affect its role and perceived level of quality by respondents. Relating to this, the site is acknowledged as having potential to be enhanced further if desired.

6.5 Value

To determine whether sites are high or low value (as recommended by the Companion Guidance) site assessments scores are colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results. A threshold of 20% is applied in order to identify high and low value. Further explanation of the value scoring and thresholds can be found in Part 2 (Methodology).

Table 6.4: Value ratings for amenity greenspace by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <20%	High >20%
Central	100	4%	29%	54%	50%	7	13
North	100	11%	29%	44%	33%	3	13
South	100	6%	28%	61%	55%	7	11
HAVERING	**100**	**4%**	**29%**	**61%**	**57%**	**17**	**37**

Similar to quality, most amenity greenspaces (69%) rate above the threshold for value. Overall a greater proportion of sites are rated high value compared to quality.

Sites scoring below the value threshold tend to be grassed areas with no noticeable features, many are highway verge style sites, which are small in size and lack any noticeable features thus their low value rating. They are acknowledged to provide some visual amenity to their locality and it is important to note that the main role of certain sites is to simply act as a grassed area, providing breaks in the urban form.

The 17 sites that rate below the threshold for value also rate low for quality. Some of the lowest scoring sites are:

- A12/Whitelands Way
- Airfield Way Open Space
- Briscoe Road
- Maytree Close
- Rush Green Open Space
- The Glen, Elm Park.

All six appear to be unused with questions over access in addition to issues of litter on some sites. Hence they rate low for value and quality.

Some of the highest scoring sites for value in LBH are:

- Windmill Field
- Mardyke Open Space
- Painsbrook Open Space
- Dickens Way Open Space

These are recognised for the accessible recreational opportunity they offer at an excellent level of quality and for a wide range of users. Windmill Field provides historical and educational value while Mardyke Open Space has a number of features such as sports provision and play facilities that meet the needs of a variety of people.

Amenity greenspace should also be recognised for its multi-purpose function, offering opportunities for a variety of leisure and recreational activities. It can often accommodate informal recreational activity such as casual play and dog walking. Many in LBH offer a dual function and are amenity resources for residents as well as being visually pleasing. These attributes add to the quality, accessibility and visibility of amenity greenspace. Combined with the presence of facilities (e.g. benches, landscaping and trees) this means that the better sites are likely to be more respected and valued by the local community.

6.6 Summary

Amenity greenspace summary

- There are 54 amenity greenspace sites in LBH; 129 hectares of amenity space.
- Provision is relatively evenly spread across LBH. Although the Central Analysis Area has a slightly lower amount per 1,000 populations (0.39) compared to 0.68 and 0.56 respectively for the North and South areas.
- The 10 minute walk time suggests a good level of coverage. Gaps in provision are noted against a five minute walk time. These are, however, served by other open space typologies.
- Overall amenity greenspaces quality is positive. Half of sites rate above the threshold and only a handful face any specific issues; some due to size, access or maintenance.
- In addition to its multifunctional role, amenity greenspace makes a valuable contribution to visual aesthetics for communities – hence most sites rate above the threshold for value.
- 17 sites rate low for quality and value. Where they cannot be improved, some may be better suited to be/become different forms of open space or could feasibly be surplus.

PART 7: PROVISION FOR CHILDREN AND YOUNG PEOPLE

7.1 Introduction

This includes areas designated primarily for play and social interaction involving children and young people, such as equipped play areas, ball courts, skateboard areas and teenage shelters.

Provision for children is deemed to be sites consisting of formal equipped play facilities typically associated with play areas. This is usually perceived to be for children under 12 years of age. Provision for young people can include equipped sites that provide more robust equipment catering to older age ranges incorporating facilities such as skate parks, BMX, basketball courts, youth shelters and MUGAs.

7.2 Current provision

A total of 40 sites are identified in LBH as provision for children and young people. This combines to create a total of more than six hectares. The table below shows the distribution. No site size threshold has been applied and as such all provision is identified and included within the audit.

Table 7.1: Distribution of provision for children and young people by analysis area

Analysis area	Provision for children and young people		
	Number	Size (ha)	Current standard (ha per 1,000 population)
Central	18	2.30	0.02
North	10	1.72	0.03
South	12	2.40	0.04
HAVERING	**40**	**6.42**	**0.03**

Play areas can be classified in the following ways to identify their effective target audience utilising Fields In Trust (FIT) guidance. FIT provides widely endorsed guidance on the minimum standards for play space.

- LAP - a Local Area of Play. Usually small landscaped areas designed for young children. Equipment is normally age group specific to reduce unintended users.
- LEAP - a Local Equipped Area of Play. Designed for unsupervised play and a wider age range of users; often containing a wider range of equipment types.
- NEAP - a Neighbourhood Equipped Area of Play. Cater for all age groups. Such sites may contain MUGA, skate parks, youth shelters, adventure play equipment and are often included within large park sites.

It is not possible to classify play sites within LBH by the FIT guidance due to the position and subdivision of site polygons within the audit. However, it is possible identify those sites designed to cater for older age ranges.

There are 22 sites identified within LBH identified as containing some form of provision intended to serve teenagers and older age children. In some instances sites contain more than one type of facility.

Table 7.2: Distribution of provision for older ages

Analysis area	Provision for children and young people				
	Basketball	BMX	MUGA	Skate Park	Youth Shelter
Central	1	-	7	4	3
North	-	1	5	2	-
South	1	-	6	1	6
HAVERING	**2**	**1**	**18**	**7**	**9**

Each analysis area contains provision of these types with MUGA being noted as the most abundant form of provision. Facilities like MUGA or basketball areas can cater for a wide range of ages not just older aged groups. Specific sites identified as having a wide range of play provision including that which serves older age groups include:

- Brittons Playing Field
- Central Park
- Cottons Park
- Harold Wood Park
- Harrow Lodge Park
- King Georges Playing Field

The Central Park site is identified as containing the only BMX facility within LBH. However, some sites with skate facilities/ramps such as Harrow Lodge Park and Cottons Park are likely to also help accommodate some demand for BMX use.

In addition, there are 14 sites identified as containing outdoor gym equipment. Such provision does not solely provide exercise and health benefits for children.

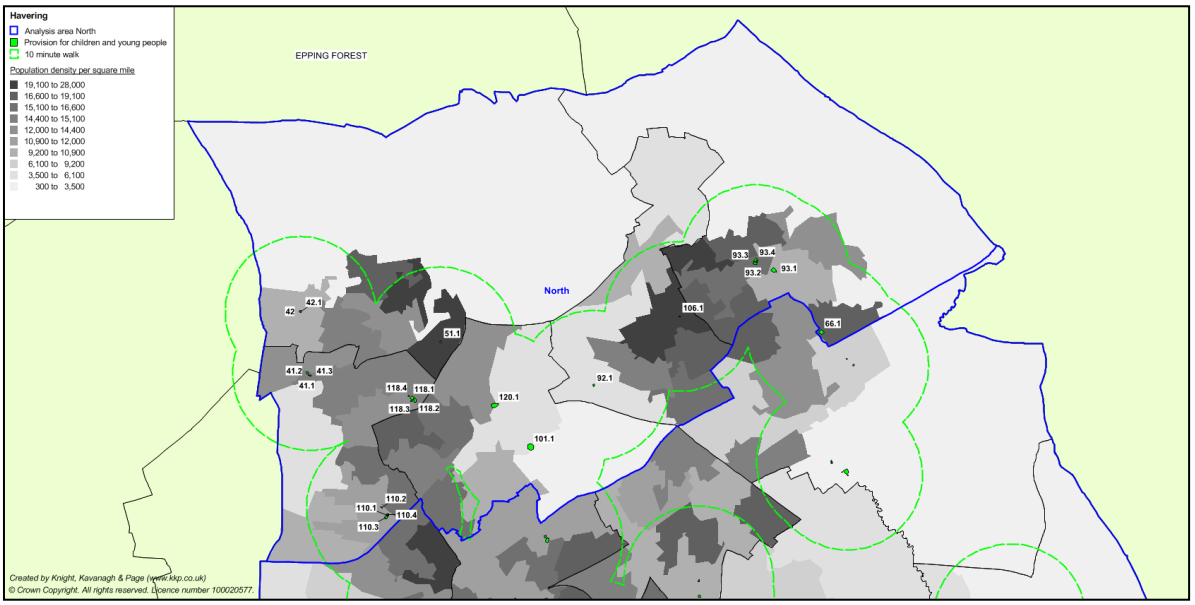
7.3 Accessibility

Findings from the Communities Survey found the most common travel time expected by respondents in order to access provision for children and young people is an 11-15 minute walk (24%); followed by a 5-10 minute walk (19%).

Recently published guidance by Fields In Trust (FIT) suggests an approximate catchment guideline of an approximate 5-10 minute walk. As a result, for the purpose of mapping a 10 minute walk time catchment has been applied.

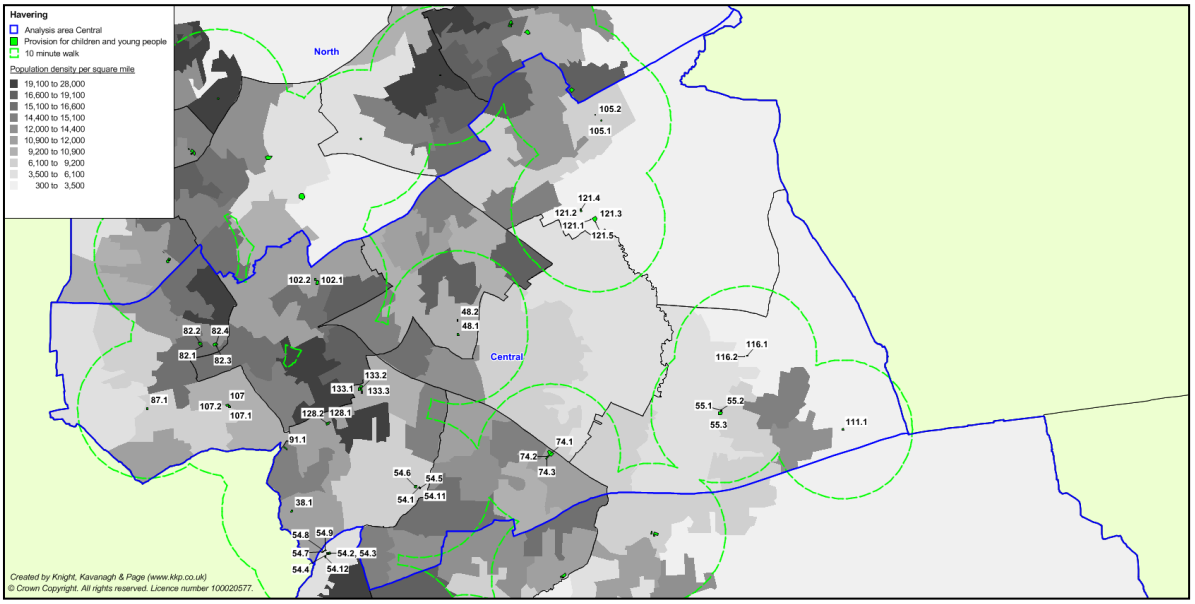
Figure 7.1, 7.2 and 7.3 show the standards applied to help inform where deficiencies in provision may be located.

Figure 7.1: Provision for children and young people mapped against North area



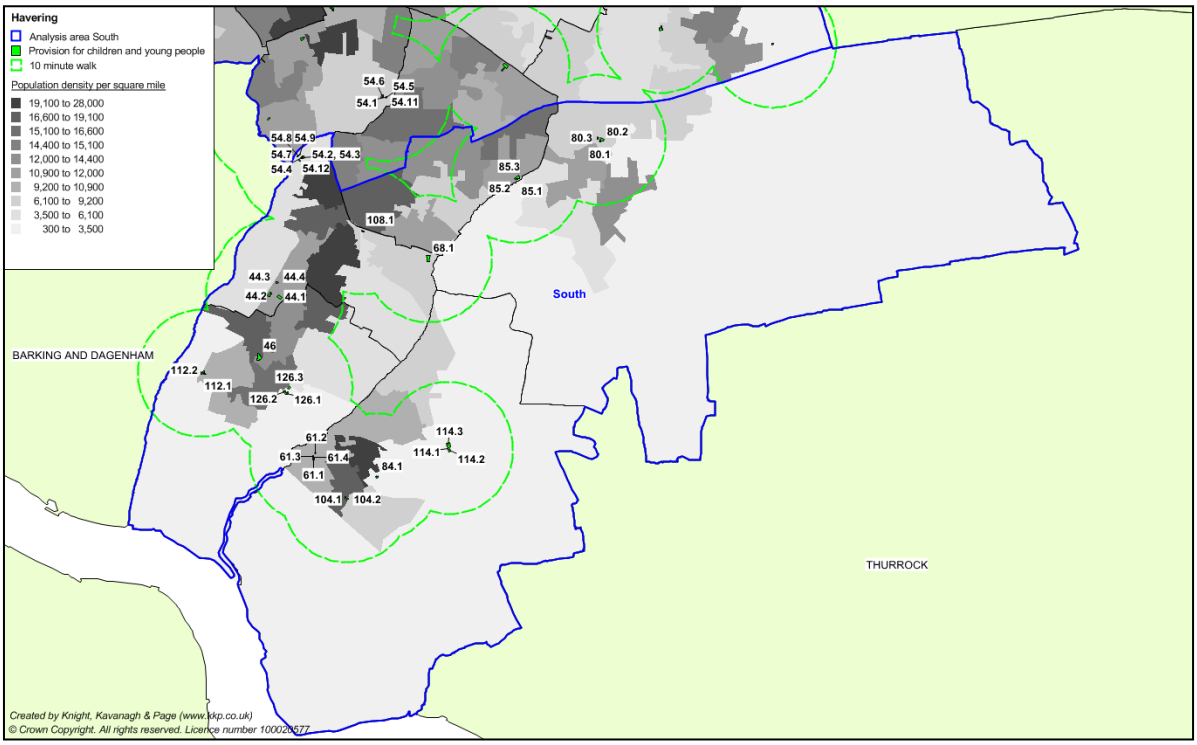
No significant gaps in provision for children and young people are noted in the North Analysis Area based on the application of a 10 minute walk time catchment.

Figure 7.2: Provision for children and young people mapped against Central area



Based on the application of a 10 minute walk time catchment a gap in provision for children and young people is observed to the Gallows Corner area of the Central Analysis Area. A gap is also noted to less densely populated area of Emerson Park.

Figure 7.3: Provision for children and young people mapped against South area



There is a slight gap in walk time catchment mapping noted to the border of the Central Analysis Area. Gaps in play provision are also observed to the east of Rainham and in the Corbets Tey areas.

Table 7.3: Key to sites mapped

Site ID	Site name	Analysis area	Quality score	Value score
38.1	Bancroft Chase Playsite	Central		
41.1	Collier Row Recreation Ground	North		
42	Forest Row Playsite	North		
44.1	Brittons Playing Field	South		
46	Whybridge Close Playsite	South		
48.1	Haynes Park	Central		
51.1	Chelmsford Avenue Play	North		
54.1	Harrow Lodge Park	Central		
54.11	Harrow Lodge Park	Central		
54.12	Harrow Lodge Park	Central		
55.1	Upminster Hall Playing Field	Central		
61.1	Rainham Recreation Ground	South		
66.1	St Neots Open Space	North		
68.1	Hornchurch Country Park	South		
74.1	St Andrews Park	Central		
80.1	Upminster Park	South		
82.1	Cottons Park	Central		
84.1	The Glen Rainham	South		

Site ID	Site name	Analysis area	Quality score	Value score
85.1	Hacton Parkway	South		
87.1	Jutsums Recreation Ground	Central		
91.1	Grenfell Park	Central		
93.1	Central Park	North		
101.1	Raphael Park	North		
102.1	Lodge Farm Park	Central		
104.1	Brookway Playsite	South		
105.1	Painbrook Adventure Playground	Central		
106.1	Myrtle Road	North		
107	Oldchurch Park Playsite	Central		
108.1	Louis Marchesi Playsite	South		
110.1	King Georges Playing Field	North		
111.1	Cranham Playing Fields	Central		
112.1	Mardyke Open Space	South		
114.1	Spring Farm Park	South		
116.1	Fleet Close Playsite	Central		
118.1	Lawns Park	North		
120.1	Rise Park	North		
121.1	Harold Wood Park	Central		
126.1	Lessa Open Space	South		
128.1	Park Lane Recreation Ground	Central		
133.1	Hylands Park	Central		

There is generally a good spread of provision across LBH. Most areas with a greater population density are within walking distance of a form of play provision. The North Analysis Area in particular appears to be well served from the catchment mapping.

However, there are a handful of gaps in the walk time catchment mapping observed in the other analysis areas. There may be a need for some forms of additional play provision to serve these gaps. The need for gaps in walk time mapping to be met by new forms of provision will be explored in the Recommendations Paper to follow.

7.4 Quality

In order to determine whether sites are high or low quality (as recommended by guidance); the scores from the site assessments have been colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results of the quality assessment for play provision for children and young people in LBH. A threshold of 60% is applied in order to identify high and low quality. Further explanation of the quality scoring and thresholds can be found in Part 2 (Methodology).

Quality assessments of play sites do not include a detailed technical risk assessment of equipment. For an informed report on the condition of play equipment the Council's own inspection reports should be sought.

Table 7.4: Quality ratings for provision for children and young people by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <60%	High >60%
Central	112	30%	67%	90%	60%	3	15
North	112	54%	65%	80%	26%	3	7
South	112	46%	66%	80%	34%	2	10
HAVERING	**112**	**30%**	**66%**	**90%**	**60%**	**8**	**32**

The majority of sites are assessed as above the threshold (80%) for quality. There is however a significant spread between the highest and lowest scoring sites particularly in the Central Analysis Area.

For instance in the Central Analysis Area, the Fleet Close Playsite scores 30% compared to the Harrow Lodge Park facilities (90%). The low score for Fleet Close Playsite reflects its lack of controls to prevent misuse, paths and limited range of play equipment; the site is observed as having only two sets of swings and a see saw. In contrast, Harrow Lodge Park rates the highest score in the analysis area due to its range and excellent condition of play equipment. It also benefits from extensive additional features such as seating, bins and fencing. Other sites to receive particularly high ratings for quality include:

- Lodge Farm Park (75%)
- Harold Wood Park (74%)
- Cottons Park (72%)
- Cranham Playing Fields (70%)

These sites are all noted as having a range and good standard of equipment catering for different ages. The sites also contain other ancillary features such as benches and bins which are assessed as being of a generally excellent condition. Furthermore, sites such as Cottons Park and Harold Wood Park also benefit from having extended provision catering for older age ranges (i.e. skate park, MUGA).

There are eight sites to rate below the threshold for quality. Some of the lowest scoring sites are:

- Fleet Close Playsite (30%)
- Jutsums Recreation Ground (44%)
- Whybridge Close Playsite (46%)
- Brookway Playsite (48%)
- St Neots (54%)

As mentioned earlier, the low score for Fleet Close Playsite reflects its limited range of play equipment and lack of controls and paths on site. A lack of paths along with no fencing being present is also identified as detrimental to the score of Brookway Playsite.

The Jutsums Recreation Ground, Whybridge Close and St Neots sites are observed as being of a poorer general appearance and quality. Specific site visit comments highlight that the general level of maintenance and cleanliness of the sites as lower. Play provision at Jutsums Recreation Ground is also viewed as being in an isolated location without any informal surveillance or sightlines.

Two sites were identified as being under construction and/or receiving improvements during the site visit process. The play provision at both Upminster Hall Playing Field and Myrtle Road were observed as having repair and improvement works being carried out.

7.5 Value

To determine whether sites are high or low value (as recommended by the Companion Guidance) site assessment scores are colour-coded against a baseline threshold (high being green and low being red). The table overleaf summarises the results of the value assessment for children and young people in LBH. A threshold of 20% is applied in order to identify high and low value. Further explanation of the value scoring and thresholds can be found in Part 2 (Methodology).

Table 7.5: Value ratings for provision for children and young people by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <20%	High >20%
Central	47	36%	57%	89%	53%	-	18
North	47	38%	49%	79%	41%	-	10
South	47	49%	68%	87%	38%	-	12
HAVERING	**47**	**36%**	**60%**	**87%**	**51%**	**-**	**40**

All play provision in LBH is rated as being above the threshold for value. This demonstrates the role play provision provides in allowing children to play but also the contribution sites make in terms of giving children and young people safe places to learn, to socialise with others and in creating aesthetically pleasing local environments.

Sites scoring particularly high for value tend to reflect the size and amount/range and standard of equipment present on site. Some of the highest scoring sites are:

- Harrow Lodge Park (89%)
- Upminster Park (87%)
- Cottons Park (83%)
- Mardyke Play Area (83%)
- Brittons Playing Field (81%)

Diverse equipment to cater for a range of ages is also essential. More specifically, provision such as skate park facilities and MUGAs are highly valued forms of play. Sites containing such forms of provision tend to rate higher for value; as evidenced by the sites listed above all containing these types of facilities.

It is also important to recognise the benefits of play in terms of healthy, active lifestyles, social inclusion and interaction between children plus its developmental and educational value. The importance of play and of children's rights to play in their local communities is essential.

7.6 Summary

Provision for children and young people summary

- There are 40 play provision sites in LBH; a total of over six hectares.
- Over half of play provision sites (22) are identified as also containing play facilities catering for older age ranges. There are also 14 sites with outdoor gym equipment.
- The South Analysis Areas has the highest amount of provision per 1,000 populations. Not surprisingly the area has the greater amount of total provision.
- The 10 minute walk time accessibility standard covers the majority of the area. However, there are a few gaps noted in the Central and South Analysis Areas.
- The majority (80%) play sites are above the threshold for quality. Quality is generally good. There are a few sites where a perceived lack of maintenance and appearance is noted.
- All play provision is rated above the threshold for value.

PART 8: ALLOTMENTS

8.1 Introduction

Allotments is a typology which covers open spaces that provide opportunities for those people who wish to do so to grow their own produce as part of the long term promotion of sustainability, health and social interaction. This includes provision such as allotments, community gardens and city farms.

8.2 Current provision

There are 27 sites classified as allotments in LBH, equating to over 35 hectares. All of these sites are council owned. No site size threshold has been applied to allotments and as such all provision is identified and included within the audit.

Table 8.1: Distribution of allotment sites by analysis area

Analysis area	Allotments		
	Number of sites	Size (ha)	Current standard (Ha per 1,000 population)
Central	12	20.03	0.18
North	7	5.02	0.07
South	8	11.89	0.18
HAVERING	**27**	**36.94**	**0.15**

Most sites are located in the Central Analysis Area (12). Not surprisingly, most hectares of provision (20.03 hectares) are to be found in the same area. However, the South Analysis Area, along with the Central Analysis Area, also has the greatest amount of provision per 1,000 populations with 0.18 hectares.

Overall, there are a combined total of circa 1,000 plots, including half plots, identified at Council sites across LBH. The number offered at each site varies with the largest site being Pretoria Road Allotments (9.5 hectares) in the Central Analysis Area. The smallest site is Macon Way Allotments (0.18 hectares) also in the Central Analysis Area.

The National Society of Allotment and Leisure Gardeners (NSALG) suggests a national standard of 20 allotments per 1,000 households (20 per 2,000 people based on two people per house or one per 200 people). This equates to 0.25 hectares per 1,000 populations based on an average plot-size of 250 square metres (0.025 hectares per plot).

Havering, as a whole, based on its current population (247,714) does not meet the NSALG standard. Using this suggested standard, the minimum amount of allotment provision for LBH is 61.93 hectares. Existing provision of 36.94 hectares therefore does not meet the NSALG standard.

8.3 Accessibility

Consultation and findings from the Communities Survey found the most common travel time expected by respondents in order to access an allotment was over a 5-10 minute walk (38%). followed by an 11-15 minute walk (31%). As a result, for the purpose of mapping a 10 minute walk time has been applied.

Figure 8.1 shows the standard applied to allotments to help inform where deficiencies in provision may be located.

Figure 8.1: Allotments mapped against analysis areas

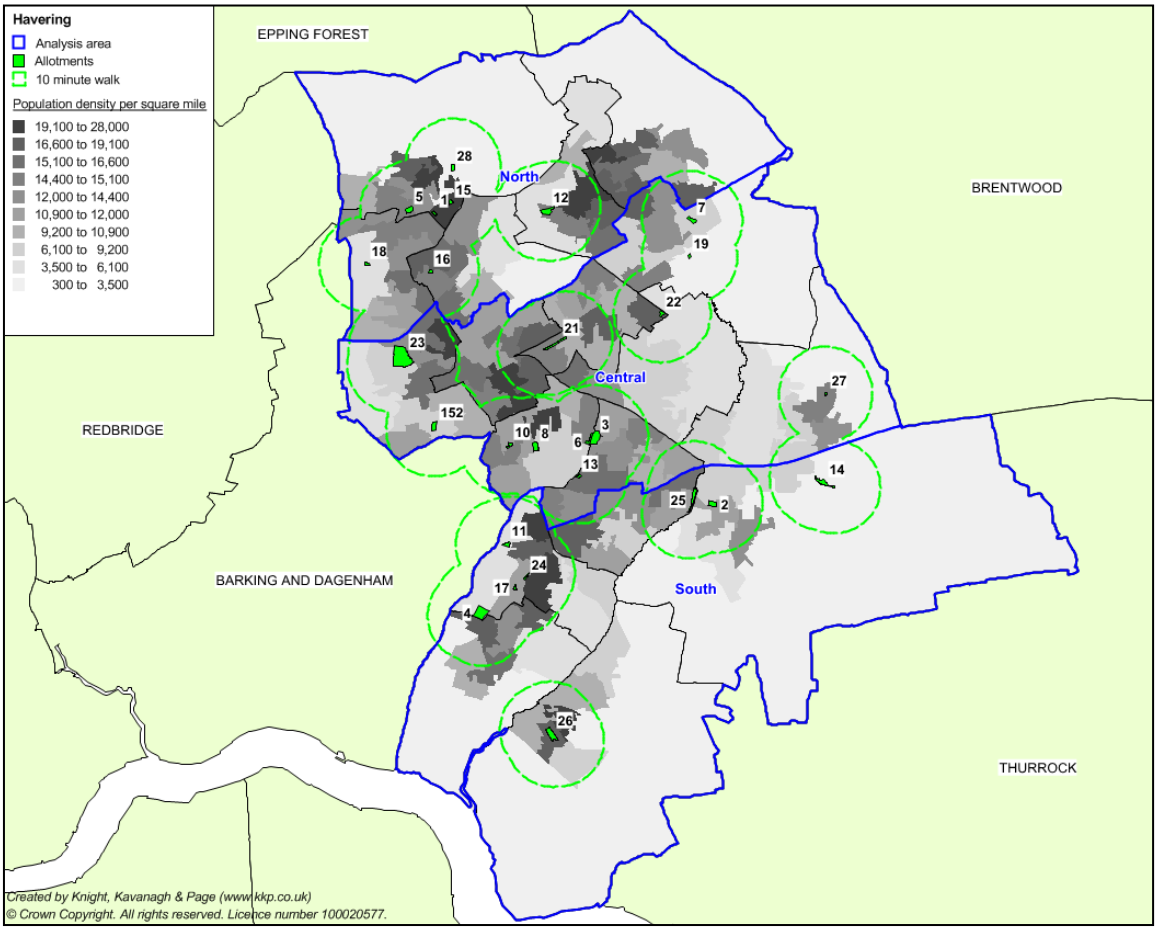


Table 8.2: Key to sites mapped

Site ID	Site name	Analysis area	Quality score	Value score
1	Robin Close Allotments	North		
2	Stewart Avenue Allotments	South		
3	Grey Towers North Allotments	Central		
4	Bretons Farm Allotments	South		
5	Chase Cross Road Allotments	North		
6	Grey Towers South Allotments	Central		
7	Church Road Allotments	Central		
8	Maylands Allotments	Central		
10	Strathmore Gardens Allotments	Central		
11	Dunningford Allotment Site	South		
12	Keats Avenue Allotments	North		
13	Uphavering Terrace Allotments	Central		
14	Ashvale Gardens	South		
15	Chelmsford Avenue Allotments	North		

Site ID	Site name	Analysis area	Quality score	Value score
16	Saffron Road Allotments	North		
17	Sowery Avenue Allotments	South		
18	White Hart Lane Allotments	North		
19	Archibald Road Allotments	Central		
21	Heath Park Allotments	Central		
22	MacDonald Avenue Allotments	Central		
23	Pretoria Road Allotments	Central		
24	Mungo Park Allotments	South		
25	Norfolk Road Allotments	South		
26	Melville Road Allotment Site	South		
27	Macon Way Allotments	Central		
28	Havering Grange Allotments	North		
152	Rush Green Allotments	Central		

Allotment provision at Sowery Avenue, Pretoria Road, Norfolk Road and Melville Road do not receive a quality or value score as the sites could not be accessed or viewed during the site visit process.

The majority of areas with a greater population density are covered by the 10 minute walk time catchment. However, there are some gaps in catchment mapping of provision across all three analysis areas.

Ownership/management

All allotment sites are owned by LBH Council, however, all sites are self-managed. This means management of waiting lists and maintenance of each site is the responsibility of the individual allotment associations. The Council meets regularly with the associations to share best practices and to discuss any issues.

Consultation was achieved with 21 of the associations in Havering. Of these 21, 14 sites indicate having a waiting list with individuals wishing to use a plot. This highlights a steady demand for the continuing provision of allotment sites and plots across the area.

Table 8.3: Council allotment plots and waiting list

Number of sites	Number of plots	Waiting list
27	1,097	72

The Pretoria Road site has the largest waiting list with 25 individuals a reflection of the sites large size and high quality; followed by other sites such as Archibald Road (7), Bretons Farm (6) and Stewart Avenue (6). Current demand therefore outweighs supply; a reflection on the trend to have an allotment from a healthy living and self-sufficiency perspective.

To help meet demand and reduce the waiting time for plots - associations appear to operate a policy whereby any new plots that become available are split into half or quarter plots (a good practice seen across the country).

At the White Hart Lane allotment site a new area has recently been opened to provide additional plots. This can accommodate eight individuals that were previously on the waiting list. The association plans to clear more land to the rear of the site in order to provide 20 additional plots in the future.

Consultation with the Hornchurch & District Gardening and Allotment Society highlights that three allotment sites are currently classed as temporary statures. One of these is identified as Macon Way Allotment site. The association has a strong desire to make the allotments a permanent site given their important role to local residents.

8.4 Quality

To determine whether sites are high or low quality (as recommended by the Companion Guidance) the site assessment scores have been colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results of the quality assessment for allotments in LBH. A threshold of 50% is applied in order to identify high and low quality. Further explanation of how the quality scores and thresholds are derived can be found in Part 2 (Methodology).

Table 8.4: Quality ratings for allotments by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <50%	High >50%
Central	122	36%	52%	63%	27%	2	8
North	122	43%	51%	56%	13%	2	5
South	122	50%	57%	70%	20%	-	5
HAVERING	**122**	**36%**	**53%**	**70%**	**34%**	**4**	**18**

The Sowery Avenue, Pretoria Road, Norfolk Road and Melville Road sites could not be assessed for quality or value as they were locked and not viewable at the time of the site visits. Rush Green does not receive a quality or value due to its late inclusion in the study. However, consultation with Pretoria Road, Norfolk Road and Melville Road associations signals that the quality of the sites is good or very good. Pretoria Road in particular is noted as having recently built a new toilet block including disabled facilities which further add to the sites overall quality.

The majority of sites assessed for quality rate above the set threshold (82%). The highest scoring sites of those assessed in LBH are Bretons Farm Allotments (70%) in the South Analysis Area, and Uphavering Terrace Allotments (63%) and Maylands Allotments (62%) in the Central Analysis Area. They score well due to having a particularly good general appearance and maintenance (e.g. decent paths, clean and tidy).

There are four sites which rate below the threshold for quality. The lowest rating allotment site in LBH is the Strathmore Gardens Allotments in the Central Analysis Area with a score of 36%. It rates lower due to security as parts of the boundary is lacking in fencing. In addition, one of the gates on site was observed as being open access.

The other three sites only just rate below the threshold; Havering Grange (49%), Macon Way (48%) and Robin Close (43%). No specific quality issues are identified from the site assessments. However, it is likely that due to the other three sites being relatively small in size they subsequently lack some ancillary features (e.g. signage, sheds) in comparison to other provision sites.

Site observations at the Heath Park Allotments suggest that some plots are not in full use due to their poor appearance. Consultation notes this is due to flooding issues. The association is waiting on the council to investigate further. Despite this, the site still rates just above the threshold for quality.

In general, consultation highlights no significant problems with regard to overall quality of provision; as demonstrated by the fact that sites are currently in full use. All consulted allotment associations rate the quality of their site as either good or very good.

A few associations (Grey Towers North, Havering Grange, Keats Avenue and Mungo Park) do however highlight fencing improvements or repairs that are required. Furthermore, Bretons Farm and Heath Park allotment sites note some issues with regard to flooding.

8.5 Value

In order to determine whether sites are high or low value (as recommended by the Companion Guidance) site assessments scores have been colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results. A threshold of 20% is applied to identify high and low value. Further explanation of how the value scores and thresholds are derived can be found in Part 2 (Methodology).

Table 8.5: Value ratings for allotments by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <20%	High >20%
Central	100	28%	38%	48%	20%	-	10
North	100	32%	34%	38%	6%	-	7
South	100	33%	40%	46%	13%	-	5
HAVERING	**100**	**28%**	**37%**	**48%**	**20%**	**-**	**22**

The Sowery Avenue, Pretoria Road, Norfolk Road and Melville Road sites could not be assessed for quality or value as they were locked and not viewable at the time of the site visits. Rush Green does not receive a quality or value due to its late inclusion in the study.

All allotments in LBH are assessed as high value. This is a reflection of the associated social inclusion and health benefits, amenity value and the sense of place offered by such forms of provision. For instance, sites such as Stewart Avenue Allotments are noted as having a children's gardening club in conjunction with a local primary school. Such a scheme offers wider community value and helps to promote healthy living and eating. This can provide a sense of ownership and knowledge that will look to help children in their future.

Sites scoring higher for value are those identified as being well used and maintained (often as a result of being of a high quality). The highest scoring site for value is the Maylands Allotments receiving a score of 48%.

The value of allotments is further demonstrated by the existence of waiting lists identified at sites signalling greater demand for provision.

8.6 Summary

Allotments summary

- There are 27 allotments sites in LBH: equating to more than 36 hectares.
- All are owned by the Council and self managed by allotment association.
- Current amount of provision is below the NSALG recommended amount. Furthermore, no individual analysis area meets the NSALG standard either.
- There are waiting lists for allotments across LBH; suggesting that demand for allotments is not currently being met by supply.
- Despite a few sites being below the quality threshold, for the majority of allotments quality is sufficient.
- All allotments are assessed as high value reflecting the associated social inclusion and health benefits, their amenity value and the sense of place offered by provision.
- Continuing measures should be made to provide additional plots in the future.

PART 9: CEMETERIES/CHURCHYARDS

9.1 Introduction

Cemeteries and churchyards include areas for quiet contemplation and burial of the dead. Sites can often be linked to the promotion of wildlife conservation and biodiversity.

9.2 Current provision

Six sites are classified as cemeteries/churchyards, equating to nearly 29 hectares of provision in LBH. No site size threshold has been applied and as such all provision identified is included within the audit.

Table 9.1: Distribution of cemeteries by analysis area

Analysis area	Cemeteries/churchyards	
	Number of sites	Size (ha)
Central	3	13.59
North	-	-
South	3	15.38
HAVERING	**6**	**28.97**

The largest contributor to burial provision in the area is Upminster Cemetery, in the South Analysis Area (13.93 hectares). This is followed by Romford Cemetery (9.51 hectares) in the Central Analysis Area. Both are managed and maintained by the Council. All except two sites are identified as cemeteries with the exception of St Helens & St Giles Churchyard and St Edward Churchyard Lane which are classified as churchyards.

Hornchurch Cemetery and Rainham Cemetery are closed to new burials except for the reopening of existing family graves.

9.3 Accessibility

No accessibility standard is set for this typology and there is no realistic requirement to set such standards. Provision should be based on burial demand.

Figure 9.1 shows cemeteries and churchyards mapped against analysis areas.

Figure 9.1: Cemetery sites mapped against analysis area

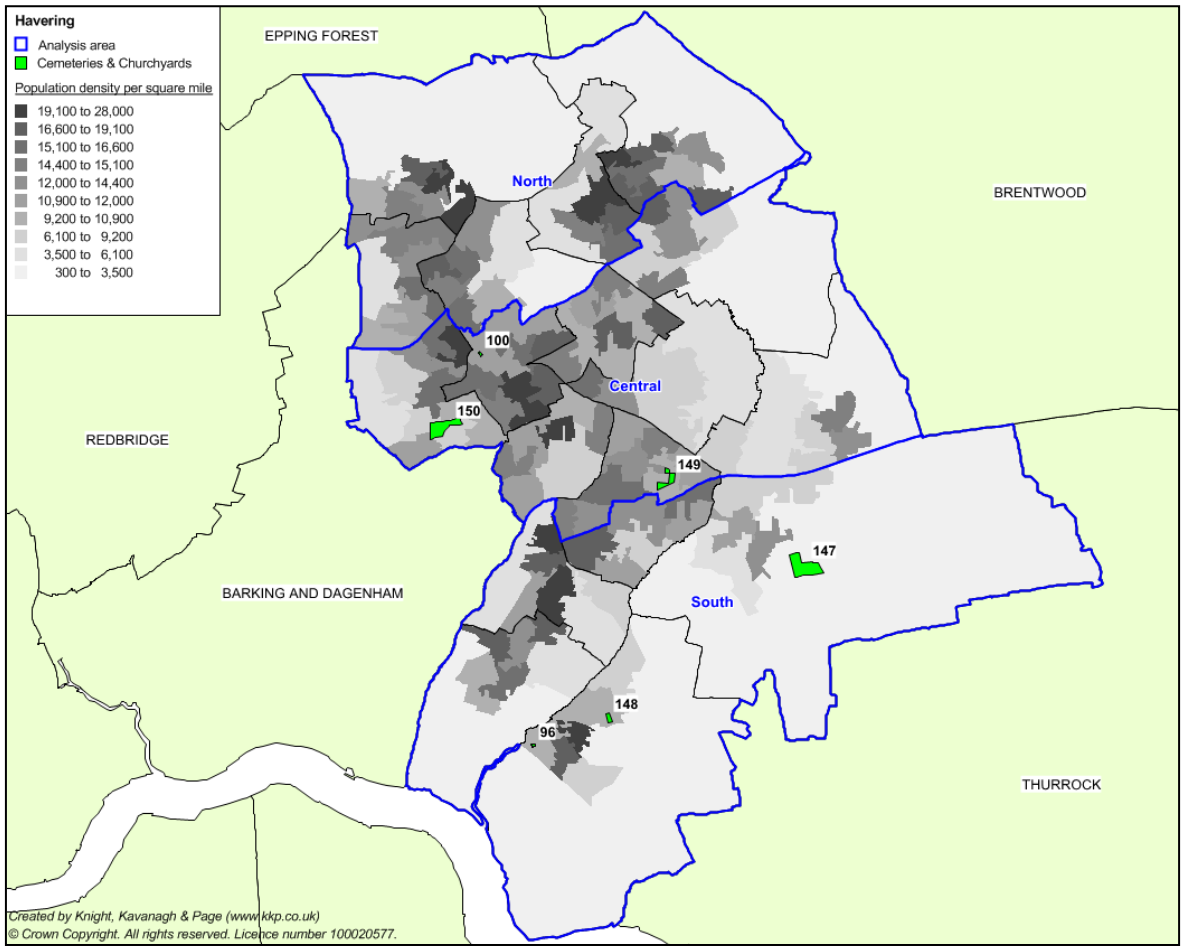

Table 9.2: Key to sites mapped

Site ID	Site name	Analysis area	Quality score	Value score
96	St Helens & St Giles Churchyard	South		
100	St Edward Churchyard	Central		
147	Upminster Cemetery	South		
148	Rainham Cemetery	South		
149	Hornchurch Cemetery	Central		
150	Romford Cemetery	Central		

In terms of provision, mapping demonstrates a fairly even distribution across the area. However, no provision is identified in the North Analysis Area.

As noted, the need for additional cemetery provision should be driven by the requirement for burial demand and capacity.

Management

The management and maintenance of active cemetery sites is included as part of the Council's wider maintenance responsibility. No cemeteries have onsite based staff. Two sites are closed to any new burials; Hornchurch Cemetery and Rainham Cemetery. However, both are able to accommodate existing family plots.

There is believed to be approximately five to six years of remaining burial capacity at Romford Cemetery. This does not include the Muslim section of the site which has capacity until approximately 2037.

Upminster Cemetery is also thought to have approximately five and half year's burial capacity remaining. This is only for Phase One of the sites recent extension. There will, however, be additional provision in Phase Two and three which should be ready to accommodate burials from 2017.

9.4 Quality

To determine whether sites are high or low quality (as recommended by the Companion Guidance) site assessments scores are colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results of the quality assessment for cemeteries in LBH. A threshold of 60% is applied in order to identify high and low quality. Further explanation of how the quality scores and threshold are derived can be found in Part 2 (Methodology).

Table 9.4: Quality ratings for cemeteries by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <50%	High >50%
Central	154	66%	74%	81%	15%	-	3
North	154	-	-	-	-	-	-
South	154	58%	72%	89%	31%	1	2
HAVERING	**154**	**66%**	**73%**	**89%**	**33%**	**1**	**5**

The majority of cemeteries and churchyards in LBH (83%) rate above the threshold set for quality.

Upminster Cemetery, in South Analysis Area, is the highest scoring site for quality with a score of 89%. Most sites rate well above the threshold suggesting a high standard of provision. These scores are predominantly due to them being maintained to a high level.

The generally high standard of provision is reflected by both the Romford and Upminster sites receiving awards in recognition of their high quality of appearance.

A large proportion of the sites are noted (both during consultation and the site assessments) as being well cared for and therefore score well for quality of appearance and cleanliness. In addition, no issues with flooding or vandalism are identified at any site in LBH.

Currently a large amount of work is going into ensuring the safety and upkeep of the many trees located on cemeteries. This is highlighted as a costly factor as the part of the regular maintenance of sites given the number of trees. Other recent work being undertaken on all sites includes the expansion of the size of entrance gates.

Only one site rates below the quality threshold; St Helens & St Giles Churchyard (58%) and is viewed as having a poorer level of general maintenance and appearance. This may reflect its role as a closed site which subsequently receives less frequent use and maintenance compared to active sites.

Consultation also highlights an issue with dog walking and fouling at the Hornchurch Cemetery. The site has a public pathway running through it which leads to people often using the site to walk their dog.

9.5 Value

To determine whether sites are high or low value (as recommended by the Companion Guidance) site assessment scores are colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results of the value assessment for cemeteries in LBH. A threshold of 20% is applied in order to identify high and low value. Further explanation of how the value scores and threshold are derived can be found in Part 2 (Methodology).

Table 9.5: Value ratings for cemeteries by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <20%	High >20%
Central	90	42%	50%	59%	17%	-	3
North	90	-	-	-	-	-	-
South	90	30%	37%	41%	11%	-	3
HAVERING	**90**	**30%**	**43%**	**59%**	**29%**	**-**	**6**

All identified cemeteries and churchyards are assessed as being of high value, reflecting the role in community lives. In addition, the cultural/heritage value of sites and the sense of place they provide to and for the local community are acknowledged in the site assessment data. Sites also often receive a score for value from their contribution to wildlife/habitats or sense of place to the local environment.

Even the St Helens & St Giles Churchyard which rates below the threshold for quality rates above the threshold for value. As noted above, despite this, it still obviously provides a role to the community it serves.

Cemeteries and churchyards are important natural resources, offering both recreational and conservation benefits. As well as providing burial space, cemeteries and churchyards can offer important low impact recreational benefits (e.g. habitat provision, wildlife watching).

9.6 Summary

Cemeteries summary

- LBH has six cemeteries and churchyards: just less than 29 hectares of provision.
- There is a fairly even distribution of provision across Havering.
- The need for additional burial provision is driven by the demand for burials and capacity; currently there would appear to be a sufficient amount of capacity remaining.
- Nearly all cemeteries and churchyards rate above the threshold for quality. However, one sites rates below the threshold. This is viewed as having a poorer level of maintenance and appearance in comparisons to other sites.
- All cemeteries are assessed as high value in LBH, reflecting that generally provision has a cultural/heritage role and provide a sense of place to the local community.

PART 10: CIVIC SPACE

10.1 Introduction

The civic space typology includes civic and market squares and other hard surfaced areas designed for pedestrians, providing a setting for civic buildings, public demonstrations and community events. For the purpose of this study the designation also includes war memorials.

10.2 Current provision

There are four civic space sites, equating to less than one hectare of provision, identified in LBH. In addition, there are likely to be other informal pedestrian areas, streets or squares which residents may be viewed as providing similar roles and functions as civic spaces.

Table 10.1: Distribution of civic spaces by analysis area

Analysis area	Civic space	
	Number of sites	Size (ha)
Central	2	0.96
North	-	-
South	2	0.01
HAVERING	**4**	**0.97**

Civic space provision is identified in Central Analysis Area and South Analysis Area. Three sites are observed as being forms of War Memorials. The other is the Market Square in Romford. No provision is noted in North Analysis Area.

The largest and most prominent civic space is Romford Market Place. Approximately 0.95 hectares in size; it is located in the Central Analysis Area.

Other sites and areas function in a secondary role as civic space provision. For example, park sites such as Harrow Lodge Park provides use associated with civic spaces - including local community events. For the purposes of this report such sites have not been classified as civic space provision due to their more prominent primary function and use.

10.3 Accessibility

No accessibility standard has been set for civic spaces. Figure 10.1 shows civic spaces mapped against analysis areas.

Figure 10.1: Civic spaces mapped against analysis areas

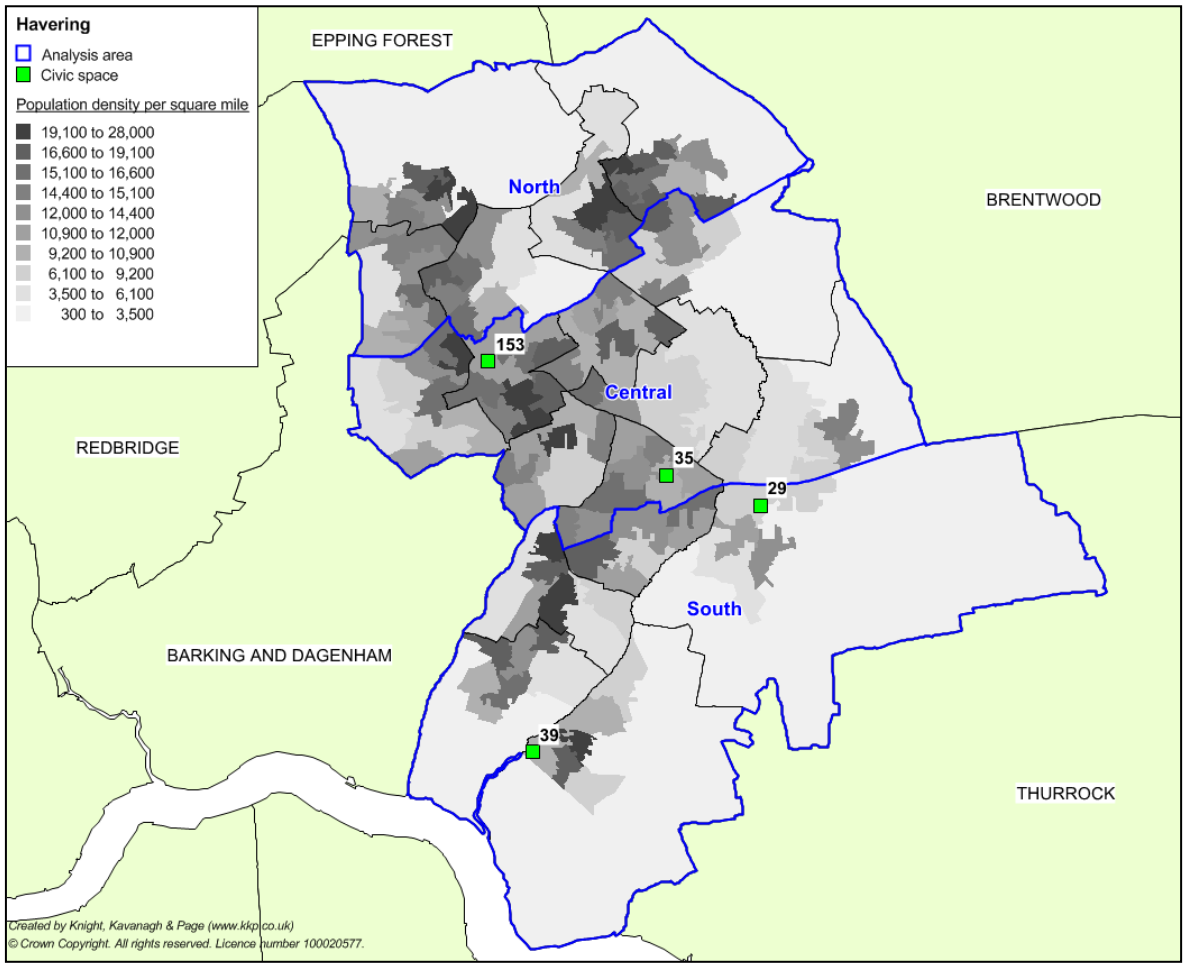

Table 10.2: Key to sites mapped

Site ID	Site name	Analysis area	Quality score	Value score
29	Upminster War Memorial	South		
35	Hornchurch War Memorial	Central		
39	Rainham War Memorial	South		
153	Romford Market Place	Central		

The Romford Market Place site does not receive a quality or value score due to its late inclusion to the study; after site visit audit had been completed.

The North Analysis Area is without access to designated civic space provision. However, it is reasonable to accept that formal civic space may only be at existing sites of provision.

10.4 Quality

In order to determine whether sites are high or low quality (as recommended by guidance); the scores from the site assessments have been colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results of the quality assessment for civic spaces in LBH. A threshold of 50% is applied in order to identify high and low quality. Further explanation of how the quality scores and thresholds are derived can be found in Part 2 (Methodology).

Table 10.3: Quality ratings for civic spaces by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <50%	High >50%
Central	**141**	51%	51%	51%	-	-	1
North	**141**	-	-	-	-	-	-
South	**141**	51%	53%	56%	5%	-	2
HAVERING	**141**	**51%**	**53%**	**56%**	**5%**	**-**	**3**

The Romford Market Place site does not receive a quality or value score due to its late inclusion to the study.

All three assessed civic spaces rate above the threshold set. The sites are all relatively small in size but are observed as being of an overall good quality. As the name of the sites suggests their main function is as memorials. Subsequently little if any ancillary features are noted. However, this is not detrimental to the overall quality and appearance of provision.

10.5 Value

To determine whether sites are high or low value (as recommended by the Companion Guidance) site assessment scores have been colour-coded against a baseline threshold (high being green and low being red). The table below summarises the results of the value assessment for civic spaces in LBH. A threshold of 20% is applied in order to identify high and low value. Further explanation of how the value scores and thresholds are derived can be found in Part 2 (Methodology).

Table 10.4: Value ratings for civic spaces by analysis area

Analysis area	Maximum score	Scores			Spread	No. of sites	
		Lowest score	Average score	Highest score		Low <20%	High >20%
Central	95	53%	53%	53%	-		1
North	95	-	-	-	-	-	-
South	95	42%	47%	52%	-	-	2
HAVERING	**95**	**42%**	**49%**	**53%**	**11%**	**-**	**3**

The Romford Market Place site does not receive a quality or value score due to its late inclusion to the study.

All three civic spaces assessed are rated as being of high value, reflecting their cultural and heritage role whilst also providing an important function to the local community and area. This is further supported by site visit observations, which confirms the historical and cultural value of the sites through their status as war memorials.

Despite not being assessed for quality or value, the Romford Market Place is likely to be a key form of civic space providing a significant role to the community. The site hosts regular markets as well as seasonal events throughout the year. It is subject to future regeneration plans looking to focus on the historic and potential event space offered by the site.

10.6 Summary

Civic space summary

- Four are sites classified as civic spaces in LBH equating to less than one hectares of provision. Most sites are identified as war memorials with the exception of Romford Market Place.
- Other forms of provision in the area (e.g. parks and gardens) also provide localised opportunities associated with the function of civic space.
- Quality and value of provision is good with an acceptable maintenance and appearance. Sites provide an important and unique cultural/heritage role to local communities.
- The Market Place is subject to regeneration plans which will further increase its quality and value.

APPENDICES

Appendix 1: Communities Survey

A summary of the 192 responses from the local communities' survey whilst a valuable tool the survey is only a small part of the process, its role is to supplement best practice and widely accepted industry standards.

The survey ran for six weeks from 23rd September to the 4th November with an extension to the end of November. Links to the survey were made available via the council's website and on social media outlets. No demographic information (e.g. gender, age and ethnicity) was asked for as part of the survey questions at the request of the Council.

Q10 and Q11: Postcode/area

A total of 187 out of the 192 respondents provided a postcode. These can be analysed by the area the postcode represents and the analysis area they fit within.

Post code	Approximate area	Analysis area	Respondents	%
RM1	Romford	Central	6	3.2
RM2	Gidea Park	Central	18	9.6

LONDON BOROUGH OF HAVERING
OPEN SPACE STANDARDS PAPER

INTRODUCTION

This is the Open Space Standards Paper prepared by Knight, Kavanagh & Page (KKP) for London Borough of Havering (LBH). It follows on from the preceding Open Space Assessment Report. Together the two documents provide an evidence base to help inform the future provision for open spaces in the Havering area.

The study sits alongside the Playing Pitch Strategy (PPS) and the Indoor Sport and Leisure Facility Strategy which are also being undertaken by KKP (provided in separate reports). The open space typology of formal outdoor sports is covered within the associated PPS. The PPS is undertaken in accordance with the methodology provided in Sport England's 'Playing Pitch Strategy Guidance: An approach to developing and delivering a Playing Pitch Strategy' (2013). The Indoor Sport and Leisure Facility Strategy is in accordance with Sport England's Assessing Needs and Opportunities Guide (ANOG) for indoor and outdoor sports facilities 2014.

The evidence presented in this report should be used to inform local plan and supplementary planning documents. It helps identify the deficiencies and surpluses in existing and future provision. In addition, it should help set an approach to securing open space facilities through new housing development and help form the basis for negotiation with developers for contributions towards the provision of appropriate open space facilities and their long term maintenance.

Scope

In accordance with best practice recommendations a size threshold of 0.2 hectares has been applied to the inclusion of some typologies within the study. This means that, in general, sites that fall below this threshold are not audited. The table below details the open space typologies included within the study:

	Typology	Primary purpose
Greenspaces	Parks and gardens	Accessible, high quality opportunities for informal recreation and community events.
	Natural and semi-natural greenspaces	Wildlife conservation, biodiversity and environmental education and awareness. Includes urban woodland and beaches, where appropriate.
	Amenity greenspace	Opportunities for informal activities close to home or work or enhancement of the appearance of residential or other areas.
	Provision for children and young people	Areas designed primarily for play and social interaction involving children and young people, such as equipped play areas, MUGAs, skateboard areas and teenage shelters.
	Allotments	Opportunities for those people who wish to do so to grow their own produce as part of the long term promotion of sustainability, health and social inclusion.
	Cemeteries, disused churchyards and other burial grounds	Quiet contemplation and burial of the dead, often linked to the promotion of wildlife conservation and biodiversity.

	Typology	Primary purpose
Civic spaces	Civic and market squares and other hard surfaced areas designed for pedestrians including the promenade	Providing a setting for civic buidings, public demonstrations and community events.

The provision standards used to determine deficiencies and surpluses for open space are set in terms of quantity, quality and accessibility throughout the report.

ASSESSMENT REPORT SUMMARIES

The following section provides a summary from the Assessment Report on a typology by typology basis.

Parks and gardens

- 24 sites are classified as parks and gardens totaling 641 hectares.
- Catchment gaps are noted to the east of the Central Analysis Area and to the south west of the South Analysis Area. This is thought to be sufficiently serviced by other forms of open space such as amenity greenspace which provide opportunities to recreation.
- Nearly all parks score both above and below the threshold for quality. The lowest scoring site is Grenfell Park. Issues with litter are highlighted.
- High scoring sites for quality, such as Upminster Park and Raphael Park, do so due to the wide range of features they contain and the excellent standards of provision.
- There are several sites with Green Flag Award status.
- All sites (except one) are assessed as being of high value, with the important social interaction, health benefits, ecological value and sense of place sites offer being recognised.

Natural and semi-natural greenspace

- LBH has 22 natural and semi-natural greenspace sites covering 441 hectares. The area also contains the nationally recognised Rainham Marshes RSPB Reserve.
- The 30 minute drive time accessibility standard shows no shortfalls. However, gaps are highlighted from the 10 minute walk time catchment; mostly the densely populated areas. New natural sites are not thought to be required to meet this gap but there may be a need to ensure that other types of open spaces contain such associated features.
- There are seven designated LNRs in LBH which means the area sufficiently meets the ANGSt standard recommended for provision.
- Natural greenspace sites are of good quality with 77% rating above the threshold.
- Sites rating below the threshold are due to a poor general appearance and cleanliness. Often other issues are observed such as litter and fly tipping.
- Nearly all sites rate above the threshold for value. Only three score below the threshold; Straight Road Woodlands, Shoulder of Mutton and The Chase. These also rate low for quality. However, their role as habitat provision is acknowledged.
- Higher scoring sites for value, such as Broadfields & Thames Chase Forest Centre, provide an excellent range of opportunities and uses for visitors.

Amenity greenspace

- There are 54 amenity greenspace sites in LBH; 129 hectares of amenity space.
- Provision is relatively evenly spread across LBH. Although the Central Analysis Area has a slightly lower amount per 1,000 populations (0.39) compared to 0.68 and 0.56 respectively for the North and South areas.
- The 10 minute walk time suggests a good level of coverage. Gaps in provision are noted against a five minute walk time. These are, however, served by other open space typologies.
- Overall amenity greenspaces quality is positive. Half of sites rate above the threshold and only a handful face any specific issues; some due to size, access or maintenance.
- In addition to its multifunctional role, amenity greenspace makes a valuable contribution to visual aesthetics for communities – hence most sites rate above the threshold for value.
- 17 sites rate low for quality and value. Where they cannot be improved, some may be better suited to be/become different forms of open space or could feasibly be surplus.

Provision for children and young people

- There are 40 play provision sites in LBH; a total of over six hectares.
- Over half of play provision sites (22) are identified as also containing play facilities catering for older age ranges. There are also 14 sites with outdoor gym equipment.
- The South Analysis Areas has the highest amount of provision per 1,000 populations. Not surprisingly the area has the greater amount of total provision.
- The 10 minute walk time accessibility standard covers the majority of the area. However, there are a few gaps noted in the Central and South Analysis Areas.
- The majority (80%) play sites are above the threshold for quality. Quality is generally good. There are a few sites where a perceived lack of maintenance and appearance is noted.
- All play provision is rated above the threshold for value.

Allotments

- There are 27 allotments sites in LBH: equating to more than 36 hectares.
- All are owned by the Council and self managed by allotment association.
- Current amount of provision is below the NSALG recommended amount. Furthermore, no individual analysis area meets the NSALG standard either.
- There are waiting lists for allotments across LBH; suggesting that demand for allotments is not currently being met by supply.
- Despite a few sites being below the quality threshold, for the majority of allotments quality is sufficient.
- All allotments are assessed as high value reflecting the associated social inclusion and health benefits, their amenity value and the sense of place offered by provision.
- Continuing measures should be made to provide additional plots in the future.

Cemeteries

- LBH has six cemeteries and churchyards: just less than 29 hectares of provision.
- There is a fairly even distribution of provision across Havering.
- The need for additional burial provision is driven by the demand for burials and capacity; currently there would appear to be a sufficient amount of capacity remaining.
- Nearly all cemeteries and churchyards rate above the threshold for quality. However, one sites rates below the threshold. This is viewed as having a poorer level of maintenance and appearance in comparisons to other sites.

  All cemeteries are assessed as high value in LBH, reflecting that generally provision has a cultural/heritage role and provide a sense of place to the local community.

Civic space

- Four are sites classified as civic spaces in LBH equating to less than one hectares of provision. Most sites are identified as war memorials with the exception of Romford Market Place.
- Other forms of provision in the area (e.g. parks and gardens) also provide localised opportunities associated with the function of civic space.
- Quality and value of provision is good with an acceptable maintenance and appearance. Sites provide an important and unique cultural/heritage role to local communities.
- The Market Place is subject to regeneration plans which will further increase its quality and value.

QUALITY STANDARDS

The quality standard is in the form of a quality and value matrix. In order to determine whether sites are high or low quality (as recommended by best practice guidance) the results of the site assessments have been colour-coded against a baseline threshold; high being green and low being red.

The primary aim of applying a threshold is to identify sites where investment and/or improvements may be required. It can also be used to set an aspirational quality standard to be achieved (if desired) in the future and to inform decisions around the need to further protect sites from future development (particularly when applied with its respective value score in a matrix format).

The base line threshold for assessing quality is set around 60%, based on the pass rate for Green Flag Award criteria (site visit criteria also being based on the Green Flag Award). This is the only national benchmark available for parks and open spaces. No other good practice examples are adopted for the setting of quality and value thresholds in the UK.

Site visit criteria used for Green Flag are not always appropriate for every open space typology and are designed to represent an exceptionally high standard of site. Therefore, the baseline threshold (and subsequent applied standard) for certain typologies is lowered to better reflect local circumstances, whilst still providing a distinction between sites of a higher or lower quality.

Quality and value thresholds

Typology	Quality threshold	Value threshold
Parks and gardens	60%	20%
Natural and semi-natural greenspace	50%	20%
Amenity greenspace	50%	20%
Provision for children and young people	60%	20%
Allotments	50%	20%
Cemeteries/churchyards	60%	20%
Civic space	50%	20%

Identifying deficiencies

Quality

The following table is a summary of the application of the quality standards in Havering.

Quality scores for all open space typologies

Typology	Threshold	Scores			No. of sites	
		Lowest score	Average score	Highest score	Low	High
Allotments	50%	36%	53%	70%	4	18
Amenity greenspace	40%	9%	48%	75%	27	27
Cemeteries/churchyards	50%	66%	73%	89%	1	5
Provision for children & young people	60%	30%	66%	90%	8	32
Civic space	50%	51%	53%	56%	-	3
Park and gardens	50%	18%	53%	86%	5	17
Natural & semi-natural greenspace	60%	31%	71%	93%	2	22
TOTAL	**-**	**9%**	**59%**	**93%**	**47**	**124**

A total of 171 sites receive a rating for quality and value out of the 176 site included in the audit. Sites not receiving a quality and value score were either not viewable at the time of the visit or only added to the study at a late stage.

Most assessed open spaces in LBH (73%) rate above the quality thresholds set. Proportionally a higher percentage of parks and gardens (77%) rate above the threshold for quality. This is a reflection of their excellent appearance and high standard.

The typologies of cemeteries, provision for children and young people, civic space and natural and semi-natural greenspace are generally all of a good quality. In particular, the proportion of natural and semi-natural greenspace and cemeteries rate as being of a high quality is noticeable. Although these typologies still contain rating below the thresholds.

Amenity greenspace has a higher proportion of sites to rate below the threshold than compared to other typologies; half of provision scores low for quality. This is thought to reflect the difference in the wide range and type of sites classified under this typology; as some sites are without additional features or facilities in comparison to others.

Value

The following table is a summary of the application of the value standards in Havering.

Value scores for all open space typologies

Typology	Threshold	Scores			No. of sites	
		Lowest score	Average score	Highest score	Low	High
Allotments	20%	28%	37%	48%	-	22
Amenity greenspace	20%	4%	29%	61%	17	37
Cemeteries/churchyards	20%	30%	43%	59%	-	6
Provision for children & young people	20%	36%	60%	87%	-	40
Civic space	20%	42%	49%	53%	-	3
Natural & semi-natural greenspace	20%	12%	35%	64%	3	19
Park and gardens	20%	15%	54%	77%	1	23
TOTAL	**20%**	**4%**	**44%**	**87%**	**21**	**150**

The majority of sites (88%) are assessed as being above the threshold for value. That nearly all typologies rate high for value reflects their role in and importance to local communities and environments.

Amenity greenspaces have a slightly higher proportion of low value provision. This reflects a lack of ancillary features at some sites leading to a lack of recreational use in comparison to other sites. The typology also contains a number of smaller sized sites. However, the value these provide in offering a visual and recreational amenity as well as a break in the built form can still be important.

A high value site is considered to be one that is well used by the local community, well maintained (with a balance for conservation), provides a safe environment and has features of interest; for example, play equipment and landscaping. Sites that provide for a cross section of users and have a multi-functional use are considered a higher value than those offering limited functions and that are thought of as bland and unattractive.

Quality and value matrix

Assessing the quality and value of open spaces is used to identify those sites which should be given the highest level of protection by the planning system, those which require enhancement in some way and those which may no longer be needed for their present purpose.

When analysing the quality/value of a site it should be done in conjunction with regard to the quantity of provision in the area (whether there is a deficiency).

Presented below is a high/low classification giving the following possible combinations of quality and value for open spaces:

High quality/low value

The preferred policy approach to a space in this category should be to enhance its value in terms of its present primary purpose. If this is not possible, the next best policy approach is to consider whether it might be of high value if converted to some other primary purpose (i.e. another open space type). Only if this is also impossible will it be acceptable to consider a change of use.

High quality/high value

All open spaces should have an aspiration to come into this category and the planning system should then seek to protect them. Sites of this category should be viewed as being key forms of open space provision.

Low quality/low value

The policy approach to these spaces or facilities in areas of identified shortfall should be to enhance their quality provided it is possible also to enhance their value.

For spaces or facilities in areas of surplus a change of primary typology should be first considered. If no shortfall of other open space typologies is noted than the space or facility may be redundant/ 'surplus to requirements'.

If there is a choice of spaces or facilities of equal quality to declare surplus, and no need to use one or part of one to remedy a deficiency in some other form of open space or sport and recreation provision, it will normally be sensible to consider the one with the lowest value to be more disposable. Similarly, if two are of equal value, it will normally be sensible to consider disposal of the one of lower quality.

Low quality/high value

The policy approach to these spaces should be to enhance their quality to the applied standards. Therefore, the planning system should initially seek to protect them if they are not already so.

Please refer to the Appendix for tables showing the application of the quality and value matrix presented for each analysis area. However, the following tables provide a summary of the matrix. The location and proximity to similar open space typologies has been used to identify if the action identified for a site should be a priority

Policy implications and recommendations

Following application of the quality and value matrix a summary of the actions for any relevant sites in each analysis area is shown below.

Central Analysis Area

Summary	Action
Allotments	
◂ Two allotments score low for quality; Strathmore Gardens and Macon Way	◂ Enhance quality of sites where possible; review site security and general site appearance.
Amenity greenspace	
◂ Low quality ratings at three sites; Jutsums Recreation Ground, Fleet Close and Cornflower Way ◂ Seven sites rate low for quality and value	◂ Quality of sites should be enhanced where possible. Explore controls to prevent illegal use and pathways. ◂ Explore access at sites such as Rush Green, Whitelands Way and The Dell. ◂ Explore enhancing quality of larger sites with greater recreational potential such as Lilliput Road and Elliot Playing Field (e.g. introduction of greater ancillary features such play equipment).
Cemeteries and churchyards	
◂ All sites rate high for quality and value	n/a
Parks and gardens	
◂ Low quality rating for Havering Well Garden ◂ Low quality and value rating for Grenfell Park	◂ Site quality should look to be enhanced where possible (e.g. review site appearance and paths to bring in line with other provision sites of same type) ◂ Enhance quality of site with view to also enhancing value (e.g. review maintenance and general site appearance in line with other provision sites of same type)
Natural and semi-natural greenspace	
◂ Low quality and value rating for The Chase	◂ Enhance quality of site with view to also enhancing value where possible (e.g. explore appearance improvement options and condition/quality of paths).
Provision for children and young people	
◂ Low quality rating for three sites; Bancroft Chase Playsite, Jutsums Recreation Ground and Fleet Close Playsite.	◂ Quality of sites should be enhanced where possible; exploring the range and general quality of equipment on sites may be appropriate.

North Analysis Area

Summary	Action
Allotments	
◂ Two allotments score low for quality; Robin Close and Havering Grange.	◂ Enhance general quality of site where possible.
Amenity greenspace	
◂ Low quality ratings at four sites; Priory Road, Farringdon Avenue, Chudleigh Road & Broxhill Centre. ◂ Three sites rate low for quality and value; Sheffield Drive, Keats Avenue and Gooshays Garden	◂ Quality of sites should be enhanced where possible. General appearance and maitneance should be reviewed. ◂ Enhance quality of sites if also possible to enhance value.
Cemeteries and churchyards	
◂ All sites rate high for quality and value	n/a
Parks and gardens	
◂ All sites rate high for quality and value	n/a
Provision for children and young people	
◂ Low quality rating for two sites; St Neots Play Area and Myrtle Road Play Area.	◂ Quality of sites should be enhanced where possible; quality of equipment on sites should be reviewed.
Natural and semi-natural greenspace	
◂ Low quality rating for Shoulder of Mutton Wood and Sage Wood. ◂ Two sites score low on quality and value; Straight Road Woodlands and Haunted House Woods.	◂ Site quality should look to be enhanced where possible (e.g. explore options to improve site security and maintenance). ◂ Enhance quality of the two sites if possible to also enhance value (e.g. review appearance and maintenance of sites).
Provision for children and young people	
◂ Low quality rating for three sites; Bancroft Chase Playsite, Jutsums Recreation Ground and Fleet Close Playsite.	◂ Quality of sites should be enhanced where possible; exploring the range and general quality of equipment on sites may be appropriate.

South Analysis Area

Summary	Action
Allotments	
◂ All assessed sites rate high for quality and value	n/a
Amenity greenspace	
◂ Two sites rate low for quality; Ockendon Road and The Glens. ◂ Seven sites rate low for quality and value	◂ Look to enhance site quality where possible (e.g. review maintenance of sites) ◂ Explore possibility to enhance quality of larger sites such as Stirling Close provided it is possible to also enhance value.

Summary	Action
Cemeteries and churchyards	
◂ St Helens & St Giles Churchyard rates low for quality.	◂ Site quality should look to be enhanced where possible; explore maintenance regime.
Parks and gardens	
◂ All sites rate high for quality and value	n/a
Provision for children and young people	
◂ Low quality rating for two sites; Whybridge Close Playsite and Brookway Playsite.	◂ Quality of sites should be enhanced where possible; quality and range of equipment on sites should be reviewed.
Natural and semi-natural greenspace	
◂ All sites rate high for quality and value	n/a

Management and development

The following issues should be considered when undertaking site development or enhancement:

- Site's significance to local area and community.
- Planning permission requirements and any foreseen difficulties in securing permission.
- Gaining revenue funding from planning contributions in order to maintain existing sites.
- Gaining planning contributions to assist with the creation of new provision where need has been identified.
- Analysis of the possibility of shared site management opportunities.
- The availability of opportunities to lease site to external organisations.
- Options to assist community groups/parish councils to gain funding to enhance existing provision.
- Negotiation with landowners to increase access to private strategic sites.

Community funding sources

Outside of developer contributions there are also a number of potential funding sources[1] available to community and voluntary groups. Each scheme is different and is designed to serve a different purpose. In order for any bid to be successful consideration to the schemes criteria and the applicant's objectives is needed. Sources for funding applications are continuously changing and regular checking of funding providers should be undertaken.

ACCESSIBILITY STANDARDS

Accessibility standards for different types of provision are a tool to identify communities currently not served by existing facilities. It is recognised that factors that underpin catchment areas vary from person to person, day to day and hour to hour. This problem is overcome by accepting the concept of 'effective catchments', defined as the distance that would be travelled by the majority of users.

Guidance is offered by the Greater London Authority (GLA) (2008): 'Open Space Strategies: Best Practice Guidance' and Fields In Trust; 'Beyond Six Acre Standard' (2015) with regard to appropriate catchment areas for authorities to use. However, in order to make accessibility standards more locally specific to Havering, we propose to use data from the survey consultation to set appropriate catchments. The following standards are recorded from the survey in relation to how far individuals are willing to travel to access different types of open space provision.

Table 4: Accessibility standards to travel to open space provision

Typology	Applied standard
Parks and gardens	15 minute walk time (1,200m)
Natural and semi-natural	10 minute walk time (800m)
	30 minute drive time
Amenity greenspace	5 minute (400m) & 10 minute (800m) walk time
Provision for children and young people	10 minute walk time (800m)
Allotments	10 minute walk time (800m)
Cemeteries	No standard set
Civic spaces	No standard set

Most typologies are set as having an accessibility standard of a 10 minute walk time. However, for certain typologies, such as amenity greenspace, accessibility is deemed to be more locally based. Subsequently a shorter accessibility standard has been applied.

For other forms of provision such as parks and gardens and natural and semi-natural greenspace a willingness to travel further is highlighted. Therefore, a slightly longer distance of standard is applied.

No standard is set for the typologies of cemeteries or civic spaces. It is difficult to assess such typologies against catchment areas due to their nature and usage. For cemeteries, provision should be determined by demand for burial space.

Identifying deficiencies

If an area does not have access to the required level of provision (consistent with the hierarchy) it is deemed deficient. KKP has estimated how many sites, of a minimum size are needed to provide comprehensive access to this type of provision (in hectares).

The GLA and FIT provide some guidance on minimum site sizes available for open spaces in instances where provision is deemed missing:

GLA minimum size of site:

Classification	Minimum size of site
Allotments	0.4 ha (0.025 per plot)
Amenity greenspace	0.4 ha
Civic spaces	0.4 ha
Natural and semi natural	0.4 ha
Parks and gardens	2 ha
Play areas (equipped)[2]	0.04 ha
Play areas (informal/casual)	0.04 ha

Source: GLA Open space strategies: Best practice guidance (2009)

Policy implications and recommendations

In general, the applied walk time catchment for each typology tends to cover the analysis areas. However, minor gaps are highlighted for certain typologies.

The table below summaries the deficiencies identified from the application of the accessibility standards, together with the recommended actions. Please refer to the Open Space Assessment Report to view the maps.

Central Analysis Area

Typology	Identified need (catchment gap)	Action
Amenity greenspace	◂ Noticeably gaps to central area	◂ Gap is served by other provision sites such as Lodge Farm Park and Cotton Park.
Parks and gardens	◂ Sight gap to east of central analysis area	◂ Gap is served by other provision sites such as Folkes Land Woodland and AGS such as Upminster Hall Playing Fields and Cranham Playing Fields.
Provision for children and young people	◂ Gap in provision observed to Gallows Corner area. Minor gap to Emerson Park area.	◂ New play provision should be sought to a minimum size of 0.04 hectares each in order to meet gap in catchment mapping in Gallows Corner and Emerson Park.

North Analysis Area

Typology	Identified need (catchment gap)	Action
Amenity greenspace	◂ Minor catchment gaps in amenity provision identified.	◂ Gap is served by other provision sites such as Havering Country Park and Lawns Park.

[2] Minimum recommended size for play areas by Fields In Trust

Typology	Identified need (catchment gap)	Action
Provision for children and young people	◂ No gaps in provision for younger children.	◂ n/a

South Analysis Area

Typology	Identified need (catchment gap)	Action
Parks and gardens	◂ Sight gap to south west of south analysis area	◂ Gap is served by other provision sites such as Ingrebourne Hill and Mardyke.
Provision for children and young people	◂ Gap in provision observed on border of Central Analysis Area. Gap also observed to the east of Rainham.	◂ New play provision should be sought to a minimum size of 0.04 hectares each in order to meet gap in catchment mapping in Gallows Corner and Emerson Park.

QUANTITY STANDARDS

The following calculation is an example of how we calculate quantity standards for the London Borough of Havering. This is done on a typology by typology basis to calculate how much open space provision per 1,000 people is needed to strategically serve the area now and in the future. An explanation about the different column headings can be found on the following pages.

Analysis areas	Current provision (ha)* (A)	Current population (B)	Current standard (C)	Identified deficiencies† (D)	Total future provision (ha) (E)	Standard based on current demand (F)	Future population (G)	Provision in 2031 (ha) (H)	Provision in 2031 based on LBH standard (ha) (I)
Area A (1)			A/B*1000		A+D	E/B*1000		F*G/1000-A	F4*G/1000-A
Area B (2)									
Area C (3)									
Study Area (4)									

No quantity standard is set for cemetery provision. As such provision is determined by demand for burial space.

* Taken from the project/audit database, supplied as an electronic file
† Provision to meet catchment gaps

Current level of provision (column A)

The starting point for calculating quantative standards is the total current provision within a given analysis area. Current provision usually has a high impact on aspirational future standards. Residents often base their judgement of need on or around current provision.

Current population (column B)

The current population in 2016 for the Havering area is 248,900 (Greater London Authority 2015 round ward population projections – SHLAA based; Capped Household Size model).

Current standard (column C)

A current standard (on a 'per 1,000 population of head') is calculated for each analysis area by dividing the current level of provision for a typology by the population identified in an analysis area.

Deficiencies (column D)

The accessibility catchment mapping (outlined above) is primarily used to demonstrate which areas are deficient in provision. Deficiency against the catchment mapping is calculated by identifying gaps/areas not covered by the minimum level of provision required (as illustrated in the maps contained within the assessment report). This is based on achieving comprehensive access, whereby people across the LB Havering can access different types of open space within specific distances and/or walking times (see accessibility standards earlier).

If a settlement does not have access to the required level of open space provision (as identified by mapping) it is deemed deficient. KKP has estimated how many sites, of a minimum size (i.e., as recommended by guidance), are needed to provide comprehensive access to this type of provision.

Total future provision (column E)

The total amount of provision required in the future for an analysis area is calculated by adding any identified deficiencies to the current level of existing provision. This ensures that provision needed to meet existing gaps is incorporated into the standards and calculations for the future.

Standard based on current demand (column F)

Once a new total amount of provision is gained by adding in any deficiencies to the current provision, a current minimum provision standard can be calculated. This takes into account current demand for open spaces and should be specific to each particular area.

Future population (column G)

By 2031 the Borough's population is projected to increase to 279,729 representing an increase of 30,829 (or equivalent to a percentage increase of 12.4%) according to the same GLA 2015 population projections. The current and predicted populations for each of the analysis areas within the LB Havering are shown in Table 6.

Table 6: Population projections

Analysis area	Current Population	Population increase	Population in 2031
Central	113,629	17,397	131,026
North	69,247	2,445	71,692
South	66,024	10,987	77,011
LB HAVERING	**248,900**	**30,829**	**279,729**

GLA 2015 round ward population projections - SHLAA-based; Capped Household Size model

Provision in 2031 (column H)

This column substantiates the actual deficiency in terms of the difference in hectares between current provision and future need for each analysis area, based on future growth having taken into account any identified deficiencies.

Provision in 2031 based on Havering standard (column I)

This column substantiates the deficiency in terms of the difference in hectares between current provision and future need for each analysis area. However, it benchmarks against the overall standard for the LB Havering rather than the individual standard for each analysis areas. No national standards for most open space typologies exist.

Parks and gardens

Analysis area	Current provision (ha) (A)	Current population (B)	Current standard (C)	Identified deficiencies (D)	Total future provision (ha) (E)	Standard based on current demand (F)	Future population (G)	Provision in 2031 (ha) (H)	Provision in 2031 based on Havering standard (ha) (I)
Central	115.18	113,629	1.01	-	115.18	1.01	131,026	**18.16**	222.87
North	334.55	69,247	4.83	-	334.55	4.83	71,692	**11.72**	-149.58
South	191.34	66,024	2.89	-	191.34	2.89	77,011	**31.22**	9.47
HAVERING	**641.07**	**248,900**	**2.58**	**-**	**641.07**	**2.58**	**279,729**	**80.63**	

To maintain existing levels of provision all three analysis areas indicate new parks provision is required up to 2031 (column H). Central Analysis Area, North Analysis Area and South Analysis Area suggest provision of 18.16, 11.72 and 31.22 hectares is required respectively. However, against the wider Havering standard (2.58 ha per 1,000 population) as shown in column I, the North Analysis Area does not require new provision as it sufficiently meets the amount of provision recommended based on the Havering standard. It is therefore unlikely that new provision of this type is required in the future.

The Central Analysis Area and South Analysis Area show deficiencies against both the analysis area standard and the Havering standard. Any identified gaps in catchment mapping are relatively small and are met by other forms of open space provision. Therefore, the focus should be on ensuring quality standards are being met for parks provision and that the quality of other forms of existing open space provision such as Upminster Hall Playing Field, Cranham Playing Fields and Mardyke AGS are sufficient.

Natural and semi-natural

Analysis area	Current provision (ha) (A)	Current population (B)	Current standard (C)	Identified deficiencies (D)	Total future provision (ha) (E)	Standard based on current demand (F)	Future population (G)	Provision in 2031 (ha) (H)	Provision in 2031 based on Havering standard (ha) (I)
Central	177.03	113,629	1.56	-	177.03	1.56	131,026	**27.37**	56.20
North	26.43	69,247	0.38	-	26.43	0.38	71,692	**0.81**	101.18
South	238.33	66,024	3.61	-	238.33	3.61	77,011	**39.68**	-101.25
HAVERING	**441.79**	**248,900**	**1.77**	**-**	**441.79**	**1.78**	**279,729**	**56.13**	

All analysis areas indicate new provision of natural and semi-natural greenspace is required up to 2031 (column H). The South Analysis Area highlights the need for a greater amount of provision of 39.68 hectares. However, against the wider Havering standard (1.78 ha per 1,000 population) in column I, the area does not require new provision as it sufficiently meets the amount of provision recommended. It is therefore unlikely that new forms of provision are required in the area.

The Central and North analysis areas show that new provision is required against the current standard (column H) and the wider Havering standard (column I). However, in both instances the future requirement is considerably less using the analysis area standard (column H).

Given the large amounts of existing natural and semi-natural greenspace already recorded across Havering as well, it is unlikely that new forms of natural and semi-natural greenspace are needed to be sought through developer contributions. The focus for natural provision should be on ensuring quality standards are being met (p8-10). Furthermore, a general consideration for future planning applications may be to ensure natural and semi-natural features are encouraged on new development sites.

Amenity greenspace

Analysis area	Current provision (ha) (A)	Current population (B)	Current standard (C)	Identified deficiencies (D)	Total future provision (ha) (E)	Standard based on current demand (F)	Future population (G)	Provision in 2031 (ha) (H)	Provision in 2031 based on Havering standard (ha) (I)
Central	44.85	113,629	0.39	-	44.85	0.39	131,026	**6.25**	23.28
North	47.20	69,247	0.68	-	47.20	0.68	71,692	**1.55**	-9.92
South	37.02	66,024	0.56	-	37.02	0.56	77,011	**6.11**	3.03
HAVERING	**129.06**	**248,900**	**0.52**	**-**	**129.06**	**0.52**	**279,729**	**16.40**	

All analysis areas indicate new provision of amenity greenspace is required up to 2031 (column H). The Central Analysis Area and South Analysis Area demonstrate a need for greater future provision against the current standard (column H) with 6.25 and 6.11 hectares required respectively. In the Central Analysis Area this requirement increases against the wider Havering standard (column I).

The North Analysis Area requires 1.55 ha in order to maintain existing levels for the future. However, against the wider Havering standard (0.52 ha per 1,000 population) in column I, the analysis area does not require new provision as it sufficiently meets the amount based on the wider Havering standard.

Improving the quality of existing provision currently scoring as low for quality and/or value should be considered the priority. Sites helping to serve gaps in other forms of open space provision should especially look to be of a high quality (e.g. Upminster Hall Playing Field, Cranham Playing Fields and Mardyke).

Provision for children and young people

Analysis area	Current provision (ha) (A)	Current population (B)	Current standard (C)	Identified deficiencies (D)	Total future provision (ha) (E)	Standard based on current demand (F)	Future population (G)	Provision in 2031 (ha) (H)	Provision in 2031 based on Havering standard (ha) (I)
Central	2.30	113,629	0.02	0.08	2.38	0.02	131,026	**0.32**	1.63
North	1.72	69,247	0.03	-	1.72	0.03	71,692	**0.43**	0.46
South	2.40	66,024	0.04	0.08	2.48	0.04	77,011	**0.68**	-0.09
HAVERING	**6.42**	**248,900**	**0.03**	**0.16**	**6.58**	**0.03**	**279,729**	**1.97**	

All analysis areas indicate new provision for children and young people is required up to 2031 (column H).

The South Analysis Area suggests a greater amount of provision is required with 0.68 hectares against the analysis area standards. However, against the wider Havering standard (0.03 ha per 1,000 population) in column I, the area does not require new provision as it sufficiently meets the amount of provision recommended.

Due to identified gaps in catchment mapping for the South Analysis Area additional provision should still be sought up to 2031; this is despite provision being sufficient against the wider Havering standard.

A priority should be to address the areas identified as having gaps in provision particularly in the Central and South analysis areas.

Allotments

Analysis area	Current provision (ha) (A)	Current population (B)	Current standard (C)	Identified deficiencies (D)	Total future provision (ha) (E)	Standard based on current demand (F)	Future population (G)	Provision in 2031 (ha) (H)	Provision in 2031 based on Havering standard (ha) (I)
Central	20.03	113,629	0.18	-	20.03	0.18	131,026	**3.55**	-0.38
North	5.02	69,247	0.07	-	5.02	0.07	71,692	**0.00**	5.73
South	11.89	66,024	0.18	-	11.89	0.18	77,011	**1.97**	-0.34
HAVERING	**36.94**	**248,900**	**0.15**	**-**	**36.94**	**0.15**	**279,729**	**5.02**	

Collectively the Havering area does not meet the suggested standard of 0.25 hectares per 1,000 population from the National Society of Allotment and Leisure Gardeners (NSALG). The North Analysis Area is noticeably below this standard.

There are also waiting lists at existing sites across Havering; suggesting demand for plots is not currently being met by supply.

It is recommended that waiting list numbers at sites, rather than the application of any standard such as the NSALG standard, may be more appropriate to determine the need for new provision. These will provide a truer reflection to the demand for additional provision.

POLICY ADVICE AND RECOMMENDATIONS

The following section provides a summary on the key findings application of the quantity, quality and accessibility standards. It incorporates and recommends what the Council should be seeking to achieve in order to address the issues highlighted.

Overview

Recommendation 1

- *Ensure low quality sites in areas are prioritised for enhancement*

The policy approach to these sites should be to enhance their quality to the applied standards (i.e. high quality). This is especially the case if the site is deemed to be of high value to the local community. Therefore, they should initially be protected, if they are not already so, in order for their quality to be improved.

The policy and implications summary of the quality and value matrix (p8-10) identifies those sites that should be given consideration for enhancement if possible.

It is also important for other low quality sites (that may also score low for value) to be addressed in terms of their quality deficiency if possible.

Recommendation 2

- *Ensure all sites assessed as high for quality and value are protected*

Sites within this category should be viewed as being key forms of open space provision. The quality and value matrix in the Appendix (p30-38) identifies those sites rating high for quality and value. It is important that the Council looks to retain sites of this classification.

Recommendation 3

- *Sites helping to serve analysis areas identified as having gaps in catchment mapping should be recognised through protection and enhancement*

The policy and implications summary for the accessibility catchment mapping (p12-13) highlights those sites that help to serve other forms of open space provision in the analysis area they are located.

These sites currently help to meet the identified catchment gaps for other open space typologies. The Council should seek to ensure the role and quality of these sites through greater levels and diverse range of features linked to these types of open space. This is in order to provide a stronger secondary role as well as opportunities associated with other open space types. This will also help to minimise the need for new provision in order to address gaps in catchments.

Recommendation 4

- *Recognise areas with surpluses in open space provision and how they may be able to meet other areas of need*

For sites identified as low value and/or low quality and value in areas (p8-10), if no improvements can be made a change of primary typology should be considered. If no shortfall of other open space typologies is noted, or it is not feasible to change the primary typology of the site, then the site may be redundant/ 'surplus to requirements'.

Recommendation 5

- *The need for additional allotment and cemetery provision should be led by demand*

No standards have been set for the provision of cemeteries. Instead provision should be determined by demand for burial space.

In terms of allotments there are waiting lists identified at sites across Havering, suggesting supply is not meeting demand. It is recommended that waiting list numbers, rather than the application of a standard, is more appropriate to determine the need for new provision.

Policy implications

The following section sets out the policy implications in terms of the planning process in Havering. This is intended to help steer the Council in seeking contributions to the improvement and/or provision of any new forms of open space.

How is provision to be made?

The requirements for on-site or off-site provision will vary according to the type of open space to be provided. Collecting contributions from developers can be undertaken through the following two processes.

Community Infrastructure Levy (CIL) and Planning Obligations are the two main mechanisms available to the Council to ensure future development addresses any adverse impacts it creates. If required, Planning Conditions can be used to ensure that key requirements are met.

Planning obligations

Planning Conditions and Obligations (often known as Section 106 Agreements) require individual developments to provide or pay for the provision of development specific infrastructure requirements. They are flexible and deliver a wide range of site and community infrastructure benefits.

A development should make appropriate provision of services, facilities and infrastructure to meet its own needs. Where sufficient capacity does not exist the development should contribute what is necessary, either on-site or by making a financial contribution towards provision elsewhere.

Community Infrastructure Levy (CIL)

The CIL is a newer method of requiring developers to fund infrastructure facilities including open spaces.

It should apply to most new developments and charges are based on the size and type of new development. It will generate funding to deliver a range of Borough wide and local infrastructure projects that support residential and economic growth.

CILs are to be levied on the gross internal floor space of the net additional liable development. The rate at which to charge such developments is set out within a council's Charging Schedule. This will be expressed in £ per m^2.

Seeking developer contributions

This document can inform policies and emerging planning documents by assisting in the Council's approach to securing open spaces through new housing development.

The guidance should form the basis for negotiation with developers to secure contributions for the provision of appropriate facilities and their long term maintenance.

Determining contributions

For planning obligations, the following elements should be considered when establishing whether open space provision is required and whether it should be provided on site:

- Identify a deficit - the total amount of open space provision within the locality and whether the amount of provision can contribute to the above quantity standards/levels set for each typology following completion of the development (p17-21).
- whether the locality is within the accessibility catchment standards as set for each open space typology (p12-13).
- whether enhancement of existing provision is required if either or both the quantity and accessibility standards are sufficiently met (p8-10).

In development areas where open space provision is identified as being sufficient in terms of quantity and subsequently, therefore, provision of new open space is not deemed necessary. It may be more suitable to seek contributions for quality improvements and/or new offsite provision in order to address any future demand.

Off site contributions

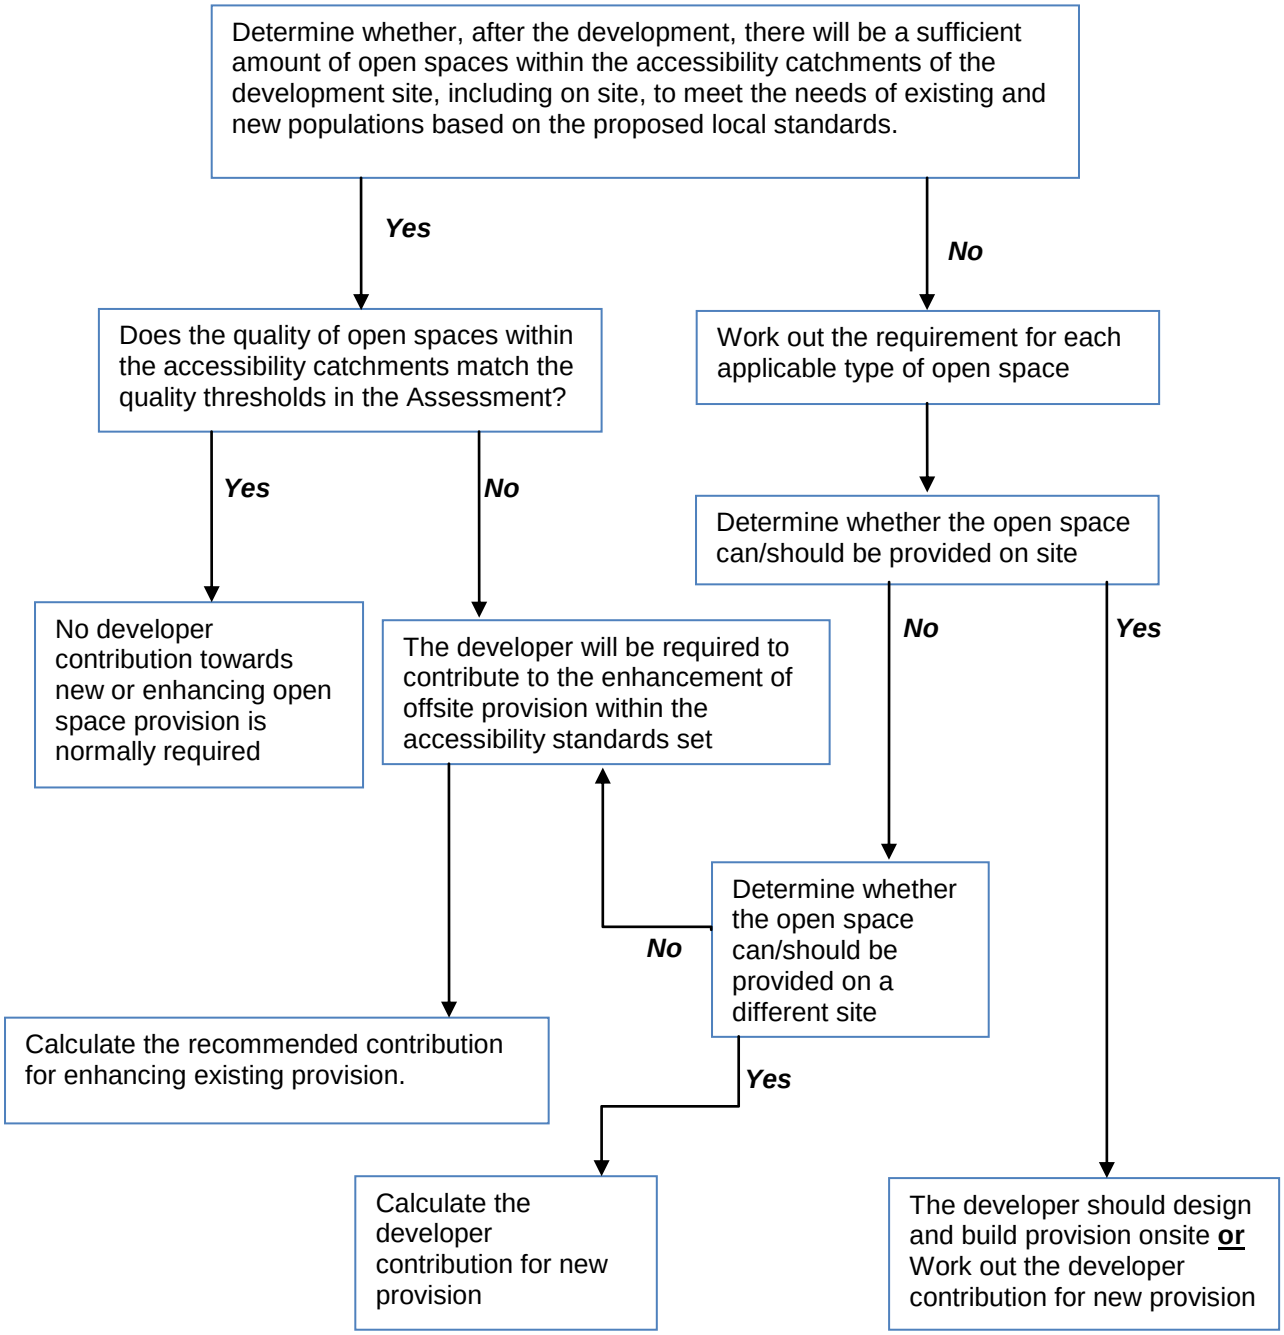
In instances where it is not realistic for new provision to be provided on site it may be more appropriate to seek to enhance the existing quality of provision and/or improve access to sites. Standard costs for the enhancement of existing open space and provision of new open spaces should be clearly identified and revised on a regular basis by the Council. A financial contribution should be, for example, required principally but not exclusively for the typologies identified in this document; subject to the appropriate authority providing and managing the forms of open space provision.

The wider benefits of open space sites and features regardless of size should be recognised as a key design principle for any new development. These features and elements can help to contribute to the perception of open space provision in an area.

At the same time as also ensuring an aesthetically pleasing landscape providing social and health benefits.

The figure below sets out the processes that should be considered when determining developer contributions towards open space, sport and recreation provision.

Determining s106 developer contributions



Maintenance contributions

There will be a requirement on developers to demonstrate that where onsite provision is to be provided it will be managed and maintained accordingly. In some instances the site may be adopted by the Council, which will require the developer to submit a sum of money in order to pay the costs of the sites future maintenance. Often the procedure for councils adopting new sites includes:

- The developer being responsible for maintenance of the site for an initial 12 months or a different agreed time period.
- Sums to cover the maintenance costs of a site (once transferred to the Council) should be intended to cover a period between 10 – 20 years.

Calculations to determine the amount of maintenance contributions required should be based on current maintenance costs. The typical maintenance costs for the site should also take into consideration its open space typology and size.

Calculating onsite contributions

The requirement for open spaces should be based upon the number of persons generated from the net increase in dwellings in the proposed scheme, using the average household occupancy rate of 2.3 persons per dwelling as derived from the Census. On this basis, 1,000 persons at 2.3 persons per household represent 435 dwellings.

The next stage is to calculate the open space requirement by typology per dwelling. This is calculated by multiplying 435 (dwellings) X the appropriate provision per dwelling by typology.

Using amenity greenspace in Central Analysis Area as an example, the recommended standard is 0.39 ha per 1,000 population (3,900 sq. metres per 1,000 population) or 435 dwellings. Therefore, by dividing 3,900 sq. metres by 435 dwellings a requirement for 9 sq. metres of amenity greenspace per dwelling is obtained.

Equipped play areas recommendation

Residential developments should normally be required to meet the need for play provision generated by the development on site, either as an integral part of the design, or through payment of a development contribution which will be used to install or upgrade play facilities in the vicinity of a proposed development.

Whilst the norm has been to expect provision to be made on site, consideration needs to be given to the feasibility of provision.

The Fields in Trust (FIT) recommended minimum area of a formal LAP (Local Area for Play) is approximately 0.01ha, or 100 sq. metres (0.01ha). Similarly, the FIT recommended area of a formal LEAP (Local Equipped Area for Play) is approximately 0.04 hectares, or 400 sq. metres per 1,000 population. Therefore, a significant amount of new housing in a development would be required to warrant on-site provision of formal children's play space.

This means that for a significant number of development sites, formal children's play space provision should take the form of developer contributions to up-grade local equipped children's play facilities in the vicinity of the development. However, informal provision may still need to be made on site in locations where the nearest existing play provision is deemed too far away.

The extent to which the amount of the required provision should be made on site by way of informal provision would be determined on a case by case basis subject to site size, shape, topography, the risk of conflict with existing neighbouring residential properties and feasibility. Any informal provision can include useable informal grassed areas but should not include landscaping areas as these are regarded as formal provision.

APPENDIX ONE

Quality and Value matrix

Assessing the quality and value of open spaces is used to identify those sites which should be given the highest level of protection by the planning system, those which require enhancement in some way and those which may be redundant in terms of their present purpose. Further guidance on the quality and value matrix is set out on p7.

EXECUTIVE SUMMARY

Introduction

This is the Indoor Sport and Leisure Assessment Report for the London Borough of Havering (LBH) for the fifteen year period 2016 – 2031. Recommendations set out in the accompanying strategy are drawn from this document which was researched and prepared between July – October 2015 by specialist sport and leisure consultancy, Knight Kavanagh and Page (KKP). Both the Assessment Report and Strategy were prepared in accordance with the 'Assessing Needs and Opportunities Guide for Indoor and Outdoor Sports Facilities (ANOG), Sport England, December 2014.

The consultant team would like to thank officers from LBH, Sport England, London Sport, national governing bodies of sport (NGBs), the Havering Sports Council and other organisations for the time and ideas they have contributed to the assessment and subsequent strategy formulation. All agencies will need to continue to work together to deliver this strategy.

Policy context

Engaging residents to take up and retain a level of physically literacy and activity is a high priority within the Government's strategy Sporting Future: A New Strategy for an Active Nation. Sport England's response to the Government's strategy has been to develop Towards an Active Nation (2016 - 2021). A key priority within this is to get the inactive active and to deliver the wider benefits of this including physical and mental wellbeing, economic and social development.

To provide a context for the strategy a broad range of national, regional and local policy documentation was reviewed. This included:

- Government Strategy for Sport 2017 - 2020
- Sport England: Towards an Active Nation (2016 - 2021)
- National Planning Policy Framework 2012
- Strategic Planning: Effective Co-operation for Planning Across Boundaries 2015
- Public Health England: Everybody Active Every Day, October 2014
- London Plan 2015
- London Borough of Havering Vision – Clean, safe and proud
- Corporate Plan 2015 – 16
- London Borough of Havering Cultural Strategy 2012 – 2024
- Havering Sport and Physical Strategy 2013 – 25
- Health and Well-Being 2012 – 2014.

In general terms, these strategies identify a broad set of aims and objectives to encourage:

- Healthy lifestyles for individuals.
- Healthier communities.
- Residents to be physically active through any means - to just playing sport.
- Increasing activity amongst all groups, including the very young and the elderly.
- Residents to be aware and understand the threat that a poor diet and lack of exercise can pose to physical and mental health and the well-being of individuals.
- Physical activity and sport to become a habit that is maintained throughout life.

The core message running through local strategic documentation is the requirement to ensure adequate, affordable opportunity for residents to take part in physical activity and to drive up participation levels. Providing facilities and programmes to help facilitate physical activity will, where appropriate, target the needs of identified groups in specific areas. It is, thus, essential that sports facilities of are available to the community and that the 'offer' is reflects local communities' needs.

The recent Government strategy confirms the recognition and understanding that sport makes a positive difference through broader means and that it will help the sector to deliver five simple but fundamental outcomes: physical health, mental health, individual development, social and community development and economic development.

Borough overview and influencing factors

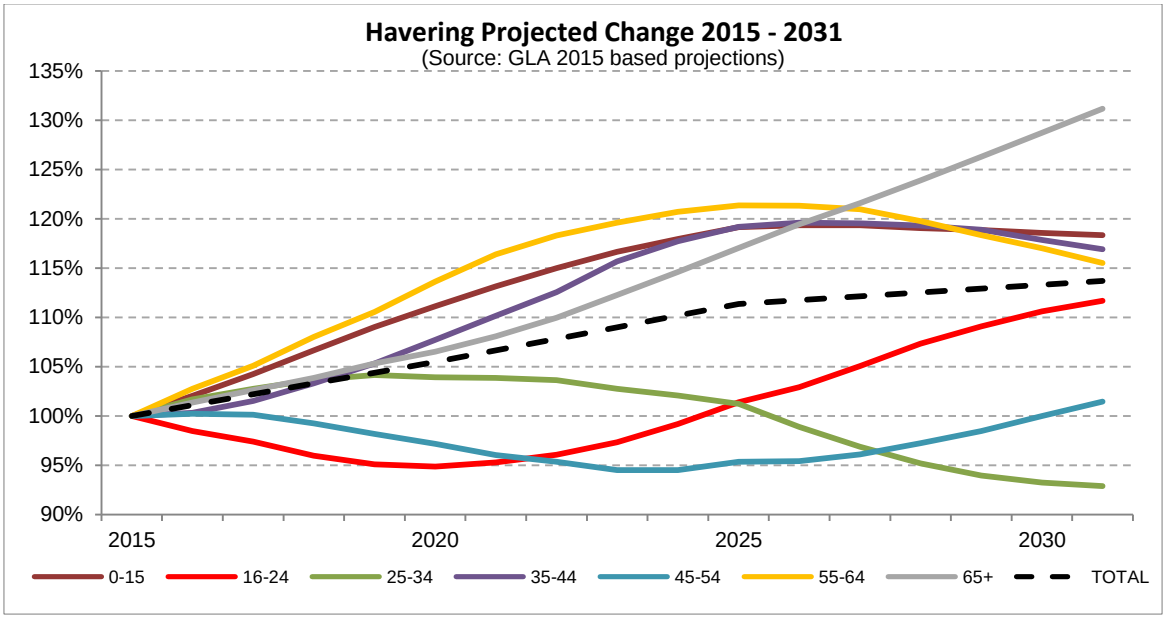
Population

The current total population of Havering (2014 MYE) is 244,729 (117,525 males and 127,203 females). The most recent Greater London Authority (GLA) projections indicate a rise of 13.7% in Havering's population (+34,109) over the 16 years from 2015 to 2031. The majority of the population is spread over five key settlement areas, Romford, Harold Wood, Harold Hill, Upminster, Hornchurch and Rainham. Many of the areas bordering Essex are rural in character. Circa 10% of LBH population belong to BME groups.

In addition to population growth, Havering will see significant change to the population profile over the period to 2037 as follows:

- A continual increase in 0-15 year olds up to 2025 before it levels off at 18% increase by 2031.
- The number of 16-24 year olds falls by circa 5% between 2015 and 2019 before rising again to 11.7% more than its 2015 baseline by 2031.
- An initial 4% rise in 25 – 34 year olds before a gradual reduction to 7% below its 2015 baseline by 2031.
- A continual increase in 35 - 44 year olds up to 2025 before it levels off at 17% increase by 2031.
- A reduction in the number of 45 - 54 year olds throughout the majority of the timeline prior to it rising to 1% increase on its 2015 baseline by 2031.
- A continual increase in 55 - 64 year olds, reaching a peak of 19.5% by 2025 before reducing slightly to 15.5% by 2031.
- A continual increase in the 65+ age group with a 31% increase by 2037

Figure 1: Projected population change (2015 -2031)[1]



Health

An estimated 8,800 children in Havering live in poverty, obesity is an issue in children and adults. To tackle these and other health issues Havering has identified the following as priorities:

- Reducing levels of obesity
- Improving the identification and support given to people with dementia
- Improving the quality of health care

  Source: PHE LB Havering Health Profile August 2014

Adult and childhood obesity rates in Havering (22.3% and 19.9% respectively) are generally similar to the national rates, reflecting the need to address these at a local level.

As with many other areas, obesity rates increase significantly between the ages of 4 and 10. Under 1 in 10 (9.6%) of children in Havering are obese in their Reception Year at school and 11.3% are overweight; by Year 6 these figures have risen to over 1 in 6 (19.9%) being obese and 15.1% being overweight. In total, by Year 6, over a third (35.0%) are either overweight or obese.

The annual cost to the NHS of physical inactivity in Havering is estimated at £4,306,560. When compared to regional and national costs per 100,000, Havering (£1,802,051) is 0.8% below the national average (£1,817,285) and 1.4% above the regional average (£1,776,346).

Housing and economic growth

In 2014, Havering had an estimated 99,230 dwellings, accommodating 97,500 household at an average of 2.6 persons per dwelling. The London Plan has set it a new house building

[1] *GLA Population Projections 2015 Round*

target of 1,170 per annum. There will be significant development in Romford Metropolitan Centre and at the London Riverside Opportunity Area in Rainham.

Crossrail, is expected to be a key driver of growth in Havering. Romford, a London Metropolitan Centre, is already a primary shopping and leisure destination and the new Crossrail links and the accessibility it affords will bring jobs, houses building, new residents and visitors directly into Havering.

It is anticipated that Crossrail will change the pattern of commuting in London opening up new areas for commuters to live, particularly in east London and Essex. The Crossrail service is expected to be completed and fully operational by 2019.

Havering Council intends to use this growth, and the opportunity presented by Crossrail as a driver to rejuvenate Romford town centre, through enhancing its character as a historic market town and as a developing centre for contemporary urban development. A significant element of this rejuvenation is the provision of a new leisure development in Station Quarter North to replace The Dolphin Pool which was closed in 1995 and the Romford Ice Rink which closed in 2013.

Sport and physical activity in LBH

The results of the Active People Survey (APS 8) indicates that 35.8% of adults in Havering participated in at least 1 x 30 minutes moderate intensity sport per week. This is equivalent to the national average and below regional averages.

Active People consistently demonstrates that adults from higher socio economic groups are more likely to take part in sport than the converse. According to APS 8 the most popular sports in LBH are going to the gym, cycling, swimming, fitness and conditioning, and athletics (running).

Table 1: Most popular sports in LBH[2]

Activity	Havering		London		England	
	No. (000s)	Rate	No. (000s)	Rate	No. (000s)	Rate
Gym	27.2	13.6%	885.0	13.9%	4,622.7	10.9%
Swimming	22.8	11.4%	757.6	11.9%	4,896.9	11.5%
Fitness & Conditioning	13.2	6.6%	519.2	8.1%	2,854.7	6.7%
Athletics	12.0	6.0%	550.1	8.6%	2,778.8	6.5%
Cycling	9.6	4.8%	421.5	6.6%	3,458.9	8.1%

The segmentation profile for Havering indicates Comfortable Mid-Life Males (Philip) to be the largest segment of the adult population at 9.9% (17,779) compared to a national average of 8.65%. Early Retirement Couples (Roger & Joy) and Settling Down Males (Tim) are the next two dominant groups, representing 19.8% (35,270) of the adult population, compared to 24.2% nationally.

[2] Sport England – Local Sports Profile & Active Places Survey

Implications for LBH

The next ten years in LBH will, as a result of the house building target, forecasted economic growth and the impact of Crossrail see significant growth in both population and housing, notably in Romford and Rainham. The other key settlements will continue to see new house building, as sites are brought to market.

Demand for high quality sport and recreation facilities, offering value for money will prevail, as will the need for continued support for voluntary and commercial sector sports clubs and facilities.

The socio-economic profile of LBH will, during the lifetime of the strategy (2015 - 2025), remain similar to its present form. Opportunities and facilities in which to take part in sport and physical activity will remain important to the population. Given the high profile and importance of being active to long term health outcomes it is anticipated that sports participation and activity rates in LBH will rise very slightly as new participants are encouraged to be active and 'returners' are tempted back.

The sports which are popular now in LBH, going to the gym, exercise classes, cycling, swimming and running are expected to continue to be the most popular. The rise in older persons could create demand less vigorous activities and more preventative classes, such as armchair exercise, walking and swimming.

Core provision

Sports halls

There are 21 sports halls in LBH. One eight court hall (Hornchurch Sports Complex), one five court hall (The Frances Bardsley School), eighteen four court halls and one three court hall (Redden Court School). Emmerson Park Academy has two sports halls; one four and one six court.

Figure 2: Three court plus sports hall provision in Havering location and quality.

64	Sacred Heart of Marys Girls School	4	Good	Above average

(Source: KKP assessment visits made in October 2015)

Inspections identify that the majority (65%) of the assessed stock of sports halls, is below average or poor, with 35% assessed as good or above average quality. Public provision at Hornchurch Sports and Central Park Leisure complexes is good, although the structural issues at Hornchurch Sports Complex will necessitate significant investment.

Residents living in the south of the borough are very poorly served. The only centre in the area offering community access is Chafford Sports Complex, which is in a poor condition and requires refurbishment or replacing. There are no sports hall facilities in Rainham. There is community use at 80% of the school stock. It is however only being used at 47% of its total capacity. Lack of take up is largely due to a combination of poor quality halls and/or protective schools which do not permit extensive community use.

Overall, there is no evidence to suggest unmet demand for available sports hall space in LBH. Peak-time at Central Park Leisure Complex and Hornchurch Sports Complex is at capacity. Many schools report having spare capacity at both peak and off-peak times with several school facilities not used at all at weekends. The poor quality facilities on offer at some sites could be limiting demand.

In the case of Rainham, the absence of facilities is restricting demand (i.e. no supply and therefore no evident demand). However, there is potential latent demand from people who wish to take part in activity but have no facilities in which to participate.

Existing sports hall supply in LBH has capacity to meet current demand. The quality of the stock on school sites is mixed. The best quality facilities are at Coopers Company and Coborn School. Chafford School Sports Complex is clearly at the end of its useful life. The School aspires to replace both its main building and sports facilities via pursuit of external funding sources. It has submitted a planning application to LBH.

Hornchurch Sports Complex is an old facility and, from a management and user perspective, suffers from having been built in two phases; wet-side in 1956 and dry-side in 1980. Despite a good maintenance regime and some small improvements its condition reflects its age and some aspects of the building are no longer fit for purpose. The ageing plant and heat management systems are considerably less economical to run than modern plant and systems that can make full use of modern technology.

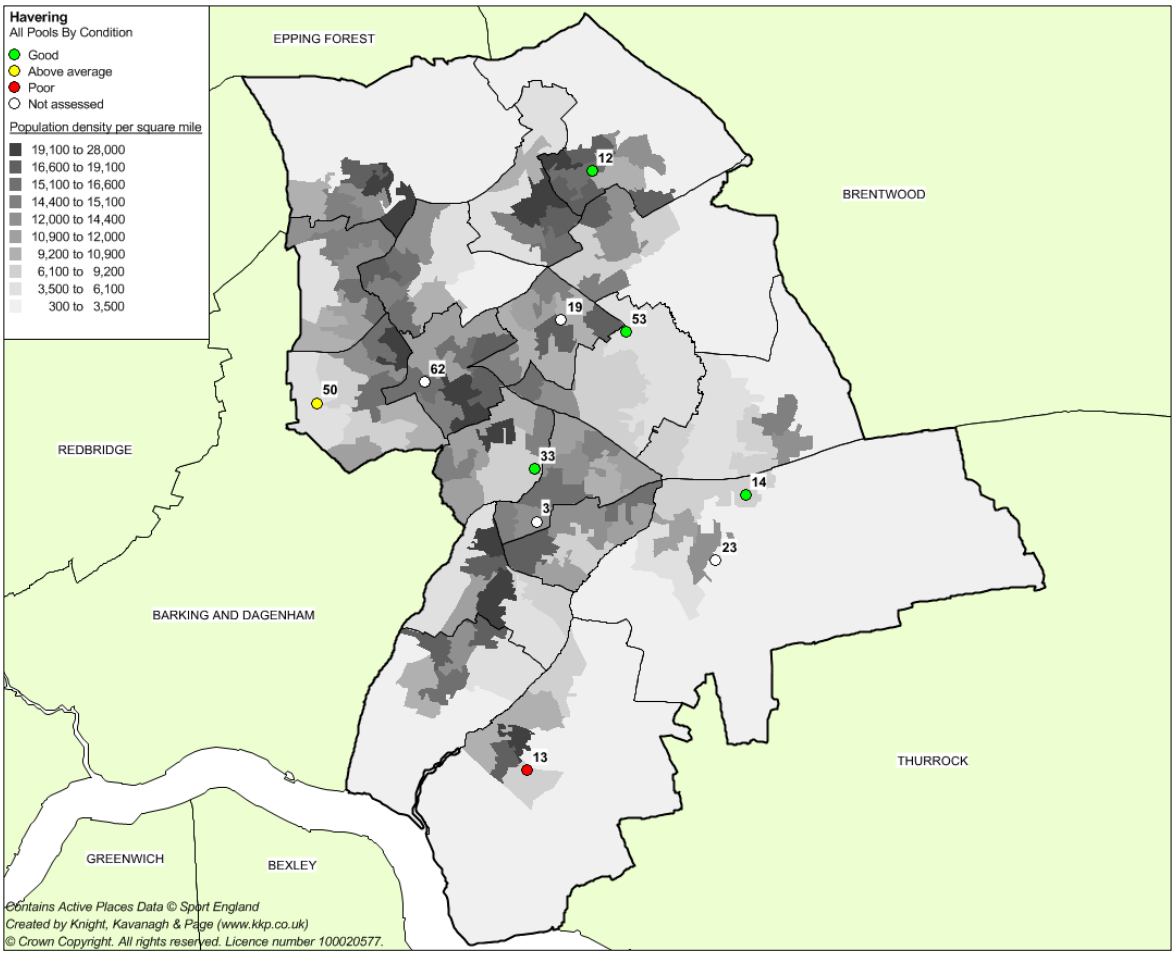
With the exception of the Rainham area, all residents in Havering have access to a sports hall within one mile of home. However, the only provision in the south area is the Chafford Sports Complex, which is ageing and, based upon the visual inspection, is no longer fit for purpose.

Existing capacity will be able to accommodate additional demand generated via latent demand and new housing and subsequent population growth. The quality of many school based facilities may, however, continue to be a barrier, particularly to new participants. Some schools may need encouragement to extend community use hours to meet growing demand, particularly if participation rises in accordance with Government targets.

Swimming pools

There are 14 swimming pools in LBH on ten different sites as illustrated in Figure 3. With the exception of the pool at Chafford Sports Complex, pool stock is assessed to be good.

Figure 3: Swimming pool provision in LBH



Ref	Site	Sub-type	Lanes	Length
3	Abbs Cross Health and Fitness	Main/General	6	15m
12	Central Park Leisure Complex	Main/General	6	33m
12	Central Park Leisure Complex	Learner/Teaching/Training	0	6m

Ref	Site	Sub-type	Lanes	Length
13	Chafford Sports Complex	Main/General	4	10m
14	Coopers Company & Coborn School	Main/General	4	8m
19	David Lloyd Club (Gidea Park)	Main/General	3	10m
19	David Lloyd Club (Gidea Park)	Lido	1	10m
23	Gaynes School Language College	Main/General	0	9m
33	Hornchurch Sports Complex	Main/General	6	33yd
33	Hornchurch Sports Complex	Learner/Teaching/Training	0	12m
50	St. Edwards C Of E School & 6th Form	Main/General	4	25m
53	The Campion School	Main/General	4	25m
62	Virgin Active Club (Romford)	Main/General	4	12m
62	Virgin Active Club (Romford)	Learner/Teaching/Training	0	6m

The planned new leisure centre in Romford, which will replace the Dolphin Pool (closed 1995) will include an 8 lane x 25m swimming pool and learner pool. The new complex will be a welcome addition to pool provision in Havering. It will not however address the access issues for residents living in the south of the Borough.

The picture for swimming pool provision is positive when compared to many London boroughs. However, the age and condition of the pool at the Chafford Sports Complex, the age of the pool at Hornchurch Sports Complex and the lack of provision in Rainham will make it increasingly challenging for a modern swimming offer to be provided without significant investment and/or new provision.

Health & fitness

LBH has a good geographical spread of gym/ fitness and conditioning provision and a wide range of health and fitness clubs to meet the needs of different users, from high end to budget facilities. Pay and play gym facilities are on offer at the main leisure complex and in many of the smaller community school gyms. Specific access issues have been identified as follows:

- Peak-time over-crowding and lack of peak time capacity, particularly at Central Park and Hornchurch complexes.
- Inability to run concurrent classes due to lack of suitable studio spaces, particularly at Hornchurch and Central sites.
- The size of the fitness suites at Hornchurch and Central complexes. These are considered to be too small to meet peak demand from members.
- Increasing market segmentation e.g. spin only clubs.

The demand for fitness suites in which to ‘work out’ seems set to continue to rise with many users young and old preferring the instant access and flexibility that gyms afford to more traditional teams sports and games. Aspirations to increase the activity levels of the population will add to demand for health and fitness provision as will the projected increase in size of population.

Budget market entrants such as Pure Gym are potential threats to leisure centre operator business models as they may impact upon fitness provision profitability thus jeopardising the long term sustainability of non-surplus generating elements of sport/leisure provision such as swimming pools and sports halls. To date this trend has not been seen in Havering.

SWOT analysis

Strengths	**Weaknesses**
Power of sport to attract/engage young people Member/officer support for sport/leisure Knowledge base and experience of LBH and SLM staff Havering Local Sports Council School sport collective Swim schools and programmes GP Referral Programme Walking for Health Programme Voluntary sector clubs Scale of market for fitness	Funding cuts leading to service cuts e.g. shorter opening hours at Chafford Sports Complex Areas of multiple and health deprivation Poor/below average quality of many school facilities Old/inefficient LBH sports and leisure buildings e.g. Hornchurch and Chafford sports complexes Health & fitness offer too small at Hornchurch Sports Complex and Central Park Leisure Complex Insufficient studio spaces within the leisure centres to offer variety of class types, particularly at peak times Limited north – south public transport Not maximising NGB external programmes and investment
Opportunities	**Threats**
Emerging Local Plan Crossrail and associated investment in infrastructure Borough regeneration plans/housing growth areas Inward investment in jobs and housing Romford leisure development Capacity in school sport hall provision To do more activity and make use of the space Public health agenda Engagement with NGBs British Gymnastics funding Table Tennis England funding My place (adjacent to Central Park Leisure Complex) Next leisure centre management contract	Cuts in local authority funding Austerity measures Areas of multiple and health deprivation Adult and child obesity Private sector investment in new gym and fitness facilities undermining the sustainability of public sector / social enterprise offer. Lack of direct control over (and thus possible inability to improve) access to school facilities

SECTION 1: INTRODUCTION

1.1 Background

The Indoor Sport and Leisure Facilities Assessment Report, (and subsequent Strategy), is required to set out the long term approach to indoor facility provision in the London Borough of Havering (LBH). Based upon assessment of existing provision, population growth and other changes, increasing participation rates and future need it identifies the principles that inform how, and what resource will be needed to meet existing and future demand for built and indoor facilities. The key strategy drivers are:

- To ensure that planning for leisure services is supported by a robust body of evidence that is National Planning Policy Framework (NPPF) compliant and provides an evidence base for Havering's Local Plan.
- The need for an evidence base to aid decision making regarding priorities for LBH and for its owned facilities.
- The Borough's role in respect of the public health agenda and a requirement to deliver healthier lifestyles and achieve positive health outcomes.
- The need to be more competitive and commercial in light of the economic, financial and political climate.
- The need to ensure value for money when providing sport and leisure services.
- To assist LBH when seeking to secure external funding.

LBH must increasingly manage on less funding from Central Government. This together with changes to welfare benefits, greater demand for social and elderly care and a new duty to improve the public's health is creating, and will continue to exert, pressure on already reduced budgets.

Thus, via the promotion of participation in sport and physical activity; the Indoor Sport and Leisure Facility Strategy for Havering must help to address health inequalities and result in the generation of a strategy and action plan which addresses facility needs and public health issues while taking account of the considerable constraints on local government spending.

1.2 Methodology

The assessment of provision is based on the Sport England Assessing Needs and Opportunities Guide (ANOG) for Indoor and Built Sports Facilities (2013).

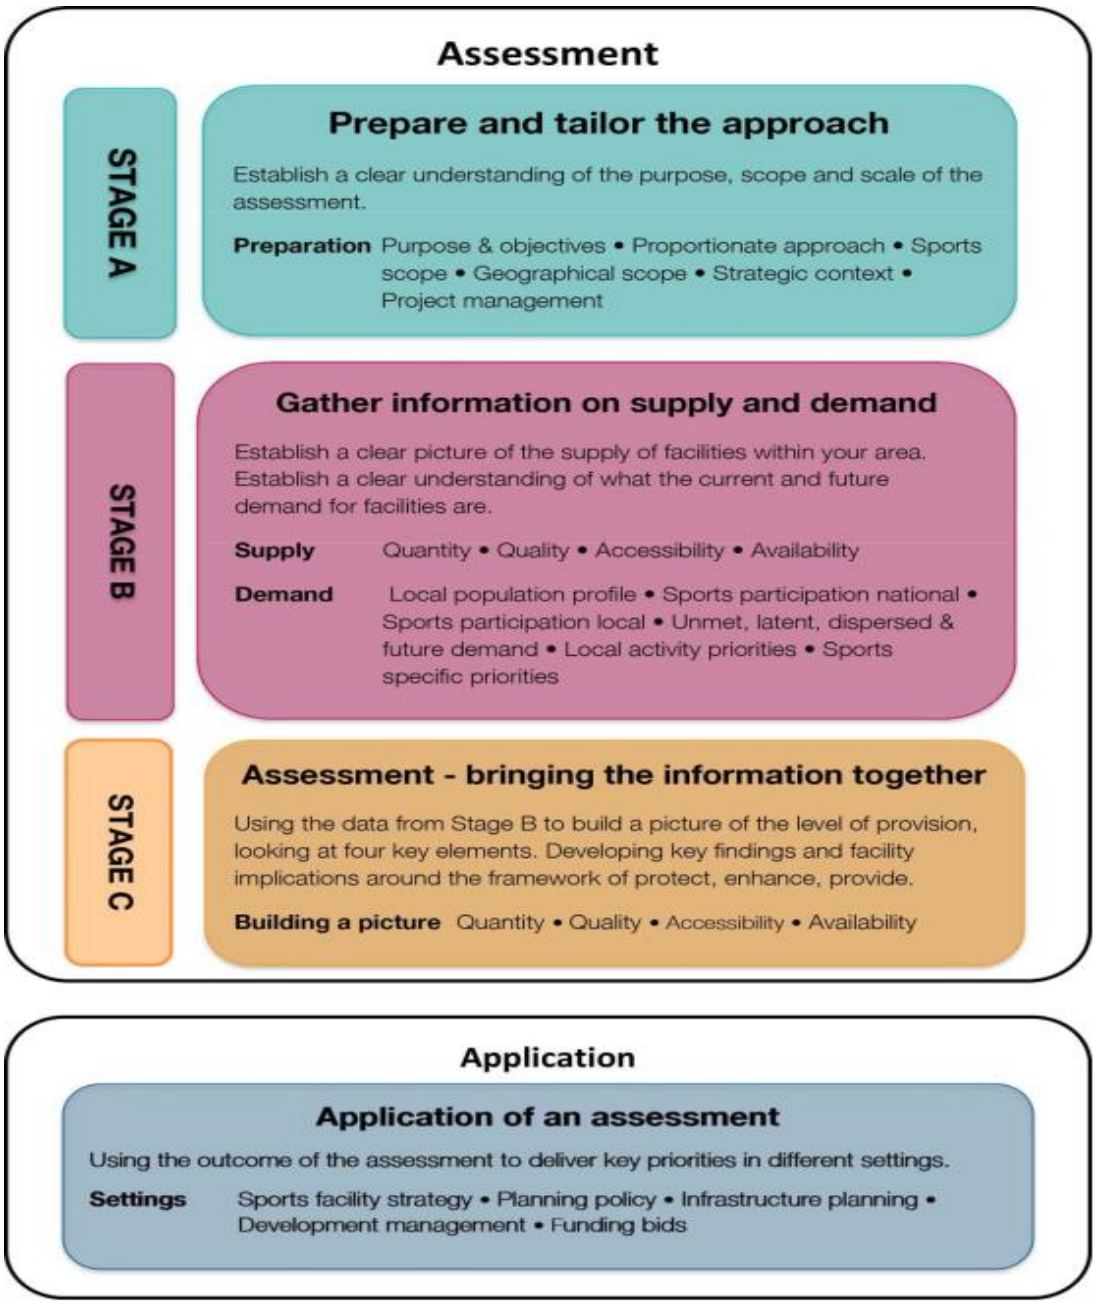
This guide recommends an approach to undertaking a robust assessment of need for indoor and outdoor built sports facilities. It has primarily been produced to help local authorities meet the requirements of the NPPF which states that:

'Access to high quality open spaces and opportunities for sport and recreation can make an important contribution to the health and well-being of communities. Planning policies should be based on robust and up-to-date assessments of the needs for open space, sports and recreation facilities and opportunities for new provision. The assessments should identify specific needs and quantitative or qualitative deficits or surpluses of open space, sports and recreational facilities in the local area. Information gained from the assessments should be used to determine what open space, sports and recreational provision is required.' (NPPF, Paragraph 73)

Assessment of provision is presented by analysis of the quality, quantity, accessibility and availability for the identified facility types (i.e., sports halls and swimming pools). Each facility is considered on a 'like for like' basis within its own facility type, so that it can be assessed for adequacy.

The report considers the distribution of and interrelationship between all facility types in the study area and evaluates demand. It gives a clear indication of areas of high demand. The strategy which follows will identify where there is potential to provide improved and/or additional facilities to meet this demand and to, where appropriate, protect or rationalise the current stock. Figure 1.1 below illustrates the approach recommended by Sport England (ANOG) and adopted in this assessment of need in the LBH.

Figure 1.1: Sport England approach to assessing need (ANOG)



The ANOG stages are as follows:

Stage A: prepare and tailor the approach. This was completed by LBH prior to project commencement.
Stage B: gather information on supply and demand. This is detailed in Sections 2 - 6.
Stage C: assessment. This is summarised in Section 7 and 8.
Stage D: application of the assessment. Assessment report findings are reflecting in and underpin the resulting Borough Strategy. (The Strategy, recommendations and action plan will be presented under separate cover).

1.3 Scope of the project

The specific objectives of this audit and assessment are to:

- Audit existing facility provision
- Identify local needs and
- Quantify levels of existing and potential future demand

The specific tasks addressed as part of the ANOG process include:

- Review of the local, regional and national strategic context
- Review of relevant Council strategies, plans, reports, corporate objectives.
- Assessment of supply and demand for indoor and built sports facility provision.
- Analysis of the demographics of the local population and other influencing factors.
- Consideration of potential participation rates; modelling likely demand for facilities.
- Detailed audit of indoor facilities provided by public, private, voluntary and education sectors.
- Consultation with key stakeholders, including LBH staff, staff from Sport and Leisure Management (SLM) trading as Everyone Active, NGBs and local sports clubs.
- Analysis of the balance between supply of, and demand for sports facilities and the identification of potential under and over provision.
- Identification of key issues to be addressed in the future provision of sports facilities across the Borough.

The assessment incorporates the following facility types:

- Sports halls
- Swimming pools / water space
- Fitness suites and gyms
- Dance / aerobic studios
- Indoor bowls centres
- Indoor tennis centres and
- Squash courts.

It also investigates supply and demand in respect of facilities for combat sports, cycling, gymnastics, trampolining and ice sports.

Pitch sport requirements including artificial grass pitches (AGPs) are considered in the Council's Playing Pitch Strategy (PPS) and the accompanying Assessment Report also being produced by KKP for the LBH in 2015-16.

Open spaces (OS) are assessed in the OS Assessment of Need which is also produced by KKP over the same time period.

This document details what exists in the Borough, its condition, location and overall quality. It also considers the demand for facilities based on population distribution, planned growth and takes account of other socio-economic factors, such as health and economic deprivation. In delivering the report KKP has:

- Individually audited each of the identified swimming pools, sports halls (conventional i.e. 3+ court halls as per Sport England definition), health and fitness facilities (including several dance studios), squash courts (public, private and voluntary sector owned/managed) and other specialist facilities in the Authority area.
- Analysed the supply and demand of facilities (including specialist sports facilities) to identify gaps and opportunities for improved facility provision.
- Identified areas of good practice and opportunities for improved service in order to drive up participation levels.

It thus provides a robust audit based quantitative, qualitative assessment of the need for sports halls, swimming pools, health and fitness plus the other specialist facilities identified above. It examines opportunities for new and/or rationalised provision and identifies specific deficiencies and surpluses to inform this process.

1.4 Report structure

- Section 2: examination of the strategic context for the assessment.
- Section 3: review of sports hall provision.
- Section 4: review of swimming pool provision.
- Section 5: review of health and fitness suites plus dance/exercise studio provision.
- Section 6: consider and review facilities for other identified specialist sports.
- Section 7: analysis of supply and demand plus a review of strengths, weaknesses, opportunities and threats (SWOT) in LBH.
- Section 8: identification of emerging key issues.

KKP is grateful to all the individual consultees, clubs and national governing bodies of sport (NGBs) listed in Appendix 2 for their contributions to the assessment and for making time available to share their views about, and experiences of indoor and built sports facilities in LBH.

Following discussion and analysis of this report by the LBH Steering Group, a strategy with recommendations and an action plan will be produced.

SECTION 2: POLICY CONTEXT

2.1 National context

National Planning Policy Framework 2012

The NPPF sets out planning policies for England. It details how these changes are expected to be applied to the planning system. It also provides a framework for local people and their councils to produce distinct local and neighbourhood plans, reflecting the needs and priorities of local communities. It states that the purpose of the planning system is to contribute to the achievement of sustainable development and identifies the need to focus on three themes of sustainable development:

- Economic
- Social
- Environmental.

A presumption in favour of sustainable development is a key aspect for any plan-making and decision-taking processes. In relation to plan-making the NPPF states that local plans should meet objectively assessed needs. It is clear about the role that sport plays in delivering sustainable communities via the promotion of health and well-being. Sport England, working with the provisions of the NPPF, wishes to see local planning policy protect, enhance and provide for sports facilities based on robust, up-to-date assessments of need, as well as helping to realise the wider benefits that participation in sport can bring.

The 'promoting healthy communities' theme identifies that planning policies should be based on robust, up-to-date assessments of need for open space, sports and recreation facilities and opportunities for new provision. Specific needs and quantitative and qualitative deficiencies and surpluses in local areas should also be identified. This information should be used to inform what provision is required in an area.

Sporting Future: A new strategy for an active nation

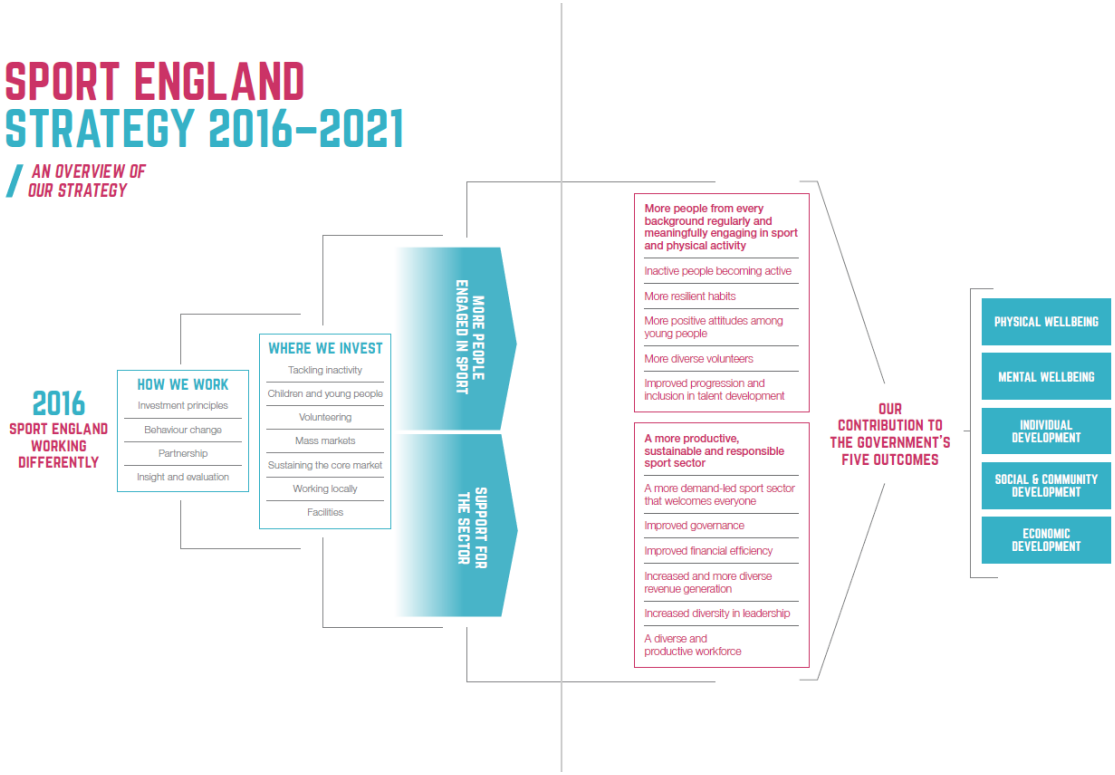
The Government published its strategy for sport in December 2015. This strategy confirms the recognition and understanding that sport makes a positive difference through broader means and that it will help the sector to deliver five simple but fundamental outcomes: physical health, mental health, individual development, social and community development and economic development. In order to measure its success in producing outputs which accord with these aims it has also adopted a series of 23 performance indicators under nine key headings, as follows (see Appendix 3 for details):

- More people taking part in sport and physical activity.
- More people volunteering in sport.
- More people experiencing live sport.
- Maximising international sporting success.
- Maximising domestic sporting success.
- Maximising the impact of Major Events.
- A more productive sport sector.
- A more financially and organisationally sustainable sport sector.
- A more responsible sport sector.

Sport England: Towards an Active Nation

Sport England's response to the Government's strategy was to develop Towards an Active Nation:

Figure 2.1 Sport England Strategy 2016-2021



Sport England has identified that it will invest in:

- Tackling inactivity
- Children and young people
- Volunteering – a dual benefit
- Taking sport and activity into the mass market
- Supporting sport's core market
- Local delivery
- Facilities

These seven investment programmes will be underpinned by a new Workforce Strategy and a new Coaching Plan.

Figure 2.2: ANOG model

This framework is used to structure the recommendations for LBH. This assessment report reviews indoor sporting facility need in the LBH area and provides a basis for future strategic planning.

Strategic Planning: Effective Cooperation for Planning Across Boundaries, RTPI, February 2015

Drawn from best practice this report identifies six general principles for strategic planning:

- Have focus – being efficient in the use of resources and clear about its purpose.
- Be genuinely strategic – dealing only with matters which require resolution across boundaries.
- Be spatial – make strategic choices between places, not establish general criteria decision making.
- Be collaborative.
- Have strong leadership and
- Be accountable to local electorates.

The key finding is that top-down strategic planning tends to be less successful. Locally designed and enacted approaches that emphasise collaboration and co-operation between local authorities bring major benefits to all the local authorities in a given area.

Public Health England

In October 2014 Public Health England (PHE) produced a plan to tackle low activity levels across the country. Along with making the case for physical activity, the plan identifies four areas where measures need to be taken at a national and local level:

- Active society: creating a social movement. Shifting social norms so that physical activity becomes a routine part of daily life.
- Moving professionals: activating networks of expertise. Making every contact with the health sector count to push the 'active' message and to deliver the message through other sectors including education, sports and leisure, transport and planning.
- Active environments: creating the right spaces. Making available and accessible appropriate environments that encourage people to be active every day.
- Moving at scale: scaling up interventions that make us active. Maximising existing assets that enable communities to be active.

NHS Guidelines for physical activity (all ages).

To stay healthy, adults aged 19-64 should try to be active daily and should do:

- At least 150 minutes (2 hours and 30 minutes) of moderate-intensity aerobic activity such as cycling or fast walking every week, and muscle-strengthening activities on 2 or more days a week that work all major muscle groups (legs, hips, back, abdomen, chest, shoulders and arms) or
- 75 minutes (1 hour and 15 minutes) of vigorous-intensity aerobic activity such as running or a game of singles tennis every week, and muscle-strengthening activities on 2 or more days a week that work all major muscle groups (legs, hips, back, abdomen, chest, shoulders and arms) or
- An equivalent mix of moderate- and vigorous-intensity aerobic activity every week (for example 2 x 30-minute runs plus 30 minutes of fast walking), and muscle-strengthening activities on 2 or more days a week that work all major muscle groups (legs, hips, back, abdomen, chest, shoulders and arms).
- One way to do the recommended 150 minutes of weekly physical activity is to do 30 minutes on 5 days a week.
- All adults should also break up long periods of sitting with light activity as sedentary behaviour is now considered an independent risk factor for ill health, no matter how much exercise is taken.

To stay healthy children aged 0-5 should be:

- Encouraged, from birth, particularly through floor-based play and water-based activities in safe environments, to be physically active.
- All under 5s should minimise the amount of time spent being sedentary (being restrained or sitting) for extended periods (except time spent sleeping). Individual physical and mental capabilities should be considered when interpreting the guidelines.

Examples of physical activity that meet the guidelines. For infants who are not yet walking, physical activity refers to movement of any intensity and may include: 'Tummy time' – this includes any time spent on the stomach including rolling and playing on the floor. Reaching for and grasping objects, pulling, pushing and playing with other people. Parent and baby' swim sessions. Floor-based and water-based play encourages infants to use their muscles and develop motor skills

To stay healthy young people (5-18) should try to be active and do:

- At least 60 minutes of physical activity every day – this should range from moderate activity such as cycling and playground activities, to vigorous activity, such as running and tennis
- On three days a week, these activities should involve exercises for strong muscles, such as push-ups, and exercises for strong bones, such as jumping and running

Examples of activities that require moderate effort for most young people include: walking to school, playing in the playground, riding a scooter, skateboarding, roller-blading, walking the dog and cycling on level ground or ground with few hills. Examples of activities that require vigorous effort for most young people include: playing chase, energetic dancing, swimming, running, gymnastics, football, rugby, martial arts, such as karate and cycling fast or on hilly terrain.

To stay healthy adults aged 65+ should try to be active and do:

- At least 150 minutes of moderate aerobic activity such as cycling or walking every week, and
- Strength exercises on two or more days a week that work all the major muscles (legs, hips, back, abdomen, chest, shoulders and arms), or
- 75 minutes of vigorous aerobic activity such as running or a game of singles tennis every week, and
- Strength exercises on two or more days a week that work all the major muscles (legs, hips, back, abdomen, chest, shoulders and arms) or
- A mix of moderate and vigorous aerobic activity every week. For example, two 30-minute

runs, plus 30 minutes of fast walking, equates to 150 minutes of moderate aerobic activity, and
- Strength exercises on two or more days a week that work all the major muscles (legs, hips, back, abdomen, chest, shoulders and arms).

Examples of activities that require moderate effort for most people include walking, water aerobics, ballroom and line dancing, riding a bike on level ground or with few hills, playing doubles tennis, pushing a lawn mower, canoeing and volleyball.

There is also a need to provide accessible facilities that can help meet the physical activity needs of the physically and mentally disabled and those with learning difficulties and debilitating diseases, many of whom often find themselves discriminated against and socially isolated.

Investment in school sport

The Government's 2013 Primary PE and Sport Premium fund of £150 million per annum was invested in school sport over the next two years. Supported by various departments (Education: £80m, Health: £60m and Culture, Media and Sport: £10m) funds go directly into the hands of primary schools to spend on sport. Its four objectives are to:

- Improve the quality of existing PE teaching through continuing professional learning in PE for generalists, so that all primary pupils improve their health, skills and physical literacy and have a broader exposure to a range of sports.
- Increase participation levels in competitive sports and healthy activity of pupils and maintain these into adolescence
- Increase the quality of initial teacher training in PE and sport, and to promote PE specialisation in primary level workforce.
- Ensure that schools understand and value the benefits of high quality PE and sport, including its use as a tool for whole school improvement.

In 2014-15 primary schools in LBH received £515,965 from the Primary PE and Sport Premium Fund.

Priority School Building Programme (PSBP)

The PSBP is a centrally managed programme set up to address the needs of the schools most in need of urgent repair. Through it, 261 schools in England will be re-built between 2014 and 2017. In LBH beneficiaries of the programme will be Hacton Primary, Suttons Primary and The Mawney Foundation School.

Summary of the national context

Engaging residents to take up and retain a minimum or better level of physically literacy and activity is a high priority for national government. For many people, sport and recreational activities have a key role to play in facilitating physical activity. Ensuring an adequate supply of suitable facilities to meet local need is, as noted earlier, a requirement of the planning system. In line with national policy recommendations, this report makes an assessment of indoor facility provision and need across LBH from which recommendations and policy will be formulated. It is, thus, important that this report is produced in accordance with Sport England guidance.

2.2 Regional context

A range of agencies and policies influence the nature and extent of provision in the London region.

The London Plan 2015

The London Plan is the strategic plan for the development of London. It intends London to continue being a 'global city', or business capital, while also improving Londoners' standard of living and the places where people live. The main direction of the London Plan is to plan for a predicted rise of 1.25 million people by 2031. It seeks provision of an average of 33,400 homes per year across London.

The plan sets the tone for an alternative vision for London, taking on a broader, fairer, more inspired set of considerations and values. The improvement of London in this way should bring a set of new benefits, new growth and new enterprise. Key influences on policy direction include a change in age of the population (more younger and older people); persistent problems of poverty and polarization and a changing climate.

Local Borough plans must all conform to the policies and direction of The London Plan. In total 122 policies form the basis of London's planning regulations and cover the economy and employment, housing, open and green space, the built environment, transport, aviation, education, pollution, climate change, shops and town centres, health and infrastructure. Policy directions, most relevant to this assessment report, are highlighted below.

The plan divides London into planning zones: Inner London and Outer London; as well as the 'Central Activities Zone', 'Opportunity Areas', 'Regeneration Areas', Areas of Intensification' and 'Town Centres', 'Strategic Industrial Locations', a strategic network of open spaces etc.

Looking forward to 2031 is as hard as looking at 2009 from the perspective of 1987. However some of the signposts are clear. There is an urgent need to alter the current way of planning for the future so that there is:

a) A value placed on the quality of life for all (both social and environmental impacts) rather than simply the economics of building and development.
b) More economic diversity and less reliance on the financial and business services sector.
c) Less waste and excess use of resources.
d) Genuine community-led development and decision-making.

Health and well-being

Health is not only affected by access to good healthcare: other factors affect health, such as low pay, social exclusion, your job or lack of a job, your housing, the environment. The London Plan should:

a) Understand how development growth affects health and well-being and prioritise health when making decisions.
b) Chart the areas of deprivation to prevent further inequality. In some areas housing is a major cause of ill health through sub-standard housing and overcrowding.

c) Single out crowded Inner London on housing issues – but some would argue there is inadequate housing on parts of outer London as well.
d) Plan social infrastructure – schools, recreation and health facilities, community centres and so on – in parallel with new development and ensure this is sufficient to develop sustainable communities or communities that are supported.

Open space

Open green space is strongly connected with health and its benefits are free, therefore policy must insist on adequate open space provision and must outlaw all removal of open space. This should include courtyards and play areas provided for social housing as well as sports grounds and open spaces that are used as recreation areas. The Plan proposes a ban on building on the gardens of houses.

Cycling and walking

Walking and cycling are recognised as key aspects of physical activity that can be fully integrated into daily life. There is a commitment to significantly increase cycling in London, so that it accounts for at least 5 per cent of modal share by 2026. The London Plan will:

a) Identify, promote and implement a network of cycle routes across London which will include Cycle Superhighways and Quietways.
b) Continue to operate and improve the cycle hire scheme.
c) Fund the transformation of up to four outer London borough town centres into cycle friendly 'mini-Hollands'.

With respect to walking the Plan will seek to bring about a significant increase in walking in London, by emphasizing the quality of the pedestrian and street environment, including the use of shared space principles, – promoting simplified streetscape, decluttering and access for all.

Transport

Public Transport: More night-time and off-hours staff on trains and stations are needed to improve safety and to encourage the all-round participation in London life. New development should be located on the public transport network that already exists or is planned and funded. The support for well-functioning neighbourhoods should reduce the general need to travel.

Cars: Traffic-generating developments should be rejected and the London Plan should clearly set out policies for reducing the volume of traffic on London's roads. The public realm should also be more people-friendly and cars should not dominate.

Rail and Air: Rail travel should replace domestic air travel and make increased rail capacity unnecessary. The Mayor's opposition to Heathrow expansion is welcomed but policy in favour of additional airport capacity should be abandoned. A Thames Estuary airport has no significant political support and would provoke widespread environmental and other opposition.

Air quality

The aim of improving air quality by planting more trees is supported, but fewer cars are also needed: the extension of the congestion charge zone might support this aim. Developments should be required to work to sustainable best practice guidelines in their construction and demolition.

Climate change

Evidence suggests that we should be aiming ideally for a zero carbon economy and seek to create a demand for greener products, services and lifestyles. All new developments need to meet higher environmental targets right now. A clear, strong assessment is needed of the potentially damaging cost of the planned population expansion / increased energy consumption and major development growth. A lower concentration of growth in the centre of London would avoid creating a 'heat island'. More interim targets between now and 2025 are needed to ensure London is on track to reducing its carbon emissions. 'Retro-fitting' our homes would make a significant impact on energy use and should be prioritized.

Minority ethnic groups

The London Plan specifies problems facing black, Asian and other ethnic minority communities, especially in relation to a growing population – leading to increased housing demands, continuing poverty and unacceptable health inequalities.

London Sport

London Sport has an overall target to get one million Londoners more physically active by 2020. This reflects its other main aim - to make London the most physically active sporting city in the world. The key strategic aims/areas are:

- Make it easier for Londoners to find the right activity, stay in it, and achieve their potential.
- Get more resources by making best use of what we have, whilst securing more.
- Support grassroots organisations by making the sector simpler and better.
- Bigger and better workforce to support activity.
- Harness the power of elite sport to create sustained grassroots activity & inspire the next generation of talent.

2.3 Local context

LB Havering Vision - Clean, Safe and Proud

The council has articulated a vision:

- We want Havering to be clean and to look after our environment for future generations.
- We want you to be safe – whether you're a pensioner walking through a town after dark, or a young child growing up without the security of a loving home.
- And we want you to be proud to live in Havering – where we respect each other, value our traditions and work together to improve our quality of life.

The Council has identified that it will support its community by spending money on the things that matter most to residents - like clean, safe streets and protecting people in need. It will support local firms to grow and create jobs; it will re-energise its towns, to improve the

quality of life in Havering and help local people to bring about the changes they want to see in their neighbourhoods.

The Council will use its influence to bring more jobs, homes, schools and transport to Havering. It will use its planning powers to balance the growth of business centres, with the protection of 'Green Havering' and its quieter communities, and it will encourage local people to do the right things: keep Havering tidy, be good neighbours and lead healthier lives.

The Council will lead by example by running a low-cost Council that respects residents, by using money wisely. It will work with others to reduce costs; help people do business with it at any time of the day or night; it will hold itself to the high standards residents expect and will spend each penny as if it were our own.
Source: Corporate Plan 2015-16

Local Development Framework (LDF)

A LDF is the spatial strategy introduced in England and Wales by the Planning and Compulsory Order Act 2004 and given detail in Planning Policy Statement 12. The LDF will soon be replaced by a new Local Plan, which will have regard to the London Plan 2015 (detailed above). The Local Plan will set out the key policies for Havering. This Assessment report is a key part of the evidence base required to produce a Local Plan.

The LDF will be used until the new Local Plan is adopted. In the LDF, the LBH policy is to work in partnership with other bodies to seek to retain and increase access to recreation and leisure opportunities by:

- Retaining existing facilities where a need exists.
- Address qualitative and quantitative and qualitative deficiencies in open space and recreation facilities.
- Improving opportunities for creative play and physical activity in parks and open spaces.
- Improving opportunities for informal recreation in the countryside.
- Seeking developer contributions towards improvements to the quality and quantity of open space, recreation and leisure facilities.
  (LDF Core Policy 7 Recreation and Leisure)

London Borough of Havering Culture Strategy 2012-2014

The stated vision is "To transform lives through participation in, and enjoyment of, culture". The strategic objectives and key principles are:

Objective 1: health and wellbeing: Support a high standard of mental, physical and emotional health for all by increasing the number of people taking part in sport and Physical Activity and accessing the natural environment.

Objective 2: learning and development: support learning opportunities for all, by enabling people to take part in new activities, ensuring development pathways are in place and providing access to coaching, officiating, leadership and club development training.

Objective 3: towns and communities: enriching our towns and communities, through investment and engagement in sport and physical activity.

Principle 1: community empowerment: promote more active engagement in service delivery, from consultation, to volunteering, to devolving services to the local community.

Principle 2: work in partnership: continue to work with our partners, internal and external, and regionally across borough boundaries, to achieve shared objectives.

Principle 3: inclusion & cohesion: be smarter about collecting information on our customers and communities. Target new audiences and broaden access to our services, breaking down barriers to engagement where these exist, facilitating social progress and improved quality of life.

Principle 4: good value services: continue to develop innovative, modern and efficient methods of service delivery, thereby maintaining the high quality of our services against a backdrop of reduced budgets, and ensuring that activities are evaluated effectively to retain a focus on outcomes for local people.

Havering Sports and Physical Activity Strategy 2013-15

Reflecting the Culture Strategy, the Borough Sport & Physical Activity Strategy is driven by the very simple ambition: "*to transform lives through participation in, and enjoyment of, sport and physical activity*". Its stated purpose is to '*provide focus and added value to the efforts of everyone involved in the planning and provision of sport & physical activity in Havering, linked to a very clear view of what will be achieved by 2015*'.

The objectives of the sport and physical activity strategy are based on those of the Culture Strategy identified above. Specific actions are set out under three headings, health and well-being, learning and personal development and towns and communities.

Health and well-being

- Provide, co-ordinate and promote a diverse range of quality sport and physical activity opportunities for all ages.
- Maintain and improve satisfaction at Borough leisure centres.
- Continue to work with the Amateur Swimming Association (ASA), England Ice Hockey Association (EIHA) and National Ice Dancing Association (NISA) to ensure the best possible use is made of the Romford Leisure Development* for recreation and performance sport.
  (*Romford Leisure Development is at the pre-construction phase. For the purposes of this report it is assumed that it will open in 2018; facilities will comprise an 8 lane x 25m pool, learner pool, 100 station health & fitness suite and ice rink with spectator provision).

Learning and personal development

- In conjunction with Pro-Active East London (now London Sport), NGBs, SLM and schools, ensure access to a range of sports specific coaching and officiating courses are run in or within easy reach of Havering.

Towns and communities

- Maintain QUEST accreditation for leisure centres.
- Maintain IFI status for Hornchurch Sports Complex.
- Maintain and improve current leisure facilities.
- Deliver a new leisure facility in Romford.
- Investigate the feasibility of new or improved sport and leisure facilities in Rainham / South Hornchurch.
- In partnership with schools and NGBs work to identify potential facility developments and funding sources.

LBH Health & Wellbeing Strategy 2012-2014

This is a plan aimed at improving the health and wellbeing of people in LBH. It focuses on a small number of local themes and priorities as follows:

Theme A: Prevention, keeping people healthy, early identification, early intervention and improving well-being.

- Priority 1: Early help for vulnerable people to live independently for longer.
- Priority 2: Improved identification and support for people with dementia.
- Priority 3: Earlier detection of cancer.
- Priority 4: Tackling obesity.

Theme B: Integrated support for people most at risk

- Priority 5: Better integrated care for the 'frail elderly' population..
- Priority 6: Better integrated care for vulnerable children.
- Priority 7: Reducing avoidable hospital admissions.

Theme C: Quality of services and patient experience

- Priority 8: Improving the quality of services to ensure that patient experience and long – term health outcomes are the best they can be.

Summary of local policy context

The core message running through local strategic documentation is the requirement to ensure adequate, affordable opportunity for LBH residents to take part in physical activity and to reduce health inequalities in the Borough. It is therefore essential that sports facilities are fit for purpose, accessible and available to the community and that the 'offer' is developed based on local communities' needs. Such access is essential if LBH residents are to have the opportunity to meet national goals and individual activity targets to make sport or physical activity part of their everyday lives. Provision of facilities and programmes to help facilitate physical activity will, where appropriate, be targeted to meet the needs of identified target groups in identified areas.

Any new provision should be built to the highest standards of design and accommodate technology to minimise energy consumption and reduce operating costs. Facilities should be built in locations that encourage access via public transport and offer residents accessible and safe walking and cycling routes. Any surrounding environmental works should be incorporated into the design and where possible make links with other open spaces and linear walks and cycle routes.

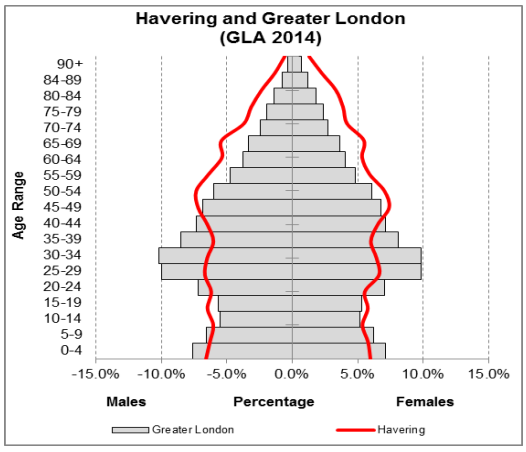
SECTION 3: BOROUGH OVERVIEW AND INFLUENCING FACTORS

3.1 Demographic profile

Havering is an outer London Borough located on the east of the NE quadrant of the Greater London conurbation. Neighbours to the west are the London boroughs of Barking & Dagenham and the London Borough of Redbridge. To the north and east is the boundary with Essex County and the boroughs of Epping Forest, Brentwood, Basildon and Thurrock. Havering, despite its proximity, to Essex has a London focus. Near neighbour sport and leisure provision plays a key role in meeting some resident's needs

Figure 3.1: Greater London Conurbation

Figure 3.2: Comparative age/sex pyramid for Havering and Greater London[3]



The current total population of the Borough (2014 MYE) is 244,729 (117,525 males and 127,203 females). It is expected to rise to 273,234 by 2024 and to 311,223 by 2037.

Havering has a significantly lower proportion of 20-44 year olds (Havering 31.5%: GL 42.5%). It has more residents age 50-84 (Havering 34.4%: GL: 24.6%).

Comparative to the wider London profile LBH has an older and increasingly ageing population base

[3] *Greater London Authorities (GLA) – Population Projections 2014 Round*

Population distribution

LBH has five key settlement areas, Romford, Harold Wood, Harold Hill, Upminster, Hornchurch and Rainham. Many of the areas bordering Essex are rural in character.

Figure 3.3: Population density (2013 MYE): Havering lower super output areas[4]

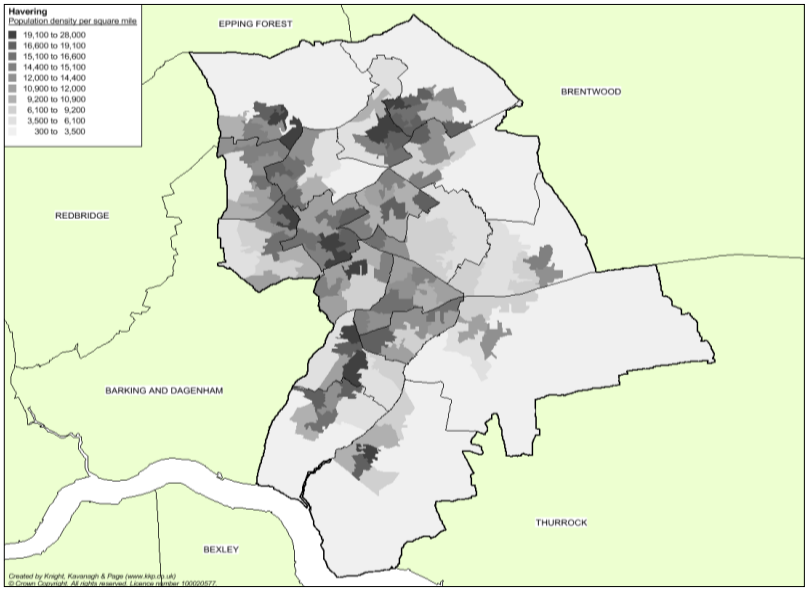


Figure 3.4 Havering Ward Population Distribution 2014[5]

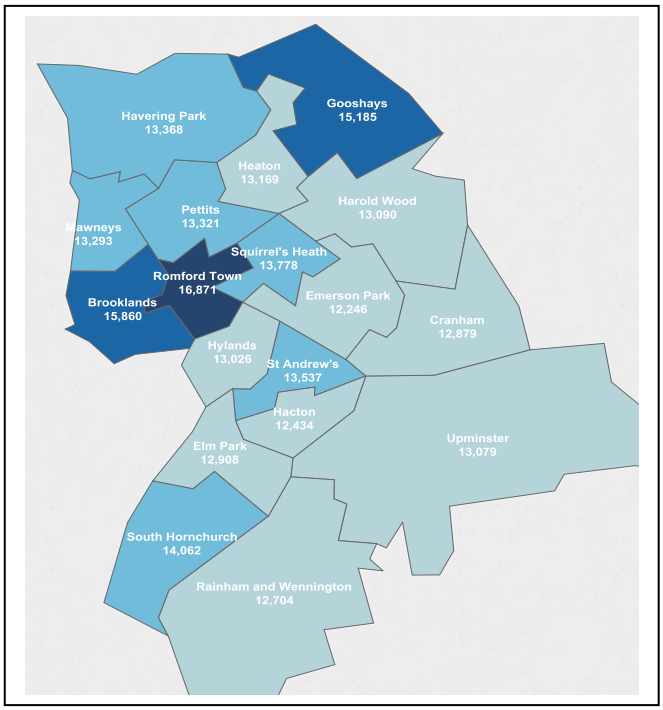


Romford Town, Brooklands, South Hornchurch and Gooshays wards have the highest population concentrations. The lowest tend to be in the Borough's south and central wards which border Thurrock and Brentwood.

[4] *Office of National Statistics (ONS) 2013 Mid-Year estimates – Lower Super Output Area (LSOA)*

[5] London Datastore, GLA (2015), '2014 Round of Demographic Projections - Ward projections. LA population projections - Trend-based population projections, short-term migration scenario.'

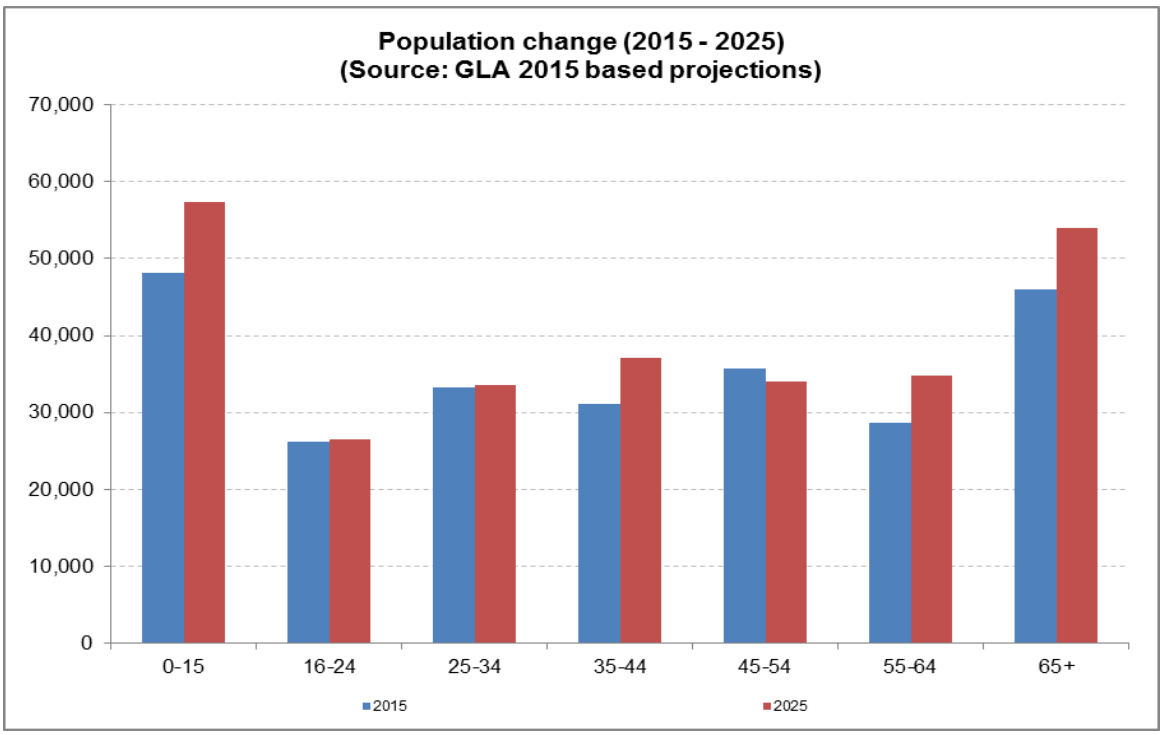
Population growth

The current total population of Havering (2014 MYE) is 244,729 (117,525 males and 127,203 females). The most recent Greater London Authority (GLA) projections indicate a rise of 13.7% in Havering's population (+34,109) over the 16 years from 2015 to 2031. The majority of the population is spread over five key settlement areas, Romford, Harold Wood, Harold Hill, Upminster, Hornchurch and Rainham. Many of the areas bordering Essex are rural in character. Circa 10% of LBH population belong to BME groups.

While strategic planning needs to consider change over 20 to 25 years, service planning is often more closely aligned to a much shorter time horizon, typically 5 to 10 years. Over the decade to 2025 it is projected that the overall number of people in Havering will rise by +28,278 (+11.4%). However, significant age specific variations will have implications for different markets, economic and health issues, for example, there will be:

- +9,221 (+19.2%) more 0-15 year olds.
- -1,654 (-4.6%) fewer 45-54 year olds; and
- +6,113 (+24.4%) more 55-64 year olds; and
- +7,859 (+17.1%) more 61+ year olds

Figure 3.5: Projected population change (2015 -2025)[6]



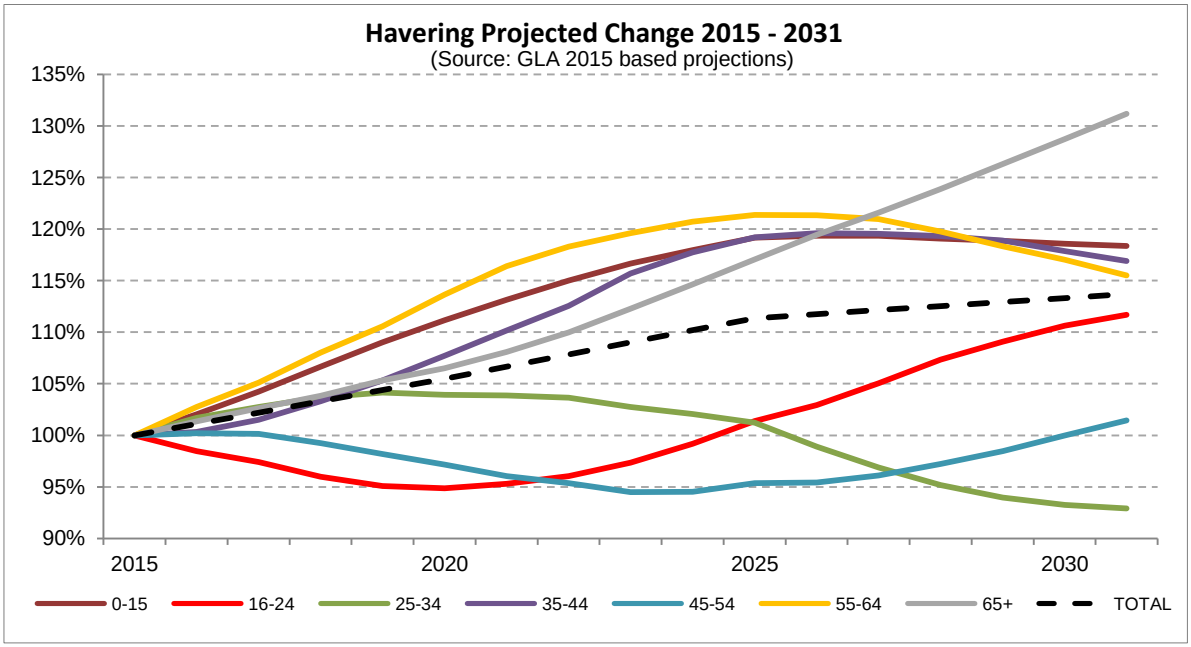
Population change throughout the period up to 2037 is detailed in Figure 3.6 overleaf. This shows the complex nature of population growth in LBH over this period. It is worth noting the 65+ age group which shows straight line growth over the period and does not appear to waiver from this continual increase.

[6] *GLA Population Projections 2015 Round*

In addition to population growth, Havering will see significant change to the population profile over the period to 2037 as follows:

- A continual increase in 0-15 year olds up to 2025 before it levels off at 18% increase by 2031.
- The number of 16-24 year olds falls by circa 5% between 2015 and 2019 before rising again to 11.7% more than its 2015 baseline by 2031.
- An initial 4% rise in 25 – 34 year olds before a gradual reduction to 7% below its 2015 baseline by 2031.
- A continual increase in 35 - 44 year olds up to 2025 before it levels off at 17% increase by 2031.
- A reduction in the number of 45 - 54 year olds throughout the majority of the timeline prior to it rising to 1% increase on its 2015 baseline by 2031.
- A continual increase in 55 - 64 year olds, reaching a peak of 19.5% by 2025 before reducing slightly to 15.5% by 2031.
- A continual increase in the 65+ age group with a 31% increase by 2031

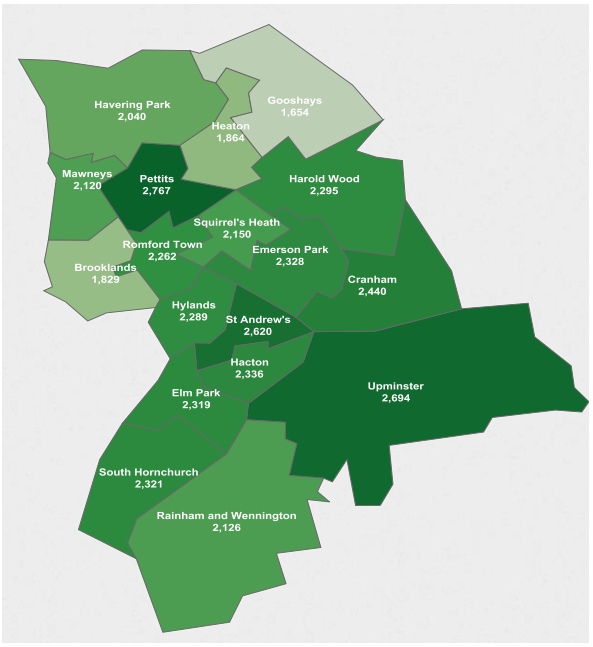
Figure 3.6: Projected population change (2012 -2031)[7]



[7] *GLA Population Projections 2015 Round*

Figure 3.7 illustrates the anticipated distribution of residents aged 65 – 84 in 2020.

*Figure 3.7: R*esidents aged 65 – 84 in 2020



Map source: London Datastore, GLA (2015)

These changes in the population profile will have an impact on the types of public services, including sport, leisure and cultural provision that Havering needs, and can, potentially, afford to provide.

Facilities planning for increases in the 65+ and 0 -15 age groups may lead the Council to determine that these opposing age groups require very different provision at key times of the day and week from other users. However, just as the 65+ age group often requires activities during the day activities for 0-5 year olds often follow similar time patterns. Conversely, activities for 5-15 year olds tend to be focused more closely on after school and weekend activities

Ethnicity

LBH's ethnic composition closely reflects that of England as a whole. The largest proportion (87.7%) of the local population classifies its ethnicity as White; slightly higher than the comparative England rate of 85.4%. The next largest population group (by self-classification) is Asian, at 4.9% this is just over half the national equivalent (7.8%).

Table 3.1: Ethnic composition – Havering and England[8]

Ethnicity	Havering		England	
	Number	Percentage	Number	Percentage
White	207,949	87.7%	45,281,142	85.4%
Mixed	4,933	2.1%	1,192,879	2.3%
Asian	11,545	4.9%	4,143,403	7.8%
Black	11,481	4.8%	1,846,614	3.5%
Other	1,324	0.6%	548,418	1.0%
Total	**237,232**	**100.0%**	**53,012,456**	**100.0%**

(Source: 2011 census of population, ONS)

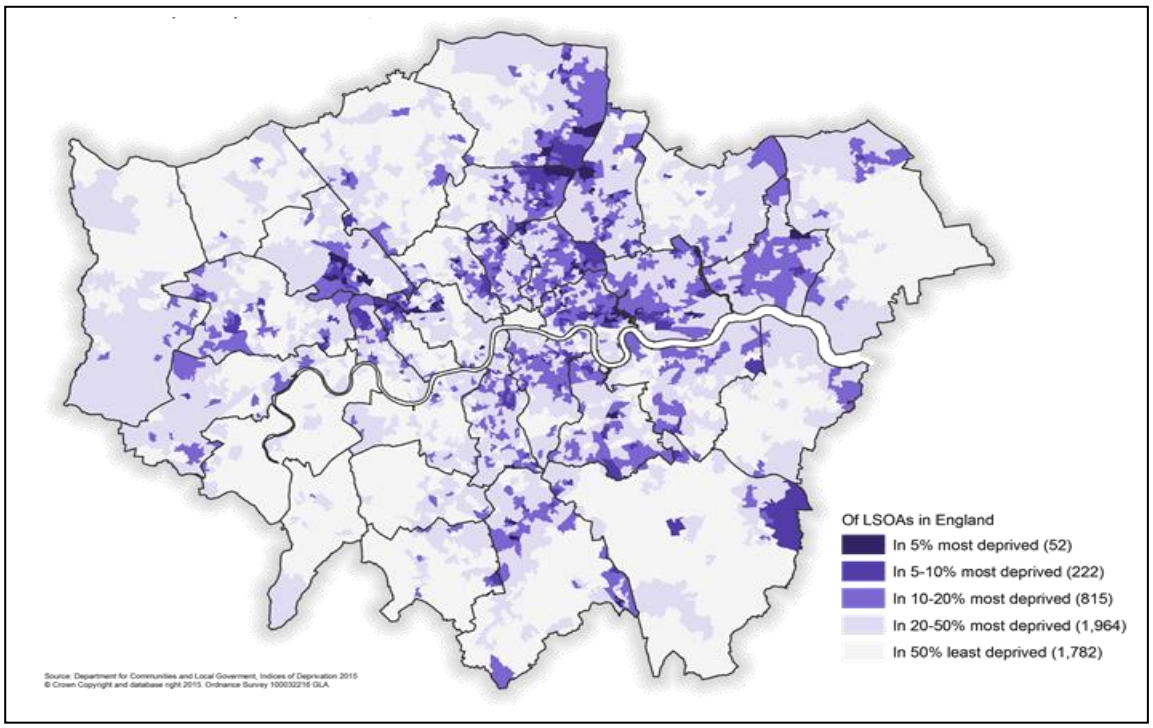
Circa 12% of LBH's population belong to BME groups. Planning for sport and leisure should take account of the potentially different cultural needs of BME groups.

[8] ONS 2011 Census

Deprivation

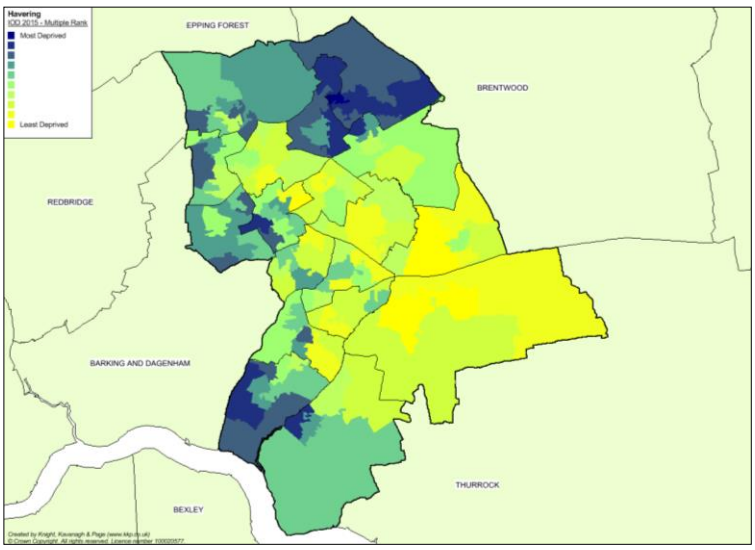
The maps below and overleaf illustrate the breadth of both multiple and health deprivation in London and Havering.

Figure 3.8: London Index of Multiple Deprivation 2015



Within the context of Greater London (Figure 3.8), LBH does not appear to have many specific areas within the top 20% of most deprived communities. However, this map can be misleading and a more detailed analysis indicates that deprivation is aligned to some of the more densely populated areas of the Borough. This includes the wards of Gooshay and Heaton, in the north, Romford in the central area and Rainham in the south.

Figure 3.9: Index of multiple deprivation[9]



[9] GLA Indices of Deprivation 2015

Figure 3.10: IMD Health and disability domain

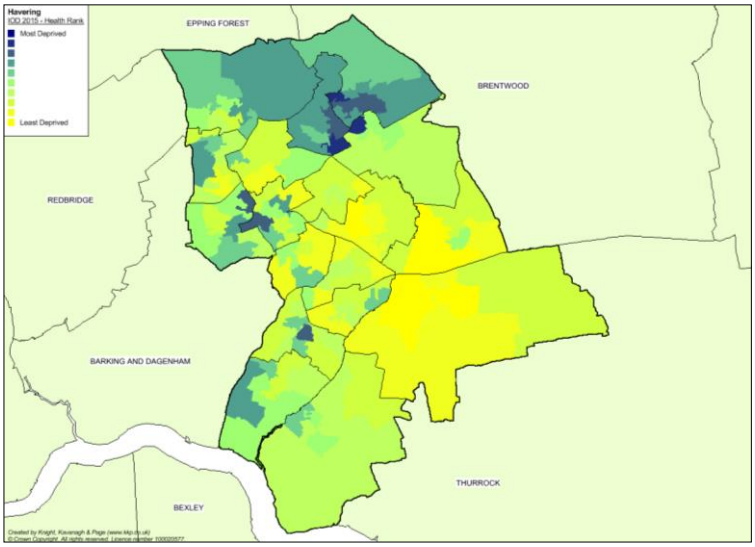


Figure 3.11: IMD and health domain comparisons – Havering and England.

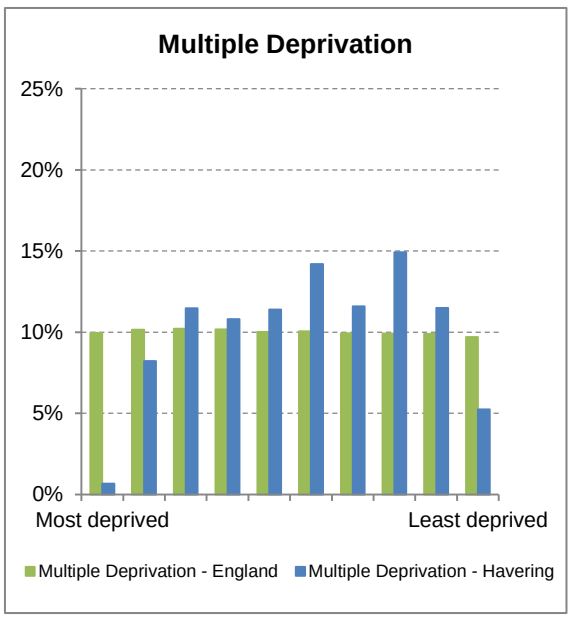
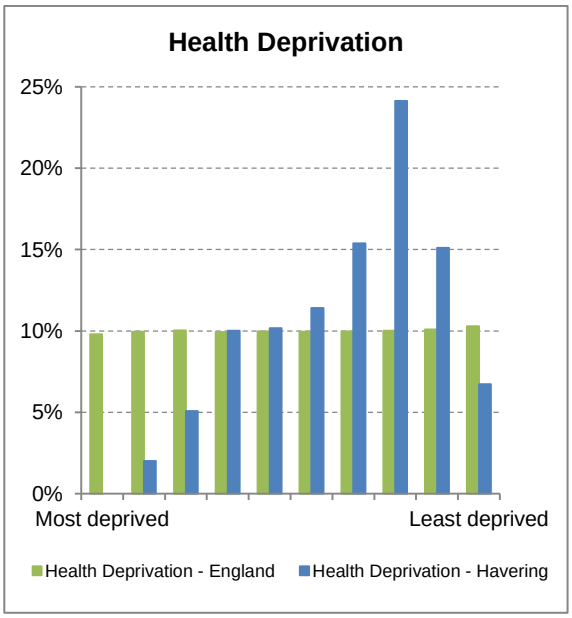




Relative to some parts of Greater London, Havering faces modest deprivation and ill health issues, with circa 9% of residents living in the 20% most deprived areas in the country. National comparisons present a mixed picture; health deprivation is higher in the least deprived areas of the Borough. Put another way Havering's least deprived residents suffer ill health and health deprivation than equivalent populations in England.

Health

Children

- The majority of children in Havering are not poor, but around 8,800 live in income-deprived households.
- Gooshays and Heaton wards have the highest proportion of children living in poverty
- 19.9% of children in Year 6 are classified as obese.
- The rate of alcohol-specific hospital stays among those under 18 was 31.3 per 100,000, better than the average for England. This represents 16 stays per year.
- Levels of GCSE attainment are better than the England average.
- Breastfeeding levels are worse than the England average.

Adults

- In 2012, 22.3% of adults were classified as obese.
- The rate of alcohol related harm hospital stays was 442 per 100,000, better than the average for England. This represents 274 stays per year.
- The rate of smoking related deaths was 302 per 100,000, worse than the average for England. This represents 417 deaths per year.

The picture in Havering is varied. An estimated 8,800 children live in poverty, obesity is an issue in children and adults. To tackle these and other health issues Havering has identified the following as priorities:

- Reducing levels of obesity
- Improving the identification and support given to people with dementia
- Improving the quality of health care

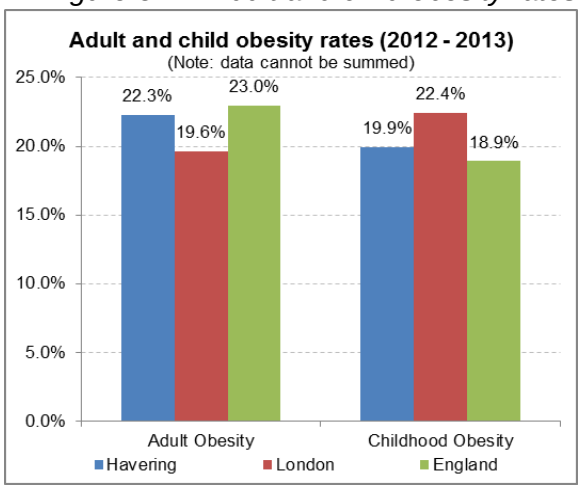
Source: PHE LB Havering Health Profile August 2014

Weight and obesity

Obesity is widely recognised to be associated with health problems such as type 2 diabetes, cardiovascular disease and cancer. At a national level, the resulting NHS costs attributable to overweight and obesity[11] are projected to reach £9.7 billion by 2050, with wider costs to society estimated to reach £49.9 billion per year. These factors combine to make the prevention of obesity a major public health challenge.

Adult and childhood obesity rates in Havering are generally similar to the national rates, reflecting the need to address these at a local level.

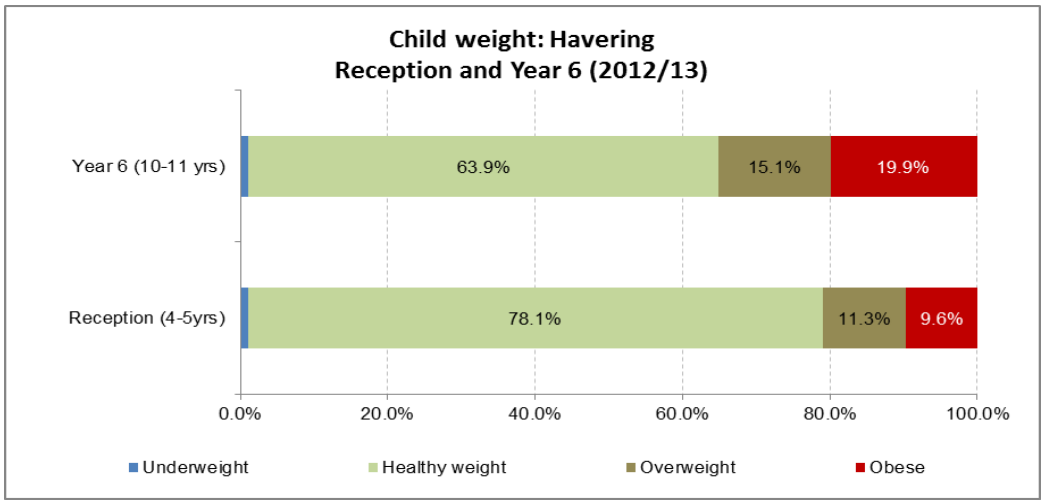
Figure 3.12: Adult and child obesity rates[10]



10 Adult Weight: Sport England Active People Survey; Childhood: National Measurement Programme, NHS

11 In adults, obesity is commonly defined as a body mass index (BMI) of 30 or more. For children in the UK, the British 1990 growth reference charts are used to define weight status.

Figure 3.13: Child weight – Reception and Year 6

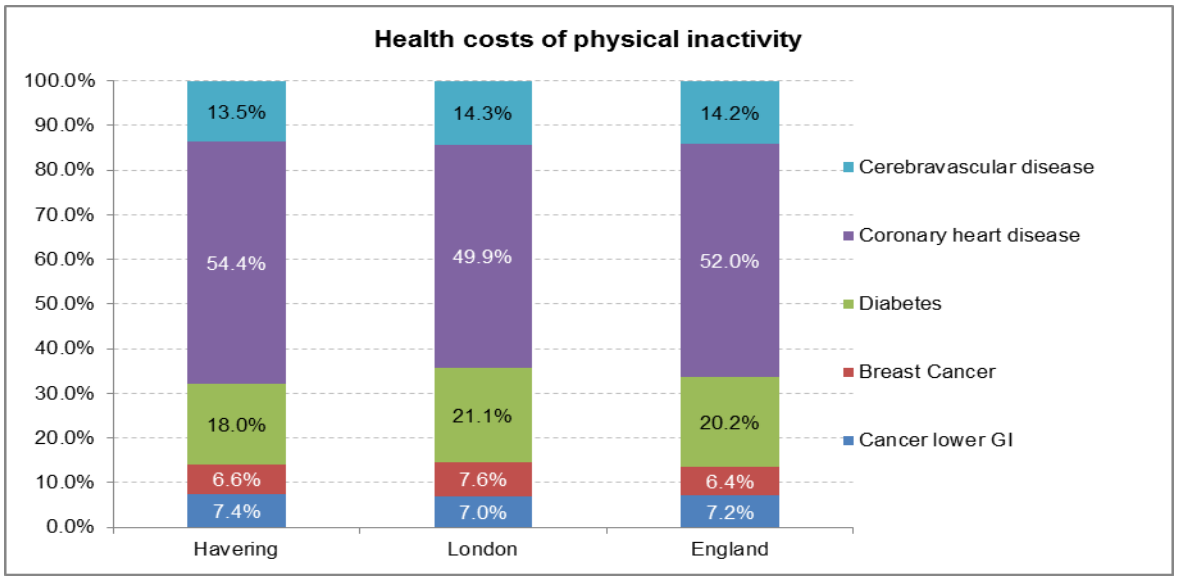


As with many other areas, obesity rates increase significantly between the ages of 4 and 10. Under 1 in 10 (9.6%) of children in Havering are obese in their Reception Year at school and 11.3% are overweight; by Year 6 these figures have risen to over 1 in 6 (19.9%) being obese and 15.1% being overweight. In total, by Year 6, over a third (35.0%) are either overweight or obese.

Health costs of physical inactivity

The British Heart Foundation (BHF) Promotion Research Group has reviewed the costs of avoidable ill health considered to be attributable to physical inactivity. This research relates to cancers such as bowel cancer, breast cancer, type 2 diabetes, coronary heart disease and cerebrovascular disease i.e. stroke. Local data indicates a similar breakdown between these illnesses regionally and nationally. The annual cost to the National Health Service (NHS) of physical inactivity in Havering is estimated to be £4,306,560 (DoH Be Active Be Healthy 2009 / Sport England website)

Figure 3.14: Health costs of physical inactivity[12]

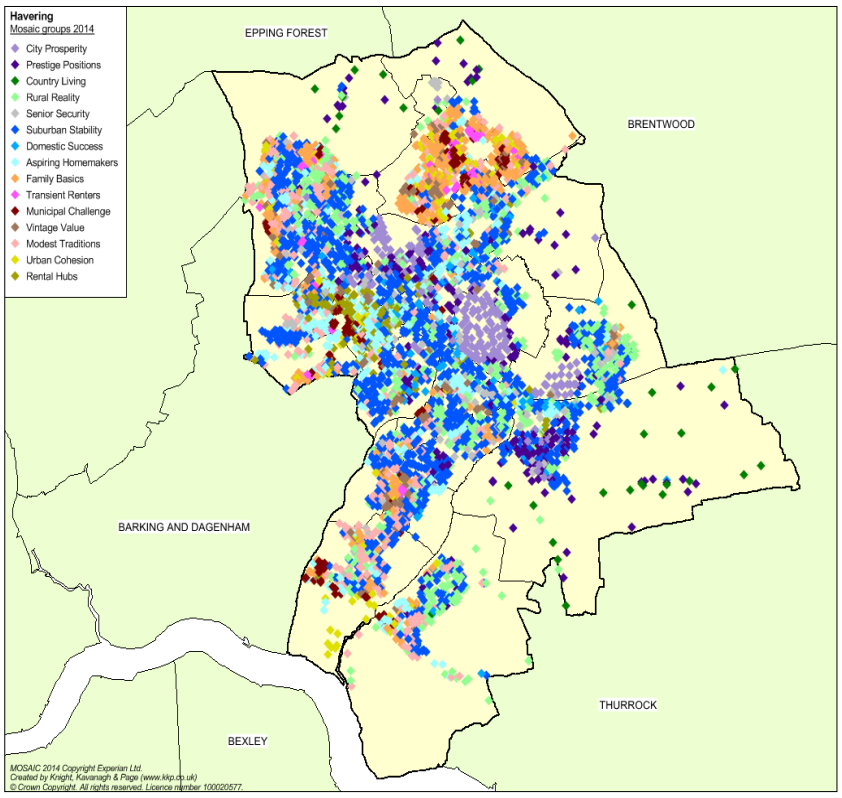


Socio economic

Mosaic profiling

Mosaic 2014 is a consumer segmentation product and classifies all 25.2 million households into 15 groups, 66 household types and 238 segments. This data is used to paint a picture of UK consumers in terms of their social-demographics, lifestyles, culture and behaviour and tends to be used to draw out population characteristics for the backdrop to library usage and other non-sporting activities.

Figure 3.15: Distribution of Mosaic segments in LB Havering[13]



This provides an immediate snapshot of the areas of poverty and comparative affluence and illustrates the domestic and suburban nature of the borough. The following table shows the mosaic classifications in Havering compared to the country as a whole.

[13] Experian Mosaic 2014

Figure 3.16: Mosaic segmentation – Havering compared to England

Mosaic group description	National	% of Havering popn.	Population mid-2013
City Prosperity	3.5%	0.0%	81
Prestige Positions	8.9%	7.1%	17,112
Country Living	4.5%	0.4%	1,009
Rural Reality	8.6%	0.1%	192
Senior Security	3.4%	20.6%	49,784
Suburban Stability	12.6%	14.6%	35,406
Domestic Success	6.1%	14.0%	33,867
Aspiring Homemakers	4.3%	13.2%	32,035
Family Basics	9.8%	8.2%	19,930
Transient Renters	5.9%	1.3%	3,195
Municipal Challenge	5.0%	3.3%	8,006
Vintage Value	3.4%	3.9%	9,353
Modest Traditions	7.8%	5.4%	12,970
Urban Cohesion	7.6%	2.6%	6,214
Rental Hubs	8.4%	5.4%	13,045
TOTAL	**100.0%**	**100.0%**	**242,199**

The largest segment profiled for Havering is 'Senior Security'. It comprises one fifth of the area's adult population. 'Suburban Stability' and 'Domestic Success' together with 'Senior Security' make up nearly half of Havering's resident population.

Senior Security - Elderly singles and couples who are still living independently in comfortable homes that they own. Property equity gives them a reassuring level of financial security. This group includes people who have remained in family homes after their children have left, and those who have chosen to downsize to live among others of similar ages and lifestyles

Suburban Stability - Typically mature couples or families, some enjoying recent empty-nest status and others with older children still at home. They live in mid-range family homes in traditional suburbs where they have been settled for many years

Domestic Success - High-earning families who live affluent lifestyles in upmarket homes situated in sought after residential neighbourhoods. Their busy lives revolve around their children and successful careers in higher managerial and professional roles.

Housing and economic growth

Romford, a London Metropolitan Centre, is already a primary shopping and leisure destination and the new Crossrail links and the accessibility it affords will bring jobs, houses builders, new residents and visitors directly into Havering.

Town centre redevelopment

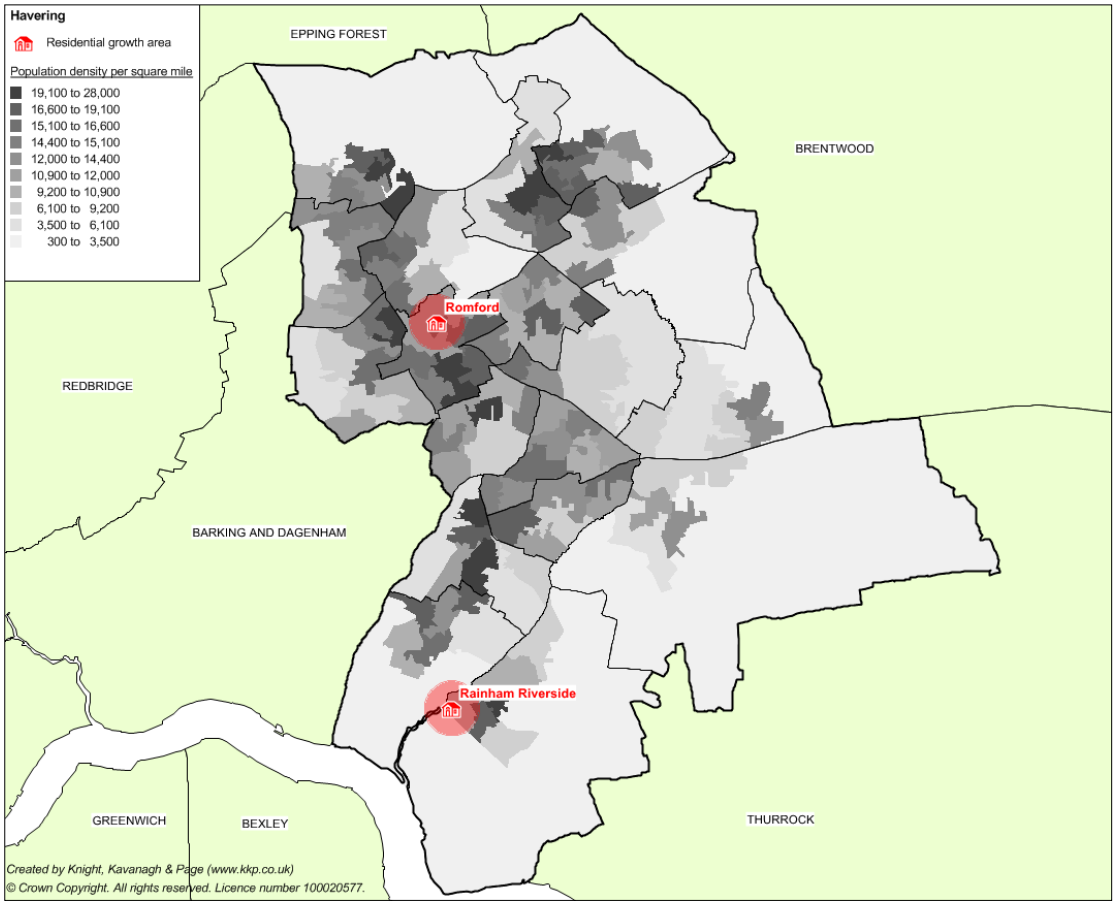
Havering Council intends to use this growth, and the opportunity presented by Crossrail as a driver to rejuvenate Romford town centre, through enhancing its character as a historic market town and as a developing centre for contemporary urban development. A significant element of this rejuvenation is the provision of a new leisure development in Station Quarter North to replace The Dolphin Pool which was closed in 1995 and the Romford Ice Rink which closed in 2013.

Housing growth

In 2014 Havering had an estimated 99,230 dwellings, accommodated 97,500 household at an average of 2.6 persons per dwelling. The London Plan has set a new house building target for Havering of 1,170 new dwellings per annum.

There will be significant development in Romford Metropolitan Centre and at the London Riverside Opportunity Area in Rainham. The main urban extension areas are identified in Figure 3.17.

Figure 3.17 Key residential growth areas in LBH



Crossrail

A key consideration in development of the main urban extensions is the upcoming investment in Crossrail, stretching from Reading and Heathrow in the west, across to Shenfield and Abbey Wood in the east. Within Havering, Romford, Gidea Park and Harold Wood stations will become part of the Crossrail network. Plans have been set out to develop and enhance the public spaces around stations in a number of outer London boroughs. The proposed designs will include new landscaped areas, better way-finding and enhanced integration with other transport services.

It is anticipated that Crossrail will change the pattern of commuting in London opening up new areas for commuters to live, particularly in east London and Essex. The Crossrail service is expected to be completed and fully operational by 2019.

3.2 Sport and physical activity in LBH

Participation

Active People Survey (APS)

Active People is the largest survey of sport and active recreation in Europe and collects data on the type, duration, frequency and intensity of adult participation by type of sport, recreation and cultural activity. The survey also covers volunteering, club membership, tuition as an instructor or coach, participation in competitive sport and satisfaction with local sports provision.

A further aspect of the Active People survey and SE segmentation is that it makes it possible to identify the five sports with highest participation levels within Havering.

Table 2.3: Most popular sports in Havering

Activity	Havering		London		England	
	No. (000s)	Rate	No. (000s)	Rate	No. (000s)	Rate
Gym	27.2	13.6%	885.0	13.9%	4,622.7	10.9%
Swimming	22.8	11.4%	757.6	11.9%	4,896.9	11.5%
Fitness & Conditioning	13.2	6.6%	519.2	8.1%	2,854.7	6.7%
Athletics	12.0	6.0%	550.1	8.6%	2,778.8	6.5%
Cycling	9.6	4.8%	421.5	6.6%	3,458.9	8.1%

(Source: SE Area Profiles)

Active People consistently demonstrates that adults from higher socio economic groups are more likely to take part in sport than the converse. It confirms that the most popular sports in Havering to be gym, swimming, fitness and conditioning, athletics (running) and cycling. It also illustrates that, in most headline categories, Havering performs below national and London averages. (APS statistics are based on a sample of 1000 interviews with Havering residents per quarter).

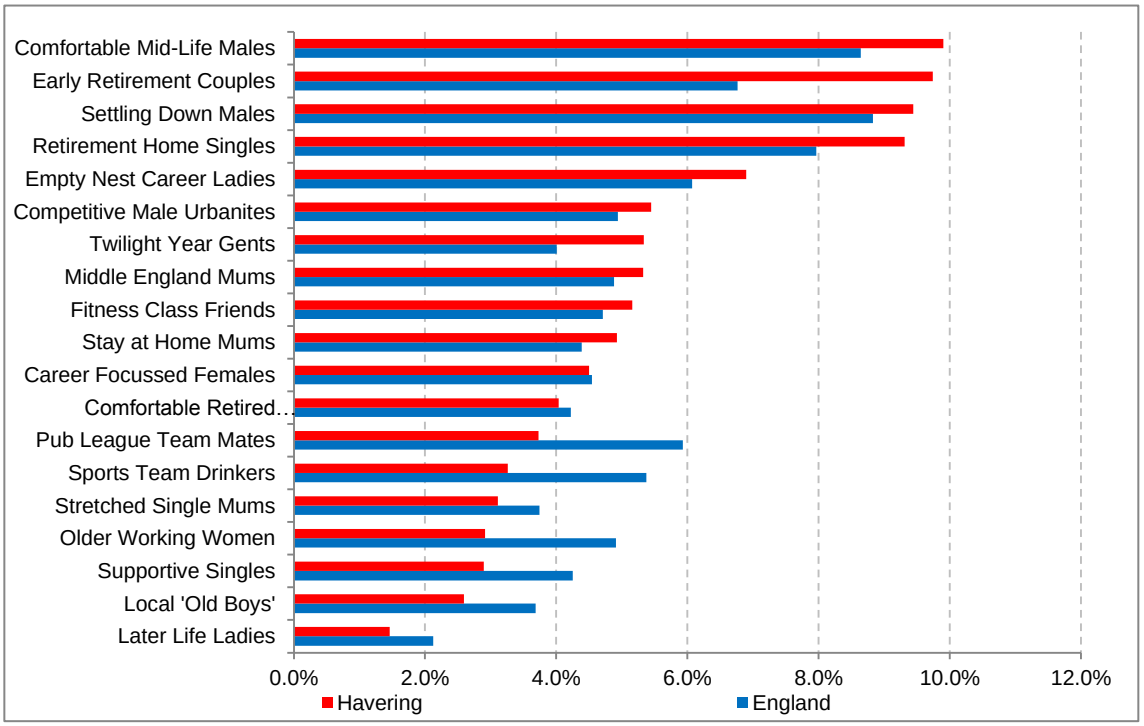
Key indicators from APS 8 for Havering identify that:

- More than one third (35.8%) of adults participated in at least 1 x 30 minutes moderate intensity sport per week. This was the same as the national (35.8%) and above all but one of its 'nearest neighbours' where participation ranged from 29.6% to 40.5%.
- Just over 1 in 6 (16.1%) are members of a sports club, based on the four weeks prior to the AP survey. This is below the national and regional (21.6%) rate and below all but one of its 'nearest neighbours'.

Sport England segmentation profiles

The segmentation profile for Havering indicates Comfortable Mid-Life Males (Philip) to be the largest segment of the adult population at 9.9% (17,779) compared to a national average of 8.65%. Early Retirement Couples (Roger & Joy) and Settling Down Males (Tim) are the next two dominant groups, representing 19.8% (35,270) of the adult population, compared to 24.2% nationally.

Figure 3.18: SE segmentation – Havering compared to England



Leisure centre attendance levels

A review of the attendances at leisure centres in Havering identifies that more people are using the facilities compared to five years ago. The decrease in 2009/10 – 2010/11 is attributed to the declining economy and the withdrawal of Government support for the free swimming initiative for children during the school holiday periods. Hornchurch Sports Complex recorded the highest level of attendances, as a result of its events programme in the larger sports hall.

Table 3.4: Leisure centre attendance levels

Year	Attendances	Increase/ Decrease (%)
2009/10	1,135,538	Base
2010/11	1,093,412	- 42,126 (3.7%)
2011/12	1,097,970	+4,558 (0.4%)
2012/13	1,161,225	+63,255 (5.4%)
2013/14	1,169,625	+8,400 (0.7%)

(Source: Facilities Development Strategy 2014)

In 2013/14 opening hours were reduced at Chafford Sports Complex resulting in a fall of 35,000 attendances. Despite this overall attendance levels, across all sites were maintained.

Leisure management operator SLM

The Borough Sport and Leisure Management Contract was awarded to SLM on October 1st 2006. SLM now trades under the brand name Everyone Active. The contract is due to conclude on September 30th 2016. The new contract tendering process is in progress. The indoor sports facilities included in the contract are:

- Hornchurch Sports Complex
- Central Park Sports Complex and
- Chafford Sports Complex at Chafford School.

Condition surveys and estimated maintenance costs

Non-intrusive surveys were conducted in September 2013. In-depth structural surveys are planned at both Hornchurch and Central Park leisure centres. Hornchurch sports complex has three major areas of concern, the main pool and the sports hall, both of which have cracks in the columns and building guttering which is leaking.

The condition surveys identified the investment requirements at facilities in order to bring the condition of the facility up to standard.

Table 3.5 Estimated cost of future maintenance at Hornchurch sports and Central leisure complexes to 2024

Centre / Area	Estimated cost (£)
Hornchurch Sports Complex	
Mechanical Plant	351,850
Electrical Services	841,000
Building	439,000
Cost	1,632,750
Central Park Leisure Complex	
Mechanical Plant	307,000
Electrical Services	700,000
Building	192,000
Costs	1,199,000
Total cost	***2,831,175***

(Source: Spons M&W Guide/LBH Leisure Development Strategy 2016 – 24)

The pool hall in Hornchurch was constructed in 1956. Dry side provision was added in the 1980's. The building is ageing and to remain 'fit for purpose' resources will need to be spent on refurbishment or replacement. In addition to the structural issues the building is not energy efficient and the 5m high diving board is currently out of commission.

Facilities at Chafford Sports Complex are reported to be in need of replacement, the building having reached the end of its economic lifespan.

Havering Sports Council (HSC)

The role of HSC is to liaise with all affiliated clubs and to represent their best interests at meetings with LBH. It is a forum for clubs to collectively discuss individual and common issues in an environment where elected members are present to get a greater understanding of sport within their area. It also holds an annual awards evening and awards small sports bursaries to local talented athletes. Its 70 affiliated clubs cover the spectrum of indoor and pitch sports. Common themes raised are, reportedly:

- Poor facilities
- Facility security and
- Car parking complaints.

To encourage new members many local clubs are reported to be making links with schools with many succeeding in attracting new members and developing good social relationships within the local community.

Summary of influencing factors

The vision for LBH in 2025 is to be a contemporary borough with a Metropolitan Central City (Romford) providing jobs, investment, shopping, leisure facilities and efficient and effective integrated public transport. The transformation driven by Crossrail will deliver significant local benefits and a rising standard of living for a growing vibrant population. An easily accessible, high quality sport and recreation offer is integral to the Council's vision to enhance quality of life and improve health outcomes across the borough.

The population is expected to grow by 29.1% (65,000 people) over the 25 years from 2014 to 2037. The most significant changes are the increases in children and residents aged 65+ (up by 25%). Currently 10% of the resident population has a BME background.

The population is dominated by Mosaic profiles senior security, suburban stability, domestic success and aspiring home makers, reflective of the commuting nature of Havering and as a place to make a home for a family.

Crossrail will have a significant impact in Romford, not only bringing economic growth but driving up demand for affordable housing. LBH has responded by identifying several large sites for re-development notably in Romford, Rainham and Hornchurch.

Tackling ill health attributable to physical inactivity, particularly obesity in children and adults is a high priority as is tackling multiple and health deprivation.

One third of adults in Havering meet the adult NHS activity target of one session of 30 minutes moderate activity per week. Many of the examples of how to be active at all ages involve playing sport or engaging in a physical activity typically hosted is a sports centre or swimming pool. Encouraging all residents to be more active whether via sport or other forms of physical activity is key to improving health outcomes and helping to address many of the health issues facing the area, a key target for both central and local government.

Currently the most popular sports in LBH are swimming, gym, fitness and conditioning, athletics and cycling. In most headline categories, LBH performs below national and London averages for the percentages of residents participating in these sports.

Leisure centre attendance at Hornchurch Sports Complex, Central Leisure Centre and the Chafford Sport Complex have risen modestly over the past 5 years (up 40,000). All three, if they are to remain relevant and 'fit for purpose' are in need of capital investment. These issues are discussed in more detail in the following report sections.

Future sport and leisure provision needs to take account of these factors, particularly the growth in population and the significant changes in the population profile.

SECTION 4: SPORTS HALLS

4.1 Introduction

Sports halls are key facilities for community sport because they are multi-purpose and provide for a range of different activities. The standard approach to measuring them is via the number of badminton courts accommodated within the floor area. They are, thus, made reference to as three, four, five, six, eight, nine and 12 (badminton) court halls.

The standard size of a 4 court sports hall was, until relatively recently, 18m x 33m x 7.5m. In 2012, Sport England, working with several indoor sport NGBs, sought to extend to 34.5m x 20m x 7.5m primarily to accommodate run off space for indoor netball. (*Source: Design Guidance Note – Sports Hall Design & Layouts, Sports England, 2012*).

A wide range of sports can be accommodated in sports halls; this includes, for example, archery, boxing, indoor athletics, badminton, basketball, bowls (short-mat), cricket (nets), dance/ exercise classes, dodgeball, fencing, fitness circuits, football, golf training, gymnastics, handball, hockey, martial arts, netball, roller hockey, table tennis, trampolining and volleyball.

4.2 Supply of sports halls

In general, the larger the hall the greater the flexibility and the more sports that can be accommodated concurrently, and/or the level of use that can be made of the venue for local and regional training, competitions and events. The review of the supply of sports halls (3 courts or more in size) examines:

- Quantity
- Quality
- Availability and
- Accessibility.

Quantity and quality

The audit research identified 21 sports halls in Havering. There is one eight court hall (Hornchurch Sports Complex), one five court hall (The Frances Bardsley School), and there are 18 four court halls and one three court hall (Redden Court School). Emmerson Park Academy has two sports halls; one four and one six court. (See Table 4.1).

New supply

Chafford Sports Complex

The Chafford School Sports Complex is managed out of school hours by SLM. The complex has a four court hall, a pool and a gym. The school has submitted a planning application to LBH to re-develop the school and the sports complex.

Funding has been sought through the PSBP, the Conditions Improvement Fund and other third parties. The respective bids have been rejected and therefore no funding is, as yet, committed to the proposed scheme.

KKP has visited and completed non-technical visual inspections at 17 sports halls in LBH. These involve looking specifically at the physical condition of buildings and assessing the extent to which they are deemed to be 'fit for purpose'.

The supply and our assessment of quality of 3+ court sports hall provision in LBH is illustrated in Figure 4.1 and detailed in Table 4.1 below. Quality is assessed visually and is based on a four point scale: good, above average, below average and poor. The assessor considers quality of surfaces, lighting, environment, fixtures and fittings and overall presentation from a users' perspective.

Figure 4.1: Three court plus sports hall provision in Havering

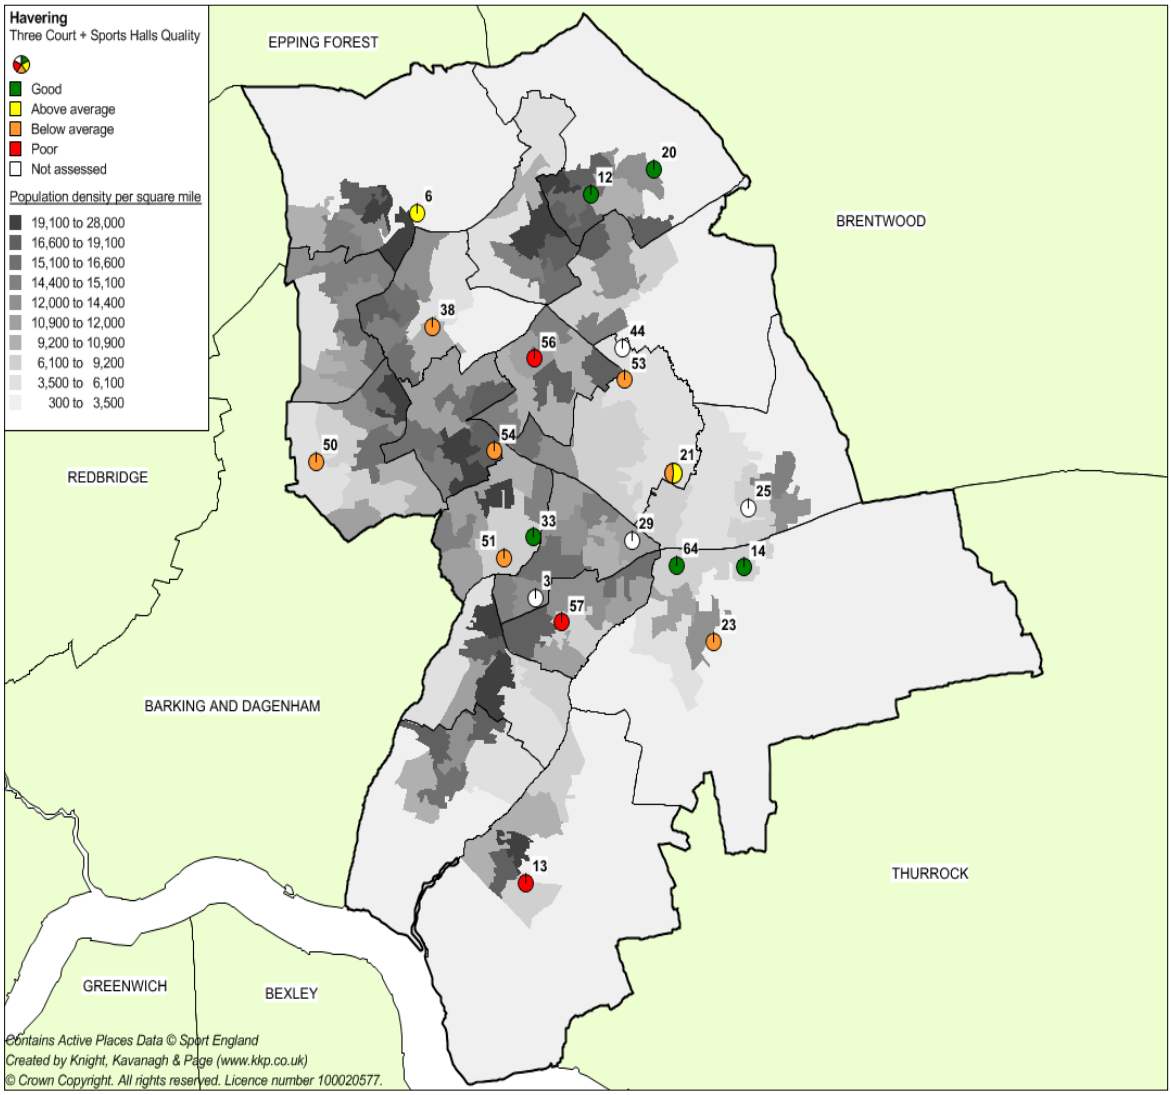


Table 4.1: Three court + sports hall provision in LBH

Ref	Site Name	Courts	Condition	
			Sports hall	Changing rooms
3	Abbs Cross Health and Fitness*	4	Not assessed	Not assessed
6	Bower Park School	4	Above average	Below average
12	Central Park Leisure Complex	4	Good	Good
13	Chafford Sports Complex*	4	Poor	Poor
14	Coopers Company & Coborn School	4	Good	Above average
20	Drapers Academy	4	Good	Good
21	Emerson Park Academy	6	Above average	Above average
21	Emerson Park Academy	4	Below average	Above average
23	Gaynes School Language College	4	Below average	Below average
25	Hall Mead School	4	Not assessed	Not Assessed
29	Havering Sixth Form College	4	Not assessed	Not Assessed
33	Hornchurch Sports Complex	8	Below average	Below average
38	Marshalls Park School	4	Below average	Poor
44	Redden Court School*	3	Not assessed	Not assessed
50	St. Edwards C Of E School & 6th Form College	4	Below average	Below average
51	The Albany	4	Below average	Above average
53	The Campion School	4	Below average	Below average
54	The Frances Bardsley School For Girls	5	Below average	Below average
56	The Royal Liberty School	4	Poor	Below average
57	Sanders Draper School & Specialist Science	4	Poor	Below average
64	Sacred Heart of Marys Girls School	4	Good	Above average

(Source: KKP assessment visits made in October 2015)

The inspections identify that the majority of the assessed stock of sports halls, is below average or poor, with 35% assessed as good or above average quality.

Changing provision quality is slightly higher with 59% of the assessed stock rated below average or poor and 41% assessed as good or above average quality.

Table 4.2 below identifies the LBH sports hall facilities and identifies some of the issues identified with the current stock.

Table 4.2 LBH sports hall provision observations

School	Observations from inspections
Emerson Park	Between the main gym and the sports hall the school has cricket nets, basketball and badminton. This is the home of the Emerson Eagles Badminton Club. Facilities are adequate for the School's needs and use by the community.
Bower Park Academy	Meets school needs. Limited public access.
Frances Bardsley Girls	Dated facility but adequate for school needs.
Coopers Company & Coborn School	The sports hall has recently been upgraded and is in good condition. It is frequently used by the community.
Campion School	A dated sports hall. The School concentrates on rugby union and that is reportedly where most of its sport resource is focused.
The Albany School	A dated sports hall. The School also has a small gymnasium (0 courts) and is in partnership with Aspire gymnastics which provides high quality equipment. Non-gymnastics based community access is restricted.
St Edwards C of E	A dated sports hall. There is no evidence of community use of the dry side facilities.
Marshalls Park Academy	A dated facility used by the community for netball and karate.
Sacred Heart of Marys Girls	The sports hall is 10 years old and of a good standard. It has a floor suitable for county level indoor hockey. Apart from occasional *ad hoc* bookings notably for Essex County hockey competition, the School does not facilitate community use. The site manager is reluctant to offer facilities to the community because of the wear and tear that this would cause on facilities, increased maintenance and staff costs.
The Royal Liberty	The sports hall is dated and reportedly suffers from worn fittings and a constantly leaking roof which is frequently a problem. This facility is not suitable for community use.
Sanders School	The School has a large four court sports hall which is outdated. PE staff are reported to have regularly expressed concerns about the floor being slippery and dangerous. Investment is required to re-surface the sports hall. There is currently no budget for this work.
Gaynes School	The sports hall is below average but suitable for school needs.
Drapers Academy	A brand new sports hall - the best quality hall in Havering. It has indoor cricket nets, basketball hoops and a climbing wall. It is let out to the community but the School is selective about who it is used by and when it is used. It has a viewing balcony for spectators
Abbs Cross H&F	Declined request for KKP to visit.
Hall Mead School	Declined request for KKP to visit.
Havering 6th Form College	Declined request for KKP to visit.
Redden Court School	Declined request for KKP to visit.
Central Sports Complex	A good quality community sports centre. Main uses are gymnastics, trampolining, fitness classes, football and badminton.
Hornchurch Sports Complex	1980's hall added to a 1956 pool. The two buildings do not 'fit' well together and there are reported airflow and condensation issues.
Chafford Sports Complex	A dated and poor quality facility.

Summary of inspection findings

The majority of the sports halls in Havering schools are outdated. Significant investment is required to raise the quality of existing provision. Only three schools have sports halls rated as good, the rest are considered to be below average or poor. The highest quality facilities are located in the central and north east areas of Havering at:

- Central Park Leisure Complex (No.12)
- Coopers Company and Coborn School (No.14)
- Drapers Academy (No.20)
- Hornchurch Sports Complex (No.33)
- Sacred Heart of Marys Girls School (No.64).

There is only one centre in south Havering, the Chafford Sports Complex at Chafford School (No.13). This is rated poor, not fit for purpose and as noted earlier beyond its economic life. Chafford School has aspirations to rebuild the school and sports facilities. Rainham and the surrounding area have no sports hall provision.

Availability

Community use of an educational facility can involve the allocation of up to 41 hours per week (5 hours on weekday evenings and 8 hours per day at weekends). Thirteen schools with sports halls in LBH offer community use as identified in Table 4.3. In LBH the 13 schools available offer the community 257 hours access per week at an average of 19.7 hours per week. Assuming that 41 hours of community use could be available at all schools, use in Havering is at 47% of capacity. As detailed below Coopers and Company Coborn, Campion, St.Edwards C of E and Abbs Cross offer 41 hours of community use or more.

Table 4.3 Hours of community use of sports hall in LBH schools

Facility	Community opening hours	Total hours	Club users	Spare capacity
Chafford School	Monday-Thursday 16.00 – 22.00 Friday 16.00 – 17.30 Saturday 08.00–13.00 Sunday 08.00–12.30 Hours recently reduced to save on staff costs	27	Basketball, badminton and football – mostly casual users. 1 court used for circuit training class	Spare capacity on all days
Abbs Cross	Monday – Thursday 18.00- 22.00 Friday 18.00 – 21.00 Weekends 08.00–19.00	41	Not Known	Spare capacity

13 Schools		257 Av. 19.7		

Two schools do not facilitate community access to the indoor sports facilities; Sacred Heart of Marys Girls and the Royal Liberty School. Sacred Heart of Marys School has a 10 year old sports hall which it is cautious to let out to the community, wishing to preserve facility quality and not to have to hire extra staff to accommodate community. The Royal Liberty sports hall is available to hire but the quality of the facility and the floor in particular is an issue; it does not, therefore attract interest from the community.

Hornchurch Sports Complex and Central Park leisure complex, sports halls are extensively used and reported to be at capacity during peak times. There is, however, clearly capacity within the existing school based provision to accommodate additional non-school use. Investment in school sports halls would improve the quality and potentially extend hours available to the local community and the attractiveness of the offer, potentially accommodating unmet latent demand.

Neighbouring authority facilities

Sports hall provision in Havering and neighbouring authorities is illustrated in Figure 4.2 overleaf. The map illustrates the catchment covered by the supply of sports halls within Havering and outlines where neighbouring supply might provide access for Havering's residents.

The main issues arising from this analysis indicates that:

- The majority of residents reside within 1 mile of a sports hall
- The key area where this is not the case is to the north of Rainham on the border with Dagenham and Redbridge.
- There is some cross over of provision in the Romford area with at least six facilities in the Barking and Dagenham area serving Havering residents.
- In the key area of Havering where there is limited provision (i.e. Rainham) there is no facility within any neighbouring authority which serves Havering's residents. As such the Rainham area of Havering is significantly isolated from sports hall provision.

Figure 4.2: Havering sports halls and provision within 1 mile of the Borough boundary

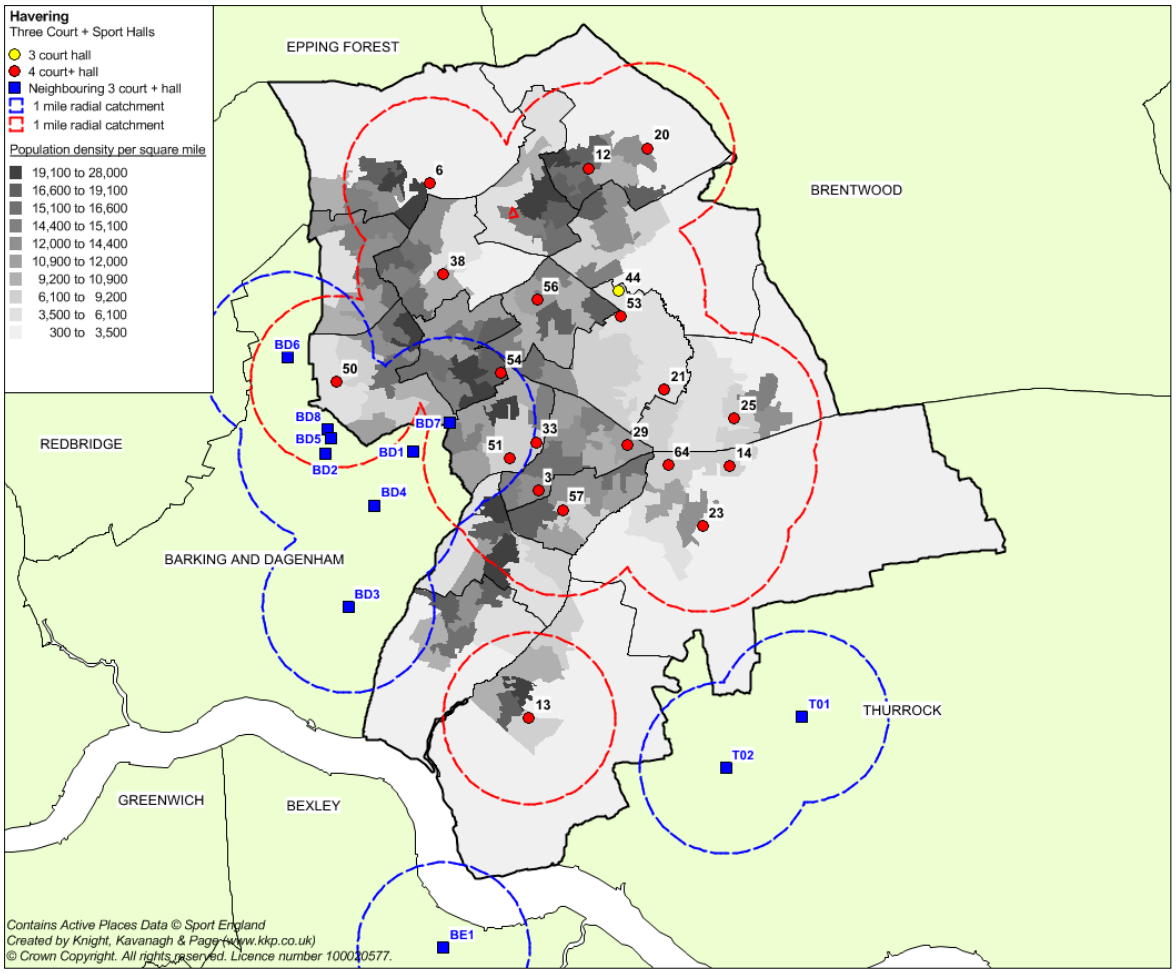

Table 4.4: Sports halls in Havering and neighbouring authorities - 1 mile of LBH boundary

Summary of the supply of sports hall accommodation

There are 21 sports hall with 3 or more courts in LBH. The quality of much of the existing school based supply is poor or below average. Public provision at Hornchurch sports and Central Park leisure complexes is good, although there are structural issues at the Hornchurch Sports Complex that will necessitate investment.

Residents living in the south of the Borough are poorly served. The only centre in the area offering community access is Chafford Sports Complex. The centre is in very poor condition. There are no other sports hall facilities in Rainham.

Remaining LBH residents can access a sports hall within a 1 mile catchment / 20 minute walk. There is community use at 80% of the school stock. It is however only being used at 47% of its total capacity. Lack of take up is largely due to a combination of poor quality halls and therefore no demand or schools not wishing to permit extensive community access due to potential damage and cost of staffing.

4.3 Demand for sports hall facilities

As noted earlier, sports halls can accommodate a wide range of sports. In partnership with London Sport the following NGBs were invited to comment on the provision of sports halls in Havering (see Appendix 5):

- England Badminton*
- Basketball
- Boxing*
- Fencing
- British Gymnastics*
- Judo
- England Netball*
- Table Tennis England*
- England Volleyball*
- England Weightlifting*

Denotes responded*

Of the 10 sports hall related NGBs contacted 7 (70%) responded to the survey request. The key points made are detailed below.

NGB survey responses

Table Tennis England (TTE)

Mission 2025 is the table tennis strategy to develop the sport over the next 10 years. It has several key aims:

- Participation: TTE will increase participation among adults, disabled people, in schools, and our own membership.
- Places: TTE will grow the network of clubs and facilities within competitive league table tennis and at a social level.
- People: TTE will increase the number of qualified coaches; provide support for table tennis 'activators'; and grow the number of volunteers and officials and provide additional training and support

- Performance: TTE wants our elite athletes performing at a world class level; and will provide the support and competitive structure at domestic level for all our players to achieve their potential.

http://tabletennisengland.co.uk/wp-content/uploads/2015/07/Mission-Statement-for-web.pdf

The strategy is designed to ensure that facility investment (of £750k from Sport England) enables "a network of vibrant table tennis venues, meeting the needs of social and committed participants that cater for current participants and enable an increase to 200,000 regular participants". The aim is to support existing clubs to secure additional tables, and to support recreational table tennis with projects such as outdoor table covers (http://tabletennisengland.co.uk/wp-content/uploads/2015/08/TTE-Facilities-Strategy-Final-30.6.15.pdf)

LB Havering is not currently a priority area for the sport. TTE's priority borough in London is Tower Hamlets. However the priority zone model is aimed at creating sustainable, increased activity in one area, and then identifying boroughs where there is an opportunity to develop the sport, in particular where there is support from the council and a local network of coaches and volunteers is available. This is the case in Havering, so there is potential for it to be a priority area for TTE in the future.

The essence of the facility strategy is that TTE will identify pre-existing clubs such as at Coopers Co & Coborn in Havering that qualify for investment in the context of purchasing new tables and equipment.

Given the popularity of table tennis there is insufficient access to it in the Borough. The main sports complexes at Hornchurch Sports Centre and Central Park Leisure Complex (Harold Hill) provide an opportunity to 'hire a table' for a period of time at a charge, but no Borough' table tennis centred' facility exists.

Centres at Maylands Green (Maylands Juniors), Bretons Farm and The Coopers Co. & Coborn School (Havering TTC) offer options for junior-only coaching. There are locally run clubs at the Hornchurch YMCA, Ardleigh Green House, Ardleigh Green, Cranham Community Centre, Cranham and Tweed Way Hall, Rise Park. Some of these offer general public access on specific times/days.

Havering has an established table tennis league (Romford & District TTL). The league currently has 8 clubs providing 32 competitive teams which compete in a league programme between September and May. The majority of clubs do not provide access to the general public to play recreational table tennis as the venues are hired premises and consequently are limited to evening match play. Only one; Romford League club has a set up for coaching of juniors, this being Maylands Green; its junior coaching arm is called Maylands Juniors.

There is potential for growth in the sport. Both Maylands Green and the Havering TTC have waiting lists for juniors wanting to join. There is no adult coaching centre, despite the League receiving many approaches from adults who wish to be coached or simply attend a club to 'have a go'. Whilst sports centres provide access to facility hire, the quality of equipment on hire is not always to a high standard and no coaching or support is provided. A more organised and structured centre at which to access the sport; allowing for coaching and a simple 'have a go' based opportunity could lead to a considerable uptake of the sport.

TTE has taken a lead in trying to introduce more access to the sport. A number of key innovations have been put in place but money, volunteers and venue availability all contribute to make this roll out difficult to accomplish. It is, thus, left to local organisations (such as the Romford & District TTL) to try and fill the gaps. Within Havering, one innovation has been to open a cross-generational club at Harold Hill (Myplace Community project), for which funding is currently being sought.

The key issue for the Romford & District TTL is that of adequate venues for hire. Facility hire costs can be prohibitive and where clubs have been based at sports centres, a number have been priced out at key times as more income can be generated from higher attendance sports and activities. The League has considered the possibility of a single multi table venue for league matches and provision of coaching for more juniors and adults, but this would require access to the appropriate facility and the ability to secure tenure of it.

Volleyball England (VE)

Volleyball England has five priority areas, or 'investment zones', in England. LBH falls within one of them; East London and Essex. The area thus has a dedicated regional manager and a significant annual revenue budget. Funding strands are available for:

- Secondary school delivery
- Further education delivery,
- Higher education delivery and
- Adult participation.

Dependent upon the project type, Volleyball England also has a capital pot to assist, primarily, with the sourcing and installation of volleyball equipment such as fixed volleyball nets and volleyball floor markings.

It is anticipated that the brand new volleyball satellite club at Redden Court School will lead to and be able to cater for an increasing demand from players keen to continue with the sport after school age. This ambition is underpinned by the interest gauged from the students and sport makers at Havering Sixth Form College and Havering College. There is also potential to see development of sitting volleyball in the Borough.

In part, reflecting the perceived shift away from traditional club engagement, 'drop-in' sessions are becoming more popular. Where indoor facilities are scarce outdoor versions of the sport are growing in the form of, for example, grass-based social volleyball. This is weather dependant and typically also takes place in summer months.

Although LBH is not specifically identified in the facilities document, Volleyball England is keen to be consulted about future development of significant new facilities in the Borough in the future to ensure that existing or potential volleyball clubs can be catered for.

Responses for other NGBs are outlined below:

Table 4.5: Other NGB responses

NGB	Key clubs	Issues	Aspirations/ resources
England Boxing	Romford ABC Hornchurch & Elm Five Star ABC	There is potential to develop boxing in LBH, particularly focused on young people. LBH/SLM could help to support the development of boxing clubs in leisure centres	To promote the JBO and England BOX course. Developing a Satellite club with Romford ABC
England Netball	Marshalls Netball Club	Back 2 Netball is well supported in LBH. Schools have good facilities but do not hire them to the community. England Netball uses Frances Bardsley and Redden Court schools.	Two indoor courts at one venue would help netball development and provide a good competition venue.
Weightlifting		Only a limited number of centres can offer facilities and opportunities for Olympic Weightlifting.	London is a target area along with Manchester and Newcastle to increase participation and support growth.
England Badminton	Satellite Cub at Redden School Battle Badminton at Central LC.	LBH is not currently an area for EB development. There is a shortfall in coaches and limited infrastructure to base development work around.	Investment boroughs in London include: Redbridge Tower Hamlets, Hounslow Lambeth, Croydon Islington and Barnet.

Summary of NGB findings

There is potential for LBH to work closely with TTE, VE and EB to help develop these three sports in the Borough. Both TTE and EV have some capital funding available to assist with the purchase of equipment. England Netball is keen to see an 8 court hall developed, built to appropriate dimensions where two matches can be played concurrently. Weightlifting would welcome the opportunity to establish a base for power lifting in Havering.

Local club consultation

KKP consulted a range of local voluntary sector sports clubs. 32 were contacted and 13 responded. The main comments in respect of indoor sports provision are identified below:

- The quality of centres assessed is generally considered to be average.
- All clubs (with the exception of Emerson Eagles Badminton Club) believe the adequacy of provision to be average or poor.
- Only three clubs stated that the overall provision in Havering was of a good standard.
- Badminton is the sport most satisfied with indoor provision in Havering.
- Five clubs believe that sports hall provision in the local authority is not suitable to meet their needs:
  - Corinthians Badminton Club, uses of Bower Park Academy find booking courts for additional matches at short notice difficult.
  - Havering Triathlon Club would like access to a sports hall for indoor training
  - The Southern England School of Karate has moved for reason of cost from Marshal Park school sports hall to a community hall
  - Jaybee Gymnastics Club would like bigger premises from which to operate. It has a long waiting list which it cannot cater for due to lack of space and specialist equipment in the local area.
  - Storm Elite Trampolining Club based at Hall Mead School, commented that the quality of the equipment is poor and more specialised equipment is not available.

Clubs that responded to the on-line survey are listed in Appendix 2.

Summary of demand

Overall, there is no evidence to suggest that there is unmet demand for available sports hall space in LBH. Although there is potential latent demand i.e. people who wish to take part in activity but have no facilities in which to participate.

Peak-time at Central Park Leisure Complex and Hornchurch Sports Complex is at capacity. Many schools however report having spare capacity at both peak and off-peak times. Several of the Borough's school facilities are not used at all at weekends. This may be a reflection of the poor quality facilities on offer which hinders demand. In the case of Rainham, the absence of facilities potentially limits the demand for them.

The issues facing table tennis and karate are not untypical; leisure operators tend to look to maximise revenue at peak times and this is increasingly done at the expense of low volume (and, in relative terms, low income generating), sports. Therefore, there is scope to work with the local league to develop a central venue for competition, training and recreational play.

Accommodating future population growth

Existing capacity will be able to accommodate additional sports hall demand generated through latent demand and new housing and subsequent population growth. Although the quality of many school based facilities may continue to be a barrier, particularly to new participants. Some schools may need to be encouraged to extend the hours of community use to meet growing demand, particularly if participation rises in accordance with Government targets.

Facility Planning Model (FPM) analysis and findings – sports halls

The FPM is a Sport England strategic planning tool to model supply and demand and help inform the scale and location of sports halls.

FPM analysis is based upon the Sport England data run carried out in January 2015. Its conclusion is that there is a good level of supply of sports hall accommodation in LBH; both the number of sports halls and sports hall sites is significantly above the average for London boroughs. In common with many London authorities most are located on education sites and sit outside the day to day control of the Council and its operator SLM.

None of the sports hall accommodation in LBH is open full time (90 hours per week) in the weekly peak period. This reduces supply to a level below that is considered possible with the existing stock.

The majority of sports halls in the Borough are considered to be old and may, therefore, be less attractive to customers/residents than more modern facilities. LBH residents have the highest levels of access to a car compared to other London boroughs, significantly improving their level of choice when considering which sports hall to access.

The FPM estimates that, compared to the London average, a greater percentage of the borough's residents have their demand for a sports hall met. This percentage is also significantly above the England average.

The FPM estimates that the level of unmet demand in Havering equates to five courts. This is the third lowest figure for all London boroughs. About 20% of the unmet demand is caused by insufficient capacity. If all of the sports halls in the borough were open for the full amount of time during the peak period it is estimated that the unmet demand figure would reduce.

The model calculates that eight sites are not at full capacity. This is borne out by KKP's research.

FPM conclusions

The FPM estimates that at a London wide level, Havering has a strong supply of sports halls, it should therefore be possible to meet the demand created by the majority of residents. However, the position could be improved were the Borough's existing sports halls to be of better quality and open for longer. Challenges going forward will include the age and condition of much of the stock, the need to ensure that facilities on school sites continue to be made available to the community and meeting the increasing demand from a growing population.

4.4 Sports halls – analysis of supply and demand

The existing supply of sports hall accommodation in LBH has capacity to meet current demand. The standard of the stock on school sites is mixed. The highest quality facilities are at Coopers Company and Coborn School.

Chafford School Sports Complex is clearly at the end of its useful life. The School has aspirations to replace both main building and sports facilities via the pursuit of external funding sources. It has submitted a planning application to LBH. LBH facilities at Central and at Hornchurch sports centres are at capacity during peak times.

Hornchurch is an old facility and, from a management and user perspective, suffers from having been built in two phases; wet-side in 1956 and dry-side in 1980. Despite a good maintenance regime and some small improvements its condition reflects its age and aspects of the building are not fit for purpose. The plant and heat management systems are also considerably less economical to run than new build modern plant and systems that make full use of modern technology.

With the exception of the Rainham area, all residents in Havering have access to a sports hall within one mile of home. However the only provision in the south area is the Chafford Sports Complex, a site which is ageing and clearly not fit for purpose.

Existing capacity will be able to accommodate additional sports hall demand generated through latent demand and new housing and subsequent population growth. Although the quality of many school based facilities may continue to be a barrier, particularly to new participants. Some schools may need to be encouraged to extend the hours of community use to meet growing demand, particularly if participation rises in accordance with Government targets.

SECTION 5: SWIMMING POOLS

5.1 Introduction

A swimming pool is defined as an "enclosed area of water, specifically maintained for all forms of water based sport and recreation". Potentially a valuable teaching resource, the National Curriculum states that all children should be taught to swim. Swimming pools accommodate a range of sports; swimming, sub aqua, synchronised swimming, kayaking, octopush and water polo plus diving (increasingly, only available in specialist venues). Pools are extensively used for fitness swimming and fitness classes, e.g. aqua aerobics. The main NGB for pool based activities is the Amateur Swimming Association (ASA). Pools come in many shapes and sizes; the primary forms are:

- Main / competition pools
- Community pools
- Learner / learner training pools
- Diving pools and
- Leisure pools.

The ASA headline strategic objectives are 'more people learning to swim, more people swimming regularly, more medals on the world stage. (Source: ASA Strategic Plan 2013 – 17). Its Participation Strategy is being re-written but it is understood that the headline objectives will remain the same.

Table 5.1 Pools - key design characteristics

Type	Length (m)	Width	Depth	Key features
50m ASA national competition pool	50	Minimum 8 lane 19 or 21m	1.0m – 1.8 min 2.0m preference	White or pale blue finish Lane markings Timing system

62	Virgin Active Club (Romford)	Learner/Teaching/Training	0	6m

New supply in Romford

The new leisure centre in Romford, which replaces the Dolphin Pool (closed 1995) will include an 8 lane x 25m swimming pool and learner pool.

Specialist facilities

The pool at Hornchurch has diving provision and has, reportedly, in the past, successfully produced elite level divers. The 5m high board is currently out of commission.

50m pool supply

LBH does not have a 50m swimming pool. Swimmers and other aquatic users (water polo teams and synchronised swimmers) who require access to provision on this scale must travel to other local authority areas. The nearest facilities to the LBH are:

- Queen Elizabeth Olympic Park, London Borough of Newham
- Basildon Sports Village in Basildon District.

Both these 50m pools have been built within the last 5 years and provide visitors with a modern swimming experience, whilst the operators benefit from technology and modern equipment and fittings to reduce energy, maintenance and cleaning costs.

5.3 Quality of provision

With the exception of the pool at the Chafford Sports Complex, pool stock is assessed as good. See Table 5.3.

Table 5.3 Quality rating of assessed public swimming pools in LBH

Analysis of the mix of swimming pools serving the Havering area (including those within neighbouring boroughs) identifies that there is a relatively even split of public, school and private pool operations in the area. However, it is clear that the majority of provision within the Borough is located within school facilities, which limits pay and play access. Furthermore Havering has two of the key private sector health and fitness operators with pools, which operate on a member access basis.

As such, Havering residents currently have access to two swimming pools which offer pay and play access. This will increase to three once the new facility in Romford opens in 2017.

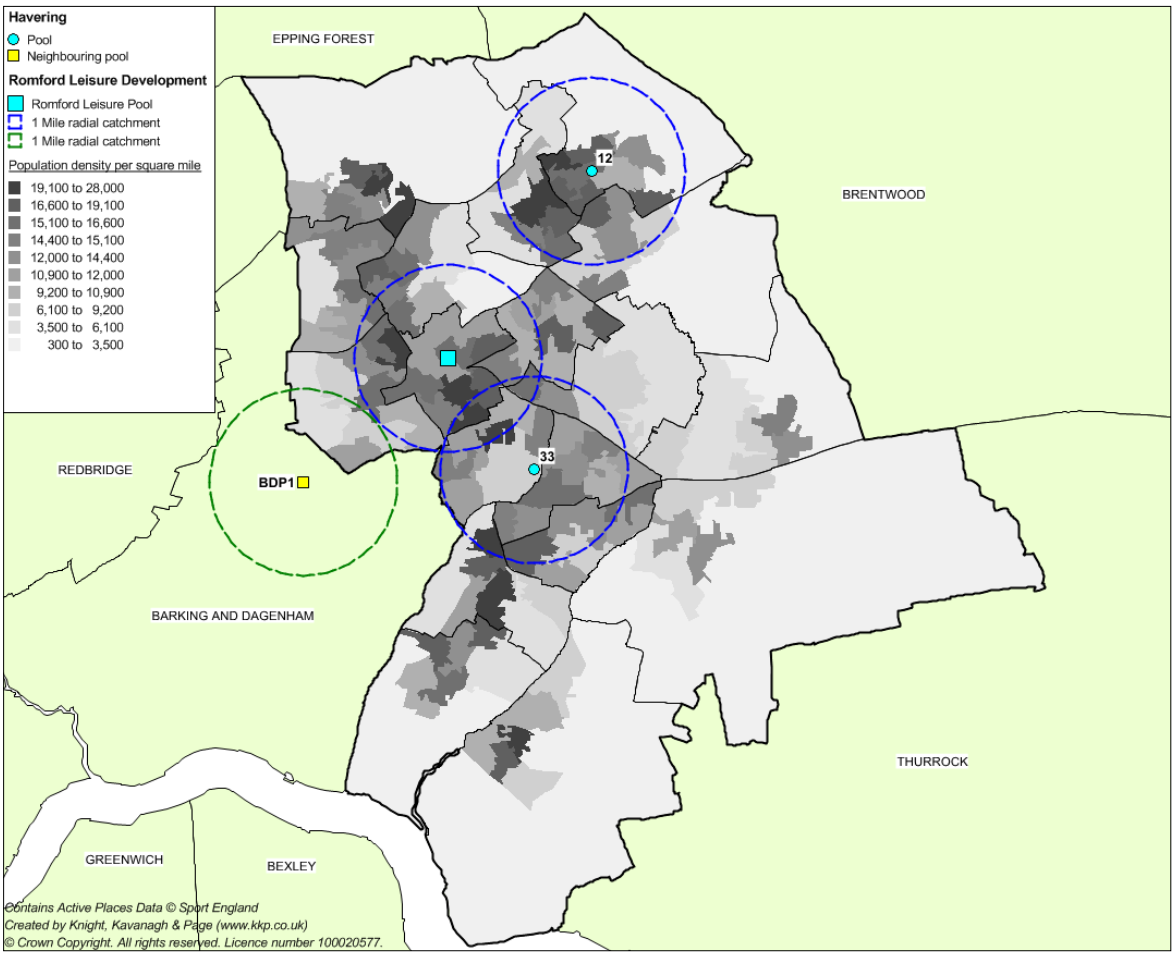
Source: KKP visits October 2015

School pools are providing 127 hours of community swimming and significantly helping to meet demand for water space throughout Havering from swimming clubs and swim schools. This is important given that it takes the pressure off council owned facilities to deliver these sessions.

Figure 5.3. Central Park and Hornchurch pools, with Romford Leisure Development site and I mile (20 minute walk) catchment areas



Provision in neighbouring local authority areas is having limited impact on meeting LBH based demand. Many venues in the immediate neighbouring areas are privately operated. Only Beacontree Heath Leisure Centre, a ten lane pool in the London Borough of Barking and Dagenham (shown on the map) is actively helping to meet the needs of Havering residents.

Figure 5.3 illustrates that significant areas of LBH remain without access to a publicly accessible swimming pool. This applies particularly to the northwest and south of the Borough, the latter of which is a key area for housing and population growth.

5.4 Availability and capacity

The main pool programmes for Hornchurch Sports Complex and Central Park Leisure Complex indicate a full programme of club, school and community swimming and classes from 06.00 through to 22.00 all week, except for Saturdays when pools close at 18.00. Swim school and schools swimming are also reported to be exceptionally busy at both pools.

Consultation with facility managers identifies a shortfall in water space to accommodate the wide range of pool users groups; swimming lessons, competition squads, fitness swimmers, aqua-fit, synchronised swimming and other water based games such as water polo and underwater rugby. Pool capacity is a particular issue at peak-times.

The new pool in Romford town centre will be a welcome addition to the available water space in Havering. Managers at the existing Central Park and Hornchurch complexes have emphasised the importance of free parking and the ability to easily accommodate buses and coaches bringing school swimmers. There is concern that these important operational criteria may not be able to be accommodated at the new development.

Summary of supply

There are 13 pools at nine sites in the LBH. Two are LBH owned (both with teaching provision), five locations are school site based and two are private health clubs (one of which offers teaching provision).

A new 8 lane x 25m pool with a learner pool is being developed in Romford Town Centre. It is expected to open in 2017.

The general quality of pool venues is good. The pool at the Chafford Sports Complex is in poor condition and at risk of closure.

There are substantial areas of LBH where residents are unable to access a publicly accessible pool within a one mile of where they live. A 20 minute drive time enables extensive choice to use facilities in neighbouring boroughs although traffic congestion is a significant deterrent.

The relatively small size of the main pools limits flexibility to accommodate different activities. All publicly accessible pools are fully programmed and at capacity during peak times.

5.6 Demand for swimming pools

NGB consultation

Consultation was undertaken with the Divisional Business Manager for the ASA London and East Region. Their comments are set out in Table 5.7 below.

Table 5.7. ASA survey response

NGB	Key clubs	Issues	Aspirations/ resources
ASA	Romford Town SC Killer Whales of Havering Havering SC Hornchurch SC Havering Dolphins SC Havering Cormorants Diving Club	Delay in the redevelopment of the Romford facility which includes a new 8 x 25m pool and teaching provision. Ongoing issues with high diving boards at Hornchurch. Consideration needs to be given to re-provision or replacement.	New 8 x 25m pool in Romford town centre is essential and will increase water space, enabling increased participation and club use. Hornchurch Swimming Club is recognised as a high quality performance club with the capability to develop elite standard divers.

Source: local club consultation

Responses drawn from the consultation with local voluntary sector clubs elicited the following main observations in respect of swimming provision:

- Clubs which use swimming facilities are the least satisfied with provision due to cost of hire and the availability of water space particularly at peak time.
- There is a consensus that swimming pool provision in Havering is insufficient. Pool time is limited and public pools are unable to meet club requirements.

The clubs which responded to the on-line survey are listed in Appendix 2.

Swim schools and lesson programmes

As Table 5.8 below, indicates that swim schools are highly prevalent in LBH and there are high levels of competition within this sector.

Table 5.6 Swim schools in LBH and key pool facilities used

Swim school	Location

Wards Swim School	Coopers & Company Coborn School

Accommodating future population growth

The new leisure development in Romford town centre is essential to meet the public swimming/water needs of the existing and future population of this significant housing growth area (3,500 new homes).

Similarly a new pool will be required to meet the needs of the new population of Rainham and replace provision at the Chafford Sports complex.

Replacement of the pool at Hornchurch will help to meet existing unmet demand and new growth from new residents and anticipated new participants.

Facility Planning Model (FPM) analysis and findings – swimming pools

The FPM is a strategic planning tool, used by Sport England to model supply and demand and help inform the scale and location of swimming pools.

The FPM analysis is based on the Sport England data run carried out in January 2015. It therefore relates only to current provision of swimming pools in Havering and does not take account of the situation which will apply when the new pools proposed for Romford are built.

Current supply of swimming pools in Havering, based upon the number of pools and volume of water space per resident, is positive with higher figures achieved than the averages for London boroughs overall. Despite the positive aspects of supply further capacity could be generated at the Borough's existing public pools if they were open for the full peak period. The model estimates that a significant number of extra visits could be catered for if existing water space were available for longer.

This said, 75% of the public pools are more than 40 years old and despite some refurbishment over the last ten years, they could be considered less attractive and are likely to be more expensive to operate than more modern provision.

Nearly 80% of Havering's residents have access to a car which means that the majority have some level of choice in respect of which swimming pool to access to meet their swimming needs. In this regard, Havering compares well to its London borough counterparts. More than 94% of the demand to use a swimming pool from Havering's residents can be met. This percentage exceeds both national and London average figures by a considerable amount.

A significant proportion of the demand from residents is met at swimming pools inside the Authority. This is unsurprising given the substantial number of pools and the greater choice available to Borough residents as a consequence of levels of household car ownership.

The FPM analysis indicates that there is unmet demand for swimming pool provision in Havering; this equates to circa 150 square metres of water space. 75% of this unmet demand can be attributed to residents who reside outside the catchment of a swimming pool and who are without access to a car. Some of the balance of unmet demand, that caused by insufficient capacity, could be addressed were public swimming pools to open for the full peak period.

The area in Havering with the greatest unmet demand is in the north west of the Borough around Havering Park and Collier Row.

Public pools in Havering are considered to be very busy during the hours that they are open in the peak period. This picture of used capacity is reflected across many public pools in London.

The FPM concludes that the picture for swimming pools provision in Havering is currently positive when compared with many of the London boroughs. However, the age of most of the public pools in the borough is likely to make it increasingly challenging for a modern swimming offer to be provided without new provision being built.

Summary of demand

Swimming is a popular recreational and club activity in Havering. The demand for swimming lessons is high, spawning a large swim school industry in both the public and private sectors.

Swimming has the potential to be the activity of choice for residents new to exercise who would like to achieve the NHS activity targets and become a regular participant.

The relatively small size of pools in LBH makes it difficult for facility managers to multi-programme pools effectively to meet the different demands placed on the water space. School based facilities meet much of the demand from local swimming clubs. However, all of the swimming clubs and the tri-athlon club would like more sessions. Greater space would allow for more squads and enable the clubs to grow. Growth in the club swimming sector is constrained by the shortfall in pool lane space.

6.7 Swimming pools - analysis of existing supply and demand

The picture for swimming pool provision in Havering is currently positive when compared with many London boroughs. However, the age and condition of the pool at the Chafford Sports Complex, the age of the pool at Hornchurch Sports Complex and the lack of provision in Rainham will make it increasingly challenging for a modern swimming offer to be provided without significant investment and/or new provision.

The new 8 lane x 25m and teaching pool provision in Romford will be a welcome addition to pool provision in Havering, it will not however address the access issues for residents living in the south of the Borough.

SECTION 6: HEALTH AND FITNESS SUITES AND EXERCISE STUDIOS

6.1 Introduction

For the past three decades health and fitness and 'working out' has become a very popular way of keeping fit. Accompanying the growth in the number of increasingly sedentary jobs 'going to the gym' has become for many a regular lifestyle activity. Static fitness equipment, swimming pools and exercise studios make up the 'core' facilities, with sauna and steam rooms, hot tubs, squash and tennis courts adding value, depending on the type of club and the market at which it is aimed.

In addition to the health impact, expansion of facilities serving this market has benefitted leisure operators as the 'fitness product' is accessed by high volumes of users and can be profitable. In the case of trusts and local government providers helping to subsidise typically less profitable operational areas such as swimming pools and sports halls.

6.2 Health and fitness – supply in LBH

Quantity

The popularity and profitability of health and fitness has attracted a range of different suppliers and the market has become increasingly segmented. In addition to council owned facilities in Hornchurch and Central Park, attracting several thousand members, there are a number of private sector providers targeting different market segments.

Figure 6.1: Health & Fitness Provision in LBH

Source: Sport England Active Places

The new leisure centre in Romford will have a 100 station fitness suite, adding to supply. No health and fitness clubs are reported to be full; all are accepting new members.

Quality

At the 'high end' of the spectrum are the David Lloyd Club at Gidea Park and Virgin Active in Romford. Low cost providers include Better Gym (run by GLL) a direct competitor to Everyone Active. In between are several privately run facilities (Fitness First, Abbs Cross Health and Fitness, LDG Fitness and Origins Health and Fitness; one of the few in Rainham) and several located on school sites. Generally clubs which charge higher memberships offer a wider range of facilities, classes, equipment and often a pool.

KKP visited 10 venues and completed non-technical visual inspections. The fitness suite facilities at Hornchurch and Central. Park are of a high standard. Equipment is modern and regularly renewed reflecting new trends where possible. The gym at Hornchurch Sports Centre is Inclusive Fitness Initiative (IFI) accredited and popular with disabled users as is the gym at YMCA Romford.

Accessibility and availability

LBH has a good geographical spread of gym/ fitness and conditioning provision and a wide range of health and fitness clubs to meet the needs of different users, from high end to budget facilities. Pay and play gym facilities are on offer at the main leisure complex and in many of the smaller community school gyms. Specific access issues have been identified as follows:

- Peak-time over-crowding and lack of peak time capacity, particularly at Central Park and Hornchurch.
- Inability to run concurrent classes due to lack of suitable studio spaces, particularly at Hornchurch and Central sites.
- The size of the fitness suites at Hornchurch and Central. These are considered to be too small to meet peak demand from members.
- Increasing market segmentation e.g. spin only clubs.

6.3 Health and fitness - demand in LBH

The demand for fitness suites in which to 'work out' seems set to continue to rise with many users young and old preferring the instant access and flexibility that gyms afford to more traditional teams sports and games. Aspirations to increase the activity levels of the population will add to demand for health and fitness provision as will the projected increase in size of population.

The fitness market is highly segmented with a 'fitness suite' offering to suit different lifestyles and budgets. Competition between providers is keen and 'new' styles of training are constantly emerging. Currently in vogue are Boot Camps, Kettle Bell workouts, Cross-Fit and Spinning. Flexible space in which to meet new trends is an advantage, as operators compete to attract and retain members.

Summary of demand

Within LBH the market for 'fitness suite' facilities is as keen and competitive as ever. It is likely that it will continue to evolve as more people are encouraged to be active. All the operators will need to keep abreast of market developments to keep pace with trends and maintain and grow their membership base.

Budget market entrants, such as Pure Gym are a potential threat to the leisure centre operator's business model as they may have an impact upon fitness profitability thus jeopardising the long term sustainability of non-surplus generating elements of sport/leisure provision such as swimming pools and sports halls. To date this trend has not been seen in Havering. There is however potential in Romford Town Centre as the population grows and LBH opens the new leisure development that will add to the health and fitness supply.

6.4 Health and fitness – analysis of supply and demand

The issues at Central Park Leisure Complex and Hornchurch Sports Complex need to be tackled if LBH is to retain its share of the health and fitness market. This is also important in the context of ensuring that current or replacement facilities do not operate at a deficit and present a burden on the Council's limited resources. New supply in Romford town centre leisure development will meet new demand from new residents.

SECTION 7: OTHER SPECIALIST PROVISION

In this section specialist provision for the following is assessed:

- Combat sports
- Cycling
- Indoor bowls
- Indoor tennis
- Squash
- Gymnastics and trampolining and
- Ice sports.

7.1 Combat sports

Combat sports in LBH: aikido, boxing, judo, karate, kick-boxing and wrestling are delivered in a multi-purpose venues across the Borough There is no specialist facility provision with purpose built/permanent matted or competition areas. Many combat sports clubs use spaces in community and church halls and four use school facilities:

- The Essex Martial Arts Academy at The Campion School
- Shotokan Karate at Marshalls Academy
- Kaizen Gunns at Frances Bardsley School for Girls and
- Karate Club at Chafford School.

Demand

No unmet demand for combat sports has been identified.

Combat sports – analysis of supply and demand

A purpose built facility for combat sports would help to meet their specialist needs in the Borough although there has been no suggestion from the NGBs or clubs that this is required. This said, many combat clubs which run as small businesses are finding the increasing cost of sports hall hire prohibitive and are turning to smaller and cheaper facilities such as community and church halls.

7.2 Cycling

The residents of Havering are circa 15 miles from the Lee Valley Velo Park at Queen Elizabeth Olympic Park and are, as a consequence, able to access the specialist cycling provision developed for the 2012 Olympic Games; now part of the Olympic legacy infrastructure. The Velo Park offers opportunities for beginners through to elite cyclists and the facilities it offers include:

- Velodrome
- 30 jump BMX track
- Mountain biking runs and a
- One mile closed road circuit.

In addition there are excellent facilities for road, mountain and BMX cycling at the Redbridge Cycling Centre at Hog Hill near Hainault Forest Country Park, circa 6 miles from Romford.

There is a small BMX grass track at Central Park adjacent to the Leisure complex and My Place. This is co-located with the Skatepark.

British Cycling operates Sky Rides in the Borough. These are local bike rides led by volunteers.

Cycling is the fifth most popular sport in Havering with an estimated 10,000 regular participants. However, the estimated Havering participation rate of 4.8% is below London (6.6%) and national (8.1%) averages.

Bike Life, a recent survey on attitudes to cycling conducted by the Charity Sustrans, questioned 11,000 people across the UK. It found that three quarters of the public would like to see the government invest more in making cycling safer. The average respondent wants £26 per person to be spent on cycling annually, as part of the £300 per person currently spent on transport. Current cycling spend in England is just £4 per head.

The survey also found that the sentiment was shared by both cyclists and non-cyclists. 71 per cent of those who said that they never used a bike still backed an increase, rising to 87 per cent among those frequently riding a bike.

Jason Torrance, policy director at Sustrans, said "*People want governments to spend more, and say that they would cycle more if it were safer. Now governments must close this gap between current spending and public demand. Physical inactivity, congestion and declining air quality cost our economy billions. Governments must act to secure a greater share of current transport investment for cycling and walking.*"

Cycling – analysis of demand and supply

Because of the presence of the Velo Park in the Lee Valley it could be argued that LBH residents have relatively good access to specialist facilities. Investment in making roads safer and providing off road cycling routes would be welcomed by the cycling community and would encourage new participants to try cycling.

7.3 Indoor bowls

National governing body

The English Indoor Bowls Association is the NGB for bowls; its stated objectives are:

- A growth in participation across the adult population in local communities. Targeted work to increase female participation.
- A growth in participation in the 14-25 age range, plus working with primary schools (Year 3 & 4 – age 7 to 9).
- The provision of an excellent sporting experience for new and existing participants.
- A growth in indoor bowls participation by people who have disabilities.

Segmentation and targeting

Sport England data shows adult (16+) participation in bowls to be as follows:

- Franks, Ralphs and Phyllis' are the groups most likely to play. However, as these vary in size those most likely to play are not always the groups with the largest numbers of potential participants; in the case of bowls these are Franks and Elsies & Arnolds.
- Frank is described as possibly married or single, aged 66+ and retired. He tends not to be very active although if he is, the main sports he takes part in are golf, keep fit, bowls, swimming and cycling. Bowls is the fifth most likely.
- Elsie & Arnold are described as aged 66+, to be widowed and retired. Their activity levels are consistent with those in this age range although they are likely to do progressively less as they get older. Their main sports are keep fit, swimming and bowls. Bowls is the fifth most likely sport for them to say they would like to take part in (if not currently already doing so).

Supply

LBH has one indoor flat green bowls club located at Harrow Lodge Park in Hornchurch. There are several indoor bowls facilities in the neighbouring London boroughs of Barking and Dagenham and Redbridge, and also in Epping Forest, Thurrock and Brentwood – as is illustrated below.

Figure 7.1: Indoor bowls supply in Havering and neighbouring authorities

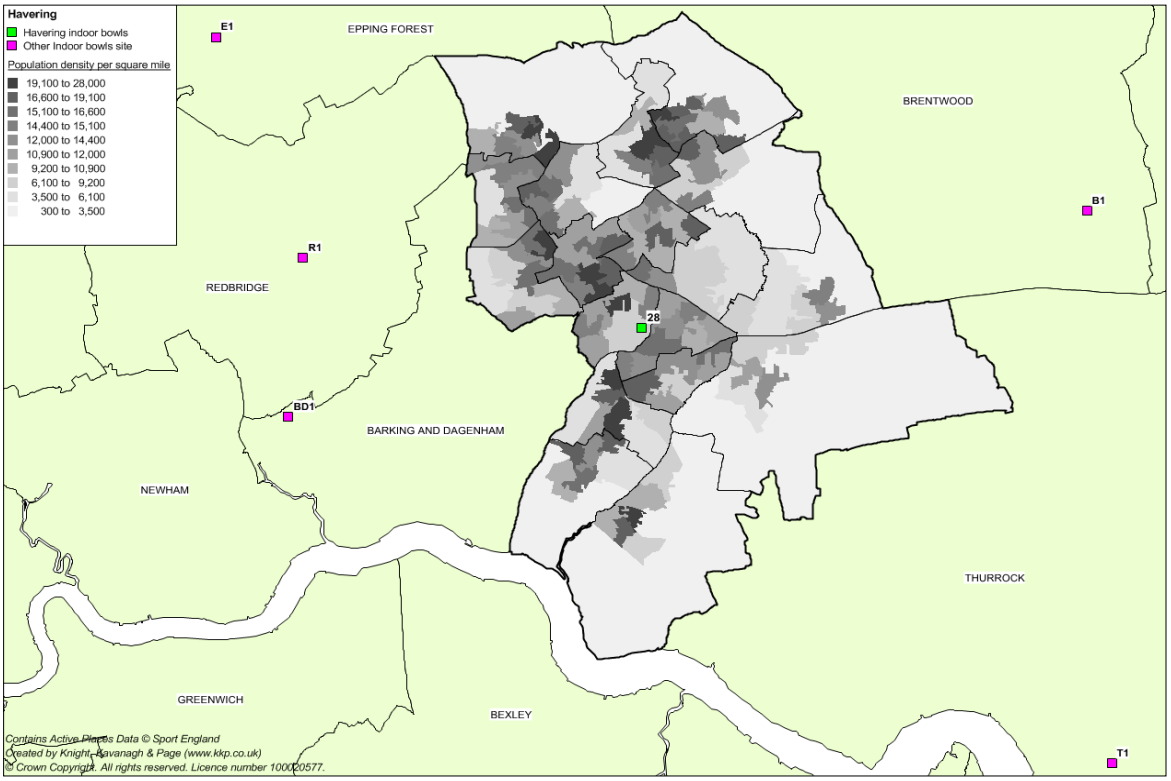

Table 7.1 Indoor bowls supply in Havering and neighbouring authorities

Map Ref	Site	Rinks
28	Havering Indoor Bowls (HIB) Club, Harrow Lodge Park	8

Map ref	Site	Local authority area	Rinks
B1	Stonyhill Bowls Club	Brentwood	7
BD1	Barking & District Indoor Bowls Club	Barking and Dagenham	6
E1	David Lloyd Club (Chigwell)	Epping Forest	7
R1	Ilford & District Indoor Bowls Club Ltd	Redbridge	4
T1	Tilbury Community Association	Thurrock	6

Demand

The indoor facilities at Hornchurch Indoor Bowls Club (HIBC) in Harrow Lodge Park run regular indoor winter leagues but are not used to capacity. The EIBA supports the retention of these facilities and would like to see all bowls clubs re-building membership up to the levels enjoyed in the 1980's thus ensuring sustainability.

Table 7.2: EIBA Survey Response

NGB	Key clubs	Issues	Aspirations/ resources
EIBA	Harrow Lodge Park Indoor Bowling Club	Retaining/recruiting new players. Working with club volunteers to deliver robust sports development plans	To grow participation. EIBA considers current capacity at Harrow Lodge Park to be sufficient to accommodate potential growth.

Indoor bowls – analysis of supply and demand

The facilities in LBH do attract users and it has been identified by the NGB as a key facility for the area and should be retained. There is spare capacity at the facility, especially during the summer months when a lot of bowlers choose to bowl outdoors. An increasingly ageing population may help to sustain and/or re-kindle interest in indoor bowls.

7.4 Indoor tennis

National governing body

The LTA has a stated objective to grow the sport and ensure that more people are able to play tennis more often at first class facilities, with high quality coaching programmes and well organised competition.

Its overall aim for 2011-2016 has been to ensure that, as far as practicably possible, people have access to and are aware of such opportunities in their local area, including:

- Access for everyone to well-maintained high quality tennis facilities that are either free or pay as you play.
- A Clubmark accredited place to play within a 10 minute drive of their home.
- Indoor tennis courts within a 20 minute drive time of their home.
- A mini tennis (10 and under) performance programme within a 20 minute drive of their home (Performance Centres).
- A performance programme for 11-15 year olds within a 45 minute drive time of their home (High Performance Centre).
- A limited number of internationally orientated programmes strategically spread for players 16+ with an international programme (International High Performance Centres).
  Note: These targets are guidelines and subject to demand, population density and existing provision.

Segmentation and targeting

Sport England data shows adult (16+) participation in tennis to be as follows:

- Bens and Tims are the groups most likely to play. However, as groups vary those most likely to play are not always the ones with the largest numbers of potential participants; in the case of tennis these are Tims and Alisons.
- Tim is described as possibly married or single, aged 26-45, employed in a professional capacity and may have children. He tends to be quite active and to take part in sport on a regular basis. The main sports in which he takes part are cycling, keep fit, swimming, football and athletics. Tennis is the eighth most likely activity for him to do and the sixth in the order of those he would like to take part in (if not currently involved).

- Alison is described as aged 36-45, to be a married, stay at home mum with children. She is fairly active and her main sports are keep fit, swimming, cycling and athletics. Tennis is the sixth most likely sport for her to do and the fifth in which she says she would like to take part (if not currently involved).

Supply

There are eight tennis clubs in Havering providing tennis coaching and competition structures. None of the clubs have indoor provision and are currently restricted to floodlit courts. There are indoor tennis facilities at the David Lloyd Club (DLL) in Gidea Park. This is a members' only facility and as such access to these courts is restricted to one's ability to pay the membership fees. It has seven indoor courts.

Demand

There are an estimated 1500 members within the eight clubs in Havering. Demand to join a tennis club has fallen over the past three years with clubs reporting reduced membership at senior level.

Indoor tennis – analysis of supply and demand

Players that wish to play indoor tennis must join DLL or travel to neighbouring authority facilities to do so. A detailed analysis of the supply and demand for outdoor tennis courts is contained in the 2015-16 Playing Pitch Strategy. The NGB has not identified LBH as a priority to develop an indoor tennis facility and this has not been deemed a priority for the Council.

7.5 Squash

National governing body

The NGB's 2008 – 2013 vision was to ensure that squash and racketball increased in popularity and profile, continued and increased success at international level and ran according to the highest standards of governance, management and ethics. A new strategy is currently understood to be in production). England Squash key aims, drawn from the 2008-2013 strategy, are centred on:

- Participation, accessibility & membership and
- Stability, independence & governance.

They are underpinned by commitments to competition, coaching, refereeing, facilities and marketing.

Segmentation and targeting

Sport England data shows adult (16+) participation in squash in as follows:

- Bens and Tims are the groups most likely to play. However, as groups vary those most likely to play are not always the one with the largest numbers of potential participants; in the case of squash these are Tims and Philips.
- Tim is described as possibly married or single, aged 26-45, employed in a professional capacity and may have children. He tends to be quite active and to take part in sport on a regular basis. The main sports in which he takes part are cycling, keep fit, swimming,

football and athletics. Tennis is the eighth most likely activity for him to do and the sixth to say he would like to take part in (if not currently involved).

- Philip is described as a comfortable mid-life male, aged 46-55, with children. His sporting activity level is above the national average. The main sports in which he takes part are cycling, keep fit, swimming, football and golf. Squash currently lies in tenth position and is ninth in the list of those in which he would like to take part.

Supply

During the past three decades the sport of squash has declined in popularity and participation has fallen drastically. There are some signs of a mini-resurgence but many of the courts that existed in the 1970/80's have been closed or converted for other uses, notably dance studios or health and fitness gyms. As is illustrated in Figure 7.2 below, the only (three) public squash courts in LBH are located at Hornchurch Sports Complex. The quality of these is good with repaired and maintained walls, floors and lighting. Two courts are provided at the David Lloyd Club in Gidea Park.

Demand

Courts at Hornchurch Sports Complex are reasonably well used at peak times (18.00 – 20.30), there is however considerable capacity during off-peak times.

Figure 7.2: Squash provision in LBH

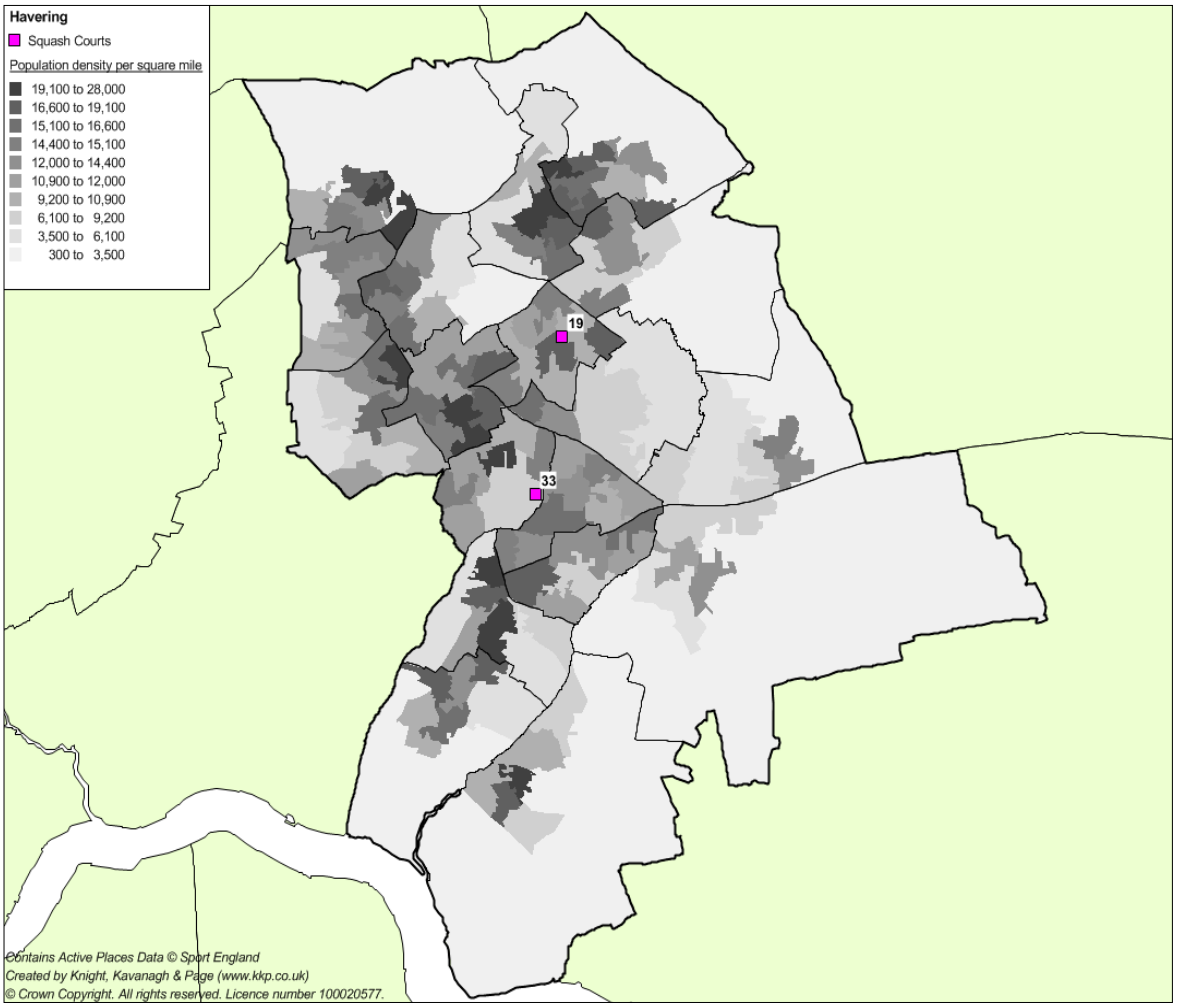

Table 7.3: Key to squash provision in LBH

Site / figure ref no.	Number of courts	Provider
Hornchurch Sports Complex (33)	3	Everyone Active
David Lloyd Club Gidea Park (19)	2	DLL (Members only)
Total number of courts	**5**	

Table 7.4: England Squash and Racketball (ES&R) survey response

Key clubs	Issues	Aspirations/ resources
None identified.	Following a period of decline participation has levelled out. APS 9 figures show evidence of growth Limited supply of public courts: just 3 at Hornchurch. More public courts needed to drive participation.	London/Essex as a whole is one of four core cities in which ES&R is prioritising activity (to 2016) to increase participation. It delivers workforce development programmes across sites in London. The ES&R Whole Sport Plan includes a budget for capital investment projects to fund refurbishment and expansion of courts/linked facilities

Squash – analysis of demand and supply

There is off peak capacity at Hornchurch Sports Complex. NGB capacity to develop programmes to re-build demand in London/Essex is limited. If LBH wishes to raise participation in squash, additional courts will be required. ES&R's whole sport plan (WSP) does have capital funding available to refurbish existing squash courts and develop new facilities.

7.6 Gymnastics and trampoline

Supply

A substantial number of gymnastics and trampoline clubs operate out of sports halls in Havering. Total membership of these clubs is in excess of 2000, with the majority of members taking part in weekly activity with some more frequently.

Figure 7.3 Gymnastic club (GC) provision in LBH

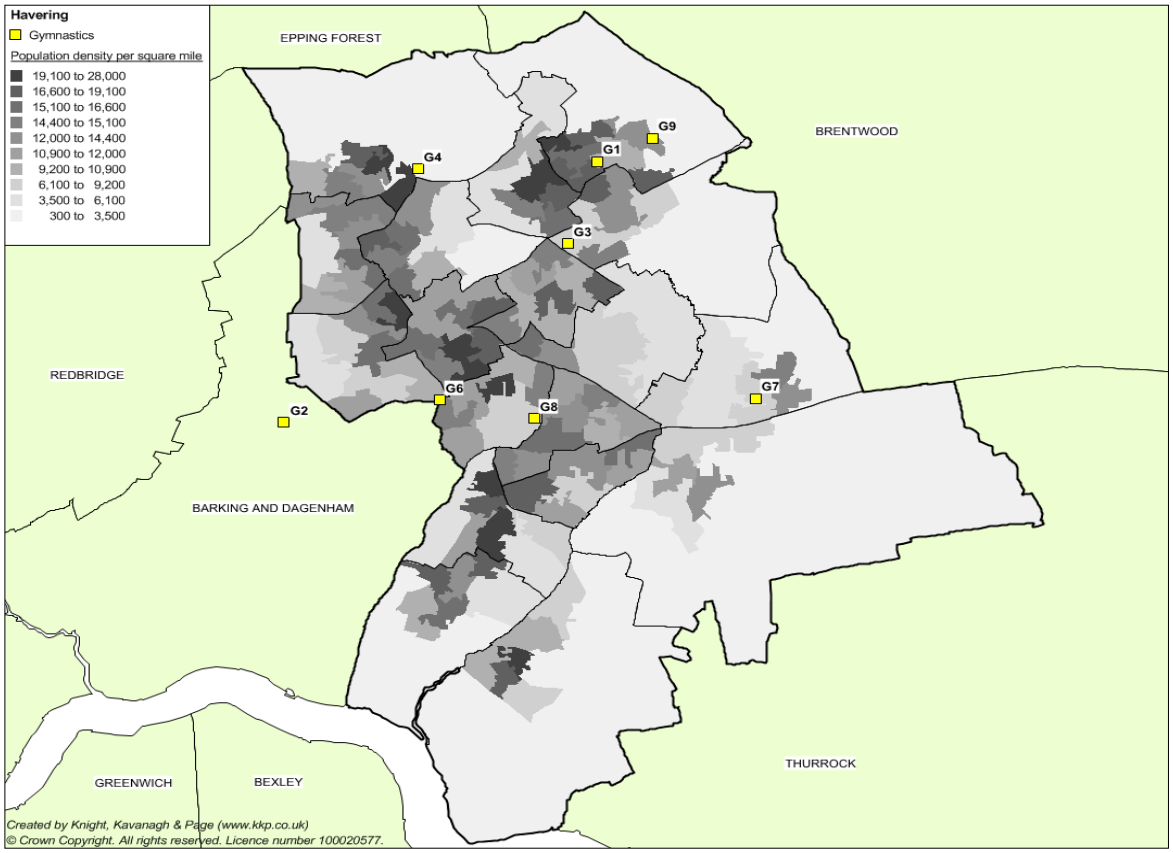

Table 7.5: Key to gymnastic club (GC) provision in LBH

	Site	***Local authority***
G1	Aspire Gymnastics Club	Havering
G2	Catleaps Gymnastics Club	Barking and Dagenham
G3	Harlequin Gymnastics Club	Havering
G4	Havering Gymnastics Club	Havering
G6	Jax Gymnastics Club	Havering
G7	Storm Elite & Storm Breakers TC	Havering
G8	Total Gymnastics Academy	Havering
G9	Ultima Trampoline Club	Havering
G10	Jaybee Gymnastics Club	Havering

(Source*: British Gymnastics: KKP information request October 2015)*

There are three clubs in Havering with access to permanently set out facilities: Havering GC based at Bower Park School, Harlequins GC in Harold Wood and Aspire GC based at Albany School. All other Havering based clubs use existing sports halls to deliver their programmes. Catleaps GC in the adjoining London Borough of Barking and Dagenham is expected to open a purpose built gymnastic facility in 2016. British Gymnastics is supporting the development of this centre.

Demand

Participation in gymnastics is increasing rapidly: British Gymnastics reports membership growth of more than 7% per annum since 2011 with an accompanying 9% rise in participation in 2013-2014 and predicted further expansion of 14% in 2014-2015. There has been a notable increase in the number of teenagers and adults (11-25 year olds) taking part in the sport on a regular basis; this is reportedly due to the increased level of opportunity and wider range of suitable activities available within clubs.

Nationally the average length of a waiting list is 35 participants. This national picture of high unmet demand is repeated in LBH where there are waiting lists for gymnastic clubs.

Supply and demand analysis

A key part of the NGB's strategy is to increase participation by assisting clubs to move into their own dedicated facility, offering more time and space for classes. As a result of the range of products and programmes and expert assistance offered to support local delivery of gymnastic activity, British Gymnastics is reporting success in supporting growth in the numbers of and associated member retention across the country.

7.7 Ice sports

Supply and demand

The ice rink in Romford town centre closed in 2013. It is being replaced as part of the Romford Town Centre Leisure Development. The nearest alternatives are in Chelmsford town centre and at the Picketts Lock Leisure Centre, owned by the Lee Valley Regional Park Authority (LVRPA). It is understood that LVRPA is investigating the feasibility of adding a second ice pad at Picketts Lock. This is considered to reflect a reasonable level of confidence in the level of demand for ice sports facilities in the region.

The Romford senior ice hockey team has temporarily relocated to Picketts Lock, 13.5 miles away. In advance of the new rink opening in Romford, LBH is preparing an ice sports development plan to encourage the return of previous users and introduce new participants to ice skating and ice dance disciplines, ice hockey and recreational skating.

Ice sports – analysis of supply and demand

The new leisure development in Romford town centre is an opportunity for Havering residents to rediscover the benefits of a local ice rink. Implementation of the recently drafted LBH ice sports development plan is important to help generate demand at the new ice facility both for recreation and sport when they open in 2018.

7.8 Other specialist provision

Audit based research has identified the following other specialist built facilities in the borough:

PlayFootball, Romford - a specialist floodlit soccer facility that provides pitches for 5, 6 and 7 a-side league play, kick-abouts and training.

My Place - a purpose built youth and community facility immediately adjacent to the Central Park Sports Complex. It was developed in 2012 as part of Havering Council's overarching regeneration scheme; Harold Hill Ambitions. The facility includes a dance and music space, a recording studio, bike workshop, computer suite, a juice bar and café and a crèche. It was funded by a Big Lottery Fund £4m grant and council funding.

Athletics track; Hornchurch Stadium – this is home to Havering AC which has 400+ affiliated members and a waiting list of 50–100 all reportedly for track access. It also hosts two jogging clubs Havering '90 and Havering Up Joggers. The multi-use nature of the venue makes it difficult for clubs to access track facilities beyond Monday, Wednesday and Friday evenings and Sunday mornings. This is reportedly inhibiting the growth and development of Havering AC and to a lesser degree the jogging clubs.

Hornchurch & Elm Amateur Boxing Club – this is a boxing club catering for adult and junior members. The club trains on a Monday, Wednesday, Thursday and Friday evening at its home venue in an old RAF building.

7.9 Havering health and sports development

www.haveringACTIVE.co.uk aims to increase sport and physical activity opportunity in the Borough and encourage physical activity. Specific initiatives in Havering include:

- Adult (50+) physical activity programmes at Central Park Leisure Complex and Hornchurch Sports Complex
- A Walking for Health Programme
- Physical Activity Referral Scheme

There is some sports development, for example, Battle Badminton is being trialled at Central Park and Hornchurch. Other health and well-being services include:

- Moving Forward – in partnership with the YMCA a well-being programme for residents over 16 with a cancer diagnosis.
- Weight watchers
- Stop smoking
- NHS health check
- Drug and alcohol services
- Falls community exercise and
- Dementia friends

Summary

LBH has a good range of specialist sports provision, with access to facilities for cycling, boxing, indoor bowls, gymnastics, 5-a-side, tennis and with, the completion of the Romford leisure development in 2018, ice sports. More could possibly be done to improve access to the athletics track and to match clubs in other sports with suitable venues at affordable prices. There is further potential at My Place to develop sports activities, for example, table tennis, but this would need to be focused on junior development given the potential safeguarding issues associated with a youth club facility.

SECTION 8: SUMMARY

8.1 Supply and demand

Engaging all residents in physically activity is a high priority for national and local government. For many people sport and recreation has a key role to play in facilitating physical activity. Ensuring an adequate supply of suitable facilities to meet local need is a requirement of the planning system.

Currently an estimated 36% of LBH adults participate in at least 30 minutes moderate intensity sporting activity per week. Most users are aged between 18 and 46. The most popular activities are working out in a health and fitness gym, taking a fitness class and swimming.

The core message running through local strategic documentation is the requirement to ensure opportunities for all LBH residents to take part in physical activity thus contributing to the reduction in health inequalities across the borough.

Access to facilities and opportunities at/in which to participate in physical activity and sport is essential if LBH residents are to have the opportunity to make sport or physical activity a part of their everyday lives and LBH is to meet national physical activity targets. It is, thus, essential that the 'offer' is developed based on assessed need.

The corporate vision is for LBH to be 'a safe, clean and proud borough'. Much is expected of Crossrail and the inward investment and changes to commuting patterns that it will bring.

The population is presently 244,729. By 2024 it will rise by 20,792 and by 2037 by a further 23,867. This is an overall increase of 17% from the current position. Non-white ethnic groups account for 10% of the population. A key change will be the rise in the number and proportion of 65+ year olds; this cohort will increase 25% by 2024.

The house building target for Havering is 1170 new homes per annum. Housing growth is expected in the areas of Romford, Hornchurch, Rainham and Chafford.

Ensuring the health and well-being of communities, and the delivery of modern and a 'fit for purpose' range of community sports facilities is a key priority. Like many other strategic bodies, LBH is keen to ensure that the population takes regular exercise and has a good diet. Unhealthy, unfit residents who eat badly and take no exercise, together with a rapidly aging population put huge pressure on local resources and the simple message is 'get active! – it is good for you and will help save valuable public sector resources@.

Facilities in which to take part in sport and other forms of physical activity are highly significant in helping to deliver the 'get active' message and providing opportunity to engage and 'be active'.

The 'mixed economy' of indoor and built sports provision in LBH is provided and managed by several different types of organisations, including the Council's leisure management contractor - SLM, schools, private companies and social enterprises.

Table 8.1 Provision of the main types of indoor facilities in LBH are as follows:

Facility type	Number	Key providers
Sports halls (min 3 court)	21	LBH Schools
Swimming Pools	13	LBH Schools Commercial clubs / private pools
Health & Fitness	42	LBH Social Enterprise Private sector
Squash courts	3	LBH
Indoor bowls	8 rinks	LBH / commercial club
Indoor tennis	7	Commercial club
Athletic track	1	LBH
Soccer centre	1	Commercial club
Gymnastics facility	3	Commercial clubs

The following conclusions can be drawn from the assessment. The Strategy will need to address these in order to make the service stronger and deliver the required outcomes of the Council and partners.

LBH has a good range of specialist sports provision, with access to facilities for cycling, boxing, indoor bowls, gymnastics, 5-a-side, tennis and with the completion of the Romford leisure development in 2018 ice sports. More could possibly be done to improve access to the athletics track and to match clubs in other sports with suitable venues at affordable prices. There is further potential at My Place to develop sports activities, for example table tennis, but this would need to be focused on junior development given the potential safeguarding issues associated with a youth club facility.

In very general terms LBH is able to accommodate demand for sports hall accommodation. There is significant capacity within the sports hall stock but it is generally of poor or below average quality.

Water space at publicly accessible pools is fully programmed and operating at capacity in peak periods. School provision is helping to meet club demand although club users expressed the desire for access to more pool time. The age of the pools at Hornchurch Sports Complex and Chafford School Complex is a concern that will, unless addressed, continue to impact on the viability, sustainability and net cost of operating these facilities.

The new 8 x 25m swimming pool in the proposed Romford Leisure Development is much needed and will make a significant difference in tackling existing unmet demand for recreational and club swimming, and the needs of new participants.

A further weakness is the scale of the gym and fitness suite facilities in the Hornchurch Sports Complex and Central Park Leisure Complex. More space for fitness stations and flexible studio spaces are needed to run classes and adapt to changing trends. Increased membership levels will also contribute to off-setting the cost of operating the swimming pool facilities.

Geography and the 'A' road network play an important role in LBH effectively splitting the Borough into three areas – north, central and south. Most public transport routes run east to west and traffic congestion can make short journeys difficult to undertake quickly, particularly in peak times.

South Havering and in particular Rainham is very poorly resourced with sports facilities. Given that Rainham is to be the location for development of 3,250 new homes over the next few years, the availability of serviceable local sport/leisure provision will need to be addressed.

8.2 SWOT analysis

Strengths	Weaknesses
Power of sport to attract and engage young people Member and officer support for sport and leisure Knowledge base and experience of LBH and SLM staff Havering Local Sports Council School sport collective Swim schools and programmes GP Referral Programme Walking for Health Programme Voluntary sector clubs Scale of market for fitness	Funding cuts leading to service cuts e.g. shorter opening hours at Chafford Sports Complex Areas of multiple and health deprivation Below average to poor quality of many school sports facilities Old/inefficient LBH sports and leisure buildings e.g. Hornchurch Sports Complex and Chafford Sports Complex Health & fitness offer too small at Hornchurch Sports Complex and Central Park Leisure Complex Insufficient studio spaces within the leisure centres to offer variety of class types, particularly at peak times Limited north – south public transport Not maximising NGB external programmes and investment
Opportunities	**Threats**
Emerging Local Plan Crossrail and associated investment in infrastructure Borough regeneration plans and housing growth areas Inward investment in jobs and housing Romford leisure development Capacity in school sport hall provision To do more activity and make use of the space Public health agenda Engagement with NGBs British Gymnastics funding Table Tennis England funding My place (located adjacent to Central Park Leisure Complex) Next leisure management contract for the leisure centres	Cuts in local authority funding Austerity measures Areas of multiple and health deprivation Adult and child obesity Private sector investment in new gym and fitness facilities undermining the sustainability of public sector / social enterprise offer. Lack of direct control over (and thus possible inability to improve) access to school facilities

SECTION 9: EMERGING KEY ISSUES

Through the background research and extensive consultation process the following key issues have emerged.

Geography

- 'A' road network creating three distinct geographical areas – north, central and south
- Key settlements: Romford, Harold Hill, Harold Wood, Hornchurch, Upminster, Gidea Park, Rainham and Chafford
- East – west public transport links

Crossrail

- Changing commuter patternonomic and social impact on Romford

Housing and population growth

- Current population 244,729
- Population growth
  - 20,000 by 2014
  - 34,109 by 2031 (+13.7%)
- Profile changes
  - Increase of 18% in 0 – 15 year olds
  - Initial decrease in 16-24 year olds before a rise of 11.7% above the 2015 baseline.
  - An eventual decrease of 7% in the number of 25 – 34 year olds.
  - An increase of 17% in the 35 - 44 year olds.
  - An eventual 1% increase in the number of 45 - 54 year olds, but preceded by a 14 year decline.
  - An eventual increase of 15.5% in the 55 - 64 year olds.
  - A continual increase in the 65+ age group with a 31% increase by 2031
- 1,170 new homes per annum
- Growth areas – Romford and Rainham Riverside

Health and physical activity agenda

- Health deprivation and inequalities
- 36% of population active
- Cost of inactivity
- Raising activity levels amongst all age groups in society
- Ensuring opportunity for those with poor physical and mental health and learning disabilities

New leisure management contract

- New contract awarded in 2016
- Investment opportunities / necessity aligned to the contract.

Sports halls

- 21 sports halls
- Poor and below average quality in majority of school facilities
- Some no longer fit for purpose
- Good access across north and central areas
- Limited provision in the south area
- Spare capacity at most sites
- No evidence of unmet demand
- Opportunities to work more closely with NGBs – ETT, ABA and EV to innovate investment and more use.

Swimming pools

- 14 swimming pools
- Ageing pool stock – Hornchurch Sports Complex and Chafford School Complex
- Small pool sizes limited multi-use programming
- High (5m) diving boards at Hornchurch out of commission
- Significant areas of LBH more than 1 mile from a public pool
- No provision in Rainham
- Unmet swimming club and triathlon club demand

Health and fitness provision

- 42 H&F providers
- Peak time over-crowding / lack of peak-time capacity in main LBH leisure complexes in Hornchurch and at Central Park
- Lack of studio space at Central Park and Hornchurch complexes
- Need for more stations and more studio spaces
- Increasing market segmentation
- Potential budget gym threats to multi-use site business model

Specialist provision

- Opportunity to develop a combat centre
- Opportunity to work with ES&R and the ABA
- Opportunity to develop a gymnastic centre
- Opportunities to extend athletic club access to the track at Hornchurch Stadium
- Opportunities to develop table tennis at My Place

Accommodating population growth and rising levels of participation

The following will be needed to meet unmet and rising demand from increases in the population and rising levels of activity and participation in sport.

- Romford Leisure Development
  - 8 lane x 25m pool
  - Learner pool
  - Ice pad
  - 100 station H&F suite
- Improvements to existing school sports halls and access for community use.
- New wet / dry centre in Hornchurch
- New wet / dry centre in the south of the Borough

Abbey Bowmen - Secretary
Bowmen of Ardleigh - Secretary
Five Star Boxing – Secretary
Eagles Badminton – Head Coach
Southern England School of Karate – Secretary

APPENDIX 3 - SPORTING FUTURE: A NEW STRATEGY FOR AN ACTIVE NATION *(EXTRACT TAKEN FROM GOVERNMENT STRATEGY).*

An important shift in this strategy is the move beyond participation in sport and winning medals as the only outputs we want to encourage. Both are clearly very important and are retained in our new strategy, but sport has other ways of delivering the overall outcomes. Recognising and understanding how sport makes a positive difference through broader means will help the sector to deliver the five outcomes more effectively. We have designed a set of indicators for each output to support this new way of thinking.

The data that underpin these KPIs will be drawn from a variety of sources including the new Active Lives survey, the Taking Part survey, the Monitor of Engagement with the Natural Environment survey[14] and the Sport Satellite Account as well as being gathered by UK Sport and Sport England through the course of their work.

More People Taking Part in Sport and Physical Activity

Taking part in sport and physical activity contributes to all of the outcomes of this strategy. To make the link to physical wellbeing in particular as strong as possible, we will measure both taking part in sport and levels of physical inactivity. This will also help ensure an adequate focus on under-represented groups in the population whose sporting behaviour we will monitor as part of the population-level KPI on taking part. The barriers to taking part for these groups are likely to be greater and so changes in behaviour may initially be slower. However, we would ultimately like to see a faster rate of change among under-represented groups than the population as a whole. We expect Sport England to provide the right incentives to tackling under-representation through their performance management approach.

Given the evidence of the enhanced impact on mental wellbeing of exercising outdoors, we will monitor taking part in this way. To get more people to enjoy an active lifestyle, we need to support children and young people to develop the confidence and skills to take part and to be positive about sport and activity. We will therefore also have specific KPIs for 5-18 year olds to track this alongside their behaviour.

Key Performance Indicators

KPI 1 – Increase in percentage of the population taking part in sport and physical activity at least twice in the last month

KPI 2 – Decrease in percentage of people physically inactive (KPI 1 and 2 from *Active Lives* survey)

KPI 3 – Increase in the percentage of adults utilising outdoor space for exercise/ health reasons (MENE survey)

KPI 4 – Increase in the percentage of children achieving physical literacy standards

KPI 5 – Increase in the percentage of children achieving swimming proficiency and Bikeability Levels 1-3

[14] https://www.gov.uk/government/collections/monitor-of-engagement-with-the-natural-environment-surveypurpose-and-results

KPI 6 – Increase in the percentage of young people (11-18) with a positive attitude towards sport and being active (KPI 4, 5 and 6 from *Taking Part*)

More People Volunteering in Sport

Volunteering has previously been treated like any factor that supports participation. But volunteering is different as it allows the volunteer themselves to benefit from the outcomes we are seeking. We will therefore measure how many people are volunteering in sport. As this is a complex area to measure accurately Sport England will take time to design and test the right questions and introduce them to *Active Lives* in 2016.

Key Performance Indicators

KPI 7 – Increase in the number of people volunteering in sport at least twice in the last year (from *Active Lives* survey)

KPI 8 – The demographics of volunteers in sport to become more representative of society as a whole (from *Active Lives* survey and ONS population data)

More People Experiencing Live Sport

People who regularly turn up and experience live sport, particularly when they support a specific team or athlete, can experience improved wellbeing or greater community engagement.

This strategy is not about getting people to watch sport on television instead of taking part in sport. Activity under this heading must clearly and demonstrably contribute to the overall outcomes to the same extent as participating or volunteering in sport.

Key Performance Indicators

KPI 9 – Number of people who have attended a live sporting event more than once in the past year (from *Active Lives* survey)

Maximising International Sporting Success

The public's support for the UK's Olympic and Paralympic athletes is incredibly high and the results of UK Sport's recent strategy review showed continued support for the 'no compromise' principle that has underpinned Olympic and Paralympic investment since 1996. We do not need to change the overall output being sought here. We will, however, ensure that the link between Olympic and Paralympic success and the overall outcomes for the public is clear and incentivised through our continued support for elite sport.

There are some sports that either do not feature in the Olympic or Paralympic Games or whose highest international achievement is not at the Olympic or Paralympic Games. Despite this, there is still significant value to be gained and a significant contribution to be made to delivering the outcomes from success at the highest level in these sports and we will measure our overall performance.

Key Performance Indicators

KPI 10 – Number of Olympic and Paralympic medals won at Summer and Winter Games

KPI 11 – Position in Olympic and Paralympic Summer and Winter medal tables

KPI 12 – UK/Home Nation performance in pinnacle World, European or

Commonwealth competitions (provided by UK Sport)

Maximising Domestic Sporting Success

Domestic success can also inspire and therefore can be part of getting more people involved in sport. It can also provide the positive wellbeing and social benefits that international sporting success brings along with the economic benefits from ticket sales, merchandising and attracting tourists.

Key Performance Indicators

KPI 13 – Average attendance levels at national-level domestic sport

Maximising the Impact of Major Events

The UK has a strong track record of delivering world class major sporting events and this is something we want to continue, for the vital role many events play in preparing our athletes for the Olympic and Paralympic Games, for the economic impact they can bring and the potential to inspire those that experience the events themselves. In ensuring these benefits are maximised, we can ensure that major events continue to play an important role in the overall success of sport in this country.

Key Performance Indicators

KPI 14 – Attendance at events supported through government and UK Sport major events programmes

KPI 15 – Economic impact of events supported through government and UK Sport major events programmes (both from UK Sport figures)

A More Productive Sport Sector

A more productive sport sector will be one that maximises its available resources and assets (including facilities, skills and workforce) and contributes directly to economic development. By ensuring it can be more productive, the sector can better deliver everything else in this strategy.

Key Performance Indicators

KPI 16 – Employment in the sport sector (from Sport Satellite Account)

KPI 17 – Position of the UK in the *Nation Brands Index*, both a) overall and b) in answer to the specific question about the UK excelling at sport (from *the Anholt-GfK Roper Nation Brands Index*)

KPI 18 – Percentage of publicly owned facilities with under-utilised capacity (through revised National Benchmarking Service)

A More Financially and Organisationally Sustainable Sport Sector

Financial and organisational sustainability are vital to build the strong foundation needed for successful delivery. This means that individual organisations and the sector as a whole must become more sustainable, including through robust governance and a capable workforce with a good pipeline of the right skills for the future.

Key Performance Indicators

KPI 19 – Increase in the amount of non-public investment into sport bodies which are in receipt of public investment

KPI 20 – Increase in the number of publicly funded bodies that meet the new UK Sports Governance Code (collated annually by UK Sport and the Home Nations Sports Councils)

A More Responsible Sport Sector

A more responsible sport sector is one that makes sure that the people within it, whether playing, working, volunteering or watching, feel welcome and can do so safely. Sport should be inclusive and open to everyone that wants to take part, and also meet its responsibilities towards the rest of the sector, ensuring that organisations work in partnership and those areas that enjoy commercial success are able to support those for whom a commercial business model may not be feasible.

Key Performance Indicators

KPI 21 – Number of sports that meet the Sport and Recreation Alliance's Voluntary Code to reinvest 30% of their net UK television broadcasting revenues in grassroots sport (collated by the SRA)

KPI 22 – Headline results of the new Sport Workforce People Survey (Sport England benchmarking)

KPI 23 – Relevant indicator to be developed as part of Duty of Care review

EXECUTIVE SUMMARY 1
INTRODUCTION 5
ABOUT HAVERING 9
RESEARCH FINDINGS 11
SWOT ANALYSIS 17
VISION AND RECOMMENDATIONS 18
PRIORITIES AND ACTION PLAN 24

EXECUTIVE SUMMARY

The London Borough of Havering (LBH) has a number of challenges in relation to its community sports facility infrastructure which is ageing, limited in size, scale and offering and does not currently represent a modern sport and physical activity offer for the 21st century. This not only applies to the Council's community sports facilities but also school sports facilities, with at least 50% requiring investment to bring them up to an acceptable standard for both school and community use.

Havering will also be changing over the coming years and there are a number of key factors which will influence residents' leisure needs and work patterns. Havering is growing and
the most recent Greater London Authority (GLA) projections indicate a population increase of 13.7% (+34,109) through to 2031.

In addition to this the profile of the population is going to change with significant increases in the 0 – 15, 16 – 24, 35 – 44, 55 – 64 and 65+ age groups; alongside decreases in the 25 – 34 and 45 – 54 year olds. However, it is also notable that many of these changes are not straight line increases and that there is a real ebb and flow to the population increase over the period. The only consistent growth is within the 65+ age group.

The development of Crossrail will have a significant impact in Romford, not only bringing economic growth but driving up demand for affordable housing. LBH has responded by identifying several large sites for re-development notably in Romford, Rainham and Hornchurch.

In addition to the demographic and transport related changes Havering has the continued challenges of tackling ill health attributable to physical inactivity, particularly obesity in children and adults is a high priority as is tackling multiple and health deprivation.

One third of adults in Havering meet the adult NHS activity target of one session of 30 minutes moderate activity per week. Many of the examples of how to be active at all ages involve playing sport or engaging in a physical activity typically hosted in a sports centre or swimming pool. Encouraging all residents to be more active whether via sport or other forms of physical activity is key to improving health outcomes and helping to address many of the health issues facing the area, a key target for both central and local government.

London Borough of Havering's Sport and Physical Activity Strategy has the vision:

"T*o transform lives through participation in, and enjoyment of, sport and physical activity*".

The Indoor Sport and Leisure Facility Strategy for LBH is for the 15 year period 2016 to 2031. It not only provides a framework to support the sports facility requirements in line with the Local Plan but is also the sports facility infrastructure response to enable the Council and its partners to deliver the Sport and Physical Activity Strategy vision.

The underpinning assessment of provision was drawn up in accordance with Sport England Assessing Needs and Opportunities (ANOG) Guide for Indoor and Outdoor Sports Facilities 2014. The Strategy is also in line with Sport England's key facility planning drivers of 'Protect', 'Enhance' and 'Provide' and, thus, provide a focus for the Borough to work with key stakeholders to provide facilities that will meet the sport and physical activity needs of its current and future resident population.

The Recommendations for this Indoor Sport and Leisure Facilities Strategy 2016-2031 are summarised below, with the full rationale provided further in the document:

Recommendation No.1 – Romford Leisure Development

Support and, as appropriate, facilitate the Romford Town Centre Leisure Development comprising:

- 8 lane x 25m pool
- Learner pool
- Ice pad
- 100 station H&F suite

Continue to work with the Amateur Swimming Association (ASA), England Ice Hockey Association (EIHA) and the National Ice Dancing Association (NISA) to ensure that the best possible use is made of the Romford Leisure Development* for recreation and performance sport.

Recommendation No 2 – Hornchurch Sports Centre

Subject to the conduct of a detailed feasibility study, replace Hornchurch Sports Centre with a 'right sized' facility which, should:

- Be strategically located so as to optimise accessibility on foot, by cycling and via public transport.
- Provide a larger water area to cater for unmet existing local club swimming demand and future demand from the growing population
- Be specified as such to provide a suitable Borough swimming gala venue
- Provide replacement diving and ancillary dry diving facilities
- Add to and extend fitness and studio provision
- Have relevant social, catering and ancillary facilities, car and bicycle parking.

Suggested core provision

- 8 court sports hall
- 8 lane x 25m pool
- 10m x 20m learner pool/diving pool with moveable floor and 2 x 1m, 2 x 3m and 1 x 5m diving boards
- Dry diving facility
- 120 station fitness suite (minimum)
- Spin studio
- Dance/multi-purpose studios
- Café with Wi-Fi
- High quality wet/dry changing facilities

Recommendation No.3 – South Havering

Subject to a detailed feasibility study, provide in south Havering / Rainham a 'right sized' facility which, should:

- Be strategically located so as to optimise accessibility on foot, by cycling and via public transport.
- Provide a substantive water area to cater for current unmet demand and future demand from the growing population
- Add to and extend fitness and studio provision
- Have relevant social, catering and ancillary facilities, car and bicycle parking.

Suggested core provision

- 4 court sports hall
- 5 lane x 25m pool
- Teaching pool
- Minimum 120 station fitness suite
- Dance/multi-purpose studios
- Spin studio
- Café with Wi-Fi
- High quality wet/dry changing facilities

Recommendation No.4 – School sports hall stock

On a site by site basis (and linked directly to school long-term commitments to offer full community use programming) investigate the feasibility of upgrading and/or expanding existing or providing new sports hall accommodation with associated office and changing provision to facilitate well managed community use at the following:

- Chafford Sports Complex
- Emerson Park Academy
- Gaynes School Language College
- Marshalls Park School
- Redden Court School*
- St. Edwards C of E School & 6th Form College
- The Albany
- The Campion School
- The Frances Bardsley School For Girls
- The Royal Liberty School
- Sanders Draper School & Specialist Science College

Recommendation No.5 – Specialist sports provision

To work closely with key local clubs and/or NGBs to assist them to develop/ improve specialist sports facilities to meet local need.

Athletics

- Assist Havering AC and associated jogging clubs to improve access to the track facilities at Hornchurch Stadium.
- Assist Havering AC to investigate the potential for development of multi-sport indoor/ covered training facilities supporting entry level participation and winter training.
- Consider whether and how to develop opportunities for marked running routes within the urban areas of LBH to meet the demands of recreational runners.

Cycling

Where funding allows, invest in making roads safer and providing off road cycling routes, not only to encourage safe cycling but also to enhance access to the network of community sports facilities.

Gymnastics

Assist the local gymnastics clubs to find an affordable venue of appropriate quality at which they can accommodate permanent fixed equipment and associated club facilities. A facility of this nature could attract strategic and financial supported from British Gymnastics.

Indoor Tennis

To address the absence of public indoor courts in Havering, work with local tennis clubs to develop air halls and floodlighting to facilitate all year round play.

'myplace'

Work with myplace to investigate the potential to provide a specialist table tennis centre.

Recommendation No.6 – Consider the co-location of other services within new leisure developments

Many local authorities have sought to develop fewer, better quality facilities and enhance their offer by developing a more 'commercial' range of facilities alongside wider health and wellbeing service providers. Recent developments of new community leisure facilities throughout the UK have followed three key themes within their design and offering, namely:

- Core facilities which meet local need and demand for sport and physical activity and enable the operator to deliver a cost effective service with minimal subsidy.
- Additional activity areas which provide a financial return by addressing a gap in the market or enhancing the core offer.
- Co-located with other service providers which enhances working relationships across 'civic' partners and improves service delivery to the community.

Therefore, LBH should consider how it might integrate or co-locate other services (e.g. library, health centre, council contact centre, etc.) within the development of new leisure facilities as identified in recommendations 2 and 3. This not only enhances the wider leisure offer by enabling the operator to offer services to residents who might not otherwise go into a leisure centre, but also enables other services to reach a wider market. This also reflects the aspiration and funding priorities identified within Sport England's Strategy: *Towards an Active Nation.*

INTRODUCTION

This is the Indoor Sport and Leisure Facility Strategy for the London Borough of Havering (LBH) for the fifteen year period 2016 – 2031. Strategy recommendations are drawn from the accompanying and underpinning Assessment Report, researched and prepared between July – October 2015 by specialist sport and leisure consultancy, Knight Kavanagh and Page (KKP). Both the Assessment Report and Strategy were prepared in accordance with the guidance from Sport England contained in the document 'Assessing Needs and Opportunities Guide for Indoor and Outdoor Sports Facilities (ANOG), Sport England, December 2014.

Havering has an aspiration, and need, to consider its facilities planning particularly in the context of an aging stock of leisure facilities; future growth needs; changing economic and demographic profile of the area.

The focus of this Strategy is to provide clear direction to all partners so that together they can plan and develop a more modern, efficient and sustainable range of Community based Sport and Leisure facilities that Havering requires. This will ensure residents have the opportunity to be physically active and healthier and where appropriate develop their sporting ambitions within their local community.

The consultant team would like to thank officers from LBH, Sport England, London Sport, national governing bodies of sport (NGBs), the Havering Sports Council and other organisations for the time and ideas they have contributed to the assessment and subsequent strategy formulation. All agencies will need to continue to work together to deliver this strategy.

Strategic context

This Indoor Sports Facilities Strategy sets out the indoor facility infrastructure requirements needed within Havering to enable the Council to deliver its Corporate Plan vision of '*Clean Safe and Proud'.*

- We want Havering to be clean and to look after our environment for future generations.
- We want you to be safe – whether you're a pensioner walking through a town after dark, or a young child growing up without the security of a loving home.
- And we want you to be proud to live in Havering – where we respect each other, value our traditions and work together to improve our quality of life.

The Council's vision within its Sport and Physical Activity Strategy is: "T*o transform lives through participation in, and enjoyment of, sport and physical activity*".

At a national level the two key policy drivers for sports facilities are contained within the Government's Strategy Sporting Future and Sport England's Towards an Active Nation. In addition to these there are a number of other national and regional policy documents including:

- National Planning Policy Framework 2012
- Strategic Planning: Effective Co-operation for Planning Across Boundaries 2015
- Public Health England: Everybody Active Every Day, October 2014
- London Plan 2015
- London Sport – Blueprint for a Physically Active Sporting City

Sporting Future: A new strategy for an active nation

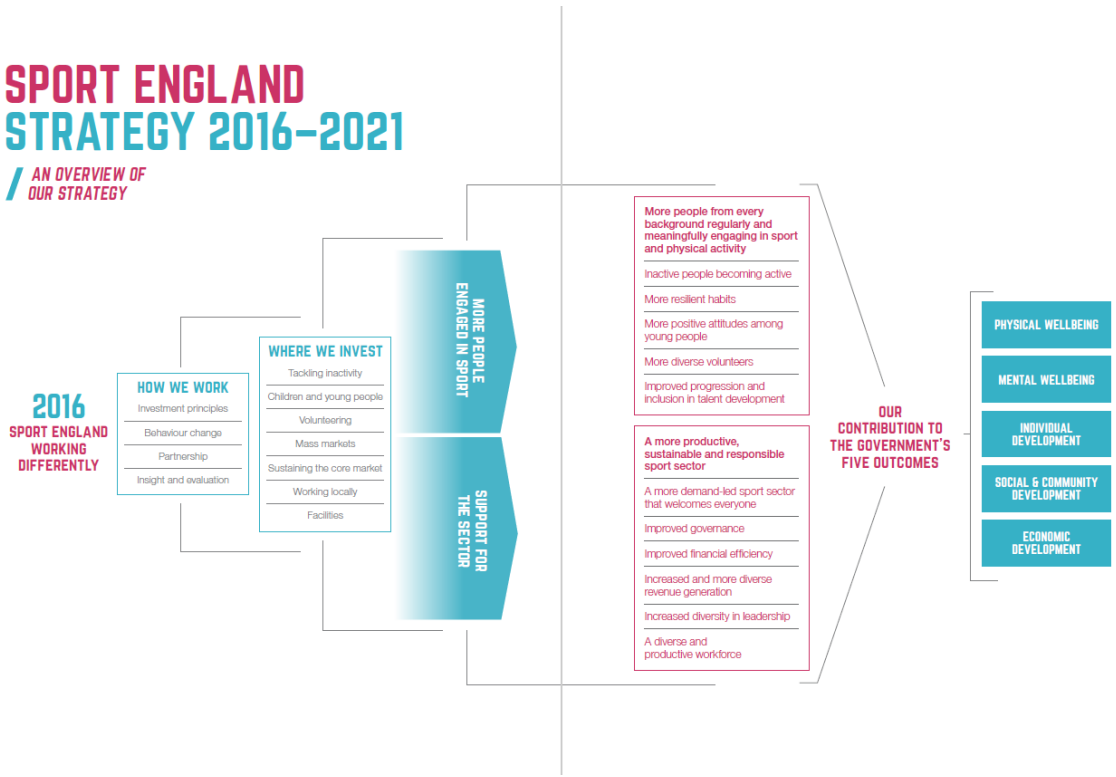
The Government published its strategy for sport in December 2015. This strategy confirms the recognition and understanding that sport makes a positive difference through broader means and that it will help the sector to deliver five simple but fundamental outcomes: physical health, mental health, individual development, social and community development and economic development. In order to measure its success in producing outputs which accord with these aims it has also adopted a series of 23 performance indicators under nine key headings, as follows:

- More people taking part in sport and physical activity.
- More people volunteering in sport.
- More people experiencing live sport.
- Maximising international sporting success.
- Maximising domestic sporting success.
- Maximising the impact of Major Events.
- A more productive sport sector.
- A more financially and organisationally sustainable sport sector.
- A more responsible sport sector.

Sport England: Towards an Active Nation

Sport England's response to the Government's strategy was to develop Towards an Active Nation:

Figure 1 Sport England Strategy 2016-2021

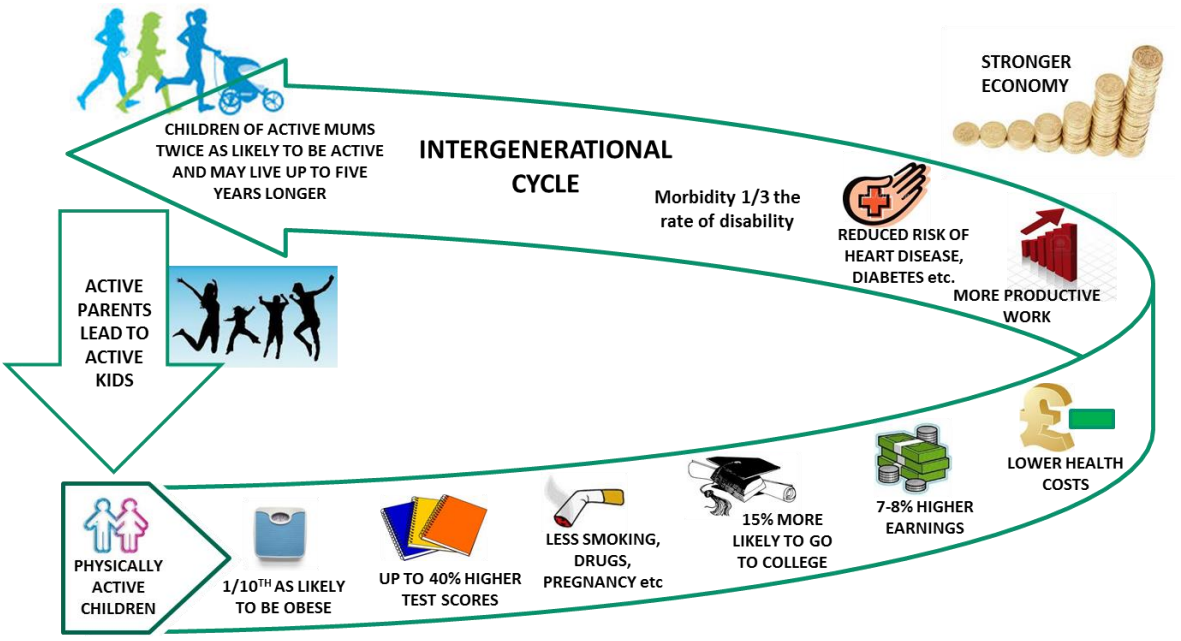


Sport England has identified that it will invest in:

- Tackling inactivity
- Children and young people
- Volunteering – a dual benefit
- Taking sport and activity into the mass market
- Supporting sport's core market
- Local delivery
- Facilities

It is clear that increasing participation in sport and physical activity and the health and wellbeing benefits that this delivers is the key driver for LBH and its partners. This is particularly important in the context of getting the inactive to become active and ensuring that interventions are targeted at underrepresented groups. The wider benefits derived from having a more active population are highlighted in the following intergenerational cycle which clearly demonstrates the impact beyond the sports field.

Figure 2: Intergenerational cycle



Based on 'Designed to move' © Nike Inc.

It is clear that having high quality and appropriate 'places to play sport and be physically active' are an integral part of the mix that delivers health and wellbeing benefits as well as wider economic gains to LBH and as such should be viewed and valued within this context. It is also clear that this links into Sport England's new strategy 'Towards an Active Nation' which sets out the following vision:

'We want everyone in England regardless of age, background or level of ability to feel able to engage in sport and physical activity. Some will be young, fit and talented, but most will not. We need a sport sector that welcomes everyone – meets their needs, treats them as individuals and values them as customers'.

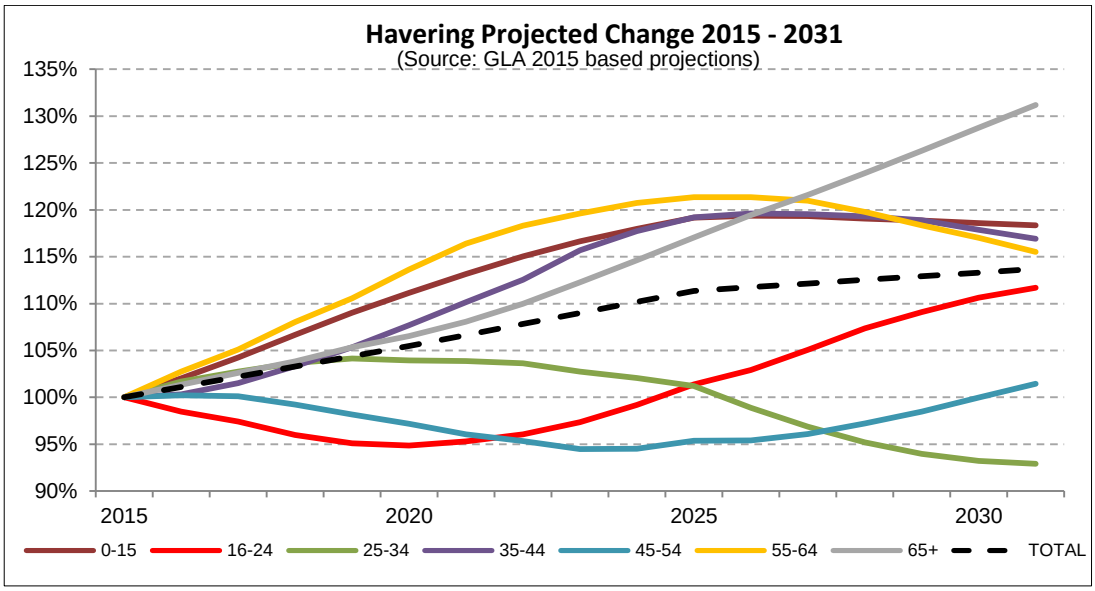
Sport England has identified that its highest priority for investment will be tackling inactivity. In addition to this it will continue to invest in facilities, but that there will be a focus on multi-sport and community hubs which bring together other services such as libraries and doctor's surgeries.

Therefore, high quality and appropriate 'places to play sport and be physically active' are important in delivering increased participation in sport and physical activity which is part of the foundation of improving health and wellbeing among Havering's residents. However, it is not enough just to have the right facilities in the right places, they also need to be programmed and priced appropriately to ensure that activities are appropriate for specific target groups and that cost is not a barrier to access.

ABOUT HAVERING

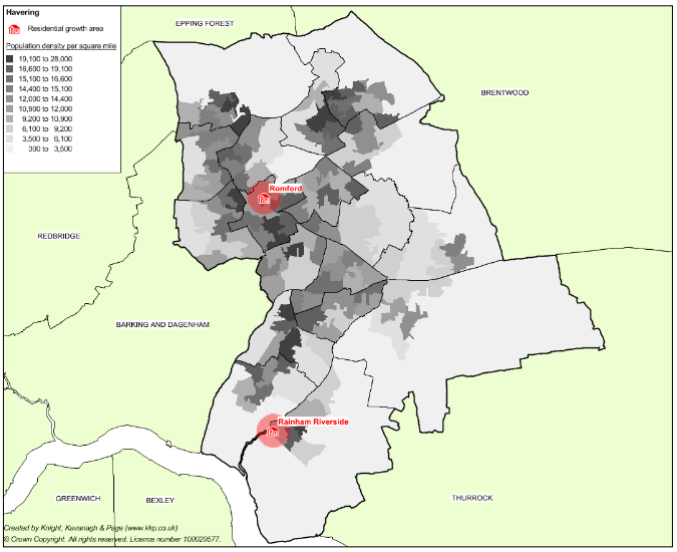
The current total population of Havering (2014 MYE) is 244,729. The most recent Greater London Authority (GLA) projections indicate a rise of 13.7% in Havering's population (+34,109) over the 16 years from 2015 to 2031.LBH has five key settlement areas, Romford, Harold Wood, Harold Hill, Upminster, Hornchurch and Rainham.

Figure 3: Projected population change (2012 -2031)[1]



Havering's changing population will have implications for the Council and its partners in the delivery of physical activity and health and wellbeing programmes. There will be significant increases in all age groups other than the 25 – 34 and 45 – 54 year olds. The main area of change will be within the 65+ age group which will increase by over 30%.

Figure 4 Key residential growth areas in LBH



In 2014 Havering had an estimated 99,230 dwellings, accommodated 97,500 household at an average of 2.6 persons per dwelling. The London Plan has set a new house building target for Havering of 1,170 new dwellings per annum. As such there will be significant development in Romford Metropolitan Centre and at the London Riverside Opportunity Area in Rainham.

[1] *GLA Population Projections 2015 Round*

Another key consideration in development of the main urban extensions is the upcoming investment in Crossrail. Within Havering, Romford, Gidea Park and Harold Wood stations will become part of the Crossrail network. It is anticipated that Crossrail will change the pattern of commuting in London opening up new areas for commuters to live, particularly in east London and Essex.

Havering's main challenge is around health and wellbeing and primarily the inactivity levels of its residents and the impact this creates.

The annual cost to the National Health Service (NHS) of physical inactivity in Havering is estimated to be £4,306,560

Adult and childhood obesity rates in Havering are generally similar to the national rates, reflecting the need to address these at a local level

The childhood obesity rate increases significantly the older a child gets, with 9.6% and 11.3% of Havering's reception year children measured as obese and overweight respectively. By year 6 these figures have risen to 19.9% being obese and 15.1% being overweight. In total, by Year 6, over a third of children in Havering are either overweight or obese.

Coupled with the above Havering performs below national and London activity targets.

- 35.8% of adults participated in at least 1 x 30 minutes moderate intensity sport per week; the same as the national regional average.
- 16.1% of Havering's residents are members of a sports club; below the national average of 21.8% (based on the four weeks prior to the AP survey).

Currently the most popular sports in Havering are gym, swimming, fitness and conditioning, athletics and cycling. In all of these activities Havering performs below national and London averages for the percentages of residents participating in these sports.

It is clear that there is a strong relationship between physical inactivity and health and wellbeing challenges in Havering. Havering has high numbers of residents with long term conditions which could be prevented or managed more effectively by physical activity interventions. Therefore, it is important for residents to be able to access high quality local places to play sport and be physically active and have a positive experience which will increase the likelihood that they participate regularly.

RESEARCH FINDINGS

Sports halls

There are 21 sports halls in LBH.

Figure 5: 3+ court sports hall provision in Havering location and quality.

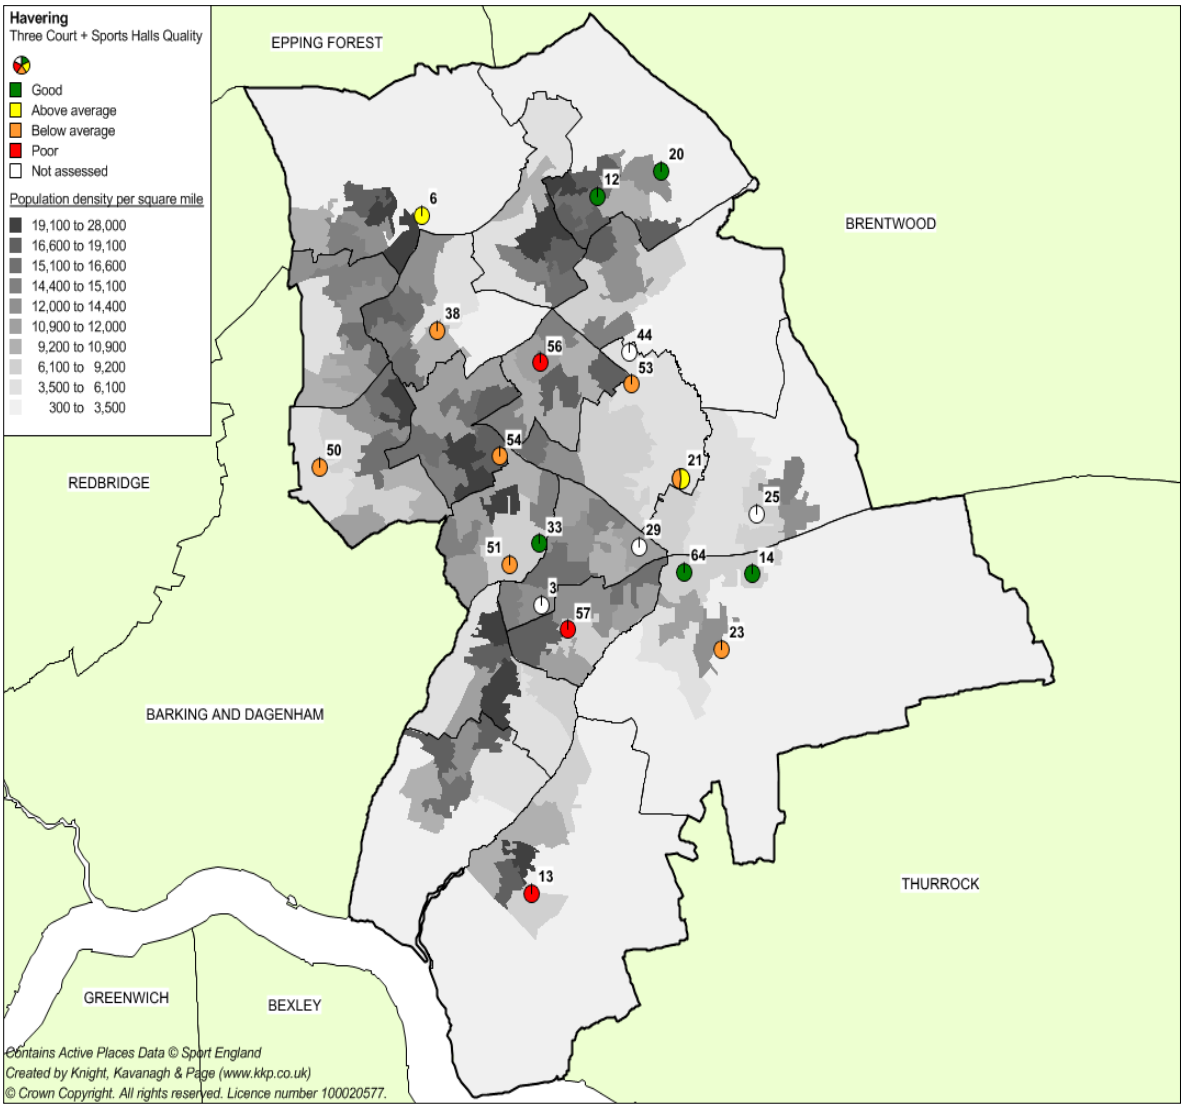


Table 1: 3+ court sports hall provision in Havering - key.

64	Sacred Heart of Marys Girls School	4	Good	Above average

(Source: KKP assessment visits made in October 2015)

The majority (65%) of assessed sports halls are below average or poor, with 35% rated as good or above average quality. Public provision at Hornchurch and Central Park leisure centres is good, although there are structural issues at the Hornchurch Sports Complex that will necessitate significant investment. Residents of the south of the borough are poorly served. The only centre in the area which offers community access is Chafford Sports Complex. It is in very poor condition.

Remaining LBH residents can access a sports hall within a 1 mile catchment / 20 minute walk. There is community use at 80% of the school stock. It is however only being used at 47% of its total capacity. Lack of take up is largely due to a combination of poor quality sports halls and therefore no demand, or through choice, schools which do not permit extensive community access.

Overall, there is no evidence to suggest unmet demand for available sports hall space in LBH. Peak-time at Central Park Leisure Centre and Hornchurch Sports Centre is at capacity. Many schools report having spare capacity at peak and off-peak times. Several school facilities are not available at weekends. This may reflect the poor quality facilities on offer and, in the case of Rainham, the absence of facilities. However, there is potential latent demand for sports halls (i.e. people who wish to take part but have no facilities in which to do so) which is due to no facilities within a specific area or the lack of availability at key times.

The existing supply of sports hall accommodation in LBH has capacity to meet current demand. The quality of the stock on school sites is mixed. The highest quality facility provision is at Coopers Company and Coborn School. Chafford School Sports Complex is clearly at the end of its useful life. The School has aspirations to replace both its main building and its sports facilities via pursuit of external funding sources. It has submitted a planning application to LBH. To date funding applications have been unsuccessful. Subject to DfE approval for the granting of a lease to the Council for the leisure centre, Chafford will remain within the leisure management contract. This will then see a level of investment in the facilities that should improve their condition. LBH facilities at Central and at Hornchurch are at capacity during peak times.

Hornchurch is an old facility and, from a management and user perspective, suffers from having been built in two phases; wet-side in 1956 and dry-side in 1987. Despite a good maintenance regime and some small improvements, elements of the building are not now fit for purpose. The ageing plant and heat management systems are considerably less economical to run than new build modern plant. The new leisure management contract (from October 2016) is, subject to planning, based on the replacement of Hornchurch Sports Centre. If planning is approved, it is expected that the new centre would be open late 2019.

With the exception of the Rainham area, all residents in Havering have access to a sports hall within one mile of home.

The FPM analysis identifies that existing sports hall capacity can accommodate additional demand generated through new housing and subsequent population growth although the quality of many school based facilities may continue to be a barrier, particularly to new participants. Some schools may need to be encouraged to extend community use hours to meet growing demand, particularly if participation rises in accordance with Government targets.

Swimming pools

There are 14 swimming pools in LBH on ten different sites as illustrated below. With the exception of the pool at the Chafford Sports Complex, pool stock is assessed as good.

Figure 6: Swimming pool provision in Havering

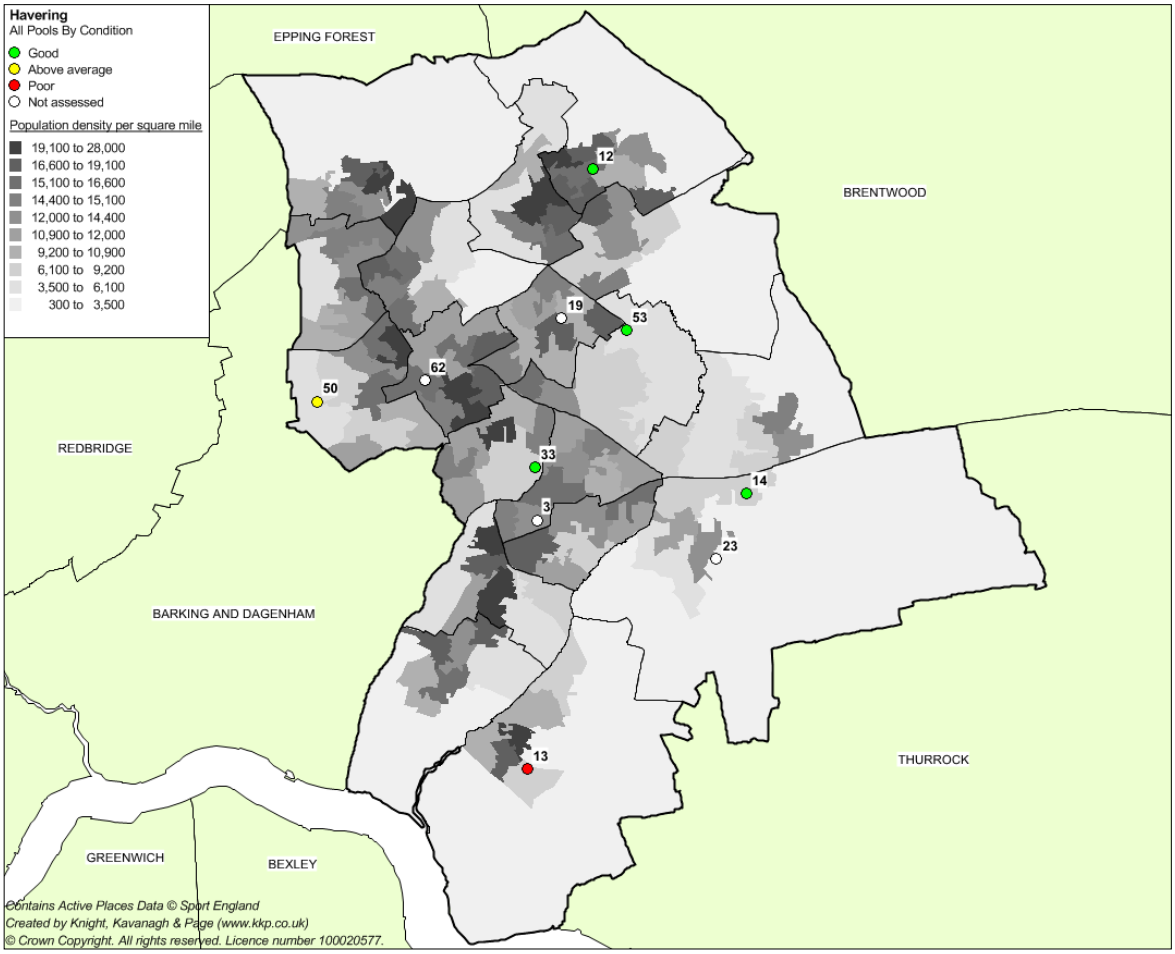

Table 2: Swimming pool provision in Havering - key

Ref	Site	Sub-type	Lanes	Length
3	Abbs Cross Health and Fitness	Main/General	6	25m
12	Central Park Leisure Centre	Main/General	6	25m
12	Central Park Leisure Centre	Learner/Teaching/Training	0	13m
13	Chafford Sports Complex	Main/General	5	25m
14	Coopers Company & Coborn School	Main/General	4	23m
19	David Lloyd Club (Gidea Park)	Main/General	3	25m
19	David Lloyd Club (Gidea Park)	Lido	3	20m
23	Gaynes School Language College	Main/General	0	18m
33	Hornchurch Sportscentre	Main/General	6	33m
33	Hornchurch Sportscentre	Learner/Teaching/Training	0	12m

Ref	Site	Sub-type	Lanes	Length
50	St. Edwards C Of E School & 6th Form	Main/General	4	25m
53	The Campion School	Main/General	4	25m
62	Virgin Active Club (Romford)	Main/General	4	20m
62	Virgin Active Club (Romford)	Learner/Teaching/Training	0	6m

The new leisure centre in Romford, which is to replace the Dolphin Pool will include an 8 lane x 25m swimming pool and learner pool. The new complex will be a welcome addition to pool provision in Havering, it will not, however, address access issues for residents living in the south of the borough.

The picture for swimming pool provision in Havering is currently positive when compared with many London boroughs. However, the age and condition of the pool at the Chafford Sports Complex, the age of the pool at Hornchurch Sports Centre and the lack of provision in Rainham will make it increasingly challenging for a modern swimming offer to be provided without significant investment and/or new provision. However, it is also noted that there is a commitment within the new leisure management contract to replace Hornchurch Sports Centre and to improve the quality of Chafford School Sports Complex.

The Greater London Authority (GLA) projections anticipate the population of Havering will increase by 65,000 people by 2037. Using the Sport England Facilities Calculator this will create the demand for an additional 700m² of water space. However, this does not take into account the new leisure centre in Romford which will create an additional 500m² of water space. Therefore, consideration will need to be given to increasing provision within any replacement facilities.

Health & fitness

LBH has a good geographical spread of gym/ fitness and conditioning provision and a wide range of health and fitness clubs to meet the needs of different users, from high end to budget facilities. Pay and play gym facilities are on offer at Central Park and Hornchurch and in many community school gyms.

Specific access issues have been identified as follows:

- Peak-time crowding and lack of peak time capacity, particularly at Central Park and Hornchurch
- Inability to run concurrent classes due to lack of suitable studio spaces, particularly at Hornchurch and Central sites.
- The size of the fitness suites at Hornchurch and Central. These are considered to be too small to meet peak demand from members.
- Increasing market segmentation e.g. spin only clubs.

The demand for fitness suites in which to ‘work out’ seems set to continue to rise with many users young and old preferring the instant access and flexibility that gyms afford to more traditional teams sports and games. Aspirations to increase the activity levels of the population will add to demand for health and fitness provision as will the projected increase in size of population.

The above issues have been recognised in the new leisure management contract which will seek to address them through the potential extension of the health and fitness suite at Central Park Sports Complex (subject to planning) and the replacement of Hornchurch Sports Centre with enlarged health and fitness provision.

The fitness market is highly segmented with a 'fitness suite' offering to suit different lifestyles and budgets. Competition between providers is keen and 'new' styles of training are constantly emerging. Currently in vogue are Boot Camps, Kettle Bell workouts, Cross-Fit and Spinning. Flexible space in which to meet new trends is an advantage, as operators compete to attract and retain members.

Within LBH the market for 'fitness suite' facilities is as keen and competitive as ever. It is likely that it will continue to evolve as more people are encouraged to be active. All the operators will need to keep abreast of market developments to keep pace with trends and developments and maintain and grow their membership base.

Budget market entrants, such as Pure Gym are a potential threat to the leisure centre operator's business model as they may have an impact upon fitness provision profitability thus jeopardising the long term sustainability of non-surplus generating elements of sport/leisure provision such as swimming pools and sports halls. To date Havering has seen one key budget gym open up within Romford (i.e. Better – Budget which is part of the GLL network), although not to the extent as in other areas.

LBH needs to consider the future provision of health and fitness facilities at its leisure centres on the basis that health and fitness underpins the cost of operating swimming pools and other facilities which are costly to operate. It is generally advised (by Sport England) that the minimum size of health and fitness facility aligned to a new swimming pool should be in the region of 100 stations as well as group fitness studios. This is on the understanding that Councils will have an aspiration that the facility will operate on a cost neutral basis as a minimum.

Specialist sports provision

LBH has a good range of specialist sports provision, with access to facilities for boxing, indoor bowls, gymnastics, 5-a-side football, tennis and with, the completion of the Romford Leisure Development in 2018, ice sports. More could possibly be done to improve access to the athletics track and to match clubs in other sports with suitable venues at affordable prices. There is further potential at myplace to develop sports activities, for example table tennis.

In addition to this, residents have access to specialist facilities in neighbouring authorities such as the cycling facilities at the Lee Valley Velo Park at Queen Elizabeth Olympic Park which is circa 15 miles from Havering.

SWOT ANALYSIS

Table 3: SWOT Analysis for LBH

Strengths	Weaknesses
Power of sport to attract and engage young people Member and officer support for sport and leisure Knowledge base and experience of LBH and SLM staff Havering Local Sports Council School sport collective Swim schools and programmes GP Referral Programme Walking for Health Programme Voluntary sector clubs Scale of market for fitness	Funding cuts leading to service cuts e.g. shorter opening hours at Chafford Sports Complex Below average to poor quality of many school sports facilities Old/inefficient LBH sports and leisure buildings e.g. Hornchurch Sports Complex and Chafford Sports Complex Health & fitness offer too small at Hornchurch Sports Complex and Central Park Leisure Complex Insufficient studio spaces within the leisure centres to offer variety of class types, particularly at peak times Limited north – south public transport
Opportunities	**Threats**
Emerging Local Plan Crossrail and associated investment in infrastructure Borough regeneration plans and housing growth areas Inward investment in jobs and housing Romford leisure development Capacity in school sport hall provision To do more activity and make use of the space Public health agenda Engagement with NGBs British Gymnastics funding Table Tennis England funding myplace (located adjacent to Central Park Leisure Complex) Future leisure management contract for the leisure centres	Cuts in local authority funding Austerity measures Areas of multiple and health deprivation Adult and child obesity Private sector investment in new gym and fitness facilities undermining the sustainability of public sector / social enterprise offer. Lack of direct control over (and thus possible inability to improve) access to school facilities

VISION AND RECOMMENDATIONS

The following vision and strategic recommendations are informed by the research undertaken when developing the Assessment Report and identified need across the Borough. Therefore, although this is an independent assessment of what LBH and partners need to do to in order to provide 'fit for purpose' sport and physical activity facilities and opportunity it does not ignore local environmental and political issues.

Vision

Reflecting the Culture Strategy, the Borough Sport & Physical Activity Strategy is driven by the very simple ambition: "*to transform lives through participation in, and enjoyment of, sport and physical activity*". Its stated purpose is to '*provide focus and added value to the efforts of everyone involved in the planning and provision of sport & physical activity in Havering, linked to a very clear view of what will be achieved by 2015*'.

The objectives of the sport and physical activity strategy are based on those of the Culture Strategy. Specific actions are set out under three headings: health and well-being, learning and personal development and towns and communities. The specific health and well-being actions are as follows:

- Provide, co-ordinate and promote a diverse range of quality sport and physical activity opportunities for all ages.
- Maintain and improve satisfaction at Borough leisure centres.
- Continue to work with the Amateur Swimming Association (ASA), England Ice Hockey Association (EIHA) and National Ice Dancing Association (NISA) to ensure the best possible use is made of the Romford Leisure Development* for recreation and performance sport.

These specific actions have been incorporated into the strategy recommendations. The recommendations emerging from the needs assessment provide a focus for LBH to work with key stakeholders to provide facilities that will enable the vision to become a reality and allow the Council to meet the sport and physical activity needs of its current and future resident population.

Figure 7: Strategy Framework

The recommendations identified are designed to deliver the above vision over the period 2017–2032 They provide strategic direction for LBH, the Council's leisure operator plus agencies, companies, schools, voluntary sector clubs and organisations which provide facilities and opportunities for residents and visitors to participate.

They have been developed in line with Sport England's key facility planning drivers of 'Protect', 'Enhance' and 'Provide'. Each is supported by a summary rationale drawn from the Indoor and Built Facilities Assessment Report, December 2015.

Recommendation No.1 – Romford Leisure Development

Support and, as appropriate, facilitate the Romford Town Centre Leisure Development comprising:

- 8 lane x 25m pool
- Learner pool
- Ice pad
- 100 station H&F suite

Continue to work with the Amateur Swimming Association (ASA), England Ice Hockey Association (EIHA) and the National Ice Dancing Association (NISA) to ensure that the best possible use is made of the Romford Leisure Development* for recreation and performance sport.

Recommendation No 2 – Hornchurch Sports Centre

Subject to the conduct of a detailed feasibility study, replace Hornchurch Sports Centre with a 'right sized' facility which, should:

- Be strategically located so as to optimise accessibility on foot, by cycling and via public transport.
- Provide a larger water area to cater for unmet existing local club swimming demand and future demand from the growing population
- Be specified as such to provide a suitable Borough swimming gala venue
- Provide replacement diving and ancillary dry diving facilities
- Add to and extend fitness and studio provision
- Have relevant social, catering and ancillary facilities, car and bicycle parking.

Suggested core provision

- 8 court sports hall
- 8 lane x 25m pool
- 10m x 20m learner pool/diving pool with moveable floor and 2 x 1m, 2 x 3m and 1 x 5m diving boards
- Dry diving facility
- 120 station fitness suite (minimum)
- Spin studio
- Dance/multi-purpose studios
- Café with Wi-Fi
- High quality wet/dry changing facilities

Recommendation No.3 – South Havering

Subject to a detailed feasibility study, provide in south Havering / Rainham a 'right sized' facility which, should:

- Be strategically located so as to optimise accessibility on foot, by cycling and via public transport.
- Provide a substantive water area to cater for current unmet demand and future demand from the growing population
- Add to and extend fitness and studio provision
- Have relevant social, catering and ancillary facilities, car and bicycle parking.

Suggested core provision

- 4 court sports hall
- 5 lane x 25m pool
- Teaching pool
- Minimum 120 station fitness suite
- Dance/multi-purpose studios
- Spin studio
- Café with Wi-Fi
- High quality wet/dry changing facilities

Recommendation No.4 – School sports hall stock

The research findings clearly identified the need to improve the quality of existing school sports hall facilities for both education and community use. There will be a need to investigate the feasibility of upgrading and/or expanding existing or providing new sports hall accommodation with associated office and changing provision to facilitate well managed community use at the following:

- Chafford Sports Complex
- Emerson Park Academy
- Gaynes School Language College
- Marshalls Park School
- Redden Court School*
- St. Edwards C of E School & 6th Form College
- The Albany
- The Campion School
- The Frances Bardsley School For Girls
- The Royal Liberty School
- Sanders Draper School & Specialist Science College

In line with the above there will also be a need to ensure that any investment in school stock is accompanied by signed community use agreements to ensure that school sports facilities are guaranteed to be made available for community use.

Recommendation No.5 – Specialist sports provision

To work closely with key local clubs and/or NGBs to assist them to develop/ improve specialist sports facilities to meet local need.

Athletics

- Assist Havering AC and associated jogging clubs to improve access to the track facilities at Hornchurch Stadium.
- Assist Havering AC to investigate the potential for development of multi-sport indoor/ covered training facilities supporting entry level participation and winter training.
- Consider whether and how to develop opportunities for marked running routes within the urban areas of LBH to meet the demands of recreational runners.

Cycling

Where funding allows, invest in making roads safer and providing off road cycling routes, not only to encourage safe cycling but also to enhance access to the network of community sports facilities.

Gymnastics

Assist the local gymnastics clubs to find an affordable venue of appropriate quality at which they can accommodate permanent fixed equipment and associated club facilities. A facility of this nature could attract strategic and financial supported from British Gymnastics.

Indoor Tennis

To address the absence of public indoor courts in Havering, work with local tennis clubs to develop air halls and floodlighting to facilitate all year round play.

myplace

Work with myplace to investigate the potential to provide a specialist table tennis centre.

Recommendation No.6 – Consider the co-location of other services within new leisure developments

In order to provide Havering with a reference point of what other local authorities are developing in relation to their sports facilities networks, it is accurate to state that the majority are developing fewer, better quality facilities and are giving greater importance to the location and travel connections to facilities. Furthermore, many are looking to enhance their offer by developing a more 'commercial' range of facilities alongside a wider health and wellbeing service providers.

Recent developments of new community leisure facilities throughout the UK have followed three key themes within their design and offering, namely:

- Core facilities which meet local need and demand for sport and physical activity and enable the operator to deliver a cost effective service with minimal subsidy.
- Additional activity areas which provide a financial return by addressing a gap in the market or enhancing the core offer.
- Co-located with other service providers which enhances working relationships across 'civic' partners and improves service delivery to the community.

The following table identifies the types of facilities and activity areas included within each and the wider benefits that this delivers for the community.

Table 4: Modern leisure facility considerations

Core facilities	Additional activity areas	Co-located services
• 6 lane 25 metre pool • Teaching pool • Sports hall (size depends on demand and programming) • 80 - 150 station fitness suite • 1x large group fitness studio • 1 x small group fitness studio • Catering hub	• Floodlit 3G pitch • 5-a-side pitches. • Soft play • Spa facilities • Youth play facility (e.g. clip n' climb, interactive activity zones. • High ropes	• Part of a school campus • Library • Health centre / GP surgery • Pharmacy • Police office • Council contact point • Meeting rooms
Benefits	**Benefits**	**Benefits**
Enables operators to provide services at minimal subsidy by: • Maximising income from health and fitness. • Maximising income from learn to swim. • Offering a range of community based activities. Enables operators to contribute to the wider physical activity and wellbeing agenda by: • Offering health based programmes within fitness suites & swimming pools • Being a meeting point and social venue for outdoor physical activities.	Enables operators to maximise income to underpin the cost of the operation by: • Taking a more commercial approach to programming activity areas. • Capturing data on users (e.g. parents) and using this as a way of cross selling core services (e.g. learn to swim). • Providing a return on investment.	Creation of a leisure and community hub which enables operators to link with other services to contribute to wider physical activity and wellbeing agenda: • Offering a wider range of services under one roof. • Reaching residents who would not otherwise enter a sports facility. • Offering programmes and interventions for specific client groups with health and other partners. • Cross marketing and sharing of information to address local needs.

Therefore, LBH should consider how it might integrate or co-locate other services (e.g. library, health centre, council contact centre, etc) within the development of new leisure facilities as identified in recommendations 2 and 3. This not only enhances the wider leisure offer by enabling the operator to offer services to residents who might not otherwise go into a leisure centre, but also enables other services to reach a wider market. This also reflects the aspiration and funding priorities identified within Sport England's Strategy: *Towards an Active Nation.*

Funding to implement the strategy

The Strategy has not addressed in detail how proposals and recommendations will be funded. It is anticipated that there will be no single funding source; rather a mix of sources and solutions will be required to deliver the vision and ambitions of the strategy. These solutions will include:

- Further development and implementation of the Havering developer contributions process associated with the development of urban extensions.
- Use of capital receipts from land disposal, where applicable.
- Asset rationalisation and use of revenue saving and/or future liabilities to pay back borrowing aligned to capital investment in other sites.
- Prudential borrowing where an 'invest to save' justification can be made, particularly for longer-term proposals which may be considered in light of the Council's future borrowing strategy.
- External funding sources aligned to specific facilities and/or sports (e.g. Sport England funding, other charitable grant awards and funding streams).
- 3rd party borrowing where a suitable, robust business case exists (although this will be more expensive than prudential borrowing).

In general, the majority of new leisure centre developments have been undertaken on the basis of rationalising one or two existing facilities and developing a new larger, better quality facility which is more economical to operate. Furthermore, the new facility mix enables the operator to deliver revenue efficiencies (i.e. operate the facility at zero subsidy or better) which are often used to fund part or all of the capital repayment. A similar approach is undertaken for the refurbishment of existing facilities where increased income offsets the annualised cost of the refurbishment.

It is likely that a combination of the above approaches will be developed for the wide range of projects identified in Havering. This will require a robust approach to business planning to ensure that all investment is financially sound.

Acknowledgements

In accordance with ANOG guidance, the Strategy Steering Group, comprising the following has played an invaluable role in guiding this project to completion:

- Lauren Miller
- Guy Selfe
- Dean Neville
- Stuart Makepeace

PRIORITIES AND ACTION PLAN

The following action plan provides an overview of the priorities in Havering and a framework for officers and members to work with in order to deliver a network of indoor sports facilities that contribute to meeting the wider needs of Havering's residents:

Importance order	Recommendation	Action	Responsibility	Timescale
1	Recommendation No.1 – Romford Leisure Development Support and, as appropriate, facilitate the Romford Town Centre Leisure Development.	◂ Work with the leisure management contractor to develop a proposed programme of activities at the new facility. ◂ Liaise with clubs and NGBs (e.g. ASA and swimming clubs) to determine the most appropriate programme of club use at the new swimming pool. ◂ Work with relevant governing bodies and clubs to implement the sports development plan for the new ice pad. ◂ Work with the leisure management contractor to develop a launch event for the new facility in order that its use is maximised.	LBH Leisure operator Sports Clubs ASA Ice NGBs	Immediate
2	Recommendation No 2 – Hornchurch Sports Centre Subject to a detailed feasibility study, replace Hornchurch Sports Centre with a 'right sized' facility	◂ Commission a detailed feasibility study on the replacement of the facility. ◂ Determine the most appropriate facility mix taking into account the need to address increased demand from an increasing population as well as the need to be financially sustainable. ◂ Ensure the continued provision of leisure facilities throughout the development period and only rationalise the existing facility once a new facility is delivered.	LBH Leisure operator Health partners NGBs	Short - medium

Importance order	Recommendation	Action	Responsibility	Timescale
3	Recommendation No.3 – South Havering Subject to a detailed feasibility study, provide in south Havering / Rainham a 'right sized' facility	◂ Commission a detailed feasibility study on the replacement of the facility. ◂ Determine the most appropriate facility mix taking into account the need to address increased demand from an increasing population as well as the need to be financially sustainable. ◂ Consider the co-location of other 'civic' services within the scope of a new facility development (e.g. health centre, GP, library, etc.) ◂ Ensure the continued provision of leisure facilities throughout the development period and only rationalise the existing facility once a new facility is delivered.	LBH Leisure operator Health partners NGBs Education / School	Short - medium
4	Recommendation No.4 – School sports hall stock Improve the quality of existing school sports hall facilities for both education and community use (i.e. upgrade and/or expand existing or providing new)	◂ Liaise with the Council's education team and individual academies to identify priorities for investing in improvements to school sports halls. ◂ Seek to ensure that new developments have community use built into the design. ◂ Liaise with sports hall specific NGBs to determine if specific technical specifications may be required at certain sites. ◂ Ensure that any funding awarded to improve school sports facilities is accompanied by a requirement to sign and implement a community use agreement.	LBH NGBs Education / School	Short - medium
5	Recommendation No.5 – Specialist sports provision To work closely with key local clubs and/or NGBs to assist them to develop/ improve specialist sports facilities to meet local	◂ Assist Havering AC and associated jogging clubs to improve access to the track facilities at Hornchurch Stadium. ◂ Assist Havering AC to investigate the potential for development of multi-sport indoor/ covered training facilities.	LBH Leisure operator NGBs Clubs Education /	Medium

Importance order	Recommendation	Action	Responsibility	Timescale
	need	◂ Consider the development of marked running routes to meet the needs of recreational runners ◂ Work with transport and open spaces colleagues to make roads safer and providing off road cycling routes to encourage safe cycling and enhance access to the network of community sports facilities. ◂ Work with local gymnastics clubs to identify an appropriate facility at which they can accommodate permanent fixed equipment and associated club facilities. ◂ Work with myplace to investigate the potential to provide a specialist table tennis centre. ◂ Work with local tennis clubs to develop air halls and floodlighting to facilitate all year round play	School	
6	Recommendation No.6 – Consider the co-location of other services within new leisure developments. PART 1: INTRODUCTION AND METHODOLOGY

This is the Playing Pitch Assessment Report prepared by Knight Kavanagh & Page (KKP) for the London Borough of Havering Council (LBHC) and its partners. This report presents a supply and demand assessment of playing pitch facilities in accordance with Sport England's Playing Pitch Strategy Guidance: An approach to developing and delivering a playing pitch strategy. It has been followed to develop a clear picture of the balance between the local supply of, and demand for, playing pitches and other outdoor sports facilities.

The guidance details a stepped approach to developing a Playing Pitch Strategy. These steps are separated into distinct stages:

- Stage A: Prepare and tailor the approach (Step 1)
- Stage B: Gather information and views on the supply of and demand for provision (Steps 2 & 3)
- Stage C: Assess the supply and demand information and views (Steps 4, 5 & 6)
- Stage D: Develop the strategy (Steps 7 & 8)
- Stage E: Deliver the strategy and keep it robust and up to date (Steps 9 & 10)

Stages A to C are covered in this report.

Stage A: Prepare and tailor the approach

Why the PPS is being developed

The Council is reviewing its Local Development Framework (LDF) 2008 and has commissioned this study as an integral part of the evidence base needed to support the review of policies and preparation of Havering's Local Plan. The study will have a key role in planning for the provision of open space, outdoor sports and recreation facilities in the Borough. The following drivers are identified:

- To inform local planning policy in line with National Planning Policy Framework and provide an evidence base for responding to planning applications affecting playing fields.
- To establish a clear strategic pathway for improvement, investment and protection of playing pitches.
- To have a robust evidence base upon which to be able to apply for external funding.
- A recognised need to improve the quality and capacity of existing provision, regardless of ownership or management and to drive participation.
- A need to assess supply and demand issues with cross-boundary usage of sites in neighbouring local authorities.

The vision for the Playing Pitch Strategy is:

"To ensure that there is a sound evidence base upon which to make informed decisions about the provision of quality and adequate sports playing pitches in Havering for the life of the strategy."

The key objectives for the Playing Pitch Strategy are:

- Integration with other strategic work streams and regeneration activity to ensure a co-ordinated and strategic approach to outdoor sports facilities and provision for the Borough.
- Providing a clear investment strategy for outdoor sports facility provision within the local authority area.
- Providing a clear framework for all outdoor sports facility providers, including the public, private and third sectors.
- Clearly addressing the needs of pitch sports within the local area and picking up particular local demand issues and deficiencies in provision, both in distribution and in relation to gaps in provision identified through community consultation.
- Being future proof and addressing issues of population growth, and or major growth/regeneration areas. The ability for regular monitoring and update processes (in accordance with Stage E of the guidance to enable changes to be identified and assessed against population growth etc.).
- Addressing issues of cross boundary facility provision.
- Addressing issues of surplus and deficiency with particular reference to overplay and spare capacity, accessibility, quality and management with regard to facility provision. Note: consideration also needs to be given to the leagues requirements where changing accommodation is specified as essential and our ability to meet this need particularly in relation to the key sports.
- Being robust, and capable of adoption as a technical document, standing up to scrutiny at a public inquiry and compliant with the National Planning Policy Framework.
- The project brief has been agreed which sets out clearly the roles and responsibilities of all partners (Borough Council, NGBs / SE and consultants) for each element of the study.

Agreed scope

The following types of outdoor sports facilities were agreed by the steering group for inclusion in the Assessment and Strategy:

- Football pitches
- Rugby union pitches
- Cricket pitches
- Artificial grass pitches
- Softball pitches
- Outdoor tennis courts
- Outdoor bowling greens

It should be noted that for the non-pitch sports i.e. tennis and bowls, included within the scope of this study the supply and demand principals of Sport England methodology: Assessing Needs and Opportunities Guide for Indoor and Outdoor Sports Facilities (ANOG) are followed to ensure the process is compliant with the National Planning Policy Framework (NPPF). This is less prescriptive than the PPS guidance. Thus, where applied, the approach to assessing non-pitch sports is a supply/demand assessment based on more a ‘light touch’ approach.

Management arrangements

A Project Team from the Council has worked with KKP to ensure that all relevant information is readily available and to support the consultants as necessary to ensure that project stages and milestones are delivered on time, within the cost envelope and to the required quality standard to meet Sport England methodology.

Further to this, the Steering Group is and has been responsible for the direction of the PPS from a strategic perspective and for supporting, checking and challenging the work of the project team. The Steering Group is made up of representatives from the Council, Sport England and NGBs. It will be important for the Steering Group to continue once the PPS has been finalised for several reasons, including a continuing responsibility to:

- Be a champion for playing pitch provision in the area and promote the value and importance of the PPS.
- Ensure implementation of the PPS's recommendations and action plan.
- Monitor and evaluate the outcomes of the PPS.
- Ensure that the PPS is kept up to date and refreshed.

What makes Havering different?

The Borough is mainly characterised by suburban development with large areas of protected open space including green belt areas. In contrast, Romford is a major metropolitan centre and to the south the borough extends into the London Riverside Opportunity Area. Hornchurch and Upminster are the other main retail centres with extensive high street shopping areas.

The current resident population in Havering in 2016 is 248,900 (Data source: GLA 2015 round ward population projections - SHLAA-based; Capped Household Size model). There is a lower proportion of 20-44 year olds (Havering 31.5%, Greater London 42.5%). There are, however, more in the age groups from 50-84 (Havering 34.4%, Greater London 24.6%). 17% of the population are from BME communities[1], this differs greatly to the London average of 55%. It is worth noting that the report from which these figures are taken, the term Black Minority Ethnic (BME) refers to ethnic minority groups, including non-British White residents.

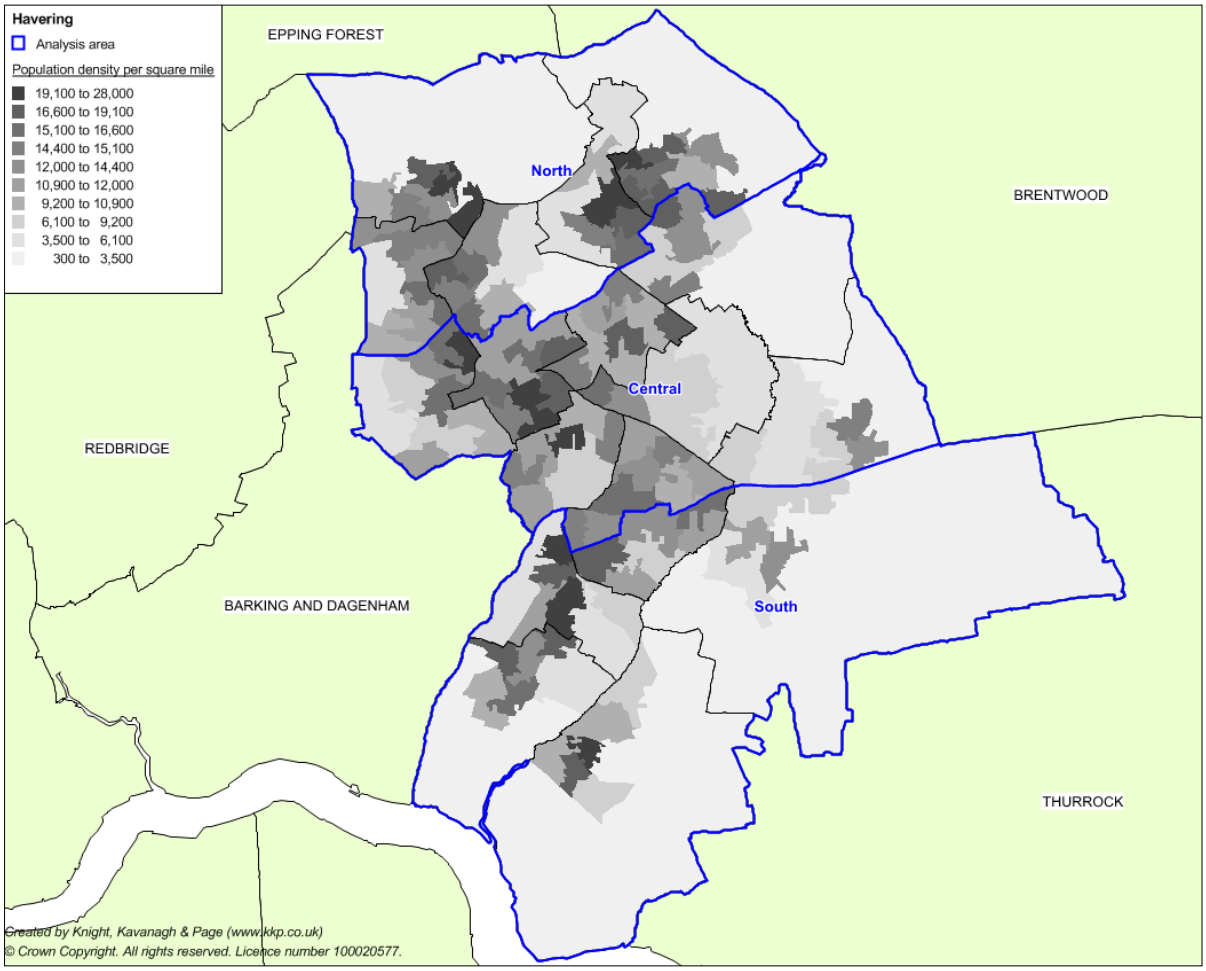
Active People Survey (APS) 8 (October 2013-October 2014) shows that under a third (31.5%) of adults participated in at least 1 x 30 minutes moderate intensity sport per week. This was below the national average (35.8%) and the regional average (37.7%). According to the Department of Health's 2009 report 'Be Active Be Healthy', the annual cost to the NHS of physical inactivity in Havering is estimated at £4,306,560.

Havering is situated in the north east of London and is an outer London Borough covering 11,227 hectares. It is adjoined by the London Boroughs of Redbridge, Barking and Dagenham and by the Essex Districts of Thurrock, Brentwood and Epping Forest. Further to this, to the South of the Borough it borders the Thames which can create a barrier to travel in that vicinity. Main settlements include Romford, Hornchurch, Upminster and Rainham. Fifty per-cent of Havering's area is designated as Green Belt, accommodating a network of pathways and bridleways that form 'green chains' throughout the countryside.

[1] *Havering London Borough Council, Demographic, Diversity and Socio-economic Profile of Havering's Population in March 2014 (Havering London Borough Council/ONS 2011)*

The study area is the London Borough of Havering (LBH) boundary area. Further to this sub areas or analysis areas have been created to allow a more localised assessment of provision and examination of playing pitch supply and demand at a local level. Use of analysis areas also allows local circumstances and issues to be taken into account. LBH is divided into three analysis areas, North, Central and South.

Figure 1.1: PPS analysis areas



Further to this, there is a level of imported demand and sports teams from outside the study area that use pitches within Havering. In addition, it is likely that sports teams from inside Havering use facilities outside of the Borough, for example in Thurrock. This cross-boundary movement is taken into consideration within each sports section where relevant following consultation with neighbouring authorities and National Governing Bodies of Sport.

Stage B: Gather information and views on the supply of and demand for provision

It is essential that a PPS is based on the most accurate and up-to-date information available for the supply of and demand for playing pitches. This section provides details about how this information has been gathered in Havering.

Gather supply information and views – an audit of playing pitches

PPS guidance uses the following definitions of a playing pitch and playing field. These definitions are set out by the Government in the 2010 'Town and Country Planning (Development Management Procedure) (England) Order'.[2]

- ***Playing pitch*** – a delineated area which is used for association football, rugby, cricket, hockey, lacrosse, rounders, baseball, softball, American football, Australian football, Gaelic football, shinty, hurling, polo or cycle polo.
- ***Playing field*** – the whole of a site which encompasses at least one playing pitch.

This PPS counts individual grass pitches (as a delineated area) as the basic unit of supply. The definition of a playing pitch also includes artificial grass pitches (AGPs).

Quantity

All playing pitches are included irrespective of ownership, management and use. Playing pitch sites were initially identified using Sport England's Active Places web based database. The Council and NGBs supported the process by checking and updating this initial data. This was also verified against club information supplied by local leagues. For each site the following details were recorded in the project database (which will be supplied as an electronic file):

- Site name, address (including postcode) and location
- Ownership and management type
- Security of tenure
- Total number, type and quality of pitches

Accessibility

Not all pitches offer the same level of access to the community. The ownership and accessibility of playing pitches also influences their actual availability for community use. Each site is assigned a level of community use as follows:

- ***Available for community use and used -*** pitches in public, voluntary, private or commercial ownership or management (including education sites) recorded as being available for hire and currently in use by teams playing in community leagues.
- ***Available but unused -*** pitches that are available for hire but are not currently used by teams which play in community leagues; this most often applies to school sites but can also apply to sites which are expensive to hire.
- ***No community use*** - pitches which as a matter of policy or practice are not available for hire or use by teams playing in community leagues. This should include professional club pitches along with some semi-professional club pitches where play is restricted to the first or second team.

[2]. www.sportengland.org>Facilities and Planning> Planning Applications

- ***Disused –*** pitches that are not being used at all by any users and are not available for community hire either. Once these sites are disused for five or more years they will then be categorised as 'lapsed sites'.
- ***Lapsed -*** last known use was as a playing field more than five years ago (these fall outside of Sport England's statutory remit but still have to be assessed using the criteria in paragraph 74 of the National Planning Policy Framework).

In addition, there should be a good degree of certainty that the pitch will be available to the community for at least the following three years. A judgement is made based on the information gathered and a record of secured or unsecured community use put against each site.

Quality

The capacity of pitches to regularly provide for competitive play, training and other activity over a season is most often determined by their quality. As a minimum, the quality and therefore the capacity of a pitch affects the playing experience and people's enjoyment of a sport. In extreme circumstances, it can result in a pitch being unable to cater for all or certain types of play during peak and off peak times.

It is not just the quality of the pitch itself which has an effect on its capacity but also the quality, standard and range of ancillary facilities. The quality of both the pitch and ancillary facilities will determine whether a pitch is able to contribute to meeting demand from various groups and for different levels and types of play.

The quality of all pitches identified in the audit and the ancillary facilities supporting them are assessed regardless of ownership, management or availability. Along with capturing any details specific to the individual pitches and sites, a quality rating is recorded within the audit for each pitch.

These ratings are used to help estimate the capacity of each pitch to accommodate competitive and other play within the supply and demand assessment.

In addition to undertaking non-technical assessments (using the templates provided within the guidance and as determined by NGBs), users and providers were also consulted on the quality and in some instances the quality rating was adjusted to reflect this. Consultation with clubs was undertaken via either face-to-face meetings or through an online survey, whilst providers were either met with or consulted via telephone/email. The quality scores were also cross checked with the steering group to ensure accuracy.

Gather demand information and views

Presenting an accurate picture of current demand for playing pitches (i.e. recording how and when pitches are used) is important when undertaking a supply and demand assessment. Demand for playing pitches in Havering tends to fall within the following categories:

- Organised competitive play
- Organised training
- Informal play

In addition, unmet and displaced demand for provision is also identified on a sport by sport basis. Unmet demand is defined as the number of additional teams that could be fielded if access to a sufficient number of pitches (and ancillary facilities) was available. Displaced demand refers to teams that are generated from residents of the area but due to any number of factors do not currently play within the area.

Future demand

Alongside current demand, it is important for a PPS to assess whether the future demand for playing pitches can be met. Using population projections, and proposed housing growth (if available), an estimate can be made of the likely future demand for playing pitches.

Population growth

The current resident population in Havering in 2016 is 248,900 (Data source: GLA 2015 round ward population projections - SHLAA-based; Capped Household Size model). By 2031 the Borough's population is projected to increase to 279,729 representing an increase of 30,829 (or equivalent to a percentage increase of 12.4%) according to the same GLA 2015 population projections.

Team generation rates are used to provide an indication of how many people it may take to generate a team (by gender and age group), in order to help estimate the change in demand for pitch sports that may arise from any population change in the study area.

Future demand for pitches is calculated by adding the percentage increases, to the GLA population increases in each analysis area. This figure is then applied to the TGRs and is presented on a sport by sport basis within the relevant sections of this report.

Other information sources that were used to help identify future demand include:

- Recent trends in the participation in playing pitch sports.
- The nature of the current and likely future population and their propensity to participate in pitch sports.
- Feedback from pitch sports clubs on their plans to develop additional teams.
- Any local and NGB specific sports development targets (e.g. increase in participation).

Stage C: Assess the supply and demand information and views

Supply and demand information gathered within Section B was used to assess the adequacy of playing pitch provision in Havering. It focused on how much use each site could potentially accommodate (on an area by area basis) compared to how much use is currently taking place.

Understand the situation at individual sites

Qualitative pitch ratings are linked to a pitch capacity rating derived from NGB guidance and tailored to suit a local area. The quality and use of each pitch is assessed against the recommended pitch capacity to indicate how many match equivalent sessions per week (per season for cricket) a pitch could accommodate.

This is compared to the number of matches actually taking place and categorised as follows, to identify:

Potential spare capacity: Play is below the level the site could sustain.	
At capacity: Play is at a level the site can sustain.	
Overused: Play exceeds the level the site can sustain.	

Develop the current picture of provision

Once capacity is determined on a site by site basis, actual spare capacity is calculated on an area by area basis via further interrogation of temporal demand. Although this may have been identified, it does not necessarily mean that there is surplus provision. For example, spare capacity may not be available when it is needed or the site may be retained in a 'strategic reserve' to enable pitch rotation to reduce wear and tear.

Capacity ratings assist in the identification of sites for improvement/development, rationalisation, decommissioning and disposal.

Develop the future picture of provision - scenario testing

Modelling scenarios to assess whether existing provision can cater for unmet, displaced and future demand is made after the capacity analysis. This will also include, for example, removing sites with unsecured community use to demonstrate the impact this would have if these sites were to be decommissioned in the future.

Identify the key findings and issues

By completing Steps 1-5 it is possible to identify several findings and issues relating to the supply, demand and adequacy of playing pitch provision in Havering. This report seeks to identify and present the key findings and issues, which should now be checked, challenged and agreed by the Steering Group prior to development of the Strategy (Section D).

The following sections summarise the local administration of the main grass pitch sports in Havering. Each provides a quantitative summary of provision and a map showing the distribution of facilities. It also provides information about the availability of facilities to/for the local community and, the governing body of each sport and regional strategic plan (where they exist). Local league details are provided in order to outline the competitive structure for each sport. The findings of club consultation and key issues for each sport are summarised.

PART 2: FOOTBALL

2.1: Introduction

The Essex County FA is the primary organisation responsible for the development (and some elements of administration) of football in Havering. It is also responsible for the administration, in terms of discipline, rules and regulations, cup competitions and representative matches, development of clubs and facilities, volunteers, referees, coaching courses and delivering national football schemes.

This section of the report focuses on the supply and demand for grass football pitches. Part 3 captures supply and demand for artificial grass pitches (AGPs). In the future it is anticipated that there will be a growing demand for the use of 3G pitches for competitive football fixtures, especially to accommodate mini and youth football.

Consultation

In addition to face to face consultation with key football clubs, an electronic survey was sent to all clubs playing in Havering. Contact details were provided by the Essex County FA, and the invitation to complete the survey was distributed via email. The survey was returned by 40 clubs (including face to face interviews) which equates to high club response rate of 73% and a team response rate of 87%. The results of which consultation are used to inform key issues within this section of the report.

The following clubs were met with face to face:

- Byron Red Star YFC
- Collier Row YFC
- Elite Colts YFC
- Essex Minors of Hornchurch FC
- Harold Wood Cougars FC
- Leaside Colts FC
- Romford Colts YFC
- Romford FC
- Romford Boro FC
- Tigers JFC
- Upminster Park Rovers JFC

Additionally, the Essex Olympian League was also consulted.

2.2: Supply

The audit identifies a current total of 170 grass football pitches within Havering across 63 sites. Of these, 151 pitches are available for community use across 48 sites, as presented in the table below. The pitches are relatively evenly spread out across the analysis areas, with 54 found in the South Analysis Area, 50 in the Central Analysis Area and 47 in the North Analysis Area.

Table 2.1: Summary of grass football pitches available to the community

Analysis area	Available for community use					
	Adult	Youth 11v11	Youth 9v9	Mini 7v7	Mini 5v5	Totals
Central	19	3	11	7	10	50
North	16	1	9	12	9	47
South	26	2	10	12	4	54
Havering	**61**	**6**	**30**	**31**	**23**	**151**

The table identifies a large number of adult pitches in Havering when compared to other pitch sizes, which reflects that the majority of teams use adult pitches. It should be noted, however, that many youth 11v11 teams are playing on adult pitches, which is not ideal for players and not in line with the FA Youth Review. In total, 70 of the 128 teams using adult pitches are youth teams, which may be in part due to a lack of dedicated youth 11v11 pitches rather than a preference for adult pitches.

In accordance with the FA Youth Review, U17s and U18s can play on adult pitches. The FA's recommended pitch size for adult football is 110m x 70m. The recommended size of a youth pitch is 100x60 metres for u16s and U15s and 90x55 metres for U14s and U13s. The recommended size for 7v7 pitches is 60x40 metres and for 5v5 pitches it is 40x30 metres.

The sites below contain adult pitches that are used by U13s-U16s teams:

- Bretons Outdoor Recreation Centre
- Forest Row
- Harold Wood Park
- Henderson's Sports & Social Club
- Rise Park
- Upminster Hall Playing Fields
- Westlands Playing Fields
- Brittons Playing Field
- Gaynes School
- Haynes Park
- Hildene Primary School
- The Brittons Academy Trust
- Upminster Park

Adult pitches at Brittons Playing Field, Gaynes School, Haynes Park, Hildene Primary School and Rise Park are used solely by youth 11v11 teams (U13s-U16s). As a result, no adult teams would be adversely affected by re-configuring the pitches (although there may be a need to retain adult pitches if shortfalls are identified).

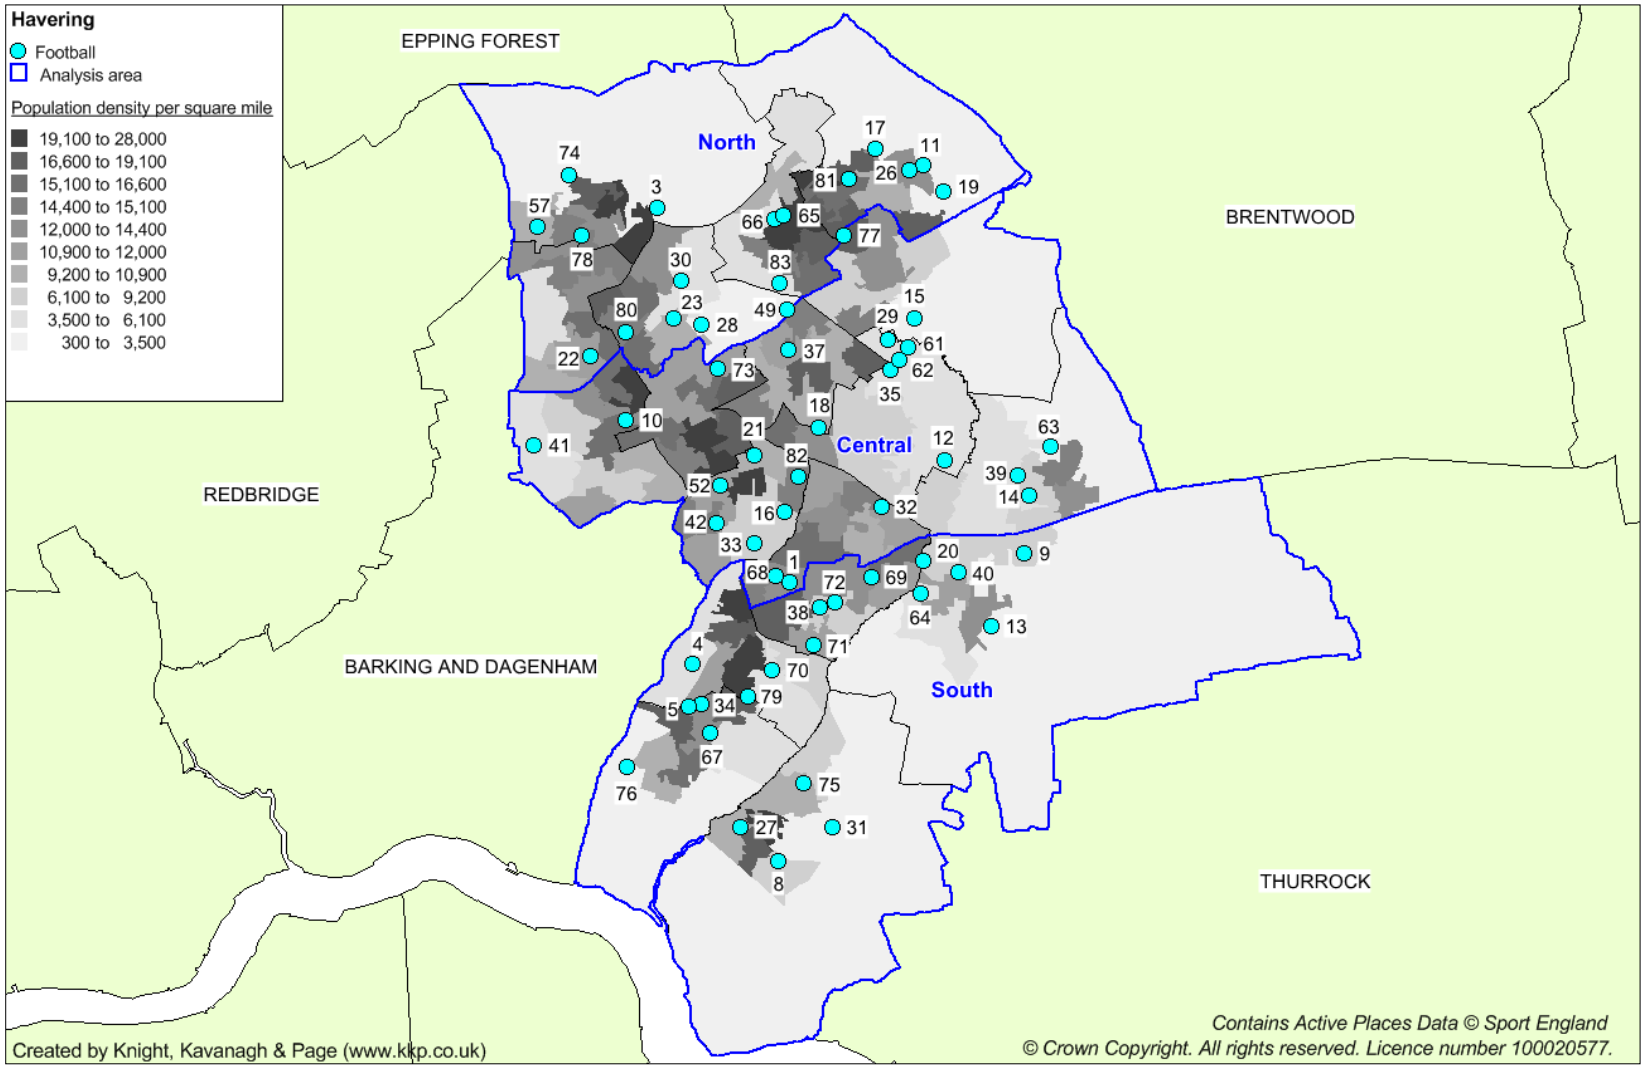
Future supply

Two new football pitches are to be provided at Noak Hill Sports Complex from Autumn 2016 as part of the sites wider development. A full size 3G pitch is also to be installed that will allow for competitive matches to be played on it (subject to FA testing).

The Royal Liberty School is in the process of developing a 9v9 pitch that should be ready by the beginning of 2016. The pitch, as with all facilities at the site, will not be available for community use, although the School is happy to reconsider this policy should site management issues be resolved.

Figure 2.1 overleaf shows the location of all football pitches currently within Havering.

Figure 2.1: Location of all football pitches in Havering



Accessibility

The majority of clubs state that most players travel between two and five miles to access their facilities.

Pitch quality

The quality of football pitches in Havering has been assessed via a combination of site visits (using non-technical assessments as determined by The FA) and user consultation to reach and apply an agreed rating as follows:

- Good
- Standard
- Poor

Pitch quality primarily influences the carrying capacity of a site; often pitches lack the drainage and maintenance necessary to sustain levels of use. It is likely that pitches which receive little to no ongoing repair or post-season remedial work will be assessed as poor, therefore limiting the number of games able to take place each week without it having a detrimental effect on quality. Conversely, well maintained pitches that are tended to regularly are likely to be of a higher standard and capable of taking a number of matches without a significant reduction in surface quality.

Private sites (e.g. sports clubs) typically offer better quality facilities than Council parks/playing fields and school pitches. In general, such sports clubs tend to have dedicated ground staff or volunteers working on pitches and the fact that they are often secured by fencing prevents unofficial use. The maintenance of Council sites tends to be less frequent and unofficial use of these sites can further exacerbate quality issues.

The percentage parameters used for the non-technical assessments were as follows; Good (>80%), Standard (50-80%), Poor (<50%). The final quality ratings assigned to the sites also take into account the user quality ratings gathered from consultation.

The table below summarises the quality of pitches that are available for community use. In total, six pitches are assessed as good quality, 108 as standard quality and 37 are deemed to be poor quality. The quality ratings for each individual pitch can be seen in table 2.14.

Table 2.2: Pitch quality assessments (community use pitches)

Adult pitches			Youth pitches			Mini pitches		
Good	Standard	Poor	Good	Standard	Poor	Good	Standard	Poor
5	42	14	1	28	7	-	38	16

The non-technical pitch quality audit shows that the majority of pitches are poor or standard quality, particularly at local authority sites. All sites managed by the Council receive a basic level of maintenance, with budgets not allowing for any further level of upkeep. The majority of pitches within schools also receive basic maintenance, which in most cases is contracted to external companies. Maintenance of pitches at club sites varies; some clubs hire dedicated ground staff whilst others depend on remedial work by volunteers that is often limited by cost and a lack of specialised equipment.

Of responding clubs, nine (23%) rate the overall quality of their home pitches as poor quality, 20 (49%) rate quality as standard and 11 (28%) rate quality as good. All clubs assessing their pitches as poor quality access local authority sites, with many reporting that pitches are often not marked out or that they are marked out incorrectly. A lack of post season remedial work is also widely stated as an issue.

Eight clubs (21%) state that quality has worsened since last season, whilst ten clubs (26%) report that quality has improved. The most common factors attributed to pitch improvements are an investment in drainage work and more frequent maintenance, whilst the opposite is true for pitches that are worsening in quality. Specific comments relating to pitch conditions at individual sites can be seen in the table below. The comments are a combination of club feedback and site assessment information.

Table 2.3: Site specific comments

Site ID	Site	Comments
4	Bretons Outdoor Recreation Centre	A lack of post season remedial work on pitches used by Tigers JFC resulted in the Club condemning the pitches until safe and playable.
9	Coopers Company & Coborn School	Pitches have drainage issues and the grass is not cut regularly enough. Otherwise recognised as a good quality site by clubs.
12	Emerson Park Academy	Goalposts are considered old and dangerous and pitch markings are often unclear.
15	Harold Wood Park	Grass cutting is not completed regularly enough during the season, which leads to Harold Wood Cougars FC carrying out maintenance itself.
		Drainage is poor on pitches used by Harold Wood Athletic FC, with high levels of clay found in the soil.
19	Henderson's Sports & Social Club	A new drainage system was put in place last season, however, some pitches remain vulnerable to wet weather. The remaining pitches are considered to be good quality by clubs.
20	Hornchurch Stadium	Considered the best quality site in Havering by clubs.
30	Rise Park	Pitches suffer from poor drainage which leads to many postponements.
31	Spring Farm	Pitches were not marked out in time for the start of the season and the grass is often too long on match days.
32	St Andrews Park	Pitches are marked to an incorrect size.
34	The Brittons Academy Trust	High levels of vandalism and litter caused by nearby skate-park.
39	Upminster Hall Playing Fields	Drainage is considered poor and the grass is not cut short enough.
40	Upminster Park	Maintenance is considered infrequent and basic, whilst unofficial use and dog fouling is also considered to be an issue.
49	Gidea Park Sports Ground	Maintenance is considered poor and the pitches suffer from many pot holes.
57	Forest Row	Pitch quality has improved after pitches were re-seeded in the closed season.

Over marked pitches

Over marking of pitches can cause notable damage to surface quality and lead to overuse beyond recommended capacity. In some cases mini pitches may be marked onto senior pitches or mini matches may be played widthways across adult or youth pitches. This can lead to targeted areas of surface damage due to large amounts of play focused on high traffic areas, particularly the middle third of the pitch. Over marking of pitches not only influences available capacity, it may also cause logistical issues regarding kick off times; for example, when two teams of differing age formats are due to play at the same site at the same time.

There are also a number of football pitches in Havering that are marked onto cricket outfields. This can create availability issues at multi-sport sites as the cricket season begins in April when the football season is still ongoing and the football season begins in August as cricket fixtures are still being played. Harold Wood Cougars YFC reports that this is a particular issue at Harold Wood Park as the Club loses access to four pitches whilst the cricket season is ongoing.

In addition, Tigers JFC reports that it loses access to some of its pitches at Bretons Outdoor Recreation Centre on Sundays due to a model aircraft society using the site. Any spare capacity identified later in the report on pitches which are over marked or contain over markings is discounted. The table below highlights all sites containing over marked pitches.

Table 2.4: Sites containing over marked pitches

Site ID	Site	Comments
3	Bower Park School	An adult pitch is removed in the summer in order to create athletics track.
9	Coopers Company & Coborn School	An adult and a youth 11v11 pitch over mark cricket outfield.
13	Gaynes School	An adult pitch is over marked by a 9v9 pitch.
49	Gidea Park Sports Ground	A youth 11v11, a 9v9 and a 7v7 pitch all over mark cricket outfield.
15	Harold Wood Park	Two adult, two 7v7 and two 5v5 pitches all over mark cricket outfield.
20	Hornchurch Stadium	The pitch is also used as an athletics field in the summer.
23	Marshalls Park School	An adult pitch is over marked by a 9v9 pitch and a 5v5 and a 7v7 pitch over mark senior rugby pitch.
31	Spring Farm Park	Three adult pitches over mark cricket outfield.
39	Upminster Hall Playing Fields	An adult pitch over marks cricket outfield.

Ancillary facilities

The non-technical assessment assesses ancillary facilities servicing pitches. This includes the condition of clubhouses, changing accommodation, toilets, showers, car parking and boundary fencing.

Of sites in Havering that are serviced by changing facilities, 24% have good quality facilities, 43% have standard quality facilities and 33% have poor quality facilities. All facilities assessed as good quality are located at education sites such as Drapers Academy and The Campion School, whilst facilities assessed as poor quality are found at the following local authority sites:

- Cottons Park
- Harold Wood Park
- Haynes Park
- Hylands Park
- Rise Park
- Upminster Hall Playing Fields

Of clubs rating changing facilities as poor quality, the main complaint is that sites have dated facilities that are small and do not provide enough rooms in relation to the number of pitches. For example, Collier Row FC reports that the facilities at Forest Row are good quality, however, only six changing rooms are provided to service ten pitches. This results in teams often having to share facilities and also causes an issue during crossover when matches are played back to back. Spring Farm is also cited as having a quantity issue as only two changing rooms are provided to service three pitches. There are more changing facilities available, however, these are owned by a cricket club and cannot be accessed by football teams.

Additionally, many clubs report that a lack of changing facilities is causing an issue at some sites, particularly for senior teams which are required by leagues to have access to changing rooms. The following seven sites do not contain changing facilities:

- Bretons Outdoor Recreation Centre
- Brittons Playing Field
- Harrow Lodge Park
- King George Playing Field
- Park Lane Recreation Centre
- St Andrews Park
- Upminster Park

An absence of changing facilities is also negatively affecting female participation as teams are again required by leagues to have access to adequate provision. Upminster Park Rovers JFC reports that its only girls' team folded last season due to a lack of toilet facilities at Upminster Park, whilst Tigers FC lost a ladies team for a similar reason. A lack of changing facilities is less of a problem when it comes to boys' football as there are no access requirements from leagues. The majority of teams, especially at younger age levels, choose not to access provision due to safeguarding measures and a lack of demand.

Other issues relating to ancillary facilities include the car park at Bretons Outdoor Recreation Centre, which is reported to be too small and poorly surfaced, and a lack of storage space at Spring Farm and Upminster Park.

Security of tenure

Tenure of sites in Havering is generally secure i.e. through a long term lease or a guarantee that pitches will continue to be provided over the next three years. An exception to this is found at schools and academies that state their own policies and are more likely to restrict levels of community use. For example, Bower Park School previously rented out its grass pitches but now limits access due to quality issues, as does Drapers Academy. The following is a full list of schools which have grass football pitches but do not allow community use:

- Broadford Primary School
- Drapers Academy
- Newtons Primary School
- Oasis Academy
- Parklands Junior School
- The Albany School
- The Royal Liberty School
- Towers Junior School
- Bower Park School
- Drapers Brookside Junior School
- Hall Mead School
- Parsonage Farm Primary School
- Scotts Primary School
- St Albans Catholic Primary School
- The Campion School

Security of tenure is also considered unsecure at Gaynes School, which is used by Essex Minors of Hornchurch FC. The Club recently invested in new changing facilities at the site, however, the School can stop its lettings at any point and as a result leave the Club without a pitch. This was raised as a concern by the Club during consultation.

It must also be noted, however, that several schools are without such sports facilities and it is therefore equally important to enable them to access provision if there is a demand to do so, either via other schools or via other community facilities.

Collier Row FC currently has 13 years remaining on its lease of Forest Row (from the Council). This requires extending beyond 25 years in order to assist with future funding opportunities. In particular, the Club expresses a need for help funding drainage improvements at the site.

Romford FC is also without security of tenure and is currently displaced and playing outside of Havering, as captured later in this section of the report. Planning permission has been gained for a stadia pitch to be built at Westlands Playing Fields, however, the Council is only able to offer a one year lease arrangement as the site is located within the green belt. As a long term agreement is required, the proposal has been called into the secretary of state in order to provide a solution.

Romford Colts FC, Jets FC and Upminster Park Rovers JFC also report a desire to acquire land on a long term lease, although potential sites have yet to be identified.

Football pyramid

The football pyramid is a series of interconnected leagues for men's association football clubs in England. The system has a hierarchical format leading from Step 1 down to Step 7, with promotion and relegation between the steps.

There are four Havering clubs that play within the football pyramid:

- AFC Hornchurch – Step 4
- Romford FC* – Step 4
- Harold Hill FC – Step 7
- Harold Wood Athletic FC – Step 7

**Romford FC is included in the above list as it considers itself to be a Havering based club, despite currently playing in Thurrock.*

Clubs within the step system must adhere to ground requirements set out by the FA. The higher the level of football being played the higher the requirements. Clubs cannot progress into the league above if the ground requirements do not meet the correct specifications. Ground grading assesses grounds from A to H, with 'A' being the requirements for Step 1 clubs. These grades are shown in detail in Appendix 2.

All clubs in Havering are currently meet the ground requirements for the step they play at, however, many would require improvements if the clubs were to progress through the system. For instance, The Essex Olympian League, which operates at Step 7 of the pyramid, reports that many clubs are turned away from its league due to poor quality changing facilities.

2.3: Demand

Through the audit and assessment a total of 306 teams (within 55 clubs) are identified as playing within Havering. This consists of six veteran's teams, 51 men's teams, one women's team, 124 youth boys' teams, seven youth girls' teams and 117 mini teams (three of which are girls' only mini teams).

Table 2.5: Summary of competitive teams currently playing in Havering

Analysis area	No. of teams playing					
	Adult	Youth 11v11	Youth 9v9	Mini 7v7	Mini 5v5	Total
Central	26	22	13	12	18	91
North	16	28	19	29	21	113
South	16	28	21	22	15	102
Havering	**58**	**78**	**53**	**63**	**54**	**306**

The majority of teams play in the North Analysis Area (113), whilst the least amount of teams play in the Central Analysis Area (91). Despite this, more adult teams play in this analysis area (26) when compared to the other two (both 16). The most prevalent playing format across all analysis areas is the youth 11v11 category (78).

Responding clubs were asked whether there has been a change in the number of teams over the previous three years. The response rates for those that answered this question can be seen in the table below:

Table 2.6: Change in the number of teams over the previous three years

Team type	Clubs response		
	Increased	Decreased	Stayed the same
Adult	15%	19%	66%
Youth	21%	14%	73%
Mini	25%	8%	68%

The highest increase in teams is seen in mini football, with 25% of clubs reporting an increase over the last three years and only 8% reporting a decrease. Likewise, 21% of clubs report an increase in youth teams whilst 14% report a decrease. Conversely, whilst 15% of clubs report an increase in adult teams over the previous three years, 19% report a decrease. It must be noted that this figure would be much higher if the number of adult-only clubs that have folded during this time were included, however, this is difficult to quantify.

It would be expected that an increase in mini and youth teams would eventually translate into more adult teams, however, as seen above, this is not always the case. The way in which people, especially adult men, want to play football is changing. There is a national trend of players opting to play small sided versions of the game as people want to be able to fit it into busy lifestyles. Shorter versions of the sport allow players to do this and if this trend continues there is likely to be demand for more access to 3G pitches.

Similarly, participation in veteran's football has increased nationwide as players in open age leagues want to move to veteran's football earlier than in the past as the schedule is less intrusive on their lives. The Essex Olympian League reports that its number of adult teams has reduced over the last three years, but states that the number of veteran's teams in the area has grown.

For clubs reporting a reduction in youth and mini teams, reasons include a lack of coaches, coaches moving teams to other clubs, a lack of available pitches and poor quality facilities.

Displaced demand

Displaced demand refers to teams that are currently accessing pitches for their home fixtures outside of the area in which they are registered, normally because their pitch requirements cannot be met. There are high levels of displaced demand in Havering, as seen in the table below.

Table 2.7: Displaced demand

Club	Team	Where displaced to?
Eva Hart FC	Mens 1st	Warren Sports Centre, Dagenham
Evan Almighty FC	Mens 1st	Warren Sports Centre, Dagenham
Goodmayes FC	u9s	Mayfield School, Redbridge
	u10s	Mayfield School, Redbridge
	u11s a	Mayfield School, Redbridge
	u11s b	Mayfield School, Redbridge

Roneo Colts FC	u8s	Robert Clack School, Dagenham
	u9s	Robert Clack School, Dagenham
	u11s	Robert Clack School, Dagenham
	u15s	Robert Clack School, Dagenham
	u16s	Robert Clack School, Dagenham
	Mens 1st	Robert Clack School, Dagenham
Romford FC	Mens 1st	Thurrock FC, Thurrock
Romford Boro FC	u9s	Ford Sports Ground, Ilford
	u10s	Ford Sports Ground, Ilford
	u11s	Ford Sports Ground, Ilford
	u12s a	Ford Sports Ground, Ilford
	u12s b	Ford Sports Ground, Ilford
	u12s c	Ford Sports Ground, Ilford
	u12s d	Ford Sports Ground, Ilford
	u12s e	Ford Sports Ground, Ilford
	u13s	Ford Sports Ground, Ilford
	u13s girls	Ford Sports Ground, Ilford
	u14s a	Ford Sports Ground, Ilford
	u14s b	Ford Sports Ground, Ilford
	u14s c	Redbridge Sports Centre, Barkingside
	u15s	Redbridge Sports Centre, Barkingside
Romford Dynamos FC	Mens 1st	Valence Park, Dagenham
Rowham FC	Mens 1st	Warren Sports Centre, Dagenham
Sungate FC	Mens 1st	Selex Sports Ground, Basildon
	Mens 2nd	Selex Sports Ground, Basildon
	Vets 1st	Fairlop Oak Playing Field, Ilford
	Vets 2nd	Fairlop Oak Playing Field, Ilford
Young Stars Football First FC	u7s	Warren Sports Centre, Dagenham
	u9s	Warren Sports Centre, Dagenham
	u11s	Warren Sports Centre, Dagenham
	u14s	Warren Sports Centre, Dagenham

In total there are 64 teams registered to Havering that currently play outside of the local authority area. As a breakdown (based on teams playing home and away) this equates to 7.5 match equivalent sessions on adult pitches (15 teams), eight match equivalents on youth 11v11 pitches (16 teams), seven match equivalents on 9v9 pitches (14 teams), five match equivalents on 7v7 pitches (10 teams) and 4.5 match equivalents on 5v5 pitches (nine teams).

Reasons for the displaced demand varies. For example, Romford Dynamos FC and Rowham FC report that they both access pitches in Dagenham due to cheaper pitch hire costs, whilst Goodmayes FC reports that it accesses pitches in Redbridge as the quality is perceived to be better. Jets FC and Romford Boro FC report that no available sites in Havering have the capacity to accommodate all their teams (seven and 14 respectively), meaning they instead choose to play on larger sites in Dagenham and Ilford respectively.

Whilst priority should be placed on ensuring displaced demand returns to the area, it must be noted that some clubs expressing displaced demand would remain displaced regardless of improvements made. This implies to Young Stars Football First FC, Eva Hart FC and Evan Almighty FC, all of which state that they currently play at their preferred home ground. As such, this demand has been discounted from the conclusions tables later in this section.

Unmet demand

Unmet demand is existing demand that is not getting access to pitches. It is usually expressed, for example, when a team is already training but is unable to access a match pitch, or when a league has a waiting list due to a lack of pitch provision which is in turn hindering its growth.

In Havering, no current unmet demand is identified, although Tigers FC reports that it previously had a ladies team that could not be fielded due to a lack of changing facilities at Bretons Outdoor Recreation Centre. The team has now moved to a different club (Collier Row FC) where it can play competitively.

Latent demand

During the consultation process a number of clubs identify that if more pitches were available at their home ground or in the local area they could develop more teams in the future (latent demand). The table below highlights latent demand expressed by the clubs (where quantified) that could *potentially* be fielded if more pitches were available.

Table 2.8: Summary of latent demand expressed by clubs

Club	Analysis area	Latent demand	Pitch type	Match equivalents
Crumpled Horn FC	South	1 x Adult	Adult	0.5
Harold Wood Athletic	Central	1 x Adult	Adult	0.5
Leaside Colts FC	South	1 x Youth	Youth 11v11	0.5
Leytonstone United FC	North	1 x Adult	Adult	0.5
Romford Boro FC	Central	2 x Mini 2 x Youth	Mini 5v5 Mini 7v7 Youth 9v9 Youth 11v11	0.5 0.5 0.5 0.5

Club	Analysis area	Latent demand	Pitch type	Match equivalents
Tigers FC	Central	2 x Mini 4 x Youth	Mini 5v5 Mini 7v7 Youth 9v9 Youth 11v11	0.5 0.5 1 1
Totals			**Adult**	**1.5**
			Youth 11v11	**2**
			Youth 9v9	**1.5**
			Mini 7v7	**1**
			Mini 5v5	**1**

The largest amount of latent demand is expressed in the Central Analysis Area, equating to 0.5 match equivalent sessions on adult pitches, 1.5 match equivalents on youth 11v11 and 9v9 pitches and one match equivalent on 7v7 and 5v5 pitches. In the South Analysis Area there is latent demand totalling 0.5 match equivalents on both adult and youth 11v11 pitches, whilst the North Analysis Area has latent demand for 0.5 match equivalents on adult pitches.

In addition to the table, eight clubs indicate that they would field more teams if more or better training facilities were available, and seven clubs state that teams would increase if ancillary provision improved.

Future demand

Future demand can be defined in two ways, through participation increases and using population forecasts.

Population increases

Team generation rates are used to calculate the number of teams likely to be generated in the future (2031) based on population growth. It is predicted that there will be an increase of four adult teams (two match equivalents), 40.5 youth teams (20 match equivalents) and 21 mini teams (10.5 match equivalents).

Table 2.9: Team generation rates

Age group	Current population within age group (2016)[3]	Current no. of teams	Team Generation Rate	Future population within age group (2031)[3]	Predicted future number of teams	Additional teams that may be generated from the increased population
Adult Men (16-45)	38,772	57	1:680	41,329	60.8	3.8
Adult Women (16-45)	40,696	1	1:40,696	43,490	1.1	0.1
Youth Boys (10-15)	6,338	124	1:51	8,281	162.0	38
Youth Girls (10-15)	6,102	7	1:872	8,282	9.5	2.5
Mini-Soccer Mixed (6-9)	7,847	117	1:67	9,249	137.9	20.9

[3] Data source: GLA 2015 round ward population projections - SHLAA-based; Capped Household Size model

Participation increases

A number of clubs report aspirations to increase the number of teams they provide. Of the clubs that quantify their *potential* increase, there is a predicted growth of five adult, 26 youth and 15 mini teams. Latent demand highlighted earlier in the report has been discounted in the table below, as it is presumed to be absorbed in future growth.

Table 2.10: Potential team increases identified by clubs

Club	Analysis area	Latent demand	Pitch type	Match equivalents
Alliance United YFC	South	1 x Youth	Youth 9v9	0.5
Collier Row FC	North	2 x Adult 4 x Youth 3 x Mini	Adult Youth 11v11 Youth 9v9 Mini 7v7 Mini 5v5	1 1 1 0.5 1
Emerson Oak FC	Central	1 x Adult 2 x Youth	Adult Youth 11v11 Youth 9v9	0.5 0.5 0.5
Essex Minors of Hornchurch FC	South	5 x Youth 4 x Mini	Youth 11v11 Youth 9v9 Mini 7v7 Mini 5v5	0.5 2 1 1
Harold Hill YFC	North	1 x Adult	Adult	0.5
Harold Wood Cougars FC	Central	2 x Youth 3 x Mini	Youth 9v9 Mini 7v7 Mini 5v5	1 0.5 1
Leaside Colts FC	South	2 x Youth 1 x Mini	Youth 11v11 Youth 9v9 Mini 7v7	0.5 0.5 0.5
Romford Boro FC	Central	2 x Youth 2 x Mini	Youth 11v11 Youth 9v9 Mini 7v7 Mini 5v5	0.5 0.5 0.5 0.5
Romford Colts FC	North	6 x Youth 2 x Mini	Youth 11v11 Youth 9v9 Mini 7v7	1 2 1
United Amateurs FC	South	2 x Youth	Youth 11v11 Youth 9v9	0.5 0.5
Upminster FC	Central	1 x Adult	Adult	0.5

The total future demand expressed equates to 23 match equivalent sessions. This is broken down by pitch type and by analysis area in the table below. The majority of future demand is expressed for 9v9 pitches and in the North Analysis Area.

Table 2.11: Future demand by analysis area

Analysis area	Future demand (match equivalent sessions)					
	Adult	Youth 11v11	Youth 9v9	Mini 7v7	Mini 5v5	Total
Central	1	1	2	1	1.5	**6.5**

Analysis area	Future demand (match equivalent sessions)					
	Adult	Youth 11v11	Youth 9v9	Mini 7v7	Mini 5v5	Total
North	1.5	2	3	1.5	1	**9**
South	-	1.5	3.5	1.5	1	**7.5**
Total	**2.5**	**4.5**	**8.5**	**4**	**3.5**	**23**

2.4: Capacity analysis

The capacity for pitches to regularly provide for competitive play, training and other activity over a season is most often determined by quality. As a minimum, the quality and therefore the capacity of a pitch affects the playing experience and people's enjoyment of playing football. In extreme circumstances it can result in the inability of a pitch to cater for all or certain types of play during peak and off peak times. Pitch quality is often influenced by weather conditions, drainage and maintenance.

As a guide, The FA has set a standard number of match equivalent sessions that each grass pitch type should be able to accommodate without adversely affecting current quality (pitch capacity).

Taking into consideration the guidelines on capacity the following ratings were used in Havering:

Adult pitches		Youth pitches		Mini pitches	
Pitch quality	**Matches per week**	**Pitch quality**	**Matches per week**	**Pitch quality**	**Matches per week**
Good	3	Good	4	Good	6
Standard	2	Standard	2	Standard	4
Poor	1	Poor	1	Poor	2

Table 2.14 applies the above pitch ratings against the actual level of weekly play recorded to determine a capacity rating as follows:

Potential capacity	Play is below the level the site could sustain
At capacity	Play matches the level the site can sustain
Overused	Play exceeds the level the site can sustain

Training

The majority of clubs prefer to access AGPs for winter training purposes, however, this is limited in Havering to use of sand-based pitches or a half size 3G pitch at The Brittons Academy Trust. As such, many teams leave the area to access full size 3G pitches in Dagenham or other neighbouring local authorities. For more information in relation to use of AGPs please see Part 3: 3G pitches and Part 6: Hockey.

Alternatively, local authority sites containing grass pitches can be accessed by clubs for training purposes through acquiring a training permit at an additional cost. The permit provides clubs with access to a designated pitch at a designated time i.e. Saturday 9am-11am throughout the football season. Many clubs choose this route as it is cheaper than accessing an AGP.

In addition, grass pitches at some school and private sites are also accessed for training purposes throughout the season. The table below highlights all sites used regularly for training in Havering, regardless of ownership.

Table 2.12: Grass pitches used for training

Site ID	Site used	Club users
4	Bretons Outdoor Recreation Centre	County Park FC
		Tigers JFC
		United Amateurs FC
5	Brittons Playing Field	Leaside Colts FC
17	Havering College	Romford Town FC
19	Henderson's Sports & Social Club	Harold Hill FC
30	Rise Park	Bryon Red Star FC
40	Upminster Park	Upminster Park Rovers FC
49	Gidea Park Sports Ground	Raphael Park Rovers FC
65	Hilldene Primary School	Romford Colts FC
83	The Gallows	Harold Hill FC

Disadvantages of using grass pitches include not being able to access sites during the winter due to dark nights and inclement weather (most clubs instead choose to train on a weekend morning), as well as extra wear and tear that can affect overall quality. As such, training demand on grass pitches needs to be factored into overall usage. One match equivalent session has therefore been added to the current play (in Table 2.14) on each pitch at the sites in the above table.

Education sites

To account for curricular/extra-curricular use of education pitches it is likely that the carrying capacity at such sites will need to be adjusted. This adjustment is dependent on the amount of play carried out and also the number of pitches on site. The only time this would not happen is when a school does not use its pitches at all and the sole use is community use. The table below identifies the school sites and adjusted capacity where required.

Table 2.13: Capacity adjustment of educational sites

Site ID	School/College name	Capacity comments/actions
1	Abbs Cross Academy	The School was unresponsive to consultation requests. Estimated school usage reduces capacity by 1.5 match equivalent sessions per pitch. Community use is recorded.
3	Bower Park School	Community use is not allowed on the grass pitches due to poor drainage and weekend management issues. School use reduces capacity by one match equivalent session per pitch, with the majority of demand taking place on the sites AGP.
8	The Chafford School	The School shares its site with Chafford Sports Complex. All football pitches are available to hire (through the School) however no use is currently recorded. School use reduces capacity by 1.5 match equivalent session per pitch.

Site ID	School/College name	Capacity comments/actions
9	The Coopers' Company & Coborn School	School use reduces capacity by one match equivalent session per pitch, with the sites AGP more regularly used. Both grass football pitches are available to hire by the community, although only the adult pitch is currently being used.
11	Drapers Academy	Community use is not allowed on the pitches due to drainage issues. School use reduces capacity by 1.5 match equivalent sessions per pitch.
12	Emerson Park Academy	Sport and community lettings are a priority for the School, with all football pitches currently in use. School use reduces capacity by one match equivalent session per pitch, with the sites AGP more regularly used.
13	Gaynes School	Pitches are let out to junior and mini teams only in order to protect quality. School use reduces capacity by 1.5 match equivalent session per pitch.
14	Hall Mead School	The School was unresponsive to consultation requests. Estimated school usage reduces capacity by 1.5 match equivalent sessions per pitch. Community use is recorded.
17	Havering College	The solitary football pitch is available to the community and well used. Use by the College reduces capacity by one match equivalent session.
23	Marshalls Park School	Community use is available at the School however bookings are often turned away due to poor quality. School usage reduces capacity by 1.5 match equivalent sessions per pitch.
29	Redden Court School	The School was unresponsive to consultation requests. Estimated school usage reduces capacity by 1.5 match equivalent sessions per pitch. Community use is recorded.
33	The Albany School	The School does not let out its grass pitches due to site management issues. School usage reduces capacity by 1.5 match equivalent session per pitch.
34	The Brittons Academy	All pitches are available to the community and used. The School has access to two AGPs and rotates its grass pitches in order to protect quality. Capacity reduced by 0.5 match equivalent sessions per pitch.
35	The Campion School	Football is not a priority sport for the School as rugby union is more commonly played. Use of its solitary football pitch reduces capacity by one match equivalent session. The pitch is available and used by the community.
36	The Frances Bardsley Academy for Girls	The School does not contain any grass pitches and does not access any off-site. A generic grass field and an AGP satisfies demand.
37	The Royal Liberty School	No community use is allowed due to site management issues. School use reduces capacity of solitary football pitch by two match equivalent sessions, although this is expected to reduce with development of a 9v9 pitch.

Site ID	School/College name	Capacity comments/actions
38	The Sanders Draper School & Specialist Science College	School use reduces capacity by 1.5 match equivalent session per pitch. All grass football pitches are used by the community.
60	Sacred Heart of Mary Girl's School	The School does not contain any grass pitches and does not access any off-site, nor does it have demand to do so.
-	St Edwards Church of England School	The School has no grass provision of its own and instead uses Westlands Playing Fields (Site ID 41). Capacity of this site is therefore reduced by one match equivalent session per pitch.

Capacity of independent, primary and special school sites has not been adjusted except for at sites where the School has quantified use for matches/curriculum use.

Peak time

Spare capacity can only be considered as such if pitches are available at peak time (actual spare capacity). The peak time for each pitch type in Havering is considered to be Sunday AM.

In total, 77 teams access adult pitches on Sunday mornings, compared to 28 that access adult pitches on Saturday afternoons, two that access adult pitches on Sunday afternoons and four that access adult pitches mid-week. Of teams accessing adult pitches on Sunday mornings, 48 are youth 11v11 teams (u13s-u16s) and should ideally be accessing youth 11v11 pitches.

Of teams accessing youth 11v11 pitches, 11 access pitches on Sunday mornings, with the remaining three accessing pitches on Sunday afternoons. For 9v9 pitches, 50 teams access pitches on Sunday mornings, with the remaining three teams accessing pitches on Sunday afternoons. In terms of mini football, 55 out of 63 7v7 teams and 41 out of 54 5v5 teams access pitches on Sunday mornings.

Table 2.14: Football pitch capacity analysis

Site ID	Site name *Indicates adult pitches that accommodate U13-U16 youth teams*	Available for community use? 2.5: Supply and demand analysis

Spare capacity

The next step is to ascertain whether or not any identified 'potential capacity' can be deemed 'actual spare capacity'. There may be situations where, although a site is highlighted as potentially able to accommodate some additional play, this should not be recorded as spare capacity against the site. For example, a site may be managed to regularly operate slightly below full capacity to ensure that it can cater for a number of regular friendly matches and activities that take place but are difficult to quantify on a weekly basis.

The table below considers site by site the capacity of the pitches to accommodate further play and for them to be deemed as having 'actual spare capacity'. A pitch is only said to have 'actual spare capacity' if it is available for community use and available at the peak time for that format of the game. Any pitch not meeting this criteria has been discounted.

Pitches that are of a poor quality or are over marked in any way are not deemed to have actual spare capacity due to the already low carrying capacity of the pitches. Any identified spare capacity should be retained in order to relieve the pitches of use, which in turn will aid the improvement of quality. In addition, it must be taken into account that teams do not want to play on poor quality pitches.

Table 2.15: Actual spare capacity

Site ID	Site name	Available for community use?	Type of tenure	Analysis area	Pitch type	Pitch size	No. of pitches	Current play (match sessions)	Overused (+), At Capacity (/) or Potential to Accommodate additional play (-)	Match equivalent sessions available in peak period	Comments
1	Abbs Cross Academy & Arts College	Yes	Unsecured	Central	Mini	(7v7)	2	1.5	-3.5	0.5	Actual spare capacity.

49	Gidea Park Sports Ground	Yes	Secured	North	Youth	(9v9)	1	1	2	0.5	Actual spare capacity.
52	Park Lane Recreation Ground	Yes	Secured	Central	Youth	(9v9)	1	0.5	-0.5	0.5	Spare capacity discounted due to poor quality.
57	Forest Row	Yes	Secured	North	Adult		4	7	-1	1	Actual spare capacity.
57	Forest Row	Yes	Secured	North	Mini	(5v5)	3	2	-10	3	Actual Spare capacity.
67	Whybridge School	Yes	Unsecured	South	Mini	(7v7)	1	0.5	-3.5	0.5	Actual spare capacity.

In addition, there are a number of pitches that are reported to be available to the community but are currently located at unused education sites. Although these sites may have potential future capacity they are not currently classified as actual spare capacity and are highlighted in the table below. Further investigation with the schools is required to fully understand community use aspects.

Site ID	Site name	Available for community use?	Type of tenure	Analysis area	Pitch type	Pitch size	No. of pitches	Current play	Overused (+), At Capacity (/) or Potential to Accommodate additional play (-)	Match equivalent sessions available in peak period	Comments

69	Hacton Primary School	Yes-unused	Unsecured	South	Mini	(7v7)	1	0	-4	1	No pitches considered available in peak period.

Site ID	Site name	Available for community use?	Type of tenure	Analysis area	Pitch type	Pitch size	No. of pitches	Current play	Overused (+), At Capacity (/) or Potential to Accommodate additional play (-)	Match equivalent sessions available in peak period	Comments
70	R J Mitchell Primary School	Yes-unused	Unsecured	South	Mini	(7v7)	1	0	-4	1	No pitches considered available in peak period.
72	Suttons Primary School	Yes-unused	Unsecured	South	Youth	(11v11)	1	0	-2	1	No pitches considered available in peak period.
72	Suttons Primary School	Yes-unused	Unsecured	South	Mini	(7v7)	1	0	-4	1	No pitches considered available in peak period.
73	Gidea Park Primary School	Yes-unused	Unsecured	Central	Mini	(5v5)	1	0	-2	1	No pitches considered available in peak period.
78	Clockhouse Primary School	Yes-unused	Unsecured	North	Mini	(7v7)	1	0	-4	1	No pitches considered available in peak period.

Actual spare capacity has been aggregated up by area and by pitch type in the table below.

Table 2.16: Actual spare capacity summary

Analysis area	Actual spare capacity (match sessions per week)				
	Adult	Youth (11v11)	Youth (9v9)	Mini (7v7)	Mini (5v5)
Central	0.5	-	1	0.5	1
North	1	-	0.5	0.5	3
South	2.5	1	-	2	-
Havering	**4**	**1**	**1.5**	**3**	**4**

The table shows a total of 13.5 match equivalent sessions of actual spare capacity across Havering, the majority of which is on adult and 5v5 pitches.

Overplay

Overplay occurs when there is more play accommodated on a site than it is able to sustain. In Havering, 40 pitches are overplayed across 15 sites by a total of 21.5 match equivalent sessions.

The majority of overplayed pitches are located at local authority sites, all of which are poor or standard quality and as such have low carrying capacity. An improvement in quality at these sites will result a reduction in overplay.

Many pitches located at education sites are also overplayed. This is due to a combination of curriculum PE use and extra-curricular use including school fixtures that results in only minimal (if any) spare capacity remaining for the community.

Table 2.17: Overplay on pitches

Site ID	Site name	Analysis area	Pitch type	Pitch size	No. of pitches	Capacity rating
4	Bretons Outdoor Recreation Centre	South	Youth	(9v9)	6	+2
			Mini	(5v5)	3	+2
5	Britons Playing Field	South	Adult		2	+0.5
13	Gaynes School Language College	South	Adult		2	+0.5
			Youth	(9v9)	1	+2.5
14	Hall Mead School	Central	Youth	(11v11)	1	+0.5
15	Harold Wood Park	Central	Adult		5	+1
17	Havering College	North	Adult		1	+1
19	Hendersons Sports & Social Club	North	Adult		3	+0.5
22	King George Playing Field (Mawney Park)	North	Adult		2	+0.5
23	Marshalls Park School	North	Adult		2	+0.5
			Youth	(9v9)	1	+0.5
			Mini	(7v7)	1	+1
			Mini	(5v5)	1	+0.5
30	Rise Park	North	Adult		3	+0.5

Site ID	Site name	Analysis area	Pitch type	Pitch size	No. of pitches	Capacity rating
40	Upminster Park	South	Adult		1	+1
41	Westlands Playing Fields	Central	Adult		2	+4
57	Forest Row	North	Youth	(9v9)	1	+0.5
65	Hildene Primary School	North	Youth	(9v9)	1	+1.5
83	The Gallows	North	Youth	(9v9)	1	+0.5

The majority of overplay occurs on adult pitches and in the South Analysis Area, although overplay is evident in each analysis area and on each pitch type. Incidentally, all overplayed adult pitches, with the exception of three, are accessed by youth 11v11 teams.

Table 2.18: Overplay summary

Analysis area	Overplay (match sessions per week)				
	Adult	Youth (11v11)	Youth (9v9)	Mini (7v7)	Mini (5v5)
Central	5	0.5	-	-	-
North	3	-	3	1	0.5
South	2	-	4.5	-	2
Havering	**10**	**0.5**	**7.5**	**1**	**2.5**

2.6: Conclusions

Having considered supply and demand, the tables below identify the extent to which the current stock of pitches can meet demand both currently (i.e. spare capacity taking away overplay) and in the future (based on latent demand, displaced demand and future demand) in each of the analysis areas.

As team generation rates (TGRs) cannot be quantified by analysis area, the total has been added to the Havering total in the future demand column (which includes demand expressed by clubs) for each pitch type. The same applies to displaced demand in the displaced demand column.

Table 2.19: Spare capacity/overplay of adult pitches

Analysis area	Match equivalent sessions						
	Actual spare capacity	Overplay	Current total	Latent demand	Displaced demand	Future demand	Total
Central	0.5	5	4.5	1	-	1	**6.5**
North	1	3	2	1	-	1.5	**4.5**
South	2.5	2	0.5	1	-	-	**0.5**
Havering	**4**	**10**	**6**	**3**	**7.5**	**4.5**[6]	**21**

Overall in Havering there is a current shortfall of six match equivalent sessions on adult pitches. When accounting for future demand there is an overall shortfall of 21 match equivalent sessions.

[6] Includes two match equivalent sessions from TGRs

Table 2.20: Spare capacity/overplay of youth 11v11 pitches

Analysis area	Match equivalent sessions						
	Actual spare capacity	Overplay	Current total	Latent demand	Displaced demand	Future demand	Total
Central	-	0.5	0.5	1.5	-	1	**3**
North	-	-	0	-	-	2	**2**
South	1	-	1	0.5	-	1.5	**1**
Havering	**1**	**0.5**	**0.5**	**2**	**8**	**14.5**[7]	**24**

The table above shows that for youth 11v11 pitches there is minimal current spare capacity amounting to 0.5 match equivalent sessions, although a shortfall exists in the Central Analysis Area. Based on future demand, there are shortfalls in each analysis area and an overall shortfall of 24 match equivalent sessions.

In addition to the above, please note that a further 35 youth 11v11 match equivalent sessions (70 U13-U16 teams) are recorded as taking place on adult pitches and as such the shortfall of youth pitches is exacerbated. Should this play be transferred to youth 11v11 pitches, there is a clear need for an increase in provision.

Table 2.21: Spare capacity/overplay of youth 9v9 pitches

Analysis area	Match equivalent sessions						
	Actual spare capacity	Overplay	Current total	Latent demand	Displaced demand	Future demand	Total
Central	1	-	1	1.5	-	2	**2.5**
North	0.5	3	2.5	-	-	3	**5.5**
South	-	4.5	4.5	-	-	3.5	**8**
Havering	**1.5**	**7.5**	**6**	**1.5**	**7**	**18.5**[8]	**33**

The current picture on 9v9 pitches shows that there is a shortfall of six match equivalent sessions overall. With future demand taken into consideration, there is an overall shortfall of 33 match equivalent sessions.

Table 2.22: Spare capacity/overplay of mini 7v7 pitches

Analysis area	Match equivalent sessions						
	Actual spare capacity	Overplay	Current total	Latent demand	Displaced demand	Future demand	Total
Central	0.5	-	0.5	1	-	1	**1.5**
North	0.5	1	0.5	-	-	1.5	**2**
South	2	-	2	-	-	1.5	**0.5**
Havering	**3**	**1**	**2**	**1**	**5**	**9.5**[9]	**13.5**

[7] Includes 10 match equivalent sessions from TGRs
[8] Includes 10 match equivalent sessions from TGRs
[9] Includes 5.5 match equivalent sessions from TGRs

There is current spare capacity amounting to two match equivalent sessions overall on 7v7 pitches. However, an overall shortfall of 13.5 match equivalent sessions is evident when taking into account future demand.

Table 2.23: Spare capacity/overplay of mini 5v5 pitches

Analysis area	Match equivalent sessions						
	Actual spare capacity	Overplay	Current total	Latent demand	Displaced demand	Future demand	Total
Central	1	-	1	1	-	1.5	**1.5**
North	3	0.5	2.5	-	-	1	**1.5**
South	-	2	2	-	-	1	**3**
Havering	**4**	**2.5**	**1.5**	**1**	**4.5**	**8.5**[10]	**12.5**

Havering as a whole has minimal current spare capacity equating to 1.5 match equivalent sessions, however, future demand results in a shortfall of 12.5 match equivalent sessions.

In order to reduce shortfalls on both 7v7 and 5v5 pitches it is recommended that community use options are explored at unused school sites.

Football – grass pitch summary

- The audit identifies a total of 170 football pitches across 63 sites in Havering. Of these, 151 are available, at some level, for community use.
- Of the community available pitches, six are assessed as good quality, 108 as standard quality and 37 are deemed to be poor quality.
- Of sites serviced by changing facilities, 24% have good quality facilities, 43% have standard quality facilities and 33% have poor quality facilities. Additionally, clubs report that a lack of changing facilities is causing an issue at some sites.
- Essex Minors of Hornchurch FC reports an issue with security of tenure at Gaynes School, Collier Row FC requires its lease extending at Forest Row and Romford FC requires a long term lease at Westlands Playing Fields in order to build a stadia pitch.
- A total of 306 teams were recognised as playing within Havering across 55 clubs. This consists of six veterans, 51 men's, one women's, 124 youth boys', seven youth girls' and 117 mini teams.
- There has been an increase in mini and youth teams over the past three years, with 25% of clubs reporting an increase in mini teams and 21% reporting an increase in youth teams. Only 15% of clubs report an increase in adult teams, whilst 19% report a decrease.
- There are 64 teams registered to Havering that currently play outside of the local authority.
- There is latent demand equating to 1.5 adult, two youth 11v11, 1.5 9v9, one 7v7 and one 5v5 match equivalent session.
- Team generation rates predict there will be an increase of four adult teams (two match equivalents), 40.5 youth teams (20 match equivalents) and 21 mini teams (10.5 match equivalents).
- There is a total of nine match equivalent sessions of actual spare capacity across Havering, the majority of which is on 5v5 pitches and in the North Analysis Area.
- There are 61 pitches overplayed across 16 sites by a total of 49.5 match equivalent sessions.
- There is either minimal current spare capacity or shortfalls across all pitch types. Further to this future demand results in shortfalls across each pitch type.

[10] Includes 5 match equivalent sessions from TGRs

PART 3: THIRD GENERATION TURF (3G) ARTIFICIAL GRASS PITCHES (AGPS)

3.1 Introduction

Competitive football can take place on 3G surfaces with an FA approved certificate and a growing number of 3G pitches are now used for competitive match play, particularly at mini and youth level. The preferred surface is medium pile 3G (55-60mm). Only competition up to (but not including) regional standard can take place on short pile 3G (40mm).

World Rugby produced the 'Performance Specification for artificial grass pitches for rugby' (more commonly known as 'Regulation 22') that provides the necessary technical detail to produce pitch systems that are appropriate for rugby union. The artificial surface standards identified in Regulation 22 allows matches to be played on a long pile 3G (65mm with shock pad) surface which meets the standard, meaning full contact activity including tackling, rucking, mauling and lineouts can take place. For rugby league, the equivalent is known as RFL Community Standard.

Table 3.1: 3G type and sport suitability

Surface	Category	Comments
Rubber crumb	Long Pile 3G (65mm with shock pad)	Rugby surface – must comply with World Rugby type 22, requires a minimum of 60mm. Football surface.
Rubber crumb	Medium Pile 3G (55-60mm)	Preferred football surface.
Rubber crumb	Short Pile 3G (40mm)	Acceptable surface for some competitive football.

3.2 Supply

Although there are currently no full size 3G pitches within Havering, one is under development at Noak Hill Sports Complex. The pitch is expected to be provided from Autumn 2016 and is expected to be available for competitive matches (subject to FA testing) as well as for training demand.

Provision is currently limited to a smaller sized pitch at The Brittons Academy Trust which measures 50x30 metres and to several smaller sized pitches at King Georges that are ran by PlayFootball. Both sites are available to the community and have some formal usage; however, the majority of use is from social groups for informal purposes as many clubs consider it too small to satisfy training demand. Instead, most clubs either train on sand based pitches (see Part 6: Hockey) or access 3G pitches in neighbouring local authorities, such as at Robert Clack Leisure Centre in Dagenham or at St Clare's School in Thurrock.

Alternatively, some clubs continue to access grass pitches for winter training (as reported in Part 2: Football), which can cause extra wear and tear and as a result reduces a sites overall capacity. This demand should ideally be transferred to 3G pitches in order to alleviate use of grass pitches (overplay), improve quality and create additional spare capacity where possible.

3.3 Demand

The FA considers high quality 3G pitches as an essential tool in promoting coach and player development. The pitches can support intensive use and as such are great assets for football use. Primarily, such facilities have been installed for social use and training, however, they are increasingly used for competition which The FA wholly supports.

Training demand

Accessing good quality, affordable training facilities is a problem for many clubs throughout the Country. In the winter months midweek training is only possible at floodlit facilities, which for clubs in Havering is limited to sand based pitches or 3G pitches outside of the area. This leads to some clubs instead accessing grass pitches on Saturday mornings, which is not considered best practice given that the majority of matches are played on a Sunday.

Of clubs that responded to consultation, 72% state that they require additional training facilities, of which, 87% specifically mention demand for 3G pitches. The FA's long term ambition is to provide every affiliated team in England the opportunity to train once per week on a floodlit 3G surface, together with priority access for every Charter Standard Community Club through a partnership agreement. The FA Standard is calculated by using the latest Sport England research "AGPs State of the Nation March 2012".

The FA estimates that one full size AGP can service 42 teams. Using this calculation, there is a current need for eight 3G pitches in Havering based on demand from 306 teams. The table below considers the number of 3G pitches required if every team was to remain within their respective analysis area.

Table 3.2: Current demand for 3G pitches in Havering by analysis area

Analysis area	Current number of teams	3G requirement	Current number of 3G pitches	Potential shortfall
Central	91	3	-	3
North	113	3	-	3
South	102	3	-	3
Havering	**306**	**9**	**-**	**9**

There is a shortfall of three 3G pitches in each analysis area. This equates to an overall need for nine pitches in Havering as a whole whilst leaving some spare capacity for growth in each analysis area. When the proposed 3G pitch is developed at Noak Hill Sports Complex, the deficit will reduce to two pitches in the North Analysis Area and to eight pitches overall.

The table below uses the same calculation but includes future demand. Based on this, there is a need for ten 3G pitches.

Table 3.3: Future demand for 3G pitches in Havering by analysis area

Analysis area	Future number of teams	3G requirement	Current number of 3G pitches	Potential shortfall
Central	104	3	-	3
North	131	4	-	4

Analysis area	Future number of teams	3G requirement	Current number of 3G pitches	Potential shortfall
South	117	3	-	3
Havering	**306**	**10**	**-**	**10**

Moving match play to 3G pitches

Improving pitch quality is one way to increase the capacity at sites but given the cost of doing such work and the continued maintenance required other options need to be considered that can offer a more sustainable model for the future of football. The alternative is to use 3G pitches for competitive matches and this is something that the FA is supporting, particularly for mini and youth football. In order for competitive matches to take place the pitch must be FA tested and approved (to either FA or FIFA standard) and it will then appear on the FA Pitch Register, which can be found at: http://3g.thefa.me.uk/.

The table below tests a scenario if all 5v5 and 7v7 football was to be moved to 3G pitches in Havering. A programme of play has been created based on the current peak time (Sunday AM).

Table 3.3: Moving all mini matches to 3G pitches

Time	AGP	Total games/teams
9.30am – 10.30am	4 x 5v5	4/8
10.30am – 11.30am	2 x 7v7	2/4
11.30am – 12.30pm	2 x 7v7	2/4
12.30pm – 1.30pm	2 x 7v7	2/4

Based on the above programming and separate start times for 5v5 and 7v7 matches, the overall need is for seven 3G pitches to accommodate all mini football demand. This is calculated as 54 teams playing 5v5 football require seven pitches (rounded up from 6.75) and 63 teams playing 7v7 football require six pitches (rounded up from 5.25).

The table below tests a similar scenario for 9v9 matches. Based on 53 teams playing 9v9 football in Havering, there is demand for five 3G pitches (rounded up from 4.42).

Table 3.4: Moving all 9v9 matches to 3G pitches

Time	AGP 1	Total games/teams
10am – Noon	2 x 9v9	2/4
Noon – 2pm	2 x 9v9	2/4
2pm – 4pm	2 x 9v9	2/4

3.4 Supply and demand analysis

Priority should be placed on the creation of new 3G pitches in order to reduce shortfalls, therefore, potential sites which can suitably accommodate a pitch should be highlighted within each analysis area. It is also important to ensure the pitch at Noak Hill Sports Complex is provided to a high standard and that it is FA tested in order to host competitive matches. Partnership clubs should be identified so that the pitch is used to its maximum potential.

3G summary

- There are no full size 3G pitches within Havering, although one is under development at Noak Hill Sports Complex.
- Most clubs either train on sand based pitches or access 3G pitches in neighbouring local authorities. Alternatively, some clubs continue to access grass pitches for winter training.
- The FA estimates that one full size AGP can service 42 teams. Using this calculation, there is a current need for eight 3G pitches in Havering based on demand from 306 teams.
- If each team was to stay with their respective analysis area, there is a shortfall of three 3G pitches in each analysis area.
- Based on future demand, there is a shortfall of ten 3G pitches overall.
- Moving all mini football matches to 3G would result in the need for seven pitches, whilst moving all 9v9 football matches would require five pitches.

PART 4: CRICKET

4.1: Introduction

The Essex County Cricket Board is the main governing and representative body for cricket within Havering. Its aim is to promote the game at all levels through partnerships with professional and recreational cricket clubs and other appropriate agencies.

Consultation

There are 11 clubs identified as playing within Havering, all of which were consulted via an online survey request resulting in a 100% response rate. The Shepherd Neame Essex League was also consulted.

4.2: Supply

Grass wickets

There are 16 grass wicket pitches in Havering located across 14 separate sites. Both Harold Wood Park and Gidea Park Sports Ground contain two pitches. All are available for community use and used.

Table 4.1: Summary of all grass wicket pitches

Analysis area	Number of grass wicket pitches
Central	7
North	6
South	3
Havering	**16**

Please see Table 4.2 for a full breakdown.

Non-turf wickets

There is a non-turf wicket accompanying the grass wickets at The Campion School. In addition, there are standalone non-turf wicket pitches at the following sites:

- Abbs Cross Academy
- Coopers Company & Coborn School
- Hall Mead School
- Harold Wood Primary School
- The Royal Liberty School
- Westlands Playing Fields

Of these pitches, The Campion School and Harold Wood Primary School are used by the community. Westlands Playing Fields, Abbs Cross Academy and Hall Mead School are available but unused. The Royal Liberty School is unavailable for community use.

Competitive senior cricket is not generally sanctioned by leagues on non-turf wickets, however, they can be used for junior cricket and for training purposes with the aid of mobile nets. They are also used for Last Man Stands (LMS) which is explored later within this section of the report.

The ECB's TS6 Guidance on performance standards sets requirements for match pitches that are non-turf wickets. The ECB highlights that pitches which follow this guidance are suitable for high level play. It should be noted that this guidance is for clubs and not standards.

Figure 4.1 below shows the location of all cricket squares (grass and non-turf) within Havering. For a key to the map please see Table 4.2.

Figure 4.1: Location of cricket pitches in Havering

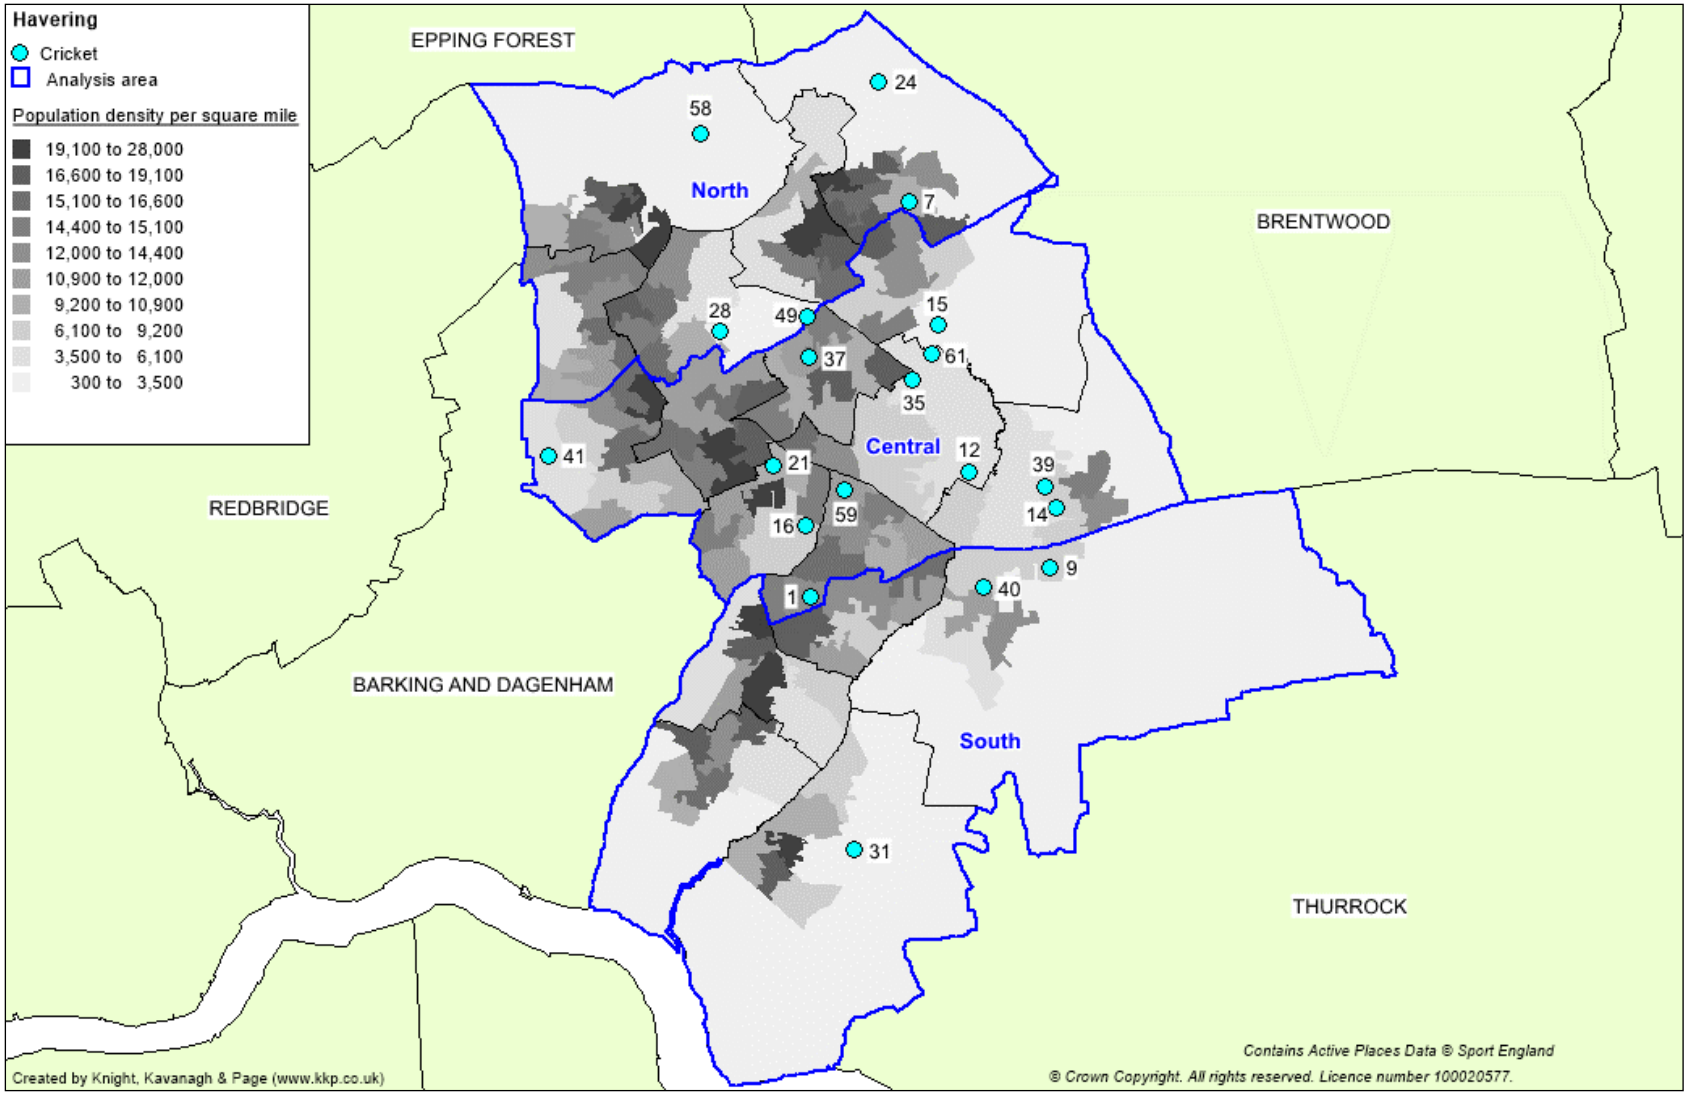

Table 4.2: Key to the map of cricket pitches

41	Westlands Playing Fields	Central	Yes-unused	-	-	1

Future supply

The cricket pitch at Upminster Hall Playing Fields will no longer be used from next season as is to be replaced by rugby pitches. The site was used last season (2015) on a Saturday by St Andrews CC for first team matches and by Havering-atte-Bower CC for third team matches. St Andrews CC, will transfer its demand outside of Havering to Hannakins Farm, Billericay, whilst it is unclear what the plans are for Havering-atte-Bower CC albeit most of its teams play at its home ground Havering-atte-Bower Cricket Club.

Management and security of tenure

Six clubs in Havering lease their main home pitch, whilst the remaining five clubs rent their pitch from the Council. The clubs which lease their pitch are as follows:

- Gidea Park & Romford CC
- Harold Wood CC
- Havering-atte-Bower CC
- Hornchurch Athletic CC
- Noak Hill Taverners CC
- Upminster CC

Of these clubs, none have lease agreements beyond 25 years. It is therefore recommended that all arrangements are extended where possible in order to provide the clubs with greater security of tenure and to also help clubs gain funding for any future development plans.

Of greatest concern are the agreements for Gidea Park CC at Gidea Park Sports Ground (expires 2017) and for Harold Wood CC at Harold Wood Park (expires 2020) as both clubs have less than five years remaining on their current lease. Hornchurch Athletic CC has the longest agreement in place, which is until 2037 at Hylands Park. Upminster CC and Noak Hill Taverners CC have lease agreements at their home grounds (Upminster Park and Noak Hill Sports Ground respectively) until 2035, whilst Havering-atte-Bower CC has a lease until 2030 at Havering-atte-Bower Cricket Club.

Many clubs also rent secondary pitches, often at school sites, in addition to their main home ground due to capacity issues. This is the case for Harold Wood CC at Harold Wood Primary School, Hornchurch CC at Emerson Park Academy and Upminster CC at The Campion School and Coopers Company & Coborn School. It is recommended that the clubs enter community use agreements with the schools in order to provide security of tenure.

It must also be noted, however, that several schools are without such sports facilities and it is therefore equally important to enable them to access provision if there is a demand to do so, either via other schools or via other community facilities.

All clubs renting their home grounds from the Council report that they are happy with the current arrangement and as such tenure of these sites is considered secure. St Andrews CC, however, is unhappy that the Club were not informed earlier about Upminster Hall Playing Fields being transferred to a rugby only site.

Quality

As part of the PPS methodology there are three levels to assess quality; good, standard and poor. The audit of grass wicket pitches in Havering found three pitches to be good quality and the remaining 14 pitches to be standard quality. No pitches were assessed as poor quality. All non-turf wicket pitches were assessed as standard quality.

The good quality pitches are Hylands Park, Upminster Park and Havering-atte-Bower Cricket Club.

Table 4.3: Grass wicket pitch quality ratings

Good	Standard	Poor
3	14	0

Further to site assessments, clubs were asked to rate the overall quality of pitches they used. Five clubs rate quality as good, four clubs rate quality as standard and two clubs rate quality as poor. St Andrews CC rates Upminster Hall Playing Fields as poor quality as the site has not been maintained to its usual standard given its impending change to rugby pitches. Gidea Park & Romford CC rates Gidea Park Sports Ground as poor quality due to poor levels of council maintenance which results in grass cuttings being left on the outfield and inconsistent wicket quality.

GIdea Park & Romford CC also reports that football pitches being overmarked on the cricket outfield causes quality issues. This is also the case at Harold Wood Park, Upminster Hall Playing Fields, Spring Farm Park and Coopers Company & Coborn School.

Of clubs rating pitch quality as standard, only Noak Hill Taverners CC report any major issues. The Club states that the drainage at Noak Hill Sports Ground is poor, which leads to many games being called off each season during inclement weather spells.

The Shephard Neame Cricket League reports that ground maintenance has reduced recently due to financial constraints and due to groundsmen being given more time onerous schedules which prevents them from undertaking as much work as in the past. The League also states that clubs are now having to undertake a lot maintenance work themselves, as opposed to the Council. which often relies on volunteers and suffers from a lack of specialised equipment.

Maintaining high pitch quality is the most important aspect of cricket. If the wicket is poor, it can affect the quality of the game and can, in some instances, become dangerous. To obtain a full technical assessment of wicket and pitches, the ECB recommends a Performance Quality Standard (PQS) assessment. The PQS looks at a cricket square to ascertain whether the pitch meets the Performance Quality Standards which are benchmarked by the Institute of Groundsmanship. The report identifies surface issues and suggests options for remediation together with likely costs. For further guidance on this, please contact the ECB.

In Havering, only Gidea Park Sports Ground has undergone a PQS assessment and the Club, Gidea Park & Romford CC, is currently awaiting the results.

Ancillary facilities

All clubs in Havering have access to changing room facilities at their home ground and all clubs rate the overall quality of their clubhouse/pavilion as being good (six clubs) or acceptable (five clubs). As a result, no major issues were reported during consultation.

Training facilities

Access to cricket nets is important, particularly for pre-season/winter training. In Havering, four clubs report a demand for additional training facilities. Harold Wood CC, Ardleigh Green CC and St Andrews CC express demand for practice nets to be installed at their home grounds, whilst Noak Hill Taverners CC expresses demand for a non-turf wicket at Noak Hill Sports Ground.

The following sites are not currently serviced by practice nets:

- Central Park
- Harold Wood Park
- Emerson Park Academy
- Noak Hill Sports Ground
- Raphael Park
- The Royal Libery School
- Upminster Hall Playing Fields

Harold Wood CC reports that it has a grant in place for the installation of practice nets at Harold Wood Park and the Club is now dealing with the Council in order to get this implemented. Clubs without access to practice nets are often forced to use indoor sports halls all year round, or are required to pay hire fees for use of nets at other sites, which as a result impacts on the clubs financially and can be difficult to organise.

Accessibility

The majority of clubs state that most players travel between two and five miles to access their facilities.

6.3: Demand

Cricket clubs in Havering tend to be large clubs offering several senior and junior teams at different age groups, although there are two clubs which field just one team (Maylands Green CC and St Andrews CC). In total, the 11 clubs consist of 46 men's teams, one women's team and 35 junior boys' teams.

The majority of teams play in the Central Analysis Area (41), which correlates to it containing the most number of pitches. There are 26 teams playing in the North Analysis Area and 15 teams playing in the South Analysis Area.

Table 4.4: Summary of teams by analysis area

Analysis area	No. of competitive teams		
	Senior men	Senior women	Junior
Central	24	1	16
North	9	-	6
South	13	-	13
Havering	**46**	**1**	**35**

In correlation with a national recognition that cricket is currently experiencing a reduction in participation, four clubs report that their number of senior teams has decreased over the previous three years, whilst only one club reports an increase. The clubs reporting a decrease are as follows:

- Ardleigh Green CC
- Gidea Park & Romford CC
- Havering-atte-Bower CC
- Upminster CC

All the above clubs cite difficulty retaining players as the main reason for a reduction in participation. Players are now seemingly less likely to give up their weekends to play cricket. In the past, club members would play for teams on both a Saturday and a Sunday, whereas many now opt to play on just one day, normally a Saturday. It is also widely accepted that less junior players are making the transition from junior cricket to senior cricket which results in a lack of youngsters coming through as older players retire.

In contrast, Rainham CC reports an increase in its number of senior teams and states that increased advertising and word of mouth has helped the Club grow. It also reports an increase in junior teams due once again to advertising and also due to improved school links. Overall, three clubs report a reduction in junior teams whilst Rainham CC is the only club which reports a growth.

The Shephard Neame Cricket League, which services the whole of Essex, reports that its number of teams has remained relatively static for a number years. The League does accept, however, that some clubs are struggling to sustain participation, although this is balanced out by teams which are experiencing a growth.

Women's and girls' cricket

Women's and girls' cricket is a national priority for the ECB. There is a target to establish more female teams in every local authority over the next five years and 8-10% of the Whole Sport Plan funding is focused around women and girls and talent identification.

Harold Wood CC currently fields the only female team in Havering; a senior team which plays in the Womens Cricket Southern League. The Club has plans to develop an additional senior team in the future, whilst Gidea Park & Romford CC also expresses demand for a senior team. Upminster CC expresses demand for a junior team and currently has girls playing in mixed junior teams.

Last Man Stands

Last Man Stands (LMS) was founded in 2005, in London. The social outdoor eight-a-side T20 cricket game is played midweek, lasts approximately two hours and is generally played on non-turf wickets. All eight wickets are required to bowl a team out so when the seventh wicket falls, the 'Last Man Stands' on his own. This shorter format of the game has encouraged more people to participate in the sport and is particularly popular in Essex with leagues running in Basildon, Chelmsford, Colchester and Havering.

The League in Havering is played at Harold Wood Primary School, adjacent to Harold Wood Park, and last season consisted of seven teams. Matches are played midweek on a variety of days and the season runs from May until August. Although Harold Wood Primary School has the capacity to cater for demand currently, and additional venue will be required should the LMS continue to grow in popularity.

Displaced demand

St Andrews CC will become displaced out of Havering from next season as its current home ground will be replaced by rugby pitches. This one team club reports that it would rather continue to play in Havering and is disappointed that it was not consulted before the decision was made regarding Upminster Hall Playing Fields. The Club will now play at Hannakins Farm, Billericay.

The third team from Havering-atte-Bower CC also played at Upminster Hall Playing Fields and it is now unclear where the team will play next season.

Future demand

Future demand can be defined in two ways, through participation increases and using population forecasts.

Team generation rates are used below as the basis for calculating the number of teams likely to be generated in the future (2031) based on population growth. Using these figures, an increase of one senior and nine junior teams is to be expected.

Table 4.5: Team generation rates based on population growth

Age group	Current population within age group (2016)[11]	Current no. of teams	Team Generation Rate	Future population within age group (2031)[11]	Predicted future number of teams	Additional teams that may be generated from the increased population
Senior Men (18-55)	51,186	46	1:1,113	52,761	47.4	1.4
Senior Women (18-55)	54,266	1	1:54,266	56,873	1.0	0.0
Junior Boys (7-17)	12,938	35	1:370	16,104	43.6	8.6
Junior Girls (7-17)	12,660	0	0	16,176	0.0	0.0

[11] Data source: GLA 2015 round ward population projections - SHLAA-based; Capped Household Size model

In addition to potential increases from population growth, six clubs report that they wish to increase their number of teams, as outlined below.

Table 4.6: Club growth aspirations

Club	Analysis area	No. of competitive teams		
		Senior men	Senior women	Junior
Gidea Park & Romford CC	North	1	1	1
Harold Wood CC	Central	1	1	3
Havering-atte-Bower CC	Central	1	-	1
Hornchurch CC	Central	-	-	5
Rainham CC	South	1	-	-
Upminster CC	South	-	-	4

There are clubs within each analysis area that wish to grow. Overall this amounts to three senior and nine junior teams in the Central Analysis Area, two senior and one junior team in the North Analysis Area and one senior and four junior teams in the South Analysis Area.

Peak time demand

An analysis of match play identifies that peak time demand for senior cricket is Saturdays, with 31 teams playing on this day compared to 16 which play on Sundays. Teams competing on a Saturday play in either the Shepherd Neame Essex League or the Trippon Mid-Essex League, whilst teams competing on a Sunday play in the Essex Sunday League.

All junior teams compete in the Havering & Metropolitan Junior League. Peak time demand is considered to be midweek as 21 teams play at this time compared to 14 teams which play on a Sunday. It should therefore be noted that midweek cricket has the potential to be spread across five days and as a result pitches have greater capacity to carry demand (providing the pitches are not overplayed).

6.4 Capacity analysis

Capacity analysis for cricket is measured on a seasonal rather than a weekly basis. This is due to playability (as only one match is generally player per pitch per day at weekends or weekday evening) and because wickets are rotated throughout the season to reduce wear and tear and also to allow for repair.

The capacity of a pitch to accommodate matches is driven by the number and quality of wickets. This section of the report presents the current pitch stock available for cricket and illustrates the:

- Number of grass and artificial cricket wickets per pitch
- Number of competitive matches per season per pitch

To help calculate pitch capacity, the ECB suggests that a good quality wicket should be able to take:

- 5 matches per season per grass wicket (adults).
- 60 matches per season per synthetic wicket (adults).

This information is used to allocate capacity ratings as follows:

Potential capacity	Play is below the level the site could sustain
At capacity	Play matches the level the site can sustain
Overused	Play exceeds the level the site can sustain

As no senior teams (other than LMS demand) are recorded as playing on non-turf wickets they have been discounted from the table below. No non-turf wickets are recorded as accommodating more than 60 matches per season and therefore they are all considered to have spare capacity. This translates to actual spare capacity as they are generally accessed during mid-week by junior teams (peak time) and as a result can be used on a variety of days. Spare capacity for junior cricket is therefore considered to exist.

Table 4.7: Cricket pitch capacity for pitches used for community use

Site ID	Site name	Clubs using the site	Analysis area	No. of grass wicket pitches	No. of grass wickets	No. of standalone non-turf wicket pitches	Pitch quality	Capacity (sessions per season)	Actual play (sessions per season)	Capacity rating (sessions per season)
7	Central Park, Romford	Ardleigh Green CC	North	1	11		Standard	55	58	+3
9	Coopers Company & Coborn School	Upminster CC	South	1	9		Standard	45	40	-5
12	Emerson Park Academy	Hornchurch CC	Central	1	8		Standard	40	18	-22
59	Fielders Sports Ground	Hornchurch CC	Central	1	11		Standard	55	36	-19
49	Gidea Park Sports Ground	Gidea Park & Romford CC	North	2	17		Standard	85	76	-9
15	Harold Wood Park	Harold Wood CC	Central	2	20		Standard	100	90	-10
61	Harold Wood Primary School	Harold Wood CC	Central			1	Standard	60	24	-36
16	Harrow Lodge Park	Hornchurch CC	Central	1	12		Standard	60	60	0
58	Havering-atte-Bower Cricket Club	Havering-atte-Bower CC	North	1	12		Good	60	40	-20
21	Hylands Park	Hornchurch Athletic CC Maylands Green CC	Central	1	15		Good	75	59	-16
24	Noak Hill Sports Ground	Noak Hill Taverners CC	North	1	12		Standard	60	45	-15
28	Raphaels Park	Hornchurch Athletic CC	North	1	7		Standard	35	20	-15
31	Spring Farm Park	Rainham CC	South	1	14		Standard	70	60	-10
35	The Campion School	Upminster CC	Central	1	5		Standard	25	22	-3

Site ID	Site name	Clubs using the site	Analysis area	No. of grass wicket pitches	No. of grass wickets	No. of standalone non-turf wicket pitches	Pitch quality	Capacity (sessions per season)	Actual play (sessions per season)	Capacity rating (sessions per season)
39	Upminster Hall Playing Fields	St. Andrews CC	Central	1	10		Standard	50	20	-30
40	Upminster Park	Upminster CC	South	1	12		Good	60	52	-8

6.5: Supply and demand analysis

Spare capacity

The next step is to ascertain whether or not any identified 'potential capacity' can be deemed 'spare capacity'. There may be situations where, although a site is highlighted as potentially able to accommodate some additional play, this should not be recorded as spare capacity against the site. For example, a site may be managed to regularly operate slightly below full capacity to ensure that it can cater for a number of regular training sessions, or to protect the quality of the site.

There are 15 grass wicket pitches in Havering which show potential spare capacity. This amounts to 182 match equivalent sessions per season. The table below shows which sites have spare capacity during peak time (Saturdays) and whether this can be considered actual spare capacity. A site with spare capacity which is not available at peak time is not considered to have actual spare capacity.

Table 4.8: Actual spare capacity on grass wicket pitches

Site ID	Site name	Analysis area	No. of pitches	Spare capacity (sessions per season)	Pitches available in peak period	Comments
9	Coopers Company & Coborn School	South	1	-5	0	No spare capacity on a Saturday.
12	Emerson Park Academy	Central	1	-22	0.5	Used by one team on a Saturday which leaves spare capacity for one team.
15	Harold Wood Park	Central	2	-10	0	No spare capacity on a Saturday.
21	Hylands Park	Central	1	-16	0	No spare capacity on a Saturday.
24	Noak Hill Sports Ground	North	1	-15	0	No spare capacity on a Saturday.
28	Raphaels Park	North	1	-15	0	No spare capacity on a Saturday.
31	Spring Farm Park	South	1	-10	0	No spare capacity on a Saturday.
35	The Campion School	Central	1	-3	0	No spare capacity on a Saturday.
39	Upminster Hall Playing Fields	Central	1	-30	-	No spare capacity as pitch will not be available next season.
40	Upminster Park	South	1	-8	0	No spare capacity on a Saturday.
49	Gidea Park Sports Ground	North	2	-9	1	Minimal spare capacity to be retained in order to protect quality.
58	Havering-atte-Bower Cricket Club	North	1	-20	0	No spare capacity on a Saturday.
59	Fielders Sports Ground	Central	1	-19	0	No spare capacity on a Saturday.

Although a large amount of spare capacity has been identified it is not as simple as to aggregate this into a general oversupply of cricket pitches. Despite 15 pitches showing spare capacity there are only two sites available during peak time for senior cricket. Of these, Gidea Park Sports Ground does not provide enough spare capacity to accommodate an additional team (based on a senior team playing an average of 12 matches per season) and therefore this capacity is discounted. As a result, only Emerson Park Academy is considered to have actual spare capacity which amounts to 0.5 pitches (one additional team based on playing home and away fixtures).

Overplay

As a guidance, pitches receiving more than five matches per wicket per season are adjudged to be overplayed. On this basis, Central Park is overplayed in Havering by three match equivalent sessions. As the pitch is assessed as standard quality it is recommended that quality is improved to good in order to ensure that usage can be sustained. Alternatively, play can be transferred to a site with actual spare capacity provided that the arrangement suits all parties involved.

6.6 Conclusions

Consideration must be given to the extent in which current provision can accommodate current and future demand.

As mentioned earlier, junior teams can play on non-turf wickets and generally play mid-week on a variety of days. Therefore, spare capacity is considered to exist for junior matches both now and in the future as no non-turf wicket pitches are at capacity or overplayed.

The table below looks at available spare capacity at peak time for senior cricket considered against overplay and future demand highlighted during consultation. Demand from Upminster Hall Playing Fields (two teams which both play on Saturdays) has also been included as displaced demand as it needs to be accommodated elsewhere (although St Andrews CC has relocated to a pitch in Billericay the Club would rather play in Havering).

As two teams require one pitch to account for playing on a home and away basis, demand for 0.5 pitches can be seen where there is demand for one team. In order to quantify overplay in pitches an average square of ten wickets (50 match equivalent sessions) has been used. Overplay of current pitches equates to three match sessions meaning it can be accommodated on one wicket (0.1 of a pitch).

Table 4.9: Capacity of grass wicket cricket pitches

Analysis area	Actual spare capacity (pitches)	Demand (pitches)				
		Overplay	Displaced demand	Current total	Future demand	Total
Central	0.5	-	1	0.5	1.5	**2**
North	-	-	-	0	1	**1**
South	-	0.1	-	0.1	0.5	**0.6**
Havering	**0.5**	**0.1**	**1**	**0.6**	**3**	**3.6**

Taking into account current demand only there is a shortfall of pitches for senior cricket in the Central and South analysis areas equating to 0.5 and 0.1 pitch respectively, whilst the North Analysis Area is being played to capacity.

The shortfall in the Central Analysis Area is due to displaced demand caused by Upminster Hall Playing Fields no longer providing a cricket pitch from next season. In order for both teams to be accommodated in Havering there is a clear need for an additional pitch to be provided. Alternatively, St Andrews CC can play in Billericay as planned and Havering-atte-Bower CC can utilise the spare capacity at Emerson Park Academy. To that end, further investigation is advised in relation to the School to ensure it is available for additional community use and that it is affordable to potential users.

The shortfall in the South Analysis Area is solely due to overplay at Central Park. Whilst pitch quality improvements can ensure the excessive use is sustained, an alternative would be to provide a non-turf wicket at the site. There are currently three junior teams using the grass wickets for matches and transferring this demand to a non-turf wicket would alleviate overplay as well as leaving spare capacity for growth.

Taking into account future demand, the shortfalls worsens in the Central and South analysis areas and there is also a shortfall in the North Analysis Area. Should this increase in teams be realised on Saturdays then a need for more pitches to be provided is apparent, although an increase in Sunday teams could be accommodated on the current pitch stock.

Cricket summary

- There are 17 grass wicket cricket pitches in Havering all of which are available for community use and used.
- Upminster Hall Playing Fields will no longer be used from next season as the cricket pitch is to be replaced by rugby pitches.
- It is recommended that lease agreements are extended where possible to provide clubs with greater security of tenure.
- The audit of grass wicket pitches in found three pitches to be good quality and the remaining 14 pitches to be standard quality.
- All clubs have access to changing room facilities at their home ground and all clubs rate the overall quality of their clubhouse/pavilion as being good or acceptable.
- Four clubs report a demand for additional training facilities.
- In total, the 11 clubs consist of 46 men's, one women's and 35 junior boys' teams.
- Four clubs report that their number of senior teams has decreased over the previous three years, whilst only one club reports an increase. Three clubs report a decrease in junior teams and one club reports an increase.
- Last Man Stands is played at Harold Wood Primary School and consists of seven teams.
- St Andrews CC will become displaced out of Havering next season whilst the third team from Havering-atte-Bower CC will be without a home pitch.
- Based on population growth an increase of one senior and nine junior teams is to be expected. Clubs express demand to grow by six senior and 14 junior teams.
- Despite 15 grass wicket pitches in Havering showing potential spare capacity, only Emerson Park Academy is considered to have actual spare capacity.
- Central Park is overplayed by three match equivalent sessions.
- As junior teams can play on non-turf wickets and generally play mid-week on a variety of days spare capacity is considered to exist for junior matches both now and in the future.
- Taking into account current demand there is a shortfall of pitches for senior cricket in the Central and South analysis areas, whilst the North Analysis Area is played to capacity.
- Future demand results in a shortfall in each analysis area.

PART 5: HOCKEY

5.1: Introduction

Hockey in England is governed by England Hockey (EH) and is administered locally by the East Hockey Association.

Competitive league hockey matches can only be played on sand based, sand dressed or water based artificial grass pitches (AGPs). Although competitive play cannot take place on third generation turf pitches (3G), 40mm pitches may be suitable, in some instances, for school training and are preferred to poor grass or tarmac surfaces. For senior teams, a full size pitch for competitive matches must measure at least 91.40m x 55m (100 x 60 yards) for the pitch, plus a four metre side line run off and five metre backline run off.

It is considered that a hockey pitch can accommodate a maximum of four matches on one day (peak time) provided that the pitch has floodlighting.

Club consultation

There are two clubs located within Havering, Upminster Hockey Club and Havering Hockey Club. Both clubs responded to consultation requests.

In addition, Plashet Hockey Club and Romford Hockey Club are both currently located outside of the authority but have links with Havering. Romford Hockey Club responded but Plashet Hockey Club did not respond to consultation requests.

Results of the consultation are used to inform key issues within this section of the study.

5.2: Supply

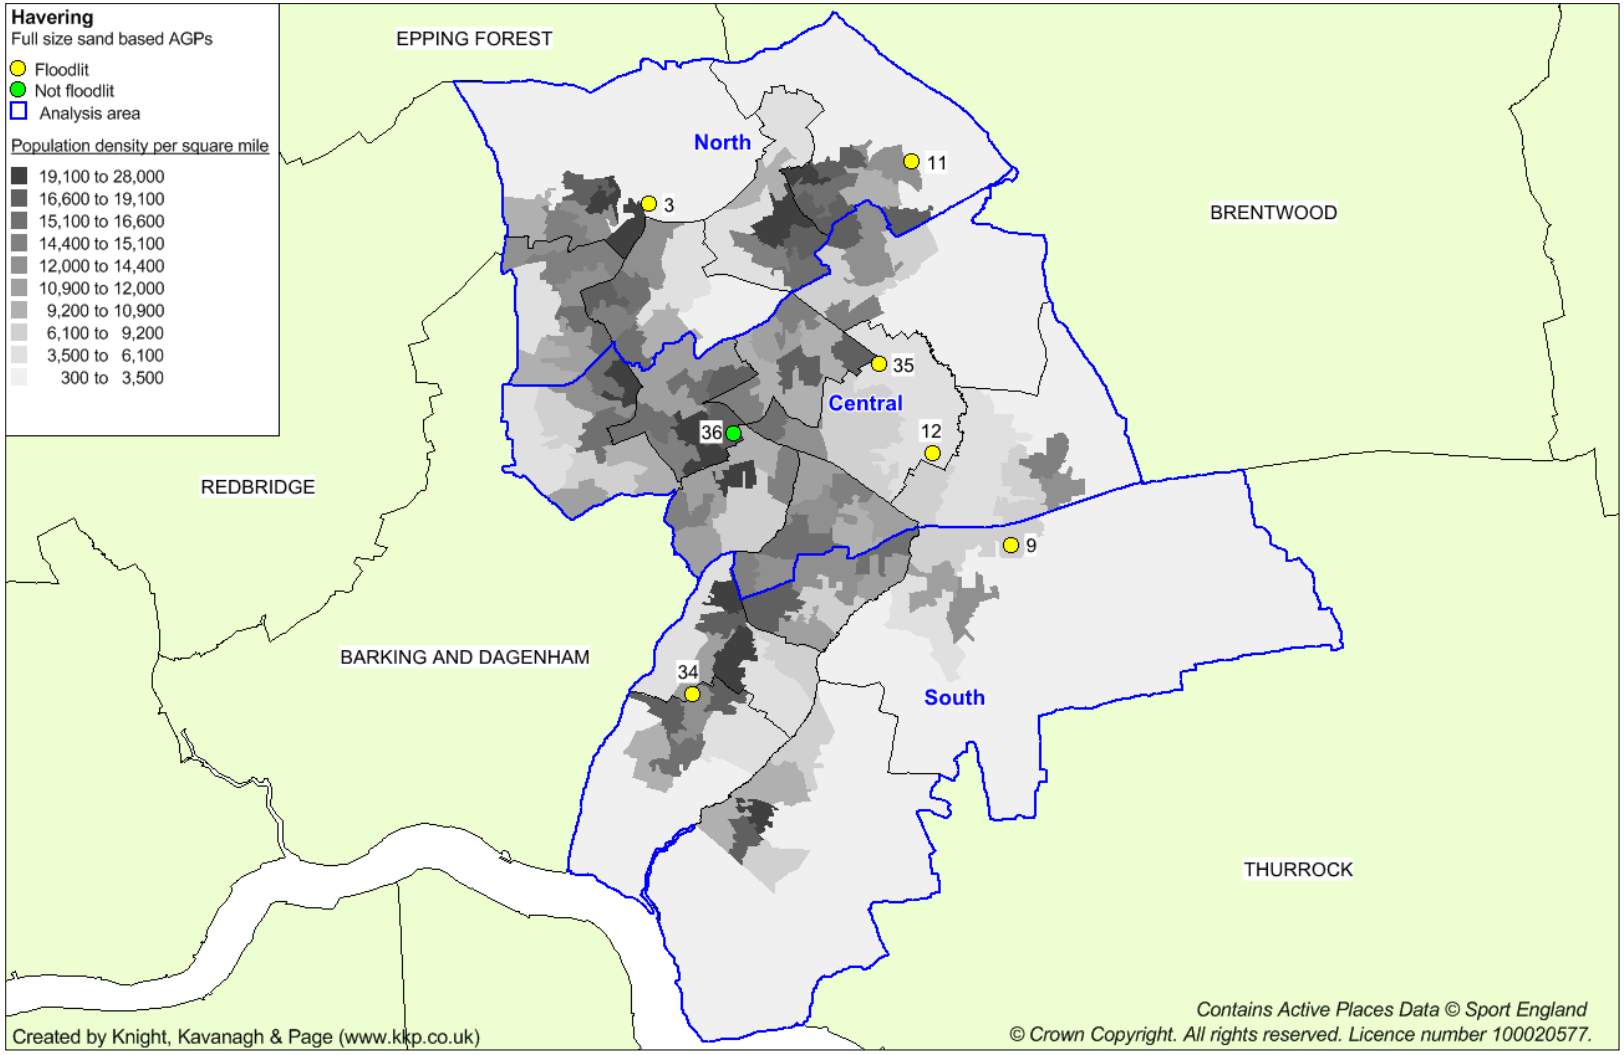
Quantity

There are seven full size sand based AGPs in Havering, two in the North Analysis Area, two in the South Analysis Area and three in the Central Analysis Area. Figure 5.1 illustrates the location of the AGPs. It appears that there is a good spread of sand based AGPs across the authority.

Table 5.1: Full size sand based AGPs by location

Site ID	Site name	Analysis area	Pitch size	Floodlit?
3	Bower Park Academy	North	Full size	Yes
9	Coopers Company & Coborn School	South	Full size	Yes
11	Drapers Academy	North	Full size	Yes
12	Emerson Park Academy	Central	Full size	Yes
34	The Brittons Academy Trust	South	Full size	Yes
35	The Campion School	Central	Full size	Yes
36	The Frances Bardsley School For Girls	Central	Full size	No

Figure 5.1: Full sized sand based AGPs in Havering



Other facilities

There is also one smaller AGP located at the Forest Row Centre. This is one third of the size of a full size pitch and has limited use but is available for junior training sessions.

Ownership/management

All full size AGPs are located on school sites and managed in house by the school. All seven schools are academies.

Security of tenure

Upminster Hockey Club pays an annual fee to hire Coopers Company and Coborn School. The Club also hire Emerson Park School when necessary. Havering Hockey Club hire Campion School. There are no long term lease arrangements in place.

Floodlights

All AGPs are floodlit, aside from the AGP at The Frances Bardsley School for Girls located in the Central Analysis Area which does not have floodlights.

Accessibility

The majority of clubs state that most players travel between two and five miles to access their facilities.

Quality

In terms of quality, sand based AGPs are rated on the scale below.

Table 5.2: Sand based AGP quality scale

Good	**Standard**	**Poor**

Through an audit assessment of the AGPs, two are rated as good quality, three are rated as standard and two are poor quality.

The AGP at Drapers Academy is poor quality; suffering from frequent vandalism and consequently the goal posts and carpet have been damaged. It is eight years old and remains from the old Kingswood School. There is no hockey use of the facility.

The other poor quality AGP is at The Brittons Academy Trust. The pitch suffers from vandalism and goal posts are frequently damaged and occasionally damage to the surface occurs. For this reason there is no hockey use on this pitch.

It is considered that the carpet of an AGP usually lasts for approximately ten years (dependant on levels of use). The AGP at Frances Bardsley School for Girls is ten years old and there is no sinking fund in place. The AGP at Bower Park School is eight years old and there is no sinking fund in place for major repair work. The facility is used extensively for football and played to capacity. At Coopers Company and Coborn School, the AGP is nine years old and floodlit, there is a sinking fund in place for repairs/resurfacing.

Emerson Park Academy has a good quality AGP, it is five years old AGP and regularly maintained by a sub-contractor, however, there is currently no sinking fund in place. The Campion School AGP is also good quality. It is ten years old but has recently been resurfaced.

5.3: Quality ratings of sand based AGPs in Havering

PPS Site ID	Site name	Analysis area	Quality rating
3	Bower Park School	North	Standard
9	Coopers Company & Coborn School	South	Standard
11	Drapers Academy	North	Poor
12	Emerson Park Academy	Central	Good
34	The Brittons Academy Trust	South	Poor
35	The Campion School	Central	Good
36	The Frances Bardsley School For Girls	Central	Standard

Ancillary facilities

The quality of ancillary facilities servicing AGPs is generally standard or good. These are outlined below. Havering HC also rates ancillary facilities at The Campion School as good, however, Upminster HC rates ancillary facilities at Coopers Company and Coborn School, as standard. This will be based on user experience and includes car parking, which could reduce the overall opinion on quality. In comparison the non-technical assessment criteria is based on the quality of the facilities available.

As seen below, all facilities were assessed with the exception of The Frances Bardsley School For Girls as access was not granted.

Table 5.4: Quality of ancillary facilities

Site ID	Site name	Quality rating
3	Bower Park School	Standard
9	Coopers Company & Coborn School	Good
11	Drapers Academy	Good
12	Emerson Park Academy	Standard
34	The Brittons Academy Trust	Standard
35	The Campion School	Good
36	The Frances Bardsley School For Girls	Not assessed

5.3: Demand

Current demand

Upminster HC and Havering HC are similar in size and field 33 teams between them. In addition both clubs run training sessions. Havering HC has training sessions on Tuesday, Wednesday and Thursday evenings and Sunday mornings at The Campion School. Upminster HC runs training sessions on Tuesday, Wednesday and Friday evenings and Sunday mornings at Coopers Company and Coborn School. Matches are played on Saturdays or some junior fixtures can be on Sunday mornings.

Table 5.5: Demand from hockey clubs

Club	Analysis area	No. of hockey teams			
		Male senior	Female senior	Junior	Total
Upminster Hockey Club	South	5	5	7	17
Havering Hockey Club	Central	5	4	7	16
Total		**10**	**9**	**14**	**33**

There is no apparent demand for facilities in the North of Havering and both clubs are based at their preferred grounds. Upminster HC has lost one men's team in the previous three years due to lower membership numbers. However, the Club does plan to regain this lost team for next season.

Havering HC has lost one junior side in the last three years, due to insufficient players in an age group. The Club report that numbers fluctuate depending on interest at each age group but it has no plans to actively increase the number of teams.

Future demand

Team generation rates (TGRs) are used below as the basis for calculating the number of teams likely to be generated in the future based on population growth.

Table 5.6: Future demand based on team generation rates

Age group	Current population within age group (2016)[12]	Current no. of teams	Team generation rate	Future population within age group (2031)[12]	Predicted future number of teams	Additional teams generated from the increased population
Senior Mens (16-45)	38,772	10	3877	41,329	10.7	0.7
Senior Womens (16-45)	40,696	9	4522	43,490	9.6	0.6
Junior Boys (11-15)	5,072	7	725	6,594	9.1	2.1
Junior Girls (11-15)	4,885	6	814	6,616	8.1	2.1

Team generation rates indicate that population increases are significant enough to result in the likely creation of two senior teams and four junior teams. This is a potential increase of six hockey teams.

It is important to note that TGRs are based on population figures and cannot account for specific targeted development work within certain areas or focused towards certain groups, such as NGB initiatives or coaching within schools.

[12] Data source: GLA 2015 round ward population projections - SHLAA-based; Capped Household Size model

Exported demand

Romford HC, as the name suggests, originated from Romford in Havering. The Club has five senior teams and is currently developing a junior section. It is currently based at the Robert Clack Leisure Centre in Barking and Dagenham (outside the study area), while the clubhouse is in Gidea Park, Havering.

Romford HC has previously used the AGP at The Frances Bardsley School for Girls, however, pitch accessibility and availability is slightly more favourable at the Robert Clack Leisure Centre. The Club still does, however, struggle to secure the pitch at the times needed. For example, there are no early Saturday morning slots due to an existing football booking, which makes fixtures difficult. Nor can the Club move training from a Tuesday to a Wednesday to attract a coach, as the football bookings are not flexible.

Parking is very difficult at the Robert Clack Leisure Centre due to the presence of a new 3G AGP, which creates a lot of traffic. However, this is the only facility on offer locally so the Club has no choice but to use it. Ideally Romford HC would move closer to its clubhouse if there was a suitable facility available.

Plashet HC also exports demand from Havering to neighbouring authorities, using the Robert Clack Leisure Centre in Barking and Dagenham for training and Plashet Park in the London Borough of Newham for matches. However, the Club did not respond to consultation so little else is known.

Usage

The following table summarises the availability of full size AGPs for community use in Havering. In addition, it records the availability of provision within the peak period. Sport England's Facilities Planning Model (FPM) applies an overall peak period for AGPs of 34 hours a week (Monday to Thursday 17:00-21:00; Friday 17:00-19:00; Saturday and Sunday 09:00-17:00).

Table 5.7: Community opening times of full size sand AGPs

Site ID	Site name	Hours available for community use	Hours available in the peak period	Usage comments
3	Bower Park School	Mon-Fri: 18:00-20.00 Weekend: Closed	Mon-Thurs:18.00-20.00- 8 hours Fri: 18.00-19.00- 1 hour Total: 9 hours in the peak period	Closed on weekends. Used heavily for football training midweek. No hockey use.
9	Coopers Company & Coborn School	Mon-Fri: 18.00-21.30 Saturday: 09.00-18.00 Sunday: 09.00-18.00	Mon-Thurs: 18.00-21.00- 12 hours Fri: 18.00-19.00- 1 hour Sat: 09.00-17.00- 8 hours Sun:09.00-17.00- 8 hours Total: 29 hours in the peak period	Main home ground for Upminster HC and accommodates all of its teams. Midweek bookings tend to be for football training.
11	Drapers Academy	Mon-Fri: 18.00-21.00 Saturday: 09.00-16.00 Sunday: Closed	Mon-Thurs: 18.00-21.00- 12 hours Fri: 18.00-19.00- 1 hour Sat:09.00-16.00- 7 hours Total: 20 house in the peak period	Due to the quality issues at the site there is no hockey use. Any community bookings are for football training.
12	Emerson Park Academy	Mon-Fri: 18.00-21.00 Saturday: 09.00-16.00 Sunday: 09.00-16.00	Mon-Thurs: 18.00-21.00- 12 hours Fri: 18.00-19.00- 1 hour Sat:09.00-16.00- 7 hours Sun:09.00-16.00- 7 hours Total: 27 hours in the peak period	Used as a second venue for Upminster HC when necessary due to fixture clashes at Coburn School. Midweek bookings tend to be for football training.
34	The Brittons Academy Trust	Mon-Fri: 18.00-21.00 Saturday: 09.00-16.00 Sunday: 09.00-16.00	Mon-Thurs: 18.00-21.00- 12 hours Fri: 18.00-19.00- 1 hour Sat: 09.00-16.00- 7 hours Sun: 09.00-16.00- 7 hours Total: 27 hours in the peak period	Used largely for football for midweek training.

Site ID	Site name	Hours available for community use	Hours available in the peak period	Comments
35	The Campion School	Mon-Fri: 17.30-21.30 Weekend: 09.00-17.00	Mon-Thurs: 17.30-21.00- 14 hours Fri: 17.30-19.00- 1.5 hours Sat: 09.00-17.00- 8 hours Sun: 09.00-17.00- 8 hours Total: 31.5 hours in the peak period	Home ground to Havering HC and also used by numerous football teams midweek for training. Currently running at capacity for hockey and cannot accommodate any further bookings.
36	The Frances Bardsley School for Girls	N/A	N/A	No official opening times, available on an ad hoc basis only.

5.4 Supply and demand analysis

A full size floodlit hockey AGP is able to accommodate up to four hockey matches at senior peak time (Saturday). Given that there are 19 senior teams currently playing in Havering, a minimum of three pitches are required to accommodate current demand, taking into account a home and away fixture basis. As there are currently seven full size pitches, supply is deemed sufficient to meet demand.

In addition, Romford HC currently play outside of Havering but would be keen to utilise an accessible pitch near its clubhouse. This club has five senior teams, taking the number of teams in Havering to 24, meaning the total number of teams currently servicing Havering can still be accommodated on three AGPs.

In quantity terms existing supply is also adequate to accommodate current demand; however, access and quality issues result in only three AGPs currently being used for hockey in Havering.

England Hockey is keen that Emerson Park Academy AGP is protected as an overspill when necessary for Upminster HC. However, there may be opportunity for discussion for it to also accommodate Romford HC. In addition the pitch at the Frances Bardsley School for Girls would not be suitable for training sessions as there are no floodlights, however, there may be some opportunity to negotiate regular access for match play.

Future demand from population growth could increase the potential number of senior teams to 28, therefore increasing the requirement to four pitches.

Hockey summary

- There are seven full size sand based AGPs located in Havering, all located on school sites.
- Two AGPs are rated as good, three are standard and two are assessed as poor quality with Drapers Academy and The Brittons Academy Trust being poor.
- The general stock of AGPs in Havering is aging and will need resurfacing in the next few years. At least three of the AGPs have no sinking funds in place for future replacement.
- The Frances Bardsley School for Girls AGP has no regular opening hours available for community access. Further to this, the Draper Academy and the Britton Academy Trust have no hockey use due to poor quality.
- Upminster Hockey Club and Havering Hockey Club both currently play in Havering and provide a total of 33 teams, including 19 senior teams.
- Romford HC with five senior teams is displaced to Barking and Dagenham, despite having a clubhouse in Havering. This is due to a perceived lack of accessible pitches in Havering.
- Given that there are 19 senior teams currently playing in Havering, a minimum of three pitches are required to accommodate current demand. To accommodate displaced demand from Romford HC this would stay at three pitches.
- Team generation rates indicate that population increases are significant enough to result in the likely creation of two senior teams and four junior teams. This is a potential increase of six hockey teams.
- In quantity terms existing supply is adequate to accommodate current and future demand for hockey; however, access and quality issues result in only three AGPs currently being used for hockey in Havering.

PART 6: RUGBY UNION

6.1: Introduction

The Rugby Football Union (RFU) is the governing body for the sport across England. A full-time development officer is responsible for Essex, in which Havering falls for the RFU, and works with all the clubs to maximise their potential. This work involves developing club structures, including working towards the RFU accreditation (Clubmark) and the development of school-club structures. The rugby union playing season operates from September to May.

Club consultation

There are four clubs based within Havering which are listed below. These were all offered an opportunity for consultation through either through face to face interviews, phone consultations or online surveys.

- Campion RFC
- Old Cooperians RFC
- Romford and Gidea Park RFC
- Upminster RFC

6.2: Supply

There are 31 rugby union pitches in Havering located across 16 sites, whilst there are no World Rugby compliant AGPs. There are 23 senior and eight mini pitches, just two pitches are unavailable for community use, listed below. Neither site is available due to site management issues.

- The Albany (one senior pitch)
- The Royal Liberty School (one senior pitch)

It should be noted that the senior pitch at The Albany School is usually marked out in the winter months; however, the configuration of pitches on this site is interchangeable.

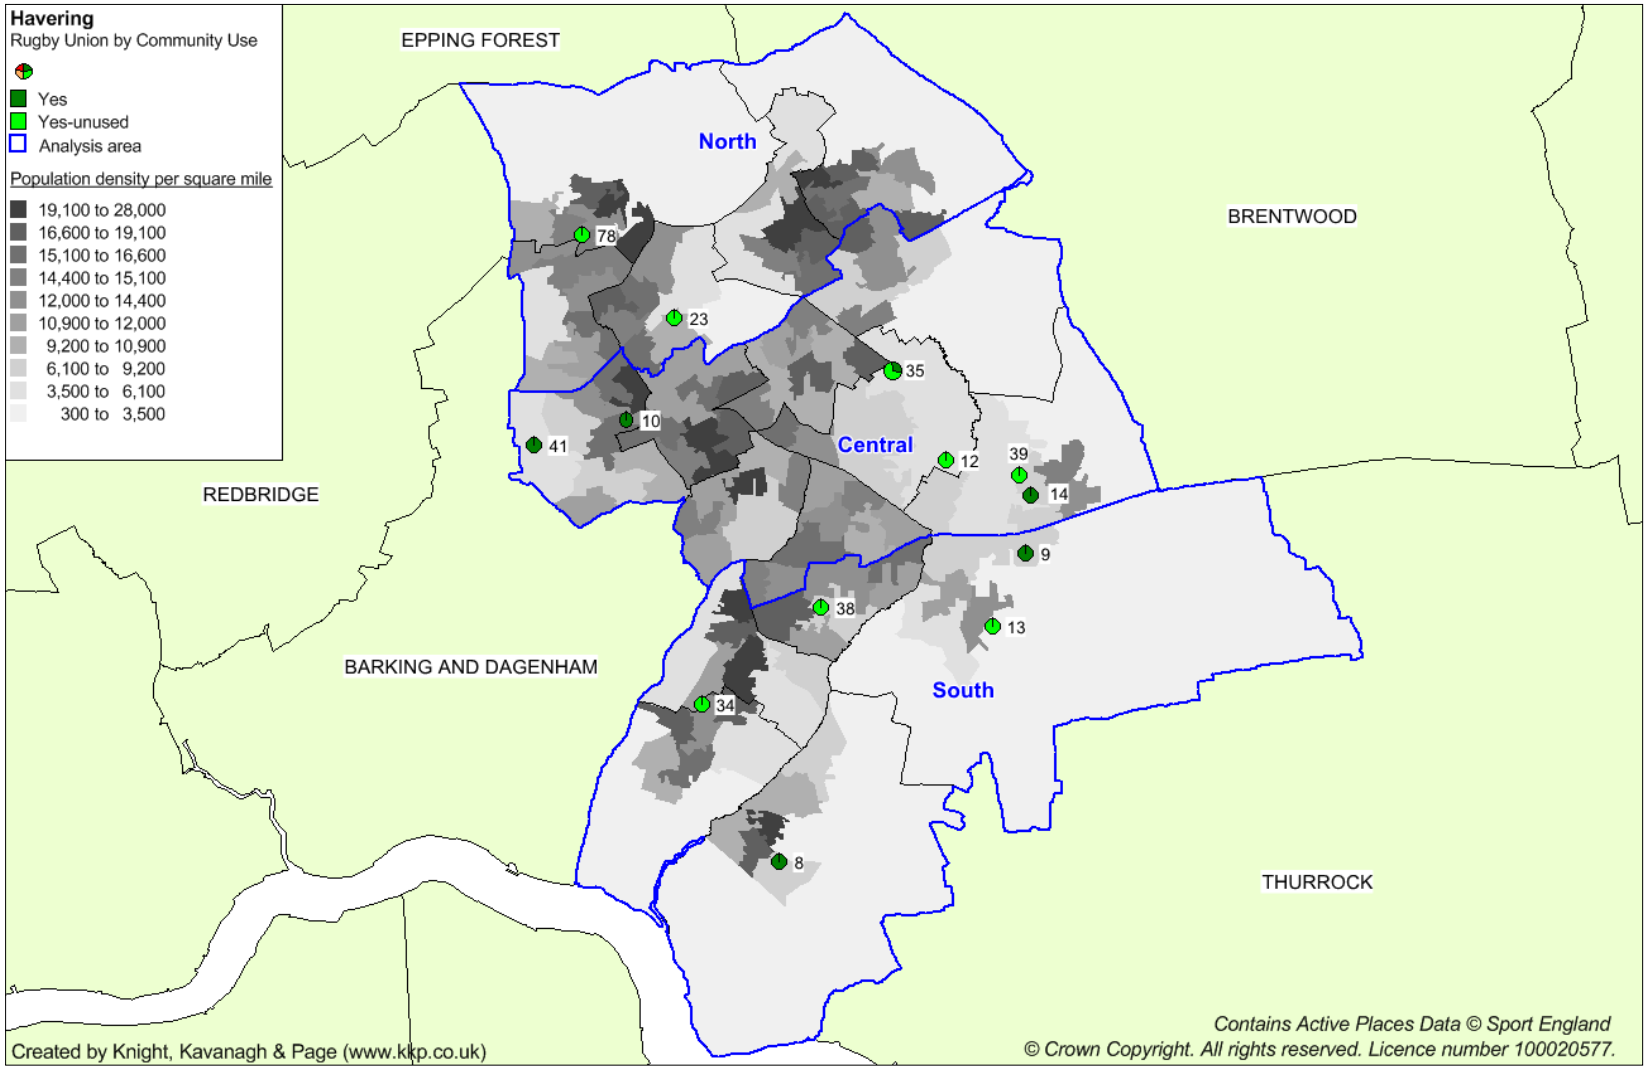
The majority of provision is in the Central Analysis Area, where 13 senior pitches and six mini pitches are available. There are no mini pitches in the South Analysis Area, as shown below. The nature of rugby union play in this area is very much focused around the main club sites.

Table 6.1: Summary of grass rugby union pitches available for community use

Analysis area	No. of senior pitches	No. of mini pitches
North	1	2
Central	13	6
South	7	0
Havering	**21**	**8**

Eight schools report the pitches to be available but currently unused due to lack of demand.

Figure 6.1: Location of rugby union pitches within Havering



Accessibility

The majority of clubs state that most players travel between two and five miles to access their facilities.

Pitch quality

The methodology for assessing rugby pitch quality looks at two key elements; the maintenance programme and the level of drainage on each pitch. An overall quality based on both drainage and maintenance can then be generated.

The agreed rating for each pitch type also represents actions required to improve pitch quality. A breakdown of actions required based on the ratings can be seen below:

Table 6.2: Definition of maintenance categories

Category	Definition
M0	Action is significant improvements to maintenance programme
M1	Action is minor improvements to maintenance programme
M2	Action is no improvements to maintenance programme

Table 6.3: Definition of drainage categories

Category	Definition
D0	Action is pipe drainage system is needed on pitch
D1	Action is pipe drainage is needed on pitch
D2	Action is slit drainage is needed on pitch
D3	No action is needed on pitch drainage

Table 6.4: Quality ratings based on maintenance and drainage scores

		Maintenance		
		Poor (M0)	Adequate (M1)	Good (M2)
Drainage	Natural Inadequate (D0)	Poor	Poor	Standard
	Natural Adequate (D1)	Poor	Standard	Good
	Pipe Drained (D2)	Standard	Standard	Good
	Pipe and Slit Drained (D3)	Standard	Good	Good

The figures are based upon a pipe drained system at 5m centres that has been installed in the last eight years and a slit drained system at 1m centres completed in the last five years.

The table below shows the agreed quality ratings for each of the sites in Havering based on a combination of non-technical site assessment scores as well as user ratings.

Table 6.5: Site quality ratings (available for community use)

Site ID	Site name	Club using facilities	No. of pitches	Community use?	Analysis area	Pitch type	Quality rating	Quality score	Comments
8	Chafford Sports Complex	-	1	Yes	South	Senior	M1 / D0	Poor	-
9	Coopers Company & Coborn School	Old Cooperians RFC	3	Yes	South	Senior	M1 / D0	Poor	School employs groundsmen to maintain pitches.
10	Cottons Park	Campion RFC	1	Yes	Central	Senior	M0 / D0	Poor	-
12	Emerson Park Academy	-	2	Yes-unused	Central	Mini Senior	M0 / D3	Standard	Grass pitches suffer some mild drainage issues. Regularly maintained by sub-contractor employed by school
13	Gaynes School Language College	-	1	Yes-unused	South	Senior	M0 / D1	Poor	External contractor performs basic maintenance programme
14	Hall Mead School	-	1	Yes	Central	Senior	M1 / D1	Standard	-
23	Marshalls Park School		1	Yes-unused	North	Senior	M0 / D0	Poor	Pitch is overmarked with football and suffers drainage issues. Maintained by Council but to a poor standard. Is available but limited bookings due to damage caused and has to refuse bookings.

Site ID	Site name	Club using facilities	No. of pitches	Community use?	Analysis area	Pitch type	Quality rating	Quality score	Comments
34	The Brittons Academy Trust		1	Yes-unused	South	Senior	M0 / D1	Poor	Pitches are located on Brittons Playing Field which is a public park and suffer vandalism
35	The Campion School	Campion RFC	5	Yes	Central	Mini	M0 / D0	Poor	Some drainage problems. The school is in the process of bidding for funding from the RFU for drainage improvements.
			2	Yes		Senior			
38	The Sanders Draper School And Specialist Science College		1	Yes-unused	South	Senior	M0 / D2	Poor	Poor drainage reported by the Club, potential that old verti drain system does not work.
39	Upminster Hall Playing Fields	Upminster RFC	2	Yes	Central	Senior	M0 / D0	Poor	-
41	Westlands Playing Fields		2	Yes	Central	Senior	M1 / D1	Standard	-
78	Clockhouse Primary School		2	Yes-unused	North	Mini	M0 / D1	Poor	-
84	Romford and Gidea Park RFC	Romford and Gidea Park RFC	4	Yes	Central	Senior	M2 / D1	Good	Club maintain own pitches with own equipment.

Table 6.6: Quality of all rugby union pitches with community use

Total pitches - senior and mini		
Good	**Standard**	**Poor**
4	5	20

Overall in Havering there are 29 pitches available for community use, four are rated as good, and these are all at Romford and Gidea RFC. Of these, 21 pitches are senior pitches and are available for community use. Four are rated as good quality, five as standard quality and 12 poor quality. Out of eight mini pitches, seven are rated as poor quality.

Just two pitches are recorded as having pipe and slit drainage; these are the mini and senior pitch at Emerson Park Academy, which are both rated as standard quality. The Sanders Draper School and Specialist Science College has pipe drainage, however, the School report poor drainage and suggest that the old verti drain system is not functioning. No other pitches are recorded as having adequate drainage systems in place.

Security of tenure

Romford and Gidea RFC is the strongest club in the area in terms of security with facilities, it owns its own site.

Campion RFC lease the clubhouse at Cottons Park from Havering Council and discussions are in progress regarding the renewal of this. The Club also has a lease on the pitch until 2026. To secure the long term future of the Club the length of the lease should be extended where possible, to allow the Club to apply for funding.

Old Cooperians lease facilities at Coopers Company and Coborn School, however, there is no detail on the length of this lease. The Club forms part of the School's alumni so the relationship is good between the two organisations.

Havering Council own the pitches at Upminster Halls Playing Fields and although it was discussed about a potential asset transfer arrangement for Upminster RFC this was then changed to a license instead. The Club also lease the clubhouse on site.

Ancillary facilities

All four clubs in Havering have access to changing room provision for games at their home ground. Though pitches are reported to be available at most school sites, in practice they may not be desirable for use by clubs if there is no access to onsite changing facilities. These may be located within main school buildings and inaccessible at weekends due to a lack of staffing.

Campion RFC is keen to make improvements to the clubhouse leased on the Cottons Park site, funding needs to be confirmed for this to happen. Upminster RFC leases the clubhouse at Upminster Halls Playing Fields. Old Cooperians RFC lease a clubhouse on site at Coopers Company and Coborn School.

With the help of a commercial loan and an RFU grant, Romford and Gidea Park RFC commissioned a £1 million project in 2009 to redevelop the clubhouse on the site.

6.3: Demand

Competitive play

Four rugby union clubs play within Havering fielding a total of consisting of 13 senior, 12 junior and 14 mini teams. There is one women's team at Romford and Gidea RFC and a girls' team at Upminster RFC.

Table 6.7: Summary of rugby union demand in Havering

Club	Analysis area	No. of rugby union teams		
		Senior	Juniors	Mini
Campion RFC	Central	2	-	-
Old Cooperians RFC	South	2	-	-
Romford and Gidea Park RFC	Central	5	5	6
Upminster RFC	Central	4	7	8
Total		**13**	**12**	**14**

Training

Campion RFC trains at Campion School twice a week on the senior pitch. Old Cooperians train twice a week at Coopers Colborn School on the senior pitches.

Romford and Gidea Park teams train at its own ground. The first team pitch is floodlit so this can be used for training; however, this affects the quality of the pitch for matches. Mini and junior teams train and play matches on the senior pitches midweek, as well as matches on a Sunday morning.

Upminster RFC train twice a week and use the senior pitches at Upminster Hall Playing Fields and Emerson Park School to use the senior and mini pitches. The junior and mini teams also use the senior pitches at Upminster Hall Playing Fields.

Casual use

There is casual use reported at both Campion School and Cooper Colborn School rugby pitches, due to the nature of the site, on school playing fields. The clubs often have to pick up litter as a result. However, the relationships between the schools and rugby clubs are good.

Future demand

Team generation rates are used below as the basis for calculating the number of teams likely to be generated in the future based on population growth.

Table 6.8: Team generation rates

Age group	Current population within age group (2016)[13]	Current no. of teams	Team Generation Rate	Future population within age group (2031)[13]	Predicted future number of teams	Additional teams that may be generated from the increased population
Senior Mens (19-45)	34,849	12	1:2,904	36,586	12.6	0.6
Senior Women (19-45)	36,908	1	1:36,908	38,769	1.1	0.1
Junior Boys (13-18)	6,738	0	0	8,440	0.0	0.0
Junior Girls (13-18)	6,561	0	0	8,489	0.0	0.0
Mini rugby mixed (7-12)	12,560	0	0	15,688	0.0	0.0

Future population projections forecast an increase of one senior team. Any new players for senior women and junior girl's teams are likely to be accommodated within current squads.

6.4: Capacity analysis

The capacity for pitches to regularly accommodate competitive play, training and other activity over a season is most often determined by quality. As a minimum, the quality, and therefore the capacity, of a pitch affect the playing experience and people's enjoyment of playing rugby. In extreme circumstances it can result in the inability of the pitch to cater for all or certain types of play during peak and off peak times. To enable an accurate supply and demand assessment of rugby pitches, the following assumptions are applied to site by site analysis:

- All sites that are used for competitive rugby matches (regardless of whether this is secured community use) are included on the supply side.
- All competitive play is on senior sized pitches (except for where mini pitches are provided).
- From U13 upwards, teams play 15 v15 and use a full pitch.
- Where mini pitches are not provided, mini (U7-12) teams play on half of a senior pitch i.e. two teams per senior pitch.
- For senior and youth teams the current level of play per week is set at 0.5 for each match played based on all teams operating on a traditional home and away basis (assumes half of matches will be played away).
- For mini teams, play per week is set at 0.25 for each match played across half of one senior pitch, based on all teams operating on a traditional home and away basis.
- All male adult club league rugby takes place on a Saturday afternoon.
- U13-18 rugby generally takes place on a Sunday morning.

[13] Data source: GLA 2015 round ward population projections - SHLAA-based; Capped Household Size model

- Training that takes place on club pitches is reflected by the addition of team equivalents.
- Team equivalents have been calculated on the basis that 30 players (two teams) train on the pitch for 90 minutes (team equivalent of one) per night.

As a guide, the RFU has set a standard number of matches that each pitch should be able to accommodate. Capacity is based upon a basic assessment of the drainage system and maintenance programme ascertained through a combination of the quality assessment and the club survey as follows:

Table 6.9: Pitch capacity (matches per week) based on quality assessments

		Maintenance		
		Poor (M0)	Adequate (M1)	Good (M2)
Drainage	Natural Inadequate (D0)	0.5	1.5	2
	Natural Adequate or Pipe Drained (D1)	1.5	2	3
	Pipe Drained (D2)	1.75	2.5	3.25
	Pipe and Slit Drained (D3)	2	3	3.5

This guide should only be used as a very general measure of potential pitch capacity and does not account for specific circumstances at time of use and assumes average rainfall and an appropriate end of season rest and renovation programme.

The figures are based upon a pipe drained system at 5m centres that has been installed in the last eight years and a slit drained system at 1m centres completed in the last five years.

The peak period

In order to fully establish actual spare capacity, the peak period needs to be established. Peak time for senior rugby union matches in Havering is Saturday afternoons; however, peak time demand for senior sized pitches is actually Sunday mornings. This due to the large number of junior and mini teams which regularly play on senior pitches on Sundays.

Table 6.10: Rugby union provision and level of community use

Site ID	Site name	Community use?	Analysis area	Pitch type	No. of pitches	Floodlit?	Quality rating	Agreed capacity rating	Current play	Site Capacity	Capacity rating	Comments
8	Chafford Sports Complex	Yes	South	Senior	1	N	M1 / D0 (Poor)	1.5	0	1.5	-1.5	Spare capacity discounted due to poor quality.
9	Coopers Company & Coborn School	Yes	South	Senior	3	N	M1 / D0 (Poor)	0.5	1	1.5	-0.5	Spare capacity discounted due to poor quality.
10	Cottons Park	Yes	Central	Senior	1	N	M0 / D0 (Poor)	0.5	1	0.5	0.5	Overplayed.
12	Emerson Park Academy	Yes	Central	Mini	1	N	M0 / D3 (Standard)	2	1	2	-1	Used for training by Upminster RFC. Has some capacity.
				Senior	1							
13	Gaynes School Language College	Yes-unused	South	Senior	1	N	M0 / D1 (Poor)	1.5	0	1.5	-1.5	Spare capacity discounted due to poor quality.
14	Hall Mead School	Yes	Central	Senior	1	N	M1 / D1 (Standard)	2	0	2	-2	Some spare capacity.
23	Marshalls Park School	Yes-unused	North	Senior	1	N	M0 / D0 (Poor)	0.5	0	1.5	-1.5	Pitch is over marked with football and ancillary facilities very poor.
34	The Brittons Academy Trust	Yes-unused	South	Senior	1	N	M0 / D1 (Poor)	1.5	0	1.5	-1.5	Spare capacity discounted due to poor quality.
35	The Campion School	Yes-unused	Central	Mini	5	N	M0 / D0 (Poor)	0.5	0	2.5	-2.5	Spare capacity discounted due to poor quality.
		Yes		Senior	2	N	M0 / D0 (Poor)	0.5	0	1	-1	
38	The Sanders Draper School And Specialist Science College	Yes-unused	South	Senior	1	N	M0 / D1 (Poor)	1.75	0	1.75	-1.75	Spare capacity discounted due to poor quality.
39	Upminster Hall Playing Fields	Yes	Central	Senior	2	N	M0 / D0 (Poor)	0.5	7.5	1	6.5	Overplayed. No spare capacity
41	Westlands Playing Fields	Yes	Central	Senior	2	N	M1 / D1 (Standard)	2	0	4	-4	Some spare capacity
78	Clockhouse Primary School	Yes-unused	North	Mini	2	N	M0 / D1 (Poor)	1.5	0	3	-3	Spare capacity discounted due to poor quality.
84	Romford and Gidea Park RFC	Yes	Central	Senior	1	Y	M2 / D1 (Good)	3	6.5	8	-1.5	Spare capacity discounted as no actual capacity during peak period.
					3	N	M2 / D1 (Good)					

6.5: Supply and demand analysis

Spare capacity

The next step is to ascertain whether or not any identified 'potential capacity' can be deemed 'actual capacity'. There may be situations where, although a site is highlighted as potentially able to accommodate some additional play, this should not be recorded as spare capacity against the site. For example, a site may be managed to regularly operate slightly below full capacity to ensure that it can cater for a number of regular friendly matches and activities that take place but are difficult to quantify on a weekly basis.

The following sites are discounted as having spare capacity due to the poor quality of the pitches:

- Chafford Sports Complex
- Coopers Company and Coborn School
- Gaynes School Language College
- The Brittons Academy Trust
- The Campion School
- Clockhouse Primary School
- The Sanders Draper School And Specialist Science College

Marshalls Park School is discounted as the pitch is overmarked and overplayed for football. Romford and Gidea Park RFC has no actual spare capacity in the peak period. This leaves three standard quality pitches with some spare capacity for additional play. These are listed below.

Table 6.11: Actual spare capacity for rugby pitches

Site ID	Site name (club name)	Pitch type	No. of pitches	Quality rating	Current play	Site Capacity	Capacity rating
12	Emerson Park Academy	Mini	1	M0 / D3 (Standard)	1	2	-1
		Senior	1				
14	Hall Mead School	Senior	1	M1 / D1 (Standard)	0	2	-2
41	Westlands Playing Fields	Senior	2	M1 / D1 (Standard)	0	4	-4

These pitches are all in the Central Analysis Area and are not floodlit, so would not be available for training but could be accessible within the peak period.

Overplay

The two sites showing overplay are Cottons Park and Upminster Hall Playing Fields, recording a total overplay of seven match equivalent sessions each week. This overplay is all on senior pitches.

Overplay at Cottons Park is due to the poor quality of the pitch. This site is used by Campion RFC. Most overplay is recorded at Upminster Halls Playing Fields (six match equivalent sessions per week) and is due to the large number of teams fielded by Upminster RFC coupled with poor quality pitches.

Further to this the mini and junior teams all play on the senior pitches.

6.6: Conclusions

At present, Havering appears to have a sufficient supply of senior rugby union pitches to accommodate current demand, although future demand will result in demand for pitches increasing. It is therefore recommended that suitable sites are identified, where possible, to develop mini pitches for the two large clubs with big junior and mini sections. This will enable mini play to be transferred away from senior pitches and will thus alleviate the pressure of senior pitches that are currently used to capacity or overplayed. One possible option would be to explore the facilities at currently unused school sites; however, ancillary facilities must be appropriate.

Alternatively, an improvement in pitch quality is necessary to increase the capacity of pitches. Additional training facilities could also help cater for future demand, to allow grass pitches additional capacity for match use.

Romford and Gidea RFC owns its own ground, the other clubs lease facilities. The lengths of these leases are not clear and priority should be given to secure the future of the clubs by securing long term leases on sites if they do not exist already.

Rugby union summary

- There are 31 rugby union pitches in Havering located across 16 sites, whilst there are no World Rugby compliant AGPs. There are 23 senior and eight mini pitches, two senior pitches are unavailable for community use.
- Overall in Havering there are 21 senior pitches available for community use, four of which were rated as good quality and 12 are poor quality. Out of eight mini pitches, seven are rated as poor quality.
- Of nine school sites with rugby union pitches, seven are recorded as having poor quality pitches.
- Upminster RFC has a licence on the pitches at Upminster Hall Playing Fields, Campion lease the pitch at Cotton Park and Old Cooperians hire school facilities at Cooper and Colborn School. Renegotiating long term leases for sites is important and should be a priority.
- Romford and Gidea RFC owns its own ground and facilities.
- Four rugby union clubs play within Havering; Romford and Gidea RFC, Upminster RFC, Old Cooperians RFC and Campion RFC. Between them they field a total of 13 senior, 12 junior and 14 mini teams.
- Future population projections forecast an increase of one senior team.
- 13 sites show potential spare capacity, however, in actual spare capacity terms, this is three sites with spare capacity, with an equivalent of seven match sessions available.
- Both Cottons Park (Campion RFC) and Upminster Playing Fields (Upminster RFC) are overplayed, resulting in total overplay of seven match equivalents each week. However, the majority of this is recorded at Upminster Playing Fields (six match sessions) due to a variety of reasons including poor quality pitches and the amount of junior teams playing on the senior pitches.
- Although spare capacity exists at three sites and equates to seven match sessions, these sites are not necessarily adequate to meet the needs of the clubs expressing the demand. Some school sites for example do not currently have appropriate ancillary facilities to support activity.

PART 7: TENNIS

7.1: Introduction

The Lawn Tennis Association (LTA) is the organisation responsible for the governance of tennis and administers the sport locally in Havering.

Consultation

There are eight tennis clubs in Havering, seven of which were consulted resulting in an 88% response rate. Hylands Tennis Club, Gidea Park Tennis Club and Cranston Park Tennis Club were met with face-to-face, whilst Havering Tennis Club, Elm Park Tennis Club, Spring Farm Tennis Club and Raphael Park Tennis Club completed an online survey. Grosvenor Tennis Club was unresponsive to consultation requests.

The LTA has also been consulted with as part of this study. Havering is not currently a priority area for the LTA; however, it is willing to support clubs with any developments.

7.2: Supply

Quantity

There are a total of 109 tennis courts identified in Havering located across 27 sites including sports clubs, parks and schools. Of the courts, 91 (83%) are categorised as being available for community use across 22 sites. The only courts unavailable for community use are located within schools.

Please note that for the purposes of this report, being available for community use refers to courts in public, voluntary, private or commercial ownership or management (including education sites) recorded as being available for hire by individuals, teams or clubs.

Table 7.1: Summary of the number of courts by analysis area

Analysis area	Courts (sites) available for community use	Courts (sites) unavailable for community use
Central	43	2
North	24	4
South	24	12
Havering	**91**	**16**

Indoor facilities

There are seven indoor courts available at David Lloyd (Gidea Park). Other indoor courts are located in Redbridge (eight indoor courts), and Lea Valley Hockey and Tennis Centre is 12 miles away and home to four new indoor courts. The LTA state that there is no geographical need for additional indoor provision in Havering.

Floodlit courts

The following courts have floodlights and are therefore available for evening training and matches. All floodlit courts are available for community use and the majority are rated as good quality.

Table 7.2: Tennis courts with floodlights in Havering

ID	Site name	Analysis area	No. of courts	Flood-lit?	Court type	Court quality[14]
6	Central Park, Rainham	South	2	Yes	Macadam	Good
33	The Albany	Central	6	Yes	Polymeric	Good

55	Grosvenor Lawn Tennis Club	Central	3	Yes	Artificial Turf	Good
56	Elm Park Tennis Club	South	2	Yes	Macadam	Standard

Future supply

Development plans are in place for the creation of four new, floodlit, macadam courts at Noak Hill Sports Complex, which will replace the sites existing two courts (non-floodlit).

[14] Assessed using a non technical site assessment proforma and also takes account of user comments.

Quality

Of provision that is available for community use, 32 courts (35%) are assessed as good quality, 46 (51%) are deemed standard and 13 are rated as poor (14%).

Table 7.3: Summary of the quality of courts by analysis area

Analysis area	Good	Standard	Poor
Central	15	19	8
North	4	20	-
South	13	7	4
Havering	**32**	**46**	**12**

The courts assessed as poor quality are located at the following sites:

- Haynes Park
- Hylands Park
- Spring Farm Park

All of these courts are managed by the Council, with no regular maintenance programme in place and are open access. Issues surrounding the courts include poor grip underfoot, worn line markings and loose gravel. As well as this, all courts rated as poor are without floodlighting and changing accommodation. Consultation with the LTA confirms that the majority of Council owned courts within Havering are considered to be poor or standard quality at best.

Club consultation discovered that the majority of clubs are satisfied with the quality of their courts and rate them as good, with the exception of Spring Farm Tennis Club and Havering Tennis Club. Spring Farm Tennis Club reports that quality at Spring Farm Park is poor due the age of the courts and a lack of maintenance, whilst Havering Tennis Club deems Noak Hill Sports Complex to be standard quality due to weeds growing through the court and the surface breaking up. As previously mentioned, however, plans are in place for the courts to be replaced which will rectify all issues. The courts are owned by the Council but managed by Havering Tennis Club.

Of remaining club managed courts, Elm Park Tennis Club reports that its courts have had quality issues in the past, but having them cleaned and repainted in the last 12 months has led to significant improvements. Cranston Park Tennis Club and Gidea Park Tennis Club report no issues with their respective courts.

All school courts are assessed as either standard or good quality, with no major problems reported during consultation. The courts at The Albany School are considered to be particularly key, however, as the School is also the home facility for Hylands Tennis Club. Although the courts are relatively new and considered to be good quality, the Club reports that it has worries over the lack of maintenance the courts receive.

The majority of tennis courts within schools are over marked by netball courts. Courts which are over marked tend to receive higher levels of use which can result in a quicker deterioration in quality.

Accessibility

The majority of clubs state that most players travel between two and five miles to access their facilities. LTA insight has shown that most players that play in parks walk to the courts with a 10-15min travel time being the norm.

Ownership/management

The table below highlights the ownership of community available courts within each analysis area. Council owned sites contain the most community available courts (42%).

Table 7.2: Courts available for community use by ownership/type

Analysis area	No. of club/private courts	No. of parks courts	No. of educational courts
Central	9	17	17
North	7	14	3
South	10	9	5
Havering	**26**	**40**	**25**

Ancillary provision

All clubs responding to consultation report access to changing facilities, with the exception of Spring Farm Tennis Club, users of Spring Farm Park, which has no changing facilities to service its courts.

Raphael Park Tennis Club and Elm Park Tennis Club report that changing accommodation servicing their clubs is poor quality, which in turn is negatively affecting membership and participation. All remaining clubs are satisfied with changing provision.

7.3: Demand

Competitive tennis

There are eight clubs in Havering collectively providing a total of 568 senior members and 7161 junior members. The clubs vary in size, with Cranston Park Tennis Club containing the most members (358) and Spring Farm Tennis Club catering for the least (15).

Table 7.4: Summary of club membership

Name of club	Number of members		
	Seniors	Juniors	Total
Cranston Park Tennis Club	148	210	358
Elm Park Tennis Club	27	43	70
Gidea Park Tennis Club	144	156	300
Grosvenor Tennis Club	115	120	235
Havering Tennis Club	24	82	106
Hylands Tennis Club	11	77	88
Raphael Park Tennis Club	86	26	112
Spring Farm Tennis Club	13	2	15

Name of club	Number of members		
	Seniors	Juniors	Total
Total	**568**	**716**	**1284**

In correlation to a national reduction in tennis participation, Hylands Tennis Club, Spring Farm Tennis Club, Gidea Park Tennis Club and Elm Park Tennis Club all report that senior membership has reduced over the previous three years, with rising costs cited as the most common attributing factor. Elm Park Tennis Club also reports a reduction in junior membership over the same time period, stating that it is becoming increasingly difficult to retain members between the ages of 14-18.

Conversely, Havering Tennis Club reports that both senior and junior membership has increased over the past three years, whereas Spring Farm Tennis Club reports that junior membership has increased. Havering Tennis Club attributes its growth to offering a free tennis weekend to all potential new members, whilst Spring Farm Tennis Club has only recently began offering a membership package to juniors.

Future demand

Each consulted club expresses plans to increase their membership. When asked to quantify potential growth, clubs report plans to increase membership by 115 seniors and 138 juniors, as seen in the table below.

Table 7.5: Summary of future demand

Name of club	Number of members	
	Seniors	Juniors
Cranston Park Tennis Club	10	20
Elm Park Tennis Club	10	30
Gidea Park Tennis Club	15	15
Grosvenor Tennis Club	-	-
Havering Tennis Club	15	20
Hylands Tennis Club	20	20
Raphael Park Tennis Club	40	28
Spring Farm Tennis Club	5	5
Total	**115**	**138**

Hylands Tennis Club, Havering Tennis Club and Raphael Park Tennis Club all have written sports development plans which state that increasing membership is a priority. It is believed by the clubs that increased advertising, facility improvements and a better standard of coaching is the key to attracting new members.

All clubs confirm that the number of courts available is adequate to meet the needs of current and potential future membership, with the exception of Havering Tennis Club. The Club expresses a need for more outdoor, floodlit courts in order to meet its needs, which will be provided with the aforementioned development at Noak Hill Sports Complex.

Latent demand

No clubs in Havering report current latent demand in that no clubs operate a waiting list and no clubs are turning away members due to a lack of available courts.

Sport England's Segmentation Tool enables analysis of 'the percentage of adults that would like to participate in tennis but 'are not currently doing so'. The tool identifies latent demand of 4,328 people within Havering who would like to play tennis. The most dominant segment is 'Tim – settling down males' of which 548 (13%) would like to participate in tennis.

Informal tennis

Improving park courts is a national priority for the LTA, however, it reports that unless tennis courts are supported by changing facilities, a café and floodlighting, it becomes harder to run a sustainable tennis programme, which therefore makes it harder to generate external investment. No park courts within Havering satisfy the above criteria.

As park courts are available free of charge in Havering the majority of use is not recorded, although it is assumed that courts are generally busier throughout the summer months. A coaching programme has been in place at Raphael Park for over ten years and a small coaching programme is also in place at Upminster Park. Coaches associated with Gidea Park Tennis Club recently showed an interest in developing a similar programme at Hylands Park, however, decided against the idea due to a lack of ancillary facilities at the site.

The majority of clubs do not readily allow for casual use of their courts by the community, with clubs preferring to remain strictly private, whilst others report that pay and play is difficult to manage.

No education sites which are available for community use report any regular demand from the community, other than The Albany School which is used by Hylands Tennis Club. It is believed that the lack of demand is a direct result of council courts being available for free, meaning the community is less likely to pay a hire charge for using school courts.

7.4: Supply and demand analysis

Based on LTA guidelines, a floodlit court provides capacity for 60 members and a non-floodlit court provides capacity for 40 members. Using this calculation in Havering, only Noak Hill Sports Complex is running above capacity as two non-floodlit courts (with capacity for 80 members) are currently servicing 87 members from Havering Tennis Club, in addition to expressed future demand totalling 35 members. The proposed developed of four replacement floodlit courts, however, will result in all demand being accommodated. It is therefore important to ensure that the courts are provided to a high quality.

As all remaining courts are deemed to have spare capacity, priority should be placed on improving current facilities, in particular relating to park courts which are assessed as poor quality.

Tennis summary

- There are a total of 109 tennis courts identified in Havering with 80 (83%) categorised as being available for community use.
- Development plans are in place for the creation of four new, floodlit, macadam courts at Noak Hill Sports Complex, which will replace the sites existing two courts.
- Of provision that is available for community use, 32 courts (35%) are assessed as good quality, 46 (51%) are deemed standard and 13 are rated as poor (14%).
- The courts assessed as poor quality are located at Haynes Park, Hylands Park and Spring Farm Park, all of which are council owned sites.
- Raphael Park Tennis Club and Elm Park Tennis Club report that changing accommodation servicing their club is poor quality.
- There are eight clubs in Havering collectively providing a total of 571 senior members and 621 junior members.
- The LTA reports that unless tennis courts are supported by changing facilities, a café and floodlighting, it becomes harder to run a sustainable tennis programme.
- No education sites which are available for community use report any regular demand from the community, other than The Albany School which is used by Hylands Tennis Club
- Based on LTA guidelines, Noak Hill Sports Complex is running above capacity. The proposed developed of four replacement courts, however, will result in all demand being accommodated.
- As all remaining courts are deemed to have spare capacity, priority should be placed on improving current facilities, in particular relating to park courts which are assessed as poor quality.
- A resolution to poor quality ancillary provision servicing Raphael Park Tennis Club and Elm Park Tennis Club is also required.

PART 8: BOWLS

8.1: Introduction

Outdoor bowls in Havering is played on flat greens. Bowls England is the National Governing Body with overall responsibility for ensuring effective governance of the sport. Locally, it is administered by the Essex Bowling Association. The bowling season runs from May to September.

Consultation

There are ten clubs identified as using bowling greens in Havering. Of these, seven replied to an online survey resulting in a response rate of 70%. The table below highlights the clubs which replied and the clubs which did not.

Table 8.1: Summary of consultation

Name of club	Responded?
Clockhouse Bowls Club	No
Elm Park Bowls Club	Yes
Harold Hill Bowls Club	Yes
Haynes Park Bowls Club	Yes
Gidea Park Bowls Club	Yes
King George's Playing Field Bowls Club	No
Liberty of Havering Bowls Club	Yes
Rainham Bowls Club	No
Romford Bowls Club	Yes
Upminster Bowls Club	Yes

8.2: Supply

There are ten flat green bowling greens in Havering provided across nine sites. There are two greens located at Lodge Park Farm. One of these however has recently been mothballed due to cost of maintenance.

Table 8.2: Summary of the number of greens by analysis area

Analysis area	Number of greens
Central	5
North	3
South	2
Havering	**10**

Figure 8.1: Distribution of bowling greens

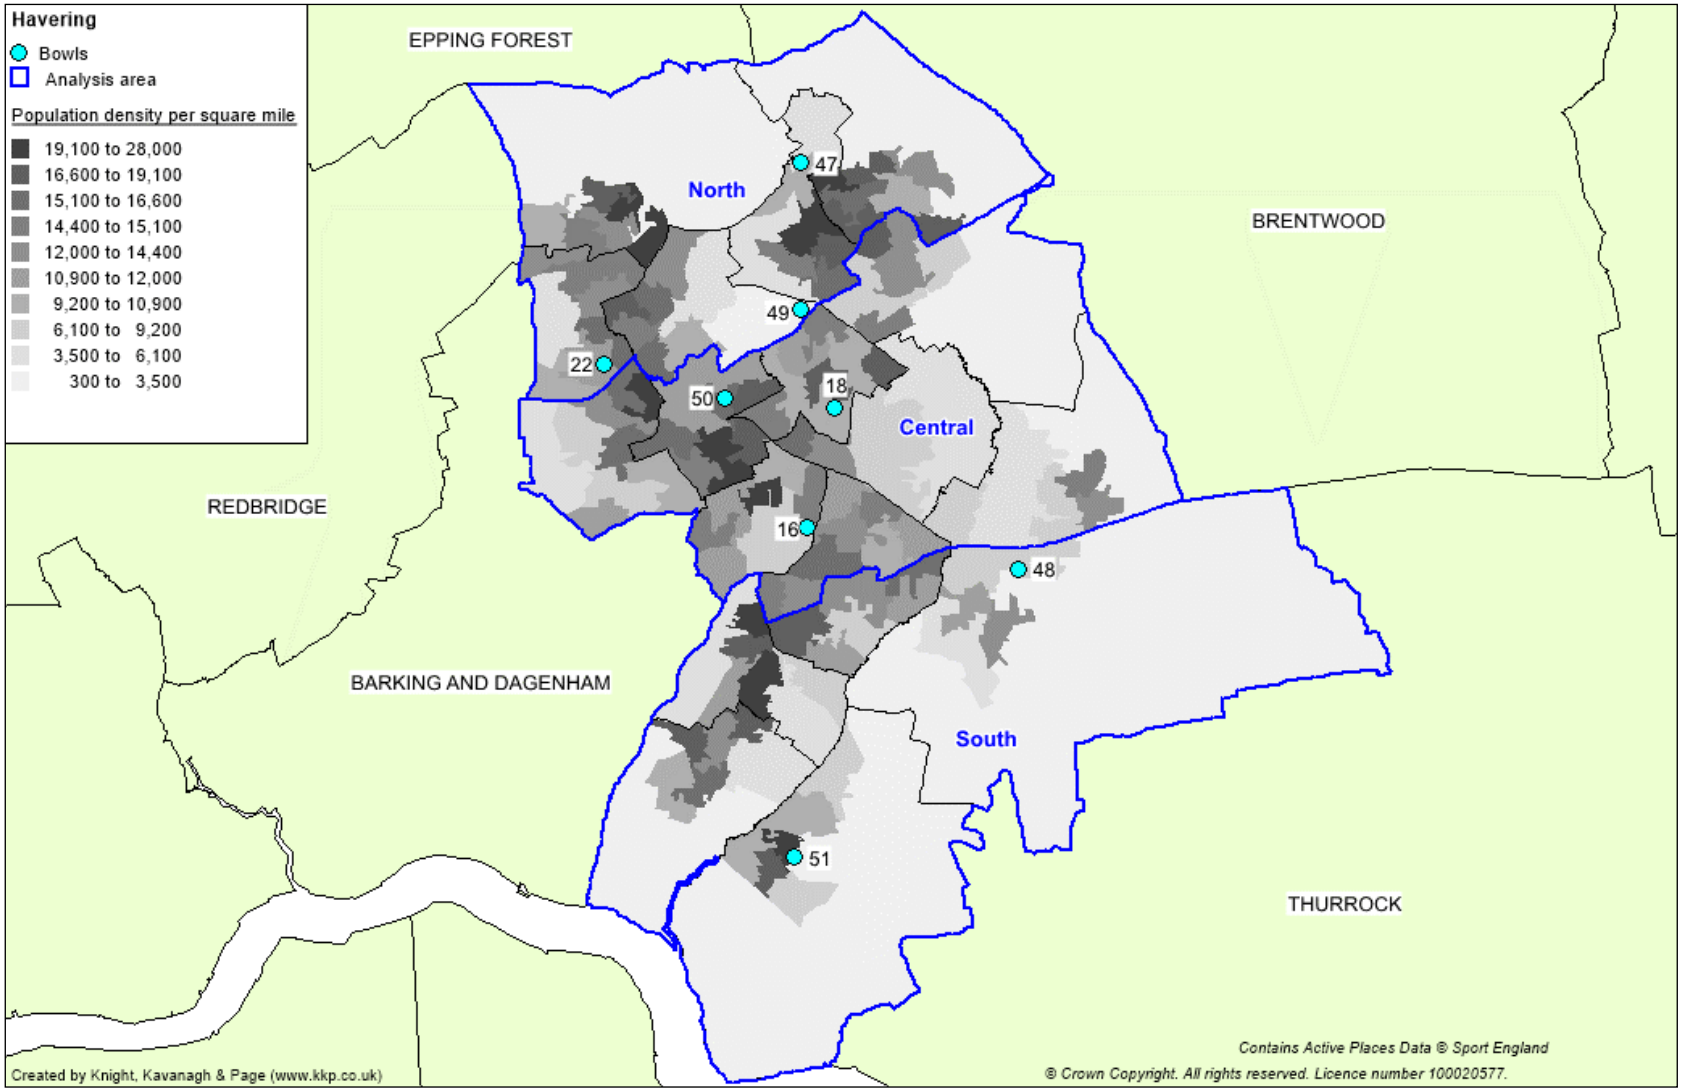

Table 8.3: Key to map

Site ID	Site	Analysis area	No. of greens	Quality
16	Harrow Lodge Park	Central	1	Good
18	Haynes Park	Central	1	Standard
22	King George Playing Field	North	1	Good
47	Harold Hill Bowls Club	North	1	Good
48	Clockhouse Bowling Club	South	1	Good
49	Gidea Park Sports Ground	North	1	Good
50	Lodge Park Farm	Central	1	Good
			1	Poor
51	Rainham Bowls Club	South	1	Good
61	Upminster Bowling Club	Central	1	Good

Accessibility

The majority of clubs state that most players travel between two and five miles to access their facilities.

Quality

As seen in the table above, of the ten bowling greens within Havering, eight are assessed as good quality, one as standard and one as poor. One of the greens at Lodge Park Farm is assessed as poor quality as it has recently been mothballed. The other green was assessed as good, however, Romford Bowls Club stated it is standard condition, possibly due to user experience and the disposal of the other green on the same site.

The green at Haynes Park is assessed as standard quality due to signs of wear and tear. The Club based here do not see this as a major issue and still rated Haynes Park as good quality.

Of clubs responding to consultation, Upminster, Liberty of Havering, Harold Hill and Haynes Park bowls clubs assess the overall quality of their home greens to be good quality, whereas Gidea Park and Romford bowls clubs rate theirs as standard. No clubs assess quality as poor.

Gidea Park Bowls Club cites drainage as its main issue at Gidea Park Sports Ground, whilst Romford Bowls Club reports poor green gradient at Lodge Farm Park. Both clubs also report that green quality has worsened since last season due to maintenance issues. All remaining clubs report that green quality has improved.

Ancillary provision

Harold Hills Bowls Club is in the process of submitting a funding application for modernising and refurbishing its clubhouse, whilst Romford Bowls Club reports that its clubhouse is dated and in need of refurbishment. All remaining clubs are able to access changing accommodation and report no issues.

8.3: Demand

Current demand

There are ten clubs using bowling greens in Havering. Membership of the seven consulted clubs amounts to 354 men, 155 women and nine junior members. Elm Park Bowls Club was the only responding club was not willing to disclose its membership information during consultation.

Table 8.4: Summary of club membership

Club name	Members		
	Men	Women	Juniors
Clockhouse Bowls Club	-	-	-
Elm Park Bowls Club	-	-	-
Harold Hill Bowls Club	53	22	0
Haynes Park Bowls Club	55	25	0
Gidea Park Bowls Club	60	24	0
King George's Playing Field Bowls Club	-	-	-
Liberty of Havering Bowls Club	27	25	0
Rainham Bowls Club	-	-	-
Romford Bowls Club	94	25	9
Upminster Bowls Club	65	34	0
Havering	**354**	**155**	**9**

Despite a national trend of declining membership, both Romford Bowls Club and Elm Park Bowls Club report that senior membership has increased over the previous three years. Elm Park Bowls Club attributes this to green quality and facility improvements, whilst Romford Bowls Club states that the increase is due to reducing membership fees and running open days. Only Gidea Park Bowls Club reports that membership has decreased in the last three years, with all remaining clubs reporting that numbers have remained static.

There are a high percentage of people in Havering (34.4%) aged 50-84 when compared to neighbouring local authorities and Greater London (24.6%) as a whole. It is people within this age band which are more likely to be playing bowls, which may therefore account for the strong participation trends in the area.

Future demand

All seven consulted clubs have plans to increase their number of members in the future and state that improved advertising, links with local schools and green quality improvements are the key factors to attracting more people. When asked to quantify potential growth, clubs report plans to increase membership by a combined 175 senior members and 25 junior members.

Harold Hill Bowls Club is particularly keen on increasing its membership and has recently introduced a social membership to its club. This enables members to take full advantage of the facility and it is hoped that this will in turn encourage more bowlers.

Latent demand

No clubs suggest that an additional bowling green at their ground or in the area would lead to an increase in club membership. In effect, the perception is that any planned increases can be accommodated on existing greens. No clubs currently have a waiting list and the majority would welcome new members.

Sport England's Segmentation Tool enables analysis of 'the percentage of adults that would like to participate in bowls but are not currently doing so'. The tool identifies latent demand of 439 people who would like to participate in the sport within Havering. The most dominant segment is 'Frank' – Twilight Year Gents' (23%).

8.4 Supply and demand analysis

Generally, through consultation, it is considered that most bowling greens in Havering have spare capacity, meaning current membership and any increase in membership is sustainable. No clubs report a demand for additional green space and all clubs report that identified future demand can be accommodated on greens currently available to them.

The average club membership in Havering is 86 (per one green). As Haynes Park, Harold Hill, Gidea Park and Liberty of Havering bowls clubs are operating below this average, it is likely that they have further capacity to increase use of their home green. Priority should therefore be placed on ensuring green quality and ancillary provision at those sites is sustained and improved where necessary in order to allow for continued use.

Romford Bowls Club (119 members) and Upminster Bowls Club (99 members) are both operating above the average club membership and it is therefore important to ensure the clubs are supported to enable growth as planned. It is also important to ensure maintenance is appropriate to accommodate current levels of use.

It is also recommended that each club which was unresponsive to consultation is further communicated with in order to better understand their needs.

Although there is no demand for addition greens to be provided across Havering, this does not translate to a surplus in provision. As all greens are currently used, it is clear that existing provision needs to be retained or mitigated.

Alternatively, there is scope to amalgamate clubs onto a lesser number of greens, especially those clubs with the lowest membership numbers in areas provided by multiple greens. This particularly relates to clubs using greens maintained by the Council as less greens will free up resources for the Council to improve quality and sustainability of remaining greens through improved maintenance.

Bowls summary

- There are ten flat green bowling greens in Havering across nine sites.
- One of the greens at Lodge Park Farm has recently been mothballed and is no longer in use. Haynes Park is assessed as standard quality. All remaining greens are assessed as good quality which generally matches the club ratings.
- Harold Hills Bowls Club is in the process of submitting a funding application for modernising and refurbishing its clubhouse, whilst Romford Bowls Club reports that its clubhouse is dated and in need of refurbishment.
- There are ten clubs using bowling greens in Havering. Membership of the six consulted clubs amounts to 354 men, 155 women and nine junior members.
- Despite a national trend of declining membership, both Romford Bowls Club and Elm Park Bowls Club report that senior membership has increased over the previous three years. Only Gidea Park Bowls Club reports a reduction in membership.
- All seven responding clubs have plans to increase their number of members in the future. When asked to quantify potential growth, clubs report plans to increase membership by a combined 175 senior members and 25 junior members.
- Priority should therefore be placed on ensuring green quality and ancillary provision at is sustained and improved where necessary in order to allow for continued use.
- Romford Bowls Club and Upminster Bowls Club are operating above the average club membership and it is therefore important to ensure the clubs are supported to enable growth as planned.
- It is also recommended that each club which was unresponsive to consultation is further communicated with in order to better understand their needs.
- Generally, it is considered that most bowling greens in Havering have spare capacity, meaning current membership and an increase in membership is sustainable and no additional facilities are necessary.

PART 9: SOFTBALL

9.1: Introduction

BaseballSoftballUK (BSUK) is the development agency for baseball and softball in the UK. Since 2,000, BSUK has provided services to the sports' governing bodies, the British Baseball Federation (BBF) and British Softball Federation (BSF) with the aim of developing and increasing the levels of participation, skill and achievement in UK baseball and softball. This occurs at both junior and adult levels, from school and grassroots through domestic adult clubs up to the Great Britain national teams.

League consultation

There is a new softball league currently (2015) being set up in Havering and two sites that have been identified to initiate activity are Raphael Park and the Noak Hill Sports Complex which are both local authority sites. The League has received a Sport England small grants award to develop activity in Havering.

9.2: Supply

There are two sites identified by the Softball League in Havering that will be marked with softball pitches; at Raphael Park and the Noak Hill Sports Complex. The League suggests that both sites are suitable and ancillary facilities will meet the needs of the development programme.

9.3 Demand

The Havering Softball League has been developed to create an initial target of five teams; however, this figure has since been revised to two. It is estimated that there will be approximately ten participants per venue/team.

9.4: Supply and demand analysis

Demand for softball has been identified by the Havering Softball League in order to secure funding to develop the programme. The League suggests that a potential two teams would initially be created from this programme and the two sites identified have been deemed appropriate by the League to mark pitches. These two pitches will be sufficient to cater for the generated demand expected.

Softball summary

- There are two sites identified to mark new softball pitches in Havering. They are both located on local authority sites.
- Both sites are deemed to be suitable by the league.
- Demand is estimated to increase to two teams in the area. The identified pitches will be sufficient to cater for this demand.

APPENDIX 1: SPORTING CONTEXT

National context

The provision of high quality and accessible community outdoor sports facilities at a local level is a key requirement for achieving the targets set out by the Government and Sport England. It is vital that this strategy is cognisant of and works towards these targets in addition to local priorities and plans.

Sport England: A Sporting Habit for Life (2012-2017)

In 2017, five years after the Olympic Games, Sport England aspires to transforming sport in England so that it is a habit for life for more people and a regular choice for the majority. Launched in January 2012 the strategy sets out how Sport England will invest over one billion pounds of National Lottery and Exchequer funding during the five year plan period. The investment will be used to create a lasting community sport legacy by growing sports participation at the grassroots level following the 2012 London Olympics. The strategy will:

- See more people starting and keeping a sporting habit for life
- Create more opportunities for young people
- Nurture and develop talent
- Provide the right facilities in the right places
- Support local authorities and unlock local funding
- Ensure real opportunities for communities

The vision is for England to be a world leading sporting nation where many more people choose to play sport. There are five strategic themes including:

- Maximise value from current NGB investment
- Places, People, Play
- Strategic direction and market intelligence
- Set criteria and support system for NGB 2013-17 investment
- Market development

The aim by 2017 is to ensure that playing sport is a lifelong habit for more people and a regular choice for the majority. A specific target is to increase the number of 14 to 25 year olds playing sport. To accomplish these aims the strategy sets out a number of outcomes:

- 4,000 secondary schools in England will be offered a community sport club on its site with a direct link to one or more NGBs, depending on the local clubs in a school's area.
- County sports partnerships will be given new resources to create effective links locally between schools and sport in the community.
- All secondary schools that wish to do so, will be supported to open up, or keep open, their sports facilities for local community use and at least a third of these will receive additional funding to make this happen.
- At least 150 further educational colleagues will benefit from a full time sports professional who will act as a College Sport Maker.
- Three quarters of university students aged 18-24 will get the chance to take up a new sport or continue playing a sport they played at school or college.
- A thousand of our most disadvantaged local communities will get a Door Step Club.
- Two thousand young people on the margins of society will be supported by the Dame Kelly Holmes Legacy Trust into sport and to gain new life skills.

- Building on the success of the Places People Play, a further £100 million will be invested in facilities for the most popular sports.
- A minimum of 30 sports will have enhanced England Talent Pathways to ensure young people and others fulfil their potential.

National Planning Policy Framework

The National Planning Policy Framework (NPPF) sets out planning policies for England. It details how these changes are expected to be applied to the planning system. It also provides a framework for local people and their councils to produce distinct local and neighbourhood plans, reflecting the needs and priorities of local communities.

The NPPF states the purpose of the planning system is to contribute to the achievement of sustainable development. It identifies that the planning system needs to focus on three themes of sustainable development: economic, social and environmental. A presumption in favour of sustainable development is a key aspect for any plan-making and decision-taking processes. In relation to plan-making the NPPF sets out that Local Plans should meet objectively assessed needs.

The 'promoting healthy communities' theme identifies that planning policies should be based on robust and up-to-date assessments of the needs for open space, sports and recreation facilities and opportunities for new provision. Specific needs and quantitative or qualitative deficiencies or surpluses in local areas should also be identified. This information should be used to inform what provision is required in an area.

As a prerequisite the NPPF states existing open space, sports and recreation buildings and land, including playing fields, should not be built on unless:

- An assessment has been undertaken, which has clearly shown that the open space, buildings or land is surplus to requirements.
- The loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location.
- The development is for alternative sports and recreational provision, the needs for which clearly outweigh the loss.

In order for planning policies to be 'sound' local authorities are required to carry out a robust assessment of need for open space, sport and recreation facilities.

The FA National Game Strategy (2015 – 2019)

The Football Association's (FA) National Game Strategy provides a strategic framework that sets out key priorities, expenditure proposals and targets for the national game (i.e., football) over a four year period. The main issues facing grassroots football are identified as:

- Sustain and Increase Participation.
- Ensure access to education sites to accommodate the game.
- Help players to be the best that they can be and provide opportunities for them to progress from grassroots to elite.
- Recruit, retain and develop a network of qualified referees
- Support clubs, leagues and other competition providers to develop a safe, inclusive and positive football experience for everyone.
- Support Clubs and Leagues to become sustainable businesses, understanding and serving the needs of players and customers.

- Improve grass pitches through the pitch improvement programme to improve existing facilities and changing rooms.
- Deliver new and improved facilities including new Football Turf Pitches.
- Work with priority Local Authorities enabling 50% of mini-soccer and youth matched to be played on high quality artificial grass pitches.

Champion Counties – England and Wales Cricket Board (ECB) Strategic Plan (2013 – 2017)

"Champion Counties" - continues to focus on the four pillars, as identified in the ECB's previous strategy: "Grounds to Play". The pillars are:

- **E**nergising people and partnerships through effective leadership and governance
- Building a **V**ibrant domestic game through operational excellence and delivering a competition structure with appointment to view
- **E**ngaging participants through the maintenance of existing facilities, supporting club/school links , supporting volunteers and expanding women's and disabilities cricket
- Delivering **S**uccessful England teams and world class global events

The key measures for the life span of the plan are as follows:-

- Increase the subset of participation measured by Sport England's Active People Survey from 183,400 to 197,500.
- Increase attendances at LV= CC, YB50 and FLT20 by 200,000.
- Complete sponsorship and broadcasting agreements through 2019.
- Win the World Test Championship and Women's
- World Cup in 2017.
- Win The Ashes and World Cup in 2015.
- Expand the number of clubs participating in NatWest Cricket Force from 2,000 to 2,200.
- Complete co-operation agreements for each of the 39 County Boards with their First Class County or Minor County partner.
- Deliver two world class global events in 2017 which exceed budget and exceed customer satisfaction targets.
- Increase the number of cricket's volunteers to 80,000 by 2017.
- Expand the number of participants in women's and disabilities cricket by 10% by 2017.
- Award all Major Matches through 2019 by December 2014.
- To increase the number of TwelfthMan members from 220,000 to 250,000 by 2017.
- Complete an approved Community Engagement programme with all 18 First Class Counties and MCC.
- Provide First Class Counties with total fee payments of £144m between 2014 and 2017.
- For each £1 provided in facility grants through the Sport England Whole Sport Plan grant programme ensure a multiplier of 3 with other funding partners.
- Provide a fund of £8.1m of capital investment to enhance floodlights, sightscreens, replay screens, power sub-stations and broadcasting facilities at First Class County venues.
- Provide an interest-free loan fund to community clubs of £10 million.
- Leverage the 2014 tour by India to engage with a minimum of 10,000 cricket supporters of Asian origin. Qualify and engage 50 Level 4 coaches to support the development of professional cricketers.
- Expand the number of coaches who have received teacher level 1, 2 or 3 qualifications to 50,000.
- Deliver an annual fixture for the Unicorns against a touring (Full, A or U19) ICC member nation.

- Provide a fund of £2 million for community clubs to combat the impact of climate change.
- Introduce a youth T20 competition engaging 500 teams by 2017.

The Rugby Football Union National Facilities Strategy (2013-2017)

The recently launched RFU National Facility Strategy 2013-2017 provides a framework for development of high-quality, well-managed facilities that will help to strengthen member clubs and grow the game in communities around them. In conjunction with partners, this strategy will assist and support clubs and other organisations, so that they can continue to provide quality opportunities for all sections of the community to enjoy the game. It sets out the broad facility needs of the sport and identifies investment priorities to the game and its key partners. It identifies that with 470 grass root clubs and 1500 players there is a continuing need to invest in community club facilities in order to:

- Create a platform for growth in club rugby participation and membership, especially with a view to exploiting the opportunities afforded by RWC 2015.
- Ensure the effectiveness and efficiency of rugby clubs, through supporting not only their playing activity but also their capacity to generate revenue through a diverse range of activities and partnerships.

In summary the priorities for investment which have met the needs of the game for the Previous period remain valid:

- Increase the provision of changing rooms and clubhouses that can sustain concurrent adult and junior male and female activity at clubs
- Improve the quality and quantity of natural turf pitches and floodlighting
- Increase the provision of artificial grass pitches that deliver wider game development

It is also a high priority for the RFU to target investment in the following:

- Upgrade and transform social, community and catering facilities, which can support the generation of additional revenues
- Facility upgrades, which result in an increase in energy-efficiency, in order to reduce the running costs of clubs
- Pitch furniture, including rugby posts and pads, pitch side spectator rails and grounds maintenance equipment

England Hockey (EH) - A Nation Where Hockey Matters (2013-2017)

EH have a clear vision, a powerful philosophy and five core objectives that all those who have a role in advancing Hockey can unite behind. With UK Sport and Sport England's investment, and growing commercial revenues, EH are ambitious about how they can take the sport forward in Olympic cycles and beyond.

"The vision is for England to be a 'Nation Where Hockey Matters'. A nation where hockey is talked about at dinner tables, playgrounds and public houses, up and down the country. A nation where the sport is on the back pages of our newspapers, where children dream of scoring a goal for England's senior hockey team, and where the performance stirs up emotion amongst the many, not the few"

England Hockey aspires to deepen the passion of those who play, deliver and follow sport by providing the best possible environments and the best possible experiences. Whilst

reaching out to new audiences by making the sport more visible, available and relevant and through the many advocates of hockey.

Underpinning all this is the infrastructure which makes the sport function. EH understand the importance of volunteers, coaches, officials, clubs and facilities. The more inspirational people can be, the more progressive Hockey can be and the more befitting the facilities can be, the more EH will achieve. The core objectives are as follows:

- Grow our Participation
- Deliver International Success
- Increase our Visibility
- Enhance our Infrastructure
- Be a strong and respected Governing Body

England Hockey has a Capital Investment Programme (CIP) that is planned to lever £5.6 million investment into hockey facilities over the next four years, underpinned by £2m million from the National Governing Body. With over 500 pitches due for refurbishment in the next 4-8 years, there will be a large focus placed on these projects through this funding stream. The current level of pitches available for hockey is believed to be sufficient for the medium term needs, however in some areas, pitches may not be in the right places in order to maximize playing opportunities

'The right pitches in the right places[16]'

In 2012, EH released its facility guidance which is intended to assist organisations wishing to build or protect hockey pitches for hockey. It identifies that many existing hockey AGPs are nearing the end of their useful life as a result of the installation boom of the 90's. Significant investment is needed to update the playing stock and protect the sport against inappropriate surfaces for hockey as a result of the rising popularity of AGPs for a number of sports. EH is seeking to invest in, and endorse clubs and hockey providers which have a sound understanding of the following:

- Single System – clubs and providers which have a good understanding of the Single System and its principles and are appropriately places to support the delivery.
- ClubsFirst accreditation – clubs with the accreditation are recognised as producing a safe effective and child friendly hockey environment
- Sustainability – hockey providers and clubs will have an approved development plan in place showing their commitment to developing hockey, retaining members and providing an insight into longer term goals. They will also need to have secured appropriate tenure.

16 http://englandhockey.co.uk/page.asp?section=1143&sectionTitle=The+Right+Pitches+in+the+Right+Places

England Hockey Strategy

Vision: For every hockey club in England to have appropriate and sustainable facilities that provide excellent experiences for players.
Mission: More, Better, Happier Players with access to appropriate and sustainable facilities.
Our club market is well structured and clubs are required to affiliate to England Hockey to play in community leagues. As a result only relatively few occasional teams lie outside our affiliation structure. Schools and Universities are the other two areas where significant hockey is played.

The 3 main objectives of the facilities strategy are:

1. **PROTECT: To conserve the existing hockey provision**

We currently have over 800 pitches that are used by hockey clubs (club, school, universities.) We need to retain the current provision where appropriate to ensure that hockey is maintained across the country.

2. **IMPROVE: To improve the existing facilities stock (physically and administratively).**

The current facilities stock is ageing and there needs to be strategic investment into refurbishing the pitches and ancillary facilities. There needs to more support for clubs to obtain better agreements with facilities providers & education around owning an asset.

3. **DEVELOP: To strategically build new hockey facilities where there is an identified need and ability to deliver and maintain. This might include consolidating hockey provision in a local area where appropriate.**

The research has identified key areas across the country where there is a lack of suitable Hockey provision and there is a need for additional pitches. There is an identified demand for multi pitches in the right places to consolidate hockey and allow clubs to have all of their provision catered for at one site.

2015-2018 British Tennis Strategy

The new strategy is presented in a concise one page framework that includes key strategies relating to three participation "focus" areas, six participation "drivers" and three participation "enablers". To achieve success, the 12 strategy areas will need to work interdependently to stem the decline and unlock sustainable growth:

The three participation “focus” areas are where tennis is consumed:

- Deliver great service to clubs
- Build partnerships in the community, led by parks
- Enhance the tennis offer in education

The six participation "drivers" are the areas that will make the biggest difference where tennis is consumed. They must all be successful on a standalone and interconnected basis and include:

- Becoming more relevant to coaches
- Refocusing on recreational competition
- Providing results orientated facility investment
- Applying best in class marketing and promotion
- Jump starting the peak summer season
- Establishing a "no compromise" high performance programme with focus

The final layer is comprised of three participation "enablers" that underpin our ability to be successful. These enablers are rooted in how the LTA will get better; how the entire network of partners must be harnessed to work together and the need to raise more financial resources to fund our sport's turnaround. They include:

- Becoming a more effective and efficient LTA
- Harnessing the full resource network
- Generating new revenue

For further information and more detail on the framework please go to *http://www.lta.org.uk/about-the-lta/structure-vision*

Bowls England: Strategic Plan 2014-2017

Bowls England will provide strong leadership and work with its stakeholders to support the development of the sport of bowls in England for this and future generations.

The overall vision of Bowls England is to:

- Promote the sport of outdoor flat green bowls.
- Recruit new participants to the sport of outdoor flat green bowls.
- Retain current and future participants within the sport of flat green bowls.

In order to ensure that this vision is achieved, ten key performance targets have been created, which will underpin the work of Bowls England up until 31st March 2017.

- 115,000 individual affiliated members.
- 1,500 registered coaches.
- Increase total National Championship entries by 10%.
- Increase total national competition entries by 10%.
- Medal places achieved in 50% of events at the 2016 World Championships.
- County development officer appointed by each county association.
- National membership scheme implemented with 100% uptake by county associations.
- Secure administrative base for 1st April 2017.
- Commercial income to increase by 20%.

Despite a recent fall in affiliated members, and a decline in entries into National Championships over the last five years, Bowls England believes that these aims will be attained by following core values. The intention is to:

- Be progressive.
- Offer opportunities to participate at national and international level.
- Work to raise the profile of the sport in support of recruitment and retention.
- Lead the sport.
- Support clubs and county associations.

APPENDIX 2: REQUIREMENTS OF FA STEP SYSTEM

Step/ Grade	Min Capacity	Pitch Barrier	Technical area	Floodlights	Turnstiles	Spectator Accommodation	Press seating	Toilets within ground	Players Changing	Match Officials Changing
7	No minimum and no boundary fencing required	Post and rope around all sides that accommodate spectators. Minimum of 1.83m (ideally 2m) away from touchline and if hard standing exists (not compulsory) it should be minimum of 0.9 metres width.	Not essential but its desirable that a technical area exists within the laws of the game	Not compulsory	Not required, however where one exists it must be fixed and fully operational	No specific requirements for accommodation	None Required	Provision should be made for adequate toilet facilities	Existing must be 12m2, with 4 shower heads and adequate toilets for players .New build 18m2.	Minimum 4m2,1 shower and access to toilets (not necessarily inside the changing room). New build 6m2. Provision for both male and female officials required.

Step/ Grade	Min Capacity	Pitch Barrier	Technical area	Floodlights	Turnstiles	Spectator Accommodation	Press seating	Toilets within ground	Players Changing	Match Officials Changing
Entry to Step 6/ H	No minimum, but ground must be enclosed with fencing 1.83m high	1.1m high and 1.83 m away from touchline (ideally 2m). Hard standing width of 0.9m on spectator side of barrier on a minimum of 2 adjacent sides from the entrance.	Same side of pitch, ideally 3m apart and seat 8 people or 4m in length	Average lux of 120 for existing or 180 lux must be provided for new	1 required or a pay box.	Can be on 1 side only. 50 minimum covered. No allocation required for Directors	None Required	2 WC's should be required	Existing must be 12m2, with 4 shower heads, 1 wash hand basin, 1 WC. New build 18m2.	Minimum 4m2,1 shower, 1 WC (exclusive use but not necessarily en suite)and 1 wash hand basin. New build 6m2. Provision for both male and female officials required.
6/ G	No minimum, but ground must be enclosed with fencing 1.83m high	1.1m high and 1.83 m away from touchline (ideally 2m). Hard standing width of 0.9m on spectator side of barrier on a minimum of 2 sides on adjacent sides from the entrance.	Same side of pitch, ideally 3m apart and seat 8 people or 4m in length	Average lux of 120 for existing or 180 lux must be provided for new	1 required or a pay box.	Can be on 1 side but preferably 2 sides. 100 minimum covered of which 50 must be seated and located in one stand. No allocation required for Directors	None Required	Male: 2 urinals or equivalent and 1 WC. Female: 2WC's	Existing must be 12m2, with 4 shower heads, 1 wash hand basin, 1 WC. New build 18m2.	Minimum 4m2,1 shower, 1 WC and 1 wash hand basin. New build 6m2. Provision for both male and female officials required.

Step/ Grade	Min Capacity	Pitch Barrier	Technical area	Floodlights	Turnstiles	Spectator Accommodation	Press seating	Toilets within ground	Players Changing	Match Officials Changing
5/ F	No minimum, but ground must be enclosed with fencing 1.83m high	1.1m high and 1.83 m away from touchline (ideally 2m). Hard standing width of 0.9m on spectator side of barrier on a minimum of 3 sides.	Same side of pitch, ideally 3m apart and seat 8 people or 4m in length	Average lux of 120 for existing or 180 lux must be provided for new	1 required or a pay box.	Can be on 1 side but preferably on 2 sides of ground. 200 minimum covered of which 100 must be seated (can be 2 stands each 50) 16 seats allocated to Directors. Public address system required.	None Required	Male: 2 urinals or equivalent and 1 WC. Female: 2WC's	Existing must be 12m2, with 4 shower heads, 1 wash hand basin, 1 WC. New build 18m2.	Minimum 4m2, 1 shower, 1 WC and 1 wash hand basin. New build 6m2. Provision for both male and female officials required.

Step/ Grade	Min Capacity	Pitch Barrier	Technical area	Floodlights	Turnstiles	Spectator Accommodation	Press seating	Toilets within ground	Players Changing	Match Officials Changing
Seeking promotion from 5-4/ E	1,000	1.1m high and 1.83 m away from touchline (ideally 2m). Must be in filled so ball can't pass through. 0.9m hard standing on all 4 areas of the ground	Same side of pitch, ideally 3m apart and seat 8 people or 4m in length	Average lux of 120 for existing or 180 lux must be provided for new	2 required with 0.9m hard standing to all spectator areas.	Preferably on at least 2 sides of ground. 250 minimum covered of which 150 must be seated in not more than 2 stands (no stand can have less than 50 seats). 16 seats allocated to Directors. Also need separate Directors room for hospitality serving minimum 16 people. Separate medical room required, not accessed through changing rooms. Public address system required.	Minimum 2 with lights and writing facilities	Male: 2 urinals or equivalent and 1 WC. Female: 2WC's	Existing must be 12m2, with 4 shower heads, 1 wash hand basin, 1 WC. New build 18m2.	Minimum 4m2, 1 shower, 1 WC and 1 wash hand basin. Bell buzzer required. New build 6m2. Provision for both male and female officials required.

Step/ Grade	Min Capacity	Pitch Barrier	Technical area	Floodlights	Turnstiles	Spectator Accommodation	Press seating	Toilets within ground	Players Changing	Match Officials Changing
4/ D	1,300 with potential to increase to 1,950	1.1m high and 1.83 m away from touchline (ideally 2m). Must be in filled so ball can't pass through. 0.9m hard standing on all 4 areas of the ground	Same side of pitch, ideally 3m apart and seat 8 people or 4m in length	Average lux of 120 for existing or 180 lux must be provided for new	2 required with 0.9m hard standing to all spectator areas.	Preferably on at least 2 sides of ground. 300 minimum covered of which 150 must be seated in not more than 2 stands (no stand can have less than 50 seats). 24 seats allocated to Directors. Also need separate Directors room for hospitality serving minimum 24 people. Separate medical room required, not accessed through changing rooms. Public address system required.	Minimum 2 with lights and writing facilities	Male: 2 urinals or equivalent and 1 WC. Female: 2WC's	Existing must be 12m2, with 4 shower heads, 1 wash hand basin, 1 WC. New build 18m2.	Minimum 4m2, 1 shower, 1 WC and 1 wash hand basin. Bell buzzer required. New build 6m2. Provision for both male and female officials required.

Step/ Grade	Min Capacity	Pitch Barrier	Technical area	Floodlights	Turnstiles	Spectator Accommodation	Press seating	Toilets within ground	Players Changing	Match Officials Changing
3/ C	1,950, with potential to increase to 3,000	1.1m high and 1.83 m away from touchline (ideally 2m). Must be in filled so ball can't pass through. 0.9m hard standing on all 4 areas of the ground	Same side of pitch, ideally 3m apart and seat 8 people or 4m in length	Average lux of 120 for existing or 180 lux must be provided for new	3 required with 0.9m hard standing to all spectator areas.	Preferably on 2 sides of ground. 500 minimum covered of which 250 must be seated (no more than 2 stands, minimum of 50 per stand). 24 seats allocated to Directors. Also need separate Directors room for hospitality serving minimum 24 people. Separate medical room required, not accessed through changing rooms. Public address system required.	4 with lights and writing facilities	Male: 4 urinals or equivalent and 2 WC's. Female: 2WC's	Existing must be 12m2, with 4 shower heads, 1 wash hand basin, 1 WC. New build 18m2.	Minimum 4m2, 1 shower, 1 WC and 1 wash hand basin. Bell buzzer required. New build 6m2. Provision for both male and female officials required.

Step/ Grade	Min Capacity	Pitch Barrier	Technical area	Floodlights	Turnstiles	Spectator Accommodation	Press seating	Toilets within ground	Players Changing	Match Officials Changing
2/ B	3,000, with potential to increase to 4,000	1.1m high and 1.83 m away from touchline (ideally 2m). Must be in filled so ball can't pass through. 0.9m hard standing on all 4 areas of the ground	Same side of pitch, ideally 3m apart and seat 11 people or 5.5m in lengt h	Average lux of 180	6 required with 0.9m hard standing to all spectator areas.	Preferably on 2 sides of ground. 500 minimum covered of which 250 must be seated and located in one stand. 24 seats allocated to Directors. Also need separate Directors room for hospitality serving minimum 24 people. Separate medical room required, not accessed through changing rooms. Public address system required	6 with lights and writing facilities	Male: 4 urinals or equivalent and 2 WC's. Female: 2WC's	Must be 18m2, with 4 shower heads, 1 wash hand basin, 1 WC.	Minimum 4m2, 1 shower, 1 WC and 1 wash hand basin. Bell buzzer required. New build 6m2. Provision for both male and female officials required.

Step/ Grade	Min Capacity	Pitch Barrier	Technical area	Floodlights	Turnstiles	Spectator Accommodation	Press seating	Toilets within ground	Players Changing	Match Officials Changing
1/ A	4,000, with potential to increase to 5,000	1.1m high and 2.25 m away from touchline (ideally 2.75m). Must be in filled so ball can't pass through. 1m hard standing on all 4 areas of the ground	Same side of pitch, ideally 3m apart and seat 11 people or 5.5m in length	Average lux of 250	8 required with 1m hard standing to all spectator areas.	Preferably on 2 sides of ground. 500 minimum covered of which 250 must be seated and located in one stand. 24 seats allocated to Directors. Also need separate Directors room for hospitality serving minimum 24 people. Separate medical room required, not accessed through changing rooms. Public address system required	12 with lights and writing facilities	Male: 4 urinals or equivalent and 2 WC's. Female: 2WC's	Must be 18m2, with 4 shower heads, 1 wash hand basin, 1 WC and 2 urinals.	Minimum 6m2, 1 shower, 1 WC and 1 wash hand basin. Bell buzzer required. New build 6m2. Provision for both male and female officials required.

TGR	Team Generation Rate

PART 1: INTRODUCTION

This is the Playing Pitch Strategy (PPS) for the London Borough of Havering. Building upon the preceding Assessment Report, it provides a clear, strategic framework for the maintenance and improvement of existing outdoor sports pitches and ancillary facilities between 2016 and 2021. The population projections used will be in accordance with the Greater London Authority (GLA) figures and run to 2031[1]. The PPS covers the following playing pitches and outdoor pitch sports:

- Football pitches (grass and third generation turf (3G))
- Cricket pitches
- Hockey pitches (artificial grass pitches (AGPs))
- Rugby union pitches
- Tennis courts
- Bowling greens
- Softball pitches

The Strategy is capable of:

- Forming part of the evidence base for the emerging Local Plan that will stand up to independent examination in public.
- Providing a clear investment strategy for playing pitch provision.
- Providing a clear framework for all facility providers.
- Clearly addressing the needs of playing pitches and participants within the local area, picking up particular local demand issues.
- Informing funding applications and targeting improvements via S106 contributions/CIL.
- Taking account of population increases that result from housing development.
- Understanding the implications and impact on playing fields from related school or academy development.
- Provide a clear hierarchy of sites that ensures protection from development pressures.

Objectives

The Strategy has been developed from research and analysis of playing pitch provision and usage within LBH to meet the following objectives:

- Integration with other strategic work streams and regeneration activity to ensure a co-ordinated and strategic approach to outdoor sports facilities and provision for the Borough.
- Providing a clear investment strategy for outdoor sports facility provision within the local authority area.
- Providing a clear framework for all outdoor sports facility providers, including the public, private and third sectors.
- Clearly addressing the needs of pitch sports within the local area and picking up particular local demand issues and deficiencies in provision, both in distribution and in relation to gaps in provision identified through community consultation.
- Being future proof and addressing issues of population growth, and or major growth/regeneration areas. The ability for regular monitoring and update processes (in accordance with Stage E of the guidance to enable changes to be identified and assessed against population growth etc.).
- Addressing issues of cross boundary facility provision.

[1] Data source: GLA 2015 round ward population projections - SHLAA-based; Capped Household Size model.

- Addressing issues of surplus and deficiency with particular reference to overplay and spare capacity, accessibility, quality and management with regard to facility provision. Note: consideration also needs to be given to the leagues requirements where changing accommodation is specified as essential and our ability to meet this need particularly in relation to the key sports.
- Being robust, and capable of adoption as a technical document, standing up to scrutiny at a public inquiry and compliant with the National Planning Policy Framework.
- The project brief has been agreed which sets out clearly the roles and responsibilities of all partners (Borough Council, NGBs / SE and consultants) for each element of the study.

The Strategy and Action Plan recommends a number of priority projects for LBH which should be implemented from 2016 to 2021. It provides a framework for improvement and, although resources may not currently be in place to implement it, potential partners and possible sources of external funding need to be explored and developed as appropriate (see Appendix Two: Funding Plan).

The recommendations that come out of this strategy may inform local planning policy and can support the local planning evidence base so there is a policy mechanism to support delivery and secure provision/investment where the opportunity arises.

There is a need to build key partnerships between the Council, National Governing Bodies of Sport (NGBs), Sport England, schools, further education providers, community clubs and private landowners to maintain and improve playing pitch provision. In these instances, the potential for the Council to take a strategic lead is more limited (except in terms of Section 106 Agreements/future Community Infrastructure Levy). This document will provide clarity about the way forward, and allow key organisations to focus on the key issues that they can directly influence and achieve.

Context

The National Planning Policy Framework March 2012 (NPPF) recognises that access to high quality open spaces and opportunities for sport and recreation can make an important contribution to the health and well-being of communities.

NPPF requires that planning policies are based on robust and up-to-date assessments of the needs for open space, sports and recreation facilities and opportunities for new provision.

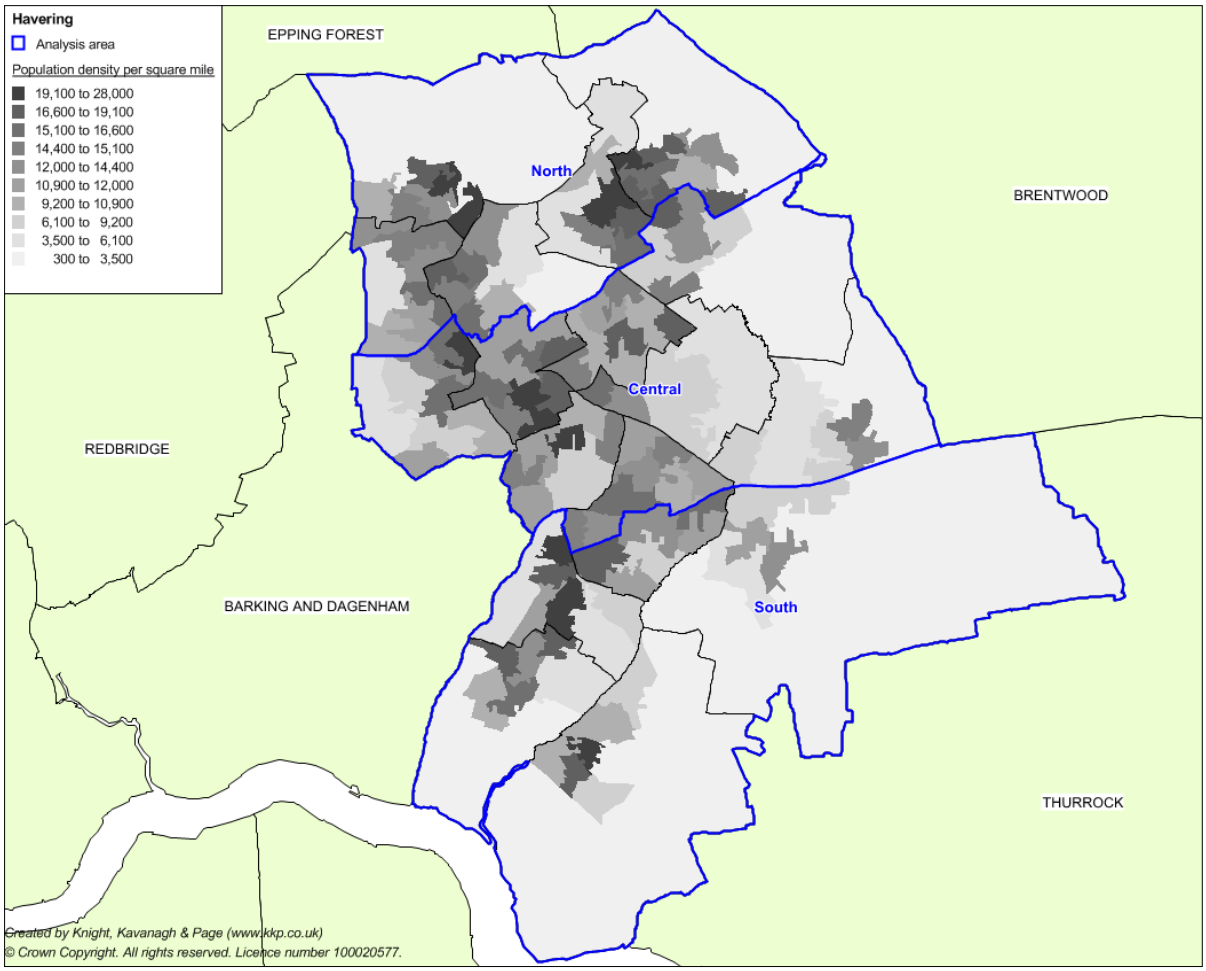
The assessments should identify specific needs and quantitative or qualitative deficits or surpluses of open space, sports and recreational facilities in the local area.

Paragraph 74 of NPPF is concerned with the protection of existing open space, sports and recreational buildings and land, including playing fields. One of the matters set out is that such buildings and land should not be built on unless an assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements. Planning Practice Guidance (PPG) (March 2014) refers local authorities to Sport England's guidance on how to assess the need for sport and recreation facilities.

Study area

The study area is the London Borough of Havering (LBH) boundary area. Further to this sub areas or analysis areas have been created to allow a more localised assessment of provision and examination of playing pitch supply and demand at a local level. Use of analysis areas also allows local circumstances and issues to be taken into account. LBH is divided into three analysis areas, North, Central and South.

Figure 1.1: PPS analysis areas



Further to this, there is a level of imported demand and sports teams from outside the study area that use pitches within Havering. In addition, it is likely that sports teams from inside Havering use facilities outside of the Borough, for example in Thurrock. This cross-boundary movement is taken into consideration within each sports section where relevant following consultation with neighbouring authorities and National Governing Bodies of Sport.

Vision

Therefore, this study has been developed on the basis of the above strategic drivers in order to ensure that it reflects the Council's wider ambitions. A vision has been agreed with the Steering Group to provide a clear focus with desired outcomes for the LB Havering Playing Pitch Strategy:

> *"To ensure that there is a sound evidence base upon which to make informed decisions about the provision of quality and adequate sports playing pitches in Havering for the life of the strategy."*

Headline findings

The table below highlights the quantitative headline shortfalls from the LB Havering Playing Pitch Assessment Report.

Sport	Analysis area	Current demand shortfall[2]	Future demand shortfall (2031)[3]
Football (grass pitches)	Central	Shortfall of 4.5 match sessions on adult and 0.5 on youth 11v11 pitches.	Shortfall of 6.5 match sessions on adult, 3 on youth 11v11, 2.5 on 9v9, 1.5 on 7v7 and 1.5 on 5v5 pitches.
	North	Shortfall of two match sessions on adult, 2.5 on 9v9 and 0.5 on 7v7 pitches.	Shortfall of 4.5 match sessions on adult, 2 on youth 11v11, 5.5 on 9v9 and 2 on 7v7 pitches.
	South	Shortfall of 4.5 match sessions on 9v9 and two on 5v5 pitches.	Shortfall of 0.5 match sessions on adult, 1 on youth 11v11, 8 on 9v9 and 3 on 5v5 pitches.
Football (3G AGPs)[4]	Central	Shortfall of three 3G pitches based on FA training model.	Shortfall of three 3G pitches; pitch/s will require resurface and FA testing.
	North	Shortfall of three 3G pitches based on FA training model.	Shortfall of four 3G pitches; pitch/s will require resurface and FA testing.
	South	Shortfall of three 3G pitches based on FA training model.	Shortfall of three 3G pitches; pitch/s will require resurface and FA testing.
Cricket	Central	Shortfall of 0.5 pitches.	Shortfall of two pitches.
	North	Current demand is being met.	Shortfall of one pitch.
	South	Shortfall of 0.1 pitches.	Shortfall of 0.6 pitches.
Hockey (Sand AGPs)	Havering	Current demand is being met.	Future demand can be met; pitch/s will require resurface.
Rugby union	Havering	Upminster Hall Playing Fields	Shortfall exacerbated by seven

[2] *Current demand is calculated from an analysis of overplay and spare capacity only.*
[3] *Please note that this is demand that will exist in 2031 if the current demand is not met and also includes latent and displaced demand identified.*
[4] *Based on accommodating 42 teams to one full size pitch for training.*

Sport	Analysis area	Current demand shortfall[2]	Future demand shortfall (2031)[3]
		overplayed by 6.5 match sessions and Cottons Park overplayed by 0.5 match sessions.	match sessions.
Tennis	Havering	Noak Hill Sports Complex (Havering Tennis Club) is above capacity.	Future demand can be met with development of Noak Hill Sports Complex.
Bowls	Havering	Current demand is being met.	Future demand can be met.
Softball	Havering	Two sites identified to mark new softball pitches.	Future demand can be met by the new pitches being marked out.

Conclusions

The existing position for all pitch sports is either demand is being met or there is a shortfall. The future position shows exacerbation of current shortfalls. In addition, some sports and some areas where demand is currently being met will experience shortfalls. As such, there is a need to protect all existing playing pitch provision and create access to school sites or bring some disused sites back into use if feasible.

Definitions

Match sessions

Pitches have a limit of how much play they can accommodate over a certain period of time before their quality, and in turn their use, is adversely affected. As the main usage of pitches is likely to be for matches, it is appropriate for the comparable unit to be match equivalent sessions but may for example include training sessions.

Based on how they tend to be played this unit for football and rugby union pitches relate to a typical week within the season for each sport. For cricket pitches it is appropriate to look at the number of match equivalent sessions over the course of a season.

Pitch capacity

The capacity for pitches to regularly provide for competitive play, training and other activity over a season is most often determined by quality. As a minimum, the quality and therefore the capacity of a pitch affects the playing experience and people's enjoyment of playing football. In extreme circumstances it can result in the inability of the pitch to cater for all or certain types of play during peak and off peak times. Pitch quality is often influenced by weather conditions and drainage.

As a guide, each NGB has set a standard number of matches that each grass pitch type should be able to accommodate without adversely affecting its current quality (pitch capacity):

Sport	Pitch type	No. of matches per week		
		Good quality	Standard quality	Poor quality
Football	Adult pitches	3	2	1
	Youth pitches	4	2	1
	Mini pitches	6	4	2
Rugby union*	Natural Inadequate (D0)	2	1.5	0.5
	Natural Adequate (D1)	3	2	1.5
	Pipe Drained (D2)	3.25	2.5	1.75
	Pipe and Slit Drained (D3)	3.5	3	2
Cricket	One grass wicket	5 per season	N/A	N/A
	One synthetic wicket	60 per season	N/A	N/A

Shortfalls

Please note that shortfalls are expressed in match sessions rather than converted to pitches. To convert match sessions into pitches, the number of match sessions should be halved (to take account of teams playing on a home and away basis).

For example, match equivalent sessions is an appropriate comparable unit for pitch usage. For football, rugby union and rugby league, pitches should relate to a typical week within the season and one match = one match equivalent session if it occurs every week or 0.5 match equivalent sessions if it occurs every other week (i.e. reflecting home and away fixtures). For cricket pitches it is appropriate to look at the number of match equivalent sessions over the course of a season and one match = one match equivalent session.

For a full Glossary of terms please refer to Appendix Three.

PART 2: SPORT SPECIFIC SUMMARIES, SCENARIOS AND RECOMMENDATIONS

In order to help develop the recommendations/actions and to understand their potential impact, a number of relevant scenario questions are tested against the key issues in this section for the playing pitch sports resulting in the sport specific recommendations. The section below highlights the summary boxes from each sports section within the Assessment Report:

Football – grass pitches

Summary

- The audit identifies a total of 170 football pitches across 63 sites in Havering. Of these, 151 are available, at some level, for community use.
- Of the pitches available for community use, six pitches are assessed as good quality, 108 as standard quality and 37 as poor quality.
- Of sites serviced by changing facilities, 24% have good quality facilities, 43% have standard quality facilities and 33% have poor quality facilities. Additionally, clubs report that a lack of changing facilities is causing an issue at some sites.
- Essex Minors of Hornchurch FC reports an issue with security of tenure at Gaynes School, Collier Row FC requires its lease extending at Forest Row and Romford FC requires a long term lease at Westlands Playing Fields in order to build a stadia pitch.
- There is a large football participation base within Havering with a total of 306 teams recognised across 55 clubs. This consists of six veterans, 51 men's, one women's, 124 youth boys', seven youth girls' and 117 mini teams.
- There has been an increase in mini and youth teams over the past three years, with 25% of clubs reporting an increase in mini teams and 21% reporting an increase in youth teams. Only 15% of clubs report an increase in adult teams, whilst 19% report a decrease.
- There are 64 teams (not included in the above figure of 306) registered to Havering that currently play outside of the local authority. Reasons for the displaced demand varies. For example, Romford Dynamos FC and Rowham FC report that they both access pitches in Dagenham due to cheaper pitch hire costs, whilst Goodmayes FC reports that it accesses pitches in Redbridge as the quality is perceived to be better. Jets FC and Romford Boro FC report that no available sites in Havering have the capacity to accommodate all their teams (seven and 14 respectively), meaning they instead choose to play on larger sites in Dagenham and Ilford respectively.
- There is latent demand equating to 1.5 adult, two youth 11v11, 1.5 9v9, one 7v7 and one 5v5 match equivalent session.
- Team generation rates predict there will be an increase of four adult teams (two match equivalents), 40.5 youth teams (20 match equivalents) and 21 mini teams (10.5 match equivalents).
- There is a total of nine match equivalent sessions of actual spare capacity across Havering, the majority of which is on 5v5 pitches and in the North Analysis Area.
- There are 61 pitches overplayed across 16 sites by a total of 49.5 match equivalent sessions.
- There is either minimal current spare capacity or shortfalls across all pitch types. Further to this future demand results in shortfalls across each pitch type.

Scenarios

Improving pitch quality

Improving pitch quality on overplayed pitches (i.e. through increased maintenance or drainage improvements) to either standard or good quality will increase pitch capacity and therefore help to accommodate expressed overplay. Each overplayed pitch identified could accommodate its current demand if quality became good, with the exception of a 9v9 pitch at Gaynes School Language College and Hilldene Primary School, two adult pitches at Westlands Playing Fields and one adult pitch at Henderson's Sports & Social Club.

Further to this, there are currently six match equivalents sessions of spare capacity discounted across Havering due to poor quality. Improving pitch quality at these sites will therefore provide actual spare capacity. This can be used to accommodate demand from currently overplayed sites as well as displaced, latent and future demand.

First and foremost, the Council should identify key sites where pitch quality needs to be improved to increase carrying capacity. The FA Pitch Improvement Programme (PIP) can then support a co-ordinated effort alongside the Council's maintenance team to review maintenance programs and schedules to see where quality improvements can be made.

However, given the costs of improving pitch quality, alternatives also need to be considered that can offer a more sustainable model for the future of football. The alternative to grass pitches is the use of 3G pitches for competitive matches.

Returning displaced demand

As a breakdown, displaced demand equates to 7.5 match equivalent sessions on adult pitches (15 teams), eight match equivalents on youth 11v11 pitches (16 teams), seven match equivalents on 9v9 pitches (14 teams), five match equivalents on 7v7 pitches (10 teams) and 4.5 match equivalents on 5v5 pitches (nine teams).

Providing security of tenure

The table below highlights unsecure sites that currently contain football pitches.

Table 2.1: Unsecured sites with football pitches

Site ID	Site name	Security of tenure	Community use?	Club users
1	Abbs Cross Academy & Arts College	No	Yes	Elite Colts YFC
3	Bower Park School	No	No	-
9	Coopers Company & Coborn School	No	Yes	Old Cooperians FC Royal Alexandra FC Crumpled Horn FC
11	Drapers Academy	No	No	-
13	Gaynes School Language College	No	Yes	Essex Minors Hornchurch FC
14	Hall Mead School	No	Yes	Upminster Park Rovers FC
17	Havering College	No	Yes-unused	-
23	Marshalls Park School	No	Yes	Elite Colts YFC
26	Pyrgo Priory School	No	Yes-unused	-

Site ID	Site name	Security of tenure	Community use?	Club users
27	Rainham Village Primary School	No	Yes	Rainham WMC FC
29	Redden Court School	No	Yes	Brymans Park YFC
33	The Albany	No	No	-
35	The Campion School	No	No	-
37	The Royal Liberty School	No	No	-
38	The Sanders Draper School And Specialist Science College	No	Yes	Sanders Cross United FC
42	Wykeham Primary School	No	Yes-unused	-
49	Gidea Park Sports Ground	No	Yes	Bryon Red Star FC Raphael Park Rovers JFC

79	St Albans Catholic Primary School	No	No	-
80	Parklands Junior School	No	No	-
81	Drapers Brookside Junior School	No	No	-
82	Towers Junior School	No	No	-

There are currently 41 match equivalent sessions played on unsecured pitches across these sites. Removing them from calculations would therefore exacerbate shortfalls across pitch type.

A total of 33 match equivalent sessions are played at unsecured education sites. Creating community use agreements at these sites will ensure that these match equivalents can continue to be provided for in the long-term.

Should unsecured sites be permanently lost in the future, replacement provision of an equal or greater quantity and quality at a suitable location is required elsewhere within Havering.

Conclusions

If pitch quality, overplay and security of tenure is addressed, and if access to existing pitches is maximised (and no pitches are permanently lost), there would be no requirement for new grass pitch provision.
However, when this model is run on an area by area basis within Havering, there may be isolated areas which do generate enough demand for new pitches to be provided in the future.

Recommendations

- Explore opportunities for access to 3G pitches to cater for grass pitch shortfalls.
- Protect existing quantity of pitches (unless replacement provision is provided).
- Ensure all teams are playing on the correct pitch sizes and explore pitch reconfiguration to accommodate more youth 11v11 pitches where possible.
- Where pitches are overplayed and assessed as poor or standard quality, prioritise investment and review maintenance regimes to ensure it is of an appropriate standard to sustain use and improve quality.
- Transfer play from sites which remain overplayed to alternative sites with spare capacity or sites which are not currently available for community use.
- Work to accommodate displaced, latent and future demand at sites which are not operating at capacity or at sites which are not currently available for community use.
- Provide security of tenure for all clubs using education sites through community use agreements.
- Where appropriate, develop partnerships and/or lease arrangements with large, sustainable, development-minded clubs to manage their own sites.
- Seek to improve ancillary provision at key strategic sites.

Football – 3G pitches

Summary

- Since the completion of the assessment report, there is now one full size 3G pitch at Frances Bardsley School for Girls after it was converted from a sand-based pitch. The pitch is FA tested to host competitive matches.
- Another full size 3G pitch is also under development at Broxhill Sports Centre.
- There are smaller sized 3G pitches located at Brittons Academy Trust and King Georges (PlayFootball).
- Most clubs either train on sand based pitches or access 3G pitches in neighbouring local authorities. Alternatively, some clubs continue to access grass pitches for winter training.
- The FA's long term ambition is to provide every affiliated team in England the opportunity to train once per week on a floodlit 3G surface and it is estimated that one full size AGP can service 42 teams. Using this calculation in Havering, there is a current need for eight 3G pitches based on demand from 306 teams.
- If each team were to train within the respective analysis area that they play, there is a shortfall of three 3G pitches each in the North and South analysis areas and a shortfall of two 3G pitches in the Central Analysis Area (following the development at Frances Bardsley School for Girls).

Scenarios

Accommodating all training demand would require eight full size 3G pitches overall and nine 3G pitches if each team was to remain within their respective analysis area (based on one full size 3G pitch being able to accommodate 42 teams per week).

Should all displaced teams also train within Havering, as the majority would prefer, an additional one full size 3G pitch is required.

Moving all mini teams to play on 3G pitches would require seven full size 3G pitches based on 54 teams playing 5v5 football (requiring seven pitches) and 63 teams playing 7v7 football (requiring six pitches).

Moving all 9v9 teams to play on 3G pitches would require five full size 3G pitches based on 53 teams playing 9v9 football.

Moving all youth 11v11 teams to play on 3G pitches would require 13 full size 3G pitches based on 78 teams playing youth 11v11 football.

Recommendations

- Ensure Broxhill Sports Centre is FA tested and seek to maximise usage for competitive football.
- Ensure Frances Bardsley School for Girls remains on the FA register and ensure a sinking fund is in place for long term sustainability.
- Identify feasible sites to increase provision of 3G pitches in Havering to meet training and competitive demand.
- Consider FA Park Life programme as a possible opportunity to address the shortfall in 3G pitches.
- Carry out consultation with leagues/clubs to gauge acceptance of moving competitive play to 3G pitches in the future.
- Encourage all providers to have a sinking fund in place to ensure the long term sustainability of pitches.
- Measure the impact of the 3G pitches at Frances Bardsley School for Girls and Broxhill Sports Centre within the PPS Annual Review to support the strategic planning of additional 3G pitches.
- Explore funding opportunities to resurface sand-based pitches assessed as poor quality, i.e. Drapers Academy and the Brittons Academy Trust, possibly as 3G in line with the aforementioned.
- Explore weekend community use options at Bower Park School, and, if successful, the feasibility for 3G conversion.
- Explore options for a World Rugby compliant AGP in line with RFU investment plans.

Rugby union

Summary

- There are 31 rugby union pitches in Havering located across 16 sites, whilst there are no World Rugby compliant AGPs. There are 23 senior and eight mini pitches, two senior pitches are unavailable for community use.
- Overall in Havering there are 21 senior pitches available for community use, four of which were rated as good quality and 12 are poor quality. Out of eight mini pitches, seven are rated as poor quality.
- Of nine school sites with rugby union pitches, seven are recorded as having poor quality pitches.

- Upminster RFC has a licence on the pitches at Upminster Hall Playing Fields, Campion RFC lease the pitch at Cotton Park and Old Cooperians RFC hire school facilities at Cooper and Coborn School. Renegotiating long term leases for sites is important and should be a priority.
- Romford and Gidea RFC owns its own ground and facilities.
- Campion RFC need to identify funding to invest in the clubhouse facilities.
- New pitches are to be created at Upminster Hall Playing Fields as the cricket square will be replaced.
- Four rugby union clubs play within Havering; Romford and Gidea RFC, Upminster RFC, Old Cooperians RFC and Campion RFC. Between them they field a total of 13 senior, 12 junior and 14 mini teams.
- Future population projections forecast an increase of one senior team.
- 13 sites show potential spare capacity, however, in actual spare capacity terms; this is three sites with spare capacity, with an equivalent of seven match sessions available.
- Both Cottons Park (Campion RFC) and Upminster Playing Fields (Upminster RFC) are overplayed, resulting in total overplay of seven match equivalents each week. However, the majority of this is recorded at Upminster Playing Fields (six match sessions) due to a variety of reasons including poor quality pitches and the amount of junior teams playing on the senior pitches.
- Although spare capacity exists at three sites and equates to seven match sessions, these sites are not necessarily adequate to meet the needs of the clubs expressing the demand. Some school sites for example do not currently have appropriate ancillary facilities to support activity.

Scenarios

Improving pitch quality

Significant improvements are required to the maintenance programme and drainage at Upminster Hall Playing Fields and Cottons Park, with all pitches assessed as poor quality (M0/D0). This would assist in addressing overplay.

Upminster Hall Playing Fields pitches are used by Upminster RFC and are overplayed by 6.5 match sessions. Increasing the pitch quality to standard (M1/D2) would reduce overplay to 2.5 match sessions.

Cotton Park is used by Campion RFC and is overplayed by 0.5 match sessions. Improving the pitch quality to standard (M1/D2) would alleviate overplay and provide 1.5 match sessions of spare capacity.

Securing access to additional grass pitches (preferably floodlit) or a 3G World Rugby AGP would address the remaining shortfalls.

Creating new pitches

Suitable sites should be identified, where possible, to develop mini pitches for the two large clubs with significant mini and junior sections. This will enable mini play to be transferred away from senior pitches and will alleviate pressure on senior pitches. One possible option would be to explore the facilities at the currently unused school sites; however, ancillary facilities must be appropriate. Potential sites that may be logical, in terms of distance, are Upminster RFC to further utilise the pitches at Emerson Park Academy. Romford and Gidea Park RFC to consider working with Hall Mead School to reconfigure and access pitches for mini activity.

Recommendations

- Where possible, improve quality through increased maintenance of pitches to help address overplay.
- Ensure adequate security of tenue for all clubs at their main home ground.
- Support Campion RFC identify funding and develop clubhouse.
- Support Campion School in bid for funding to improve pitches.
- Review maintenance on currently unused school pitches (Hall Mead School and Marshalls Park School) to improve quality and make available for demand. Encourage these schools to establish community use in order to accommodate current and predicted future demand.
- Explore options for a World Rugby compliant AGP in line with RFU investment plans.

Hockey

Summary

- There are six full size sand based AGPs (reduced since the assessment report as Frances Bardsley School has been converted to 3G) located in Havering, the majority of which are located on school sites and all floodlit.
- Two AGPs are rated as good; three are standard and two as poor quality. The AGP at Drapers Academy is poor quality as it suffers from frequent vandalism and consequently the goal posts and carpet have been damaged. Brittons Academy Trust is poor quality as it also suffers from vandalism and its goal posts and surface are frequently damaged.
- The general stock of AGPs in Havering is aging and will need resurfacing in the next few years. At least three of the AGPs have no sinking funds in place for future replacement.
- No hockey use is recorded at the Draper Academy or Brittons Academy Trust.
- Bower Park School is not available for community use at weekends and receives no hockey demand.
- Upminster Hockey Club (Coopers Company & Coborn School and Emerson Park Academy) and Havering Hockey Club (The Campion School) both currently play in Havering and provide a total of 33 teams, including 19 senior teams.
- Team generation rates indicate that population increases are significant enough to result in the likely creation of two senior teams and four junior teams. This is a potential increase of six hockey teams.
- Romford HC with five senior teams is displaced to Barking and Dagenham, despite having a clubhouse in Havering. This is due to a perceived lack of accessible pitches in Havering after it previously used The Frances Bardsley School.
- Peak time demand for senior hockey is Saturdays, whereas for junior hockey it is Sundays.

Scenarios

Accommodating current and future demand

Based on a floodlit AGP being able to accommodate a maximum of four matches on one day, and based on teams playing home and away (i.e. accommodates eight teams), there is a current requirement for three full size, floodlit AGPs in Havering (based on 19 senior teams playing at peak time). To accommodate displaced (five teams at peak time) and future demand (four teams at peak time); this increases to a requirement for four full size, floodlit AGPs.

As there are currently six pitches servicing Havering, supply is deemed sufficient to meet demand both currently and in the future in terms of quantity; however, quality issues and access issues result in only three pitches currently being used for hockey, meaning an improvement is required to meet demand.

Converting pitches to 3G

Providing enough accessible sand-based pitches are retained throughout Havering, there is scope to convert some of the existing stock to a 3G surface in order to reduce 3G shortfalls. This, however, only implies to pitches that have no current or future demand for hockey i.e. Draper Academy.

Recommendations

- Retain at least four (including all pitches currently used for hockey), good quality, accessible, sand-based AGPs to meet current and future hockey demand.
- Seek to prevent vandalism issues at Brittons Academy Trust and explore transfer of hockey demand to the site.
- The FA and England Hockey to work together to identify the feasibility of converting Drapers Academy.
- Encourage providers to put sinking funds (formed by periodically setting aside money over time ready for surface replacement when required) in place to maintain AGP pitch quality in the long term.

Cricket

Summary

- There are 17 grass wicket cricket pitches in Havering all of which are available for community use and used.
- Upminster Hall Playing Fields will no longer be used from next season as the cricket pitch is to be replaced by rugby pitches.
- It is recommended that lease agreements are extended where possible to provide clubs with greater security of tenure.
- The audit of grass wicket pitches found three pitches to be good quality and the remaining 14 pitches to be standard quality.
- All clubs have access to changing room facilities at their home ground and all clubs rate the overall quality of their clubhouse/pavilion as being good or acceptable.
- Four clubs report a demand for additional training facilities.
- In total, the 11 clubs consist of 46 men's, one women's and 35 junior boys' teams.
- Four clubs report that their number of senior teams has decreased over the previous three years, whilst only one club reports an increase. Three clubs report a decrease in junior teams and one club reports an increase.
- Last Man Stands is played at Harold Wood Primary School and consists of seven teams.
- St Andrews CC will become displaced out of Havering next season whilst the third team from Havering-atte-Bower CC will be without a home pitch.
- Based on application of population growth to team generation rates an increase of one senior and nine junior teams is to be expected. Further to this, clubs express demand to grow by six senior and 14 junior teams.
- Despite 15 grass wicket pitches in Havering showing potential spare capacity, only Emerson Park Academy is considered to have actual spare capacity.
- Central Park is overplayed by three match equivalent sessions.
- As junior teams can play on non-turf wickets and generally play mid-week on a variety of days spare capacity is considered to exist for junior matches both now and in the future.
- Taking into account current demand there is a shortfall of pitches for senior cricket in the Central and South analysis areas, whilst the North Analysis Area is played to capacity.
- Future demand results in a shortfall in each analysis area.

Scenarios

Improving pitch quality

In most instances overplay is minimal (Central Park is overplayed by three match equivalent sessions), therefore increased club management and maintenance of the square is likely to improve pitch quality and as required sustain current levels of overplay through greater time and cost able to be invested in relation to current regimes.

Developing new pitches

Noak Hill Taverners CC has expressed demand for the development of a non-turf pitch at Noak Hill Sports Ground. Working in partnership with Gidea Park and Romford CC, this could also provide additional capacity for this club to expand, as they are in the locality.

Harold Wood CC has a grant in place for the installation of practice nets at Harold Wood Park. This would provide added value for this club and potentially other local clubs for training.

These new pitches, alongside utilising non-turf wickets that are currently underused, should address any current and future shortfalls.

Accommodating displaced demand

It is planned that there will be a loss of a cricket pitch at Upminster Hall Playing Fields. If disposal of the site is inevitable it must meet the requirements of the second criterion of paragraph 74 of NPPF. This requires replacement provision of an equivalent or better quantity and quality in a suitable location.

Emerson Park Academy is the only cricket pitch with spare capacity during the peak period, enough for one additional team. The Council owned Upminster Hall Playing Fields are due to remove the cricket pitch from next season, leaving Havering atte Bower 3rd team and St Andrews CC without a venue. The relocation of Havering atte Bower to close by Emerson Park Academy would be most logical, as St Andrews CC already has secured usage of a pitch outside of Havering in Billericay; this pitch has capacity to accommodate the team. It must be noted that the Club wish to play in Havering and are hoping that this move is a short term solution.

Recommendations

- Protect current levels of provision to accommodate current and future demand.
- Work with clubs to review quality issues on those pitches assessed as standard quality and to address quality issues through increased maintenance.
- Support clubs to develop and improve 'off pitch' practice facilities or additional access to training provision elsewhere.
- Support Harold Wood CC and Noak Hill Taverners CC to develop additional pitches/facilities.
- Support clubs such as Gidea Park and Romford CC, Harold Wood CC, Havering-atte-Bower CC and Upminster CC, in securing long term tenure on pitches.

Tennis

Summary

- There are a total of 109 tennis courts identified in Havering with 80 (83%) categorised as being available for community use.
- Development plans are in place for the creation of four new, floodlit, macadam courts at Noak Hill Sports Complex, which will replace the sites existing two courts.
- Of provision that is available for community use, 32 courts (35%) are assessed as good quality, 46 (51%) are deemed standard and 13 are rated as poor (14%).
- The courts assessed as poor quality are located at Haynes Park, Hylands Park and Spring Farm Park, all of which are council owned sites.
- Raphael Park Tennis Club and Elm Park Tennis Club report that changing accommodation servicing their club is poor quality.
- There are eight clubs in Havering collectively providing a total of 571 senior members and 621 junior members.
- The LTA reports that unless tennis courts are supported by changing facilities, a café and floodlighting, it becomes harder to run a sustainable tennis programme.
- No education sites which are available for community use report any regular demand from the community, other than The Albany School which is used by Hylands Tennis Club.
- Based on LTA guidelines, Noak Hill Sports Complex is running above capacity. The proposed development of four replacement courts, however, will result in all demand being accommodated.
- As all remaining courts are deemed to have spare capacity, priority should be placed on improving current facilities, in particular relating to park courts which are assessed as poor quality.

Recommendations

- Improve court quality at sites assessed as poor or standard quality.
- Seek to improve offering at council sites through improved ancillary facilities.
- Utilise technology to better manage community tennis offering that promotes a greater level of sustainability.
- Support Havering Tennis Club to ensure the development at Noak Hill Sports Complex supports its needs.
- Support Raphael Park Tennis Club and Elm Park Tennis Club in their aspirations to improve their changing facilities.

Bowls

Summary

- There are ten flat green bowling greens in Havering across nine sites.
- One of the greens at Lodge Park Farm has recently been mothballed and is no longer in use. Haynes Park is assessed as standard quality. All remaining greens are assessed as good quality which generally matches the club ratings.
- Harold Hills Bowls Club is in the process of submitting a funding application for modernising and refurbishing its clubhouse, whilst Romford Bowls Club reports that its clubhouse is dated and in need of refurbishment.
- There are ten clubs using bowling greens in Havering. Membership of the six consulted clubs amounts to 354 men, 155 women and nine junior members.
- Despite a national trend of declining membership, both Romford Bowls Club and Elm Park Bowls Club report that senior membership has increased over the previous three years. Only Gidea Park Bowls Club reports a reduction in membership.

- All seven responding clubs have plans to increase their number of members in the future. When asked to quantify potential growth, clubs report plans to increase membership by a combined 175 senior members and 25 junior members.
- Priority should therefore be placed on ensuring green quality and ancillary provision is sustained and improved where necessary in order to allow for continued use.
- Romford Bowls Club and Upminster Bowls Club are operating above the average club membership and it is therefore important to ensure the clubs are supported where possible to enable growth as planned.
- It is also recommended that each club which was unresponsive to consultation is further communicated with in order to better understand their needs.
- Generally, it is considered that most bowling greens in Havering have spare capacity, meaning current membership and an increase in membership is sustainable and no additional facilities are necessary.

Recommendations

- Support those clubs wishing to develop ancillary facilities on site.
- Support and encourage junior bowls development in order to grow and sustain future participation levels in the sport.
- Address spare capacity and maximise the availability of bowling greens for pay and play in order to raise the profile of the game, increase levels of membership and the revenue generated by sites.
- Ensure appropriate maintenance regime to improve/sustain quality of green as appropriate.

Softball

Summary

- There are two sites, Raphael Park and Noak Hill Sports Complex, which are identified to be marked out, to support the development of a new softball league.
- Since the Assessment report, Westlands Playing Fields now has softball/baseball with a club based there.
- The sites are both suitable and can accommodate predicted current and future demand.

Recommendations

- Support the new league development with the marking of a softball pitch at Raphael Park.
- Support and encourage junior bowls development in order to grow and sustain future participation levels in the sport.
- Ensure appropriate maintenance regime to improve/sustain quality of green as appropriate.

PART 3: AIMS

The Havering PPS a strategy not just for the local authority, but holistically for sport across the Borough as a whole. Delivery of the Strategy is the responsibility of and relies on, *all* stakeholders.

The following overarching objectives are based on the three Sport England themes (see Figure 1 below). It is recommended that the following are adopted by the Council and its partners to enable it to achieve the overall vision of the Strategy and Sport England planning objectives. Objective specifics and timescales are included within the action plan (Part 5).

AIM 1

Protect playing field sites through local planning policy.

AIM 2

To **enhance** playing fields, pitches and ancillary facilities through working in partnership with others to improve the quality and management of sites.

AIM 3

To **provide** new playing pitches where there is current or future demand to do so.

Figure 1: Sport England themes

Source: Sport England 2015

PART 4: STRATEGIC RECOMMENDATIONS

The strategic recommendations have been developed from the key issues cutting across all playing pitch sports and categorised under each of the Strategy Aims. They reflect overarching and common areas to be addressed which apply across outdoor sports facilities and may not be specific to just one sport.

AIM 1
To **protect** the existing supply of playing pitch facilities where it is needed to meet current or future needs.

Recommendations:

a. Protect playing field sites through local planning policy.

b. Assist in securing tenure and access to sites for high quality, development minded clubs, through a range of solutions and partnership agreements.

c. Maximise community use of outdoor sports facilities where there is a need to do so.

Recommendation a – Protect playing field sites through local planning policy

The PPS Assessment shows that all currently used playing field sites require protection and therefore cannot be deemed surplus to requirements because of shortfalls now and in the future. Therefore, based on the outcomes of the PPS, local planning policy should reflect this situation. Planning policy should either seek to protect sites from development or replace them to an equivalent or better quantity and quality in a suitable location.

NPPF paragraph 74 states that existing open space, sports and recreational buildings and land, including playing fields, should not be built on unless:

- An assessment has been undertaken which has clearly shown the open space, buildings or land to be surplus to requirements; or
- The loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location; or
- The development is for alternative sports and recreational provision, the needs for which clearly outweigh the loss.

Lapsed and disused – playing field sites that formerly accommodated playing pitches but are no longer used for formal or informal sports use within the last five years (lapsed) or longer (disused).

The PPS Assessment shows that all currently used playing field sites require protection or replacement and therefore cannot be deemed surplus to requirements because of shortfalls now and in the future. Lapsed, disused underused and poor quality sites should also be protected from development or replaced as there is a requirement for playing field land to accommodate more pitches to meet the identified shortfalls.

New housing development - where proposed housing development is located within access of a high quality playing pitch, this does not necessarily mean that there is no need for further pitch provision or improvements to existing pitches in that area in order to accommodate additional demand arising from that development. The PPS should be used to help determine what impact the new development will have on the demand and capacity of existing sites in the area, and whether there is a need for improvements to increase capacity or if new provision is required.

The PPS should be used to help inform Development Management decisions that affect existing or new playing fields, pitches and ancillary facilities. All applications are assessed by the Local Planning Authority on a case by case basis taking into account site specific factors. In addition, Sport England as statutory consultee on planning applications that affect or prejudice the use of playing fields will use the PPS to help assess that planning application against their Playing Fields Policy.

Sport England's playing field policy exception E1 only allows for development of lapsed or disused playing fields if a PPS shows a clear excess in the quantity of playing pitch provision at present and in the future across all playing pitch sports types and sizes.

Policy Exception E1:

'A carefully quantified and documented assessment of current and future needs has demonstrated to the satisfaction of Sport England that there is an excess of playing field provision in the catchment, and the site has no special significance to the interests of sport'.

Where the PPS cannot demonstrate the site, or part of a site, is clearly surplus to requirements then replacement of the site, or part of a site, will be required to comply with Sport England policy exception E4.

Policy Exception E4:

'The playing field or fields to be lost as a result of the proposed development would be replaced, prior to the commencement of development, by a new playing field site or sites:

- of equivalent or better quality and
- of equivalent or greater quantity;
- in a suitable location and
- subject to equivalent or better management arrangements.

Further to this, all playing fields should be protected or replaced up until the point where all satisfied demand has been met within the study area or each individual sports catchment areas.

Mitigation in the form of qualitative improvements to other sites for the loss of any lapsed/disused playing field sites will only be supported if it is clearly demonstrated that all demand is being met elsewhere. If the site is located in an area of deficiency, then the entire area of playing field needs to be replaced whether that is an extension to an existing site to make it a multi pitch site or large enough to be replaced as a new site.

In the event that all demand is satisfied and the pitch assessment shows significant spare capacity across all pitch types and sizes in excess of that required to meet a strategic reserve, the following factors should be considered when assessing the suitability of lapsed/disused sites proposed for alternative development:

- Location and willingness of LA/club or other party to take on ownership/lease /maintenance.
- Size and quality e.g. single pitch site with no ancillary facilities and poorly located to meet demand.
- History of community access.
- Availability of ancillary facilities.

Local authorities wanting to dispose of school playing field land need consent under Section 77 of the Schools Standards and Framework Act 1998, but consent is now also required for disposal of any land used by a school or academy under Schedule 1 to the Academies Act 2010. Academies also need consent to any leases or disposals under their Funding Agreement.

Havering, in common with the many other London boroughs and urban areas is currently experiencing an increase in demand for school places. This increase in demand is due to rising birth rates in Havering and families moving into the Borough from other parts of London, the UK and abroad. All local authorities including Havering have a statutory duty to ensure that there are enough school places available in the Borough to accommodate all children who live in the Borough and might require one. The increase in demand for school places has meant that in some areas of Havering the demand for places is higher than the number of places available.

To ensure that Havering Council continues to fulfil its statutory duty to secure enough school places, it has already consulted on and successfully implemented expansions at several schools in the Borough, through the first phases of the Primary Expansion Programme. Havering is projecting an increase in demand of secondary school places, as the pressure on places moves from primary to secondary. Due to the sustained and increasing demand for school places, further permanent expansion of schools is required.

As such, the Council may consider in future the creation of additional school places by utilising school playing field land. Any proposal of this kind would be conducted in consultation with Sport England.

It should be noted that consent under Section 77 of the Schools Standards and Framework Act does not necessarily mean subsequent planning approval will be granted. Therefore, any application for planning permission must meet the requirements of the relevant policy, in this case paragraph 74 of NPPF, Local Plan Policy and Sport England policy. Indeed, applicants are advised to engage Sport England before submitting applications. Robust implementation of the statutory obligation will ensure protection of school playing fields for use by pupils (and sometimes the community as a whole) to ensure receipt is ploughed back into sports education.

Recommendation (b) – Assist in securing tenure and access to sites for high quality, development minded clubs through a range of solutions and partnership agreements.

Local sports clubs should be supported by partners including the Council, NGBs or the County Sports Partnership (CSP) to achieve sustainability across a range of areas including management, membership, funding, facilities, volunteers and partnership working. For example, support club development and encourage clubs to develop evidence of business and sports development plans to generate an income through their facilities. All clubs could be encouraged to look at different management models such as registering as Community Amateur Sports Clubs (CASC)[5]. Clubs should also be encouraged to work with partners locally, such as volunteer support agencies or linking with local businesses.

There are a number of sites in Havering where security of tenure for the club/user needs to be secured, including on education sites where formal community use agreements are not in place. NGBs can often help to negotiate and engage with schools, particularly academies where the local authority may not have direct influence. For further information on this, please refer to Recommendation (c) of Aim 1.

A minimum of 25 years is recommended by Sport England and NGBs to ensure security of a site and enable clubs to apply for external funding. There are a number of clubs that have been identified as having less than this term remaining on its lease and it is recommended that agreements are in place to future proof the sustainability of the clubs:

- Essex Minors of Hornchurch FC (Gaynes School)
- Collier Row FC (Forest Row)
- Romford FC (Westlands Playing Fields)
- Gidea Park and Romford CC (Gidea Park Sports Ground)
- Harold Wood CC (Harold Wood Park)
- Havering-atte-Bower CC (Havering atte Bower)
- Hornchurch Athletic CC (Hylands Park)
- Noak Hill Taverners CC (Noak Hill Sports Ground)
- Upminster CC (Upminster Park)
- Upminster Hockey Club (Coopers Company and Coborn School)
- Havering Hockey Club (Campion School)
- Campion RFC (Cottons Park)
- Old Cooperians RFC (Coopers Company and Coborn School)
- Upminster RFC (Upminster Playing Fields)

Partners should further explore opportunities where security of tenure could be granted to the clubs playing on these sites (minimum 25 years as recommended by Sport England and NGBs) so the clubs are in a position to apply for external funding to improve the ancillary facilities.

Further to this there could be examples where long term leases could be put into place for the continued use of a site. Each club should be required to meet service and/or strategic recommendations. However, an additional set of criteria should be considered, which takes into account the quality of the club, aligned to its long term development objectives and sustainability.

In the context of spending cuts it is increasingly important for pitch providers to work with users in order that they may be able to take greater levels of ownership and support the wider development and maintenance of facilities.

[5] *http://www.cascinfo.co.uk/cascbenefits*

Recommended criteria for lease of sport sites to clubs/organisations:

Club	Site
◂ Clubs should have Clubmark/FA Charter Standard accreditation award. ◂ Clubs commit to meeting demonstrable local demand and show pro-active commitment to developing school-club links. ◂ Clubs are sustainable, both in a financial sense and via their internal management structures in relation to recruitment and retention policy for both players and volunteers. ◂ Ideally, clubs should have themselves already identified (and received an agreement in principle) any match funding required for initial capital investment identified. ◂ Clubs have processes in place to ensure capacity to maintain sites to the existing, or better, standards.	◂ Sites should be those identified as 'Club Sites' (see Part 5, recommendation e) for new clubs (i.e. not those with a Borough wide significance) but which offer development potential. For established clubs which have proven success in terms of self-management 'Key Centres' (see Part 5) are also appropriate. ◂ If required, sites should acquire capital investment via external funding and partnerships to improve quality. ◂ Sites should be leased with the intention that investment can be sourced to contribute towards improvement of the site. ◂ An NGB/Council representative should sit on a management committee for each site leased to a club.

Partners can further recognise the value of ClubMark/Charter Standard by adopting a policy of prioritising the clubs that are to have access to these better quality facilities. This may be achieved by inviting clubs to apply for season long leases on a particular site as an initial trial.

Where clubs are unable to meet the required outcomes of the agreement the Council will consider the continued support and use of the site and an intervention may be required.

Club outcomes for lease agreements

Partners should establish a series of core outcomes to derive from clubs taking on a lease arrangement to ensure that the most appropriate clubs are assigned to sites. As an example, outcomes may include:

- Increasing participation.
- Supporting the development of coaches and volunteers.
- Commitment to quality standards.
- Improvements (where required) to facilities, or as a minimum retaining existing standards.

In addition, clubs should be made fully aware of the associated responsibilities/liabilities when considering leases of multi-use public playing fields.

Recommendation (c) Maximise community use of outdoor sports facilities where there is a need to do so

Education sites

In order to maximise community use of educational facilities it is recommended to establish a more coherent, structured relationship with schools, regardless of ownership, i.e. academies, independent schools, etc. The ability to access good facilities within the local community is vital to any sports organisation, yet many clubs struggle to find good quality places to play, but especially to train. Pricing policies at facilities can be a barrier to access at some of the education sites but physical access and resistance from schools, especially academies, to open up provision is also an issue for a number of reasons.

It must also be noted, however, that several schools are without such sports facilities and it is therefore equally important to enable them to access provision if there is a demand to do so, either via other schools or via other community facilities.

The following clubs play all of their games on education sites and it is recommended therefore that a formalised community use agreement is negotiated and put in place:

- Brymans Park Youth FC (Redden Court School)
- Campion Old School FC (Campion School)
- Crumpled Horn FC (Coopers Company and Coborn School)
- Elite Colts YFC (Abbs Cross Academy and Arts College, Marshalls Park School, Emerson Park Academy)
- Essex Minors of Hornchurch FC (Gaynes School Language College)
- FC Mexico (Emerson Park Academy)
- Hornchurch Vets FC (Emerson Park Academy)
- Old Cooperians FC (Coopers Company and Coborn School)
- Old Cooperians RFC (Coopers Company and Coborn School)
- Rainham Working Men's Club FC (Rainham Village Primary School)
- Romford Colts FC (St Ursula's catholic Junior School, Hilldene Primary School)
- Royal Alexandra FC (Coopers Company and Coborn School)
- Sanders Cross United FC (Sanders Draper School and Specialist Science College)

A large number of sporting facilities are located on education sites and making these available to sports clubs can offer significant benefits to both the school/college and the local clubs. The Council and other key partners must work with schools and colleges to develop an understanding of the issues that restrict or affect community access. Support should be provided, where appropriate, to address underlying problems and concerns that schools may have. Consideration should be given to a centralised booking system for community use of schools and colleges to minimise administration and make access easier for the users.

It is not uncommon for school pitch stock not to be fully maximised for community use. Even on established community use sites, access to grass pitches for community use is limited. Consultation identified several issues relating to the use of school facilities:

- Quality of pitches are unable to cater for both school use and community use, so schools prefer to preserve pitches for school use.
- Quality of pitches not good enough to hire out.
- Many schools report that pitches cannot be accessed by the community due to being unable to staff the opening/closing of facilities both during and outside of the school day.
- Community use is limited and often based on informal agreements between individual schools and clubs.

- There is no strategic guidance as to which clubs are allocated the use of playing pitch facilities (i.e. in accordance with a strategic need).
- There are management issues inherent in developing, implementing and managing community use agreements. Advice and guidance can be obtained from Sport England's Schools toolkit and Sports organisations toolkit.
  (www.sportengland.org/facilities-planning)

Where appropriate, it will be important for schools to negotiate and sign formal and long-term agreements that secure community use. This needs to be examined against the following:

- The analysis provides a clear indication of the future pitch requirements and provides a basis for partners to negotiate.
- Community use should not impact on the needs of schools to deliver curricular and extracurricular activities and;
- Community use must not impact on the school's educational budget.
- Community use should not impact on safeguarding during the school day.
- Consideration of "wear and tear" on school premises versus budget available for repairs and maintenance.
- The need for agreement by Governing Bodies responsible for the safe management of school premises.

'Use Our School' is a Sport England resource to support schools in opening their facilities to the community and keeping them open. It provides tried and tested solutions, real life practice, tips from people making it happen and a range of downloadable resources. The information can be accessed here:

http://www.sportengland.org/facilities-planning/use-our-school/

The following schools were reported as being available for community use but currently unused. It is recommended that these schools are prioritised in terms of further exploring the reason pitches are currently unused by the community:

Site ID	Site name	Analysis area	Sport	Pitch type	Pitch Size	No. pitches
1	Abbs Cross Academy & Arts College	Central	Cricket	Senior		1
8	Chafford Sports Complex	South	Football	Adult		1
				Mini	(7v7)	1
				Youth	(9v9)	1
13	Gaynes School Language College	South	Rugby Union	Senior		1
14	Hall Mead School	Central	Rugby Union	Senior		1
23	Marshalls Park School	North	Rugby Union	Senior		1
26	Pyrgo Priory School	North	Football	Mini	(7v7)	1
				Youth	(9v9)	1
29	Redden Court School	Central	Football	Youth	(9v9)	1
34	The Brittons Academy Trust	South	Rugby Union	Senior		1
35	The Campion School	Central	Rugby Union	Mini		5
38	The Sanders Draper School and Specialist Science College	South	Rugby Union	Senior		1
40	Upminster Park	South	Football	Mini	(7v7)	1
41	Westlands Playing Fields	Central	Cricket	Senior		1
42	Wykeham Primary School	Central	Football	Youth	(9v9)	1
61	Harold Wood Primary School	Central	Football	Mini	(7v7)	1

Site ID	Site name	Analysis area	Sport	Pitch type	Pitch Size	No. pitches
				Youth	(9v9)	1
68	Benhurst Primary School	Central	Football	Mini	(7v7)	1
69	Hacton Primary School	South	Football	Mini	(7v7)	1
70	R J Mitchell Primary School	South	Football	Mini	(7v7)	1
72	Suttons Primary School	South	Football	Mini	(7v7)	1
				Youth	(11v11)	1
73	Gidea Park Primary School	Central	Football	Mini	(5v5)	1
78	Clockhouse Primary School	North	Football	Mini	(7v7)	1
			Rugby Union	Mini		2

As detailed earlier, Sport England has also produced guidance, online resources and toolkits to help open up and retain school sites for community use and can be found at: http://www.sportengland.org/facilities-planning/accessing-schools/

Other sites

Given the mix of provider in Havering, including for example, Council and private clubs, there is a need for the Council and NGBs to work with other partners to help maximise use of outdoor sports facilities and in particular grass pitches and AGPs.

Using spare capacity at such sites may help to rectify shortfalls in the current pitch stock and alleviate overplay on other sites within the same analysis area by transferring play, particularly in the shorter terms whilst, for example, quality improvements are made. This may also be a longer term solution on some sites where the use of alternative, adequate secured provision can be achieved.

In terms of non pitch sports, the issue of spare capacity on bowling greens was identified within the Assessment Report. In order to ensure that existing provision is sustained there is a need to maximise the use of bowling greens, which may, for example, include increasing the availability of greens for pay and play in order to raise the profile of the game, increase levels of membership and the revenue generated by sites.

AIM 2

To **enhance** outdoor sports facilities through working in partnership with others to improve the quality and management of sites.

Recommendations:

d. Maintain the quality of pitches and improve where appropriate.

e. Adopt a tiered approach (hierarchy of provision) to the management and improvement of sites.

f. Work in partnership with stakeholders to secure community funding.

g. Secure developer contributions.

Recommendation (d) – Maintain the quality of pitches and improve where appropriate.

There are a number of ways in which it is possible to increase pitch quality, including for example, addressing overplay and improving maintenance. Given that most councils are operating under reducing budgets it is currently advisable to look at improving only poor quality pitches as a priority. However, given such pressures on budgets any direct investment into pitch quality is unlikely and other options for improvements should be considered. This could be via long term lease arrangements as highlighted in recommendation b, for example for cricket; the Club could maintain the square and the Parish Council the outfield. Other options may include equipment banks and the pooling of resources for maintenance.

The FA and ECB all part of the Pitch Improvement Programme (PIP) which has been developed in partnership with Institute of Groundsmanship (IOG) to develop a Grass Pitch Maintenance service that can be utilised by grassroots clubs with the aim of improving the quality of grass pitches. The key principles behind the service are to provide clubs with advice/practical solutions on a number of areas, with the simple aim of improving the clubs' playing surface. Where quality issues are identified the Pitch Improvement Programme should be accessed to help support improvements.

Addressing quality issues

Pitch quality in Havering is variable but on the whole pitches are assessed as poor or standard quality, with a small proportion of good quality pitches. Currently used sites that are of poor quality and require pitch improvements to sustain usage are listed in the table below. Improving pitch quality increases the carrying capacity of pitches and can help to reduce overplay and/or shortfalls.

Currently overplayed sites with poor pitch quality:

PPS site ID	Site name	Analysis area	Sport	Pitch type	Pitch Size	No. of pitches
10	Cottons Park	Central	Rugby union	Senior		1
15	Harold Wood Park	Central	Football	Adult		5
22	King George Playing Field	North	Football	Adult		2
23	Marshalls Park School	North	Football	Adult		2
				Youth	(9v9)	1
				Mini	(7v7)	1
				Mini	(5v5)	1
39	Upminster Hall Playing Fields	Central	Rugby union	Senior		2

For the purposes of the Quality Assessments, the Strategy will refer to pitches and ancillary facilities separately as Good, Standard or Poor quality. For example, some good quality sites have poor quality elements i.e. changing rooms or a specific pitch.

Good quality refers to pitches that have, for example, good grass cover, an even surface, are free from vandalism, litter. In terms of ancillary facilities, good quality refers to access for disabled people, sufficient provision for referees, juniors/women/girls and appropriate provision of showers, toilets and car parking.

Standard quality refers to pitches that have, for example, adequate grass cover, minimal signs of wear and tear, goalposts may be secure but in need of minor repair. In terms of ancillary facilities, standard quality refers to adequately sized changing rooms, storage provision and provision of toilets.

Poor quality refers to pitches that have, for example, inadequate grass cover, uneven surface and damage. Please refer to the Sport England/NGB quality assessments. Sites played beyond capacity may require remedial action to help reduce this.

For improvement/replacement of AGPs refer to Sport England and the NGBs 'Selecting the Right Artificial Surface for Hockey, Football, Rugby League and Rugby Union' document for a guide as to suitable AGP surfaces:

www.sportengland.org/facilities-planning/tools-guidance/design-and-cost-guidance/artificial-sports-surfaces/

In order to improve the quality of pitches and non-pitches all partners should work in a co-ordinated way to address the issues. By working with the NGBs through the key programmes as follows

- Grass pitches – addressing poor quality pitches through the Pitch Improvement Programme.
- Rugby union pitches – addressing quality issues at club sites through the RFU and implementing a groundsman programme.
- Cricket pitches – addressing poor quality wickets through technical assessments of wickets and pitches available through a Performance Quality Standard Assessment (PQS).
- Tennis courts – improve the quality of existing sites, ancillary facilities in particular, with support from the LTA.
- Bowling greens – continue club investment to maintain/improve quality of greens.

Generally, where pitches are assessed as standard or poor quality and/or overplayed, review/improve maintenance regimes to ensure it is of an appropriate standard to sustain/improve pitch quality. Ensuring existing maintenance of good quality pitches continues is also important.

Based on an achievable target using existing quality scoring to provide a baseline, a standard should be used to identify deficiencies and investment should be focused on those sites which fail to meet the proposed quality standard (using the site audit database, provided in electronic format).

In terms of ancillary facilities, poor quality refers to inappropriate size of changing rooms, no showers, no running water and old dated interior. The following sites were highlighted as poor quality and in need of investment:

- Cottons Park
- Harold Wood Park
- Hylands Park
- Rise Park
- Elm Park Tennis Club
- Haynes Park
- Raphael Park Tennis Club
- Upminster Hall Playing Fields

Without appropriate, fit for purpose ancillary facilities, good quality pitches may be underutilised. Changing facilities form the most essential part of this offer and therefore key sites such as those mentioned above should be given priority for improvement.

Addressing overplay

In order to improve the overall quality of the playing pitches stock; it is necessary to ensure that pitches are not overplayed beyond recommended weekly carrying capacity. This is determined by assessing pitch quality (via a non-technical site assessment) and allocating a weekly match limit to each. Each NGB recommends a number of matches that a good quality pitch should take:

Sport	Pitch type	No. of matches
Football	Adult pitches	3 per week
	Youth pitches	4 per week
	Mini pitches	6 per week
Rugby union*	Pipe and Slit Drained and a good level of maintenance (D3/M2)	3.5 per week
	Pipe drained and a good level of maintenance (D2/M2)	3.25 per week
	Natural (adequate) drainage and a good level of maintenance (D1/M2)	3 per week
Cricket	One grass wicket One synthetic wicket	5 per season 60 per season

* Please note that the RFU believes that it is most appropriate to base the calculation of pitch capacity upon an assessment of the drainage system and maintenance programme afforded to a site.

		Maintenance		
		Poor (M0)	Adequate (M1)	Good (M2)
Drainage	Natural Inadequate (D0)	Poor	Poor	Standard
	Natural Adequate (D1)	Poor	Standard	Good
	Pipe Drained (D2)	Standard	Standard	Good
	Pipe and Slit Drained (D3)	Standard	Good	Good

There are also sites that are poor quality but are not overplayed. These sites should not be overlooked as often poor quality sites have less demand than other sites but demand could increase if the quality was to increase. Improving pitch quality should not be considered in isolation from maintenance regimes.

Whilst it works both ways, in so much as, poor pitch condition is a symptom of pitches being over played, potential improvements may make sites more attractive and, therefore, more popular; which in the long run can lead again to poor quality pitches if they are not maintained properly.

There is also a need to balance pitch improvements alongside the transfer of play to alternative pitch sites. Therefore, it is beneficial to work with clubs to ensure that sites are not played beyond their capacity and encourage play, where possible, to be transferred to alternative venues which are not operating at capacity.

Increasing pitch maintenance

Standard or poor grass pitch quality may not just be a result of poor drainage. In some instances ensuring there is an appropriate maintenance for the level/standard of play can help to improve quality and therefore increase pitch capacity. Each NGB can provide assistance with reviewing pitch maintenance regimes.

For example, the FA, ECB, RFL in partnership have introduced a Pitch Advisor Scheme and has been working in partnership with Institute of Groundsmanship (IOG) to develop a Grass Pitch Maintenance service that can be utilised by grassroots clubs with the simple aim of improving the quality of grass pitches. The key principles behind the service are to provide clubs with advice/practical solutions on a number of areas, with the simple aim of improving the club's playing surface.

In relation to cricket, maintaining high pitch quality is the most important aspect of cricket. If the wicket is poor, it can affect the quality of the game and can, in some instances, become dangerous. The ECB recommends full technical assessments of wickets and pitches available through a Performance Quality Standard Assessment (PQS). The PQS assesses a cricket square to ascertain whether the pitch meets the Performance Quality Standards that are benchmarked by the Institute of Groundsmanship. Please note that PQS assessments are also available for other sports.

Recommendation (e) – Adopt a tiered approach (hierarchy of provision) to the management and improvement of sites

To allow for facility developments to be programmed within a phased approach the Steering Group, including key partners such as NGBs should adopt a tiered approach to the management and improvement of playing pitch sites and associated facilities. Please refer to Part 5: Action Plan for the proposed hierarchy.

Recommendation (f) – Work in partnership with stakeholders to secure community funding

Partners, led by the Council, should ensure that appropriate funding secured for improved sports provision are directed to areas of need, underpinned by a robust strategy for improvement in playing pitch facilities. Priorities should be identified from the NGBs that can also feed into the overall priorities of Havering.

In order to address the community's needs, to target priority areas and to reduce duplication of provision, there should be a coordinated approach to strategic investment. In delivering this recommendation the Council should maintain a regular dialogue with local partners and through the Playing Pitch Steering Group.

Not all investment in new provision will be made by the Council directly, it is important, however, that the Council seeks to direct and lead a strategic and co-ordinated approach to facility development by education sites, NGBs, sports clubs and the commercial sector to address community needs whilst avoiding duplication of provision.

Please refer to Appendix Two for further funding information which includes details of the current opportunities, likely funding requirements and indicative project costs.

Sport and physical activity can have a profound effect on peoples' lives, and plays a crucial role in improving community cohesion, educational attainment and self-confidence.

However, one of sport's greatest contributions is its positive impact on public health. It is therefore important to lever in investment from other sectors such as health and wellbeing for example.

Recommendation (g) –Secure developer contributions

It is important that this strategy informs policies and supplementary planning documents by setting out the approach to securing sport and recreational facilities through new housing development. Although the Council is currently pursuing CIL, it is recommended that there is still an evidence base for securing and negotiating developer contributions through S106.

The guidance should form the basis for negotiation with developers to secure contributions to include provision and/or enhancement of appropriate playing fields and its subsequent maintenance. Section 106 contributions could also be used to improve the condition and maintenance regimes of the pitches in order to increase pitch capacity to accommodate more matches.

A number of planning policy objectives should be implemented to enable the above to be delivered:

- Planning consent should include appropriate conditions and/or be subject to specific planning obligations. Where developer contributions are applicable, a Section 106 Agreement or equivalent must be completed specifying the amount which will be linked to Sport England's Building Cost Information Service from the date of the Planning Committee, and timing of the Contribution(s) to be paid.
- Contributions should also be secured towards the first ten years of maintenance on new pitches. NGBs and Sport England can provide further and up to date information on the associated costs.
- External funding should be sought/secured to achieve maximum benefit from the investment into appropriate playing pitch facility enhancement and its subsequent maintenance.
- Where new multiple pitches are provided, appropriate changing rooms and associated car parking should be located on site.
- All new or improved playing pitches on school sites should be subject to community use agreements. For further guidance please refer to Sport England: http://www.sportengland.org/facilities-planning/planning-for-sport/planning-tools-and-guidance/community-use-agreements/

Sport England reports that housing growth often leads to an increase in school places. S106 contributions are then secured to pay for these places which usually result in an extension to a school, sometimes on playing field. If applicable, this should be identified early in the process and embraced in policy that any replacement of playing fields i.e. compensatory provision, due to school expansion should be negotiated directly with the relevant developer.

AIM 3

To enable the **provision** of new outdoor sports facilities where there is current or future demand to do so.

Recommendations:

h. Seek to address the quantitative shortfalls in the current pitch stock.

i. Identify opportunities to add to the overall pitch stock to accommodate both current and future demand.

Recommendation (h) - Seek to address quantitative shortfalls in the current pitch stock.

The Council and its partners should work to rectify identified inadequacies and meet identified shortfalls as outlined in the Assessment Report and the sport by sport specific recommendations.

It is important that the current levels of grass pitch provision are protected, maintained and enhanced to secure provision now and in the future. Maximising use of existing pitches through a combination of the following will help to reduce shortfalls:

- Improving pitch quality in order to improve the capacity of pitches to accommodate more matches.
- The re-designation of pitches for which there is an oversupply.
- Securing long term community use at school sites.
- Working with commercial and private providers to increase usage.

Unmet demand, changes in sport participation and trends, and proposed housing growth should be recognised and factored into future facility planning. Assuming an increase in participation and housing growth occurs, it will impact on the future need for certain types of sports facilities. Sports development work also approximates unmet demand which cannot currently be quantified (i.e., it is not being suppressed by a lack of facilities) but is likely to occur. The following table highlights the main development trends in each sport and their likely impact on facilities. However, it is important to note that these may be subject to change.

Furthermore, retaining some spare capacity allows some pitches to be rested to protect overall pitch quality in the long term. Therefore, whilst in some instances it may be appropriate to re-designate a senior pitch where there is low demand identified, a holistic approach should be taken to re-designation for the reasons cited. The site-by-site action planning will seek to provide further clarification on where re-designation is suitable.

Likely future sport-by-sport demand trends

Sport	Future development trend	Strategy impact
Football	Demand for adult football is likely to be sustained with the FA focusing on retention. There is also likely to be some continued movement towards small sided football for adults.	Additional need for 3G pitches. Sustain current pitch stock but give consideration to pitch reconfiguration to accommodate youth 11v11 football. Qualitative improvements.
	Demand for mini and youth football is likely to increase based on Team Generation Rates and The FA has a key objective to deliver 50% of mini and youth football on 3G AGP's.	Sustain current stock and consideration given to reconfigure pitches if required. Qualitative improvements. Where possible utilise new or existing 3G pitches to accommodate this demand.
3G pitches	Demand for 3G pitches for football is high and will continue to increase as currently there is a shortfall of full size pitches. It is likely that future demand for the use of 3G pitches, especially for training, will increase.	Requirement for new 3G pitches to be provided and a need for community use agreements to be in place for any new pitches as well as sinking funds. Requirement for 3G pitches to be FA/FIFA tested to host competitive matches. Utilise Sport England/NGB guidance on choosing the correct surface: http://www.sportengland.org/media/30651/Selecting-the-right-artificial-surface-Rev2-2010.pdf
Rugby union	The RFU work towards achieving the stated outcomes of its National Facilities Strategy (2013-2017), the RFU National Women and Girls Strategy and the RFU National Male XV-a-side Strategy. Locally the RFU want to ensure access to pitches in Thurrock that satisfies the existing demand and predicted growth. Further, the RFU is aiming to protect and improve pitch quality plus that of ancillary facilities including changing rooms and floodlights as current and future demand requires.	Clubs are likely to field more teams in the future. It is important, therefore, to work with the clubs to maintain the current pitch stock, support facility development where appropriate and increase the number of floodlit pitches where necessary.
	The RFU investment strategy into AGPs considers sites where grass rugby pitches are over capacity and where an AGP would support the growth of the game at the host site and for the local rugby partnership, including local clubs and education sites. To achieve this, the RFU is keen to work locally with partners such as the Council and the FA to look at sites of mutual interest.	Consider requirement for a World Rugby compliant 3G pitch given shortfalls identified on grass pitches and level of training demand on grass pitches.
Hockey	Demand is likely to grow based on team generation rates.	Improving quality on AGPs assessed as poor quality will help to accommodate current and future demand. Sinking funds are required for long term sustainability. An adequate number of pitches (four) need protecting from 3G conversion.

Sport	Future development trend	Strategy impact
Cricket	Demand is likely to remain static in Havering for grass wickets for both junior and adult participation.	Sustain current pitch stock. Isolated pockets of demand for access to additional facilities where pitches are operating at capacity. A need to install non-turf wickets and encourage greater use for junior cricket.
	An increase in casual play, especially from South Asian communities.	Develop cricket within communities that more commonly play informal formats of the game.
	Women's and girls' cricket is a national priority and there is a target to establish two girls' and one women's team in every local authority over the next five years.	Support clubs to ensure access to segregated changing and toilet provision and access to good quality cricket pitches to support growth.
Tennis	No expected net increase in memberships.	Likely that any future increase could be accommodated on existing courts. Please refer to the 2015 LB Havering Indoor Sports and Leisure Facilities Assessment Report for details on indoor courts.
Bowls	No expected net increase in memberships.	Likely that any future increase could be accommodated on existing greens.
Softball	Development of a new league is expected to develop two new teams	Teams will be accommodated at the identified new sites already highlighted. No need for additional facilities at this stage.

Recommendation (i) - Identify opportunities to add to the overall pitch stock to accommodate both current and future demand

The Steering Group should use, and regularly update, the Action Plan within this Strategy for improvements to all pitches whilst recognising the need to support partners. The Action Plan lists improvements to be made to each site focused upon both qualitative and quantitative improvements as appropriate for each area.

Furthermore any potential school sites which become redundant over the lifetime of the Strategy may offer potential for meeting community needs on a localised basis. Where schools are closed their playing fields may be converted to dedicated community use to help address any unmet community needs.

PART 5: ACTION PLAN

Introduction

The site-by-site action plan list seeks to address key issues identified in the accompanying Assessment Report. It provides recommendations based on current levels of usage, quality and future demand, as well as the potential of each site for enhancement.

It should be reviewed in the light of staff and financial resources in order to prioritise support for strategically significant provision and provision that other providers are less likely to make. Recommendations below explain the hierarchy of priorities on the list. It is imperative that action plans for priority projects should be developed through the implementation of the strategy.

It is imperative to keep the action plan up to date and review regularly as developments take place. With pitch improvements and/or facility developments the status of sites could therefore change, as could any site specific recommendations.

Recommendation (e) - Adopt a tiered approach (hierarchy of provision) to the management and improvement of sites

To allow for facility developments to be programmed within a phased approach partners should adopt a tiered approach to the management and improvement of playing pitch sites and associated facilities.

The identification of sites is based on their strategic importance in a Borough-wide context i.e. they accommodate the majority of demand or the recommended action has the greatest impact on addressing shortfalls identified either on a sport by sport basis or across the Borough as a whole.

Recommended tiered site criteria

Strategic sites	Key centres	Local sites
Strategically located. Priority sites for NGB.	Strategically located within the analysis area.	Services the local community. Likely to include education sites.
Accommodates three or more good quality grass pitches. Including provision of at least one AGP.	Accommodates two or more good quality grass pitches.	Accommodates more than one pitch.
Single or multi-sport provision. Could also operate as a central venue.	Single or multi-sport provision. Could also operate as a central venue.	Single or multi-sport provision.
Maintenance regime aligns with NGB guidelines.	Maintenance regime aligns with NGB guidelines.	Standard maintenance regime either by the club or in house maintenance contract.
Good quality ancillary facility on site, with sufficient changing rooms and car parking to serve the number of pitches.	Good quality ancillary facility on site, with sufficient changing rooms and car parking to serve the number of pitches.	Appropriate access changing to accommodate both senior and junior use concurrently (if required).

Strategic sites are of Borough wide importance where users are willing to travel to access the range and high quality of facilities offered and are likely to be multi-sport. These have been identified on the basis of high impact on addressing the issues identified in the assessment.

The financial, social and sporting benefits which can be achieved through development of strategic sites (also known as hub sites) are significant. Sport England provides further guidance on the development of community sports hubs at:

http://www.sportengland.org/facilities_planning/planning_tools_and_guidance/sports_hubs.aspx

Where development of hub sites includes provision of 3G pitches for football it is recommended that further modelling/feasibility work is carried out to ensure sustainability of new 3G pitches to accommodate competitive fixtures. However, as a priority consultation should be carried out with leagues/clubs to gauge acceptance/buy in of moving competitive play to 3G pitches in the future.

Key centres although these sites are more community focused, some are still likely to service a wider analysis area (or slightly wider). However, there may be more of a focus on a specific sport i.e. a dedicated site.

It is considered that some financial investment will be necessary to improve the ancillary facilities at both Hub sites and Key Centres to complement the pitches in terms of access, flexibility (i.e. single-sex changing if necessary), quality and that they meet the rules and regulations of local competitions.

Local sites refer to those sites which are generally one and two pitch sites and may be Council owned hired to clubs for a season or are sites which have been leased on a long-term basis. However, they are also likely to be private club sites serving one particular sport. This would also likely include education sites used for community use.

The level of priority attached to them for partner-generated investment may be relatively low and consideration should be given, on a site-by-site basis, to the feasibility of a club taking a long-term lease on the site (if not already present), in order that external funding can be sought.

It is possible that sites could be included in this tier which are not currently hired or leased to a club, but have the potential to be leased to a suitable club. NGBs would expect the facility to be transferred in an adequate condition that the club can maintain. In the longer term, the Club should be in a position to source external funding to improve/extend the facilities.

Management and development

The following issues should be considered when undertaking sports related site development or enhancement:

- Financial viability.
- Security of tenure.
- Planning permission requirements and any foreseen difficulties in securing permission.
- Adequacy of existing finances to maintain existing sites.
- Business Plan/Masterplan – including financial package for creation of new provision where need has been identified.
- Analysis of the possibility of shared site management opportunities.

- The availability of opportunities to lease sites to external organisations.
- Options to assist community groups to gain funding to enhance existing provision.
- Negotiation with landowners to increase access to private strategic sites.
- Football investment programme/3G pitches development with The FA.

Action plan columns

Partners

The column indicating Partners refers to the main organisations that the Council would look to work with to support delivery of the actions. Given the extent of potential actions it is reasonable to assume that partners will not necessarily be able to support all of the actions identified but where the action is a priority and resource is available the partner will endeavour to provide support.

Site hierarchy tier and priority level

Strategic sites have a **high** priority level as they have Borough wide importance and have been identified on the basis of the impact that the site will have on addressing the key issues identified in the assessment.

Key centres are a **medium** priority and have analysis area importance and have been identified on the basis of the impact that the site will have on addressing the issues identified in the assessment.

Low priority sites are club or education sites with local specific importance and have been identified on a site by site basis as issues appertaining to individual sites but that may also contribute to addressing the issues identified in the assessment.

Costs

The strategic actions have also been ranked as low, medium or high based on cost. The brackets in which these sit are:

(L) -Low - less than £50k; (M) -Medium - £50k-£250k; (H) -High £250k and above. These are based on Sport England's estimated facility costs which can be found at www.sportengland.org/media/198443/facility-costs-4q13.pdf

Timescales

The action plan has been created to be delivered over a five year period. The information within the Assessment Report, Strategy and Action Plan will require updating as developments occur. The timescales relate to delivery times and are not priority based.

Timescales: (S) -Short (1-2 years); (M) - Medium (3-4 years); (L) - Long (5+ years).

Aim

Each action seeks to meet at least one of the three aims of the Strategy; **Enhance, Provide, Protect.**

NORTH ANALYSIS AREA

Football

Summary of pitches required to meet current and future demand[6]

Pitch type	Actual spare capacity[7]	Demand (match equivalent sessions)					
		Overplay	Current total	Latent demand	Displaced demand	Future demand	Total
Adult pitches	1	3	**2**	1	**-**	1.5	**4.5**
Youth pitches 11v11	-	-		-	**-**	2	**2**
Youth pitches 9v9	0.5	3	**2.5**	-	**-**	3	**5.5**
Mini pitches 7v7	0.5	1	**0.5**	-	**-**	1.5	**2**
Mini pitches 5v5	3	0.5	**2.5**	-	**-**	1	**1.5**

- There is a current shortfall of adult pitches equating to two match equivalent sessions and a future shortfall equating to 4.5 match equivalent sessions.
- Youth 11v11 pitches are currently played to capacity, although future demand results in a shortfall of two match equivalent sessions.
- There is a current shortfall of 9v9 pitches equating to 2.5 match equivalent sessions and a future shortfall equating to 5.5 match equivalent sessions.
- There is a current shortfall of 7v7 pitches equating to 0.5 match equivalent sessions and a future shortfall equating to two match equivalent sessions.
- Spare capacity exists on 5v5 pitches both now and in the future.
- Overplay is evident on adult pitches at Havering College, King George Playing Field, Marshalls Park School and Rise Park, on youth pitches at Marshalls Park School, Forest Row, Hildene Primary School and The Gallows and on mini pitches at Marshalls Park School.
- In North Area there is training demand for three 3G pitches, of which, there are currently none, although one is under development at Noak Hill Sports Complex.

Recommendations

- Improve pitch quality to alleviate overplay and shortfalls and increase future capacity.
- Transfer youth 11v11 teams from adult pitches to youth 11v11 pitches. Use resultant spare capacity on adult pitches to create and build future youth pitch capacity.
- Seek use of currently unavailable sites in order to further reduce shortfalls and build future capacity.
- Provide security of tenure for all clubs using education sites through community use agreements.
- Seek to improve poor quality ancillary provision.
- Ensure 3G pitch at Noak Hill Sports Complex is provided to a good quality and ensure FA testing. Also ensure a sinking fund is put into place.
- Measure the impact of the 3G pitch at Noak Hill Sports Complex when it is provided to support the strategic planning of additional 3G pitches.

[6] Key:

	Shortfall		Played to capacity		Spare capacity

[7] *In match equivalent sessions*

Rugby union

- There is one senior and two mini rugby union pitches in the North Analysis Area. All three are assessed as poor quality,
- All three pitches are located at school sites and available but unused by the community.
- There is no identified demand in the analysis area.

Recommendations

- Ensure appropriate maintenance regime for the school to continue use on the pitch.

Hockey

- There are two full size hockey suitable AGPs (Bower Park Academy and Drapers Academy), both of which are available to the community and floodlit.
- Drapers Academy is assessed as poor quality, whilst Bower Park Academy is assessed as standard quality.
- Bower Park Academy is not available to the community during weekends and therefore cannot be accessed for hockey matches.
- Neither AGP has any recorded community hockey use.

Recommendations

- Improve quality at Drapers Academy through resurfacing pitch.
- Ensure a sinking fund is in place for long term sustainability.
- Explore community use options in relation to future weekend use at Bower Park Academy.
- Explore lack of hockey demand and explore future use by teams currently displaced.
- Should no future demand exist, consider converting pitches to a 3G surface in order to reduce 3G shortfalls (providing enough sand-based pitches are retained throughout Havering).

Cricket

- There are five grass wickets on four sites available for community use in this analysis area, all are standard quality.
- There is no actual spare capacity on any of the squares at peak time, suggesting an opportunity for further play mid-week or Sundays.
- Pitches in the North Analysis Area are currently played to capacity. Predicted future demand indicates a demand for one additional pitch to accommodate future demand.
- There is also an artificial turf wicket at Gidea Park Sports Ground.
- Gidea Park and Romford CC intend to increase the club by two senior and one junior team.
- No club has a lease longer than 25 years currently. The shortest is Gidea Park and Romford CC, the lease expires in 2017.
- Noak Hill Taverners CC identifies the need for a non-turf wicket on site.

Recommendations

- Work with clubs to extend leases on current sites to secure long term security of tenure for clubs.
- Work with clubs to review quality issues on those pitches assessed as standard quality and to address quality issues through increased maintenance.
- Support Noak Hill Taverners CC to identify funds to install a non-turf wicket on site.
- Support clubs to develop and improve 'off pitch' practice facilities or additional access to training provision elsewhere.

Tennis

- There are 26 courts available for community use and four courts unavailable for community use.
- There are six floodlit courts; two at Central Park and four at Gidea Park Lawn Tennis Club.
- Of the courts available to the community, six are assessed as good quality and 20 are assessed as standard quality.
- Changing provision at Raphael Park is rated poor.
- Noak Hill Sports Complex is considered to be oversubscribed due to the membership of Havering Tennis Club, although a planned development of the facility is considered to meet its needs.

Recommendations

- Improve and sustain court quality.
- Support Raphael Tennis Club in its aspiration to improve the changing facilities at Raphael Park.
- Further consult with Havering Tennis Club following the development at Noak Hill Sports Complex to understand whether this meets the needs of the Club.

Bowls

- There are three bowling greens, all of which are assessed as good quality.
- Harold Hill Bowls Club has submitted a funding application for modernising the clubhouse.
- Current supply is deemed adequate to service demand, as the majority of bowling greens are considered to have spare capacity.

Recommendations

- Support Harold Hill Bowls Club with its application to modernise facilities.
- Support and encourage junior bowls development in order to grow and sustain future participation levels in the sport.
- Address spare capacity and maximise the availability of bowling greens for pay and play in order to raise the profile of the game, increase levels of membership and the revenue generated by sites.
- Ensure appropriate maintenance regime to improve/sustain quality of green as appropriate.

Softball

- There are two sites, Raphael Park and Noak Hill Sports Complex, which are identified to be marked out, to support the development of a new softball league.
- The sites are both suitable and can accommodate predicted current and future demand.

Recommendations

- Support the new league development with the marking of a softball pitch at Raphael Park.
- Support and encourage junior softball development in order to grow and sustain future participation levels in the sport.
- Ensure appropriate maintenance regime to improve/sustain quality of pitch as appropriate.

47	Harold Hill Bowls Club	Bowls	Council	A good quality green, used by Harold Hill Bowls Club. Site has some spare capacity. The Club is in the process of submitting a funding application for modernising and refurbishing its clubhouse.	Ensure appropriate maintenance to sustain green quality and support the Club with funding application if required.	Council	Local site	L	L	Protect
49	Gidea Park Sports Ground	Football	Club	One youth 11v11, one 9v9 and one 7v7 pitch assessed as standard quality. Actual spare capacity of 0.5 match equivalent sessions exists on both the youth 11v11 and the 9v9 pitch.	Seek transfer of play from overplayed sites to make use of actual spare capacity.	Club FA	Key centre	S	L	Protect
		Bowls		A good quality green. Gidea Park Bowls Club cites drainage as its main issue.	Ensure appropriate maintenance to sustain green quality.	Club		L	L	Protect
		Cricket		Two standard quality pitches, with minimal spare capacity, none at peak time. One artificial turf wicket. Used by Gidea Park and Romford CC. Lease expires in 2017.	Agree new lease for Club on ground to secure long term tenure on site. Work with football club to resolve overlap and quality issues on outfield	ECB		M	L	Provide
54	Gidea Park Lawn Tennis Club	Tennis	Club	Three standard quality (acrylic) courts and four good quality (artificial) courts. The good quality courts are floodlit.	Ensure appropriate maintenance to sustain court quality.	LTA	Local site	L	L	Protect

Site ID	Site	Sport	Management	Current status	Recommended actions	Partners	Site hierarchy tier	Timescales[8]	Cost[9]	Aim
57	Forest Row	Football	Club	Four adult, one 9v9, two 7v7 and two 5v5 pitches assessed as standard quality. Adult pitches are well used by youth 11v11 teams and have actual spare capacity of one match equivalent session. The 9v9 pitch is overplayed by 0.5 match equivalent sessions. Lease arrangement with Collier Row FC (from the Council) is close to expiring.	Extend lease agreement to provide greater security of tenure. Relieve overplay of 9v9 pitch through pitch quality improvements or through transfer of play. Consider pitch reconfiguration to better accommodate youth 11v11 teams.	FA Council Club	Key centre	S	L	Protect
		AGP		One third of a pitch, available for junior training.	Ensure appropriate maintenance to sustain pitch quality.					
65	Hilldene Primary School	Football	School	One adult and one 9v9 pitch assessed as standard quality. The adult pitch is used solely by youth 11v11 teams and is played to capacity, whilst the 9v9 pitch is overplayed by 1.5 match equivalent sessions.	Consider pitch reconfiguration to better accommodate youth 11v11 teams. Relieve overplay of 9v9 pitch through pitch quality improvements or through transfer of play. Encourage users to enter a community use agreement to provide greater security of tenure.	School FA	Local site	S	L	Protect
66	St Ursula's Catholic Junior School	Football	School	One 7v7 and one 5v5 pitch assessed as standard quality. Both pitches are played to capacity during peak time.	Ensure appropriate maintenance regime to sustain usage. Encourage users to enter a community use agreement to provide greater security of tenure.	School FA	Local site	L	L	Protect
74	Oasis Academy	Football	School	One standard quality 7v7 pitch that is not available for community use.	Explore community use options to reduce local shortfalls.	School FA	Local site	S	L	Provide
78	Clockhouse Primary School	Football	School	One standard quality 7v7 pitch that is available to the community but unused.	Explore community use options to attract demand given local shortfalls.	School FA	Local site	S	L	Provide
		Rugby union		Two poor quality mini rugby union pitches. Available to the community but unused.	Ensure appropriate maintenance to improve quality.	School		S	L	Enhance
80	Parklands Junior School	Football	School	One standard quality 7v7 pitch that is unavailable for community use.	Explore community use options to reduce local shortfalls.	School FA	Local site	S	L	Provide
81	Drapers Brookside Junior School	Football	School	One 7v7 pitch assessed as poor quality. Unavailable for community use.	Improve pitch quality and explore community use options to reduce local shortfalls.	School FA	Local site	S	L	Provide Enhance
83	The Gallows	Football	Club	One 9v9, one 7v7 and one 5v5 pitch assessed as standard quality. The 9v9 pitch is overplayed by 0.5 match equivalent sessions whilst remaining pitches are played to capacity during peak time.	Ensure appropriate maintenance to sustain current usage. Relieve overplay of 9v9 pitch through pitch quality improvements or through transfer of play.	Club FA	Local site	S	L	Protect

CENTRAL ANALYSIS AREA

Football

Summary of pitches required to meet current and future demand[10]

Pitch type	Actual spare capacity[11]	Demand (match equivalent sessions)					
		Overplay	Current total	Latent demand	Displaced demand	Future demand	Total
Adult pitches	0.5	5	**4.5**	1	-	1	**6.5**
Youth pitches 11v11	-	0.5	**0.5**	1.5	-	1	**2**
Youth pitches 9v9	1	-	**1**	1.5	-	2	**2.5**
Mini pitches 7v7	0.5	-	**0.5**	1	-	1	**1.5**
Mini pitches 5v5	1	-	**1**	1	-	1.5	**1.5**

- There is a current shortfall of adult pitches equating to 4.5 match equivalent sessions and a future shortfall equating to 6.5 match equivalent sessions.
- There is a current shortfall of youth 11v11 pitches equating to 0.5 match equivalent sessions and a future shortfall equating to 2.5 match equivalent sessions.
- There is spare capacity currently only 9v9, 7v7 and 5v5 pitches, however, future demand results in shortfalls across each pitch type.
- Overplay is evident on adult pitches at Westlands Playing Fields and Harold Wood Park and on a youth 11v11 pitch at Hall Mead School.
- There is a shortfall of two 3G pitches in the Central Analysis Area (following the development at Frances Bardsley School for Girls).

Recommendations

- Improve pitch quality to alleviate overplay and shortfalls and increase future capacity.
- Transfer youth 11v11 teams from adult pitches to youth 11v11 pitches. Use resultant spare capacity on adult pitches to create and build future youth pitch capacity.
- Seek use of currently unavailable sites in order to further reduce shortfalls and build future capacity.
- Provide security of tenure for all clubs using education sites through community use agreements.
- Seek to improve poor quality ancillary provision.
- Seek resolution to issues preventing Romford FC developing its stadia pitch at Westlands Playing Fields.
- Identify potential sites for 3G pitch provision and ensure any new pitches are FA tested and ensure a sinking fund is put in place.

Rugby union

- There are 13 senior pitches and six mini pitches available for community use. Of these, 6 senior pitches and 5 mini pitches are poor quality.
- The four good quality pitches are located at Romford and Gidea Park RFC with no actual spare capacity.

[10] Key- Shortfall | Played to capacity | Spare capacity

[11] *In match equivalent sessions*

- Cottons Park is overplayed by 0.5 match sessions and Upminster Hall Playing Fields is overplayed by 6.5 match sessions per week.
- Campion School is currently applying for RFU funding to improve pitch quality.
- There is capacity for pitches to meet current demand; future demand will require additional provision.

Recommendations

- Improving pitch quality at Cottons Park to standard (M1/D1) would alleviate overplay and provide capacity for training sessions.
- Improving pitch quality at Upminster Hall Playing Fields would reduce overplay to 3.5 match sessions.
- Improve quality of pitches at Emerson Park Academy and transfer additional training/match play from Upminster Hall Playing Fields. (Upminster RFC).
- Support Campion School in bid for funding to improve pitches.
- Review maintenance on currently unused school pitches (Hall Mead School and Marshalls Park School) to improve quality to protect and keep available for future demand.

Hockey

- There are two full size hockey suitable AGPs (Emerson Park Academy and The Campion School).
- Both Emerson Park Academy and The Campion School are available to the community and are floodlit.
- Emerson Park Academy and The Campion School are assessed as good quality.
- The Campion School is used by Havering HC for all its matches and training.
- Emerson Park Academy is used by Upminster HC as a secondary venue to avoid fixture clashes at Coopers Company & Coborn School.

Recommendations

- Retain The Campion School and Emerson Park Academy for continued future hockey use.
- Also explore return of displaced demand in relation to spare capacity existing for matches at Emerson Park Academy.
- Encourage use of Brittons Academy Trust for hockey purposes.
- Ensure sinking funds are in place for future refurbishment and long term sustainability.

Cricket

- There are eight grass pitches available for community use in the Analysis Area.
- Hylands Park and Havering atte Bower CC are good quality; the remaining pitches are standard quality.
- Upminster Hall Playing Fields will no longer be available as cricket pitch from next season. This site currently accommodates St Andrews CC and Havering-atte-Bower 3rd team.
- St Andrews CC will move to a pitch in Billericay, but want to stay in Havering. There is no confirmed location for Havering-atte-Bower 3rd team currently.
- Emerson Park Academy has capacity for one additional team at peak time. No other site has spare capacity at peak time.
- There are three artificial turf wickets in the Central Analysis Area, at The Campion School, The Royal Liberty School and Westlands Playing Fields.

- Clubs intend to grow by three senior teams and nine junior teams in the Analysis Area.
- Harold Wood CC has secured funding to install practice nets on site.
- There is currently a shortfall of 0.5 pitches in the Central Analysis Area. Predicted future demand indicates a demand for two additional pitches to accommodate future demand.
- No club has a lease longer than 25 years currently.

Recommendations

- Protect current levels of provision to accommodate current and future demand.
- Work with clubs to extend leases on current sites to secure long term security of tenure for clubs.
- Work with clubs to review quality issues on those pitches assessed as standard quality and to address quality issues through increased maintenance.
- Support Harold Wood CC to install practice nets.
- Work with Emerson Park Academy to relocate Havering atte Bower 3rd team to this site.
- Support clubs to develop and improve 'off pitch' practice facilities or additional access to training provision elsewhere.
- Improve/increase training provision, particularly at sites that do not contain practice nets.

Tennis

- There are 43 courts available for community use and two courts unavailable for community use.
- There are 10 floodlit courts; six at The Albany, one at David Lloyd Club (Gidea Park) and three at Grosvenor Lawn Tennis Club.
- Of the courts available to the community, 15 are assessed as good quality and 19 are assessed as standard quality and eight are assessed as poor quality.
- Supply is deemed sufficient to meet demand both now and in the future.

Recommendations

- Improve and sustain court quality, particularly at courts assessed as poor.
- Improve ancillary provision servicing council courts to maximise usage.

Bowls

- There are five bowling greens in the Analysis Area, three of which are assessed as good quality, one is standard and one is poor quality.
- The poor quality green is the second green at Lodge Park Farm and has recently been mothballed due to high maintenance costs.
- Romford Bowls Club states that the clubhouse is in need of investment.
- Current supply is deemed adequate to service demand, most bowling greens are considered to have spare capacity.

Recommendations

- Support and encourage junior bowls development in order to grow and sustain future participation levels in the sport.
- Identify funding opportunities for Romford Park to invest in the club house at Lodge Park Farm.
- Address spare capacity and maximise the availability of bowling greens for pay and play in order to raise the profile of the game, increase levels of membership and the revenue generated by sites.

- Ensure appropriate maintenance regime to improve/sustain quality of green as appropriate.

Softball

- There is one recently marked softball pitch at Westland's Playing Fields, which has been developed to support a new club based there.

Recommendations

- Support the new club development at Westlands Playing Fields.
- Support and encourage junior softball development in order to grow and sustain future participation levels in the sport.
- Ensure appropriate maintenance regime to improve/sustain quality of pitch as appropriate.

Site ID	Site	Sport	Management	Current status	Recommended actions	Partners	Site hierarchy tier	Timescales[12]	Cost[13]	Aim
1	Abbs Cross Academy & Arts College	Football	School	Two adult, two 7v7 and two 5v5 pitches assessed as standard quality. Actual spare capacity exists on the 7v7 and 5v5 pitches amounting to 0.5 and one match equivalent sessions respectively.	Ensure appropriate maintenance regime to sustain and improve quality. SOUTH ANALYSIS AREA

Football

Summary of pitches required to meet current and future demand[14]

Pitch type	Actual spare capacity[15]	Demand (match equivalent sessions)					
		Overplay	Current total	Latent demand	Displaced demand	Future demand	Total
Adult pitches	2.5	2	**0.5**	1	**-**	-	**0.5**
Youth pitches 11v11	1	-	**1**	0.5	**-**	1.5	**1**
Youth pitches 9v9	-	4.5	**4.5**	-	**-**	3.5	**8**
Mini pitches 7v7	2	-	**2**	-	**-**	1.5	**0.5**
Mini pitches 5v5	-	2	**2**	-	**-**	1	**3**

- There is current spare capacity on adult and youth 11v11 pitches, however, future demand results in a shortfall of 0.5 and one match equivalent respectively.
- There is a current shortfall of 9v9 pitches equating to 4.5 match equivalent sessions and a future shortfall equating to eight match equivalent sessions.
- There is current and future spare capacity on 7v7 pitches.
- There is a current shortfall of 5v5 pitches equating to two match equivalent sessions and a future shortfall equating to three match equivalent sessions.
- Overplay is evident on adult pitches at Britons Playing Field, Gaynes School and Upminster Park, on youth pitches at Bretons Outdoor Recreation Centre and Gaynes School and on mini pitches at Bretons Outdoor Recreation Centre.
- In South Area, there is training demand for three 3G pitches, of which, there are currently none.

Recommendations

- Improve pitch quality to alleviate overplay and shortfalls and increase future capacity.
- Transfer youth 11v11 teams from adult pitches to youth 11v11 pitches. Use resultant spare capacity on adult pitches to create and build future youth pitch capacity.
- Seek use of currently unavailable sites in order to further reduce shortfalls and build future capacity.
- Provide security of tenure for all clubs using education sites through community use agreements.
- Provide changing provision at Bretons Outdoor Recreation Centre and seek to improve poor quality ancillary provision elsewhere.
- Identify potential sites for 3G pitch provision and ensure any new pitches are FA tested and ensure a sinking fund is put in place.

[14] Key-

	Shortfall		Played to capacity		Spare capacity

[15] *In match equivalent sessions*

Rugby union

- There are seven senior pitches available for community use; all are assessed as poor quality.
- The sites with recorded use are Coopers Company and Coborn School, which has no spare capacity due to pitch quality.
- There is capacity for pitches to meet current demand; future demand will require additional provision in Havering but not necessarily in the South.

Recommendations

- Formalise the agreement between Old Cooperians and Coopers Company and Coborn School to secure tenure on the site.
- Improve the quality and maintenance of pitches to help increase capacity at Coopers Company and Coborn School.
- Review maintenance on school pitches to improve quality to provide for school use and keep available for future demand.

Hockey

- There are two full size hockey suitable AGPs (Coopers Company & Coborn School and The Brittons Academy Trust), both of which are available to the community and floodlit.
- The Brittons Academy Trust is assessed as poor quality due to vandalism issues, whilst Coopers Company & Coborn School is assessed as standard quality.
- Coopers Company & Coborn School is used by Upminster HC for the majority of its matches and training activity.
- The Brittons Academy Trust receives no hockey demand at present.

Recommendations

- Retain Coopers Company & Coborn School for continued hockey use.
- Seek resolution to vandalism issues at Brittons Academy Trust.
- Ensure a sinking fund is in place for long term sustainability at Coopers Company & Coborn School and ensure sinking fund remains in place at Brittons Academy Trust.
- Explore lack of hockey demand at The Brittons Academy Trust and explore future use by teams currently displaced.
- Should no future demand exist, consider converting pitch to a 3G surface in order to reduce 3G shortfalls (providing enough sand-based pitches are retained throughout Havering).

Cricket

- There are three grass pitches available for community use in the Analysis Area, two are standard quality and Upminster Park is good quality.
- No pitches have any spare capacity during the peak period.
- Clubs intend to grow by one senior and four junior teams in the Analysis Area.
- There is currently a shortfall of 0.1 pitches in the South Analysis Area. Predicted future demand indicates a demand for 0.6 additional pitches to accommodate future demand.
- The shortfall in this analysis area is solely due to overplay at Central Park. The provision of a non-turf wicket at the site, and transferring junior cricket to this, would alleviate overplay and leave spare capacity for growth.
- No club has a lease longer than 25 years currently.

Recommendations

- Work with clubs to extend leases on current sites to secure long term security of tenure for clubs.
- Work with clubs to review quality issues on those pitches assessed as standard quality and to address quality issues through increased maintenance.
- Support clubs to develop and improve 'off pitch' practice facilities or additional access to training provision elsewhere.
- Improve/increase training provision, particularly at sites that do not contain practice nets.

Tennis

- There are 22 courts available for community use and 12 courts unavailable for community use.
- There are ten floodlit courts; eight at Cranston Park Lawn Tennis & Social Club and two at Elm Park Tennis Club.
- Of the courts available to the community, 11 are assessed as good quality, seven are assessed as standard quality and four are assessed as poor quality.
- Changing provision at Elm Park Tennis Club is rated poor, whilst Spring Farm Tennis Club is not serviced by changing provision at all.
- Supply is deemed sufficient to meet demand both now and in the future.

Recommendations

- Improve and sustain court quality, particularly at sites assessed as poor.
- Improve ancillary provision servicing council courts to maximise usage.
- Support Elm Park Tennis Club and Spring Farm Tennis Club in their aspirations to improve changing provision.

Bowls

- There are two bowling greens in the Analysis Area, both of which are assessed as good quality.
- Current supply is deemed adequate to service demand, as the majority of bowling greens are considered to have spare capacity.

Recommendations

- Support and encourage junior bowls development in order to grow and sustain future participation levels in the sport.
- Address spare capacity and maximise the availability of bowling greens for pay and play in order to raise the profile of the game, increase levels of membership and the revenue generated by sites.
- Ensure appropriate maintenance regime to improve/sustain quality of green as appropriate.

Softball

- There are no softball pitches in the Analysis Area and no identified demand.

SOUTH ANALYSIS AREA ACTION PLAN

Site ID	Site	Sport	Management	Current status	Recommended actions	Partners	Site hierarchy tier	Timescales[16]	Cost[17]	Aim
4	Bretons Outdoor Recreation Centre	Football	Council	Currently subject to a master planning exercise. Ten adult, six 9v9, three 7v7 and three 5v5 pitches assessed as standard quality. The 9v9 pitches are overplayed by two match equivalent sessions, whilst the remaining pitches are played to capacity at peak time. The adult pitches are used heavily by youth 11v11 teams. Pitches are not serviced by changing facilities, however, Tigers FC have been working with the Football Foundation for the development of facilities.	Link masterplan to the outcome of the PPS in terms of pitch reconfiguration, maintenance and long term operation. Ensure appropriate maintenance to sustain usage. Relieve overplay of 9v9 pitches through pitch quality improvement or the transfer of play to sites with actual spare capacity. Consider pitch reconfiguration to better accommodate youth 11v11 teams. Consider suitability for a 3G pitch, possibly as part of the FA's Park Life scheme. As a high priority, seek to provide changing provision that will support Tigers FC's sustainability with toilet, changing, kitchen and social space.	Council FA	Strategic site	S	H	Protect Enhance Provide
5	Brittons Playing Field	Football	Council	Two adult, one 9v9 and one 7v7 pitch assessed as standard quality. Adult pitches are overplayed by 0.5 match equivalent sessions and are well used by youth 11v11 teams. Remaining pitches are played to capacity at peak time.	Ensure appropriate maintenance to sustain usage. Relieve overplay of adult pitches through pitch quality improvement or the transfer of play to sites with actual spare capacity. Consider pitch reconfiguration to better accommodate youth 11v11 teams.	Council FA	Key centre	S	L	Protect
8	Chafford Sports Complex	Football	School	One adult, one 9v9 and one 7v7 pitch assessed as poor quality. Available to the community, however, unused.	Improve pitch quality and explore community use options in order to attract demand.	School FA	Local site	S	L	Protect Enhance
		Tennis		Three standard quality macadam courts, unavailable to the community.	No local demand. Retain for school use.	School		L	L	
		Rugby union		One senior pitch, poor quality. Available and unused due to poor quality.	Review maintenance to improve quality and provide for school use.	School		S	L	
9	Coopers Company & Coborn School	Football	School	One adult and one youth 11v11 pitch assessed as good quality. Adult pitch is played to capacity at peak time. Youth 11v11 pitch has one match equivalent of actual spare capacity.	Seek transfer of youth 11v11 teams from overplay sites and from adult pitches to utilise spare capacity. Encourage users to enter a community use agreement to provide greater security of tenure.	School FA	Strategic site	S	L	Protect Enhance
		Hockey (Sand AGP)		A full size, floodlit, sand-based AGP assessed as standard quality. Used for matches and training by Upminster HC.	Ensure a sinking fund is in place for long term sustainability and retain as a hockey suitable surface.	School EH		L	L	
		Tennis		Four macadam courts; two assessed as good quality and two assessed as standard quality. Available to the community, however, unused.	No local demand. Retain for school use.	School		L	L

PART 6: KEEP THE STRATEGY ROBUST AND UP TO DATE

Delivery

The Playing Pitch Strategy seeks to provide guidance for maintenance/management decisions and investment made across Havering. By addressing the issues identified in the Assessment Report and using the strategic framework presented in this Strategy, the current and future sporting and recreational needs of Havering can be satisfied. The Strategy identifies where there is a deficiency in provision and identifies how best to resolve this in the future.

It is important that this document is used in a practical manner, is engaged with partners and encourages partnerships to be developed, to ensure that outdoor sports facilities are regarded as a vital aspect of community life and which contribute to the achievement of Council priorities.

The production of this Strategy should be regarded as the beginning of the planning process. The success of this Strategy and the benefits that are gained are dependent upon regular engagement between all partners involved and the adoption of a strategic approach.

Each member of the steering group should take the lead to ensure the PPS is used and applied appropriately within their area of work and influence. The role of the steering group should not end with the completion of the PPS document.

To help ensure the PPS is well used it should be regarded as the key document within the study area guiding the improvement and protection of playing pitch provision. It needs to be the document people regularly turn to for information on the how the current demand is met and what actions are required to improve the situation and meet future demand. In order for this to be achieved the steering group need to have a clear understanding of how the PPS can be applied and therefore delivered. Key uses for the PPS include evidence for supporting funding bids, guidance to inform planning decisions and planning applications and decision making for capital investment.

The process of developing the PPS will hopefully have already resulted in a number of benefits that will help with its application and delivery. These may include enhanced partnership working across different agendas and organisations, pooling of resources along with strengthening relationships and understanding between different stakeholders and between members of the steering group and the sporting community. The drivers behind the PPS and the work to develop the recommendations and action plan will have also highlighted, and helped the steering group to understand, the key areas to which it can be applied and how it can be delivered.

Monitoring and updating

It is important that there is regular annual monitoring and review against the actions identified in the Strategy. This monitoring should be led by the local authority and supported by all members of, and reported back to, the steering group. Understanding and learning lessons from how the PPS has been applied should also form a key component of monitoring its delivery. This should form an on-going role of the steering group. It is possible that in the interim between annual reviews the steering group could operate as a 'virtual' group; prepared to comment on suggestions and updates electronically when relevant.

As a guide, if no review and subsequent update has been carried out within three years of the PPS being signed off by the steering group, then Sport England and the NGBs would consider the PPS and the information on which it is based to be out of date. If the PPS is used as a 'live' document, and kept up to date, the time frame can be extended to five years.

Furthermore, the process of refreshing the PPS would be much less resource intensive if changes and updates have been made throughout the five years. If there are no updates to the document within the period the nature of the supply and in particular the demand for playing pitches is likely to have changed. Therefore, without any form of review and update within this time period it would be difficult to make the case that the supply and demand information and assessment work is sufficiently robust.

Ideally the PPS should be reviewed on an annual basis from the date it is formally signed off by the steering group. This will help to maintain the momentum and commitment that would have been built up when developing the PPS. Taking into account the time to develop the PPS this should also help to ensure that the original supply and demand information is no more than two years old without being reviewed.

An annual review should not be regarded as a particularly resource intensive task. However, it should highlight:

- How the delivery of the recommendations and action plan has progressed and any changes required to the priority afforded to each action (e.g. the priority of some may increase following the delivery of others).
- How the PPS has been applied and the lessons learnt.
- Any changes to particularly important sites and/or clubs in the area (e.g. the most used or high quality sites for a particular sport) and other supply and demand information, what this may mean for the overall assessment work and the key findings and issues.
- Any development of a specific sport or particular format of a sport.
- Any new or emerging issues and opportunities.

Once the PPS is complete the role of the steering group should evolve so that it:

- Acts as a focal point for promoting the value and importance of the PPS and playing pitch provision in the area.
- Monitors, evaluates and reviews progress with the delivery of the recommendations and action plan.
- Shares lessons learnt from how the PPS has been used and how it has been applied to a variety of circumstances.
- Ensures the PPS is used effectively to input into any new opportunities to secure improved provision and influence relevant programmes and initiatives.
- Maintains links between all relevant parties with an interest in playing pitch provision in the area;
- Reviews the need to update the PPS along with the supply and demand information and assessment work on which it is based. Further to review the group should either:
  - Provide a short annual progress and update paper;
  - Provide a partial review focussing on particular sport, pitch type and/or sub area; or
  - Lead a full review and update of the PPS document (including the supply and demand information and assessment details).

Alongside the regular steering group meetings it is recommended that the Council holds annual sport specific meetings with the pitch sport NGBs and other relevant organisations. These meetings should look to update the key supply and demand information, if necessary amend the assessment work, track progress with implementing the recommendations and action plan and highlight any new issues and opportunities. Things to consider include formation of new teams or loss of teams, any new formats of the sports that would impact on facilities, changes in quality or creation of new facilities.

These meetings could be timed to fit with the annual affiliation process undertaken by the NGBs which would help to capture any changes in the number and nature of sports clubs in the area. Other information that is already collected on a regular basis such as pitch booking records for local authority and other sites could be fed into these meetings. The NGBs will also be able to indicate any further performance quality assessments that have been undertaken within the study area. Discussion with the league secretaries may also indicate annual league meetings which it may be useful to attend to pick up any specific issues and/or enable a review of the relevant club details to be undertaken.

The steering group should regularly review and refresh area by area plans taking account of any improvements in pitch quality (and hence increases in pitch capacity) and also any new negotiations for community use of education or other private sites in the future. Updating the action plans will make the task of updating the PPS much easier.

It is important that the Council maintains the data contained with the accompanying Playing Pitch Database. This will enable it to refresh and update area by area plans on a regular basis. The accompanying databases are intended to be refreshed on a season by season basis and it is important that there is cross-departmental working, including for example, grounds maintenance and sports, to ensure that this is achieved and that results are used to inform subsequent annual sports facility development plans. Results should be shared with partners via a consultative mechanism.

Checklist

To help ensure the PPS is delivered and is kept robust and up to date, the steering group can refer to the new methodology Stage E Checklist: Deliver the strategy and keep it robust and up to date:

http://www.sportengland.org/facilities-planning/planning-for-sport/planning-tools-and-guidance/playing-pitch-strategy-guidance/

Stage E: Deliver the strategy and keep it robust and up to date	Tick ✓	
	Yes	Requires Attention
Step 9: Apply & deliver the strategy		
1. Are steering group members clear on how the PPS can be applied across a range of relevant areas?		
2. Is each member of the steering group committed to taking the lead to help ensure the PPS is used and applied appropriately within their area of work and influence?		
3. Has a process been put in place to ensure regular monitoring of how the recommendations and action plan are being delivered and the PPS is being applied?		
Step 10: Keep the strategy robust & up to date		
1. Has a process been put in place to ensure the PPS is kept robust and up to date?		
2. Does the process involve an annual update of the PPS?		
3. Is the steering group to be maintained and is it clear of its on-going role?		
4. Is regular liaison with the NGBs and other parties planned?		
5. Has all the supply and demand information been collated and presented in a format (i.e. single document that can be filtered accordingly) that will help people to review it and highlight any changes?		
6. Have any changes made to the Active Places Power data been fed back to Sport England?		

APPENDIX ONE: STRATEGIC CONTEXT

The recommendations within this Strategy have been developed via the combination of information gathered during consultation, site visits and analysis. They reflect key areas to be addressed over its lifetime. However, implementation must be considered in the context of financial implications and the need for some proposals to also meet planning considerations.

The provision of high quality and accessible community outdoor sports facilities at a local level is a key requirement for achieving the targets set out by the Government and Sport England. It is vital that this strategy is cognisant of and works towards these targets in addition to local priorities and plans.

DCMS (Department for Culture Media & Sport) is currently (2015) consulting on a new strategy for sport. It will seek to address the following challenges:

- How to address the recent decline in the number of people that regularly take part in sport and deliver a long-term sustainable increase in participation;
- What type(s) of participation should be encouraged and how should they be measured;
- How to ensure that funding goes to those who can best deliver results;
- How to specifically target under-represented groups;
- Understanding the role of the private sector, and how public sector bodies,
- National Governing Bodies (NGBs) and other sports bodies should work with the private sector to help deliver an increase in participation;
- How to best support participation in new and/or non-traditional sports and activities;
- How to maximise the potential of new technology to increase participation;
- How to use the power of sport to achieve broader positive social outcomes and whether some funding should specifically be spent for that purpose.

Sport England: Towards an Active Nation (2016-2021)

Sport England has recently released its new five year strategy ‘Towards an Active Nation’. The aim is to target the 28% of people who do less than 30 minutes of exercise each week and will focus on the least active groups; typically women, the disabled and people from lower socio-economic backgrounds.

Sport England will invest up to £30m on a plan to increase the number of volunteers in grassroots sport. Emphasis will be on working with a larger range of partners with less money being directed towards National Governing Bodies.

The Strategy will help deliver against the five health, social and economic outcomes set out in the Government’s Sporting Future strategy.

- Physical Wellbeing
- Mental Wellbeing
- Individual Development
- Social & Community Development
- Economic Development

National Planning Policy Framework

The National Planning Policy Framework (NPPF) sets out planning policies for England. It details how these changes are expected to be applied to the planning system. It also provides a framework for local people and their councils to produce distinct local and neighbourhood plans, reflecting the needs and priorities of local communities.

The NPPF states the purpose of the planning system is to contribute to the achievement of sustainable development. It identifies that the planning system needs to focus on three themes of sustainable development: economic, social and environmental. A presumption in favour of sustainable development is a key aspect for any plan-making and decision-taking processes. In relation to plan-making the NPPF sets out that Local Plans should meet objectively assessed needs.

The 'promoting healthy communities' theme identifies that planning policies should be based on robust and up-to-date assessments of the needs for open space, sports and recreation facilities and opportunities for new provision. Specific needs and quantitative or qualitative deficiencies or surpluses in local areas should also be identified. This information should be used to inform what provision is required in an area.

As a prerequisite the NPPF states existing open space, sports and recreation buildings and land, including playing fields, should not be built on unless:

- An assessment has been undertaken, which has clearly shown that the open space, buildings or land is surplus to requirements.
- The loss resulting from the proposed development would be replaced by equivalent or better provision in terms of quantity and quality in a suitable location.
- The development is for alternative sports and recreational provision, the needs for which clearly outweigh the loss.

In order for planning policies to be 'sound' local authorities are required to carry out a robust assessment of need for open space, sport and recreation facilities.

The FA National Game Strategy (2015 – 2019)

The Football Association's (FA) National Game Strategy provides a strategic framework that sets out key priorities, expenditure proposals and targets for the national game (i.e., football) over a four year period. The main aims of the National Games Strategy are:

- Sustain and increase participation.
- Ensure access to education sites to accommodate the game.
- Help players to be the best that they can be and provide opportunities for them to progress from grassroots to elite.
- Recruit, retain and develop a network of qualified referees.
- Support clubs, leagues and other competition providers to develop a safe, inclusive and positive football experience for everyone.
- Support Clubs and Leagues to become sustainable businesses, understanding and serving the needs of players and customers.
- Improve grass pitches through the pitch improvement programme to improve existing facilities and changing rooms.
- Deliver new and improved facilities including new Football Turf Pitches.
- Work with priority Local Authorities enabling 50% of mini-soccer and youth matched to be played on high quality artificial grass pitches.

England and Wales Cricket Board (ECB) Cricket Unleashed 5 Year Plan

The England and Wales Cricket Board unveiled a new strategic five-year plan in 2016 (available at http://www.cricketunleashed.com). Its success will be measured by the number of people who play, follow or support the whole game.

The plan sets out five important headline elements and each of their key focuses, these are:

- ***More Play*** – make the game more accessible and inspire the next generation of players, coaches, officials and volunteers. Focus on:
  - *Clubs and leagues*
  - *Kids*
  - *Communities*
  - *Casual*

- ***Great Teams*** – deliver winning teams who inspire and excite through on-field performance and off-field behaviour. Focus on:
  - *Pathway*
  - *Support*
  - *Elite Teams*
  - *England Teams*

- ***Inspired Fans*** – put the fan at the heart of our game to improve and personalise the cricket experience for all. Focus on:
  - *Fan focus*
  - *New audiences*
  - *Global stage*
  - *Broadcast and digital*

- **Good Governance and Social Responsibility** – make decisions in the best interests of the game and use the power of cricket to make a positive difference. Focus on:
  - *Integrity*
  - *Community programmes*
  - *Our environments*
  - *One plan*

- **Strong Finance and Operations** – increase the game's revenues, invest our resources wisely and administer responsibly to secure the growth of the game. Focus on:
  - *People*
  - *Revenue and reach*
  - *Insight*
  - *Operations*

England Hockey (EH) - A Nation Where Hockey Matters (2013-2017)

EH have a clear vision, a powerful philosophy and five core objectives that all those who have a role in advancing Hockey can unite behind. With UK Sport and Sport England's investment, and growing commercial revenues, EH are ambitious about how they can take the sport forward in Olympic cycles and beyond.

"The vision is for England to be a 'Nation Where Hockey Matters'. A nation where hockey is talked about at dinner tables, playgrounds and public houses, up and down the country. A nation where the sport is on the back pages of our newspapers, where children dream of scoring a goal for England's senior hockey team, and where the performance stirs up emotion amongst the many, not the few"

England Hockey aspires to deepen the passion of those who play, deliver and follow sport by providing the best possible environments and the best possible experiences. Whilst reaching out to new audiences by making the sport more visible, available and relevant and through the many advocates of hockey.

Underpinning all this is the infrastructure which makes the sport function. EH understand the importance of volunteers, coaches, officials, clubs and facilities. The more inspirational people can be, the more progressive Hockey can be and the more befitting the facilities can be, the more EH will achieve. The core objectives are as follows:

- Grow our Participation
- Deliver International Success
- Increase our Visibility
- Enhance our Infrastructure
- Be a strong and respected Governing Body

England Hockey has a Capital Investment Programme (CIP) that is planned to lever £5.6 million investment into hockey facilities over the next four years, underpinned by £2m million from the National Governing Body. With over 500 pitches due for refurbishment in the next 4-8 years, there will be a large focus placed on these projects through this funding stream. The current level of pitches available for hockey is believed to be sufficient for the medium term needs, however in some areas; pitches may not be in the right places in order to maximize playing opportunities.

England Hockey Strategy

Vision: For every hockey club in England to have appropriate and sustainable facilities that provide excellent experiences for players.
Mission: More, Better, Happier Players with access to appropriate and sustainable facilities.

Our club market is well structured and clubs are required to affiliate to England Hockey to play in community leagues. As a result only relatively few occasional teams lie outside our affiliation structure. Schools and Universities are the other two areas where significant hockey is played.

British Tennis Strategy 2015-2018

The new strategy is presented in a concise one page framework that includes key strategies relating to three participation "focus" areas, six participation "drivers" and three participation "enablers". To achieve success, the 12 strategy areas will need to work interdependently to stem the decline and unlock sustainable growth:

The three participation "focus" areas are where tennis is consumed:

- Deliver great service to clubs.
- Build partnerships in the community, led by parks.
- Enhance the tennis offer in education.

The six participation "drivers" are the areas that will make the biggest difference where tennis is consumed. They must all be successful on a standalone and interconnected basis and include:

- Becoming more relevant to coaches.
- Refocusing on recreational competition.
- Providing results orientated facility investment.
- Applying best in class marketing and promotion.
- Jump starting the peak summer season.
- Establishing a "no compromise" high performance programme with focus.

The final layer is comprised of three participation "enablers" that underpin our ability to be successful. These enablers are rooted in how the LTA will get better; how the entire network of partners must be harnessed to work together and the need to raise more financial resources to fund our sport's turnaround. They include:

- Becoming a more effective and efficient LTA.
- Harnessing the full resource network.
- Generating new revenue.

For further information and more detail on the framework please go to *http://www.lta.org.uk/about-the-lta/structure-vision*

Bowls England: Strategic Plan 2014-2017

Bowls England will provide strong leadership and work with its stakeholders to support the development of the sport of bowls in England for this and future generations. The overall vision of Bowls England is to:

- Promote the sport of outdoor flat green bowls.
- Recruit new participants to the sport of outdoor flat green bowls.
- Retain current and future participants within the sport of flat green bowls.

In order to ensure that this vision is achieved, ten key performance targets have been created, which will underpin the work of Bowls England up until 31st March 2017.

- 115,000 individual affiliated members.
- 1,500 registered coaches.
- Increase total National Championship entries by 10%.
- Increase total national competition entries by 10%.
- Medal places achieved in 50% of events at the 2016 World Championships.
- 35 county development plans in place and operational.
- County development officer appointed by each county association.
- National membership scheme implemented with 100% uptake by county associations.
- Secure administrative base for 1st April 2017.
- Commercial income to increase by 20%.

Despite a recent fall in affiliated members, and a decline in entries into National Championships over the last five years, Bowls England believes that these aims will be attained by following core values. The intention is to:

- Be progressive.
- Offer opportunities to participate at national and international level.

- Work to raise the profile of the sport in support of recruitment and retention.
- Lead the sport.
- Support clubs and county associations.

APPENDIX TWO: FUNDING PLAN

Funding opportunities

In addition to using the planning system to lever in contributions through Section 106 or CIL, it is recognised that external partner funding will need to be sought to deliver much of the action plan. Although seeking developer contributions in applicable situations and other local funding/community schemes could go some way towards meeting deficiencies and/or improving provision, other potential/match sources of funding should be investigated. Below is a list of current funding sources that are relevant for community improvement projects involving sports facilities.

In order to deliver much of the Action Plan it is recognised that external partner funding will need to be sought. Although seeking developer contributions in applicable situations and other local funding/community schemes could go some way towards meeting deficiencies and/or improving provision, other potential/match sources of funding should be investigated. Below is a list of current funding sources that are relevant for community improvement projects involving sports facilities.

Awarding body	Description
Big Lottery Fund http://www.biglotteryfund.org.uk/	Big invests in community groups and to projects that improve health, education and the environment.
Sport England: ◂ Improvement Fund ◂ Sportsmatch ◂ Small Grants ◂ Protecting Playing Fields ◂ Inspired Facilities ◂ Strategic Facilities Fund http://www.sportengland.org/funding.aspx http://www.sportengland.org/funding/our-different-funds/strategic-facilities/	Sport England is keen to marry funding with other organisations that provide financial support to create and strengthen the best sports projects. Applicants are encouraged to maximise the levels of other sources of funding, and projects that secure higher levels of partnership funding are more likely to be successful.
Football Foundation http://www.footballfoundation.org.uk/	This trust provides financial help for football at all levels, from national stadia and FA Premier League clubs down to grass-roots local development.
Rugby Football Foundation - The Grant Match Scheme www.rugbyfootballfoundation.org	The Grant Match Scheme provides easy-to-access grant funding for playing projects that contribute to the recruitment and retention of community rugby players. Grants are available on a 'match funding' 50:50 basis to support a proposed project. Projects eligible for funding include: 1. Pitch Facilities – Playing surface improvement, pitch improvement, rugby posts, and floodlights. 2. Club House Facilities – Changing rooms, shower facilities, washroom/lavatory, and measures to facilitate segregation (e.g. women, juniors). 3. Equipment – Large capital equipment, pitch maintenance capital equipment (e.g. mowers).
EU Life Fund http://ec.europa.eu/environment/funding/intro_en.htm	LIFE is the EU's financial instrument supporting environmental and nature conservation projects throughout the EU.

Awarding body	Description
EH Capital Investment Programme (CIP)	The CIP fund is for the provision of new pitches and re-surfacing of old AGPs. It forms part of EH's 4 year Whole Sport's Plan.
National Hockey Foundation http://www.thenationalhockeyfoundation.com/	The Foundation primarily makes grants to a wide range of organisations that meet one of our chosen areas of focus: ◂ Young people and hockey. ◂ Enabling the development of hockey at youth or community level. ◂ Smaller Charities.
Lawn Tennis Association http://www.lta.org.uk/venue-management/	British Tennis has £5.125m million pounds of new funding per annum to enhance tennis facilities, with the aim of getting more people playing more often. The LTA have three funding streams available to support clubs and community projects. ◂ Easy Access Loan Funding Any LTA registered club that can demonstrate that the facility development will retain or grow membership can apply for this funding at any time. ◂ Growing the Game – now closed Any LTA registered venue that can demonstrate sustainable growth through facility development and a tennis development plan can apply for this funding. ◂ The Community Tennis Fund Any registered venue that can demonstrate the ability to grow community participation through tennis facility development. This fund will be allocated throughout the year.

Protecting Playing Fields

Sport England launched a funding programme; Protecting Playing Fields (PPF) as part of its Places People Play Olympic legacy mass participation programme. The programme is being delivered via funding rounds with approximately £4 million being awarded to projects in each round.

Its focus is on protecting and improving playing fields and developing community sport. It will fund capital projects that create, develop and improve playing fields for sporting and community use and offer long term protection of the site for sport. Projects are likely to involve the construction of new pitches or improvement of existing ones that need levelling or drainage works.

The programme is being delivered via five funding rounds (with up to £2 million being awarded to projects in each round). Its focus is on protecting and improving playing fields and developing community sport. It will fund capital projects that create, develop and improve playing fields for sporting and community use and offer long term protection of the site for sport. Projects are likely to involve the construction of new pitches or improvement of existing ones that need levelling or drainage works.

Inspired Facilities

Sport England's 'Inspired Facilities' funding programme is an open programme where clubs, community and voluntary sector groups and local authorities can apply for grants of between £25k and £150k where there is a proven local need for a facility to be modernised, extended or modified to open up new sporting opportunities.

The programmes three priorities are:

- Organisations that haven't previously received a Sport England Lottery grant of over £10k.
- Projects that are the only public sports facility in the local community.
- Projects that offer local opportunities to people who do not currently play sport.

Besides this scheme providing an important source of funding for potential voluntary and community sector sites, it may also providing opportunities for Council to access this funding particularly in relation to resurfacing the artificial sports surfaces.

Strategic Facilities Fund

Facilities are fundamental in providing more people with the opportunity to play sport. The supply of the right facilities in the right areas is key to getting more people to play sport. Sport England recognises the considerable financial pressures that local authorities are currently under and the need to strategically review and rationalise leisure stock so that cost effective and financially sustainable provision is available in the long-term. Sport England has a key role to play in the sector, from influencing the local strategic planning and review of sports facility provision to investing in major capital projects of strategic importance.

The Strategic Facilities Fund will direct capital investment into a number of key local authority projects that are identified through a strategic needs assessment and that have maximum impact on growing and sustaining community sport participation. These projects will be promoted as best practice in the delivery of quality and affordable facilities, whilst demonstrating long-term operational efficiencies. The fund will support projects that bring together multiple partners, including input from the public and private sectors and national governing bodies of sport (NGBs). The fund is also designed to encourage applicants and their partners to invest further capital and revenue funding to ensure sustainability. Sport England has allocated a budget of circa £30m of Lottery funding to award through this fund (2013-17).

Key features which applications must demonstrate are:

- A robust needs and evidence base which illustrates the need for the project and the proposed facility mix
- Strong partnerships which will last beyond the initial development of the project and underpin the long-term sustainability of the facility
- Multi-sport provision and activity that demonstrates delivery against NGB local priorities
- A robust project plan from inception to completion with achievable milestones and timescales.

Lottery applications will be invited on a solicited-only basis and grants of between £500,000 and £2,000,000 will be considered. The Strategic Facilities Fund will prioritise projects that:

- Are large-scale capital developments identified as part of a local authority sports facility strategic needs assessment/rationalisation programme and that will drive a significant increase in community sports participation.
- Demonstrate consultation/support from two or more NGBs and delivery against their local priorities.
- Are multi-sport facilities providing opportunities to drive high participant numbers.
- Are a mix of facility provision (indoor and/or outdoor) to encourage regular & sustained use by a large number of people.
- Offer an enhancement, through modernisation, to existing provision and/or new build facilities.
- Have a long-term sustainable business plan attracting public and private investment.
- Show quality in design, but are fit for purpose to serve the community need.
- Have effective and efficient operating models, combined with a commitment to development programmes which will increase participation and provide talent pathways.

Projects will need to demonstrate how the grant will deliver against Sport England's strategic priorities. The funding available is for the development of the capital infrastructure, which can contribute to the costs of new build, modernisation or refurbishment and purchasing of major fixed equipment as part of the facility development.

Funder's requirements

Below is a list of funding requirements that can typically be expected to be provided as part of a funding bid, some of which will fall directly out of the Playing Pitch Strategy:

- Identify need (i.e., why the Project is needed) and how the Project will address it.
- Articulate what difference the Project will make.
- Identify benefits, value for money and/or added value.
- Provide baseline information (i.e., the current situation).
- Articulate how the Project is consistent with local, regional and national policy.
- Financial need and project cost.
- Funding profile (i.e., who's providing what? Unit and overall costs).
- Technical information and requirements (e.g., planning permission).
- Targets, outputs and/or outcomes (i.e., the situation after the Project/what the Project will achieve).
- Evidence of support from partners and stakeholders.
- Background/essential documentation (e.g., community use agreement).
- Assessment of risk.

Indicative costs

The indicative costs of implementing key elements of the Action Plan can be found on the Sport England website:
http://www.sportengland.org/facilities-planning/tools-guidance/design-and-cost-guidance/cost-guidance/

There are two sets of costs that are highlighted here; facility capital costs and lifecycle costs.

Facility capital costs

- Facility capital costs are calculated using estimates of what it typically costs to build modern sports facilities, including fees and external work, naturally taking into account varying conditions, inflation and regional adjustments.
- Costs are updated regularly in conjunction with information provided by the BCIS (Building Cost Information Service) and other Quantity Surveyors.
- The document is often referred to as the Planning Kitbag costs as the figures are often used by planners and developers when reviewing potential planning contributions to site developments.

Lifecycle costs

- Life cycle costs are how much it costs to keep a facility open and fit-for-purpose during its lifetime.
- It includes costs for major replacement and planned preventative maintenance (PPM) – day to day repairs. The costs are expressed as a percentage of the capital cost.
- You should not underestimate the importance of regular maintenance and the expense in maintaining a facility throughout its life.

APPENDIX THREE: GLOSSARY OF TERMS

Displaced demand generally relates to play by teams or other users of playing pitches from within the study area (i.e. from residents of the study area) which takes place outside of the area. This may be due to issues with the provision of pitches and ancillary facilities in the study area, just reflective of how the sports are played (e.g. at a central venue for the wider area) or due to the most convenient site for the respective users just falling outside of the local authority/study area.

Unmet demand is demand that is known to exist but unable to be accommodated on current supply of pitches. This could be in the form of a team with access to a pitch for matches but nowhere to train or vice versa. This could also be due to the poor quality and therefore limited capacity of pitches in the area and/or a lack of provision and ancillary facilities which meet a certain standard of play/league requirement. League secretaries may be aware of some unmet demand as they may have declined applications from teams wishing to enter their competitions due to a lack of pitch provision which in turn is hindering the growth of the league.

Latent demand is demand that evidence suggests may be generated from the current population should they have access to more or better provision. This could include feedback from a sports club who may feel that they could set up and run an additional team if they had access to better provision.

Future demand is an informed estimate made of the likely future demand for pitches in the study area. This is generally based on the most appropriate current and future population projections for the relevant age and gender groupings for each sport. Key trends, local objectives and targets and consultation also inform this figure.

Casual use or other use could take place on natural grass pitches or AGPs and include:

- Regular play from non-sports club sources (e.g. companies, schools, fitness classes).
- Infrequent informal/friendly matches.
- Informal training sessions.
- More casual forms of a particular sport organised by sports clubs or other parties.
- Significant public use and informal play, particularly where pitches are located in parks/recreation grounds.

Carrying capacity is the amount of play a site can regularly accommodate (in the relevant comparable unit) for community use without adversely affecting its quality and use. This is typically outlined by the NGB.

Overplay is when a pitch is used over the amount that the carrying capacity will allow, (i.e. more than the site can accommodate). Pitches have a limit of how much play they can accommodate over a certain period of time before their quality, and in turn their use, is adversely affected.

Spare capacity is the amount of additional play that a pitch could potentially accommodate in additional to current activity. There may be reasons why this potential to accommodate additional play should not automatically be regarded as actual spare capacity, for example, a site may be managed to regularly operate slightly below its carrying capacity to ensure that it can cater for a number of friendly matches and training activity. This needs to be investigated before the capacity is deemed **actual spare capacity**.

Match equivalent sessions is an appropriate comparable unit for pitch usage. For football, rugby union and rugby league, pitches should relate to a typical week within the season and one match = one match equivalent session if it occurs every week or 0.5 match equivalent sessions if it occurs every other week (i.e. reflecting home and away fixtures). For cricket pitches it is appropriate to look at the number of match equivalent sessions over the course of a season and one match = one match equivalent session.

Executive Summary

1 The aim of this Infrastructure Delivery Plan (IDP) is to set out the type and scale of infrastructure required to underpin the Local Plan's vision and framework for the future development of Havering. Provision of adequate infrastructure is essential for maintaining the existing quality of life in the area and to support further development to accommodate growth in population and economic activity.

2 The IDP presents evidence on the scale and cost of infrastructure that will be required to meet the needs of development in Havering over the Local Plan period to 2032. This is of necessity a broad assessment as there are inevitably considerable uncertainties surrounding projections of development and costs over the medium to long term.

3 Infrastructure is planned, provided and funded by a wide range of agencies. The IDP has been compiled in consultation with all the relevant delivery agencies.

Types of Infrastructure

4 The IDP assesses the need for infrastructure in the following categories, with the most costly items listed first:

- Transport;
- Education;
- Health and Well-being;
- Utilities;
- Flood Protection;
- Culture & Community;
- Green Infrastructure;
- Recreation & Leisure;
- Emergency Services;
- Waste;
- Urban Regeneration; and
- Environment.

Funding Sources

5 There is a wide range of potential sources of funding for the provision of infrastructure. The role and relative contribution of these sources vary through time, according to national economic circumstances, government policy, and as new mechanisms are introduced and older ones phased out. There have been very significant cuts to public expenditure and in particular to local government funding in recent years and these are expected to continue in the immediate future, creating a very challenging environment for infrastructure providers.

6 The main funding sources likely to be available to support the Havering IDP comprise:

- London Borough of Havering capital funding;
- Greater London Authority/Transport for London;

- developer contributions;
- Central Government allocations;
- lotteries and charities; and
- direct charges for services, as in the case of utility companies.

Housing Zones

7 Two proposals for Housing Zones (HZ) in Havering have been agreed with the Mayor of London: Rainham and Beam Park Housing Zone, and Romford Housing Zone. The building of homes in these areas is supported by a range of planning and financial measures. HZ programmes are funded by a combination of local authority funding, Greater London Authority (GLA) direct and recoverable grant, and external funding. HZ finance will be used predominately to deliver physical infrastructure in advance or in parallel to developments, which will significantly increase viability and hence improve Community Infrastructure Levy/section 106 contribution potential. In the Local Plan, each Housing Zone forms the focus for a Strategic Development Area (SDA).

Developer Contributions

8 Given the constraints on public sector funding in the coming years, particular emphasis needs to be placed on the potential for developer contributions to raise funds towards investment in essential facilities. The Community Infrastructure Levy (CIL) regulations allow local authorities in England and Wales to raise funds from developers undertaking new building projects in their area. The money can be used to fund a wide range of infrastructure that is needed as a result of development.

9 As 'pooling' of section 106 (s106) obligations has now been limited to five s106 obligations to pay for a single infrastructure project or type of infrastructure, CIL is now the main mechanism for funding strategic off-site community infrastructure from developer contributions. However, s106 obligations can still be used to deliver affordable housing and certain site-specific infrastructure needs, and mitigation measures. Havering is in the process of developing and implementing its Havering CIL with the objective of this being adopted in 2017 subject to Member approval.

Coordination Challenges

10 The London Borough (LB) of Havering is only one of a large number of agencies involved in delivering infrastructure in Havering (see Annex A). All are pursuing the delivery of their particular service and the Local Plan provides a vital framework to guide their actions towards a common goal. However, if the required infrastructure is to be available to serve new developments as and when they come on stream there needs to be substantial joint working between agencies to ensure their individual plans and programmes are designed and funded to bring this about. Challenging issues include bringing together disparate planning processes and cycles, the need to work with neighbouring agencies/authorities, evolving new models for service delivery, and taking advantage of the potential for co-location of facilities and services.

Development Quantities

11 In order to assess the amount of infrastructure required to support future development in Havering the quantity of future dwellings and population needs to be established. The housing target for Havering in the Further Alterations to the London Plan, published in 2015, is 11,700 for the period 2015 to 2025. Projecting this rate onwards, the total housing target for Havering for the 15 year plan period March 2016 to April 2031 would therefore be 17,550 dwellings. The total population of the borough is projected to increase by some 31,000, from 252,000 in 2016 to 283,000 in 2032.

12 The Rainham and Beam Park SDA and the Romford SDA will each deliver a minimum of 4.000 new dwellings towards that target.

Infrastructure Costs

13 Table ES1 sets out the estimated cost of the main infrastructure items identified as required to support the Local Plan, by broad category. The total of £568m, cannot be taken to be a comprehensive estimate of total costs of all infrastructure for the total Local Plan period, 2016 to 2031. This is because in many cases the relevant agencies have only derived costs for a shorter time period, due to their regular capital programming procedures and the uncertainties of longer term forecasts of requirements. In some other cases, such as police and flood protection, the relevant agencies are still in the process of assessing requirements and forms of provision.

Table ES1: Estimated Total Cost of Identified Infrastructure Requirements

Sector	Total Cost
Education	£218m
Transport	£105m
Health	£73m
Culture & Community	£32m
Green Infrastructure	£49m
Recreation & Leisure	£63m
Urban Regeneration	£24m
Others	£4m
Total	**£568m**
Note: Figures may not sum to Total due to rounding.	

14 In addition to the currently programmed transport improvements, three major transport interventions are currently under active consideration but have not yet been progressed sufficiently for costs to be estimated for inclusion in Table ES1. These are a new north-south public transport route, and re-configuration of the arrangements at Gallows Corner and also the Ring Road west of Romford Town Centre.

Priority Infrastructure

15 This IDP assesses requirements for a wide range of infrastructure types, all of which are important in supporting sustainable communities in that a significant shortfall could limit quality of life in a community and reduce the appeal of Havering to newcomers. However, some infrastructure items have particularly high priority and should be provided within the first five years of the Local Plan. Priority infrastructure comprises:

- infrastructure that would be needed regardless of additional development, ie. to make up existing deficiencies in provision, and

- critical infrastructure needed to allow early development to proceed, without which it might be unacceptable for development and occupation to take place. This relates mainly to areas designated in the Local Plan as locations for substantial growth in the early phases of the Plan, especially the Rainham and Beam Park SDA and the Romford SDA, each of which is expected to deliver over 4,000 new dwellings.

16 Priority projects in the Rainham and Beam Park SDA are as follows:

- Utilities: diversion of electricity cables, sewer and gas main;
- Transport: new Beam Park Station;
- Transport: Beam Parkway, improving connectivity along A1306;
- Education: new and expanded primary and secondary schools;
- Health: New primary care facility near Rainham Town Centre; and
- Flood Protection: opening up culverts and flood storage improvements.

17 Priority projects in the Romford SDA are as follows:

- Transport: Crossrail serving Romford;
- Transport: Romford Station improvements;
- Transport: East West Link and improved accessibility for walking and cycling;
- Education: new and expanded primary and secondary schools in Romford; and
- Health: Primary and community care hub in Romford Town Centre

18 Priority projects elsewhere in the borough are as follows:

- Transport: Crossrail serving Gidea Park and Harold Wood;
- Education: New and expanded primary schools in Harold Hill and South Hornchurch and secondary schools in the Central Area; and
- New primary care hub in Heaton ward.

Major Infrastructure Projects under Consideration

19 LB Havering is currently in the early stages of investigating the feasibility of three major new interventions to bring about transport and public realm improvements in the borough, although these are not yet committed or costed:

- provision of public transport modes such as light rail, tram or guided bus to provide a step change in connectivity between the north and south of the borough and linking to Romford, either on existing highways or outside of the established built up area;

- a substantial re-configuration of the arrangement at Gallows Corner, by which the junction of the A12 and A127 would be decked over to create a space above for new development and safe, convenient movement by pedestrians and cyclists; and

- a similar substantial re-configuration of the Ring Road to the west of Romford town centre which would place the road underground, allowing unrestricted movement for pedestrians and cyclists into the town centre from the west and scope for an improved public realm.

1 INTRODUCTION

Purpose of Report

1.1 The aim of this Infrastructure Delivery Plan (IDP) is to set out the type and scale of infrastructure required to underpin the Local Plan's vision and framework for the future development of Havering. Provision of adequate infrastructure is essential for maintaining the existing quality of life in the area and to support further development to accommodate growth in population and economic activity.

1.2 According to paragraph 157 of the National Planning Policy Framework (NPPF), Local Plans should *"plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies (of the NPPF)"*. The NPPF (paragraph 177) stresses the importance of ensuring that there is a reasonable prospect that planned infrastructure is deliverable in a timely fashion and states that "*to facilitate this, it is important that local planning authorities understand district-wide development costs at the time Local Plans are drawn up. For this reason, infrastructure and development policies should be planned at the same time, in the Local Plan"*.

1.3 Paragraph 162 of the NPPF states that*:* "*Local planning authorities should work with other authorities and providers to:*

- *assess the quality and capacity of infrastructure for transport, water supply, wastewater and its treatment, energy (including heat), telecommunications, utilities, waste, health, social care, education, flood risk and coastal change management, and its ability to meet forecast demands; and*

- *take account of the need for strategic infrastructure including nationally significant infrastructure within their areas."*

1.4 According to paragraph 18 of the Planning Practice Guidance (PPG) on Local Plans: *"the Local Plan should make clear, for at least the first five years, what infrastructure is required, who is going to fund and provide it, and how it relates to the anticipated rate and phasing of development"* (emphasis added). There is a clear requirement to present an assessment of required infrastructure, its location, costs, timing, funding source and implementing agent.

1.5 The PPG on Local Plans also states that: "*the detail concerning planned infrastructure provision can be set out in a supporting document such as an infrastructure delivery programme that can be updated regularly".* The primary purpose of this IDP is to demonstrate that it will be practical to provide sufficient infrastructure to support the quantity of development proposed in the Havering Local Plan.

1.6 This IDP presents evidence on the scale and cost of infrastructure that will be required to meet the needs of development in Havering over the Local Plan period to 2031. This is, of necessity, a broad assessment as there are inevitably considerable uncertainties surrounding projections of development and costs over the medium to long term.

1.7 The PPG recognises that it is difficult to assess infrastructure requirements for the longer term and requires coverage of *"at least the first five years".* While the IDP aims to cover the whole Local Plan period to 2031 as far as possible, some of the requirements and costs can only be assessed in relation to needs over a shorter period of up to ten years or so.

1.8 The PPG states that: *"early discussion with infrastructure and service providers is particularly important to help understand their investment plans and critical dependencies".* This IDP has been compiled in consultation with all the relevant delivery agencies. Contact details for these are contained in Annex A, which also notes which agencies have directly provided information for inclusion in this report.

Structure of Report

1.9 The report contains four sections after this introduction:

- Section 2 sets out the types of infrastructure covered in the assessment;
- Section 3 discusses the potential sources of funding of infrastructure investment;
- Section 4 discusses the challenges of coordinating infrastructure provision;
- Section 5 sets out the assumptions on development quantities in terms of dwellings, population, and commercial floorspace;
- Section 6 provides an assessment of the scale of requirements for each type of infrastructure that will be needed to serve the borough's planned development; and
- Section 7 presents the main infrastructure items that have been identified and the costs of providing them, to the extent that these can be established at present.

2 TYPES OF INFRASTRUCTURE

2.1 Paragraph 156 of the NPPF sets out the main types of infrastructure required to promote healthy communities and for which the Local Plan should include strategic delivery policies. These are:

- infrastructure for transport, telecommunications, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat); and
- health, security, community and cultural infrastructure and other local facilities.

2.2 Also, paragraph 73 of the NPPF requires local authorities to determine requirements for open space, sports and recreational provision.

2.3 Table 2.1 lists the facilities required to support development in Havering and which are covered in this IDP. The last column shows any current plans or strategies which are relevant to the assessment of future requirements.

3 INFRASTRUCTURE FUNDING

Funding Sources

3.1 There is a wide range of potential sources of funding for the provision of infrastructure. The role and relative contribution of these sources vary through time, according to national economic circumstances, government policy, and as new mechanisms are introduced and older ones phased out. There have been very significant cuts to public expenditure and in particular to local government funding in recent years and these are expected to continue in the immediate future, creating a very challenging environment for infrastructure providers.

3.2 In the light of these funding constraints, the Mayor of London has stated in the London Plan (paragraph 8.7) that he will be exploring "*the scope for innovative funding techniques such as tax increment funding/ accelerated development zones (allowing future tax income in an area to support local infrastructure and regeneration)"*. He will also support *"the development and implementation of innovative forms of funding and partnership across the public, private and community/voluntary sectors to seek to lever more resources to support London priorities, and to ensure maximum cost effectiveness in their delivery".*

3.3 The main funding sources likely to be available to support the Havering IDP are discussed below. They comprise:

- LB Havering capital funding;
- Greater London Authority/Transport for London;
- developer contributions;
- Central Government allocations;
- lotteries and charities; and
- direct charges for services, as in the case of utility companies.

LB Havering Capital Funding

3.4 LB Havering capital funding is derived from a number of funding streams, predominantly Capital Receipts and Government Grants. In addition it can divert some revenue funding to fund capital items. Revenue funding includes Government Grant, Council Tax, Business Rates, and income from service providers. Due to changes in the way Revenue Support Grant reductions have been allocated, LB Havering will experience a rapid reduction in its grant settlement over the four year period up to 2019/2020, with a large element of this front loaded in the early years. At present it is not possible to foresee how far into the Local Plan period such financial constraints are likely to continue. They will inevitably place severe restrictions on the resources available for services provided by LB Havering.

Greater London Authority (GLA)/Transport for London (TfL)

GLA Housing Zones

3.5 The Mayor introduced Housing Zones (HZs) as a new approach to delivering housing in London. Unlike traditional funding programmes, they are area-focused and bespoke to suit each location to significantly expand and accelerate the number of homes being built. The building of homes in these areas is supported by a range of planning and financial measures.

3.6 Two proposals for HZs in Havering have been agreed with the GLA:

- Rainham and Beam Park (R/BPHZ) Housing Zone is within Phase 2 of the Mayor's Housing Zone Programme; and

- Romford Housing Zone (RHZ) is within Phase 3 of the Programme.

3.7 HZ programmes are funded by a combination of local authority funding, GLA direct and recoverable grant, and external funding. The GLA funding can be used flexibly, from financing infrastructure to supporting individual schemes, with the focus on recovery and recycling investment, rather than conventional grant. HZ finance will be used predominately to deliver physical infrastructure in advance or in parallel to developments, which will significantly increase viability and hence improve CIL/s106 contribution potential.

3.8 Repayable grant is grant that the GLA would expect to be repaid over time. The GLA is demonstrating significant flexibility over the terms of repayment, for example, linking recovery of grant to meeting certain conditions, rather than it being unconditional – these conditions will be set out in the contracts for individual interventions. LB Havering's mechanism for repayment will be through recouping payments from CIL and the sale/development of land acquired through funding provided by the GLA.

3.9 The R/BPHZ programme is funded by a combination of LB Havering funding, GLA direct and recoverable grant and external funding, including £8.8 million contribution from TfL for the new Beam Park Station. The GLA allocation is £30.56m, of which £14.15m is direct grant and £16.41m is repayable grant.

3.10 The GLA allocation for the RHZ programme is £34.9m, of which £22.7m is direct grant and £12.2m repayable grant.

3.11 Some of the infrastructure required in both HZs will have benefited from forward funding from the GLA in the form of GLA recoverable grant. One proposal under consideration is to ring fence CIL payments and developer contributions from development schemes within the R/BPHZ to establish a series of funding pots to assist in the delivery of infrastructure in the HZ. Developer contributions from s106 and CIL would be used from these funding pots to repay the forward funding.

Other GLA/TfL Funding

3.12 The GLA provides funding for the London Fire Brigade. TfL funds most transport provision in Havering through the Local Implementation Plan, although LB Havering funds some road improvements. Each year LB Havering bids to TfL for funding for its transport projects and programmes. It has to spend this money in line with criteria set out by TfL and against a background set out in the Mayor's strategies as well as in accordance with LB Havering's own priorities.

3.13 Other GLA funding programmes are undertaken periodically to boost particular types of improvement to the urban environment, such as the Mayor's Air Quality Fund. The London Regeneration Fund, established by the London Enterprise Panel (LEP), aims to help places in London take advantage of opportunities presented by economic and demographic change and of new technology, and help secure the future of the capital's mixed economy. £20m capital funding has been made available, between April 2016 and April 2018, to specifically help London's high streets and places of work by supporting innovative and place-based projects throughout the city.

3.14 TfL funds the Crossrail Complementary Measures (CCM) a programme of improvements to public areas and interchanges outside all 18 stations in outer London that will eventually form part of the Elizabeth line. TfL is working with LBs, Crossrail Ltd, Network Rail and Rail for London to develop and deliver the schemes.

Developer Contributions

3.15 Given the constraints on public sector funding in the coming years, particular emphasis needs to be placed on the potential for developer contributions to raise funds towards investment in essential facilities.

3.16 The Community Infrastructure Levy (CIL) Regulations allow local authorities in England and Wales to raise funds from developers undertaking new building projects in their area. The money can be used to fund a wide range of infrastructure that is needed as a result of development. This includes new or safer road schemes, flood defences, schools, hospitals and other health and social care facilities, park improvements, green spaces and leisure centres. LB Havering has not yet introduced a CIL but it has embarked on the preparation of such a scheme. It published a Preliminary Draft Charging Schedule in 2015 and aims to have its CIL adopted in 2017/2018 subject to Member approval.

3.17 Before the introduction of the CIL, developer contributions were raised mainly through Section 106 (s106) planning obligations linked to individual planning permissions, which require developers to make payments to make acceptable development which would otherwise be unacceptable in planning terms. LB Havering's Planning Obligations Supplementary Planning Document (SPD), adopted in 2013, provided for a 'standard charge' tariff, to apply to new residential development (only), to ensure that development would contribute appropriately, both financially and in-kind, towards the provision of required infrastructure and services.

3.18 However, since April 2016, it has no longer been permissible for local authorities to 'pool' more than five s106 obligations together to pay for a single infrastructure project or type of infrastructure, LB Havering will therefore be introducing CIL alongside the Local Plan. This will specify those types of infrastructure on which CIL can be spent. Following its adoption by LB Havering, CIL will be the main mechanism for funding strategic off-site community infrastructure from developer contributions..

3.19 It will still be admissible to use s106 obligations to deliver affordable housing and certain site-specific infrastructure needs, and mitigation measures. In addition, agreements under section 278 of the Highways Act will continue to be used to require developers to pay for, and sometimes provide, highway improvements that will mitigate the impact of new development.

Central Government Allocations

3.20 A number of major agencies depend heavily on Central Government allocations for funding infrastructure. These include the National Health Service (NHS), including Hospital Trusts and Clinical Commissioning Groups (CCG), and the Police and Ambulance Services.

Lotteries and Charities

3.21 There is a wide range of funds arising from lotteries and charities for which for which agencies compete for funds. These include the National Lottery, Veolia Environmental Trust, etc. The National Lottery is a significant potential source of funds for a number of social and community facilities. In the year to March 2016, the National Lottery Distribution Fund, administered by the Department for Culture, Media and Sport, shared the funds as follows: 40% to health, education, environment and charitable causes, 20% to Sports, 20% to Arts and 20% to Heritage.

Direct Charges for Services

3.22 The main example of direct charges for services being used to fund infrastructure provision is the utility companies, which raise funds for investment in infrastructure through user charges (and also borrowing). Electricity, gas and water prices to the customer are regulated by the government regulators, Ofwat and Ofgem, and set at a level which the regulator considers appropriate to permit the levels of investment the companies indicate are necessary to meet future need. In addition developers may wish to make individual arrangements directly with the utility companies to contribute to the provision of their services.

4 CO-ORDINATION CHALLENGES TO INFRASTRUCTURE DELIVERY

Introduction

4.1 Ensuring appropriate infrastructure is delivered in the right place at the right time to support ongoing development presents a number of significant challenges apart from the issue of securing sufficient funding. A large number of agencies are involved in delivering infrastructure in Havering, of which LB Havering is only one. The others are listed in Annex A. All are pursuing the delivery of their particular service and the Local Plan provides a vital framework to guide their actions towards a common goal. However, if the required infrastructure is to be available to serve new developments as and when they come on stream there needs to be substantial joint working between agencies to ensure their individual plans and programmes are designed and funded to bring this about.

4.2 Important challenges include:

- disparate planning processes of the agencies involved in infrastructure development and provision;
- working with neighbouring agencies/authorities;
- evolving delivery models; and
- taking advantage of co-location potential.

Planning Processes of the Agencies Involved in Infrastructure Development and Provision

4.3 Most agencies periodically undertake some form of review of the suitability and adequacy of their facilities to satisfy their required function. These reviews vary considerably in their scope and detail from ad hoc identification of shortcomings of individual facilities to full estate strategies and comprehensive asset assessments. There is even more variation in the extent to which organisations undertake long term planning of their facilities to meet future requirements. In most cases facility planning covers only the short or medium term, often up to five years or so, rather than the 15 years of the Local Plan. Furthermore, at any one time agencies will have reached different stages in their planning processes, while their planning horizons may well not coincide. These disparate planning processes need to be brought in line to ensure proper implementation of the Local Plan and its supporting infrastructure.

Working with Neighbouring Agencies and Authorities

4.4 Many of the issues addressed in the Local Plan cross administrative boundaries. This is most obviously the case with transport. In many other cases, however, agencies and local authorities are finding it more efficient to plan and undertake their activities by joining together in sub-regional groupings. This is the case for example with health, social care and some police. Therefore, working with neighbouring and sub regional partners will be essential to ensure the effective delivery of Havering's Local Plan, and LB Havering demonstrates the importance of this through meeting its Duty to Cooperate responsibilities.

Transforming Delivery Models

4.5 Many agencies are currently engaged in changing the way they deliver their services, often with significant implications for the geographical distribution of their infrastructure and facilities. These changes are prompted partly by the need to economise on scarce financial resources and partly by the recognition that more recent knowledge and technology have demonstrated more effective approaches to meeting the aims of the organisation.

4.6 There are two clear and complementary tendencies within the variety of delivery models which are emerging: centralisation and decentralisation. Centralisation is aimed primarily at achieving cost efficiencies, often by cutting back on less viable delivery sites, while decentralisation is aimed at improving the convenience of service received by clients and customers. Most new delivery models involve a combination of these two approaches. For example the Mayor's Office on Policing and Crime is reviewing the scope for disposing of under-utilised front counters while increasing the level of local policing directly serving communities. Similarly, the broad aim in health provision is to increase specialisation at acute hospitals while reducing everyday pressure on them by maximising the care and support that can be provided at or close to the patient's home.

4.7 The issue here in terms of ensuring infrastructure delivery is that several important infrastructure agencies are currently still in the process of developing their new delivery models or if they have developed their concept they are still working out how they would be best applied in Havering. A key case here is health and social care. These two areas of service are closely related. Inadequate social care generates greater pressure on the health service, including acute hospitals and Accident and Emergency (A&E) departments. There is now a well-recognised need for close integration of the way the two types of service are delivered to allow them to function seamlessly. The main agencies responsible for these two services, the NHS and LB Havering, are currently jointly engaged in defining coordinated delivery models.

Co-location Opportunities

4.8 One of the key approaches to improving efficiency of provision is to identify opportunities for joint provision of services or the use of shared facilities/co-location in meeting future needs. Many agencies can gain from pursuing synergies in facility provision, both because of the potential economies to be made in capital and running costs, and because of the benefits to be gained in terms of the quality and convenience by linking their service provision. A good example of this approach is Children Centres which are designed to offer a seamless service for children, with care, education, health and wellbeing services all provided under one roof.

4.9 The Local Plan and IDP aim to assist agencies in engaging further with each other to achieve the benefits of sharing locations and facilities. The first step is for agencies to share information on their emerging future proposals and on the locations where they are seeking to provide facilities so that the requirements of different agencies can be matched through joint provision where possible. The potential is particularly high as many decentralised facilities require only limited floorspace and can be co-located with a range of other public or private sector facilities, for example in libraries, health centres and shopping centres.

5 DEVELOPMENT QUANTITIES

Introduction

5.1 Paragraph 156 of the NPPF requires local planning authorities to set out the strategic priorities for their area in the Local Plan, including strategic policies to deliver the homes and jobs needed in the area, and the provision of retail, leisure and other commercial development. In order to assess the amount of infrastructure required to support future development in Havering the quantity of future dwellings and employment floorspace planned to be completed within the relevant appropriate time horizon needs to be established.

Housing

5.2 The minimum housing target for Havering in the Further Alterations to the London Plan[1] (FALP), published in 2015, is 11,700 (an average of 1,170 dwellings pa) for the period 2015 to 2025. This was based on the findings of the GLA's latest 2013 Strategic Housing Land Assessment (Jan 2014). The new Havering Local Plan covers the period 2016 to 2031. The FALP (paragraph 3.24) advises that for Local Development Framework (LDF) purposes its rates should be rolled forward to give an indicative figure for an LDF's 15 year plan period. It is therefore reasonable to assume that the minimum target of 1,170 dwellings per annum for the period 2015 to 2025 should be rolled forward for the period 2025 to 2031 for which there is no specific GLA target. The minimum housing target for Havering for the 15 year plan period 2016 to 2031 would therefore be 17,550 dwellings.

5.3 The total number of dwellings in Havering in April 2011, according to the 2011 census, was 99,184. According to the Havering Annual Monitoring Reports for 2011-2012, 2012-2013, 2013-2014 and 2014-2015, a further 2,419 dwellings were completed in those years, bringing the total dwellings in Havering in March 2015 to around 101,600. Assuming the total housing target for the period 2015 to 2031 is met, the number of dwellings in 2031 will therefore be around 120,300. Table 5.1 sets out the number of dwellings projected in Havering from 2015 to 2031.

Housing Zone Proposals

5.4 Two proposals for HZs have been agreed with the GLA:

- the R/BPHZ is within Phase 2 of the Mayor's Housing Zone Programme and is planned to provide around 3,450 new dwellings by 2025 (Rainham and Beam Park Housing Zone Overarching Legal Agreement [November 2015]); and

[1] The Mayor of London is currently commencing a Full Review of the London Plan but under the current timetable it will be published for consultation in Autumn 2017, with final publication expected in Autumn 2019.

- the RHZ is within Phase 3 of the Programme and is planned to provide around 3,300 new dwellings by 2026 (Overarching Borough Agreement with the GLA to support the reinvigoration of Romford town centre [June 2016]).

Table 5.1: Dwelling Numbers in Havering Assuming FALP Housing Targets are met, 2015 to 2031

Year	Total Dwellings
2015	101,600
2016	102,770
2021	108,620
2026	114,470
2031	120,320
2016 to 2031	*17,550*

5.5 The R/BPHZ forms a contiguous area in the south of the borough which will require some items of infrastructure specifically to serve it, whereas the RHZ comprises pockets of new housing development within areas of existing development.

5.6 The two HZs form the foci of the Local Plan's two Strategic Development Areas (SDAs): Romford SDA and Rainham and Beam Park SDA. The two HZs themselves do not cover all the housing sites that are planned to be delivered within their respective SDAs. Each SDA is expected to deliver over 4,000 new dwellings over the Local Plan period.

Population

5.7 Requirements for infrastructure tend to be more directly related to population (and age structure) than to dwelling numbers so it is important to appreciate the changes in population implied by the scale of additional planned housing. The most up-to-date population projections for Havering are those contained in the GLA's 2015 Round Demographic Projections. There are two Strategic Housing Land Availability Assessment (SHLAA) based projections, ie. projections which assume achievement of the FALP housing targets. These differ according to the household size assumptions. One set takes its household size trends from the Department of Communities and Local Government (DCLG) projections. The other caps household size so as not to assume the indefinite continuation of recent short term trends by which population has increased substantially faster than housing supply. The capped version is adopted here.

5.8 The GLA 2015 Round SHLAA-based household projections are based on the additional dwelling numbers from the 2013 GLA SHLAA, for the periods up to and after 2025, rather than assuming a continuation of the annual target for the period 2015 to 2025 as mentioned above. Their population projections do not therefore tie in directly with the Local Plan Housing target of 17,550 dwellings for the period 2016 to 2031. The latter can be estimated to imply a total private household population in 2031 of 281,750, based on the dwelling

total in Table 5.1, the GLA's projected average household size in 2031 of 2.39, and a vacancy rate of 2%, as in 2011.

5.9 The GLA's projection (capped household size version) gives a total private household population for Havering in 2031 of 281,000. Given the inevitable imprecision of projections over a fifteen year period this figure is close enough to the housing-based estimate above for it to be reasonable to adopt the GLA's projections as a basis for assessing infrastructure requirements in Havering.

5.10 The household and population figures for relevant years are set out in Table 5.2. The total population increase for the Local Plan period of 2016 to 2031 is given as around 31,000.

Table.5.2: Population in Havering under GLA 2015 Round SHLAA-based Household Projections, 2016 to 2031

Year	Households	Private Population	Institutional Population	Total Population
2015	247,235	1,645	248,880	247,235
2016	249,945	1,665	251,611	249,945
2021	263,692	1,755	265,447	263,692
2026	276,254	1,876	278,130	276,254
2031	280,956	2,034	282,990	280,956
2016-2031	*31,010*	*369*	*31,379*	*31,010*

5.11 In order to assess infrastructure needs within the two HZs, their potential future population needs to be estimated. Assuming the average household size of 2.39 in 2031 from the GLA's 2015 Round SHLAA-based household projection with capped household size, and a vacancy rate of 2%, the new dwellings planned for each zone will accommodate around 9,400 persons.

Office Floor Space

5.12 The Havering Employment Land Review (April 2015) forecasts a net demand for B1 office floorspace of between 10,700 m^2 and 17,100 m^2, with a medium forecast of 13,900 m^2 between 2014 and 2031. The most suitable location to accommodate demand forecast for B1 office uses is in Romford Town Centre. The review presents a projection of about 2,300 additional office jobs over the period 2013 to 2031.

Industrial Floor Space

5.13 The Havering Employment Land Review (2015) forecasts a reduction in demand for industrial floorspace of between 21,300 m^2 and 25,900 m^2 over the period 2014 to 2031 and projects a decrease of around 2,000 industrial jobs over the same period.

Retail Floor Space

5.14 The Havering Retail & Commercial Leisure Needs Assessment (April 2015) proposes that provision should be made for between 16,100 m^2 and 21,500 m^2 net additional comparison goods floorspace in the period to 2021, and indicatively between 49,500 m^2 and 62,000 m^2 net by 2031. The assessment also identified a quantitative need for 7,500 m^2 net additional convenience goods floorspace by 2021, increasing to an indicative requirement of 13,200 m^2 net by 2031, as well as a requirement for 15,100 m^2 of gross food and drink floorspace by 2031.

6 FUTURE INFRASTRUCTURE REQUIREMENTS IN HAVERING

Introduction

6.1 This section sets out the scale of additional infrastructure that will be required to meet the needs of development in Havering over the Local Plan period to 2032, as far as can be determined based on currently available evidence. Infrastructure types and facilities are numbered as in Table 2.1.

6.2 Some infrastructure items have particularly high priority and should be provided within the first five years of the plan. These comprise infrastructure required to make up existing deficiencies in provision together with infrastructure needed to allow early development to proceed. The latter relates mainly to areas designated in the Local Plan as locations for substantial growth in the early phases of the Plan. These are the Rainham and Beam Park SDA and the Romford SDA, each of which is expected to deliver over 4,000 new dwellings. If there were to be a significant shortfall in provision in these areas, it might be unacceptable for development and occupation to take place there. Priority infrastructure items are indicated by a (P) in the paragraphs below.

6.3 Fuller information on all infrastructure types is presented in tabular form in Annex B, again numbered as in Table 2.1, under the following headings:

- main provider of the infrastructure;
- level of existing provision;
- adequacy of the existing provision to meet current needs, both quantitative and qualitative;
- assessment of infrastructure required to meet planned future development/population levels, with cost estimates where available (excluding land costs);
- where relevant, basis for estimating costs of required infrastructure; and
- main potential funding sources.

A Transport

A1 Rail

6.4 Havering is well connected to London and Essex by mainland train services, TfL Rail services, London Overground services and the District Underground line. Several major transport infrastructure improvements are currently planned to meet wider strategic needs as well as serving Havering, as follows:

- Crossrail is a new regional east-west railway line, currently under construction, which will connect Heathrow and Maidenhead in the west with Essex and South London in the east. The northern branch of the eastern section will run from Shenfield in Essex through the three Havering stations

of Harold Wood, Gidea Park, and Romford. Crossrail is scheduled to become operational from 2018/2019 (P);

- improvements to the London-Tilbury-Southend (LTS) railway via Rainham and Upminster (c2c Essex Thameside franchise to 2029) will support planned regeneration strategies, and include the provision of 12-car trains on the Tilbury loop and more frequent services (P);
- upgrades to the London Underground District Line are underway to increase peak capacity by 47% by 2018 (P); and
- Upminster Depot, one of the four major depots for London Underground's railway fleet, is being upgraded, with completion planned for early 2017 (P).

6.5 Other proposals are specifically aimed at meeting the future needs of Havering, namely:

- improvements to Romford Station, including potential southern entrance improvements to assist access to all rail services (P) and TfL Crossrail Complementary Measures to enable interchange with Crossrail; and
- a new Beam Park station on the LTS railway line will help maximise the future development potential of the south of the borough and support housing and employment sites at London Riverside (P).

A2 Other Public Transport

6.6 Bus transport in Havering is provided by TfL. New and better north-south bus links are needed to improve connectivity, particularly to Rainham and its railway station and London Riverside Business Improvement District. More frequent services to some more rural parts of the borough would also benefit those in the community who are often dependent on public transport such as young people and the elderly.

6.7 A number of bus-related projects are required to meet future transport needs in the borough:

- a bus bridge over the Beam River on Ford Land will provide a vital link between LB Havering and LB Barking and Dagenham;
- a bus bridge link across Rainham Creek between Ferry Lane and Creek Way will similarly improve connections between Rainham and other employment areas and provide better access to jobs;
- an Orbital Bus service is required to connect Strategic Industrial Locations and Rainham; and.
- TfL is improving bus stop accessibility in the borough (P).

6.8 In addition, LB Havering is currently in the early stages of considering the feasibility of modes such as light rail, tram or guided bus to provide a step change in connectivity between the north and south of the borough, either on existing highways or outside the established built up area.

6.9 The A12, A13 and A127 provide high quality trunk road access to the M25, which in turn provides access to London and the south east, and the borough is served by a full network of other roads. There is an ongoing need to assess and upgrade highway structures, principal roads, distributor roads and bus route roads to deal with existing and projected increased levels of traffic and to improve safety for all users. There is similarly a need to improve accessibility and safety for pedestrians and cyclists to facilitate safer and more convenient 'active' travel choices. Several improvements to cycling and walking provision are included wider green space and public realm proposals.

6.10 Specific measures include:

Borough-wide

- footway improvements borough-wide, including accessibility arrangements for pedestrian dropped kerbs (P);
- upgrades to principal roads, distributor roads and bus route roads (P);
- Highway structure upgrades (P);
- casualty reduction measures P);
- 20 mph zones (P).

Romford SDA

- engineering measures to improve cycling accessibility to Romford Town Centre (P);
- an east-west link to the rail station from the growing residential areas to the west of the town centre (eg. Waterloo Road, Bridge Close and the former Ice Rink site), including wider improvements along the River Rom (P);
- further key measures for the Town Centre discussed below under 'Public Realm';

Rainham & Beam Park SDA

- the Rainham and Beam Park Planning Framework (January 2016), through the TfL Beam Parkway Major Scheme, aims to transform the A1306 in Havering from a traffic dominated road into an attractive green corridor, the Beam Parkway, providing a quality walking and cycling route (P); and
- development of sustainable transport options (walking, cycling, bus, tram) for accessing London Riverside Conservation Park (Wildspace); and
- Rainham Creek cycling/walking bridge.

6.11 In addition, two significant major interventions are under consideration to enhance the public realm, reduce congestion, improve safety for pedestrians and cyclists, improve air quality, and generate development potential. These are:

- a substantial re-configuration of the arrangement at Gallows Corner, by which the junction of the A12 and A127 would be decked over to create a clear space for development and pedestrian movement above; and

- a similar substantial re-configuration of the Ring Road to the west of Romford town centre which would place the road underground, allowing unrestricted pedestrian movement into the town centre from the west and scope for an improved public realm.

Key Implications for the Local Plan

6.12 The Local Plan should provide for the incorporation into the urban fabric of the significant transport infrastructure projects set out above in such a way as to improve the efficiency and convenience of movement within the borough and the quality of public spaces. Priority projects required for completion or to commence implementation within the first five years of the Local Plan include those supporting Crossrail and the two SDAs, as follows:

- Crossrail Complementary Measures to improve Romford, Harold Wood and Gidea Park stations (P);
- improved East-West connectivity for walking and cycling into Romford Town Centre (P);
- new Beam Park Station (P); and
- new Beam Parkway, improving connectivity along A1306 (P).

6.13 In addition, the Local Plan will eventually need to make provision for the three major transport interventions discussed above, which are currently at an early stage of consideration, once their plans have been fully developed and adopted for implementation.

B Education

6.14 Major residential development should only be permitted to go ahead if provision of sufficient educational infrastructure is assured. Local Authorities are under a statutory duty to ensure a sufficiency of school places in their area under section 14 of the Education Act 1996. This applies to all children of compulsory school age resident in the local authority area. Providers come from the private, voluntary, charitable and maintained sectors. LB Havering is the commissioner of education and is also the "provider of last resort" when no other acceptable new provider comes forward.

6.15 Section 6 of the Childcare Act 2006 places a duty on Local Authorities to secure sufficient childcare for working parents. In addition, local authorities are required to secure free early education provision for pre-school children of three and four years old and two year olds from lower income families. This Early Years education is primarily delivered by private, voluntary and independent pre-school providers, accredited childminders, and schools with a maintained nursery provision.

6.16 LB Havering undertakes annually a comprehensive assessment of future demand for school places in the borough by projecting cohorts within the existing schools, taking account of recent future birth rates, and allowing for the impact of committed and planned housing. Allowance is also made for significant cross border flows both into and out of the borough. The latest long term strategic forecast, contained in the Commissioning Plan for Education Provision (2015/2016 to 2019/2020), covers the ten year period from 2015/2016 to 2025/2026.

B1 & B2 Primary and Secondary Places

6.17 The number of primary age pupils in Havering schools, including pupils in existing and planned housing, is expected to increase significantly, by 7,815, during the ten year period from 2015/2016 to 2025/2026, and the number of secondary age pupils by 5,182, leading to shortfalls compared with existing school places of 7,689 and 3,626 respectively.

6.18 The substantial housing development in the Rainham area will require a new 3-form entry primary school, in addition to 4-forms of entry in expanded schools in the area. Existing secondary schools will also need to be expanded in this area to meet the need for places.

6.19 Substantial housing development planned in Romford will require new primary schools and new secondary schools. Sites will need to be identified for the new schools.

6.20 There may be some areas of Havering that will have no available options to expand existing schools if further major housing is brought forward. School place demand arising from such developments will need to be met through new school provision that will require a site to enable delivery.

6.21 The figures given below represent the emerging position. The school roll projections are updated on an annual basis and the latest figures are contained in LB Havering's Commissioning Plan for Education Provision.

Primary School Requirements in First Five Years

6.22 The Commissioning Plan for Education Provision indicates the need for a total of 1,667 additional primary places to meet demand for places for 2020/2021, as indicated in Table 6.1. This is equivalent to an additional 8 Forms of Entry (FE) expansion.1 FE expansion in primary is equivalent to 210 school places.

Table 6.1: Primary School Requirements to 2020/2021

Academic Year	Primary NOR	Permanent Primary Places Available	Surplus/Deficit of Places
2015/2016	21,074	21,200	126
2016/2017	22,150	21,836	-314
2017/2018	23,131	22,584	-547
2018/2019	23,990	23,189	-801
2019/2020	24,831	23,652	-1179
2020/2021	25,677	24,010	-1667

6.23 The need for additional places is mainly in Harold Hill, Romford and Rainham and South Hornchurch planning areas, as shown in Table 6.2.

Table 6.2: Primary School Requirements by Planning Area in 2020/2021

Planning Area	Projected Primary NOR 2020/2021	Permanent Primary Places Available 2020/2021	Surplus/Deficit of Places
Collier Row	3,773	3,825	52
Elm Park	2,838	2,920	82
Harold Hill	4,420	3,900	-520
Hornchurch	5,062	5,040	-22
Rainham & S Hornchurch	2,965	2,370	-595
Romford	3,859	3,510	-349
Upminster	2,759	2,730	-29

6.24 Beyond 2020/2021 the primary pupil numbers are forecast to increase, due to rising birth rates and the level of housing growth planned.

Secondary School Requirements in First Five Years

6.25 For secondary schools, the Commissioning Plan similarly indicates a need for a total of 637 additional Year 7 places by 2022/2023. This is equivalent to an additional 21 FE. As indicated in Table 6.3, this demand is concentrated in the Central Area, with lesser demands elsewhere. In most areas the requirement can be met by school expansions but new provision will also be required to meet needs in the Central Area.

Table 6.3: Secondary School Requirements to 2022/2023

Education Planning Area	Perm'nt Places 2015-2016	Pupil Roll 2015-2016	Surplus Places 2015-2016	Surplus capacity 2015-2016	Perm'nt places 2022-2023	Pupil roll 2022-2023	Surplus places 2022-2023	Surplus capacity 2022-2023
North East	180	179	1	1%	180	269	-89	-49%
North West	180	162	18	10%	180	221	-41	-23%
Central	1578	1532	46	3%	1624	1990	-366	-23%
East	693	621	72	10%	651	755	-104	-16%
South	617	473	144	23%	617	654	-37	-6%

6.26 Beyond 2022/2023 the secondary pupil numbers are forecast to increase due to the higher year 6 primary cohort continuing to transfer to year 7 in secondary and the level of housing growth planned.

B3 Post-16 Places

6.27 It is difficult to be definitive about future requirements for post-16 education in the borough. A range of options is available for pupils in this age group, including sixth forms, colleges, and apprenticeships. The situation is further complicated by the fact that post-16 pupils can travel between local authorities and Havering has traditionally been a net importer of learners post-16. Current data for Havering suggests that over the next few years an expected rise in the participation rate to full participation of 16 and 17 year-olds will to a large

degree be cancelled out by a fall in numbers of young people aged 16-18. However, in the longer term, the number of 16 and 17 year olds in Havering is projected to increase by around 1,300 between 2016/2017 and 2023/2024.

B4 Early Years

6.28 From September 2017 working families will be entitled to up to 30 hours of childcare per week for 3 and 4 year olds, subject to the eligibility criteria for the additional free entitlement. There is already a need for additional Early Years places; with the additional hours being available this could see a further increase in demand.

6.29 The number of two, three and four year olds needing Early Education Entitlement (EEE) places across the borough is expected to increase by over 1,000 between 2015/2016 and 2025/2026, with a deficit of about 300 places for 2, 3 and 4 year olds being projected for the latter date. However, it is not possible to be specific about locations at present. Further details on the future demand for early years places are given in LB Havering's Childcare Sufficiency Report, which is updated on an annual basis.

Special Education Needs Places

6.30 The demand for special school places in line with the overall growing demand for school places with the complexity of the needs of the children increasing and changing over time. Work is ongoing to refine the forecast figure for pupils who have a special education need and will require schools places over the next 10 years.

Key Implications for the Local Plan

6.31 The Local Plan, through the future Detailed Sites Local Plan, should support expansion plans and identify sites for new primary/secondary schools required to support additional residential development in the early years of the Local Plan. Additional primary capacity beyond that currently programmed is required especially in Harold Hill, Rainham and Romford. For secondary schools the main additional requirement is around Romford.

C Health and Wellbeing

C1 & C2 Primary and Acute Health Care

6.32 There are 47 General Practitioner (GP) practices in Havering, with a total of 95 Full Time Equivalent GPs. These currently provide services from around.6,560 m^2 of space to a registered patient population of 255,865. The only acute hospital, operating an Accident &Emergency department, in Havering is Queen's Hospital in Romford, which opened in 2006, and brought together the services previously run at Oldchurch and Harold Wood hospitals.

6.33 The average ratio of patients to FTE GPs in the borough is 2,690, well above the London average of 2,100 and somewhat higher than the national average of 2,000. There are no clinically set standards for the ratio of GPs to patients but the primary healthcare default assumption used for capacity planning purposes is a ratio of 1 GP per 1,800 patients.

6.34 Existing facilities are currently operating at or near capacity. Based on current Department of Health guidance on primary care space standards, the existing population of Havering would require around 18,000 $m^{2,}$ compared with the 7,179 m^2 of space currently provided. Havering has a large number of smaller premises which, by their nature, will have little opportunity for expansion and if feasible, the size of expansion is likely to be relatively small scale. Furthermore, many GP practices are currently using ageing, converted domestic premises, a large number of which are in need of major building works to enable them to comply with required standards.

6.35 The CCG's aims for the development of general practice and the wider primary care family are that it should be accessible, coordinated and proactive. There will be a focus on prevention, support for self-care, active management of long-term conditions and the avoidance of unnecessary hospital admissions. Acute hospital care should be reserved for acutely ill patients with the majority of care delivered nearer home.

6.36 The present assessment concentrates on the primary healthcare requirements arising solely from new housing developments. The NHS Healthy Urban Development Unit (HUDU) has used their model to calculate the population yield from new housing and to assess the subsequent healthcare impacts and floorspace requirements. The HUDU model estimates primary care requirements by locality and phase in terms of full time equivalent (FTE) GPs and primary care floor space, to meet the estimated population growths.

6.37 New, fit-for-purpose premises are needed to cater for the significant population growth, especially in and around the Romford Town Centre and Rainham and Beam Park SDAs, as well as to facilitate primary care at scale, and enable patient access to a wider range of integrated services.

C3 Mental and Community Health

6.38 North East London Foundation Trust (NELFT) provides mental health and community services in Havering. People's health in Havering is changing as more people are living longer and with more complex long term conditions, and so needing more and a wider range of care.

6.39 The NELFT strategy is based on the development of 'agile working', a flexible and mobile workforce, to support care closer to home and early intervention. For adult services a model of care based on locality primary care provision is currently being rolled out within Havering, with community health and social care integrated within these hubs. Some teams will be co-located and clustered around three hubs at Harold Wood, Romford and Cranham.

6.40 NELFT is holding discussions with LB Havering on integrating primary care, community, mental health and social care under a single management structure. Joint use of provision and premises with Social Services and other Local Authority departments has commenced around older people's services.

6.41 Surveys by NELFT in 2015 of all the properties it owns or substantially occupies suggest substantial underuse of both clinical and non-clinical space within a majority of premises. Under the NELFT Estates Strategy 2014 - 2019, the existing estate in Havering will be rationalised to provide new accommodation to meet the needs of new working practices.

6.42 The NELFT has embarked on an ambitious drive to reduce estate costs by developing closure plans for up to six Havering premises and relocating their services within the borough. Estate rationalisation will ensure that the retained premises are in the optimum locations for service delivery within the Borough and in good condition. Any future investment can then be directed towards the retained properties. The Trust is working in partnership with other organisations to maximise the use of the public estate to the overall benefit of the local health economy.

C4 Social Care

6.43 Havering has the highest proportion of older people of any of the LBs and the significant majority of vulnerable people in the borough with a supported housing need are elderly. However, the current provision of residential care homes is more than sufficient to meet current needs. Throughout 2015/2016, of approximately 1,600 available beds, 250 remained vacant each week.

6.44 LB Havering considers that there is no need for more residential or nursing homes within the borough. The policy is to support people in remaining independent and safe at home. However, there is a growing need for supported accommodation within the borough that cannot be entirely met by existing provision. For example, there is currently no supported housing for people with physical disabilities in Havering. The current Housing Strategy recommends converting some existing sheltered schemes to extra care or a retirement village model, due to the high number of asset rich older people in the borough.

6.45 LB Havering has identified potential need for up to three purpose-built six person supported housing schemes for people with learning disabilities and potentially for one purpose built six to eight person supported housing scheme for people with physical disabilities (P). The more adaptable the premises the better (ie. can one building be fit for purpose for people with learning disabilities, physical disabilities, autism etc.). With increasing demands, the supply requirement is having to be reviewed on a regular basis.

6.46 LB Havering currently runs six Children Centres, offering a range of services and activities in partnership with health and other partner agencies to provide a holistic service. Demand for Children Centres is forecast to increase substantially as the young population increases. LB Havering plans to respond to projected substantial increase in demand from the rising young population by increasing the level of services provided by existing centres and by bringing back into operation a Centre in existing premises in Harold Hill, which has not been functioning for some years (P). The aim is to utilise these centres to enable further co-location with partners in the health service.

6.47 As part of the Local Authorities Sufficiency duty there is a need to develop the provision of children's residential care within the borough and semi-independent living accommodation for children, prior to leaving care. The design of these premises could incorporate provision for both, so that move on could be enabled as and when children become more independent.

Key Implications for the Local Plan

6.48 The Local Plan should support the following additional facilities:

Romford SDA

- Primary and community care hub in Romford Town Centre of 4,500 m^2 (P)

Rainham & Beam Park SDA

- New facility of 2,000 m^2 close to Rainham Town Centre for about 21,500 patients (P)

Rest of Borough

- New primary care hub in Heaton ward of 950 m^2 for around 10,000 patients (P);
- Enhanced GP service of 2,800 m^2 at the proposed St. George's Health & Well-Being Centre for around 30,000 patients (P);
- New primary care hub of 1,850 m^2 to be developed in North Locality for around 30,000 patients;
- New primary care hub of 3,200 m^2 to be developed in Central Locality for around 35,000 patients; and
- Supported housing scheme for people with physical disabilities (P).

D Utilities

D1 Water Supply

6.49 Most of Havering is within the water supply area of Essex and Suffolk Water (ESW), although some small areas are supplied by Thames Water. Havering falls within ESW's Essex Water Resource Zone. Following a significant investment in its expansion, Abberton reservoir in Essex has sufficient water to meet forecast demand until at least 2040. Therefore no major infrastructure is needed to meet the increase in housing numbers or commercial development within Havering during the period of the Local Plan.

6.50 The proposed level of development at various locations within Havering could, depending on the size and location, require some minor water mains enhancement prior to development, but this is part of 'business as usual' and would not delay development.

D2 Sewerage

6.51 Thames Water is the statutory sewerage undertaker for most of Havering. A comprehensive upgrading of the Riverside Sewage Treatment Works at Rainham, which treats wastewater from approximately 400,000 people in Havering and other parts of East London, was completed in 2014 as a part of the London Tideway Improvements scheme. This increased its capacity to meet the predicted increase in flows until 2021.

6.52 The water companies' investment programmes are based on a five year cycle known as the Asset Management Plan (AMP) process. The AMP6 period began on 31st March 2015 and covers the period up to 31st March 2020. As part of its five year business plan Thames Water advises Ofwat on the funding required to accommodate growth in its networks and treatment works.

6.53 Limited information is yet available from Thames Water on the capacity of the local sewerage system to accept the additional loads from HZ development in the borough. However, sewer capacity in the R/BPHZ is limited and Thames Water expects infrastructure upgrades to be required for the level of development proposed. Also, the need has been identified to divert a sewer along the northern frontage at Dovers Corner to allow the site to be developed to its full potential capacity (P).

6.54 During heavy rainfall, the sewerage system in the Ravensbourne Valley, which includes much of Havering, has occasionally become overwhelmed resulting in sewer flooding in some local areas. Studies by Thames Water to identify solutions to this problem will be completed during 2017.

D3 Electricity

6.55 National Grid runs the high-voltage electric power transmission network (National Electricity Transmission System (NETS), which connects power stations and major substations and ensures that electricity generated anywhere in Britain can be used to satisfy demand elsewhere. UK Power Networks own and maintain electricity cables and lines across London, the South East and East of England. They maintain and upgrade power equipment, and move and connect new electricity cables.

6.56 There is adequate capacity for a generic load growth for at least ten years at most substations in Havering, with probably some local reinforcement needed at a few sites and to the cable network. Future scenarios are modelled on a regular basis to reflect changes within the network but the potential increase in use of electricity for new technology, such as Data Centres, may impact the available capacity sooner than anticipated.

6.57 Development in the Rainham and Beam Park SDA will necessitate some diversions/alterations to Low Volt and High Volt cables (P). There may also be a need to undertake alterations to 33kv extra high voltage cables.

6.58 The Rainham and Beam Park area has been identified as a target cluster for the deployment of a district heating network in the London Riverside Opportunity Area Rainham & Beam Park Energy Masterplan, 2015. No decision has yet been made on the form of provision.

D4 Gas

6.59 Cadent's distribution network serves the whole borough. However, major pipelines passing through the borough can put constraints on development potential in some location, particularly in the R/BPHZ. Capacity requirements for the entire HZ development can be satisfied by the existing Cadent gas infrastructure but the area is traversed by three high pressure gas pipelines. In order to minimise limitations on development potential there is a need for some pipeline diversion at Dovers Corner (P).

D5 Telecommunications/Broadband

6.60 Advanced, high quality digital infrastructure is essential for sustainable economic growth, allowing Havering's community enhanced freedom of choice about where and how they work, and how they promote and operate their

businesses.

6.61 Superfast Broadband in Havering is provided via one of two networks. The Fibre To The Cabinet (FTTC) network is owned by BT and operated by a range of providers, while Virgin Media owns and operates exclusively a Fibre To The Property (FTTP) network. All exchanges within a five mile radius of Havering are owned and maintained by Openreach and have been fibre broadband enabled. Consequently broadband providers who are reliant on Openreach's broadband network infrastructure can provide fibre broadband to homes in this area. Virgin Media fibre broadband is also available to homes within a 5 mile radius of Havering. Some 98% of Havering users can now order a superfast broadband (speed greater than 24Mbps) connection.

6.62 The Government's support for further broadband roll-out is largely provided through the Superfast Broadband Programme. In September 2015 BT announced plans for an expansion of high-speed fibre broadband in Havering.

6.63 Openreach, BT's local network business, will take the company's total coverage for fibre in the borough to nearly 100,000 premises by 2017. Virgin Media are in year two of an ongoing five year plan for expanding/upgrading their network.

6.64 Providing additional infrastructure in the field as well as in the exchange does not present significant issues. By deploying fibre technology to new build sites there is no need for large multiple copper cables to be provided, building large cable frames in telephone exchanges, or even to build completely new telephone exchanges.

Key Implications for the Local Plan

6.65 The Local Plan should include policies to ensure new development is equipped with all necessary utility infrastructure, including facilities to enable the delivery of high-speed broadband and other digital services.

E Flood Protection

6.66 The Environment Agency (EA) has a strategic overview of all sources of flooding and coastal erosion and is responsible for tidal flood risk management along the Thames Estuary. LB Havering is the Lead Local Flood Authority for Havering, with a strategic role in overseeing the management of local flood risk ie. flood risk from surface water runoff, groundwater and ordinary watercourses such as streams and ditches.

6.67 The EA's Thames Estuary 2100 (TE 2100) (2012) is a strategic flood risk management plan for London and the Thames estuary through to 2100. It reviews how tidal flood risk is likely to change in response to future changes in climate and people and property in the floodplain. It found that many of the existing flood walls, embankments and barriers would need to be raised or replaced to manage rising water levels in the long term (by 2050).

6.68 The EA's current estimates of the costs of maintaining and improving the flood defence system for Havering for the period to 2050 are as follows:

- fixed flood defences - maintenance and repair: £5m;
- fixed flood defences - major repairs and replacements: £26m; and
- flood barriers and outfalls: £5m.

6.69 The Havering Strategic Flood Risk Assessment (SFRA) (Nov 2016) identifies: flood risk zones 1, 2, 3a and 3b (functional floodplain); locations of flood risk from other sources (ordinary watercourses, groundwater, sewers, reservoirs and canals); locations at risk of surface water flooding, termed Havering Critical Drainage Areas (CDA), particularly outside fluvial or tidal risk areas; and areas protected by existing flood defences and that could be at risk should they fail. The SFRA makes recommendations to reduce flood risk but makes no specific infrastructure proposals.

6.70 As part of the Drain London Project, a Draft Surface Water Management Plan (SWMP) was prepared for LB Havering in consultation with key local partners, including Thames Water, the EA and TfL. The Draft SWMP identified the main sources of flood risk in the borough and a number of CDAs. The LB Havering Critical Drainage Areas - Detailed Investigations Report (January 2016) has examined the potential damage from flooding in each CDA, and identified and assessed for viability a set of mitigation options for each.

Romford SDA

6.71 The SFRA Annex A identifies the land immediately adjacent to the River Rom and Blacks Brook within the SDA as predominantly located within fluvial Flood Zone 2, with small areas designated as Flood Zone 3b. There are no specific proposals for flood defence infrastructure.

Rainham & Beam Park SDA

6.72 The SFRA Annex A identifies the southern section of the SDA as located within fluvial Flood Zones 3a and 2, with areas designated as Flood Zone 3b adjacent to the River Beam and Ingrebourne. The Rainham and Beam Park Development Framework proposes a number of interventions to reduce flood risk in the area, comprising opening up culverted channels and upgrading flood attenuation storage, but costs have not yet been estimated for these (P).

Key Implications for the Local Plan

6.73 The Local Plan should include policies to support mitigation measures required to protect key Critical Drainage Areas and to ensure the implementation of interventions that have been identified to reduce flood risk in the Rainham & Beam Park and Romford SDAs.

F Culture and Community

F1 Libraries

6.74 LB Havering is responsible for the management and development of ten libraries, all of which are located in or close to town centres and well served by public transport. Almost all the main residential areas in the borough are included in the catchment area of one of the five most strategically important

libraries: Romford, Hornchurch, Rainham, Harold Hill and Upminster. All ten of Havering's libraries have undergone a programme of building refurbishments over the last few years, including new replacement libraries at Rainham (2014) and Harold Hill (2016) provided as part of wider regeneration initiatives led by LB Havering.

6.75 Under the Draft Library Strategy 2015 – 2017, future needs will be met using the existing facilities, but adopting a new delivery model by which the five strategically most important libraries (Romford, Hornchurch, Rainham, Harold Hill and Upminster) will be open at least 50 hours a week and the remaining five libraries will open at least 24 hours a week. No requirement has been identified for further library facilities to serve the additional population during the lifetime of the Local Plan.

F2 & F3 Cultural Facilities and Heritage

6.76 The main cultural facilities in Havering are the Queen's Theatre and the Fairkytes Arts Centre, both in Hornchurch, Havering Museum in Romford, which opened in 2010, and the Brookside Theatre in Romford, which opened in 2012.

6.77 The Havering Arts Strategy 2013 to 2015 identifies a number of improvements to ensure the borough continues to offer high quality cultural facilities to its increasing population. These include:

- a new high quality visual arts exhibition space at Fairkytes Arts Centre;
- rehearsal space and a cafe area at Queen's theatre; and
- on-going repair and maintenance of the Havering Museum.

6.78 Havering has a rich and varied range of heritage assets and LB Havering is the owner of three heritage sites: Bretons (house, gardens and adjoining open land), Upminster Windmill, and Upminster Tithe Barn, which houses the Museum of Nostalgia. The Havering Heritage and History Sub-Strategy (2013-2015) identifies the following improvements to ensure they can continue to meet the public's expectations:

- improvements to Bretons to restore the historic buildings and gardens and convert them to alternative uses (P); and
- improvements to Upminster Tithe Barn to provide public toilets, re-thatch the roof (rolling programme) and to provide interpretative material inside the Barn (P).

F4 Community Halls/Youth Centres

6.79 Community halls and youth centres provide a valuable recreational and educational resource to the local community. LB Havering currently has nine community halls, eight of which it leases to community associations and the other to an Early Years operator. Seven of the halls are in need of upgrading/refurbishing to bring them up to contemporary standards (P).

6.80 There are three main youth centres in Havering, located in Harold Wood, Hornchurch and Rainham. This leaves a significant gap at Romford which is in need of provision, particularly in view of the additional population planned there under the Local Plan (P).

6.81 The Rainham and Beam Park Development Framework expects that additional social facilities including community halls will be required to serve the additional population in the R/BPHZ but suggests these should be defined according to the expressed needs of the future local population.

F5 Crematorium and Burial Grounds

6.82 Crematorium facilities are provided at the South Essex Crematorium in Upminster, which is considered adequate for current needs.

6.83 There are currently four cemeteries in Havering run by LB Havering: at Rainham, Hornchurch, Romford and Upminster. In addition, Rainham Jewish cemetery was purchased from the local Jewish community in 2016 by a private company and the burial plots are now multi faith/interdenominational. Rainham and Hornchurch cemeteries have no new graves available and capacity for reopen burials only.

6.84 At Romford Cemetery there are currently sufficient new multi faith/interdenominational graves and graves for Muslim burials available to last 11 and 22 years respectively at recent rates of burial. Following the Phase 1 extension to Upminster cemetery in 2014 there are currently sufficient new graves available there for about seven years.

6.85 Assuming recent burial rates, future burial needs for the whole borough can be met by the Phase 2 and 3 expansions of the Upminster Cemetery programmed. Phase 2 will provide burial provision until 2031 at current rates and Phase 3 until 2039. There is therefore expected to be sufficient capacity to accommodate additional demand for multi-faith/interdenominational plots arising from Local Plan population increase in the period to 2032. If required, however, other land is available for possible future Upminster Cemetery extensions, currently used as agricultural tenancy land on lease from the Council. Furthermore, the significant capacity at Rainham Jewish cemetery has not been taken into account within these capacity projections.

6.86 LB Havering has recently granted permission for a new Muslim cemetery at Oak Farm, Harold Wood, following an appeal decision by the Secretary of State. This facility will provide for demands for burials meeting specific Muslim requirements arising from the wider North East London, including Havering, when the remaining capacity of the existing Gardens of Peace Muslim Cemetery in Ilford has been exhausted, in five years or so. The new cemetery is expected to provide capacity to meet the needs of North East London for a further 6 to 7 years at recent death rates, ie. until around 2028.

Key Implications for the Local Plan

6.87 The Local Plan should protect existing cultural and community facilities and support the following:

- provision of a new youth centre in Romford (P);
- protection from other development of land adjacent to Upminster Cemetery to allow possible future expansion of the cemetery if required; and

- planned improvements to various cultural and heritage facilities identified above (P).

G Green Infrastructure

G1 Parks

6.88 The Open Space Strategy Draft Assessment Report (OSSDAR) (January 2016) identifies 24 park and garden sites in Havering, ten of which have Green Flag status. There is generally a good coverage of parks based on a 15 minute walk time, the standard adopted in the OSSDAR. The majority of areas that are densely populated are covered by the walk time catchment. The LB Havering Open Space Study Draft Standards Paper (August 2016) concludes that there is no need for additional park provision on the basis of projected population levels across Havering, the emphasis being on preserving and improving the quality of existing provision.

6.89 The following requirements have been identified to ensure the parks fully meet the needs of the existing and future population:

- Creekside Park improvements and extension;
- London Riverside Conservation Park (Wildspace);
- Rainham to the River - linking Rainham communities to Thames and marshes;
- Harrow Lodge Park, second lake dredging;
- Parks Investment Programme, including parks signage improvements (P);
- Parks Depot Refurbishment Programme (P); and
- Linear park (within Beam Parkway) to connect Rainham to Beam Park (P).

G2 Children's Play Space

6.90 For communities to thrive it is essential for children to have regular access to free, inclusive, opportunities for local play. Children's play space comprises areas designed primarily for play and social interaction involving children and young people, such as equipped play areas, multi-use games areas (MUGA), skateboard areas and teenage shelters.

6.91 Guidance by Fields in Trust suggests an approximate catchment guideline of an approximate 5-10 minute walk to a play space. On this basis there is generally a good coverage of provision across LB Havering with most areas with a greater population density within walking distance of a form of play provision. However, there are a few gaps in the walk time catchment in the centre and south of the borough and there may be a need for some additional play provision to serve these gaps.

6.92 The LB Havering Open Space Study Draft Standards Paper (August 2016) projects a need for additional children and young people's provision totalling approximately 2 ha across the borough to serve the 2031 population. The Rainham and Beam Park Planning Framework identifies the need for a number of children's play areas within a series of local green spaces and pocket parks and in the new Beam Park.

G3 Allotments

6.93 There are 27 allotments sites in Havering: totalling more than 36 hectares. All are owned by LB Havering and self-managed by allotment associations. The LB Havering Open Space Standards Paper (August 2016) projects a need for an additional 5.5 ha of allotment space to serve the 2031 population of the borough, based on current provision standards. However, the Paper recommends that future provision should respond to waiting lists rather than be based on applying National Society Allotments and Leisure Gardens (NSALG) or other quantitative standards.

G4 Other Green Space

6.94 A number of partnerships are engaged in green space projects in the borough, including:

- Land of the Fanns Partnership - A stage 1 Heritage Lottery Fund (HLF) Landscape Partnership scheme led by Thames Chase Trust and LB Havering, with a programme of access and conservation projects;

- Wildspace - a partnership of landowners and conservation organisations (Royal Society for the Protection of Birds [RSPB], Veolia North, Veolia Environmental Services, Thames Trust, Natural England, LB Havering, Port of London Authority [PLA] and the EA) with the objective of delivering a new London Conservation Park: Wildspace for a World City' on Rainham Marshes and the operational landfill site to the south;

- All London Green Grid (ALGG) - established to provide a pan-London strategy for Green Infrastructure (GI) and to deliver a rolling programme of GI projects; and

- Roding, Beam and Ingrebourne Catchment Partnership - works to improve the water environment of the river basin. Managed jointly by Thames 21 and the Thames Chase Trust.

6.95 The Rainham and Beam Park Planning Framework proposes the establishment of a network of green routes and open spaces to connect the strategic open spaces of the London Green Grid on a local level. These will include:

- Beam Parkway - a green and landscaped corridor with pedestrian and cycling facilities and a number of pocket spaces providing amenities for residents and people passing through the area (P);

- Marshway Green Bridge – a green corridor on the eastern side of Marsh Way Bridge providing a strategic cycle and walking connection across the railway to CEME and the River Thames; and

- re-opened Culverts - reopening of the New Havering Sewer and the Drain running beneath the Suttons Industrial site to create a naturalised watercourse. Linear green spaces alongside re-opened and naturalised culverts at the Suttons Industrial site and at Dovers Corner.

Key Implications for the Local Plan

6.96 The Local Plan should support protection of and improvements to existing parks and other green infrastructure within Havering, and assure provision of children's play space in all new development.

H Recreation and Leisure

H1 Sports Complexes

6.97 Access to opportunities for sport and recreation can make an important contribution to the health and well-being of communities. There are 21 sports halls in Havering, and a further new sports pavilion containing a small indoor sports hall is soon to be completed at Broxhill Park. LB Havering's Indoor Sport and Leisure Facility Assessment (ISLFA) (January 2016) found that most residents in Havering have access to a sports hall within one mile of home with the exception of parts of the Rainham area. The existing supply of sports hall accommodation in LB Havering has capacity to meet current demand but LB Havering facilities at Central and at Hornchurch are at capacity during peak times. Furthermore, the quality of the stock is mixed, with Chafford School Sports Complex at the end of its useful life.

6.98 There are 14 swimming pools open to the public in Havering, at ten sites. The ISLFA found that Havering is relatively well provided with swimming pools compared with many London boroughs but that significant areas of the borough remain without access to a publicly accessible swimming pool, particularly in the northwest and south of the borough. Furthermore, the age and condition of the pool at the Chafford Sports Complex, the age of the pool at Hornchurch leisure complex and the lack of provision in Rainham will make it increasingly challenging for a modern swimming offer to be provided without significant investment and/or new provision. The relatively small size of the main pools limits flexibility to accommodate different activities.

6.99 There is currently no ice rink provision in Havering as the former ice rink in Romford closed in 2013 and has been demolished.

6.100 LB Havering's Indoor Sport and Leisure Facility Strategy (ISLFS) (January 2016) indicates a need for the following new facilities in the borough to improve quality of provision and accessibility:

- the new Romford Leisure Centre, to include an eight lane 25m pool and learner pool, a replacement ice rink, and a health and fitness suite (due to open in 2018) (P);

- replacement Hornchurch sports complex, to include a four court sports hall, fitness suite, four dance/multi-purpose studios, eight lane 25m pool and a learner/diving pool; and

- a new sports facility in south Havering (replacing the Chafford Sports Complex), to include a four court sports hall, fitness suite, dance/multi-purpose studios, five lane x 25m pool, learner pool, and splash area (P).

6.101 The ISLFS also proposes investigating the feasibility of upgrading existing or providing new sports hall accommodation with associated office and changing accommodation to facilitate well managed community use at 11 school sports hall sites.

H2 Playing Pitches

6.102 The Playing Pitch Final Strategy and Action Plan 2016-2021 (PPFSAP) (November 2016) identifies significant shortfalls in grass football pitches, third generation synthetic (3G) pitches, cricket pitches and rugby union pitches at present across the borough. These shortfalls will be exacerbated by expected increases in population and participation rates over the period of the Local Plan. However, the PPFSAP finds that if pitch quality, overplay and security of tenure are addressed, and if access to existing pitches is maximised (and no pitches are permanently lost), there would be no requirement for new grass football pitch provision, although there may be isolated areas which generate enough demand for new pitches to be provided in the future.

6.103 With regard to the other facilities, the PPFSAP proposes that LB Havering should:

- identify feasible sites to increase provision of 3G pitches in Havering to meet training and competitive demand;
- support Harold Wood Cricket Club (CC) and Noak Hill Taverners CC in developing additional cricket pitches/facilities; and
- identify suitable sites, where possible, to develop mini pitches for clubs with significant mini and junior sections to alleviate pressure on senior pitches.

Key Implications for the Local Plan

6.104 The Local Plan should support protection of and improvements to existing sports facilities and playing pitches in the borough, including identifying sites for additional facilities where required as discussed above.

6.105 Key projects required to meet expected needs are:

- the new Romford Leisure Centre, which will serve the Romford SDA (P);
- a new sports facility in south Havering to replace the Chafford Sports Complex (P); and
- a replacement Hornchurch sports complex.

I Emergency Services

I1 Police

6.106 There are three operational police bases within Havering, and eighteen ward based Safer Neighbourhood Teams. The Mayor's Office for Policing and Crime (MOPAC) Estate Strategy 2013-2016 aims to streamline the extensive police estate in London and make it fit for purpose. Reforms to the local policing estates will be directed at making the police more visible, accountable

and accessible. The implications for Havering have not yet been worked through and the Commander of Havering's Borough Operational Command Unit (BOCU) is exploring the potential for joint working/sharing of resources and a joined-up approach with Commanders at Barking & Dagenham and Redbridge. Future requirements are therefore unknown at present.

I2 Fire Services

6.107 Havering falls under the Eastern District Command of the London Fire Brigade (LFB). There are four fire stations in the borough: Romford, Hornchurch, Wennington and Harold Hill, all of which are 'fit for purpose' (Harold Hill Fire Station was opened recently, in 2010) and are sufficient to meet the borough's needs. The LFB's Fifth London Safety Plan 2013 to 2016 (2013) maintains the target attendance time of getting a first fire engine to an emergency within an average six minutes and the second fire engine, when needed, within an average of eight minutes.

6.108 The location of the LFB's fire stations is based on modelling of historical data on fires that have occurred to ensure that average attendance times of six minutes for the first appliance and eight for the second can be met, across London. Any new development will meet modern building control standards and will therefore be of a lower risk of fire compared to older buildings. Furthermore, the Fifth London Safety Plan, which includes measures to reduce the number of incidents requiring attendance, projects fewer incidents London-wide in 2031 than in 2010. If, in future years, it is found that fires have increased in particular areas of Havering this will be taken into account in future London Safety Plans. At present LFB do not envisage that the planned new development will require any change in the location of the existing fire stations in Havering.

I3 Ambulance Service

6.109 The London Ambulance Service (LAS) provides a service responding to 999 calls across the whole of London. Three of its 70 ambulance stations are in LB Havering at Romford, Becontree, and Hornchurch. The LAS aims to meet the Government response time targets of 75% of Category A (immediately life-threatening) calls within eight minutes, and 95% of such calls within 19 minutes. The London Ambulance Service 5 Year Strategy 2014/2015 – 2019/2020 contains no proposals to increase the number of ambulance stations. However, the LAS is currently reviewing its Strategy and its Estates Strategy and these are is likely to be finalised in autumn 2016.

Romford Town Centre Development Framework identifies the need to re-provide an ambulance station currently located in a building offering significant redevelopment potential within the Bridge Close area.

Key Implications for the Local Plan

6.110 At present there is no expressed requirement for additional emergency services facilities in the borough, apart from the need to re-provision an ambulance station in Romford. The Local Plan should provide for meeting the needs of emergency services as and when these are defined, with opportunities for co-location and joint provision with other facilities fully explored.

J Waste Management

6.111 The East London Waste Authority (ELWA) was established in 1986 and is responsible for waste disposal in Havering as well as the London boroughs of Barking & Dagenham, Newham and Redbridge. In 2002, ELWA signed a 25 year contract with Shanks Plc, a leading waste management company, to deliver an Integrated Waste Management Strategy for the area.

6.112 Within Havering the main waste management facilities are: Gerpins Lane Re Use and Recycling Centre, and Frog Island Mechanical and Biological Treatment Facility. The Frog Island waste facility handles household waste and recyclable materials from mainly Barking & Dagenham and Havering.

6.113 A Joint Waste Development Plan Document (DPD) was developed in 2010/2011 by the four ELWA London boroughs as part of each borough's LDF and was formally adopted by LB Havering in February 2012. It pools the London Plan's borough level apportionment of municipal solid waste and commercial and industrial waste to be managed for the four boroughs. The DPD sets the sub-regional strategy up to 2021and aims to ensure adequate provision of waste management facilities in appropriate locations for municipal and commercial and industrial waste.

6.114 The Joint Waste DPD identifies three sites in Havering with potential to accommodate additional facilities to meet estimated demand to 2021, through the provision of

- two small scale facilities for biodegradable waste at Ferry Lane North, Havering;
- medium scale composting facility at Gerpins Lane, Havering; and
- large scale composting facility at Hall Farm, Havering.

Key Implications for the Local Plan

6.115 Policies for providing new waste management facilities to serve the borough are set out in the Joint Waste DPD.

K Urban Regeneration

K1 Public Realm

6.116 LB Havering has a number of ongoing regeneration schemes, which are focussed largely on transport and place-making elements, the main ones being Romford Town Centre and Beam Parkway (the latter described above under 'Other Green Space').

6.117 The Romford Town Centre scheme will create a better street environment around the Ring Road, with enhanced crossings for pedestrians, and enhance the environment for pedestrians and cyclists by creating designated cycle routes and planting trees, creating new landscapes, and incorporating public art (P). In addition, Romford Market transformation will produce re-imagined public space with the aim of creating a new heart of the town in the Market Place and acting as a catalyst for the town's future growth (P).

6.118 Three station schemes are covered under TfL's Crossrail Complementary Measures programme of improvements to public areas and interchanges outside all stations in outer London that will eventually form part of the Elizabeth line:

- Harold Wood Station Area Scheme (P);
- Gidea Park Station Scheme (P); and
- Romford Station Scheme (P).

K2 Employment & Skills

6.119 LB Havering will also support new and existing businesses through an incubator hub, offering affordable accommodation and business support to develop businesses to their next level of growth (P).

Key Implications for the Local Plan

6.120 The Local Plan should incorporate the major regeneration schemes in Romford Town Centre, including the Romford Station Scheme and Romford Market transformation, as well as schemes associated with the other Crossrail stations at Harold Wood and Gidea Park. It should also include policies to support the provision of affordable office accommodation within or funded by new commercial and mixed use developments.

L Environment

L1 Air Quality

6.121 The main source of air pollution In Havering is road traffic vehicle emissions. Significant amounts also come from residential and commercial gas use, industry, construction sites and emissions from outside London. The whole area of the borough was declared an Air Quality Management Area in 2006 due to levels of nitrogen dioxide and particulate matter not meeting air quality objectives in many parts of the borough. Air quality improvement projects have been undertaken in Romford, Hornchurch, Upminster and Rainham.

6.122 The latest Air Quality Action Plan for LB Havering covers the period 2017 to 2022. Current projects to improve air quality in the borough comprise:

- green screens: planting of green screens formed of trees and shrubs to take carbon dioxide, ozone and nitrous oxides out of the air and provide protection against particulate pollution; and
- pocket parks: Provision of small areas of inviting public space where people can enjoy relief from busy city streets.

Key Implications for the Local Plan

6.123 The Local Plan should support the provision of interventions aimed at improving air quality, especially for pedestrians and cyclists.

7 FUTURE INFRASTRUCTURE ITEMS AND COSTS

Introduction

7.1 Table 7.1 lists the main infrastructure items which so far have been identified as being required to support development under the Havering Local Plan. These comprise individual projects or types of project. Table 7.1 can be found at the end of this section. For each infrastructure project or type of infrastructure, the following information is given where available:

- location, which may be an individual district or the whole borough;
- type (eg. community facilities, transport);
- facility (eg. school, highway);
- content of project(s);
- estimated total capital cost of the project(s);
- required timing of implementation of the project in five year tranches;
- delivery agency; and
- expected main funding source(s).

Estimated Cost by Sector

7.2 Table 7.2 sets out the estimated cost of the main infrastructure items identified in Table 7.1, grouped by sector. The costs total £568m. However, this does not represent a comprehensive estimate of total costs of all infrastructure for the Local Plan period, 2017 to 2032. This is because in many cases the relevant agencies have only derived costs for a shorter time period, due to their regular capital programming procedures and the uncertainties of longer term forecasts of requirements. In some other cases, such as police and flood protection, the relevant agencies are still in the process of assessing requirements and forms of provision.

Table 7.2: Estimated Total Cost of Identified Infrastructure Requirements

Sector	Total Cost
Education	£218m
Transport	£105m
Health	£73m
Culture & Community	£32m
Green Infrastructure	£49m
Recreation & Leisure	£63m
Urban Regeneration	£24m
Others	£4m
Total	**£568m**
Note: Figures may not sum to Total due to rounding.	

7.3 It should be noted that neither Table 7.1 nor Table 7.2 includes three major transport interventions currently under active consideration but which have not yet been progressed sufficiently for costs to be estimated. These are a new north-south public transport route, and re-configuration of the arrangements at Gallows Corner and also the Ring Road west of Romford Town Centre.

Table 7.1: Main Infrastructure Projects in Support of the Local Plan

Location	Type	Facility	Project	Total Cost (£000s)	Period			Delivery Agency	Expected Main Funding Source

ANNEX B INFRASTRUCTURE PROVISION AND REQUIREMENTS BY TYPE

A1 Rail Transport	
Main provider	**Network Rail/TfL**
Existing provision	Connections to local surface level trains are provided by stations at Romford, Harold Wood and Gidea Park on the Liverpool Street-Shenfield-Norwich main line, Upminster and Emerson Park on the Romford to Upminster line, and Rainham on the London-Tilbury-Southend (LTS) line. There is access to Underground services (District Line) at Hornchurch, Upminster Bridge, Elm Park and Upminster.
Adequacy of existing provision	Only the surface line between Romford and Upminster provides a north south rail connection as the other facilities have an east - west routing.
Assessment of future needs	Several major transport infrastructure improvements are currently planned to meet wider strategic needs as well as serving Havering, including: • Crossrail – a new regional east-west railway line, currently under construction, will connect Heathrow and Maidenhead in the west with Essex and South London in the east. The eastern branch (north of River Thames) will run from Shenfield in Essex through the three Havering stations of Harold Wood, Gidea Park, and Romford. Crossrail is scheduled to become operational from 2018/2019 at a cost of almost £15 billion; • improvements to LTS railway via Rainham and Upminster (c2c Essex Thameside franchise to 2029) - to support planned regeneration strategies including the provision of 12-car trains on the Tilbury loop and more frequent services; • London Underground District Line – upgrades are underway to increase peak capacity by 47% by 2018. Signal and customer information upgrade of the District Line in 2014; and • Upminster Depot redevelopment – one of the four major depots for London Underground's railway fleet (Metropolitan, Hammersmith & City, Circle and District Lines) to be upgraded, with completion planned for early 2017.

	Proposals specifically to meet the future needs of Havering include: *Romford SDA* • improvements to Romford Station to enable interchange with Crossrail (as part of TfL Crossrail Complementary Measures) and southern entrance improvements (£5.3m); and *Rainham & Beam Park SDA* • a new Beam Park station on the LTS railway line to maximise the future development potential of the south of the borough and to support the housing and employment sites at London Riverside; which is expected to be open by 2020. (£17.6m)
Main funding sources	TfL, Local Implementation Plan (LIP), DfT, Mayoral CIL (minor contribution to Crossrail), developer contributions

A2 Other Public Transport	
Main provider	**TfL**
Existing provision	Bus routes in Havering form part of the London bus network. Bus routes serve the various residential, employment, education and leisure activities and key destinations. Romford is the major destination and most routes provide good links to its railway station in the town centre. Other services connect to Hornchurch and Upminster.
Adequacy of existing provision	New and better north-south bus links are needed in Havering (particularly to Rainham and its railway station and London Riverside Business Improvement District) to improve connectivity. LB Havering is working with TfL to explore the opportunities for this. More frequent services to some more rural parts of the borough (such as Havering-Atte-Bower) would also benefit those in the community who are often dependent on public transport such as young people and the elderly. Reconfiguration of Queens Hospital in Havering and King Georges Hospital in Redbridge has resulted in several key services, including A&E and maternity units, being relocated from King Georges to Queens. This has led to an increase in the numbers of patients at and visits to Queens Hospital. Efforts have been made in recent years to improve bus access to Queens but there are still some pockets of the borough and wider region which would benefit from direct bus access to Queens. This includes access from areas within Havering such as Cranham and Upminster as well as parts of the neighbouring LB of Barking and Dagenham where passengers travelling by bus to Queens need to make one, if not, two bus changes.
Assessment of future needs	The existing problem of a lack of connectivity between the south of the Borough and Romford, including Queens Hospital, and further north to Harold Hill is likely to become an even greater challenge over the next decade given demands arising from the two Housing Zones planned for Romford and Rainham. LB Havering is currently in the early stages of considering the feasibility of modes such as light rail, tram or guided bus to provide a step change in connectivity between the north and south of the borough, either on existing highways or outside of the established built up area. The following bus-related projects are currently identified as required in the borough: *Borough-wide* • improving bus stop accessibility in the borough under TfL Programme (£3m);

A2 Other Public Transport	
	• Improved bus stop provision at Queens Hospital bus interchange to increase capacity (£200k); *Rainham & Beam Park SDA* • Beam River bus bridge - linking LB Havering and LB Barking & Dagenham on Ford Land (£10m); • Rainham Creek bus bridge (£10m); and • revenue support for orbital bus service connecting Strategic Industrial Locations and Rainham (£2m).
Main funding sources	TfL, developer contributions

A3 Highways	
Main provider	**LB Havering** (principal, distributor and minor roads), **TfL** (strategic roads), and **Highways England** (motorways)
Existing provision	The A12, A13 and A127 provide high quality trunk road access to the M25, which in turn provides access to London and the south east. The borough is served by a full network of other roads.
Adequacy of existing provision	There is a continuing need to assess and upgrade highway structures, principal roads, distributor roads and bus route roads. Gallows Corner, a five arm junction linking the A127 with the A12, suffers from delay due to congestion and is an accident 'hotspot' in the borough.
Assessment of future needs	LB Havering is currently exploring with TfL the feasibility of sinking the Gallows Corner road junction underground in order to generate development potential for mixed uses at ground level across the site and to reduce accident rates. LB Havering are working with TfL, Essex County Council and neighbouring District and Unitary Authorities looking at the A127 Corridor in its entirety to see what measures need to be delivered in order to accommodate future growth LB Havering and TfL are also currently considering the possibility of placing the western part of the Romford Ring Road beneath ground so that residential areas to the west of Romford Town Centre (eg. Waterloo Road, Bridge Close and the former Ice Rink site)) can be better integrated and connected with the town centre for cycling and walking, and creating development potential for more new homes. The above projects are at an early stage of consideration and their feasibility has not yet been demonstrated. Future highway improvements that have been firmly identified include: *Borough-wide* • upgrades to principal roads, distributor roads and bus route roads (£25m); • Highway structure upgrades (£5m); • casualty reduction measures (£5m); • 20 mph zones (£1m); and

A3 Highways	
	Rainham & Beam Park SDA • road, carriageway and major junction improvements and cycle ways on the A 1306 (£11.92m).
Main funding sources	TfL, LB Havering, developer contributions

A4 Walking and Cycling	
Main provider	**LB Havering**
Existing provision	Most of Havering's residential areas have a network of well-lit footways providing safe and convenient access to local facilities and services, to parks and open spaces, and to public transport connections. LB Havering has developed a series of Heritage Walks around the borough. Havering also has an extensive network of quiet traffic-free routes suitable for cycling, including National Cycle Network route 136, but they are less well connected, with main roads, railways and rivers presenting significant barriers.
Adequacy of existing provision	There is a continuing need to improve accessibility and safety for pedestrians and cyclists. The Ring Road forms a substantial barrier to pedestrian and cycle access to Romford Town Centre and additional crossing points are required to reduce severance and facilitate active travel.
Assessment of future needs	Numerous improvements to cycling and walking provision are included within highway improvements and wider green space and public realm proposals. Some more specific measures required include: *Borough-wide* • footway improvements, including accessibility arrangements for pedestrian dropped kerbs (£5m); *Romford SDA* • engineering measures to improve cycling accessibility to Romford town centre (£4m); • east-west link, including wider improvements along the River Rom (£1.5m); *Rainham & Beam Park SDA* • The Rainham and Beam Park Planning Framework (January 2016) aims to transform the A1306 in Havering from a traffic dominated road into an attractive green corridor, the Beam Parkway (scheme under Other Green Space below), providing a quality walking and cycling route, and a series of pocket parks, which will transform the image of the area; • the Planning Framework proposes to create a network of walking and cycling routes to connect new local

A4 Walking and Cycling	
	green spaces with the surrounding Marshes and Country Parks; • Rainham Creek cycling/walking bridge (£1m); and *Elsewhere in Borough* • development of sustainable transport options (walking, cycling, bus, tram) for London Riverside Conservation Park (Wildspace) (£5m).
Main funding sources	TfL, LB Havering, GLA, developer contributions

B Education (Primary, Secondary, Post-16 and Early Years)	
Main provider	Local authorities are under a statutory duty to ensure the sufficiency of school places in their area under section 14 of the Education Act 1996. This applies to all children of compulsory school age resident in the local authority area. Providers come from the private, voluntary, charitable and maintained sectors. LB Havering is the commissioner of education and is also the "provider of last resort" when no other acceptable new provider comes forward. Section 6 of the Childcare Act places a duty on local authorities to secure sufficient childcare for working parents. In addition, regulations under the Childcare Act 2006 place duties on all local authorities to secure free early education provision for pre-school children of three and four years old and two year olds from lower income families. This Early Years education is primarily delivered by private, voluntary and independent pre-school providers, accredited childminders, and schools with a maintained nursery provision.
Existing provision	As at 2015/2016 state school provision in Havering comprises 60 primary schools (YrR – Yr6), offering 21,200 places, 18 secondary schools (Yr7 – Yr11), offering 16,140 places, and three special schools, offering 266 places. Post-16 education is currently offered at six secondary schools, Havering College of Further & Higher Education and the Havering Sixth Form College. Havering College of Further & Higher Education has three campuses: Ardleigh Green Campus, Hornchurch, Quarles Campus, Harold Hill, and Rainham Campus Construction Centre. As at April 2016, 448 providers in Havering were offering 7,167 early years and childcare places for statutory and non- statutory school aged children. Of these, 1,058 places are nursery classes within maintained schools and academies.
Adequacy of existing provision	In 2015/2016 there were 21,200 primary school places in Havering, and 21,074 primary pupils, leaving a total of 126 surplus spaces (0.6% of the total). The equivalent figures for secondary schools were 16,140 secondary school places and 14,594 secondary pupils in 2015/2016, leaving a total of 1,546 surplus spaces, or around 10% of capacity.

B Education (Primary, Secondary, Post-16 and Early Years)	
	For 16 to 18 year olds, there were 1,990 places and 1,457 pupils in state school sixth forms in 2015/2016, leaving a total of 533 surplus places. There were additionally 6,701 Education Funding Agency (EFA) funded places at other colleges and academies, including 2,711 at Havering Sixth Form College and 2,268 at Havering College of Further and Higher Education. The Havering Childcare Sufficiency report indicates that there are sufficient Early Education Entitlement (EEE) places in most of the wards in the borough. However, as of July 2016, there are potential shortfalls of places in the Gooshays, Harold Wood, Mawney, Rainham & Wennington, South Hornchurch and Upminster wards, although this situation may change as new providers open and existing providers may close. There are approximately 1000 children who have a statement of Special Educational Need (SEN) that live in Havering. Since September 2014, any requests received for an assessment and agreed could lead to an Education Health Care Plan (EHCP). The majority of these children attend mainstream school where they receive additional support. Some will attend Additionally Resourced Provision units (ARPs) within mainstream schools and the remaining children attend Special schools both within and out of borough.
Assessment of future needs	Planning for school places is a complex process and the future need for school places can be impacted by changes to the key data used to produce school roll projections. Changes to housing delivery in terms of overall numbers and phasing can impact on the demand and timing of school places required. Low birth projections or a sudden increase in the birth rate can also lead to an increase in the number of school places needed. Changes to patterns of movement and migration in and out of the borough can also cause fluctuations in demand for school places. Havering carefully monitors all of the above factors to try and mitigate the impact any changes may have on our ability to plan school places effectively, so far as possible. The Local Authority is unable to open new schools, instead proposers need to be invited to open new schools. However the Local Authority may not be successful in attracting suitable sponsors to open new schools. This may impact on the Local Authority's ability to deliver new schools places on time. LB Havering undertakes annually a comprehensive assessment of future demand for school places in the borough by projecting cohorts within the existing schools, taking account of recent future birth rates, and allowing for the impact of committed and planned housing. Allowance is also made for significant cross border flows both into and out of the borough. The latest long term strategic forecast, contained in the Commissioning

B Education (Primary, Secondary, Post-16 and Early Years)	
	Plan for Education Provision (2015/2016 to 2019/2020), covers the ten year period from 2015/2016 to 2025/2026. *Primary and Secondary Places* The number of primary age pupils in Havering schools, including pupils in existing and planned housing, is expected to increase significantly from 21,074 in 2015/2016 to 28,889 by 2025/2026, and the number of secondary age pupils from 14,584 to 19,766 over the same periods. These represent increases in demand for school places of 7,815 at primary level and 5,182 at secondary level over the ten year period, leading to shortfalls compared with existing school places of 7,689 and 3,626 respectively. The Local Authority will take action to reduce surplus capacity where this exceeds 10%, and will seek to exert a downward pressure on levels of surplus capacity where these are forecast to remain significantly above 5% throughout the forecast period. The demand for special school places in line with the overall growing demand for school places with the complexity of the needs of the children increasing and changing over time. Work is ongoing to refine the forecast figure for pupils who have a special education need and will require schools places over the next 10 years. There may be some areas of Havering that will have no available options to expand existing schools if further major housing is brought forward. School place demand arising from such developments will need to be met through new school provision that will require a site to enable delivery. *Rainham & Beam Park SDA* The Rainham housing zone bid has been approved, with an expected delivery of 3,360 units. The expectation is that four FE of the need will be met by expansion of existing schools in the Rainham and South Hornchurch Primary Planning area (subject to statutory process). A new three FE- school will be needed from 2020/2021. A site within the housing development has been identified and reserved for the new school and discussions are on-going between the developer and the potential sponsor. The need for secondary school places for Rainham Housing Zone is four FE (600 places). This could be delivered by expanding secondary schools in the planning area as we are not projecting a deficit in year 7 places in that area until 2022/2023.

B Education (Primary, Secondary, Post-16 and Early Years)

Romford SDA

The Romford Framework Delivery bid has been approved, with an expected delivery of over 3,304 units and there is also a regeneration programme of over 2,500 units of which the majority of units are within Romford. In the long term, this is likely to result in an increase in the projected pupil numbers and need for additional school places. In order to meet the need for primary school places in the Romford area eight FE will need to be delivered through new schools. A six to eight form entry secondary school in the second phase of the Plan period (5-10 years) will be needed. Both the new primary and secondary schools will need sites in order to deliver the required school places.

Borough-wide Primary School Requirements to 2020/2021

The Commissioning Plan for Education Provision indicates the need for a total of 3,840 additional primary places by 2020/2021 in addition to those already available in 2016/2017. This demand is concentrated in Romford, Harold Hill, and Rainham & South Hornchurch.

Primary School Requirements by 2020/2021

Planning Area	Capacity 2015-2016	Pupil Roll 2015-2016	Surplus Places 2015-2016	Surplus Capacity 2015-2016	Capacity 2020-2021	Pupil Roll 2020-2021	Surplus Places 2020-2021	Surplus Capacity 2020-2021
Collier Row	3525	3387	138	4%	3825	3773	52	1%
Elm Park	2330	2242	88	4%	2920	2838	82	3%
Harold Hill	3435	3395	40	1%	3900	4420	-520	-13%
Hornchurch	4860	4641	219	5%	5040	5062	-22	0%
Rainham and South Hornchurch	2295	2167	128	6%	2370	2965	-595	-25%
Romford	2745	2692	53	2%	3510	3859	-349	-10%
Upminster and Cranham	2572	2550	22	1%	2730	2759	-29	-1%

Beyond 2020/2021 the primary pupil numbers are forecast to increase, due to rising birth rates and the level of housing growth planned.

Borough-wide Secondary School Requirements to 2020/2021

For secondary schools, the Commissioning Plan similarly indicates a need for a total of 637 additional Year 7 places by 2022/2023. This is equivalent to an additional 21 FE. This demand is concentrated in the Central Planning Area, with lesser demands elsewhere. In most areas the requirement can be met by school expansions but new provision will also be required to meet needs in the Central Area and the North East area.

Secondary School Requirements by 2020/2021

Planning Area	Permanent Places 2015-2016	Pupil Roll 2015-2016	Surplus places 2015-2016	Surplus Capacity 2015-2016	Permanent Places 2022-2023	Pupil Roll 2022-2023	Surplus Places 2022-2023	Surplus Capacity 2022-2023
North East	180	179	1	1%	180	269	-89	-49%
North West	180	162	18	10%	180	221	-41	-23%
Central	1578	1532	46	3%	1624	1990	-366	-23%
East	693	621	72	10%	651	755	-104	-16%
South	617	473	144	23%	617	654	-37	-6%

Beyond 2022/2023 the secondary pupil numbers are forecast to increase due to the higher year 6 primary cohort continuing to transfer to year 7 in secondary and the level of housing growth planned.

Borough-wide Post-16 Places

Current data for Havering suggests that an expected rise in the participation rate to full participation of 16 and 17 year-olds from 2015 will to a large degree be cancelled out by a fall in numbers of young people aged 16 to18 in the next few years. However, in the longer term, the number of 16 and 17 year olds in Havering is projected to increase, from 9,043 in 2016/2017 to 10,318 in 2023/2024. There is a range of options for pupils in

B Education (Primary, Secondary, Post-16 and Early Years)	
	this age group, including sixth forms, colleges, and apprenticeships, to which would be pupils can travel from anywhere in the borough. Numbers on roll at Havering College of Further and Higher Education and Havering Sixth Form College are projected to increase by around 200 and 240 over this period, respectively. The situation is complicated by the fact that post-16 pupils can travel between local authorities and Havering has traditionally been a net importer of learners post-16. The number of 16 to19 year-olds in East London and the Thames Gateway is forecast to increase significantly in the coming years, which is also the case in Greater London but at the same time there is a potential increase in the number of 16 to19 providers in the surrounding area, such as the recently established University Technical College (ELUTEC) in Dagenham. It is therefore difficult to be definitive about future requirements. *Borough-wide Early Years Places* From September 2017 working families will be entitled to up to 30 hours of childcare per week for three and four year olds, subject to the eligibility criteria for the additional free entitlement. There is already a need for additional Early Years places; with the additional hours being available this could see a further increase in demand. The number of two, three and four year olds needing EEE places across the borough is expected to increase from 5819 in 2015/2016 to 6857 in 2025/2026. A deficit of about 300 places for two, three and four year olds is projected over that period although it is not possible to be specific about locations at present. Further details on the future demand for early years places are given in LB Havering's Childcare Sufficiency Report, which is updated on an annual basis.
Costs	The DfE is currently funding the Local Authority at the rates of £16.5k per primary pupil and £21.5k per secondary pupil. At these rates the total cost of school places to meet pupil numbers to 2025/2026 will be at least £127m for primary and £78m for secondary, excluding any allowance for providing surplus places to provide flexibility. Assuming post-16 pupils are funded at the same rate as secondary pupils, the equivalent cost of additional places for this age group to 2023/2024 would total around £9.5m. The total cost of Early Years places to meet pupil numbers to 2025/2026 will be of the order of £3.73m
Main funding sources	Department for Education (DfE), LB Havering, Education Funding Agency, developer contributions.

B Education (Primary, Secondary, Post-16 and Early Years)	
	LB Havering receives Basic Need Funding Allocation from the DfE to create additional school places to meet demand arising from increases in births and net in- migration into the borough. However, there is no guarantee of the level of future Basic Need allocation that Havering may receive and the allocation has been significantly reduced in recent years. No grant is allocated to meet demand for places arising from new housing developments. Other sources, including developer contributions, will be needed to provide such places. The Education Funding Agency (EFA) is responsible for managing the Government's 16-19 Demographic Growth Capital Fund, which supports the creation of accommodation for new learners aged 16-19. This demand may arise from either population growth, the increase in participation by young people who are not in education, employment or training, or new learners with learning difficulties and/or disabilities who require provision. Free School provision has been used across the country to meet some of the demand for additional school places. Havering has two new Primary Free Schools. If there are further opportunities to apply for free schools in future waves, Havering will do so. However it is not certain if the Free Schools waves will continue to be used a method of providing additional school places in the future. The Local Authority will need to provide sites for any new school needed in the future. In the case of Free schools/new schools and expansion works, there is an element of risk around the delivery of the school places and whether they can be delivered on time to accommodate the need for additional school places.

C1 & C2 Primary and Acute Health Care	
Main provider	**Havering Clinical Commissioning Group (CCG) and NHS England commission healthcare services. Barking, Havering and Redbridge University Trust provide acute hospital services**
Existing provision	There are 47 GP practices in Havering, with a total of 95 Full Time Equivalent GPs. These currently provide services from around.6,560 m^2 of space to a registered patient population of 255,865. A new Harold Wood Polyclinic of 2,500 m^2 was opened at Harold Hill in 2010, at a construction cost of £4.6m. The only acute hospital, operating an Accident &Emergency department, in Havering is Queen's Hospital in Romford, which opened in 2006, and brought together the services previously run at Oldchurch and Harold Wood hospitals.
Adequacy of existing provision	The average ratio of patients to FTE GPs in the borough is 2,690, well above the London average of 2,100 and somewhat higher than the national average of 2,000. There are no clinically set standards for the ratio of GPs to patients but the primary healthcare default assumption used for capacity planning purposes is set at a ratio of 1 GP per 1,800 patients based on guidance from the Royal College of General Practitioners. The primary care estate data base (SHAPE) indicates that existing facilities are currently operating at or near capacity. Based on current Department of Health guidance on primary care space standards, the existing population of Havering (around 250,000) would require some c.18,000 $m^{2,}$ compared with the 7,179 m^2 of space currently provided. Havering has a large number of smaller premises which, by their nature, will have little opportunity for expansion and if feasible, the size of expansion is likely to be relatively small scale. Furthermore, many GP practices are currently using ageing, converted domestic premises, a large number of which are in need of major building works to enable them to comply with required standards.
Assessment of future needs	The CCG has worked together with the Council to prepare the Havering Primary Care Infrastructure Capacity Plan. The purpose of this plan is to give an indication of additional primary care infrastructure requirements up to 2026. Continued working between the CCG and the Council is required to monitor and update the information in the plan. The CCG's aims for the development of general practice and wider primary care are that it should be accessible, coordinated and proactive. There will be a focus on prevention, support for self-care, active management of long-

term conditions and the avoidance of unnecessary hospital admissions. Acute hospital care should be reserved for acutely ill patients with the majority of care delivered nearer home.

Havering is divided into three healthcare regions, termed “localities”:

- North (including Harold Wood);
- Central (including Romford Town); and
- South (including Rainham and South Hornchurch).

This assessment concentrates on the primary healthcare requirements arising solely from new housing developments. The NHS Healthy Urban Development Unit (HUDU) has used their model to calculate the population yield from new housing and to assess the subsequent healthcare impacts and floorspace requirements. The model produces the following population growth for each locality over the two phases of the development:

Locality	Phase 1 2016/2017-2020/2021	Phase 2 2020/2021-2025/2026	Total
North	1,310	402	2,071
Central	4,665	8,025	15,804
South	3,379	4,617	8,510
Total	**9,354**	**13,044**	**26,385**

This shows that the Central and South localities will need to absorb the majority of the population increase, receiving 60% and 32% of the growth respectively.

The HUDU model estimates primary care requirements by locality and phase in terms of full time equivalent (FTE) GPs and primary care floor space, to meet the estimated population growths. The floor space requirement assumption is derived by HUDU from example schedules of accommodation in Health Building Note 11-01: *Facilities for primary and community care services* (2013), which also includes space for wider primary and community care services. The requirements are as follows:

C1 & C2 Primary and Acute Health Care

Locality	Phase 1 2016/2017-2020/2021		Phase 2 2020/2021-2025/2026		Total	
	FTE GPs	Primary Care m^2	FTE GPs	Primary Care m^2	FTE GPs	Primary Care m^2
North	0.7	118	0.2	36	0.9	**159**
Central	2.6	426	4.5	735	7.0	**1196**
South	1.9	309	2.6	422	4.4	**753**
Total	**5.2**	**853**	**7.2**	**1,193**	**12.4**	**2108**

The CCG has undertaken a preliminary desktop review of current facilities and development sites on offer to determine which might be the most suitable sites to be allocated for health and in which time period they will be required. New, fit-for-purpose premises are needed to cater for the significant population growth, to facilitate primary care at scale, and enable patient access to a wider range of integrated services. In summary, the additional requirements for new facilities could be:

Romford SDA

- primary and community care hub in Romford Town centre of 4,500 m^2 (£20.3m);

Rainham & Beam Park SDA

- new facility of 2,000 m^2 close to Rainham Town Centre for about 21,500 patients (£9m);

Rest of Borough

- new primary care hub in Heaton ward of 950 m^2 for around 10,000 patients (£4.3m);
- enhanced GP service of 2,800 m^2 at the proposed St. George's Health & Well-Being Centre for around 30,000 patients (£12.6m);
- new primary care hub of 1,850 m^2 to be developed in North Locality for around 30,000 patients (£8.3m); and
- new primary care hub of 3,200 m^2 to be developed in Central Locality for around 35,000 patients (£14.4m).

C1 & C2 Primary and Acute Health Care	
	In addition, Harold Hill Health Centre and Harold Wood Polyclinic would be combined into a joint hub and the utilisation of South Hornchurch and Cranham Health centres would be maximised. It should be noted that these proposals reflect the need to provide additional services and space for population increase only. Other pressures may impact these proposals, such as: • the CCG forward vision and future estate rationalisation plans (identified through the 'Transforming Primary Care in Havering' strategy 2016-2021); • re-providing ageing GP practice buildings that may be struggling to meet fit for purpose criteria; and • health and social care integration by creating larger multi use 'hub' facilities.
Costs	The CCG is currently assuming a build cost for primary care facilities of £4,500 per sq m. The costs of individual projects given in Table 7.1 are calculated using this assumption.

C3 Mental and Community Health	
Main provider	**North East London Foundation Trust (NELFT)** provides mental health and community services in Havering.
Existing provision	The NELFT estate in Havering comprises 18 premises. Adult Services in Havering, including Mental Health Services, are organised around 6 GP clusters while Children's Services are organised around three clusters. The NELFT opened the Acorn Centre, a Child Development Centre, in London Road, Havering in February 2015 as a hub facility allowing Child and Adolescent Mental Health Services from various locations within Havering to provide an integrated service to the Borough.
Adequacy of existing provision	NELFT commissioned surveys in 2015 of all properties the Trust owns or substantially occupies. The results suggest substantial underuse of both clinical and non-clinical space within the majority of premises.
Assessment of future needs	People's health in Havering is changing as more people are living longer and with more complex long term conditions, and so needing more and a wider range of care. Future plans will largely be based on demographic information, age, population growth and areas of deprivation. The NELFT strategy is based on the development of 'agile working', a flexible and mobile workforce, to support care closer to home and early intervention. For adult services a model of care based on locality primary care provision is currently being rolled out within Havering, with community health and social care integrated within these hubs. Some teams will be co-located and clustered around three hubs at: Harold Wood, Romford and Cranham. Discussions are taking place with LB Havering on integrating primary care, community, mental health and social care under a single management structure. Joint use of provision and premises with Social Services and other LA departments has commenced around older people's services. Under the NELFT Estates Strategy 2014- 2019, the existing estate in Havering will be rationalised to provide new accommodation to meet the needs of new working practices. The NELFT has embarked on an ambitious drive to reduce estates costs by developing closure plans for up to six Havering premises and relocating their services within the borough. Estate rationalisation will ensure that the retained premises are in the optimum locations for service delivery within the Borough and in good condition. Any future investment can then be directed towards the retained properties. The Trust is working in partnership with other organisations to maximise the use of the public estate to the overall benefit of the local health economy.

C3 Mental and Community Health	
	Crisis teams will be aligned to hospital A&E and other urgent and emergency care hubs while intermediate care services for Havering are being relocated to the King George's Hospital site in Ilford, Redbridge, which provides cohesive patient care and estate rationalisation opportunities.
Main funding sources	NELFT. The Trust has a five year Investment and disposal plan which addresses the operational and strategic expenditure required to accommodate its plans.

C4 Social Care	
Main provider	**LB Havering (and commissioned external private providers)**
Existing provision	There are 39 care homes in Havering (21 residential and 18 with the facility to provide nursing care for older people and people with physical and sensory disabilities). LB Havering purchases approximately a third of the beds. Three commissioned extra care housing schemes for older people are located in Harold Wood, Gidea Park and Harold Hill. There are ten day opportunity services in Havering, located mostly in the north of the borough, and one day centre for people with learning disabilities in Rainham. Adult Social Care statutory and non-statutory functions are largely based in offices in Romford town centre, with adult social work teams co-located with community health services located in Romford, Cranham, Elm Park and Harold Hill. LB Havering currently runs six Children Centres, in Collier Row, Elm Park, Harold Hill, Noak Hill, Rainham and Romford. These centres offer a range of services and activities including family sessions, parenting programmes. In addition, the Children Centres work in partnership with health and other partner agencies to provide a holistic service covering midwifery, child health clinics, foster carers support groups, one to one and group counselling, etc. Children's and Adult Social Care Services are currently working with health and other partners on developing locality based models of care and support, including improving access to prevention and early intervention. The localities will be a mixture of co-located and virtual integrated services.
Adequacy of existing provision	LB Havering's Joint Strategic Needs Assessment (2016) provides a high-level description of population growth, prevalence and pattern of risk factors for ill health, status of health and wellbeing and the patterns of demand for health and social care services in Havering. Havering has the highest proportion of older people of any London Borough and the significant majority of vulnerable people in the borough with a supported housing need are elderly. However, the current provision

C4 Social Care	
	of residential care homes is more than sufficient to meet current needs. Throughout 2015/2016, of approximately 1600 available beds, 250 remained vacant each week. There is currently no supported housing for people with physical disabilities in Havering.
Assessment of future needs	LB Havering is clear that there is no need for more residential or nursing homes within the borough. The policy is to support people in remaining independent and safe at home. However, there is a growing need for supported accommodation within the borough that cannot be entirely met by existing provision. However, detailed knowledge of residents' supported housing needs is required in order to encourage private sector providers and housing associations to build suitable properties and schemes in the borough. Rising pressures on LB Havering to provide suitable housing options for older people means that a specific Older Persons Housing Sub-strategy has been developed to set out to address the issues. The current Housing Strategy recommends converting some existing sheltered schemes to extra care or a retirement village model, due to the high number of asset rich older people in the borough. *Borough-wide* • LB Havering has identified a current need for up to three purpose-built six person supported housing schemes for people with learning disabilities and for one purpose built six to eight person supported housing scheme for people with physical disabilities (combined cost £4.2m); • demand for Children Centres is forecast to increase substantially as the young population increases. LB Havering plans to respond to this demand by increasing the level of services provided by the existing centres and by bringing back into operation Hilldene Children Centre in existing premises in Harold Hill, which has not been functioning for some years; and • Children's Services have also identified the need for the development of borough based residential care facilities for vulnerable children and young people, as well as semi-independent living schemes to support young people leaving care become independent as they move into adulthood.
Main funding sources	LB Havering, GLA

D1 Water supply	
Main provider	Most of Havering is within the water supply area of **Essex and Suffolk Water** (ESW), although some small areas are supplied by **Thames Water.**
Adequacy of existing provision	ESW and Thames Water infrastructure is sufficient to supply the water needs of Havering.
Assessment of future need	All water companies must prepare a Water Resource Management Plan (WRMP) every five years at the same time as they prepare their business plan. A WRMP forecasts water demand over a 25 year planning horizon, taking into account reductions in per capita consumption due to water efficiency activity and the uptake of meters. It then documents how demand will be met over this period. ESW's current Water Resources Management Plan (2014) covers the 25 year period from 2015 to 2040. Havering falls within ESW's Essex Water Resource Zone. Following a significant investment in the expansion of Abberton reservoir, Essex, has sufficient water to meet forecast demand until at least 2040. As such no major infrastructure is needed to meet the increase in housing numbers or commercial development within Havering during the period of their delivery plan. ESW has confirmed that the proposed level of development, depending on the size and location, could require some minor infrastructure (water mains) enhancement prior to development, but this is part of Business as Usual and would not delay development. In particular, the existing water network in the Rainham & Beam Park SDA can provide the required capacity to accept a new mains to serve the HZ development.
Main funding sources	Essex and Suffolk Water and Thames Water are private utility companies.

D2 Sewerage	
Main provider	**Thames Water** is the statutory sewerage undertaker for most of LB Havering
Existing provision	Thames Water's Riverside Sewage Treatment Works at Rainham treats wastewater from approximately 400,000 people in Havering and other parts of East London.
Adequacy of existing provision	A comprehensive upgrading of the Rainham works was completed in 2014 as a part of the London Tideway Improvements scheme. This increased its capacity to meet the predicted increase in flows until 2021, in addition to the construction of a new sludge digestion plant equipped to turn solid waste, left behind after treatment, into enough renewable energy to power the entire site. During heavy rainfall, the sewerage system in the Ravensbourne Valley, which includes much of Havering, has occasionally become overwhelmed, and has been associated with sewer flooding in some local areas.
Assessment of future need	The water companies' investment programmes are based on a five year cycle known as the Asset Management Plan (AMP) process. The AMP6 period began on 31st March 2015 and covers the period up to 31st March 2020. As part of its five year business plan Thames Water advise Ofwat on the funding required to accommodate growth in its networks and treatment works. Thames Water bases its investment programmes on development plan allocations, which form the clearest picture of the shape of the community. Where the infrastructure is not available they may require up to three-year lead in time for provision of extra capacity to drain new development sites. If any large engineering works are needed to upgrade infrastructure the lead-in time could be up to five years. Implementing new technologies and the construction of new treatment works could take up to ten years. *Romford SDA* • Thames Water has no concerns from a wastewater treatment perspective, but no information is yet available on the capacity of the local sewerage system to accept the additional loads from HZ development; *Rainham & Beam Park SDA* • a series of significantly large gravity sewers passing through this area Under the HZ agreement, a GLA grant of £1.5m is allocated to diverting a sewer and high pressure gas main along the northern frontage at Dovers Corner to allow the site to be developed to its full potential capacity; and • sewer capacity in this area is limited and Thames Water expect infrastructure upgrades to be required for the level of development proposed. Thames Water has not quantified the scale and likely cost of these upgrades.

Main funding sources	Thames Water is a private utility company.

D3 Electricity	
Main provider	**National Grid** runs the high-voltage electric power transmission network (National Electricity Transmission System (NETS), which connects power stations and major substations and ensures that electricity generated anywhere in Britain can be used to satisfy demand elsewhere. **UK Power Networks** own and maintain electricity cables and lines across London, the South East and East of England. They maintain and upgrade power equipment, and move and connect new electricity cables.
Existing provision	Havering falls within Boundary 14 (London) of the NETS. The majority of this transmission network is a 275kV route, with the main London feeders being at 400kV. Electricity infrastructure in Havering comprises overhead transmission lines and underground cables and no other major National Grid facilities. UK Power Networks has 18 major substations within Havering.
Adequacy of existing provision	There is ample capacity within major substations to supply Havering.
Assessment of future need	According to the National Grid's "Electricity Ten Year Statement" (2015), high demand in London and interconnector exports drive power through north London and the Thames Estuary, causing heavy circuit loading and voltage depressions. With more interconnectors expected over the next 10 years, an increased draw of power could be seen through the major Midlands to South routes and through London when the interconnectors export, putting these major transmission routes and the circuits connecting the Greater London area close to the thermal capacity limits. The network will have to be developed in order to improve its utilisation or to create new capacity. There is adequate capacity for a generic load growth for at least ten years at most substations in Havering, with probably some local reinforcement needed at a few sites and to the cable network. Future scenarios are modelled on a regular basis to reflect changes within the network but the potential increase in use of electricity for new technology may impact the available capacity sooner than anticipated. For example, localised one-off loads for commercial developments such as Data Centres can adversely impact the infrastructure network and may require substantial reinforcement to enable their connection, and may change the configuration of the higher voltage networks. This may change the available capacities to other future connections.

	Rainham & Beam Park SDA • the new development will require diversions/alterations to Low Volt and High Volt cables. There may also be a need to undertake alterations to 33kv extra high voltage cables. The total cost indication budget figure provided by UKPN for all required diversionary works within the HZ development is £2.0m, although this is a worst case scenario under which large scale diversion is required; and • the Rainham and Beam Park area has been identified as a target cluster for the deployment of a district heating network in the London Riverside Opportunity Area Rainham & Beam Park Energy Masterplan, 2015. No decision has yet been made on the form of provision.
Main funding sources	National Grid and UK Power Networks are privatised utility companies operating commercially within a regulated framework.

D4 Gas	
Main provider	**Cadent** (previously National Grid) is the sole owner and operator of gas transmission infrastructure in the UK. Gas producers supply gas to its National Transmission System (NTS) through reception terminals. Gas is transported from the NTS through eight regional distribution networks for final delivery to consumers. The regional distribution network for North London, including Havering, is run by Cadent.
Existing provision	Candent's gas distribution network serves the whole borough. However, major pipelines passing through the borough can put constraints on development potential in some locations. This is particularly important in the Rainham/Beam Park SDA (see below).
Adequacy of existing provision and assessment of future need	Cadent has confirmed that there is sufficient capacity on the MP/IP (Medium Pressure/Intermediate Pressure) Gas Distribution system to accommodate potential developments within Havering and the surrounding areas. However, Cadent's connections process works on a first come first serve basis. Cadent can therefore not guarantee if capacity is available at the time an official connections request is sent in. *Rainham & Beam Park SDA* • capacity requirements for the entire SDA development can be satisfied by the existing National Grid gas infrastructure. However, the area is traversed by three high pressure gas pipelines which are aligned predominately east to west. The nature of the pipelines affects how the land near them can be developed. A pipeline study has established that the impact of the pipelines on development can be minimised by locating development carefully. Other potential mitigation measures may include pipeline diversion; and • under the HZ agreement, a GLA grant of £1.5m is allocated to diverting a sewer and high pressure gas main along the northern frontage at Dovers Corner to allow the site to be developed to its full potential capacity.
Main funding sources	Cadent is a privatised utility company operating commercially within a regulated framework.

D5 Telecommunications/Broadband	
Main provider	**BT Openreach, Virgin Media**
Existing provision	Superfast Broadband in Havering is provided via one of two networks. The Fibre To The Cabinet (FTTC) network is owned by BT and operated by a range of providers, while Virgin Media owns and operates exclusively a Fibre To The Property (FTTP) network. All exchanges within a five mile radius of Havering are owned and maintained by Openreach and have been fibre broadband enabled. Consequently broadband providers who are reliant on Openreach's broadband network infrastructure (BT, Plusnet, Sky, TalkTalk, etc.) can provide fibre broadband to homes in this area. Virgin Media fibre broadband is also available to homes within a five mile radius of Havering.
Adequacy of existing provision	Some 98% of Havering users can now order a superfast broadband (speed greater than 24Mbps) connection, (although the actual guaranteed minimum contracted speed maybe far less than the speeds quoted).
Assessment of future need	*Borough-wide* Advanced, high quality digital infrastructure is essential for sustainable economic growth, allowing Havering's community enhanced freedom of choice about where and how they work, and how they promote and operate their businesses. The Local Plan therefore expects new development to future-proof developments to accommodate high speed broadband infrastructure. The Government's support for further broadband roll-out is largely provided through the Superfast Broadband Programme. A London-wide programme will increase fibre coverage in every LB. Providing additional infrastructure in the field as well as in the exchange does not present significant issues. By deploying Fibre technology to new build sites there is no need for large multiple copper cables to be provided, building large cable frames in telephone exchanges, or even to build completely new telephone exchanges. In September 2015 BT announced plans for an expansion of high-speed fibre broadband in Havering. Openreach, BT's local network business, will take the company's total coverage for fibre in the borough to nearly 100,000 premises by 2017. The recent Ofcom judgement that BT and Openreach have to formally separate may delay progress of technology delivery. It may also open up the market to other providers. At present Openreach delivery is still FTTC and not FTTD as desired.

	Virgin Media is in year two of an ongoing five year plan for expanding/upgrading its network. *Rainham and Beam Park SDA* To ensure an enriched environment LB Havering will provide suitable infrastructure ducting that will be utilised to deliver digital connectivity services. The aim will be to provide FTTD for all properties and locations as a default and wireless provision will also be provided to commercial areas such as the new railway station.
Main funding sources	UK Government, BT and Virgin Media

E Flood Protection	
Main provider	**LB Havering, Environment Agency (EA)** The EA has a strategic overview of all sources of flooding and coastal erosion. It is also responsible for tidal flood risk management along the Thames Estuary. LB Havering is the Lead Local Flood Authority for Havering, with a strategic role in overseeing the management of local flood risk ie. flood risk from surface water runoff, groundwater and ordinary watercourses such as streams and ditches.
Existing provision	The Havering Strategic Flood Risk Assessment (SFRA) (November 2016) identifies formal flood management assets (features or structures built and maintained specifically for the purpose of flood risk management) in Havering.
Assessment of future needs	The EA's Thames Estuary 2100 (TE 2100) (2012) is a strategic flood risk management plan for London and the Thames estuary through to 2100. It reviews how tidal flood risk is likely to change in response to future changes in climate and people and property in the floodplain. It found that many of the existing flood walls, embankments and barriers would need to be raised or replaced to manage rising water levels in the long term (by 2050). TEAM2100 is the Environment Agency's 10-year programme to refurbish and replace tidal flood defences in London and the Thames estuary. TEAM2100 will improve tidal flood defences in London, Kent and Essex from 2015 to 2025. The EA's current estimates of the costs of maintaining and improving the flood defence system for Havering for the period to 2050 are as follows: • fixed flood defences - maintenance and repair: £5m; • fixed flood defences - major repairs and replacements: £26m; and • flood barriers and outfalls: £5m. The SFRA identifies: flood risk zones 1, 2, 3a and 3b (functional floodplain); locations of flood risk from other sources (ordinary watercourses, groundwater, sewers, reservoirs and canals); locations at risk of surface water flooding, termed Havering Critical Drainage Areas or HCDA, particularly outside fluvial or tidal risk areas; and areas protected by existing flood defences and that could be at risk should they fail. The SFRA makes recommendations to reduce flood risk but makes no specific infrastructure proposals.

E Flood Protection	
	As part of the Drain London Project, a Draft Surface Water Management Plan (SWMP) has been prepared for LB Havering in consultation with key local partners, including Thames Water, the EA and Transport for London. The Draft SWMP identifies the main sources of flood risk in the borough and a number of Critical Drainage Areas (CDAs). *Borough-wide* The LB Havering Critical Drainage Areas - Detailed Investigations Report (Jan 2016) has examined the potential damage from flooding in each (CDA), and identified and assessed for viability a set of mitigation options for each. However, schemes for implementation have not yet been selected nor costs estimated. *Romford SDA* The SFRA Annex A identifies the land immediately adjacent to the River Rom and Blacks Brook within the SDA as predominantly located within fluvial Flood Zone 2, with small areas designated as Flood Zone 3b. There are no specific proposals for flood defence infrastructure. *Rainham & Beam Park SDA* The SFRA Annex A identifies the southern section of the SDA as located within fluvial Flood Zones 3a and 2, with areas designated as Flood Zone 3b adjacent to the River Beam and Ingrebourne. The Rainham and Beam Park Development Framework proposes a number of interventions to reduce flood risk in the area, but costs have not yet been estimated for these: • Dovers Corner/Havering College: open up the culverted section of the Havering New Sewer which flows through the Dovers Corner site, and provide an open channel with a width of 5m; • Suttons Industrial Park: open up the culvert in the Sutton Industrial Park site and provide an open channel with a width of 5m; and • Beam Park: Upgrading the existing Washlands Flood Attenuation Storage to reduce the risk from flooding at the Beam Park site.
Main funding sources	LB Havering, EA's Flood Defence Grant in Aid, developer contributions. Any financial investment in Havering's flood defences throughout the TE 2100 plan will be subject to the Department for Environment, Food & Rural Affairs (Defra) flood and coastal resilience partnership funding policy

E Flood Protection	
	statement. Under these terms financial contributions will be required from partners (including EA, LB Havering, landowners and other key stakeholders) to attract the maximum amount of Flood Defence Grant in Aid funding.

F1 Libraries	
Main provider	**LB Havering**
Existing provision	LB Havering is responsible for the management and development of ten libraries: Collier Row, Elm Park, Harold Hill, Hornchurch, Gidea Park, Harold Wood, Rainham, Romford, South Hornchurch and Upminster.
Adequacy of existing provision	Almost all the main residential areas in the borough are included in the catchment area of one of the five most strategically important libraries: Romford, Hornchurch, Rainham, Harold Hill and Upminster. All ten libraries are located in or close to town centres and are well served by public transport. LB Havering libraries have undergone a programme of building refurbishments over the last few years. A new library has also been built in Rainham (opened July 2014) replacing the old Rainham Library and a new library opened at Harold Hill in September 2016 as a replacement for the existing library. The latter was financed by the sale of Council-owned land at Gooshays.
Assessment of future needs	Under the Draft Library Strategy 2015 – 2017, future needs will be met using the existing facilities, but adopting a new delivery model by which the five strategically most important libraries (Romford, Hornchurch, Rainham, Harold Hill and Upminster) will be open at least 50 hours a week and the remaining five libraries will open at least 24 hours a week. No requirement has been identified for additional library provision to serve the additional population under the Local Plan. *Borough-wide* • under the Library Strategy 2015-2017 there is an ongoing programme of decoration, repairs and maintenance (£1m);and *Rainham & Beam Park SDA* • there is no requirement for additional library facilities in the SDAs as Romford Library and the new Rainham Library have sufficient capacity to serve the new population in the HZs in addition to their current users.
Main funding sources	LB Havering, developer contributions

F2 & F3 Cultural Facilities and Heritage	
Main provider	**LB Havering**
Existing provision	The main cultural facilities in Havering are the Queen's Theatre and the Fairkytes Arts Centre, both in Hornchurch, Havering Museum in Romford, which opened in May 2010 with funding from the Heritage Lottery Fund, and the Brookside Theatre in Romford, which opened in 2012. Havering has a rich and varied range of heritage assets, including140 Listed Buildings of Special Architectural or Historic Interest; three Scheduled Ancient Monument sites, 11 conservation areas and a registered historic garden. LB Havering is the owner of three heritage sites: Bretons (house and gardens), Upminster Windmill, and Upminster Tithe Barn, which houses the Museum of Nostalgia.
Adequacy of existing provision	Refurbishment of the Fairkytes Arts Centre has recently been completed, including the opening of the Fairkytes Live music venue. Queen's theatre is in need of rehearsal space.
Assessment of future needs	*Romford SDA* • there is an ongoing requirement for repair and maintenance of the Havering Museum (£0.2m); *Elsewhere in Borough* • The Havering Arts Strategy 2013 to 2015 identifies a need for new high quality visual arts exhibition space at Fairkytes Arts Centre (£1m); • Queen's theatre is in need of rehearsal space and a cafe area (£10m); • improvements to Upminster Tithe Barn are needed to provide public toilets, re-thatch the roof and to provide interpretative material inside the Barn (£1m); and • improvements to Bretons are required to restore the historic buildings and convert them to alternative uses (to be determined but could include a wedding venue) (£10m).
Main funding sources	LB Havering, Arts Council, Heritage Lottery Fund, developer contributions

F4 Community Halls and Youth Centres	
Main provider	**LB Havering**
Existing provision	LB Havering currently has nine community halls, eight of which it leases to community associations and the other to an Early Years operator. The Halls provide a valuable recreational and educational resource to the local community. There are three main youth centres in Havering. Myplace in Harold Wood and Robert Beard in Hornchurch are run by LB Havering, and Rainham Royals in Rainham is run by the voluntary sector. Myplace was opened in 2012 and Robert Beard in the 1960s, while Rainham Royals was refurbished and extended in 2015.
Adequacy of existing provision	Of the nine halls, seven are in need of some repair and improvement works to bring them up to contemporary standards. The distribution of youth centres in Havering leaves a significant gap at Romford.
Assessment of future needs	*Borough-wide* • all community halls require upgrading/refurbishing (£2m); *Romford SDA* • due to changing demographics as a result of new development it is anticipated that Youth Centre provision will be required in Romford, although a specific need has not yet been identified. *Rainham & Beam Park SDA* • The Rainham and Beam Park Development Framework expects that additional social facilities including community halls will be required, but they should be defined according to the expressed needs of the future local population. As the nearest social hall is on the former Mardyke estate a new hall will most likely be required. The recently improved and extended Rainham Royals Youth Centre lies within the area.
Main funding sources	LB Havering, Lottery, local sponsorship, developer contributions, and in-kind contributions from volunteers.

F5 Crematorium and Burial Grounds	
Main provider	**LB Havering**
Existing provision	Crematorium facilities are provided at the South Essex Crematorium in Upminster. There are currently four cemeteries in Havering run by the Borough Council: at Rainham, Hornchurch, Romford and Upminster. In addition, Rainham Jewish cemetery was purchased from the local Jewish community in 2016 by a private company and the burial plots are now multi faith/interdenominational.
Adequacy of existing provision	The South Essex Crematorium is adequate for current needs. There are currently 295 new multi faith/interdenominational graves available at Romford cemetery and 44 new graves for Muslim burials. At recent burial rates this equates to 11 years and 22 years respectively. Following the Phase 1 extension to Upminster cemetery in 2014 there are currently 925 new graves available there (seven or so years at recent rates of burial). Rainham and Hornchurch cemeteries have no new graves available and capacity for reopen burials only. The significant capacity at Rainham Jewish cemetery is not taken into account within the capacity projections given above.
Assessment of future needs	There is no identified requirement for additional crematorium facilities. Assuming recent burial rates, future burial needs for the whole borough can be met by the Phase 2 and 3 expansions of the Upminster cemetery programmed (£2m). Phase 2 of the Upminster cemetery expansion has a preliminary opening date of 2019 and will provide burial provision for 2350 graves, providing burial provision until 2031, at current rates. Phase 3 has a preliminary opening date of 2025 and will provide provision for 2730 graves, providing burial provision until 2039, at current rates. There is therefore expected to be sufficient capacity to accommodate additional demand for multi-faith/interdenominational plots arising from Local Plan population increase in the period to 2032. If required, however, other land is available for possible future Upminster cemetery extensions, currently used as agricultural tenancy land on lease from the Council. LB Havering has recently granted permission for a new Muslim cemetery at Oak Farm, Harold Wood, following an appeal decision by the Secretary of State. This facility will provide for demands for burials meeting specific Muslim

	requirements arising from the wider North East London, including Havering, when the remaining capacity of the existing Gardens of Peace Muslim Cemetery in Ilford has been exhausted, in five years or so. The new cemetery is expected to provide capacity to meet the needs of North East London for a further 6 to 7 years at recent death rates, ie. until around 2028. Rainham Cemetery has no additional capacity except for re-opened graves. However, the SDA's needs will be served by provision at Upminster Cemetery.
Main funding sources	LB Havering

G1 Parks	
Main provider	**LB Havering**
Existing provision	According to the LB Havering Open Space Assessment Report (OSAR) (April 2016), there are 24 open space sites classified as parks and gardens in Havering, covering 641 hectares. The largest parks are: Dagnam Park (128 ha), Bedford's Park (86 ha), and Havering Country Park (68 hectares) in the north, Harrow Lodge Park (53 ha) in the centre, and Hornchurch Country Park (119 ha) and Belhus Woods Country Park (57 ha) in the south. The latter is an Essex County Council owned site straddling the boundary with Thurrock.
Adequacy of existing provision	Of the 24 park and garden sites in Havering 22 rate above the quality threshold adopted in the OSAR. Ten Parks have Green Flag status: Bedford's Park, Belhus Wood Country Park, Cottons Park, Harold Wood Park, Hylands Park, Lawns Park, Lodge Farm Park, St Andrews Park, Upminster Park and Raphael's Park. There is generally a good coverage of parks based on a 15 minute walk time, the standard adopted in the OSAR. The majority of areas that are densely populated are covered by the walk time catchment. Although there are catchment gaps to the east of the centre and in the south west of the borough, new forms of park provision are not thought to be required to improve accessibility. The OSAR did not identify any issues with regard to deficiency in the amount of parks and gardens either through consultation or via its Communities Survey.
Assessment of future needs	The LB Havering Open Space Study Draft Standards Paper (August 2016) concludes that there is no need for additional park provision on the basis of projected population levels across Havering, the emphasis being on preserving and improving the quality of existing provision. The following requirements have been identified: *Borough-wide* • Parks Investment Programme (including parks signage improvements) (£6m); • Parks Depot Refurbishment Programme (£3m); *Rainham & Beam Park SDA* • linear park to connect Rainham to Beam Park (£1.7m); • Rainham to the River - linking Rainham communities to Thames and marshes (£5m); • Rainham and Beam Park Planning Framework identifies the need for a new multi-functional community park at Beam Park to serve the western part of the neighbourhood;

G1 Parks	
	Elsewhere in Borough • Creekside Park improvements and extension (£0.3m); • London Riverside Conservation Park (Wildspace) (£15m); and • Harrow Lodge Park, second lake dredging (£0.3m).
Main funding sources	LB Havering, Heritage Lottery Fund, developer contributions

G2 Children's Play Space	
Main provider	**LB Havering**
Existing provision	Provision comprises areas designed primarily for play and social interaction involving children and young people, such as equipped play areas, multi-use games areas (MUGAs), skateboard areas and teenage shelters.The 2016 Open Space Strategy Draft Assessment Report identifies 40 sites in Havering with some kind of children's play provision, totalling 6.42 ha with a current standard of 0.03 ha per 1,000 population.22 sites contain facilities for older age ranges and 14 sites are equipped with outdoor gym equipment. A children's play area is included in the committed Broxhill Park improvement which is due to open in late 2016/2017.
Adequacy of existing provision	Guidance by Fields in Trust suggests an approximate catchment guideline of an approximate 5-10 minute walk. On this basis there is generally a good coverage of provision across LB Havering with most areas with a greater population density within walking distance of a form of play provision. However, there are a few gaps in the walk time catchment in the centre and south of the borough and there may be a need for some additional play provision to serve these gaps.
Assessment of future needs	*Borough-wide* • The LB Havering Open Space Study Draft Standards Paper (August 2016) projects a need for additional children and young people's provision in all parts of the borough and totalling approximately 2 ha to serve the 2031 population (£1.8m see below); and • LB Havering has a programme of investment in children's playgrounds but this does not cover requirements to serve new development in the longer term.
Costs	It is assumed that Local Equipped Areas of Play (LEAPs) will be provided directly by developers as part of achieving a good standard of development. Neighbourhood Equipped Areas of Play (NEAP) serve more substantial populations and would be appropriate for funding by developer contributions. Assuming half of the total new requirements will be NEAPs (on the basis that typically the standards of provision for LEAP and NEAP per head of population are similar) and taking the Sport England estimated MUGA cost of £180 per square metre (April 2016), the additional 1 ha requirement will cost around £1.8m.
Main funding sources	LB Havering, developer provision and contributions

G3 Allotments	
Main provider	**LB Havering**
Existing provision	There are 27 allotments sites in LB Havering: totalling more than 36 hectares. All are owned by LB Havering and self-managed by allotment associations.
Adequacy of existing provision	Current provision (0.15 hectares per 1,000 population) is below the National Society of Allotment and Leisure Gardeners recommended standard of 0.25 hectares per 1,000 population, although most meet quality standards. There are waiting lists for allotments across the borough, suggesting that demand for allotments is not currently being met by supply.
Assessment of future needs	The LB Havering Open Space Draft Standards Paper (August 2016) projects a need for an additional 5.5 ha of allotment space to serve the 2031 population of the borough, based on current provision standards. However, the Paper recommends that future provision should respond to waiting lists rather than be based on applying NSALG or other quantitative standards. *Borough-wide* • LB Havering currently has an Allotments Infrastructure Improvement Programme (£1.5m).
Main funding sources	LB Havering

G4 Other Green Space	
Main provider	**LB Havering, the Thames Chase Trust and the Forestry Commission**
Existing provision	According to the GLA's 'All London Green Grid SPG', Green Infrastructure (GI) refers to the multifunctional, interdependent network of open and green spaces and green features (eg. green roofs). Green and open spaces of all sizes can be part of GI provided they contribute to the functioning of the network as a whole. The LB Havering Open Space Assessment Report (OSAR) (April 2016), identifies 22 sites comprising natural and semi-natural greenspace, including woodland, scrub, grassland, heath or moor, wetlands, wastelands, bare rock habitat, and commons. Their areas total over 441 hectares of provision, excluding sites below 0.2 hectares. The largest site is the Thames Chase Community Forest - 158.3 ha of new community woodlands have been planted by the Forestry Commission, increasing woodland coverage in Havering by more than 40%. The OSAR also identifies 54 amenity greenspace sites, equivalent to over 129 hectares of provision. Sites are mostly found within areas of housing and function as informal recreation space or open space along highways to provide a visual amenity. A number of recreation grounds and playing fields are also classified as amenity greenspace.
Adequacy of existing provision	The OSAR adopts a 30 minute drive time accessibility standard, which shows no shortfalls, and a 10 minute walk time standard, for which there are some gaps in the densely populated areas. However, these areas contain other forms of open space; particularly amenity greenspace and parks and gardens with features associated with natural and semi-natural greenspace so new natural sites are not considered to be required.
Assessment of future needs	*Borough-wide* A number of partnerships are engaged in green space projects in the borough, including: • Land of the Fanns Partnership - A stage 1 Heritage Lottery Fund Landscape Partnership scheme led by Thames Chase Trust and LB Havering, with a programme of access and conservation projects. (£5m); • Wildspace - a partnership of landowners and conservation organisations (RSPB, Veolia North, Veolia Environmental Services, Thames Trust, Natural England, LB Havering, PLA and the EA) with the objective of delivering a new London Conservation Park: Wildspace for a World City' on Rainham Marshes and the operational landfill site to the south. The project is active, but timescales are delayed by the extension of the operational life of the landfill, (£15m); • All London Green Grid (ALGG) - established to provide a pan-London strategy for GI and to deliver a rolling programme of GI projects. The partnership is no longer funded but the GLA is promoting GI delivery by other stakeholders (£5m);and

G4 Other Green Space	
	• Roding, Beam and Ingrebourne Catchment Partnership - works to improve the water environment of the river basin. Managed jointly by Thames 21 and the Thames Chase Trust. *Rainham & Beam Park SDA* The Rainham and Beam Park Planning Framework proposes the establishment of a network of green routes and open spaces to connect the strategic open spaces of the London Green Grid on a local level. These will include: • Beam Parkway - a green and landscaped corridor along a two mile section of the A1306 between Dovers Corner roundabout and the Marsh Way junction. This will be achieved by downgrading the road and re-allocating two- way traffic to the northern carriageway, while opening up the southern carriageway as a green space with pedestrian and cycling routes, and "pocket parks" (£1.7m); • Marshway Green Bridge – a green corridor on the eastern side of Marsh Way Bridge providing a strategic cycle and walking connection across the railway to CEME and the River Thames; and • re-opened culverts - reopening of the New Havering Sewer and the Drain running beneath the Suttons Industrial site to create a naturalised watercourse. Linear green spaces alongside re-opened and naturalised culverts at the Suttons Industrial site and at Dovers Corner.
Main funding sources	LB Havering, Heritage Lottery Fund, TfL, Veolia North Thames Trust, Defra, RSPB, developer contributions

H1 Sports Complexes	
Main provider	**LB Havering**
Existing provision	There are 21 sports halls in Havering. A new sports pavilion containing a small indoor sports hall and changing rooms for a range of sports are included in the soon to be completed Broxhill Park improvement. There are 14 swimming pools open to the public in LB Havering, at ten sites. Only two (Hornchurch Sports Complex and Central Park Leisure Complex) have pools of at least 25m in length. Five locations are school site based and two are private health clubs. A new eight lane 25m pool with a learner pool is currently being developed in the new Romford Leisure Centre.
Adequacy of existing provision	LB Havering's Indoor Sport and Leisure Facility Assessment (ISLFA) (January 2016) found that most residents in Havering have access to a sports hall within one mile of home with the exception of parts of the Rainham area. The existing supply of sports hall accommodation in LB Havering has capacity to meet current demand but LB Havering facilities at Central and at Hornchurch are at capacity during peak times. The quality of the stock on school sites is mixed. Chafford School Sports Complex is clearly at the end of its useful life. The ISLFA found that Havering is relatively well provided with swimming pools compared with many London boroughs but that significant areas of the borough remain without access to a publicly accessible swimming pool, particularly in the northwest and south of the borough. Furthermore, the age and condition of the pool at the Chafford Sports Complex, the age of the pool at Hornchurch leisure complex and the lack of provision in Rainham will make it increasingly challenging for a modern swimming offer to be provided without significant investment and/or new provision. The relatively small size of the main pools limits flexibility to accommodate different activities. There is currently no ice rink provision in Havering as the former ice rink in Romford closed in 2013 and has been demolished.
Assessment of future needs	The LB Havering's Indoor Sport and Leisure Facility Strategy (ISLFS) (January 2016) indicates a need for the following new facilities in the borough to improve quality of provision and accessibility: *Romford SDA* • the new Romford Leisure Centre, due to open in April 2018, to include: eight lane 25m pool and learner, a

H1 Sports Complexes	
	56m x 26m replacement ice rink, and 100 station health and fitness suite. (£28.6m); *Rainham & Beam Park SDA* • a new sports facility in south Havering (replacing the Chafford Sports Complex), to include: four court sports hall, 100 station fitness suite, dance/multi-purpose studios, five lane 25m pool, 10m x 20m learner pool, and splash area (£8.4m). The Chafford School has aspirations to replace both its main building and its sports facilities via pursuit of external funding sources so this need may possibly be met by a refurbished Chafford Sports Complex; *Elsewhere in Borough* • replacement Hornchurch sports complex, to include: four court sports hall, 150 station fitness suite, four dance/multi-purpose studios, eight lane 25m pool and 10m x 20m learner/diving pool (around £20m); and • the ISLFS also proposes investigating the feasibility of upgrading existing or providing new sports hall accommodation with associated office and changing accommodation to facilitate well managed community use at 11 school sports hall sites.
Costs	The above cost for facilities at south Havering is derived from Sport England who have assessed the cost for the 2nd Quarter 2016 for the development of a facility offering four court hall, 100 station health and fitness gym plus two studios and a six lane pool, which is broadly similar to that proposed for south Havering in the Strategy at £8.4m.
Main funding sources	LB Havering, Sport England, developer contributions, charitable funding organisations, commercial investment

H2 Playing Pitches	
Main provider	**LB Havering**
Existing provision	The LB Havering Playing Pitch Strategy Assessment Report (April 2016) identifies current totals of: • 170 grass football pitches across 63 sites, of which 151 pitches are available for community use across 48 sites; • 31 rugby union pitches across 16 sites, (although no World Rugby compliant Artificial Grass Pitches), of which 23 senior and eight mini pitches, with only two pitches unavailable for community use; • 16 grass wicket cricket pitches, all of which are available for community use. However, Upminster Hall Playing Fields will no longer be used from next season as the cricket pitch is to be replaced by rugby pitches; and • seven full size sand based artificial grass pitches for hockey. Although there are currently no full size third generation turf (3g) artificial grass pitches within Havering, one is under development at Broxhill Sports Centre. The latter will also include two grass pitches, a multi-use games area including four new tennis courts, basketball and football facilities.
Adequacy of existing provision	The LB Havering Final Playing Pitch Strategy and Action Plan 2016-2021 (PPFSAP) (November 2016) identifies the following shortfalls in pitches at present across the borough: • football grass pitches: adult - 3.25, youth 11v11 - 0.25, 9v9 - 3.5, 7v7 - 0.25, 5v5 - 1.0; • nine 3G pitches (after provision of Broxhill 3G pitch); • 0.6 cricket pitches (in the centre and south of the borough); and • 3.5 rugby union pitches. Existing supply of hockey pitches is adequate to accommodate current demand.
Assessment of future needs	The PPFSAP projects the following future shortfalls (if current shortfalls are not made up), taking account of participation increases and population forecasts to 2037: • football grass pitches: adult - 5.75, youth 11v11 - 3.0, 9v9 - 8.0, 7v7 - 1.75, 5v5 - 1.25;

H2 Playing Pitches	
	• ten 3G pitches (after provision of Broxhill 3G pitch); • 3.6 cricket pitches; and • 3.5 rugby union pitches. Existing supply of pitches for other sports is adequate to accommodate future demand. With regard to grass football pitches, the PPFSAP finds that if pitch quality, overplay and security of tenure are addressed, and if access to existing pitches is maximised (and no pitches are permanently lost), there would be no requirement for new grass football pitch provision, although there may be isolated areas which generate enough demand for new pitches to be provided in the future. However, the Plan does not make specific proposals for such provision. With regard to the other facilities, the PPFSAP proposes that LB Havering: • identifies feasible sites to increase provision of 3G pitches in Havering to meet training and competitive demand; • supports Harold Wood CC and Noak Hill Taverners CC in developing additional cricket pitches/facilities; and • identifies suitable sites, where possible, to develop mini pitches for clubs with significant mini and junior sections to alleviate pressure on senior pitches.
Costs	Sport England estimate the unit cost of pitches as follows (Second Quarter 2016): • football grass: adult - £85k, youth 11v11 and 9v9 – £70k, 7v7 and 5v5 £20k; • football 3G - £900k; • cricket (natural turf) - £265k; and • Rugby Union grass - £115k. Total cost of forecast demand above at these rates is £12.0m but it would be reasonable to suppose that if the recommendations of the PPFSAP set out above were adopted only 50% of this cost would be required, giving a total of £6.0m.

H2 Playing Pitches	
Main funding sources	LB Havering, Mayor's Sports Facilities Fund, Sport England, developer contributions

I1 Police	
Main provider	**Mayor's Office for Policing And Crime (MOPAC); Metropolitan Police, Havering Borough Operational Command Unit**
Existing provision	There are three operational police bases within Havering, and eighteen ward based Safer Neighbourhood Teams. The police stations are: Romford Police Station, Hornchurch Police Station and Romford Patrol Base in Harold Hill. There are Contact Points at Collier Row Road, Rainham Police Office, Tadworth Parade (Hornchurch), Upminster Police Office, St George's Church (Harold Hill), and Hornchurch Police Station.
Adequacy of existing provision and assessment of future needs	The MOPAC Estate Strategy 2013-16 set out MOPAC's intention to ensure their vast and expensive estate is streamlined and made fit for purpose. Reforms to the local policing estate will be part of making the police more visible, accountable and accessible. The implications for Havering have not yet been worked through and the BOCU Commander of Havering is exploring the potential for joint working/sharing of resources and a joined-up approach with Commanders at Barking & Dagenham and Redbridge.
Main funding sources	Central Government grant to MOPAC

I2 Fire Services	
Main provider	**London Fire Brigade** (LFB). Havering falls under the Eastern District Command of the LFB.
Existing provision	There are four fire stations in Havering: Romford, Hornchurch, Wennington and Harold Hill.
Adequacy of existing provision	The existing fire stations are all fit for purpose (Harold Hill Fire Station was opened recently, in 2010) and are sufficient to meet the borough's needs. The LFB's Fifth London Safety Plan 2013 to 2016 (2013) maintains the target attendance time of getting a first fire engine to an emergency within an average six minutes and the second fire engine, when needed, within an average of eight minutes. In Havering, the latest statistics, for 2013/2014, show that this target was achieved, with an average first pump attendance time of 344 seconds. 65% of first pumps arrived at the incident within six minutes and 98% within 12 minutes.
Assessment of future needs	The location of the London Fire Brigade's fire stations is based on modelling of historical data on fires that have occurred to ensure that average attendance times of 6 minutes for the first appliance and 8 for the second can be met, across London. Any new development will meet modern building control standards and will therefore be of a lower risk of fire compared to older buildings. Furthermore, the LFB's Fifth London Safety Plan 2013 to 2016 (2013), which includes measures to reduce the number of incidents requiring attendance, projects fewer incidents London-wide in 2031 than in 2010. If, in future years, it is found that fires have increased in particular areas of Havering this will be taken into account in future London Safety Plans. At present LFB does not envisage that the planned new development will require any change in the location of the existing fire stations in Havering.
Main funding sources	GLA

I3 Ambulance Service	
Main provider	**London Ambulance Service NHS Trust**
Existing provision	The London Ambulance Service (LAS) provides a service responding to 999 calls across the whole of London. Three of its 70 ambulance stations are in LB Havering at Romford, Becontree, and Hornchurch.
Adequacy of existing provision	The LAS aims to meet the Government response time targets of 75% of Category A (immediately life-threatening) calls within eight minutes, and 95% of such calls within 19 minutes. The latest figures for Havering CCG show monthly percentages of Category A calls meeting the eight minute response time ranging between 58% and 70% between March and August 2016.
Assessment of future needs	The London Ambulance Service 5 Year Strategy 2014/2015 – 2019/2020 contains no proposals to increase the number of ambulance stations. However, the LAS is currently reviewing its Strategy and its Estates Strategy and these are is likely to be finalised in autumn 2016. Romford Town Centre Development Framework identifies the need to re-provision an ambulance station currently located in a building offering significant redevelopment potential.
Main funding sources	Direct Government funding

J Waste Management	
Main provider	**East London Waste Authority** (ELWA). The ELWA was established in 1986 and is responsible for waste disposal in Havering as well as the LBs of Barking & Dagenham, Newham and Redbridge. In 2002, ELWA signed a 25 year contract with Shanks Plc**,** a leading waste management company, to deliver an Integrated Waste Management Strategy for the area.
Existing provision	ELWA arranges for the recycling, recovery and disposal over 440,000 tonnes of waste each year in the four boroughs. Within Havering the main waste management facilities are: Gerpins Lane Re Use and Recycling Centre, and Frog Island Mechanical and Biological Treatment Facility. The Frog Island waste facility handles household waste and recyclable materials from mainly Barking & Dagenham and Havering.
Assessment of future needs	A Joint Waste Development Plan Document (DPD) was developed in 2010/2011 by the four ELWA London boroughs as part of each borough's LDF and was formally adopted by LB Havering in February 2012. It pools the London Plan's borough level apportionment of municipal solid waste and commercial and industrial waste to be managed for the four boroughs. The DPD sets the sub-regional strategy up to 2021and aims to ensure adequate provision of waste management facilities in appropriate locations for municipal and commercial and industrial waste. The Joint Waste DPD identifies three sites in Havering with potential to accommodate additional facilities to meet estimated demand to 2021 through the provision of: • two small scale facilities for biodegradable waste at Ferry Lane North, Havering; • medium scale composting facility at Gerpins Lane, Havering; and • large scale composting facility at Hall Farm, Havering. Sites for other facilities needed to serve the ELWA boroughs are identified in Barking & Dagenham and Newham.
Costs	Over the course of its contract with ELWA, Shanks will invest over £100 million in new and improved facilities.
Main funding sources	LBs of Havering, Barking & Dagenham, Newham and Redbridge

K Urban Regeneration	
Main provider	**LB Havering**
Future needs	<u>Public Realm</u> LB Havering has a number of ongoing regeneration schemes, which are focussed largely on transport and place-making elements, the main one being Romford Town Centre. Three station schemes (Romford, Gidea Park and Harold Wood) are covered under TfL's Crossrail Complementary Measures programme of improvements to public areas and interchanges outside all 18 stations in outer London that will eventually form part of the Elizabeth line (see section A1 Rail). *Romford SDA* • The Romford Town Centre scheme will create a better street environment around the Ring Road, with enhanced crossings for pedestrians, and enhance the environment for pedestrians and cyclists by creating designated cycle routes and planting trees, creating new landscapes, and incorporating public art (£10m); • Romford Market. The transformation proposal is to transpform the Market Place into a high quality civic space, accommodating a reconfigured, successful and vibrant market, a new public square and an enhanced restaurant offer (£6m); • Romford Station Scheme (Crossrail Complementary Measures - see section A1 Rail); and *Rainham & Beam Park SDA* • Beam Parkway, described above under 'Other Green Space', will improve connectivity along the A1306 and within London Riverside. <u>Employment & Skills</u> *Borough-wide* • LB Havering will support new and existing businesses through an incubator hub, offering affordable accommodation and business support to develop businesses to their next level of growth (£4m).
Main funding sources	TfL, LB Havering, developer contributions

L Air Quality	
Main provider	**LB Havering**
Existing provision	As discussed in the LB Havering Air Quality Action Plan, 2017- 2022, the main source of air pollution in Havering is road traffic vehicle emissions. Significant amounts also come from residential and commercial gas use, industry, construction sites and emissions from outside London. The whole borough was declared an Air Quality Management Area in 2006 due to levels of nitrogen dioxide and particulate matter not meeting air quality objectives in many parts of the borough. Air quality improvement projects have been undertaken in Romford, Hornchurch, Upminster and Rainham.
Assessment of future needs	The Air Quality Action Plan includes a range of proposals to help control and reduce air pollution within the borough, including the introduction of low emission zones, encouraging walking and cycling, and traffic management. Two infrastructure projects are currently being implemented supported by the Mayor's Air Quality Fund: • green screens: planting of green screens formed of trees and shrubs to take carbon dioxide, ozone and nitrous oxides out of the air and provide protection against particulate pollution (£38k); and • pocket parks: provision of small areas of inviting public space where people can enjoy relief from busy city streets (£38k).
Main funding sources	Mayor's Air Quality Fund

1. Executive Summary

Introduction and Methodology

1.1 The primary objective of the 2016 Gypsy and Traveller Accommodation Assessment (GTAA) is to provide a robust assessment of current and future need for Gypsy, Traveller and Travelling Showpeople accommodation in the London Borough of Havering. As well as updating previous GTAAs, another key reason for completing the study was the publication of a revised version of Planning Policy for Traveller Sites (PPTS) in August 2015. This included a change to the definition of Travellers for planning purposes. The key change that was made was the removal of the term persons…who have ceased to travel permanently, meaning that those who have ceased to travel permanently will not now fall under the planning definition of a Traveller for the purposes of assessing accommodation need in a GTAA (see Paragraph 2.10 for the full definition).

1.2 The GTAA provides a credible evidence base which can be used to aid the implementation of Development Plan policies and the provision of new Gypsy and Traveller pitches and Travelling Showpeople plots for the period up to 2031. The outcomes of this study supersede the outcomes of any previous Traveller and Travelling Showpeople Accommodation Needs Assessments completed in Havering.

1.3 The GTAA has sought to understand the accommodation needs of the Gypsy, Traveller and Travelling Showpeople population in Havering through a combination of desk-based research, stakeholder interviews and engagement with members of the travelling community living on all known sites. A total of 21 interviews were completed with Gypsies and Travellers out of a total of 44 pitches occupied by Gypsies and Travellers, and one interview was completed with Travelling Showpeople living on an authorised yard out of a total of five plots occupied by Showpeople. Despite extensive efforts to identify them it was only possible to interview one Traveller living in bricks and mortar. A total of 10 telephone interviews were completed with Officers from the Council, Officers from neighbouring planning authorities, and other local stakeholders.

1.4 The fieldwork for the study was completed between June and September 2016, which was after the publication of PPTS (2015). As a result of this changes were made to the household interview questions to enable the determination of the travelling status of households to be made.

1.5 The baseline date for the study is **July 2016** which was when the majority of the household interviews were completed.

Key Findings

Additional Pitch Needs – Gypsies and Travellers

1.6 Overall the additional pitch needs for Gypsies and Travellers from 2016-2031 are set out below. Additional needs are set out for those households that meet the planning definition of a Gypsy or Traveller, for those unknown households[1] where an interview was not able to be completed (either due to households refusing to be interviewed, or not being present despite three visits to each site) who may meet the planning definition, and for those households that do not meet the planning definition.

1.7 Only the need from those households who meet the planning definition and from those of the unknown households who subsequently demonstrate that they meet it should be considered as need arising from the GTAA.

1.8 The need arising from households that meet the planning definition should be addressed through site allocation/intensification/expansion policies.

1.9 The Council will need to carefully consider how to address the needs associated with unknown Travellers as it is unlikely that all of this need will have to be addressed through the provision of conditioned Gypsy or Traveller pitches. In terms of Local Plan policies, the Council could consider the use of a criteria-based policy (as suggested in PPTS) for any unknown households that do provide evidence that they meet the planning definition.

1.10 The need for those households who do not meet the planning definition will need to be addressed through other means such as the Strategic Housing Market Assessment (SHMA) or Housing and Economic Development Needs Assessment (HEDNA).

1.11 There were 18 Gypsy or Traveller households identified in Havering that meet the planning definition, 24 unknown households that may meet the planning definition and three households that do not meet the planning definition.

1.12 There is a need for **33 additional pitches** for households that meet the planning definition. This is made up of six unauthorised pitches, nine pitches with temporary planning permission, two concealed or doubled-up households or adults, seven older teenage children in need of a pitch of their own in the next 5 years, and nine from new household formation.

1.13 Need of up to 29 additional pitches for unknown households is made up of 11 pitches with temporary planning permission, 12 unauthorised pitches, and six from new household formation from a maximum of 25 households. If the ORS national average[2] of 10% were applied this could result in a need for three additional pitches. Whilst the proportion of households in Havering that meet the planning definition is higher than 10% this is based on a small household base. Therefore, it is felt that it would be more appropriate to consider the more statistically robust ORS national figure.

1.14 The additional need is over and above the existing four pitches with full planning permission.

[1] See Paragraph 3.22 for further information on unknown households.
[2] Based on over 1,800 interviews completed by ORS across England.

Years	0-5	6-10	11-15	
	2016-21	2021-26	2026-31	Total
	26	3	4	**33**

Additional Plot Needs - Travelling Showpeople

1.15 Overall the additional plot needs for Travelling Showpeople from 2016 to 2031 are set out below. Additional needs are set out for those households that meet the planning definition of a Travelling Showperson, for those unknown households where an interview was not able to be completed (either due to households refusing to be interviewed, or not being present despite three visits to each site) who may meet the planning definition, and for those households that do not meet the planning definition.

1.16 Only the need from those households who meet the planning definition and from those of the unknown households who subsequently demonstrate that they meet it, should be considered as need arising from the GTAA.

1.17 The need arising from households that meet the planning definition should be addressed through yard allocation/intensification/expansion policies.

1.18 The Council will need to carefully consider how to address the needs associated with unknown Showpeople as it is unlikely that all of this need will need to be addressed through the provision of conditioned Showpeople plots. In terms of Local Plan policies the Council could consider the use of a criteria-based policy (as suggested in PPTS) for any unknown households that do provide evidence that the meet the planning definition.

1.19 The need for those households who do not meet the planning definition will need to be addressed through other means such as the SHMA or HEDNA.

1.20 There was one Travelling Showpeople household identified in Havering that met the planning definition, no unknown households that may meet the planning definition and four households that do not meet the planning definition.

1.21 There is **no need for additional plots** arising from the household that meets the planning definition.

1.22 The interview with the resident that meets the planning definition identified that there was over-crowding on the yard and a need to provide additional plots for older teenage children. It was also stated that the families are looking to expand the yard on to adjacent land that they already own – and that this will meet all of their current and future needs.

Transit Requirements

1.23 It is recommended that whilst there are small numbers[3] of unauthorised encampments in Havering, the situation relating to levels of encampments should be continually monitored whilst any potential changes associated with PPTS (2015) develop.

1.24 A review of the evidence base relating to unauthorised encampments should be undertaken in autumn 2018 once there is a new 3 year evidence base following the changes to PPTS in August 2015 including attempts to try and identify whether households on encampments meet the planning definition. This will establish whether there is a need for investment in more formal transit sites or emergency stopping places.

1.25 In the short-term the Council may wish consider the use of short-term toleration or negotiated stopping agreements to deal with any encampments, as opposed to taking forward an infrastructure-based approach. At this point whilst consideration should be given as to how to deal with households that do and do not meet the planning definition, from a practical point of view it is likely that households on all unauthorised encampments will need to be dealt with in the same way.

[3] On average less than 10 each year.

2. Introduction

2.1 The primary objective of the 2016 Gypsy and Traveller Accommodation Assessment (GTAA) is to provide a robust assessment of current and future need for Gypsy, Traveller and Travelling Showpeople accommodation in Havering. The outcomes of this study supersede the outcomes of any previous Traveller and Travelling Showpeople Accommodation Needs Assessments completed in Havering.

2.2 The study provides an evidence base to enable the Council to comply with their requirements towards Gypsies, Travellers and Travelling Showpeople under the Housing Act 1985, the National Planning Policy Framework (NPPF) 2012, Planning Practice Guidance (PPG) 2014, Planning Policy for Traveller Sites (PPTS) 2015, and the Housing and Planning Act (2016).

2.3 The GTAA provides a robust assessment of need for Gypsy, Traveller and Travelling Showpeople accommodation in the study area. It is a credible evidence base which can be used to aid the implementation of development plan policies and the provision of Traveller pitches and plots in five year increments covering the period 2016 to 2031. As well as identifying current and future permanent accommodation needs, it also seeks to identify any need for the provision of transit sites or emergency stopping places.

2.4 We would note at the outset that the study covers the needs of Gypsies (including English, Scottish, Welsh and Romany Gypsies), Irish Travellers, New (Age) Travellers, and Travelling Showpeople, but for ease of reference we have referred to the study as a Gypsy and Traveller (and Travelling Showpeople) Accommodation Assessment (GTAA).

2.5 The baseline date for the study is July 2016 which was when the majority of the household interviews were completed.

Definitions

2.6 The planning definition for a Gypsy, Traveller or Travelling Showperson is set out in PPTS (2015). The previous definition set out in the Housing Act (2004) was repealed by the Housing and Planning Act (2016).

2.7 In their response to the consultation on Planning and Travellers that resulted in the revised PPTS being published, DCLG stated that the Government will, when parliamentary time allows, seek to amend primary legislation to clarify the duties of local authorities to plan for the housing needs of their residents. This is set out in the Housing and Planning Act (2016) which omits sections 225 and 226 of the 2004 Housing Act.

2.8 Provisions set out in the Housing and Planning Act now include a duty (under Section 8 of the 1985 Housing Act that covers the requirement for a periodical review of housing needs) for local authorities to consider the needs of people residing in or resorting to their district with respect to the provision of sites on which caravans can be stationed, or places on inland waterways where houseboats can be

moored. Draft Guidance[4] related to this section of the Act has been published setting out how the government would want local housing authorities to undertake this assessment and it is the same as the GTAA assessment process. The implication is therefore that the housing needs of any Gypsy and Traveller households who do not meet the planning definition of a Traveller will need to be assessed as part of the wider housing needs of the area through the SHMA or HEDNA process for example, and will form a subset of the wider need arising from households residing in caravans.

2.9 Another key issue is that there may also be Romany, Irish and Scottish Travellers who no longer travel so will not fall under the planning definition, but who may claim that the Council need to meet their needs through the provision of culturally suitable housing.

The Planning Definition in PPTS (2015)

2.10 For the purposes of the planning system, the definition was changed in PPTS (2015). The planning definition is set out in Annex 1 and states that:

> *For the purposes of this planning policy "gypsies and travellers" means:*
>
> *Persons of nomadic habit of life whatever their race or origin, including such persons who on grounds only of their own or their family's or dependants' educational or health needs or old age have ceased to travel temporarily, but excluding members of an organised group of travelling showpeople or circus people travelling together as such.*
>
> *In determining whether persons are "gypsies and travellers" for the purposes of this planning policy, consideration should be given to the following issues amongst other relevant matters:*
>
> *a) Whether they previously led a nomadic habit of life.*
> *b) The reasons for ceasing their nomadic habit of life.*
> *c) Whether there is an intention of living a nomadic habit of life in the future, and if so, how soon and in what circumstances.*
>
> *For the purposes of this planning policy, "travelling showpeople" means:*
>
> *Members of a group organised for the purposes of holding fairs, circuses or shows (whether or not travelling together as such). This includes such persons who on the grounds of their own or their family's or dependants' more localised pattern of trading, educational or health needs or old age have ceased to travel temporarily, but excludes Gypsies and Travellers as defined above.*
>
> (Planning Policy for Traveller Sites, Department for Communities and Local Government (DCLG), August 2015)

2.11 The key change that was made to both definitions was the removal of the term *persons…who have ceased to travel permanently,* meaning that those who have ceased to travel permanently will no longer fall under the planning definition of a Traveller for the purposes of assessing accommodation need in a GTAA.

[4] "Draft guidance to local housing authorities on the periodical review of housing needs for caravans and houseboats." (March 2016)

Definition of Travelling

2.12 One of the most important questions that GTAAs will need to address in terms of applying the planning definition is *what constitutes travelling*? This has been determined through case law that has tested the meaning of the term '*nomadic*'.

2.13 **R v South Hams District Council (1994)** – defined Gypsies as "persons who wander or travel for the purpose of making or seeking their livelihood (not persons who travel from place to place without any connection between their movements and their means of livelihood.)" This includes 'born' Gypsies and Travellers as well as 'elective' Travellers such as New Age Travellers.

2.14 In **Maidstone BC v Secretary of State for the Environment and Dunn (2006)**, it was held that a Romany Gypsy who bred horses and travelled to horse fairs at Appleby, Stow-in-the-Wold and the New Forest, where he bought and sold horses, and who remained away from his permanent site for up to two months of the year, at least partly in connection with this traditional Gypsy activity, was entitled to be accorded Gypsy status.

2.15 In **Greenwich LBC v Powell (1989)**, Lord Bridge of Harwich stated that a person could be a statutory Gypsy if he led a nomadic way of life *only seasonally*.

2.16 The definition was widened further by the decision in **R v Shropshire CC ex p Bungay (1990)**. The case concerned a Gypsy family that had not travelled for some 15 years in order to care for its elderly and infirm parents. An aggrieved resident living in the area of the family's recently approved Gypsy site sought judicial review of the local authority's decision to accept that the family had retained their Gypsy status even though they had not travelled for some considerable time. Dismissing the claim, the judge held that a person could remain a Gypsy even if he or she did not travel, provided that their nomadism was held in abeyance and not abandoned.

2.17 That point was revisited in the case of **Hearne v National Assembly for Wales (1999)**, where a traditional Gypsy was held not to be a Gypsy for the purposes of planning law as he had stated that he intended to abandon his nomadic habit of life, lived in a permanent dwelling and was taking a course that led to permanent employment.

2.18 **Wrexham County Borough Council v National Assembly of Wales and Others (2003)** determined that households and individuals could continue to lead a nomadic way of life with a permanent base from which they set out from and return to.

2.19 The implication of these rulings in terms of applying the planning definition is that it will **only include those who travel (or have ceased to travel temporarily) for work purposes and in doing so stay away from their usual place of residence**. It can include those who have a permanent site or place of residence, but that it will not include those who travel for purposes other than work – such as visiting horse fairs and visiting friends or relatives. It will **not cover** those who commute to work daily from a permanent place of residence.

2.20 It will also be the case in our view that a household where some family members travel for nomadic purposes on a regular basis, but where other family members stay at home to look after children in education, or other dependents with health problems etc. the household unit would be defined as travelling under the planning definition.

2.21 Households will also fall under the planning definition if they can demonstrate that they have ceased to travel temporarily as a result of their own or their family's or dependants' educational, health needs

or old age. In order to have ceased to travel temporarily these households will need to demonstrate that they have travelled in the past. In addition, households may also have to demonstrate that they plan to travel again in the future.

2.22 This approach was endorsed by a Planning Inspector in a recent Decision Notice for an appeal in East Hertfordshire (Appeal Ref: APP/J1915/W/16/3145267). A summary can be seen below.

Case law, including the R v South Hams District Council ex parte Gibb (1994) judgment referred to me at the hearing, despite its reference to 'purposive activities including work' also refers to a connection between the travelling and the means of livelihood, that is, an economic purpose. In this regard, there is no economic purpose… This situation is no different from that of many landlords and property investors or indeed anyone travelling to work in a fixed, pre-arranged location. In this regard there is not an essential connection between wandering and work… Whilst there does appear to be some connection between the travel and the work in this regard, it seems to me that these periods of travel for economic purposes are very short, amounting to an extremely small proportion of his time and income. Furthermore, the work is not carried out in a nomadic manner because it seems likely that it is done by appointment… I conclude, therefore, that XX does not meet the definition of a gypsy and traveller in terms of planning policy because there is insufficient evidence that he is currently a person of a nomadic habit of life.

Legislation and Guidance for Gypsies and Travellers

2.23 Decision-making for policy concerning Gypsies, Travellers and Travelling Showpeople sits within a complex legislative and national policy framework and this study must be viewed in the context of this legislation and guidance. For example, the following key pieces of legislation and guidance are relevant when developing policies relating to Gypsies, Travellers and Travelling Showpeople:

- The Housing and Planning Act, 2016
- Planning Policy for Traveller Sites (PPTS), 2015
- National Planning Policy Framework (NPPF), 2012
- Planning Practice Guidance[5] (PPG), 2014

2.24 The primary guidance for undertaking the assessment of housing need for Gypsies, Travellers and Travelling Showpeople is set out in PPTS (2015). It should be read in conjunction with the National Planning Policy Framework (NPPF). In addition, the Housing and Planning Act (2016) makes provisions for the assessment of need for those Gypsy, Traveller and Travelling Showpeople households living on sites and yards who do not meet the planning definition – through the assessment of all households living in caravans.

PPTS (2015)

2.25 PPTS (2015), sets out the direction of Government policy. As well as introducing the planning definition of a Traveller, PPTS is closely linked to the NPPF. Among other objectives, the aims of the policy in respect of Traveller sites are (PPTS Paragraph 4):

- *Local planning authorities should make their own assessment of need for the purposes of planning.*

[5] With particular reference to the sections on Housing and Economic Development Needs Assessments

- *To ensure that local planning authorities, working collaboratively, develop fair and effective strategies to meet need through the identification of land for sites.*
- *To encourage local planning authorities to plan for sites over a reasonable timescale.*
- *That plan-making and decision-taking should protect Green Belt from inappropriate development.*
- *To promote more private Traveller site provision while recognising that there will always be those Travellers who cannot provide their own sites.*
- *That plan-making and decision-taking should aim to reduce the number of unauthorised developments and encampments and make enforcement more effective.*
- *For local planning authorities to ensure that their Local Plan includes fair, realistic and inclusive policies.*
- *To increase the number of Traveller sites in appropriate locations with planning permission, to address under provision and maintain an appropriate level of supply.*
- *To reduce tensions between settled and Traveller communities in plan-making and planning decisions.*
- *To enable provision of suitable accommodation from which Travellers can access education, health, welfare and employment infrastructure.*
- *For local planning authorities to have due regard to the protection of local amenity and local environment.*

2.26 In practice, the document states that (PPTS Paragraph 9):

- *Local planning authorities should set pitch targets for Gypsies and Travellers and plot targets for Travelling Showpeople, which address the likely permanent and transit site accommodation needs of Travellers in their area, working collaboratively with neighbouring local planning authorities.*

2.27 PPTS goes on to state (Paragraph 10) that in producing their Local Plan local planning authorities should:

- *Identify and annually update a supply of specific deliverable sites sufficient to provide five years' worth of sites against their locally set targets.*
- *Identify a supply of specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15.*
- *Consider production of joint development plans that set targets on a cross-authority basis, to provide more flexibility in identifying sites, particularly if a local planning authority has special or strict planning constraints across its area (local planning authorities have a Duty-to-Cooperate on strategic planning issues that cross administrative boundaries).*
- *Relate the number of pitches or plots to the circumstances of the specific size and location of the site and the surrounding population's size and density.*
- *Protect local amenity and environment.*

2.28 Local Authorities now have a duty to ensure a 5 year land supply to meet the identified needs for Traveller sites. However, 'Planning Policy for Traveller Sites' also notes in Paragraph 11 that:

- *Where there is no identified need, criteria-based policies should be included to provide a basis for decisions in case applications nevertheless come forward. Criteria-based policies should be fair and*

should facilitate the traditional and nomadic life of Travellers, while respecting the interests of the settled community.

3. Methodology

Background

3.1 Over the past 10 years, ORS has continually refined a methodology for undertaking robust and defensible Gypsy, Traveller and Travelling Showpeople Accommodation Needs Assessments. This has been updated in light of the introduction of the PPG in 2014, changes to PPTS in August 2015 and the Housing and Planning Act (2016), as well as responding to changes set out by Planning Ministers, with particular reference to new household formation rates. This is an evolving methodology that has been adaptive to changes in planning policy as well as the outcomes of Local Plan Examinations and Planning Appeals.

3.2 PPTS (2015) contains a number of requirements for local authorities which must be addressed in any methodology. This includes the need to pay particular attention to early and effective community engagement with both settled and traveller communities (including discussing travellers' accommodation needs with travellers themselves); identification of permanent and transit site accommodation needs separately; working collaboratively with neighbouring local planning authorities; and establishing whether households fall within the planning definition for Gypsies, Travellers and Travelling Showpeople.

3.3 The approach currently used by ORS was considered in April 2016 by the Planning Inspector for the Gloucester, Cheltenham and Tewkesbury Joint Core Strategy who concluded:

> *'The methodology behind this assessment included undertaking a full demographic study of all occupied pitches, interviewing Gypsy and Traveller households, including those living in bricks and mortar accommodation, and considering the implications of the new Government policy. On the evidence before me, I am satisfied that the assessment has been appropriately carried out, and there is no reason for me to dispute the figures.'*

3.4 The stages below provide a summary of the methodology that was used to complete this study. More information on each stage is provided in the appropriate sections of this report.

Glossary of Terms

3.5 A Glossary of Terms can be found in **Appendix A**.

Desk-Based Review

3.6 ORS collated a range of secondary data that was used to support the study. This included:

- Census data
- Caravan counts
- Records of unauthorised sites/encampments
- Information on planning applications/appeals
- Information on enforcement actions
- Existing Needs Assessments and other relevant local studies
- Existing national and local policy, guidance and best practice

Stakeholder Engagement

3.7 Engagement was undertaken with key Council Officers and with wider stakeholders through telephone interviews. Three interviews were undertaken with Council Officers from the study area. Members of the Showmen's Guild and the London Gypsy Traveller Unit were also interviewed.

Working Collaboratively with Neighbouring Planning Authorities

3.8 To help support the Duty-to-Cooperate and provide background information for the study, telephone interviews were conducted with Planning Officers in neighbouring planning authorities. These interviews will help to ensure that wider issues that may impact on this project are fully understood. This included interviews with Officers from the Council set out below. Again, a detailed topic guide was agreed with the Council. Despite repeated attempts it was not possible to complete an interview with Essex County Council or the Greater London Authority.

- Brentwood Borough Council
- Epping Forest District Council
- London Borough of Barking and Dagenham
- London Borough of Redbridge
- Thurrock Council

Survey of Travelling Communities

3.9 Through the desk-based research and the stakeholder interviews, ORS sought to identify all authorised and unauthorised sites/yards and encampments in the study area and attempted to complete an interview with the residents on all occupied pitches and plots. In order to gather robust information to use to assess households against the planning definition of a Traveller multiple visits were made to households where it was not initially possible to conduct an interview because they were not in or not available at the time.

3.10 Our experience suggests that an attempt to interview households on all pitches is more robust, as opposed to a sample based approach which often leads to an under-estimate of need - an approach which is regularly challenged by the Planning Inspectorate and at planning appeals.

3.11 ORS worked closely with the Council to ensure that the interviews collected all the necessary information to support the study. The Site Record Form that was used has been updated to take account of recent changes to PPTS and to collect the information ORS feel is necessary to apply the planning definition. All pitches and plots were visited by members of our dedicated team of experienced interviewers who work solely on our GTAA studies across England and Wales. They conducted semi-structured interviews with residents to determine their current demographic characteristics, their current or future accommodation needs, whether there is any over-crowding or the presence of concealed households and travelling characteristics. Interviewers also sought to identify contacts living in bricks and mortar to interview, as well as an overall

assessment of each site to determine any opportunities for intensification or expansion to meet future needs.

3.12 They also sought information from residents on the type of pitches they may require in the future – for example private or socially rented, together with any features they may wish to be provided on a new pitch or site.

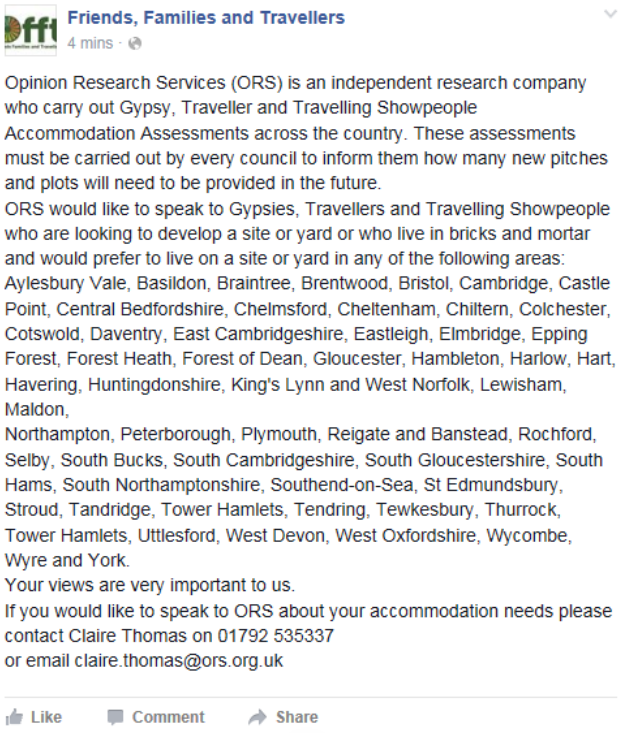
3.13 Where it was not possible to undertake an interview, staff sought to capture as much information as possible about each pitch using a Pitch Outcome Form from sources including neighbouring residents and site management (if present).

Engagement with Bricks and Mortar Households

3.14 ORS apply a rigorous approach to making contact with bricks and mortar households as this is a common issue raised at Local Plan examinations and planning appeals. Contacts were sought through a range of sources including the interviews with people on existing sites and yards, intelligence from the stakeholder interviews, information from housing registers and other local knowledge from stakeholders and adverts on social media (including the Friends, Families and Travellers Facebook group). Through this approach we endeavoured to do everything within our means to give households living in bricks and mortar the opportunity to make their views known to us.

3.15 As a rule, we do not make any assumptions on the overall needs from household in bricks and mortar based on the outcomes of any interviews that are completed as in our experience this leads to a significant over-estimate of the number of households wishing to move to a site or a yard. We work on the assumption that all those wishing to move will make their views known to us based on the wide range of publicity we will put in place. Thus we are seeking to shift the burden of responsibility on to those living in bricks and mortar through demonstrating disproportionate efforts to make them aware of the study. This approach has been supported by Planning Inspectors in Appeal Decision Notices.

Figure 5 – Bricks and Mortar Advert



Timing of the Fieldwork

3.16 ORS are fully aware of the transient nature of many travelling communities and subsequent seasonal variations in site and yard occupancy. As such, all of the fieldwork was undertaken during the non-travelling season, and also avoided days of known local or national events. Fieldwork was completed between June and September 2016.

Waiting Lists

3.17 As there are no public sites in Havering there is no waiting list.

Calculating Current and Future Need

3.18 The primary change introduced by PPTS (2015) in relation to the assessment of need is the change in the definition of a Gypsy, Traveller or Travelling Showperson for planning purposes. Through the site interviews ORS sought to collect information necessary to assess each household against the planning definition. As PPTS (2015) has only recently been issued only a small number of relevant appeal decisions have been issued by the Planning Inspectorate on how the planning definition should be applied – these support the view that households need to be able to demonstrate that they travel for work purposes to meet the planning definition, and stay away from their usual place of residence when doing so.

3.19 To identify need, PPTS (2015) requires an assessment for current and future pitch requirements, but does not provide a methodology for this. However, as with any housing assessment, the underlying calculation can be broken down into a relatively small number of factors. In this case, the key issue is to compare the supply of pitches available for occupation with the current and future needs of the population.

Applying the Planning Definition

3.20 The household survey included a structured section of questions to record information about the travelling characteristics of household members. This included questions on the following key issues:

- Whether any household members have travelled in the past 12 months.
- Whether household members have ever travelled.
- The main reasons for travelling.
- Where household members travelled to.
- The times of the year that household members travelled.
- Where household members stay when they are away travelling.
- When household members stopped travelling.
- The reasons why household members stopped travelling.
- Whether household members intend to travel again in the future.
- When and the reasons why household members plan to travel again in the future.

3.21 When the household survey was completed, the answers from these questions on travelling were used to determine the status of each household against the planning definition in PPTS (2015). Through a combination of responses, households need to provide sufficient information to demonstrate that household members travel for work purposes and in doing so stay away from their usual place of residence, or that they have ceased to travel temporarily due to education, ill health or old age, and plan to travel again for work purposes in the future. The same definition applies to Travelling Showpeople as to Gypsies and Travellers.

3.22 Households that need to be considered in the GTAA fall under one of three classifications that will determine whether their housing needs will need to be assessed in the GTAA. Only those households that meet, or may meet, the planning definition will form the components of need to be included in the GTAA:

- Households that travel under the planning definition.
- Households that have ceased to travel temporarily under the planning definition.
- Households where an interview was not possible who *may* fall under the planning definition.

3.23 Whilst the needs of those households that do not meet the planning definition do not need to be included in the GTAA, they will be assessed to provide the Council with components of need to consider as part of their work on wider housing needs assessments.

Unknown Households

3.24 As well as calculating need for households that meet the planning definition, the needs of the households where an interview was not completed (either due to refusal to be interviewed or households that were not present during the fieldwork period) need to be assessed as part of the GTAA where they are believed to be ethnic Gypsies and Travellers who **may** meet the planning definition. Whilst there is no law or guidance that sets out how the needs of these households should be addressed, an approach has been taken that seeks an estimate of

potential need from these households. This will be a maximum additional need figure over and above the need identified for households that do meet the planning definition.

3.25 The estimate of potential need in unknown households seeks to identify potential current and future need from many pitches known to be temporary or unauthorised, and through new household formation. For the latter, the national rate of 1.50% has been used as the demographics of residents are unknown. This approach is consistent with the outcomes of a recent Planning Appeal where access to a site was not possible but basic information was known about the number of households residing there. (Planning Inspectorate Ref: APP/Z6950/A/14/2212012).

3.26 Should further information be made available to the Council that will allow for the planning definition to be applied, these households could either form a confirmed component of need to be addressed in through the GTAA or the SHMA/HEDNA.

3.27 ORS are of the opinion that it would not be appropriate when producing a robust assessment of need to make any firm assumptions about whether or not households where an interview was not completed meet the planning definition based on the outcomes of households where an interview was completed.

3.28 However, data that has been collected from over 1,800 household interviews that have been completed by ORS since the changes to PPTS in 2015 suggests that overall approximately 10% of households who have been interviewed meet the planning definition – and in some local authorities, particularly London Boroughs, 100% of households do not meet the planning definition.

3.29 ORS are not implying that this is an Official National Statistic - rather a national statistic based on the outcomes of our fieldwork since the introduction of PPTS (2015). It is estimated that there are between 12,000-14,000 Gypsy and Traveller pitches in England and we have spoken to over 12% of them at a representative range of sites and just over 10% meet the planning definition. ORS also asked similar questions on travelling in over 2,000 pre-PPTS (2015) household interviews and also found that 10% of households would have met the PPTS (2015) planning definition. It is ORS' view therefore that this is the most comprehensive national statistic in relation to households that meet the planning definition in PPTS (2015) and should be seen as a robust statistical figure.

3.30 This would suggest that it is likely that only a small proportion of the potential need identified from these households will need conditioned Gypsy and Traveller pitches, and that the needs of the majority will need to be addressed through the SHMA or HEDNA for example.

3.31 In terms of Local Plan policies, the Council could consider the use of a specific site allocation/protection policy for those households that do meet the planning definition, together with a criteria-based policy (as suggested in PPTS) for any unknown households that do provide evidence that they meet the planning definition.

Households that Do Not Meet the Planning Definition

3.32 Whilst households who do not travel fall outside the planning definition of a Traveller, Romany Gypsies, Irish and Scottish Travellers may be able to demonstrate a right to culturally appropriate accommodation under the Equality Act (2010). In addition, provisions set out in the

Housing and Planning Act (2016) now include a duty (under Section 8 of the 1985 Housing Act that covers the requirement for a periodical review of housing needs) for local authorities to consider the needs of people residing in or resorting to their district with respect to the provision of sites on which caravans can be stationed, or places on inland waterways where houseboats can be moored. Draft Guidance[6] related to this section of the Act has been published setting out how the government would want local housing authorities to undertake this assessment and it is the same as the GTAA assessment process. The implication is therefore that the housing needs of any Gypsy and Traveller households who do not meet the planning definition of a Traveller will need to be assessed as part of the wider housing needs of the area, for example through the SHMA or HEDNA process, and will form a subset of the wider need arising from households residing in caravans. An assessment of need for Travellers that do not meet the planning definition can be found in **Appendix B**.

Supply of Pitches

3.33 The first stage of the assessment sought to determine the number of occupied, vacant and potentially available supply in the study area:

- Current vacant pitches.
- Pitches currently with planning consent due to be developed within 5 years.
- Pitches vacated by people moving to housing.
- Pitches vacated by people moving from the study area (out-migration).

Current Need

3.34 The second stage was to identify components of current need, which is not necessarily the need for additional pitches because they may be able to be addressed by space already available in the study area. This is made up of the following. It is important to address issues of double counting:

- Households on unauthorised developments for which planning permission is not expected.
- Households on unauthorised encampments for which planning permission is not expected.
- Concealed, doubled-up or over-crowded households (including single adults).
- Households in bricks and mortar wishing to move to sites.
- Households in need on waiting lists for public sites.

Future Need

3.35 The final stage was to identify components of future need. This includes the following four components:

- Older teenage children in need of a pitch of their own.
- Households living on sites with temporary planning permissions.

[6] "Draft guidance to local housing authorities on the periodical review of housing needs for caravans and houseboats." (March 2016)

- New household formation.
- In-migration.

3.36 Household formation rates are often the subject of challenge at appeals or examinations. We agree with the position set by Ministers from DCLG in a Ministerial Statement in 2014 and firmly believe that any household formation rates should use a robust local evidence base, rather than simply relying on precedent. This is set out in more detail later in this report.

3.37 All of these components of supply and need are presented in easy to understand tables which identify the overall net need for current and future accommodation for both Gypsies and Travellers. This has proven to be a robust model for identifying needs. The residential and transit pitch needs for Gypsies and Travellers are identified separately and the needs are identified in 5 year periods to 2031.

Pitch Turnover

3.38 Some assessments of need make use of pitch turnover as an ongoing component of supply. ORS do not agree with this approach or about making any assumptions about annual turnover rates. This is an approach that usually ends up with a significant under-estimate of need as in the majority of cases vacant pitches on sites are not available to meet any additional need. The use of pitch turnover has been the subject of a number of Inspectors Decisions, for example APP/J3720/A/13/2208767 found a GTAA to be unsound when using pitch turnover and concluded:

West Oxfordshire Council relies on a GTAA published in 2013. This identifies an immediate need for 6 additional pitches. However the GTAA methodology treats pitch turnover as a component of supply. This is only the case if there is net outward migration yet no such scenario is apparent in West Oxfordshire. Based on the evidence before me I consider the underlying criticism of the GTAA to be justified and that unmet need is likely to be higher than that in the findings in the GTAA.

3.39 In addition, a recent GTAA Best Practice Guide produced by a number of organisations including Friends, Families and Travellers, the London Gypsy and Traveller Unit, the York Travellers Trust, the Derbyshire Gypsy Liaison Group, Garden Court Chambers and Leeds GATE concluded that:

Assessments involving any form of pitch turnover in their supply relies upon making assumptions; a practice best avoided. Turnover is naturally very difficult to assess accurately and in practice does not contribute meaningfully to additional supply so should be very carefully assessed in line with local trends. Mainstream housing assessments are not based on the assumption that turnover within the existing stock can provide for general housing needs.

3.40 As such, other than current vacant pitches on sites that are known to be available, or pitches that are known to become available through the household interviews, pitch turnover has not been considered as a component of supply in this GTAA.

Transit Provision

3.41 PPTS also requires an assessment of the need for any transit sites or stopping places. While the majority of Gypsies, Travellers and have permanent bases either on Gypsy and Traveller sites or in bricks and mortar and no longer travel, other members of the community either travel permanently or for part of the year. Due to the mobile nature of the population, a range of sites or management approaches can be developed to accommodate Gypsies and Travellers as they move through different areas, including: -

- Transit sites
- Temporary/Emergency stopping places
- Temporary (seasonal) sites
- Negotiated Stopping Agreements

3.42 In order to investigate the potential need for transit provision when undertaking work to support the study, ORS sought to undertake analysis of any records of unauthorised sites and encampments, as well as information from the CLG Caravan Count. The outcomes of the interviews with Council Officers, Officers from neighbouring planning authorities and other stakeholders was also be taken into consideration when determining this element of need in the study area.

4. Gypsy, Traveller & Travelling Showpeople Sites & Population

Introduction

4.1 One of the main considerations of this study is to provide evidence to support the provision of pitches and plots to meet the current and future accommodation needs of Gypsies, Travellers and Travelling Showpeople. A pitch is an area normally occupied by one household, which typically contains enough space for one or two caravans, but can vary in size. A site is a collection of pitches which form a development exclusively for Gypsies and Travellers. For Travelling Showpeople, the most common descriptions used are a plot for the space occupied by one household and a yard for a collection of plots which are typically exclusively occupied by Travelling Showpeople. Throughout this study the main focus is upon how many extra pitches for Gypsies and Travellers and plots for Travelling Showpeople are required in the study area.

4.2 The public and private provision of mainstream housing is also largely mirrored when considering Gypsy and Traveller accommodation. One common form of a Gypsy and Traveller site is the publicly-provided residential site, which is provided by a Local Authority or by a Registered Provider (usually a Housing Association). Pitches on public sites can be obtained through signing up to a waiting list, and the costs of running the sites are met from the rent paid by the licensees (similar to social housing).

4.3 The alternative to public residential sites are private residential sites and yards for Gypsies, Travellers and Travelling Showpeople. These result from individuals or families buying areas of land and then obtaining planning permission to live on them. Households can also rent pitches on existing private sites. Therefore, these two forms of accommodation are the equivalent to private ownership and renting for those who live in bricks and mortar housing. Generally, the majority of Travelling Showpeople yards are privately owned and managed.

4.4 The Gypsy, Traveller and Travelling Showpeople population also has other forms of sites due to its mobile nature. Transit sites tend to contain many of the same facilities as a residential site, except that there is a maximum period of residence which can vary from a few days or weeks to a period of months. An alternative to a transit site is an emergency or negotiated stopping place. This type of site also has restrictions on the length of time someone can stay on it, but has much more limited facilities. Both of these two types of site are designed to accommodate, for a temporary period, Gypsies, Travellers and Travelling Showpeople whilst they travel. A number of authorities also operate an accepted encampments policy where short-term stopovers are tolerated without enforcement action.

4.5 Further considerations for the Gypsy and Traveller population are unauthorised developments and encampments. Unauthorised developments occur on land which is owned by the Gypsies and Travellers or with the approval of the land owner, but for which they do not have planning permission to use for residential purposes. Unauthorised encampments occur on land which is not owned by the Gypsies and Travellers.

Sites and Yards in Havering

4.6 In Havering, at the base date for the GTAA, there are 4 private sites with permanent planning permission (4 pitches), 7 Private sites with temporary planning permission (21 pitches), and 1 Travelling Showperson yard (5 plots). There are no public sites and no transit sites. See **Appendix C** for further details.

4.7 There are also 15 unauthorised sites (20 pitches)[7] in the borough – a number of these previously had temporary planning consents that have now expired.

Figure 6 - Total amount of authorised provision in Havering (July 2016)

Category	Sites/Yards	Pitches/Plots
Private with permanent planning permission	4	4
Private sites with temporary planning permission	7	21
Public Sites (Council and Registered Providers)	0	0
Public Transit Provision	0	0
Private Transit Provision	0	0
Travelling Showpeople Provision	1	5

Caravan Count

4.8 Another source of information available on the Gypsy, Traveller and Travelling Showpeople population is the bi-annual Traveller Caravan Count which is conducted by each Local Authority in England on a specific date in January and July of each year, and reported to DCLG. This is a statistical count of the number of *caravans* on both authorised and unauthorised sites across England. With effect from July 2013, DCLG has renamed the 'Gypsy and Traveller Caravan Count' as the 'Traveller Caravan Count.'

4.9 As this count is of caravans and not households, it makes it more difficult to interpret for a study such as this because it does not count pitches or resident households. The count is merely a 'snapshot in time' conducted by the Local Authority on a specific day, and any unauthorised sites or encampments which occur on other dates will not be recorded. Likewise, any caravans that are away from sites on the day of the count will not be included. As such it is not considered appropriate to use the outcomes from the Traveller Caravan Count in the calculation of current and future need as the information collected during the site visits is seen as more robust and fit-for-purpose. However, the Caravan Count data has been used to *support* the identification of the need to provide for transit provision and this is set out later in this report.

[7] There were also 3 unauthorised sites with 4 pitches that were not occupied by ethnic Gypsies or Travellers and 1 unauthorised site with 1 pitch that was vacant with no clear sign of recent occupation.

5. Stakeholder Engagement

Introduction

5.1 To be consistent with the guidance set out in PPTS (2015) and the methodology used in other GTAA studies, ORS undertook a stakeholder engagement programme to complement the information gathered through interviews with members of the Travelling Community. This consultation took the form of telephone interviews which were tailored to the role of the individual.

5.2 The aim of these interviews was to provide an understanding of: current provision and possible future need; short-term encampments and transit provision; and cross-border issues. Importantly, stakeholders who are in contact with members of the travelling community (who are in bricks and mortar or who are not known to the Council) were asked if they could inform them that the study is taking place and provide details about how they could participate in a confidential telephone interview with a member of the ORS research team.

5.3 Three interviews were undertaken with Council Officers from the study area. ORS also liaised with the London Gypsy and Traveller Unit throughout the Study. A representative of the Showmen's Guild also took part in the Study.

5.4 As stated in the Planning Policy for Traveller Sites, Local Authorities have a Duty-to-Cooperate on strategic planning issues that cross administrative boundaries (S.110 Localism Act 2011). In order to explore issues relating to cross boundary working, ORS interviewed a planning officer from five of the local authorities that neighbour the Borough:

- Brentwood Borough Council
- Epping Forest District Council
- London Borough of Barking and Dagenham
- London Borough of Redbridge
- Thurrock Council.

5.5 Due to issues surrounding data protection, and in order to protect the anonymity of those who took part, this section presents a summary of the views expressed by interviewees and verbatim comments have not been used.

5.6 The first section provides the response from key stakeholders and council officers from the study area and neighbouring authorities. The views expressed in this section of the report represent a balanced summary of the views expressed by stakeholders, and on the views of the individuals concerned, rather than the official policy of their Council or organisation. Following this section, the response from community and representative organisations are presented.

Views of Key Stakeholders and Council Officers in Havering

Accommodation for Gypsies and Travellers

5.7 There are no Council run sites in the area and there are only four pitches which have permanent planning permission. All the other sites have temporary planning permission; planning permission has expired and is tolerated; or are unauthorised.

5.8 Officers were not aware of any overcrowding in the area. However, it is felt that need is not currently being met because most Gypsies and Travellers are on temporary or tolerated sites.

5.9 The results of this study will inform the new Local Plan.

Bricks and Mortar

5.10 Importantly, stakeholders who are in contact with members of the Traveller community (who are in bricks and mortar or who are not known to the Council) were asked if they could inform them that the study is taking place and provide details about how they could participate in a confidential telephone interview with a member of the ORS research team.

5.11 Twelve Housing Associations, who own properties in Havering, were contacted by ORS to explore whether they record the ethnicity of their tenants. They were also asked if they could identify Gypsy and Traveller tenants living within their properties and, if they did, whether they could contact them to advise them that the study is being undertaken and if they would like to discuss their accommodation needs via a confidential interview with the research team. Of the 12 contacted A2 Dominion, Metropolitan and Genesis provided a response and explained that people are nominated by the Local Authority and they do not record the ethnicity of their tenants once they have started their tenancy and therefore would not be in a position to assist.

Short-term Roadside Encampments

5.12 Some Gypsies and Travellers travel through the area for work purposes and some are known for travelling for social events or visiting family weddings. They usually stay on parks and vacant private land. Encampments also occur on private land.

5.13 There is currently no transit provision and it was felt that Gypsies and Travellers who travel through the area would not want to stay on a formal transit site. However, officers all agreed that there should be a London-wide approach to the provision of transit sites.

Cross-border Issues

5.14 Overall, there are not thought to be any significant cross-border issues. However, it was explained that the public site in Barking & Dagenham is located on the Havering border and a number of those residents will request help and support from Havering Council officers in relation to Council provided services (which they are unable to provide).

5.15 Havering are considered to be working closely with neighbouring boroughs and will carry out stakeholder workshops to consult on Gypsy and Traveller issues and are also in the process of setting-up Duty-to-Cooperate meetings with all the neighbouring boroughs to discuss Gypsy and Traveller issues and wider housing issues.

5.16 In addition, the Borough worked on a SHMA with Barking & Dagenham (LBBD) and Redbridge which is a key piece of joint working and the relationship with LBBD is consider to be positive and it is felt that they are a responsive borough.

5.17 The neighbouring boroughs are said to be meeting their own accommodation need and complying with the Duty-to-Cooperate.

Neighbouring Authorities

Brentwood Borough Council

5.18 With regard to overall accommodation need in Brentwood, the views of the officer interviewed were as follows:

- The Essex-wide GTAA (July 2014 and update in September 2014) identified that Brentwood Borough has eight private sites (10 pitches), eight sites with temporary permission (27 pitches) and three unauthorised developments (17 Pitches). There are no public Gypsy and Traveller sites. These numbers are subject to revision following a forthcoming review of the GTAA.
- There are a number of personal permissions that tend to last for the duration of the family's occupation in the area.
- At the time of the interview, the officer referred to two unauthorised encampments near the boundary with Havering, in Navestock.
- The Essex-wide GTAA (July 2014 and update in September 2014) identified a need for Brentwood for an additional 59 Gypsy and Traveller pitches between 2013 and 2018. It was explained that this is a much higher and more challenging figure than previous targets set out in the former East of England Plan.
- The Essex authorities have commissioned an updated GTAA which will incorporate the change to definition in the revised PPTS and are currently waiting for the revised figures.
- Brentwood have recently updated their emerging Local Plan, which went to consultation at the beginning of 2016. The Brentwood draft Local Plan (2013-2033) contains Policy 7.10, which seeks to provide for Gypsies and Travellers based on the need identified in the 2014 GTAA, though it is acknowledged that those figures may change. Whilst the policy does not identify all the sites necessary to meet that need it does state the Council's aim to ensure identified need is met in full throughout the Plan period despite the Borough's Green Belt constraints.
- Brentwood Council is continuing to redraft emerging policy following representations from the public consultation on the Draft Local Plan and various options are being considered and assessed to develop a strategy that meets identified need.
- A strategic housing-led allocation known as Dunton Hills Garden Village is being progressed through the Local Plan. This strategic allocation is identified as a broad location for future Gypsy and Traveller provision to be planned in an integrated way as part of a mixed use development. It is proposed provision will be made for 20 pitches as part of this strategic allocation. A number of roadside encampments occurred in 2016; on Little Warley Common, Hutton Poplars, Bishop Hall and Seymour Field and Ingatestone. They tend to occur during

the summer, and as the duration is normally no longer than a couple of nights, it is felt that the Travellers are simply travelling through the Borough.

» There is no transit provision in Brentwood. There is believed to be a need across Essex County as a whole, but the best location for such a site would need to be determined by discussions between all local authorities and the County Council.

5.19 With regard to the subject of cross-border issues and the Duty-to-Cooperate, the views of the officer interviewed were as follows:

» The Borough is currently working to have their pre-submission draft of the Local Plan prepared by the end of the year, for consultation at the start of 2017. As that takes place, the officer felt it is imperative that Brentwood has discussions with Havering.

» The officer believed that one issue of key importance was the potential of cumulative impact – specifically, sites on both Epping Forest's and Havering's borders. To attempt to meet their identified need, one avenue being considered by Brentwood is the permanent allocation of pitches currently with temporary or personal permission, so working with Brentwood's neighbours is necessary to identify any potential negative impact or cumulative effect.

» When Brentwood went to consultation on their local draft plan, they received a response from Basildon, who were seeking assistance in meeting their own high need.

» The officer believed Brentwood was complying with the Duty-to-Cooperate, citing the consultations and events that the Borough has been holding for their emerging plan. At the time of the interview, the officer had meetings with Havering scheduled in the near future about shared Duty-to-Cooperate. Brentwood will be attempting to be active in joint-working and discussions throughout the whole process, and the officer believed that Gypsies and Travellers would be high priority as an issue that cannot be looked at individually.

Epping Forest District Council

5.20 With regard to overall accommodation need in Epping Forest, the views of the officer interviewed were as follows:

» The GTAA (2014) identified a need of 112 additional pitches. Most of the identified need is due to overcrowding and concealed households, rather than new populations coming to the district.

» The number of unauthorised sites and temporary permissions has reduced in recent years, due to more sites being granted permanent planning permission. At the time of the interview, the officer believed there were approximately six temporary permissions and one or two unauthorised sites.

» Epping Forest will meet this need by attempting to standardise permissions, granting permanent authorisation where possible and considering temporary permissions. Other attempts to meet the need involve the identification of new sites, meeting it through the SHMA, and potential discussions with RSLs. A new Local Plan consultation draft should be complete by the end of October 2016 which will set out how the District will meet the need.

» The District is currently updating the GTAA to take into account the revision to PPTS and the change to the travelling definition.

- In regards to transit provision, there is an identified County-wide need for such provision, but there are no available sites within the district for that purpose.
- The officer believed a major issue to be the spatial distribution of sites across the District. There has been traditionally a concentration of Gypsies and Travellers, in two of the twenty-four parish and town councils. The officer highlighted the problem with deciding whether to seek a more even distribution across the district or allowing the concentration to continue by seeking to extend or intensify use on existing sites.

5.21 With regard to the subject of cross-border issues and the Duty-to-Cooperate, the views of the officer interviewed were as follows:

- Epping Forest have been in dialogue with their ten neighbouring authorities. They share issues with neighbouring authorities such as Brentwood, as both districts are around 90% greenbelt land, with Epping Forest's percentage being slightly larger. Harlow has issues with unauthorised encampments. The officer believed that the main difficulty is locating sites that are neither too urban nor too rural. Sites on the edge of or just outside settlements were thought to be preferred by Gypsy and Traveller populations.
- The officer was not fully aware of how other local authorities are meeting their own need, though the officer did reference a recent meeting with Broxbourne, who said their need was being met.
- The officer felt that Epping Forest and its neighbouring local authorities are complying with the Duty-to-Cooperate and explained that Epping Forest have a well-established system in place and an officer forum for discussion of cross boundary issues which are also debated at a member's board. Havering is a member of this grouping

London Borough of Barking & Dagenham

5.22 With regard to overall accommodation need in Barking & Dagenham, the views of the officer interviewed were as follows:

- There is one public site with 12 pitches and no private sites.
- The officer was not aware of any overcrowding issues.
- It has been estimated that the borough is home to 200-300 people of Gypsy and Traveller living in bricks and mortar, though the officer cannot be certain of the reliability of that figure. There is very little demand from that community to deliver extra sites or pitches.
- The GTAA (2008) identified a need of between two and nine additional pitches. Since the GTAA one additional pitch was added to the original 11 pitches.
- There are approximately sixteen on the waiting list – the majority of them are from one Irish Traveller family.
- The Borough has undertaken a call for sites and examined about five areas, all of which proved to be unsuitable because of the financial viability and mainly because of the remediation works required or planning policy conflicts. The officer explained that a more strategic assessment of sites is required through the Local Plan.
- In general, demand and need is relatively low, but the officer believes Barking & Dagenham must be prepared for any emerging need, particularly from the Irish Traveller community.

- The officer was aware of a recent illegal encampment on Abbey Green, in Barking Town Centre, although they are historically quite rare. The officer believes that this is due to Barking being quite built up, with little available space for such incursions to happen. Havering is more open, which probably contributes to their higher number of issues.
- The officer does not believe that there is any need for transit provision, as it has never featured as high priority.

5.23 With regard to the subject of cross-border issues and the Duty-to-Cooperate, the views of the officer interviewed were as follows:

- The officer was not aware of any cross-border issues. Mainly, Gypsies and Travellers stop in Newham or Havering, as opposed to Barking & Dagenham.

London Borough of Redbridge

5.24 With regard to overall accommodation need in Redbridge, the views of the officer interviewed were as follows:

- There is one public site for Gypsy and Travellers and no Travelling Showpeople yards in the Borough.
- The Borough has recently undertaken a GTAA which identified a need for an additional seven pitches on the public site (2015-2030). Two of which can be provided in the first five years of the Local Plan. The officer felt the Borough is meeting the accommodation needs of the Gypsy and Traveller community.
- There are said to be a small number of unauthorised encampments and the officer referred to the 2012 study which did not identify a need for any transit provision.

5.25 With regard to the subject of cross-border issues and the Duty-to-Cooperate, the views of the officer interviewed were as follows:

- The officer was not aware of any cros-border issues, and was of the view that neighbouring boroughs (including the Study area) is meeting the Duty-to-Cooperate.
- The officer was confident that neighbouring boroughs could meet their own assessed need and referred to conversations with neighbouring authorities which demonstrated that Redbridge would not have to deal with issues arising from neighbouring boroughs and would be able to meet its own local need.

Thurrock Borough Council

5.26 With regard to overall accommodation need in Thurrock, the views of the officer interviewed were as follows:

- There are 90 approved Gypsy and Traveller pitches within the Borough, the majority being public. There are also a number of long established tolerated sites, and a smaller number of unauthorised sites.
- The Borough is home to the Buckles Lane site, one of the largest Travelling Showpeople sites in Europe, of which a large number are unauthorised or temporary permission.
- The Essex-wide GTAA (July 2014 and update in September 2014) identified a need for Thurrock for an additional 104 Gypsy and Traveller pitches and 61 Travelling Showpeople

Plots up to 2030. The Essex authorities have commissioned an updated GTAA which will incorporate the change to definition in the revised PPTS and are currently waiting for the revised figures.

- The GTAA (2014) also identified a need of six for bricks and mortar. Compared to many areas in the East of England, Thurrock has traditionally had a higher number of older members of the Gypsy and Traveller community who have moved to live in bricks and mortar. There is a long history of members of the Gypsy & Traveller community being integrated in to the settled community. The updated GTAA will further assess the needs of Bricks and Mortar travellers.
- Part of the existing need is on longstanding tolerated sites – the officer explained that this this need is probably met on the existing sites which may remain as tolerated. The Council will look at a small amount of unauthorised site needs and future needs going forward.
- Due to the size of the Travelling Showpeople community, the number of plots required to meet current and future need is high. On the approved sites, the traditional Thurrock Travelling Showpeople families have become overcrowded as new households form. On the temporary sites, overcrowding tends to be due to Travelling Showpeople coming into the area from elsewhere. Thurrock Council will need to consider the approach to meeting current and future needs for Travelling Showpeople through the local plan process and Duty-to-Cooperate.
- The Local Plan is in very early preparative stages, and future stages of its preparation will need to take into account further public consultations and new technical evidence. The Local Plan is unlikely to be submitted until 2018/19 due to the impact on the timetable of the Lower Thames crossing route announcement.

5.27 With regard to the subject of cross-border issues and the Duty-to-Cooperate, the views of the officer interviewed were as follows:

- The officer referenced Basildon's high Gypsy and Travellers need and explained that Thurrock is unlikely to take into account the needs of any other areas due to its own high need.
- The officer had some concerns about the approach of Basildon Borough Council in its draft local plan proposing to redistribute a large amount of their unauthorised population to neighbouring authorities, and Thurrock Council had made representations on the Basildon Local plan to this effect. It is understood that some of this unauthorised need may have since moved elsewhere. In the officer's experience, other local authorities have been unwilling to accommodate adjoining authorities need. However, Thurrock Council's previously stated position is that it believes there needs to be a fairer distribution, as Thurrock and Basildon have much larger populations of Gypsies, Travellers and Travelling Showpeople than other neighbouring authorities. The officer believes authorities in Greater Essex need to have discussions regarding this.
- Indeed, after taking advice from the Showman's Guild, Thurrock will need to discuss whether some of the future Travelling Showpeople population need should be redistributed to other parts of Essex. Part of the Buckles Lane site began as an unauthorised site including Travelling Showpeople coming from other areas of the country – including London – so the officer felt that it is not technically a local need. The Showman's Guild have recognised that

the population did not necessarily need to be located in Thurrock and the rest of Essex should be attempting to make provision for the needs of Travelling Showpeople.

- The Essex Planning Officers Association has produced the evidence base on Gypsies and Travellers (2014) and has recognised potential strategic and cross-boundary issues, but further discussion is required following the updated GTAA
- Duty-to-Cooperate is ongoing with Thurrock, amongst others. The South Essex Group of local authorities are all working together on Duty-to-Cooperate. However, many local plans are at the early stages of preparation.
- Thurrock will be focussing on accommodating its own need going forward, and the officer believes it would be an issue should Thurrock be expected to accommodate the need of any other area. They may need to seek assistance from neighbouring authorities with the future need for the Travelling Showpeople population in Thurrock. The officer believes they should be seeking a fair and equitable agreement with neighbouring authorities with regards to distribution.
- There is a concern about whether the Greater London Authority plan addresses the issue, as traditionally there have been Gypsies and Travellers moving into the Thurrock area who have lost sites in London. The officer believes that London Plan Review needs to play its part in seeking to accommodate Gypsies and Travellers and Travelling Showpeople, and not get lost in the drive to regenerate and build houses all over London.
- Transit provision in Greater Essex may be an issue relating to the Duty-to-Cooperate, as there is still no agreement in regards to providing these sites. Whether there is a need or not will be resolved during the planning process.
- Thurrock would be seeking to engage with Havering one-on-one to discuss cross-boundary issues and their plan.

Views from Community Representatives

Response from the London Gypsy and Traveller Unit (LGTU)

5.28 ORS interviewed a representative of the LGTU, who supports Gypsies and Travellers across London to:

- Influence decisions affecting their lives.
- Improve their quality of life and the opportunities available to them.
- Challenge the discrimination they routinely experience.

5.29 The representative of the LGTU expressed concern that the Council doesn't have any policy or site allocation in place and that they have not done anything since the Gypsy and Traveller Development Plan Document was withdrawn in 2015. However, the representative acknowledged that the GTAA should provide an evidence base for their general Local Plan.

5.30 If there are issues around unauthorised encampments, the representative felt that priority should be to identify suitable pieces of land for either negotiated stopping or transit sites, or sites that are available to be acquired by Travellers if they wish to develop their own site in the borough.

Response from the Showmen's Guild (London Section)

5.31 As part of the stakeholder engagement, ORS spoke with a representative of the Showman's Guild of Great Britain who is aware of four families living in the Borough. The representative explained that the Borough is adjacent to Thurrock and South Ockendon which has the largest Travelling Showpeople site in Europe (Buckles Lane) and the representative was of the view that Havering should take into account their needs in their Local Plan.

5.32 ORS have undertaken GTAAs across the UK and regularly consult with organisations which promote and support Travelling Showpeople. Across the country, Traveling Showpeople sites are said to be overcrowded with a requirement for small expansions for family growth and most sites have reached maximum capacity.

5.33 The Guild feel there is a lack of site accommodation in the south east of England and where sites meet the site criteria, the local planning authority should base any decision on the need for additional sites regionally not locally. The key factors should be suitability of sites, sustainability, and access to transport links and not whether or not families can prove a specific local link. The representative called for a London-wide approach.

5.34 The representative agreed that it is difficult to source sites which are both affordable and suitable. The Guild's view is that it is less onerous to look at existing sites and to explore whether surrounding land can be purchased to enable a small expansion. This will have the least impact on local communities and would allow families to remain together.

5.35 The Guild suggested that new yards ideally contain between six to eight plots. Any smaller and this would become unsustainable as people could be left isolated when people are away, any larger and it can be intrusive and puts additional demands on local services. The average size of each plot is ½ an acre per plot and the Showmen's Guild has designed a model design for both a smaller and larger site which is available on its website.

6. Survey of Travelling Communities

Interviews with Gypsies and Travellers

6.1 One of the major components of this study was a detailed survey of the Gypsy and Traveller population living in the study area, and also efforts to engage with the bricks and mortar community.

6.2 Through the desk-based research and stakeholder interviews ORS identified four private sites with planning permission, seven private sites with temporary planning permission, 14 unauthorised sites and one Travelling Showpersons yard. The majority of interviews were completed between June and July 2016 and up to three attempts were made to interview each household where they were not present when interviewers visited. In addition to this, a further attempt was made to contact those where no contact was possible during the first three attempts, after the summer holidays during September. The table below sets out the number of pitches, the number of interviews that were completed, and the reasons why interviews were not completed.

Figure 7 - Sites and yards visited in Havering

Public Sites	Pitches/Plots	Interviews	Reasons for not completing interviews
None	-	-	-
Private Sites			
Railway Sidings, North Ockendon	1	1	-
The Old Forge, Hubbards Chase	1	1	-

Fairoaks, St Mary's Lane, Upminster	5	1	4 x no contact possible
TOTAL	**50**	**22**	

Efforts to Contact Bricks and Mortar Households

6.3 ORS attempted to make identify with bricks and mortar households by asking residents that were interviewed if they knew of any friend or family who were looking to move to a site; through the stakeholder interviews; and through adverts in the Traveller press and on social media. As a result of this one household was identified to be interviewed.

[8] This site was granted temporary planning permission for 36 months after the base date for the GTAA.

7. Current and Future Pitch Provision

Introduction

7.1 As on the additional pitch provision which is needed in the study area currently and to 2031. This includes both current unmet need and need which is likely to arise in the future[9]. This time period allows for robust forecasts of the requirements for future provision, based upon the evidence contained within this study and also secondary data sources. Whilst the difficultly in making accurate assessments beyond 5 years has been highlighted in previous studies, the approach taken in this study to estimate new household formation has been accepted by Planning Inspectors as the most appropriate methodology to use.

7.2 We would note that this section is based upon a combination of the on-site surveys, planning records and stakeholder interviews. In many cases, the survey data is not used in isolation, but instead is used to validate information from planning records or other sources.

7.3 This section concentrates not only upon the total additional provision which is required in the area, but also whether there is a need for any transit sites and/or emergency stopping place provision.

Planning Definition

7.4 As well as assessing housing need, the revised version of PPTS (2015) requires a GTAA to determine whether households living on sites, yards, encampments and in bricks and mortar fall within the planning definition of a Gypsy, Traveller or Travelling Showperson. Only households that fall within the planning definition, and those who *may* meet the planning definition (households where an interview was not completed), will have their housing needs assessed separately from the wider population in the GTAA. The planning definition now excludes those households who have ceased to travel permanently.

New Household Formation Rates

7.5 Nationally, a household formation and growth rate of 3.00% net per annum has been commonly assumed and widely used in local Gypsy and Traveller assessments, even though there is no statistical evidence of households growing so quickly. The result has been to inflate both national and local requirements for additional pitches unrealistically. In this context, ORS has prepared a *Technical Note on Household Formation and Growth Rates (2015)*. The main conclusions are set out here and the full paper is in **Appendix D**.

7.6 Those seeking to provide evidence of high annual net household growth rates for Gypsies and Travellers have sometimes sought to rely on increases in the number of caravans, as reflected in

[9] See Paragraphs 3.32 and 3.33 for details of comparison current and future need.

caravan counts. However, caravan count data is unreliable and erratic – so the only proper way to project future population and household growth is through demographic analysis.

7.7 The Technical Note concludes that in fact, the growth in the national Gypsy and Traveller population may be as low as 1.25% per annum – much less than the 3.00% per annum often assumed, but still greater than in the settled community. Even using extreme and unrealistic assumptions, it is hard to find evidence that net Gypsy and Traveller population and household growth rates are above 2.00% per annum nationally.

7.8 The often assumed 3.00% per annum net household growth rate is unrealistic and would require clear statistical evidence before being used for planning purposes. In practice, the best available evidence supports a national net household growth rate of 1.50% per annum for Gypsies and Travellers (in addition research by ORS has identified a national growth rate of 1.00% for Travelling Showpeople) and this has also been adjusted locally based on site demographics.

7.9 This view has been supported by Planning Inspectors in a number of Decision Notices. The most recent was in relation to an appeal in Doncaster that was issued in November 2016 (Ref: APP/F4410/W/15/3133490) where the agent acting on behalf of the appellant claimed that a rate closer to 3.00% should be used. The Inspector concluded:

> *In assessing need account also needs to be taken of likely household growth over the coming years. In determining an annual household growth rate the Council relies on the work of Opinions Research Services (ORS), part of Swansea University. ORS's research considers migration, population profiles, births & fertility rates, death rates, household size data and household dissolution rates to determine average household growth rates for gypsies and travellers. The findings indicate that the average annual growth rate is in the order of 1.50% but that a 2.50% figure could be used if local data suggest a relatively youthful population. As the Council has found a strong correlation between Doncaster's gypsy and traveller population age profile and the national picture, a 1.50% annual household growth rate has been used in its 2016 GTANA. Given the rigour of ORS's research and the Council's application of its findings to the local area I accept that a 1.50% figure is justified in the case of Doncaster.*

7.10 In addition, the Technical Note has recently been accepted as a robust academic evidence base and has been published by the Social Research Association in its journal Social Research Practice. The overall purpose of the journal is to encourage and promote high standards of social research for public benefit. It aims to encourage methodological development by giving practitioners the space and the incentive to share their knowledge – see link below.

http://the-sra.org.uk/journal-social-research-practice/

7.11 ORS assessments take full account of the net local household growth rate per annum for each local authority, calculated on the basis of demographic evidence from the site surveys, and the 'baseline' includes all current authorised households, all households identified as in current need (including concealed households, movement from bricks and mortar and those on waiting lists not currently living on a pitch or plot), as well as households living on tolerated unauthorised pitches or plots who are not included as current need. The assessments of future need also take account of modelling projections based on birth and death rates, and in-/out-migration.

7.12 Overall, the household growth rate used for the assessment of future needs has been informed by local evidence. This demographic evidence has been used to adjust the national growth rate of 1.50% up or down based on the proportion of those aged under 18 (by travelling status).

7.13 In certain circumstances where the numbers of households and children are low it may not be appropriate to apply a percentage rate for new household formation. In these cases a judgement will be made on likely new household formation based on the age and gender of the children. This will be based on the assumption that 50% of likely households to form will stay in the area. This is based on evidence from other GTAAs that ORS have completed across England and Wales.

Breakdown by 5 Year Bands

7.14 In addition to tables which set out the overall need for Gypsies and Travellers, the overall need has also been broken down by 5 year bands as required by PPTS (2015). The way that this is calculated is by including all current need (from unauthorised pitches, pitches with temporary planning permission, concealed and doubled-up households, 5 year need from older teenage children, and net movement from bricks and mortar) in the first 5 years. In addition the total net new household formation is split across the 5 year bands based on the compound rate of growth that was applied – as opposed to being spread evenly.

Applying the Planning Definition

7.15 The outcomes from the questions in the household survey on travelling were used to determine the status of each household against the planning definition in PPTS (2015). This assessment was based on the verbal responses to the questions given to interviewers as it is understood that oral evidence is capable of being sufficient when determining whether households meet the planning definition. Only those households that meet the planning definition, in that they were able to demonstrate that they travel for work purposes, and stay away from their usual place of residence when doing so – or that they have ceased to travel temporarily due to education, ill health or old age, form the components of need that will form the baseline of need in the GTAA. Households where an interview was not completed who **may** meet the planning definition have also been included as a potential additional component of need from unknown households.

7.16 Information that was sought from households where an interview was completed allowed each household to be assessed against the planning definition of a Traveller. This included information on whether households have ever travelled; why they have stopped travelling; the reasons that they travel; and whether they plan to travel again in the future. The table below sets out the travelling status of households living on the public site in in Havering.

Figure 8 – Planning status of households in Havering

Site Status	Meets Planning Definition	Does Not Meet Planning Definition	Unknown
Gypsies and Travellers			
Private Sites	2	1	1
Temporary Sites	10	-	11
Unauthorised Sites	6	2	12

Sub-Total	**18**	**3**	**24**
Travelling Showpeople			
Private Yards	1	-	4
Sub-Total	**1**	**0**	**4**
TOTAL	**19**	**3**	**28**

7.17 Figure 8 shows that for Gypsies and Travellers 18 households and for Travelling Showpeople, one household met the planning definition of a Traveller in that they were able to provide information demonstrating that they travel for work purposes and stay away from their usual place of residence, or have ceased to travel temporarily. A total of three Gypsy and Traveller households did not meet the planning definition as they were not able to demonstrate that they travel away from their usual place of residence for the purpose of work, or that they have ceased to travel temporarily due to children in education, ill health or old age. Some did travel for cultural reasons to visit fairs, relatives or friends, and others had ceased to travel permanently – these households did not meet the planning definition.

7.18 The number of households where an interview was not possible are recorded as unknown. The reasons for this included households that refused to be interviewed and households that were not present during the fieldwork period – despite up to three visits (and four visits in some cases).

Bricks and Mortar Interviews

7.19 Whilst the 2011 Census identified 46 households living in bricks and mortar in Havering who identified as a Gypsy or Irish Traveller, it was only possible to complete one interview, despite all of the efforts that were made. Whilst this household does meet the planning definition, they stated that they live in bricks and mortar through choice and have no plans or wishes to move to a site.

Gypsies and Travellers

Pitch Needs – Gypsies and Travellers that meet the Planning Definition

7.20 There were 18 households that met the planning definition. Analysis of the household interviews indicated that there is current need for two additional pitches as a result of concealed or doubled up households or adults, seven additional pitches for older teenage children in need of a pitch of their own in the next 5 years, six pitches on unauthorised developments, and nine pitches with temporary planning permission. The household demographics suggest that a new household formation rate of 1.80% should be used. This gives a total of nine additional pitches through new household formation over the 15 year GTAA period to 2031.

7.21 Therefore, the overall level of additional need for those households who meet the planning definition of a Gypsy or Traveller is for **33 additional pitches** over the 15 year GTAA period.

Figure 9 – Additional need for Gypsy and Traveller households in Havering that meet the Planning Definition (2016-31)

Gypsies and Travellers - Meeting Planning Definition	Pitches
Supply of Pitches	
Additional supply from vacant public and private pitches	0
Additional supply from pitches on new sites	0
Pitches vacated by households moving to bricks and mortar	0
Pitches vacated by households moving away from the study area	0
Total Supply	**0**
Current Need	
Households on unauthorised developments	6
Households on unauthorised encampments	0
Concealed households/Doubling-up/Over-crowding	2

Pitch Needs – Unknown Gypsies and Travellers

7.22 Whilst it was not possible to determine the travelling status of a total of 24 households as they either refused to be interviewed, or were not on site at the time of the fieldwork, the needs of these households still need to be recognised by the GTAA as they are believed to be ethnic Gypsies and Travellers and **may** meet the planning definition.

7.23 ORS are of the opinion that it would not be appropriate when producing a robust assessment of need to make any firm assumptions about whether or not households where an interview was not completed meet the planning definition based on the outcomes of households in that local authority where an interview was completed.

7.24 However, data that has been collected from over 1,800 household interviews that have been completed by ORS since the changes to PPTS in 2015 suggests that nationally approximately 10% of households that have been interviewed meet the planning definition.

[10] See Paragraph 7.10 for the components that make up the household base.

7.25 This would suggest that it is likely that only a small proportion of the potential need identified from these households will need new Gypsy and Traveller pitches, and that the needs of the majority will need to be addressed through other means.

7.26 Should further information be made available to the Council that will allow for the planning definition to be applied to the unknown households, the overall level of need could rise by up to 11 from pitches with temporary planning consents, by up to 12 from unauthorised pitches, and by up to six pitches from new household formation (this uses a base of the 24 households and a net growth rate of 1.5%[11]). Therefore, additional need could increase by up to a further 29 pitches, plus any concealed adult households or 5 year need arising from older teenagers living in these households (if all 24 unknown pitches are deemed to meet the planning definition). However, as an illustration, if the ORS national average of 10% were to be applied this could be as few as three additional pitches.

7.27 Whilst the proportion of households in Havering that meet the planning definition is higher than 10% this is based on a small household base. Therefore, it is felt that it would be more appropriate to consider the more statistically robust national figure.

7.28 Tables setting out the components of need for unknown households can be found in **Appendix B**.

Waiting Lists

7.29 There are no public sites in Havering so there is no waiting list.

Travelling Showpeople

Plot Needs – Travelling Showpeople that meet the Planning Definition

7.30 The one household that was interviewed that met the planning definition was found on a private yard. Analysis of the household interview indicated that there is no current or future need for additional plots.

7.31 Therefore, the overall level of additional need for those households who meet the planning definition of a Travelling Showperson is for **no additional plots** over the 15 year GTAA period.

Figure 11 – Additional need for Travelling Showpeople households in Havering that meet the Planning Definition (2016 - 31)

Travelling Showpeople - Meeting Planning Definition	Plots
Supply of Plots	
Additional supply from vacant public and private plots	0
Additional supply from plots on new yards	0

Plot Needs – Unknown Travelling Showpeople

7.32 It was not possible to determine the travelling status of a total of four households as they were not on site at the time of the fieldwork. However, the needs of these households still need to be recognised by the GTAA as they are believed to be Travelling Showpeople and may meet the planning definition as defined in PPTS.

7.33 The interview with the resident that does meet the planning definition identified that there was over-crowding on the yard and a need to provide additional plots for older teenage children. It was also stated that the families are looking to expand the yard on to adjacent land that they already own – and that this will meet all of their current and future needs.

Transit Requirements

7.34 When determining the potential need for transit provision the assessment has looked at data from the DCLG Caravan Count, the outcomes of the stakeholder interviews and records on numbers of unauthorised encampments, and the potential wider issues related to changes made to PPTS in 2015.

DCLG Caravan Count

7.35 Whilst it is considered to be a comprehensive national dataset on numbers of authorised and unauthorised caravans across England, it is acknowledged that the Caravan Count is a count of caravans and not households. It also does not record the reasons for unauthorised caravans. This makes it very difficult to interpret in relation to assessing future need because it does not count pitches or resident households. The count is also only a twice yearly (January and July) 'snapshot in time' conducted by local authorities on a specific day, and any caravans on unauthorised sites or encampments which occur on other dates are not recorded. Likewise any caravans that are away from sites on the day of the count are not included. As such it is not considered appropriate to use the outcomes from the Traveller Caravan Count in the

assessment of future transit provision. It does however provide valuable historic and trend data on whether there are instances of unauthorised caravans in local authority areas.

7.36 Data from the Caravan Count shows that apart from one large encampment in July 2015, there have been no non-tolerated unauthorised caravans on land not owned by Travellers recorded in the study area in recent years.

Stakeholder Interviews and Local Data

7.37 Information from the stakeholder interviews also identified that there are low levels of unauthorised encampments in Havering, and that the majority were short-term visiting family or friends, transient and simply passing through.

7.38 There is currently no formal transit provision and it was felt by officers that Gypsies and Travellers who travel through the area would not want to stay on a formal transit site. However, officers all agreed that there should be a London-wide approach to the provision of transit sites.

Potential Implications of PPTS (2015)

7.39 It has been suggested that there will need to be an increase in transit provision across the country as a result of changes to PPTS leading to more households travelling. This may well be the case but it will take some time for any changes to pan out. As such the use of historic evidence to make an assessment of future transit need is not recommended at this time. Any recommendation for future transit provision will need to make use of a robust post-PPTS (2015) evidence base and there has not been sufficient time yet for this to happen at this point in time.

Transit Recommendations

7.40 It is recommended that whilst there may be relatively high numbers of encampments in some areas, the situation relating to levels of unauthorised encampments should be continually monitored whilst any potential changes associated with PPTS (2015) develop.

7.41 A review of the evidence base relating to unauthorised encampments should be undertaken in autumn 2018 once there is a new 3 year evidence base following the changes to PPTS in August 2015 – including attempts to try and identify whether households on encampments meet the planning definition. This will establish whether there is a need for investment in more formal transit sites or emergency stopping places.

7.42 In the short-term the Council should consider the use of short-term toleration or negotiated stopping agreements to deal with any encampments, as opposed to taking forward an infrastructure-based approach. At this point whilst consideration should be given as to how to deal with households that do and do not meet the planning definition, from a practical point of view it is likely that households on all unauthorised encampments will need to be dealt with in the same way.

7.43 The term ‘negotiated stopping’ is used to describe agreed short term provision for Gypsy and Traveller caravans. It does not describe permanent ‘built’ transit sites but negotiated agreements which allow caravans to be sited on suitable specific pieces of ground for an agreed and limited period of time, with the provision of limited services such as water, waste disposal

and toilets. Agreements are made between the authority and the (temporary) residents regarding expectations on both sides.

7.44 Temporary stopping places can be made available at times of increased demand due to fairs or cultural celebrations that are attended by Gypsies and Travellers. A charge may be levied as determined by the local authority although they only need to provide basic facilities including: a cold water supply; portaloos; sewerage disposal point and refuse disposal facilities.

Appendix A: Glossary of Terms

Amenity block/shed	A building where basic plumbing amenities (bath/shower, WC, sink) are provided.
Bricks and mortar	Mainstream housing.
Caravan	Mobile living vehicle used by Gypsies and Travellers. Also referred to as trailers.
Chalet	A single storey residential unit which can be dismantled. Sometimes referred to as mobile homes.
Concealed household	Households, living within other households, who are unable to set up separate family units.
Doubling-Up	Where there are more than the permitted number of caravans on a pitch or plot.
Emergency Stopping Place	A temporary site with limited facilities to be occupied by Gypsies and Travellers while they travel.
Green Belt	A land use designation used to check the unrestricted sprawl of large built-up areas; prevent neighbouring towns from merging into one another; assist in safeguarding the countryside from encroachment; preserve the setting and special character of historic towns; and assist in urban regeneration, by encouraging the recycling of derelict and other urban land.
Household formation	The process where individuals form separate households. This is normally through adult children setting up their own household.
In-migration	Movement into or come to live in a region or community
Local Plans	Local Authority spatial planning documents that can include specific policies and/or site allocations for Gypsies, Travellers and Travelling Showpeople.
Negotiated Stopping	Mutually agreed short term provision for Gypsy and Traveller caravans which allow caravans to be sited on suitable specific pieces of ground for an agreed and limited period of time, with the provision of limited services such as water, waste disposal and toilets.

Out-migration	Movement from one region or community in order to settle in another.
Personal planning permission	A private site where the planning permission specifies who can occupy the site and doesn't allow transfer of ownership.
Pitch/plot	Area of land on a site/development generally home to one household. Can be varying sizes and have varying caravan numbers. Pitches refer to Gypsy and Traveller sites and Plots to Travelling Showpeople yards.
Private site	An authorised site owned privately. Can be owner-occupied, rented or a mixture of owner-occupied and rented pitches.
Site	An area of land on which Gypsies, Travellers and Travelling Showpeople are accommodated in caravans/chalets/vehicles. Can contain one or multiple pitches/plots.
Social/Public/Council Site	An authorised site owned by either the local authority or a Registered Housing Provider.
Temporary planning permission	A private site with planning permission for a fixed period of time.
Temporary Stopping Places	Short-term temporary sites made available at times of increased demand due to fairs or cultural celebrations that are attended by Gypsies and Travellers.
Tolerated site/yard	Long-term tolerated sites or yards where enforcement action is not expedient and a certificate of lawful use would be granted if sought.
Transit provision	Site intended for short stays and containing a range of facilities. There is normally a limit on the length of time residents can stay.
Unauthorised Development	Caravans on land owned by Gypsies and Travellers and without planning permission.
Unauthorised Encampment	Caravans on land not owned by Gypsies and Travellers and without planning permission.
Waiting list	Record held by the local authority or site managers of applications to live on a site.
Yard	A name often used by Travelling Showpeople to refer to a site.

Engagement with Travelling Showpeople that were interviewed suggested that need for unknown households as a result of over-crowding and future household formation can be met through expanding the current yard on to adjacent land already owned by the residents.

It is not now a requirement to include details of need from Gypsies and Travellers that do not meet the planning definition in the GTAA. However, an assessment of this need has been made to support the Council with its SHMA or HEDNA. There were no Travelling Showpeople in Havering that do not meet the planning definition.

Household Growth Rates

Abstract and conclusions

1. National and local household formation and growth rates are important components of Gypsy and Traveller accommodation assessments, but little detailed work has been done to assess their likely scale. Nonetheless, nationally, a net growth rate of 3% per annum has been commonly assumed and widely used in local assessments – even though there is actually no statistical evidence of households growing so quickly. The result has been to inflate both national and local requirements for additional pitches unrealistically.

2. Those seeking to provide evidence of high annual net household growth rates for Gypsies and Travellers have sometimes sought to rely on increases in the number of caravans, as reflected in caravan counts. However, caravan count data are unreliable and erratic – so the only proper way to project future population and household growth is through demographic analysis (which, of course, is used to assess housing needs in the settled community).

3. The growth in the Gypsy and Traveller population may be as low as 1.25% per annum – a rate which is much less than the 3% per annum often assumed, but still at least four times greater than in the general population. Even using extreme and unrealistic assumptions, it is hard to find evidence that net Gypsy and Traveller population and household growth rates are above 2% per annum nationally.

4. The often assumed 3% per annum net household growth rate is unrealistic and would require clear statistical evidence before being used for planning purposes. In practice, the best available evidence supports a national net household growth rate of 1.5% per annum for Gypsies and Travellers.

5. Some local authorities might perhaps allow for a household growth rate of up to 2.5% per annum, to provide a 'margin' if their populations are relatively youthful; but in areas where on-site surveys indicate that there are fewer children in the Gypsy and Traveller communities, the lower estimate of 1.5% per annum should be used for planning purposes.

Introduction

6. The rate of household growth is a key element in all housing assessments, including Gypsy and Traveller accommodation assessments. Compared with the general population, the relative youthfulness of many Gypsy and Traveller populations means that their birth rates are likely to generate higher-than-average population growth, and proportionately higher *gross* household formation rates. However, while their *gross* rate of household growth might be high, Gypsy and Traveller communities' future accommodation needs are, in practice, affected by any reduction in the number of households due to dissolution and/or by movements in/out of the area and/or by transfers into other forms of housing. Therefore, the *net* rate of household growth is the *gross* rate of formation *minus* any reductions in households due to such factors. Of course, it is the *net* rate that is important in determining future accommodation needs for Gypsies and Travellers.

7. In this context, it is a matter of concern that many Gypsy and Traveller accommodation needs assessments have not distinguished *gross* and *net* growth rates nor provided evidence for their assumed rates of household increase. These deficiencies are particularly important because when assumed growth rates are unrealistically high, and then compounded over a number of planning years, they can yield exaggerated projections of accommodation needs and misdirect public policy. Nonetheless, assessments and guidance documents have assumed 'standard' *net* growth rates of about 3% without sufficiently recognising either the range of factors impacting on the *gross* household growth rates or the implications of unrealistic assumptions when projected forward on a compound basis year by year.

8. For example, in a study for the Office of the Deputy Prime Minister ('Local Authority Gypsy and Traveller Sites in England', 2003), Pat Niner concluded that *net* growth rates as high as 2%-3% per annum should be assumed. Similarly, the Regional Spatial Strategies (RSS) (which continued to be quoted after their abolition was announced in 2010) used *net* growth rates of 3% per annum without providing any evidence to justify the figure (For example, 'Accommodation for Gypsies and Travellers and Travelling Showpeople in the East of England: A Revision to the Regional Spatial Strategy for the East of England July 2009').

9. However, the guidance of the Department of Communities and Local Government ('Gypsy and Traveller Accommodation Needs Assessments: Guidance', 2007) was much clearer in saying that:

> *The 3% family formation growth rate is used here as an example only. The appropriate rate for individual assessments will depend on the details identified in the local survey, information from agencies working directly with local Gypsy and Traveller communities, and trends identified from figures previously given for the caravan count.* [In footnote 6, page 25]

10. The guidance emphasises that local information and trends should always be taken into account – because the *gross* rate of household growth is moderated by reductions in households through dissolution and/or by households moving into bricks and mortar housing or moving to other areas. In other words, even if 3% is plausible as a *gross* growth rate, it is subject to moderation through such reductions in households through dissolution or moves. It is the resulting *net* household growth rate that matters for planning purposes in assessing future accommodation needs.

11. The current guidance also recognises that assessments should use local evidence for *net* future household growth rates. A letter from the Minister for Communities and Local Government (Brandon Lewis MP), to Andrew Selous MP (placed in the House of Commons library on March 26th 2014) said:

> *I can confirm that the annual growth rate figure of 3% does not represent national planning policy.*
>
> *The previous Administration's guidance for local authorities on carrying out Gypsy and Traveller Accommodation Assessments under the Housing Act 2004 is unhelpful in that it uses an illustrative example of calculating future accommodation need based on the 3% growth rate figure. The guidance notes that the appropriate rate for individual assessments will depend on the details identified in the local authority's own assessment of need. As such the Government is not endorsing or supporting the 3% growth rate figure,'*

12. Therefore, while there are many assessments where a national Gypsy and Traveller household growth rate of 3% per annum has been assumed (on the basis of 'standard' precedent and/or guidance), there is little to justify this position and it conflicts with current planning guidance. In this context, this document seeks to integrate available evidence about *net* household growth rates in order to provide a more robust basis for future assessments.

Compound growth

13. The assumed rate of household growth is crucially important for Gypsy and Traveller studies because for future planning purposes it is projected over time on a compound basis – so errors are progressively enlarged. For example, if an assumed 3% *net* growth rate is compounded each year then the implication is that the number of households will double in only 23.5 years; whereas if a *net* compound rate of 1.5% is used then the doubling of household numbers would take 46.5 years. The table below shows the impact of a range of compound growth rates.

Table 1
Compound Growth Rates and Time Taken for Number of Households to Double

Household Growth Rate per Annum	Time Taken for Household to Double
3.00%	23.5 years
2.75%	25.5 years
2.50%	28 years
2.25%	31 years
2.00%	35 years
1.75%	40 years
1.50%	46.5 years

14. The above analysis is vivid enough, but another illustration of how different rates of household growth impact on total numbers over time is shown in the table below – which uses a baseline of 100 households while applying different compound growth rates over time. After 5 years, the difference between a 1.5% growth rate and a 3% growth rate is only 8 households (116 minus 108); but with a 20-year projection the difference is 46 households (181 minus 135).

Table 2
Growth in Households Over time from a Baseline of 100 Households

Household Growth Rate per Annum	5 years	10 years	15 years	20 years	50 years	100 years
3.00%	116	134	156	181	438	1,922
2.75%	115	131	150	172	388	1,507
2.50%	113	128	145	164	344	1,181
2.25%	112	125	140	156	304	925
2.00%	110	122	135	149	269	724
1.75%	109	119	130	141	238	567
1.50%	108	116	125	135	211	443

15. In summary, the assumed rate of household growth is crucially important because any exaggerations are magnified when the rate is projected over time on a compound basis. As we have shown, when compounded and projected over the years, a 3% annual rate of household growth implies much larger future Gypsy and Traveller accommodation requirements than a 1.5% per annum rate.

Caravan counts

16. Those seeking to demonstrate national Gypsy and Traveller household growth rates of 3% or more per annum have, in some cases, relied on increases in the number of caravans (as reflected in caravan counts) as their evidence. For example, some planning agents have suggested using 5-year trends in the national caravan count as an indication of the general rate of Gypsy and Traveller household growth. For example, the count from July 2008 to July 2013 shows a growth of 19% in the number of caravans on-site – which is equivalent to an average annual compound growth rate of 3.5%. So, *if plausible*, this approach could justify using a 3% or higher annual household growth rate in projections of future needs.

17. However, caravan count data are unreliable and erratic. For example, the July 2013 caravan count was distorted by the inclusion of 1,000 caravans (5% of the total in England) recorded at a Christian event near Weston-Super-Mare in North Somerset. Not only was this only an estimated number, but there were no checks carried out to establish how many caravans were occupied by Gypsies and Travellers. Therefore, the resulting count overstates the Gypsy and Traveller population and also the rate of household growth.

18. ORS has applied the caravan-counting methodology hypothetically to calculate the implied national household growth rates for Gypsies and Travellers over the last 15 years, and the outcomes are shown in the table below. The January 2013 count suggests an average annual growth rate of 1.6% over five years, while the July 2013 count gives an average 5-year rate of 3.5%; likewise a study benchmarked at January 2004 would yield a growth rate of 1%, while one benchmarked at January 2008 would imply a 5% rate of growth. Clearly any model as erratic as this is not appropriate for future planning.

Table 3
National CLG Caravan Count July 1998 to July 2014 with Growth Rates (Source: CLG)

Date	Number of caravans	5 year growth in caravans	Percentage growth over 5 years	Annual over last 5 years.

Jan 1999	13,009			
Jul 1998	13,545			

19. The annual rate of growth in the number of caravans varies from slightly over 1% to just over 5% per annum, but if longer time periods are used the figures become more stable. Over the 36-year period from 1979 (the start of the caravan count) to 2015, the average compound growth rate in caravan numbers has been 2.5% per annum.

20. However, there is no reason to believe that the widely varying annual rates correspond with similar rates of increase in the household population. In fact, the highest rates of caravan growth occurred between 2006 and 2009, when the first wave of Gypsy and Traveller Accommodation Needs Assessments were being undertaken – so it is likely that the assessments prompted the inclusion of additional sites and caravans (which may have been there, but not counted previously). In reality, counting caravans is a poor indicator of Gypsy and Traveller household growth rates, for caravans are not always occupied by Gypsy and Traveller families; and the number of caravans held by families may increase with affluence and as economic conditions improve, but without a corresponding growth in the number of households.

21. Therefore, caravan counts are not appropriate planning guides: the only proper way to project future population and household growth is through demographic analysis – which should consider both population and household growth rates.

Modelling population growth

Introduction

22. The basic equation for calculating the rate of Gypsy and Traveller population growth seems simple: start with the base population and then calculate the average increase/decrease by allowing for births, deaths and in-/out-migration. Nevertheless, deriving satisfactory estimates is difficult because the evidence is often tenuous – so, in this context, ORS has modelled the growth of the national Gypsy and Traveller population based on the most likely birth and death rates, and by using PopGroup (the leading software for population and household forecasting). To do so, we have supplemented the available national statistical sources with data derived locally (from our own surveys) and in some cases from international research.

None of the supplementary data are beyond question, and none will stand alone; but, when taken together they have cumulative force. In any case the approach we adopt is more critically self-aware than simply adopting 'standard' rates on the basis of precedent.

Migration effects

23. Population growth is affected by national net migration and local migration (as Gypsies and Travellers move from one area to another). In terms of national migration, the population of Gypsies and Travellers is relatively fixed, with little international migration. It is in principle possible for Irish Travellers (based in Ireland) to move to the UK, but there is no evidence of this happening to a significant extent and the vast majority of Irish Travellers were born in the UK or are long-term residents. In relation to local migration effects, Gypsies and Travellers can and do move between local authorities – but in each case the in-migration to one area is matched by an out-migration from another area. Since it is difficult to estimate the net effect of such movements over local plan periods, ORS normally assumes that there will be nil net migration to/from an area. Nonetheless, where it is possible to estimate specific in-/out- migration effects, we take account of them, while distinguishing between migration and household formation effects.

Population profile

24. The main source for the rate of Gypsy and Traveller population growth is the UK 2011 Census. In some cases the data can be supplemented by ORS's own household survey data which is derived from more than 2,000 face-to-face interviews with Gypsies and Travellers since 2012. The ethnicity question in the 2011 census included for the first time 'Gypsy and Irish Traveller' as a specific category. While non-response bias probably means that the size of the population was underestimated, the age profile the census provides is not necessarily distorted and matches the profile derived from ORS's extensive household surveys.

25. The age profile is important, as the table below (derived from census data) shows. Even assuming zero deaths in the population, achieving an annual population growth of 3% (that is, doubling in size every 23.5 years) would require half of the "year one" population to be aged under 23.5 years. When deaths are accounted for (at a rate of 0.5% per annum), to achieve the same rate of growth, a population of Gypsies and Travellers would need about half its members to be aged under 16 years. In fact, though, the 2011 census shows that the midway age point for the national Gypsy and Traveller population is 26 years – so the population could not possibly double in 23.5 years.

Table 4
Age Profile for the Gypsy and Traveller Community in England (Source: UK Census of Population 2011)

Age Group	Number of People	Cumulative Percentage
Age 0 to 4	5,725	10.4
Age 5 to 7	3,219	16.3
Age 8 to 9	2,006	19.9
Age 10 to 14	5,431	29.8
Age 15	1,089	31.8
Age 16 to 17	2,145	35.7
Age 18 to 19	1,750	38.9
Age 20 to 24	4,464	47.1

Age 25 to 29	4,189	54.7
Age 30 to 34	3,833	61.7
Age 35 to 39	3,779	68.5
Age 40 to 44	3,828	75.5
Age 45 to 49	3,547	82.0
Age 50 to 54	2,811	87.1
Age 55 to 59	2,074	90.9
Age 60 to 64	1,758	94.1
Age 65 to 69	1,215	96.3
Age 70 to 74	905	97.9
Age 75 to 79	594	99.0
Age 80 to 84	303	99.6
Age 85 and over	230	100.0

Birth and fertility rates

26. The table above provides a way of understanding the rate of population growth through births. The table shows that surviving children aged 0-4 years comprise 10.4% of the Gypsy and Traveller population – which means that, on average, 2.1% of the total population was born each year (over the last 5 years). The same estimate is confirmed if we consider that those aged 0-14 comprise 29.8% of the Gypsy and Traveller population – which also means that almost exactly 2% of the population was born each year. (Deaths during infancy will have minimal impact within the early age groups, so the data provides the best basis for estimating of the birth rate for the Gypsy and Traveller population.)

27. The Total Fertility Rate (TFR) for the whole UK population is just below 2 – which means that on average each woman can be expected to have just less than two children who reach adulthood. We know of only one estimate of fertility rates of the UK Gypsy and Traveller community, in 'Ethnic identity and inequalities in Britain: The dynamics of diversity' by Dr Stephen Jivraj and Professor Ludi Simpson (published May 2015). The authors use 2011 Census data to estimate the TFR for the Gypsy and Traveller community as 2.75.

28. At ORS we have used our own household survey data[1] to investigate the fertility rates of Gypsy and Traveller women. The ORS data shows that on average Gypsy and Traveller women aged 32 years have 2.5 children (but, because the children of mothers above this age point tend to leave home progressively, full TFRs were not completed). On this basis it is reasonable to infer an average of three children per woman during her lifetime, which is broadly consistent with the estimate of 2.75 children per woman derived from the 2011 Census. In any case, the TFR for women aged 24 years is 1.5 children, which is significantly short of the number needed to double the population in 23.5 years – and therefore certainly implies a net growth rate of less than 3% per annum.

Death rates

29. Although the above data imply an annual growth rate through births of about 2%, the death rate has also to be taken into account – which means that the *net* population growth cannot conceivably achieve 2% per

[1] Approximately 2,000 household interviews across approximately 950 sites in England and Wales

annum. In England and Wales there are nearly half-a-million deaths each year – about 0.85% of the total population of 56.1 million in 2011. If this death rate is applied to the Gypsy and Traveller community then the resulting projected growth rate is in the region of 1.15%-1.25% per annum.

30. However, the Gypsy and Traveller population is significantly younger than average and may be expected to have a lower percentage death rate overall (even though a smaller than average proportion of the population lives beyond 68 to 70 years). While there can be no certainty, an assumed death rate of around 0.5% to 0.6% per annum would imply a net population growth rate of around 1.5% per annum.

31. Even though the population is younger and has a lower death rate than average, Gypsies and Travellers are less likely than average to live beyond 68 to 70 years. Whereas the average life expectancy across the whole population of the UK is currently just over 80 years, a Sheffield University study found that Gypsy and Traveller life expectancy is about 10-12 years less than average (Parry et al (2004) 'The Health Status of Gypsies and Travellers: Report of Department of Health Inequalities in Health Research Initiative', University of Sheffield). Therefore, in our population growth modelling we have used a conservative estimate of average life expectancy as 72 years – which is entirely consistent with the lower-than-average number of Gypsies and Travellers aged over 70 years in the 2011 census (and also in ORS's own survey data). On the basis of the Sheffield study, we could have supposed a life expectancy of only 68, but we have been cautious in our approach.

Modelling outputs

32. If we assume a TFR of 3 and an average life expectancy of 72 years for Gypsies and Travellers, then the modelling projects the population to increase by 66% over the next 40 years – implying a population compound growth rate of 1.25% per annum (well below the 3% per annum often assumed). If we assume that Gypsy and Traveller life expectancy increases to 77 years by 2050, then the projected population growth rate rises to nearly 1.5% per annum. To generate an 'upper range' rate of population growth, we have assumed a TFR of 4 and an average life expectancy rising to 77 over the next 40 years – which then yields an 'upper range' growth rate of 1.9% per annum. We should note, though, that national TFR rates of 4 are currently found only in sub-Saharan Africa and Afghanistan, so it is an implausible assumption.

33. There are indications that these modelling outputs are well founded. For example, in the ONS's 2012-based Sub-National Population Projections the projected population growth rate for England to 2037 is 0.6% per annum, of which 60% is due to natural change and 40% due to migration. Therefore, the natural population growth rate for England is almost exactly 0.35% per annum – meaning that our estimate of the Gypsy and Traveller population growth rate is four times greater than that of the general population of England.

34. The ORS Gypsy and Traveller findings are also supported by data for comparable populations around the world. As noted, on the basis of sophisticated analysis, Hungary is planning for its Roma population to grow at around 2.0% per annum, but the underlying demographic growth is typically closer to 1.5% per annum. The World Bank estimates that the populations of Bolivia, Cambodia, Egypt, Malaysia, Pakistan, Paraguay, Philippines and Venezuela (countries with high birth rates and improving life expectancy) all show population growth rates of around 1.7% per annum. Therefore, in the context of national data, ORS's modelling and plausible international comparisons, it is implausible to assume a net 3% annual growth rate for the Gypsy and Traveller population.

Household growth

35. In addition to population growth influencing the number of households, the size of households also affects the number. Hence, population and household growth rates do not necessarily match directly, mainly due to the current tendency for people to live in smaller (childless or single person) households (including, of course, older people (following divorce or as surviving partners)). Based on such factors, the CLG 2012-based projections convert current population data to a projected household growth rate of 0.85% per annum (compared with a population growth rate of 0.6% per annum).

36. Because the Gypsy and Traveller population is relatively young and has many single parent households, a 1.5% annual population growth could yield higher-than-average household growth rates, particularly if average household sizes fall or if younger-than-average households form. However, while there is evidence that Gypsy and Traveller households already form at an earlier age than in the general population, the scope for a more rapid rate of growth, through even earlier household formation, is limited.

37. Based on the 2011 census, the table below compares the age of household representatives in English households with those in Gypsy and Traveller households – showing that the latter has many more household representatives aged under-25 years. In the general English population 3.6% of household representatives are aged 16-24, compared with 8.7% in the Gypsy and Traveller population. Because the census includes both housed and on-site Gypsies and Travellers without differentiation, it is not possible to know if there are different formation rates on sites and in housing. However, ORS's survey data (for sites in areas such as Central Bedfordshire, Cheshire, Essex, Gloucestershire and a number of authorities in Hertfordshire) shows that about 10% of Gypsy and Traveller households have household representatives aged under-25 years.

Table 5
Age of Head of Household (Source: UK Census of Population 2011)

Age of household representative	All households in England		Gypsy and Traveller households in England	
	Number of households	Percentage of households	Number of households	Percentage of households
Age 24 and under	790,974	3.6%	1,698	8.7%
Age 25 to 34	3,158,258	14.3%	4,232	21.7%
Age 35 to 49	6,563,651	29.7%	6,899	35.5%
Age 50 to 64	5,828,761	26.4%	4,310	22.2%
Age 65 to 74	2,764,474	12.5%	1,473	7.6%
Age 75 to 84	2,097,807	9.5%	682	3.5%
Age 85 and over	859,443	3.9%	164	0.8%
Total	22,063,368	100%	19,458	100%

38. The following table shows that the proportion of single person Gypsy and Traveller households is not dissimilar to the wider population of England; but there are more lone parents, fewer couples without children, and fewer households with non-dependent children amongst Gypsies and Travellers. This data suggest that Gypsy and Traveller households form at an earlier age than the general population.

Table 6
Household Type (Source: UK Census of Population 2011)

Household Type	All households in England		Gypsy and Traveller households in England	
	Number of households	Percentage of households	Number of households	Percentage of households
Single person	6,666,493	30.3%	5,741	29.5%
Couple with no children	5,681,847	25.7%	2345	12.1%
Couple with dependent children	4,266,670	19.3%	3683	18.9%
Couple with non-dependent children	1,342,841	6.1%	822	4.2%
Lone parent: Dependent children	1,573,255	7.1%	3,949	20.3%
Lone parent: All children non-dependent	766,569	3.5%	795	4.1%
Other households	1,765,693	8.0%	2,123	10.9%
Total	22,063,368	100%	19,458	100%

39. ORS's own site survey data is broadly compatible with the data above. We have found that: around 50% of pitches have dependent children compared with 45% in the census; there is a high proportion of lone parents; and about a fifth of Gypsy and Traveller households appear to be single person households. One possible explanation for the census finding a higher proportion of single person households than the ORS surveys is that many older households are living in bricks and mortar housing (perhaps for health-related reasons).

40. ORS's on-site surveys have also found more female than male residents. It is possible that some single person households were men linked to lone parent females and unwilling to take part in the surveys. A further possible factor is that at any time about 10% of the male Gypsy and Traveller population is in prison – an inference drawn from the fact that about 5% of the male prison population identify themselves as Gypsies and Travellers ('People in Prison: Gypsies, Romany and Travellers', Her Majesty's Inspectorate of Prisons, February 2004) – which implies that around 4,000 Gypsies and Travellers are in prison. Given that almost all of the 4,000 people are male and that there are around 200,000 Gypsies and Travellers in total, this equates to about 4% of the total male population, but closer to 10% of the adult male population.

41. The key point, though, is that since 20% of Gypsy and Traveller households are lone parents, and up to 30% are single persons, there is limited potential for further reductions in average household size to increase current household formation rates significantly – and there is no reason to think that earlier household formations or increasing divorce rates will in the medium term affect household formation rates. While there are differences with the general population, a 1.5% per annum Gypsy and Traveller population

growth rate is likely to lead to a household growth rate of 1.5% per annum – more than the 0.85% for the English population as a whole, but much less than the often assumed 3% rate for Gypsies and Travellers.

Household dissolution rates

42. Finally, consideration of household dissolution rates also suggests that the net household growth rate for Gypsies and Travellers is very unlikely to reach 3% per annum (as often assumed). The table below, derived from ORS's mainstream strategic housing market assessments, shows that generally household dissolution rates are between 1.0% and 1.7% per annum. London is different because people tend to move out upon retirement, rather than remaining in London until death. To adopt a 1.0% dissolution rate as a standard guide nationally would be too low, because it means that average households will live for 70 years after formation. A 1.5% dissolution rate would be a more plausible as a national guide, implying that average households live for 47 years after formation.

Table 7
Annual Dissolution Rates (Source: SHMAs undertaken by ORS)

Area	Annual projected household dissolution	Number of households	Percentage
Greater London	25,000	3,266,173	0.77%
Blaenau Gwent	468.2	30,416	1.54%
Bradford	3,355	199,296	1.68%
Ceredigion	348	31,562	1.10%
Exeter, East Devon, Mid Devon, Teignbridge and Torbay	4,318	254,084	1.70%
Neath Port Talbot	1,352	57,609	2.34%
Norwich, South Norfolk and Broadland	1,626	166,464	0.98%
Suffolk Coastal	633	53,558	1.18%
Monmouthshire Newport Torfaen	1,420	137,929	1.03%

43. The 1.5% dissolution rate is important because the death rate is a key factor in moderating the *gross* household growth rate. Significantly, applying a 1.5% dissolution rate to a 3% *gross* household growth formation rate yields a *net* rate of 1.5% per annum – which ORS considers is a realistic figure for the Gypsy and Traveller population and which is in line with other demographic information. After all, based on the dissolution rate, a *net* household formation rate of 3% per annum would require a 4.5% per annum *gross* formation rate (which in turn would require extremely unrealistic assumptions about birth rates).

Summary conclusions

44. Future Gypsy and Traveller accommodation needs have typically been over-estimated because population and household growth rates have been projected on the basis of assumed 3% per annum net growth rates.

45. Unreliable caravan counts have been used to support the supposed growth rate, but there is no reason to suppose that the rate of increase in caravans corresponds to the annual growth of the Gypsy and Traveller population or households.

46. The growth of the national Gypsy and Traveller population may be as low as 1.25% per annum – which is still four times greater than in the settled community. Even using extreme and unrealistic assumptions, it is hard to find evidence that the net national Gypsy and Traveller population and household growth is above 2% per annum nationally. The often assumed 3% net household growth rate per annum for Gypsies and Travellers is unrealistic.

47. The best available evidence suggests that the net annual Gypsy and Traveller household growth rate is 1.5% per annum. The often assumed 3% per annum net rate is unrealistic. Some local authorities might allow for a household growth rate of up to 2.5% per annum, to provide a 'margin' if their populations are relatively youthful; but in areas where on-site surveys indicate that there are fewer children in the Gypsy and Traveller population, the lower estimate of 1.5% per annum should be used.

Havering
LONDON BOROUGH

CABINET MEETING
19th JULY 2017

HAVERING LOCAL PLAN

GYPSY AND TRAVELLER POSITION STATEMENT 2017

Havering Proposed Submission Local Plan

Gypsy and Traveller Accommodation Position Statement

July 2017

Introduction

This position statement has been prepared to support the Proposed Submission Local Plan.

The purpose of this paper is set out the Council's approach to meeting Gypsy and Traveller accommodation needs within Havering.

This statement should be read alongside the Havering Gypsy and Traveller Needs Accommodation Assessment 2017 which forms a key part of the evidence base for the Havering Local Plan.

Policy context

Planning Policy for Traveller Sites (PPTS)

The Planning Policy for Traveller Sites was published in 2012 (and updated in 2015) to accompany the NPPF. It sets out the direction of Government policy as well as introducing the planning definition of a Traveller.

The overarching aim of the Government is to ensure fair and equal treatment for travellers in a way that facilitates the traditional and nomadic way of life while respecting the interests of the settled community.

The policy document states that Local Planning Authorities should set pitch targets for gypsies and travellers which address the likely permanent and transit site accommodation needs of travellers in their area. The Government recognise the importance of informing the plan making process with a robust evidence base which assesses accommodation needs.

The Policy aims to protect the Green Belt from inappropriate development and protect local amenity and the environment. It also seeks to reduce the number of unauthorised development and encampments and reduce tensions between the settled and traveller communities. The Government also recognise the importance of private traveller site provision while acknowledging that there will always be those travellers who cannot provide their own sites.

The London Plan

Policy 3.8 of the London Plan recognises that Londoners should have a genuine choice of homes that they can afford and which meet their requirements for difference sizes and types of dwellings. Taking account of housing requirements identified at regional, sub-regional and local levels, boroughs should work with the Mayor and local communities to identify the range of needs likely to arise within their areas and ensure that the accommodation requirements of Gypsies and Travellers (including travelling show people) are identified and addressed in line with national policy.

The Mayor does not consider it appropriate to include detailed policies for the provision of sites for Gypsies and Travellers and Travelling Show People in the London Plan because of the level of locally-specific detail involved and the scale of the issue. Local authorities are responsible for determining the right level of site provision in their areas in consultation with local communities and setting targets for provision based on robust evidence of local need.

The Mayor believes that the boroughs are best placed to assess the needs and make provision for these groups through new pitch provision, protection or enhancement of existing pitches, or by other means.

Gypsy and Traveller Accommodation Needs

The Havering Gypsy and Traveller Accommodation Assessment (GTAA) 2017 provides a robust assessment of current and future need for Gypsy, Traveller and Travelling Showpersons accommodation in the borough up to 2031. The Assessment identifies a need for 33 additional pitches for the Gypsy and Traveller households who meet the planning definition as set out in the National Planning Policy for Traveller Sites. Of the 33 pitches needed, 26 pitches are required within the first 5 year period of the Plan (2016 – 2021), and the remaining 7 pitches in the latter part of the plan period. No additional need has been identified for plots for Travelling Showpeople over the 15 year plan period (2016-2031). Refer to the GTAA for further details.

Havering's approach to meeting need

The GTAA demonstrates that all gypsy and traveller families living in the borough currently occupy privately owned sites within the Green Belt.

In accordance with National Planning Policy Gypsy and Traveller pitches are inappropriate development in the Green Belt and can only be permitted in very special circumstances.

The Council has considered whether there are any deliverable sites outside of the Green Belt which could accommodate gypsy and traveller pitches. However, it has not been possible to identify any suitable sites for the following reasons:

There are no publically owned/operated gypsy and traveller sites within the Borough. Havering is therefore dependant on privately owned sites to accommodate the identified need.

A review of Council owned land has been undertaken but no sites that are surplus to requirements or suitable for gypsy and traveller sites have been identified.

The Council has considered whether any privately owned potential housing sites (outside of the green belt) could be identified for gypsy and traveller use. A key concern when considering any such sites is their deliverability. The Council has had to consider whether private land owners would bring these sites forward and whether existing gypsy and traveller families living in the borough could purchase such sites particularly in light of the land values in Havering.

The gypsy and traveller families that form part of the overall need (as identified in the GTAA) have all lived in the borough, on their sites within the Green Belt, for a number of years and many of the sites have children living on them. Consideration has been given the provision of stable, safe and secure places to live and the benefits of enabling settled children continued access to the schools they currently attend.

The Council is of the view that, in light of the information set out above and the unmet need for gypsy and traveller accommodation there are, in this situation, very special circumstances that outweighs the harm to the Green Belt.

The Council's proposed approach to meeting Gypsy and Traveller needs wihin the Local Plan is therefore to formalise and where appropriate intensify the existing occupied sites within the green belt. The sites have been identified based on whether the occupants meet the planning definition of a Traveller and therefore contribute to the overall need set out in the GTAA. These sites are:

- Tyas Stud Farm rear of Latchford Farm
- Vinegar Hill
- Hogbar Farm West
- Ashlea View, Tomkyns Lane
- Benskins Lane
- Fairhill Rise
- Hogbar Farm East
- Lower Bedfords Road
- The Caravan Park, Putwell Bridge

Annex 1 Site Assessments

facilities (e.g. food shop) within 2km of the site									
Site located within 800m of a public transport route	Yes	Yes	Yes	No (1.25km's)	No (1.9km's)	Yes	Yes	Yes	Yes
Impact of the site on local character and appearance of the surrounding area?	Low Impact. Site set well away from the road- no detrimental impact when seen from the M25, trains or footpath to the east.	Low impact. Site forms a narrow wedge of land that is mostly contained by existing development to the south and east. As such, the visual impact and encroachment into the Green Belt is limited.	Low impact. Site forms a narrow wedge of land that is mostly contained by existing development to the south and east. As such, the visual impact and encroachment into the Green Belt is limited.	Low impact. Residential development on the site is set back from Tomkyns Lane, is screened by vegetation and has a low impact on the local character, appearance and general openness of the area.	Medium impact. Mature woodland cut down to enable development of this site and others and as such, development of the sites has had a high impact on the rural character and wooded appearance of the area and the erosion of the openness of the Green Belt.	Low impact. Site forms a narrow wedge of land that is mostly contained by existing development to the south and east. As such, the visual impact and encroachment into the Green Belt is limited.	Low impact. Site forms a narrow wedge of land that is mostly contained by existing development to the south and east. As such, the visual impact and encroachment into the Green Belt is limited.	Low impact. While the north side of Lower Bedfords Road is open countryside leading to Bedfords Park, the south side contains ribbon development of mostly bungalows, although the neighbouring properties to the east are a pair of semi-detached houses.	Low impact, site set well away from the road and residential properties and as such, has low impact on the local character, appearance and general open-ness of the area.
What is the impact of the site on the amenity of nearby residents?	Low Impact. Latchford Farm and Wyngards Farm situated to the east of the site are the only neighbouring properties and the site does not have any detrimental impact on the amenity of these residents.	Low impact on the residents of Stanwyck Gardens and Straight Road to the rear of the site. Noise from site residents no different to neighbouring houses.	Low impact. Site is situated to the west of Stanwyck Gardens and does not border these residential properties.	Low impact. Sporadic residential development along Tomkyns Lane and no adjoining properties.	Low impact- Sporadic residential development along Benskins Lane and no adjoining properties.	Low impact on the residents of Stanwyck Gardens owning to the distance between the location of accommodation on the site and the rear of the residential properties. Noise from site residents no different to neighbouring houses.	Low-medium impact. The properties on Stanwyck Gardens are situated at a lower level in relation to those on this site. However, this can be addressed through landscaping to the rear of the site. Noise from site residents no different to neighbouring houses.	Low impact. The residential area of the site is set back from the road and does not directly over-look any neighbouring properties.	Low impact owning to the distance between the location of accommodation on the site and the nearest residential properties which are some distance away.
Can the site provide site	The site has visual privacy	Yes. Fencing around site	Yes. Fencing and tree cover	The residential area is set back	Each of the six sites is	Yes. Fencing around site	Yes. Fencing around site	Wall and entrance gate	Yes. Fencing around site

residents with visual and acoustic privacy?	from Latchfords Farm and Wyngards Farm and the residential area is situated at the southern end of the site, some considerable distance from the railway line. HAVERING LOCAL PLAN

TOWN CENTRE POSITION STATEMENT 2017

Havering
LONDON BOROUGH

TOWN CENTRE POSITION STATEMENT

JULY 2017

1. INTRODUCTION

1.1 This position statement has been prepared to support the Proposed Submission Local Plan.

1.2 The purpose of the statement is to:

- Outline the key findings of a town centre audit that was carried out and completed in August 2016 as part of the evidence base for the Local Plan, and to;

- Demonstrate how the town centre audit has informed the policy approach in the Proposed Submission Local Plan.

1.3 The town centre audit provides a greater understanding of the composition of uses that exist within the Boroughs Metropolitan Centre of Romford, 6 District Centres of Hornchurch, Upminster, Collier Row, Harold Hill, Rainham and Elm Park and the Boroughs diffuse network of Local Centres.

1.4 This statement should be considered alongside the Havering Retail and Commercial Leisure Needs Assessment 2015 which also forms part of the evidence base for the Local Plan.

2. HAVERING'S TOWN CENTRE AUDIT

2.1 The objective of the town centre audit was to provide evidence and justification in support of the Proposed Submission Local Plan, specifically in relation to:

- The suitability of the current town centre boundaries and whether any amendments are needed to the primary and secondary frontages;

- Identifying an appropriate percentage of A1 units within the primary and secondary frontages required to maintain a sustainable mix of uses within town centres; and

- Identifying over-concentrations of particular uses and how this can be managed.

3. HAVERING'S TOWN CENTRE AUDIT

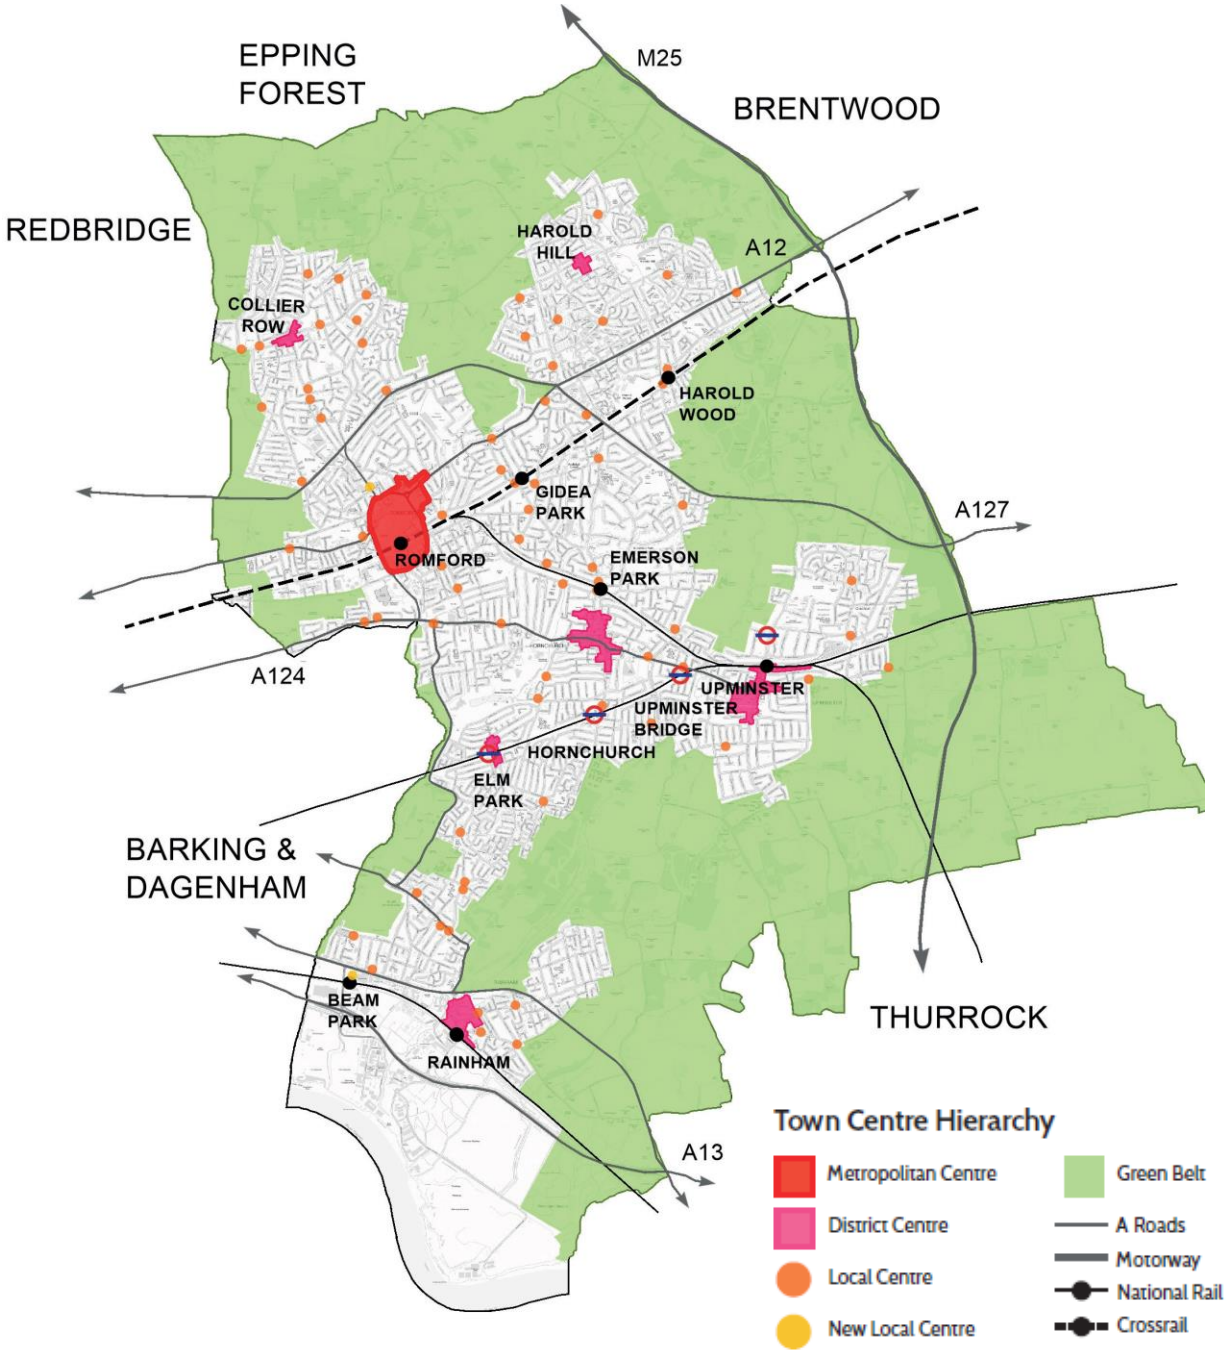
3.1 The audit was undertaken by the Council over a period of 3 weeks in August 2016. It included Havering's Metropolitan Centre of Romford, six District Centres of Upminster, Hornchurch, Elm Park, Collier Row, Harold Wood and Rainham, and the boroughs 77 Local Centres.

3.2 The boundary for each centre surveyed was based on existing information from the 2008 Havering Local Development Framework, which also included primary and secondary retail frontage designations. In some cases, the survey was extended (as a result of the site visits) where it was felt to be a logical addition to the survey area and where the Council may wish to consider a revised town centre boundary.

3.3 The primary use of each existing unit along with the business name and address were recorded. The use class of each unit was identified using the Town and Country Planning (Use Classes) Order 1987 (as amended).

3.4 This audit was carried out solely for the purpose of informing the Local Plan. Town Centre Health Checks are carried out on a quarterly basis by the Town Centre Management Team for Romford and the District Centres and will be used to monitor town centre performance over the Plan period.

Map 1: Havering's Town Centre Network



4. KEY FINDINGS AND RECOMMENDATIONS

4.1 This section set outs out the key findings and recommendations relating to town centre boundaries and primary and secondary frontages.

4.2 In line with the National Planning Policy Framework, primary frontages should be focused around areas with the highest concentration of A1 uses. Secondary frontages are reserved for a more diverse range of uses which should be actively encouraged.

a. ROMFORD

	Romford Town Centre		Romford Primary Frontage		Romford Secondary Frontage	
Total Units	**267**	**100%**	**156**	**100%**	**111**	**100%**
A1	118	44%	83	53%	35	32%
A2	31	12%	17	11%	14	13%
A3	33	12%	20	13%	13	12%
A4	9	3%	8	5%	1	1%
A5	9	3%	1	1%	8	7%
Sui Generis (Total)	25	9%	13	8%	12	11%
Sui Generis (Betting Shops)	8	3%	6	4%	2	2%
Sui Generis (Pay day loans)	3	1%	2	1%	1	1%
D1	5	2%	0	0%	5	5%
D2	3	1%	1	1%	2	2%
B1	5	2%	0	0%	5	5%
Vacant	29	11%	13	8%	16	14%

i. As a result of the audit and site visit, it is recommended that minor amendments be made to the existing LDF Metropolitan Centre boundary, with the new boundary to be drawn around the ring road and and to extend into the civic quarter, incorporating the public offices and buildings located here.

ii. As a result of such action, this would in turn create an additional Local Centre at North Street, incorporating numbers 68-78, 88-148 evens and 95-105, 117-137 odds.

iii. This is illustrated below in map 2.

iv. In terms of shopping frontages, amends were made to the primary frontage to consolidate the primary shopping area. Furthermore, the secondary frontage was increased at Victoria Road and now includes the whole road up to the town centre boundary as indicated on the map.

Sui Generis (Total)	9	14%	7	13%	2	14%
Sui Generis (Betting Shops)	2	3%	2	4%	0	0%
Sui Generis (Pay day loans)	0	0%	0	0%	0	7%
D1	1	2%	0	0%	1	0%
D2	0	0%	0	0%	0	0%
B1	0	0%	0	0%	0	0%
Vacant	2	3%	1	2%	1	7%

i. As a result of the audit, it is recommended that minor amendments are made to the existing Harold Hill District Centre boundary.

ii. This is due to residential development to the north of the centre beyond Hilldene Avenue which has resulted in the detachment of this area from the rest of the centre and its primary retailing function.

iii. Map 3 below illustrates the proposed new Harold Hill boundary.

iv. No further changes were identified to the primary or secondary frontages.

Vacant	0	0%	0	0%	0	0%

i. No reasons to modify the Rainham centre boundary were found; therefore it is recommended that the boundary is preserved

ii. No changes were identified to the primary or secondary frontages.

h. LOCAL CENTRES

i. Results of the Local Centre audit can be viewed in Annex I.

ii. As a result of the audit, it is recommended to de-designate the following centres:

   a. Fitzilian Avenue, Harold Wood Local Centre; following a sustained period of redevelopment that has replaced most of the centre, the centre currently fails to provide any convenience provision and as such, can be argued to no longer serve the key local centre function and;

   b. Mawney Road South, Romford Local Centre, due to an extremely limited convenience offer which can be argued to no longer fulfil the functions of a Local Centre.

iii. In light of the proposed residential development at Rainham and Beam Park and in line with the Rainham and Beam Park Masterplan, it is recommended that a new Local Centre is developed at Beam Park Station.

iv. A new Local Centre is proposed in North Street, Romford which covers the properties previously included as part of the fringe area of Romford Metropolitan Centre as this has been amended (see Romford section above).

v. Further, it is recommended that the properties in the Local Centres are updated to reflect the Local Centre audit

5. IMPLICATIONS FOR PROPERTY

Preserving the primary shopping function

5.1 NPPF guidelines state that within primary frontages, Use Class A1 should be the principal and most dominant land use as this contains the most important shopping facilities, those which attract the greatest number of customers and which contribute most to the vitality and viability of the respective centres.

5.2 Due to the Permitted Development rights regarding the change of use from A1 to A2, it is justified to set a combined percentage for A1 and A2 uses. Considering the key findings, it is recommended a threshold of 60% be set, allowing town centres room to further diversify while maintaining the primary shopping function at a reasonable level.

5.3 The audit also provided the opportunity to investigate A5 and betting shop proliferation which often provides an indication of town centre performance. The audits found a concentration of these uses in certain centres. It is recommended that the Local Plan puts in place controls to prevent over-concentration of these uses.

5.4 Pay day loan shops have also been audited. Although no particular issues have been identified at this point in time, it is recommended that this use is being monitored.

Impact Assessment Threshold

5.5 Impact assessments should demonstrate the impact on the existing, planned and committed investment in centres and on town centre vitality and viability.

5.6 Although overall performing well, the District and Metropolitan centres are subject to the over proliferation of non-retail uses and have a number of vacancies in prominent locations. The vitality and vitality of these town centres could therefore also be adversely impacted by out of centre development.

5.7 To make sure that such proposals do not affect the vitality and viability of existing town centres, and make sure future investments are optimised, the setting of a significantly lower locally specific threshold for impact assessments than that specified in the NPPF is justified.

1 INTRODUCTION

Wardell Armstrong (WA) have been commissioned to prepare a Wind Energy Assessment for the London Borough of Havering. This commission is in response to the Written Ministerial Statement (HCWS42) on the 18th June 2015 and the subsequent amendments to the Planning Practice Guidance which state:

> *"When determining planning applications for wind energy development involving one or more wind turbines, local planning authorities should only grant planning permission if: – the development site is in an area identified as suitable for wind energy development in a Local or Neighbourhood Plan; and – following consultation, it can be demonstrated that the planning impacts identified by affected local communities have been fully addressed and therefore the proposal has their backing."*

This Wind Energy Assessment has identified areas within the London Borough of Havering which are potentially suitable for the development of three different scales of wind turbine based on a Geographical Information system analysis of physical, environmental and planning constraints. These areas will form a key part of the evidence base for the Borough's emerging Local Plan and will help the Council to designate suitable areas for wind energy development in the Plan. The areas identified will not constitute areas of permitted development and will still require full planning approval subject to suitable environmental assessment, public engagement and support.

2 METHODOLOGY

This assessment seeks to identify areas within the London Borough of Havering which are suitable for the development of wind power. The Borough is diverse in current land use and therefore suitability of various scales of wind turbine needs to be recognised. Constraints for different scales of wind turbine vary greatly and therefore this assessment has sought to identify suitable areas for development of three scales of wind turbine which have been termed Small, Medium and Large.

The wind speeds for the London Borough of Havering are generally quite low at around 6m/s on average at a reference height of 45m above ground level. This will necessitate a

class 2 or 3 turbine which is geared toward lower wind speeds. Generally, this means that turbines will be larger in both rotor diameter and hub height for their respective power output. The three scales of turbine considered are defined below in Table 2.1 in terms of their dimensions and approximate output.

Table 2.1: Definitions for Wind Turbine Scales and Indicative Candidate Wind Turbines

	Rotor Diameter (m)	Hub Height (m)	Tip Height (m)	Power Output (MW)	Representative Turbine
Small	33	43	59	<0.3	KWT300 IEC 61400 Class IIIA
Medium	54	50	77	<0.9	EWT900 IEC 61400 Class IIIA
Large	80	60	100	<1.8	Leitwind LTW80 Class IIA

Larger turbines necessitate larger separation distances from sensitive receptors (constraint offsets) and therefore it was important to limit the maximum size of the turbine in order to ensure at least some turbines at the large scale could still be accommodated within the Borough. Mapping the constraints allowed the maximum size of large turbines to be determined at about 100m to tip. The Medium and Small cut offs for turbines have been selected based on the availability of turbines. Some of the constraints used to define areas for wind turbine suitability are shown in Table 2.2 below. These constraints have been given offsets or minimum distances where the development of turbines would not usually be proposed. These offsets are applied to the constraints giving a good graphical illustration of where suitable scales of wind turbines may or may not be implemented.

Table 2.2: Wind Turbine Constraints

Constraint	Small Turbines	Medium Turbines	Large Turbines
	Additional Offsets Applied (m)		
Residential Properties & Schools	300	500	700
Commercial Properties	200	200	200
Farm Properties	200	200	200
Hedges	50	50	50
Woodland & Tree Belts	60	60	60
Railway	76	83.6	110
Roads	76	83.6	110
Electrical Transmission Grid	76	83.6	110
River, streams and other water bodies	25	25	25
Listed Building Grade 1	500	700	900
Listed Building Grade 2*	400	600	800
Listed Building Grade 2	300	500	700

The assessment for each scale of wind turbine was started from a GIS layer comprising the London Borough of Havering boundary. This polygon was then constrained to identify suitable areas in which each scale of wind turbines could be deployed. There are many combinations of turbine hub height and blade diameter which may reduce or increase the offsets distance selected for this study. The areas identified within this evidence base can only be used to help understand where suitable applications for wind turbines might be brought forward. Applications for wind turbines close to the areas identified might also be suitable, especially where they are smaller than the candidate turbines selected for this study.

Residential Properties & Schools

Residential properties and Schools are noise sensitive receptors and therefore offsets were created around non-commercial addresses as identified in the Ordnance Survey's AddressBase layer to exclude areas that would otherwise generate noise in excess of background levels at residential receptors. The offset distances have been selected based on WA's experience of modelling noise levels for these scales of turbine and comparison with likely background noise levels in the Borough. The offsets selected are expected to be a good approximation, however the actual offset required for a planning application will need to be confirmed and will depend on the results of specific background noise monitoring and turbine modelling.

Commercial Properties and Farms

Noise from wind turbines also has the potential to impact people while at work however background noise levels are generally much higher in these locations and the noise from turbines is masked. Farms which host residential properties could have financial involvement in wind turbine developments and as such tolerate higher noise levels. To show consideration to occupants of commercial properties and farms, without overly restricting potential development areas, an offset of 200m has been selected for all scales of turbine development. Actual offsets required will depend on specific noise assessments and financial involvement.

Hedges, Tree Belts & Woodland

Natural England has issued guidance for wind turbines regarding their proximity to hedges / tree belts and woodlands. Bat activity (including commuting and foraging) has been seen to decline significantly at distance of 50m or less. Natural England's advice is to ensure that

wind turbines blade tips cannot intrude within a 50m offset from hedges / tree belts and woodlands. The corresponding ground level offset is a function of the turbine tower height and rotor diameter. Based on the selected candidate turbines for each scale of development, the offsets at ground level to the turbine centres from these features would need to be 53m (Small turbines), 59m (Medium turbines) and 69m (Large turbines), assuming a hedge height of 2.5m. For trees these buffers would need to be 58m, 65m and 75m respectively, assuming a tree height of 10m. These distances would vary depending on the combinations of turbine geometry and tree / hedgerow height. Because of this and for simplicity a relatively small offset of 50m for hedges and 60m for trees has been selected as an approximation of what will be required by Natural England.

Roads, Railway and Electrical Transmission Grid

The safety record for wind turbines is excellent however the highways agency, local authority highways departments, Network rail, National Grid and regional Electricity Distribution Network Operators would as a minimum require topple offsets from existing and planned infrastructure of turbine tip height + 10%.

River, Streams and Other Water Bodies

There is currently no guidance on minimum distances between wind turbines and water bodies. However, it is not practical to construct wind turbines immediately adjacent to them. For this reason, an offset of 25m (typically the size of a large turbine foundation) has been selected to prevent excessive run off from the construction area, subsidence and potential contamination of the water body. Much larger offsets may be required if specific ecological concerns are relevant and raised as part of the planning application process.

Listed Buildings

Listed buildings can be vulnerable to impacts from turbines with regard to their setting within their local context. There are three grades of nationally listed buildings which reflect the value of the building and inferred setting. The highest ranking buildings are known as Grade 1 follow by Grade 2* and lastly Grade 2. Locally Listed Buildings are classified as of less importance and have not been considered in this assessment, but will need to be considered at the planning application stage. There is no specific guidance on minimum separation distances between wind turbines and listed buildings. Impacts would normally be assessed as part of landscape and visual impact, heritage and noise assessments for a specific planning application. This is beyond the scope of this study and a simpler approach

of assigning constraint offsets to them has been taken. The higher the listing the greater the offset required. It also follows that due to dominance in the landscape, the larger the turbine the greater the offset required. This is reflected in the offsets selected as shown in the constraint table (Table 2.2), which are based on Wardell Armstrong's experience in previous wind resource assessments.

Environmental Constraints

Wind turbines can have an impact on birds and bats either through direct strike or displacement. To limit the potential for this, environmental designations and certain habitat type such as woodlands / orchards have been removed from the potential wind turbine areas layer, see Table 2.3 below.

Table 2.3: Environmental Constraints	
RSPB Reserves	Marine Conservation Areas
RSBP Important Bird Areas	Doorstep Greens
World Heritage Sites	Country Parks
Battlefields	Local Nature Reserves
Parks and Gardens	National Nature Reserves
Traditional Ordchards	Special Protected Areas
Areas of Outstanding Natural Beauty	Special Areas of Conservation
Open Country	Ramsar Sites
Nature Improvement Areas	Special Sites of Scientific Interest
Millennium Greens	Heritage Coast
National Parks	

Other Constraints Considered but not Included in the Assessment

Radar

Wind turbine developments are often prone to objections arising from concerns regarding radar interference. Such objections from the Civil Aviation Authority or Ministry of Defence can be difficult, costly or impossible to resolve. These economic risk considerations should be explored by the developer prior to an application for planning being made. In order to understand where radar interference may occur, Wardell Armstrong has created "viewsheds" or zones of theoretical visibility for primary surveillance radar (PSR) within consultation distance of the London Borough of Havering. These viewsheds shows where the consultation zone is and also how much clearance there is between the ground and radar visibility. The consultation zone depends on whether the radar is used for civil or military operations. Civil radars are perceived to have coverage of 35km in any given

direction whilst military radars cover approximately 65km. If a desired site is within or close to the consultation zone for a radar it will be necessary to consult the operator of the radar. Consultation should always be sought with the relevant airport/radar operator when developing a wind project. This GIS layer has not therefore been applied as an additional constraint to wind resource. Instead it has been supplied to provide information on where difficulties due to radar interference may arise.

The viewsheds show that only the Stansted and Southend indicative radar consultation areas extend into the Borough. The clearance with the Southend radar is in excess of 300m and is therefore unlikely to restrict development of wind turbines. The clearance with the Stansted radar varies between 100m and 35m. Detailed consultation with Stansted will therefore be required by any developer.

Green Belt

The Green Belt covers 53% of the London Borough of Havering however adding the Green Belt to the constraint list would leave no suitable areas for wind development with the exception of the existing site at Dagenham. The National Planning Policy Framework (NPPF) states that;

> *"When located in the Green Belt, elements of many renewable energy projects will comprise inappropriate development. In such cases developers will need to demonstrate very special circumstances if projects are to proceed. Such very special circumstances may include the wider environmental benefits associated with increased production of energy from renewable sources."*

Developers wishing to develop wind projects within the Borough will therefore need to demonstrate these special circumstances to allow permission to be granted for wind developments.

3 RESULTS

The areas potentially suitable for Small, Medium and Large turbines development (based on the methodology described above) are highlighted on Figure 2 without the constraints used to identify them. The layers of constraints are somewhat complicated and are shown on Figures 3, 4 and 5 respectively. The key to the constraint layers is shown on Figure 6.

No cut off for lower wind speeds has been derived. The developer of any wind project will first consider the prevailing wind regime combined with the energy yield profile of a turbine best suited to the wind regime. The financial viability of the development may also be dependent on the electricity price. In the future this may or may not include a top up subsidy or an onsite end user power purchase agreement. For reference purposes a wind speed up log law calculation was applied to the UK Wind Speed database to estimate the wind speed at the candidate turbine hub heights for the Small, Medium and Large turbines. These are shown on the respective maps (Figures 3-5).

The areas assessed as suitable for large wind turbines would also be suitable for Medium and Small turbines and areas assessed as suitable for Medium sized turbines would also be suitable for Small turbines. Consideration within the Local Plan should be given as to whether to allow smaller turbines to sterilise areas which would otherwise be suitable for larger wind turbines as this could reduce the potential for wind energy production within the London Borough of Havering.

To estimate the number of turbines and resulting installed capacity that could be developed in these areas, it has been assumed that areas suitable for larger scale turbines will be populated by large turbines and that these areas are mutually exclusive with Medium and small scale turbines. The estimates for each area were based on the land area occupied by a single turbine and the land take required for each scale of turbine ellipses set at 5 rotor diameters downwind and 3 rotor diameters across the wind aligned along a south west axis to match the prevailing wind direction for London[1]. These buffers are to ensure optimum wind resource extraction based on wind flow between adjacent turbines and are the minimum spacing expected to be acceptable by the turbine manufacturers. The results are summarised in Table 3.1 below.

Table 3.1: Potential Number of Wind Turbines and Indicative Installed Capacity

Turbine Scale	Total Area (ha)	Indicative Turbines/ha (5Dx3D spacing)	No of mutually exclusive turbines	Indicative capacity (MW)
Small	268.3	0.81	217	65
Medium	102	0.36	37	18
Large	24.5	0.16	4	8

[1] https://www.meteoblue.com/en/weather/forecast/modelclimate/london_united-kingdom_2643743.

The number of turbines estimated from the areas available is conservative in that if the areas are fragmented, which they generally are (see Figure 2), it would be possible to apply higher density turbine packing. Nevertheless, the areas identified are likely not to be suitable for wind development for a number of reasons, which may include:

- Existing land use
- Landowner willingness
- Justification of special circumstances in the Green belt
- Turbine uneconomic without a suitable end user for the electricity generated
- Grid connection limitations
- Landscape and heritage concerns
- Ecology and archaeology outside of areas currently designated
- Radar and aviation issues
- Public amenity

It would therefore be sensible to assume less than 10% of the sites could be developed.

4 CONCLUSION

The study has identified a number of potentially unconstrained locations for the development of Small, Medium and Large wind turbines in the Borough. The majority of these can accommodate small scale turbines. There is some scope for medium scale turbines and very few opportunities to implement large scale turbines.

5 RECOMMENDATION

We would recommend that the Local Plan highlights the locations identified within this study and invites developers to bring forward well planned projects which have carefully considered the scale and appropriate constraints, and can be justified in terms of Green belt policies.

Executive summary

Background and context

This reports presents the conclusions of the strategic assessment of Havering's Green Belt. The Green Belt study has been formed by the Council in association with Peter Brett Associates and Enderby Associates. The purpose of the study is to assess if the Green Belt is fit for purpose, to inform decisions in the Local Plan.

The full extent of the Green Belt in the borough has been assessed to determine its contribution to Green Belt purposes as defined in the National Planning Policy Framework (NPPF).

Table .1 Green Belt Purposes (NPPF Paragraph 80)

- To check the unrestricted sprawl of large built-up areas
- To prevent neighbouring towns merging into one another
- To assist in safeguarding the countryside from encroachment
- To preserve the setting and spatial character of historic towns
- To assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Method

Although all five purposes of the Green Belt have been looked at as a starting point, it was agreed based on best practice that the study assesses the first three purposes in more detail. To aid the assessments, the Green Belt in the borough has been divided into strategic parcels. The parcels have been assessed based on a desk based review and site visits. A performance value has been contributed to the parcels for each purpose, based on predefined criteria. The overall value to the Green Belt has been defined by the highest scoring purpose as all purposes are of equal value and could be a reason for Green Belt inclusion in their own right.

Findings

A total of 24 parcels have been identified. All parcels are found to make a contribution to Green Belt purposes. Despite that there is a variation on performance of the parcels to individual purposes, it was found that 19 of the parcels make a fundamental contribution. A further 4 parcels make a high or moderate/high contribution. Only one parcels makes a low contribution. However, this parcel provides valuable recreational uses in line with the objectives of the Green Belt.

The findings of this study will together with other evidence be used to inform decisions in the Local Plan. In line with the NPPF exceptional circumstances will need to be demonstrated to alter Green Belt boundaries.

1 Background and context

1.1 Purpose of the Green Belt Study

1.1.1 The Green Belt study forms part of the evidence base supporting the Havering Local Plan. Its purpose is to review the extent of the Green Belt to make sure its designation is fit for purpose. This informs decisions in the Local Plan.

1.1.2 This study is lead and initiated by the Council, and performed in co-operation with Peter Brett Associates (PBA) and Enderby Associates. The method was jointly developed by the Council and PBA. Enderby Associates performed the parcel assessments. The final report has been written by the Council and critically reviewed by PBA to make sure its findings are robust. The working arrangements are clearly set out in the method section.

1.2 National Planning Policy Framework

1.2.1 National policy on Green Belts is set out in the National Planning Policy Framework (NPPF) published in March 2012. This Green Belt Study is undertaken in the context of national policy. There is no published guidance on how a Green Belt Study should be undertaken. Green Belt is a strategic policy tool which has been used to restrict development around and between towns and cities. The NPPF establishes five purposes for including land within the Green Belt. These are:

Table 1.1 Green Belt Purposes (NPPF Paragraph 80)

- To check the unrestricted sprawl of large built-up areas
- To prevent neighbouring towns merging into one another
- To assist in safeguarding the countryside from encroachment
- To preserve the setting and spatial character of historic towns
- To assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

1.3 The London Plan

1.3.1 The London Plan was altered in March 2015 with the 'Further Alterations to the London Plan' adoption, which was followed by the adoption of 'Minor Alterations to the London Plan' in March 2016. The London Plan sets out the policy framework for the Mayor's own decisions on the strategic planning applications referred to him and sets out the strategic, London-wide policy context within which boroughs should set their detailed local planning policies. Borough Local Plans should be in general conformity with the London Plan.

1.3.2 The London Plan emphasises that the Mayor strongly supports the current extent of London's Green Belt, its extension in appropriate circumstances and its protection from inappropriate development (Policy 7.16). In line with this the London Plan strategy to increase housing supply (Policy 3.3) is focused on releasing brownfield housing capacity through the existing spatial structure.

1.4 The Havering Local Plan

1.4.1 The London Borough of Havering is preparing a new Local Plan to replace the 2008 Local Development Framework. A Detailed Sites Local Plan will be prepared separately and at a later stage.

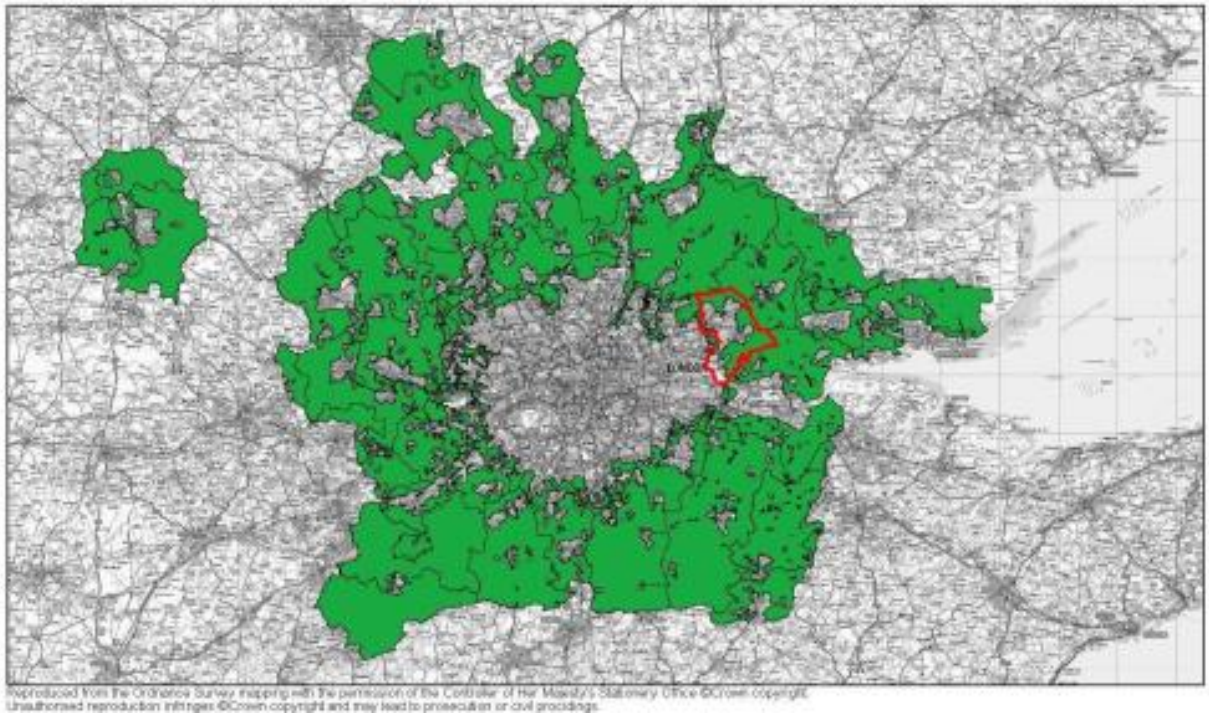
1.4.2 As part of this process the Council is undertaking a Green Belt Study which will form part of the evidence base used to support the Local Plan and its policies. The preparation of the new Local Plan presents the opportunity to review the Green Belt boundary to ensure that it is appropriate for the next 15 years and beyond.

1.4.3 The spatial strategy of the Havering Local Plan will direct the majority of growth to the Rainham and Beam Park area and Romford Town Centre, and a set of regeneration sites. The strategy for the rest of the borough will be based on maintaining and enhancing of existing communities.

1.5 The London Metropolitan Green Belt

1.5.1 The Green Belt is regarded as a central tenet of spatial planning in London. It was introduced in 1938 by the London County Council (LCC), who proposed the creation of a Green Belt around London. Implementation started with the passing of the Green Belt (London and Home Counties) Act where land encircling London was bought by the LCC and safeguarded from development. Following this, the 1947 Town and Country Planning Act, allowed authorities across the country to include Green Belts in their development plans, and the first Green Belts were designated in 1955.

Figure 1 Havering in respect to wider Metropolitan Green Belt



Reproduced from the Ordnance Survey mapping with the permission of the Controller of Her Majesty's Stationery Office ©Crown copyright. Unauthorised reproduction infringes ©Crown copyright and may lead to prosecution or civil proceedings.

1.5.2 The original vision of the London Metropolitan Green Belt was to act as a barrier to London's expansion. Even if Green Belt land was neither green nor particularly attractive scenically, the essential function of the Green Belt was to stop further urban development. Thus Green Belt land is strictly protected from development. As such, London's Metropolitan Green Belt has restricted the supply of land for development such as housing for more than two generations.

1.6 Havering's Green Belt

1.6.1 Havering is located on the north eastern edge of London. It is the third largest borough in Greater London at around 40 square miles. More than half of the borough lies within the Metropolitan Green Belt, as shown in Annex A. It has proved effective in preventing urban sprawl, particularly preventing London from merging with urban areas in Essex. Havering's Green Belt has helped stop the urban areas within the Borough merging with both London and Essex urban areas. The Green Belt accommodates a network of pathways and bridleways that form 'green chains' throughout the countryside. The Green Belt has helped maintain a valuable recreational resource on the metropolitan edge, particularly through Country Parks and the Thames Chase Community Forest.

1.6.2 Not all of Havering's Green Belt is green, nor does it have a single character or use. Land within the Green Belt can vary from open countryside to poor-quality scrubland, and uses within the Green Belt vary greatly. They include agriculture and recreational uses which account for a large proportion of Green Belt land, an airfield, water treatment works, active and former mineral extraction sites, unused hospitals and golf courses. Within these locations the diversity of landscape and wildlife is considerable. Additionally not all Green Belt land in Havering is accessible to the public, much of it is privately owned by a range of landowners.

1.6.3 Following the 1957 Initial Development Plan, Havering's Green Belt has been altered twice. The first alteration was in 1993 as part of Havering's Unitary Development Plan. The Council took full account of housing supply and demand issues, and considered there to be exceptional circumstances that justified the revision of the Green Belt boundary to include five additional sites within the Green Belt.

1.6.4 The last alteration to Havering's Green Belt was in 2008 as part of the Local Development Framework. The Council considered there to be exceptional circumstances which warranted the removal of three sites from the Green Belt.

1.7 Working across local authority boundaries

1.7.1 Havering's (lower tier, where applicable) neighbouring local authorities are:

- Brentwood Borough Council;
- Epping Forest District Council;
- London Borough of Barking and Dagenham;
- London Borough of Redbridge; and
- Thurrock Council.

1.7.2 Each of the neighbouring authorities are undertaking Green Belt Assessment studies and are at various stages of production and have different reasons for undertaking their studies, as summarised below:

Table 1.2 Status of Green Belt studies neighbouring local authorities as of October 2016

Local Authority	Status of Green Belt study	Purpose of Green Belt study
Brentwood Borough Council	Draft 'Assessment of Housing, Employment and Mixed Use sites in the Green Belt' (working draft published March 2016).	The Draft Local Plan looks to release sites in the Green Belt for residential, employment and mixed-use development.
Epping Forest District Council	High level (Stage 1) Green Belt review published in Sept. 2015, Stage 2 published as part of Draft Local Plan in October 2016 .	The Draft Local Plan proposes sites for release from the Green Belt to provide for sustainable development, largely informed by the Stage 2 report.
London Borough of Barking and Dagenham	Green Belt review is currently ongoing.	tbc
London Borough of Redbridge	Various stages of Green Belt review have been completed and published. Review completed in 2010.	Release of sites in the Green Belt are proposed in the proposed-submission Local Plan 2016
Thurrock Council	Green Belt study currently in progress.	As part of preparation of the new Local Plan sites for urban extensions in the Green Belt are sought.

1.7.3 Havering Council has co-operated with each of the above authorities to inform the Green Belt Study. Its relationship between neighbouring authorities, in relation to the Metropolitan Green Belt issue is therefore carefully considered.

1.7.4 The Council has also engaged with Essex County Council and the Great London Authority (GLA) regarding the Green Belt.

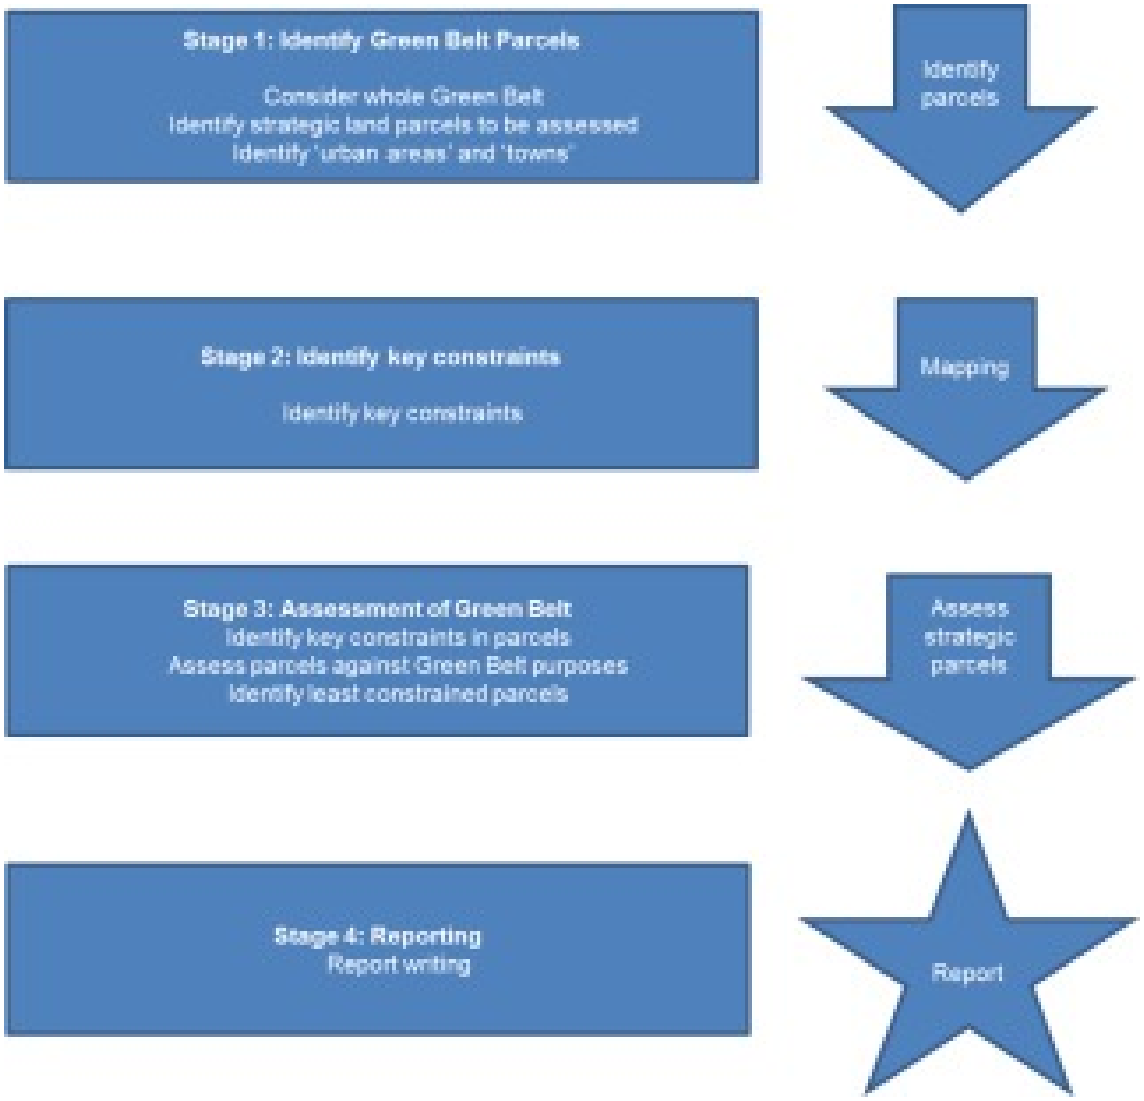
2 How the study was done

2.1 Introduction

2.1.1 There is no set method for performing a Green Belt study. This section sets out the methodology for the strategic Green Belt Assessment and reflects recognised good practice. It has been prepared in conjunction with PBA drawing on their experience with Green Belt studies.

2.1.2 The Green Belt Assessment is carried out in a number of stages, resulting in a selection of areas of land with the least contribution to Green Belt purposes. The stages of the study are outlined in the diagram below.

Figure 2 Green Belt Study stages



2.2 Area of Study - Havering's settlements

2.2.1 The urban area of Havering has evolved over the years by the merging of settlements and by urban extensions. The original settlements of Romford, Hornchurch, Upminster, Cranham and Rainham have, due to development, merged into one large urban area, while keeping their distinct character. For the purpose of this study the urban area of Havering is therefore considered as a single 'large built-up area'. Havering has several smaller settlements located in the Green Belt, most notably Havering-atte-Bower and Noak Hill but these are not 'towns' for the purposes of the assessment.

2.2.2 In each of the neighbouring local authorities large built-up areas can be distinguished. These are largely separated from the Havering urban area by Green Belt land. The Barking and Dagenham urban area is located west of Havering. The urban areas of Havering and Barking and Dagenham come together in the London Riverside area in the south of the borough. The Hainault urban area, in the London Borough of Redbridge, is located to the northwest of Havering. The Thurrock urban area to the southeast of Havering includes the separate settlements north of the A13, including the separate town of South Ockendon. The Brentwood urban area is located northeast of Havering, and is classified as a main town (Brentwood Draft Local Plan, 2016). The urban area and towns in Epping Forest are located to the north of the borough, but are not in close enough proximity to be considered relevant in this study.

2.2.3 A map showing the classification of large built-up areas, towns and other settlements as used for this study is included in Annex B.

2.3 Identify parcels of assessment

2.3.1 Areas have been broken down into identifiable strategic parcels and each of these parcels has been assessed in terms of their contribution to Green Belt purposes as defined in the NPPF. This identifies parcels considered to be most and least suitable for further study if required.

2.3.2 The identification of these strategic parcels of land has been informed through desk based review and site survey work. The identification of the parcels has been based on the following;

- Broad landscape characteristics; and
- Features on the ground which could provide boundaries that are 'readily recognisable and likely to be permanent' (consistent with the requirements of NPPF para 85), as identified from site work and from the use of mapping information.

2.3.3 In considering which parcels should be assessed, it was appropriate to look across administrative borough boundaries because Green Belt issues do not necessarily respect these sometimes artificial lines. However, where the administrative boundaries are based on clearly defined natural or manmade features, these have been used.

2.3.4 The whole of the Green Belt within Havering Borough has been assessed against the purposes of the Green Belt not withstanding the fact that significant areas are constrained by 'high level' constraints (such as flood risk). Therefore the whole Green Belt has been divided into parcels.

2.3.5 As part of the desk based review the Land of the Fanns Landscape Character Assessment (February 2016) has been used to inform the assessment of the landscape character of the parcels. This has been initiated by the Land of the Fanns Lanscape Partnerhsip, which covers a large extend of Havering's countryside.

2.4 Consider key constraints

2.4.1 This stage identified key constraints which would normally exclude certain areas from development. These key constraints have been discussed with neighbouring local planning authorities. Key constraints considered are as follows:

- Conservation Area
- Country Park
- Flood Zone 3
- Local Nature Reserve
- National Nature Reserve
- Nature Improvement Areas
- Ramsar Site
- Registered Parks and Gardens
- Scheduled Monuments

- Sites of Special Scientific interest
- Special Area of Conservation

2.4.2 Earlier on was mentioned that the above constraints have not been used to exclude areas from parcels. Instead have they been used in the parcel assessments to identify if (parts of) parcels are constrained from development.

2.5 Assessment of the Green Belt

2.5.1 After the parcels have been identified, each has been assessed in terms of its performance in fulfilling Green Belt purposes. The parcel assessments have been performed by Enderby Associates, as specialist landscape architect services were required to assure robust assessments.

2.5.2 The starting point was to consider all five Green Belt purposes and whether they are applicable to Havering. It has been agreed in line with best practice that the first three purposes are applicable to Havering, with the last two purposes not applicable, as set out below.

2.5.3 The study examines the parcels by using the first three of the Green Belt purposes for including land in the Green Belt set out in the NPPF:

1. to restrict the unrestricted sprawl of large built-up areas;
2. to prevent neighbouring towns from merging into one another; and
3. to assist in safeguarding the countryside from encroachment.

2.5.4 The fourth purpose of Green Belts is to 'preserve the setting and special character of historic towns'. There are no towns in the Borough which may be regarded as having a particularly 'special' historic character or where such character is particularly derived from or complemented by to its landscape setting (such as is the case, for example, at Oxford or York, which are both historic towns surrounded by Green Belt which contributes to their special historic character and setting). The Borough contains a number of Conservation Areas but, in the main, these are parts of smaller settlements. Whilst there may be a noticeable relationship between such areas and their surroundings which contributes to their local character and setting, these areas within such settlements are not considered relevant to the strategic nature of this Green Belt purpose. However, where distinct relationships between Conservation Areas and Green Belt land beyond are noted this will be referred to in the consideration of the third Green Belt purpose in the context of the protection that this purpose provides in safeguarding such countryside from inappropriate development and hence maintain this relationship.

2.5.5 The purpose 'to assist in urban regeneration, by encouraging the recycling of derelict land', is not used at all in the assessment. If there is any effect at all in this respect, it is the overall restrictive nature of having Green Belt policy that encourages regeneration and the re-use of previously used land by stifling the supply of other land. That said, the modern evidence-based planning system is intended to deal with the supply of land primarily through positive provision in a development plan rather than through the piecemeal consideration of planning applications for development proposals. Either way it is generally not possible to judge how any given parcel of land would contribute to the fulfilment of this purpose, or to distinguish between different parcels on this basis.

2.5.6 Annex D provides the sample parcel assessment sheet which has been used within the Green Belt Parcel assessment.

2.5.7 The tables below outline the criteria against which the parcels have been assessed in respect of the Green Belt purposes used in the assessment. The assessment is based on whether development would fundamentally, substantially or significantly impact on the Green Belt purpose. These terms are defined below through the identified characteristics which provide the basis for categorising different parcels of land against the different Green Belt purposes. After the individual parcels have been assessed against each of the three purposes, an assessment was undertaken to provide an overall judgement of the contribution they make to the Green Belt.

Purpose 1 – To check the unrestricted sprawl of large built-up areas

Table 2.1 Green Belt Purpose 1 - To check the unrestricted sprawl of large built-up areas

Criteria	Fulfilment of Green Belt Purpose	
Land where strategic level of development would conflict **fundamentally** with Green Belt purpose. ■ The land provides a distinct, well-defined area that contains the large built up area and provides strong containment that prevents the perception of 'sprawl'. ■ There may be/is no alternative strong physical/landscape boundary(s) further from the edge of the large built-up area that would perform a similar role in containing growth and ensuring a 'good fit' for development - strategic level of development may lead to perception of uncontained growth. ■ The land may/may not be affected already by the existing physical/visual presence of the large built up area and may have a varied character.	**Paramount importance to Green Belt Purpose** Continued inclusion within Green Belt of paramount importance	**Paramount**
Land where strategic level of development would conflict **substantially** with Green Belt purpose. ■ The land contains/contributes to the containment of the large built up area (although its character may be influenced by it). ■ Strategic level of development has potential to create perception of poorly contained growth, although other physical/landscape boundaries may exist further from the edge of the large built up area that could define and contain growth and prevent the perception of 'sprawl' (although these may require reinforcement to achieve a well-defined limit to development and a new Green Belt boundary).	**Major importance to Green Belt Purpose** Continued inclusion within Green Belt of major importance	**Major**
Land where strategic level of development would conflict **significantly** with Green Belt purpose. • The land provides some containment of the large built up area although it is significantly influenced by its presence and related features/land uses leading to a poorly defined edge, or it may be slightly removed from the edge of the large built up area and therefore contribute less to the purpose (other land closer to the edge performs the function of containment).	**Moderate importance to Green Belt Purpose** Continued inclusion within Green Belt of moderate importance	**Moderate**
Land where strategic level of development would have **negligible** impact on this purpose of Green Belt. ■ The land may be physically and visually related to the large built up area and already perceived to be part of/or closely related to the built up area, giving a poorly defined edge and possibly the perception of 'sprawl'; or is an area that has very little relationship to the large built up area and of little importance to containing 'sprawl' (land closer to the built up area fulfils this function to a greater degree). ■ Development may allow opportunities for enhancement of degraded land and the definition of a stronger long-term Green Belt boundary, or there are other strong boundaries that would contain development.	**Slight/Negligible importance to Green Belt Purpose** Continued inclusion within Green Belt of minor/negligible importance	**Slight/ Negligible**
Land where strategic level of development would have **no** impact on this purpose of Green Belt.	**No importance to Green Belt Purpose**	**None**

Criteria	Fulfilment of Green Belt Purpose	
■ Land is largely contained by existing development and already forms part of, and is perceived as, part of the large built up area ; or ■ Land is unrelated/has no significant relationship with a large built up area.	Continued inclusion within Green Belt of no importance	

Purpose 2 – To prevent neighbouring towns from merging into one another

Table 2.2 Green Belt Purpose 2 - To prevent neighbouring towns from merging into one another (see Note 1 below)

Criteria	Fulfilment of Green Belt Purpose	
Land that is **fundamental** to physical separation of neighbouring towns. • Any significant reduction in extent would result in physical coalescence, or a perception of merging that would erode the distinct separate identity and character of the towns.	**Paramount importance to Green Belt Purpose** Continued inclusion within Green Belt of paramount importance	Paramount
Land that provides **substantial** contribution to separation between neighbouring towns. ■ Some development may be possible without causing merger or perception of merging between the towns.	**Major importance to Green Belt Purpose** Continued inclusion within Green Belt of major importance	**Major**
Land that provides **significant** contribution to separation between neighbouring towns. ■ Land may be part of a substantial gap (3km or more) between neighbouring towns with separate identities. ■ Land where well planned strategic level of development unlikely to result in merger or a perception of merging as a consequence of inter-visibility (although intervening smaller settlements within Green Belt may be affected significantly by reduction of separation, merger or inter-visibility).	**Moderate importance to Green Belt Purpose** Continued inclusion within Green Belt of moderate importance	**Moderate**
Land does not lie between towns or makes **negligible** contribution to separation; or land does not provide strategic level of separation. ■ Strategic level of development would have little impact on this Green Belt purpose, although smaller settlements may be affected by reduction in separation, merger, or inter-visibility depending on their proximity to the existing edge of the town. ■ Other strong/well-defined boundary(s) may exist to restrain growth/prevent merging. ■ Width of Green Belt may already be narrower at an adjacent location.	**Slight/Negligible importance to Green Belt Purpose** Continued inclusion within Green Belt of minor/negligible importance	**Slight/ Negligible**
Land does not lie between towns and makes **no** contribution to separation. ■ It may lie between parts of the same town and fulfil a local purpose of maintaining the separation/identity of communities.	**No importance to Green Belt Purpose**	**None**

Criteria	Fulfilment of Green Belt Purpose	
	Continued inclusion within Green Belt of no importance	

Purpose 3 – To assist in safeguarding the countryside from encroachment

Table 2.3 Green Belt Purpose 3 - To assist in safeguarding the countryside from encroachment

Criteria	Fulfilment of Green Belt Purpose	
Countryside is **fundamental** to the purpose of retaining land within Green Belt. ■ Land possesses a strong, unspoilt rural character which Green Belt designation protects.	**Paramount importance to Green Belt Purpose** Continued inclusion within Green Belt of paramount importance	**Paramount**
Countryside is of **substantial** importance to the purpose of retaining land within the Green Belt. ■ Land possesses a predominantly rural character. ■ There may be other constraints (such as a noticeable landscape feature) that would limit encroachment but the Green Belt provides valuable protection.	**Major importance to Green Belt Purpose** Continued inclusion within Green Belt of major importance	**Major**
Countryside is of **significant** importance to the purpose of retaining land within the Green Belt. ■ There may already be a perception of significant encroachment by development (or other uses, such as large scale mineral extraction) and land may possess a semi-rural character. ■ There may be other constraints to further encroachment.	**Moderate importance to Green Belt Purpose** Continued inclusion within Green Belt of moderate importance	**Moderate**
Countryside is of **negligible** importance to the purpose of retaining land within the Green Belt. ■ Land may possess a semi-urban character and is no longer perceived to be part of the open countryside. ■ It may contain degraded land that provides opportunities for enhancement.	**Slight/Negligible importance to Green Belt Purpose** Continued inclusion within Green Belt of minor/negligible importance	**Slight/ Negligible**
Countryside is **no** importance to this purpose of Green Belt. ■ Land forms very narrow area between existing parts of an urban area or other strong boundary. ■ Such areas may be protected by other policies/designations (such as open space or Green Wedge).	**No importance to Green Belt Purpose** Continued inclusion within Green Belt of no importance	**None**

Overall contribution of assessed parcels to Havering's Green Belt

2.5.8 The assessment of parcels against individual purposes is then combined to give an overall judgement of the performance of each parcel to the Green Belt. All purposes are considered to be of equal importance, and could on their own justify inclusion in the Green Belt. The overall judgement for each parcel is therefore based on the highest performance on the three purposes instead of cumulative or combined scoring. This is consistent with best practice.

Table 2.4 Contribution of parcels to Green Belt based upon assessment of Green Belt purposes 1-3

Criteria	Overall contribution to Green Belt
One or more Green Belt purpose(s) is considered to be of Paramount importance.	**Fundamental** contribution to Green Belt
One or more Green Belt purpose(s) is considered to be of Major importance; there are no purposes that are of Paramount importance.	**High** contribution to Green Belt
One or more Green Belt purpose(s) is considered to be of Moderate importance; there are no purposes that are of Paramount or Major importance.	**Moderate** contribution to Green Belt
One or more Green Belt purpose(s) is considered to be of Slight/Negligible importance; there are no purposes that are of Paramount, Major or Moderate importance.	**Low** contribution to Green Belt

3 Findings of the study

3.1 Introduction

3.1.1 For the purpose of this study the Green Belt in the borough has been divided into 24 parcels. A map showing the parcels and parcel numbers can be found in Annex C. In some instances the parcels cross the borough boundary as this is not always made up of recognisable features on the ground. However, the results of this study only apply to the areas of land within Havering.

3.1.2 This is especially the case in Thurrock, where several parcels overlap. Thurrock Council has performed a Green Belt study at the same time as Havering. Parcel boundaries have therefore been agreed between Havering and Thurrock. As the parcel assessments in Thurrock have also been performed by Enderby/PBA, these have been based on the same methodology which ensured consistency in approach and results.

3.1.3 In the following sections the results of the parcel assessments against the first three purposes of the Green Belt as defined in the NPPF will be presented. Firstly, an overview of the performance of each of the parcels against the Green Belt purposes will be presented. This will be followed by a summary of the performance of parcels against the individual purposes.

3.1.4 For the detailed scoring of the individual parcels is referred to Annex F, which contains the parcel assessment forms.

3.2 Overall contribution to Green Belt and overview

3.2.1 Table 3.1 'Overview table parcel assessments Green Belt Study' presents the findings of the parcel assessments for each purpose. Additionally, a column has been added which presents the overall contribution of the parcels to the Green Belt.

3.2.2 The assessments of the Green Belt parcels in the borough have shown that all of Havering's Green Belt contribute to purposes of the Green Belt as provided by the NPPF. Nineteen of the parcels make a fundamental contribution to the Green Belt. Three parcels, 5, 8 and 11, make a high contribution due to their countryside qualities.

3.2.3 The contribution of the land within parcel 3 varies between high and moderate, which is largely due to the mineral extraction/landfilling in the area which adversely affects the character of the countryside. However, the more rural appearance is expected to be re-established via restoration upon cessation of use.

3.2.4 Only one parcel is found to provide a low contribution to Green Belt purposes; parcel 23. It makes a limited contribution to two purposes. It plays a role in preventing the merging of towns with its location in the corridor between Romford and Dagenham. In addition, the parcel is fulfilling an objective of the Green Belt by providing valuable open and recreational space in the Green Belt.

3.2.5 Map 1 'Overall contribution to Green Belt' displays the overall Green Belt contribution as presented in Table 3.1 'Overview table parcel assessments Green Belt Study'. Maps showing the performance of the parcels against the individual purposes can be found in Annex D.

Table 3.1 Overview table parcel assessments Green Belt Study

Parcel number	Purpose 1: To check the unrestricted sprawl of large built-up areas	Purpose 2: To prevent neighbouring towns from merging into one another	Purpose 3: To assist in safeguarding the countryside from encroachment	Overall contribution to Green Belt

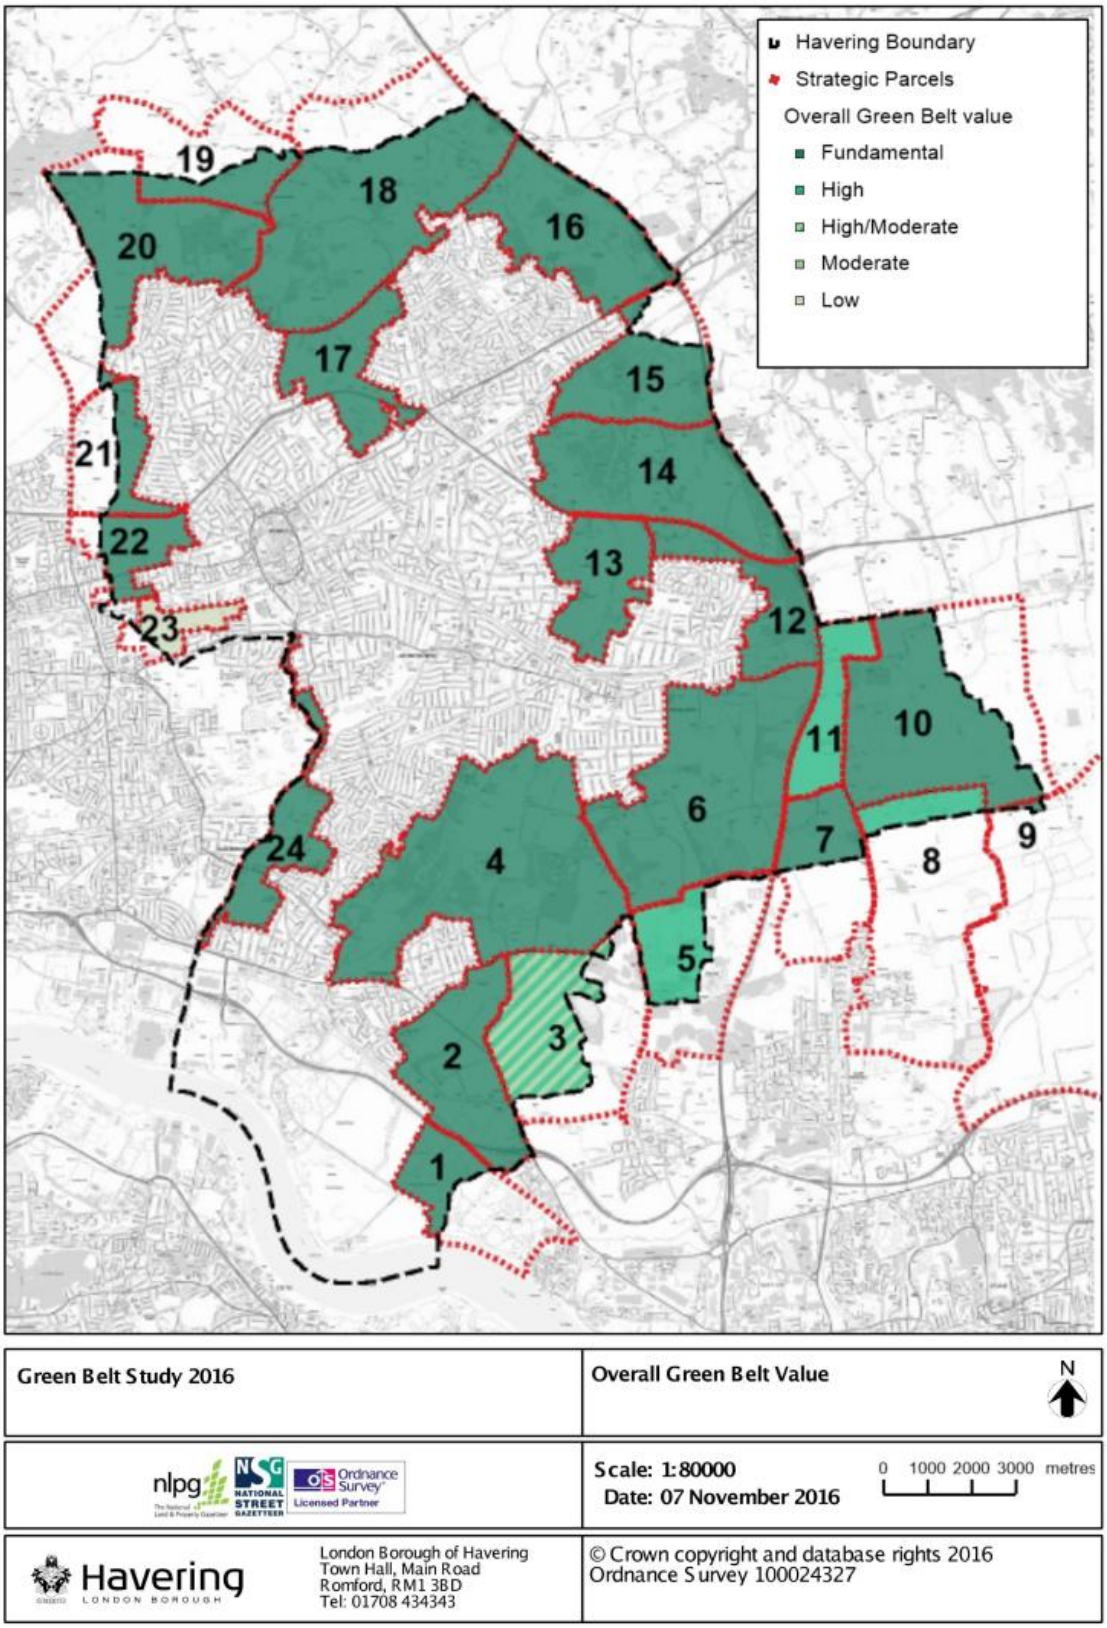
21	Major	Paramount	Moderate	**Fundamental**
22	Major/None	Paramount	Moderate	**Fundamental**
23	None	Slight/Negligible	Slight/Negligible	**Low**
24	Paramount	Major and Slight/Negligible	Major/Moderate	**Fundamental**

Note: Some parcels have a mixed performance on a purpose. The colouring of these parcels in the above table is therefore indicative, and tends to be based on the average or lower score in case of mixed performance.

Map 1 Overall contribution to Green Belt



3.3 Purpose 1 - To check the unrestricted sprawl of large built-up areas

3.3.1 The parcels closest to the large built-up areas of Havering, Thurrock or Barking and Dagenham have a more paramount contribution checking the unrestricted sprawl than parcels further away from these built-up areas. No parcels are directly adjoining or affecting the Brentwood or Redbridge built-up areas. The land east of the M25 is not related to any built-up area and therefore does not contribute to this purpose.

3.3.2 Three parcels in the 'Dagenham corridor' to the west of Romford make a lower contribution to limiting urban sprawl. Parcel 21 has a slight/negligible contribution to this purpose due to the close existing relationship between the built-up areas of Romford and Dagenham where there is already a perception of sprawl. Parcel 22 has a mixed contribution towards this purpose. While the wider northern part of the parcel makes a major contribution, the narrow southern part provides no contribution towards this purpose as it has a close existing relationship with the two built up areas where there is already a perception of sprawl. Parcel 23 is almost entirely enclosed by existing development and therefore makes no contribution to this purpose.

3.4 Purpose 2 - To prevent neighbouring towns merging into one another

3.4.1 All parcels adjoining the built-up area of Romford except towards the north have at least a slight/negligible contribution to preventing towns from merging. Areas of land farther away from the built-up area do not have any contribution to this purpose as distances to nearby towns are generally too large, although development would often result in a decrease of the gap between towns.

3.4.2 Parcel 2 provides a major contribution by preventing the outward growth of Rainham and Purfleet on either side of the parcel. Also of major contribution are parcel 13 which provides separation between the northern part of Upminster at Cranham and Emerson Park at the eastern edge of Romford, and parcel 17 which prevents the merging of Collier Row and Harold Hill. Parts of parcels 15 and 16 form part of the narrowest gap between Romford and Brentwood and therefore have a major contribution towards purpose 2. A major contribution is also provided by parcel 20 which separates the north western edge of Romford from the eastern part of Hainault.

3.4.3 A paramount contribution to this purpose is provided by parcels 21 and 22, which separate the towns of Collier Row and Chadwell Heath which are in close proximity to eachother. While located in the same corridor, parcel 23 has a slight/negligible contribution to the merging of Romford and Chadwell Heath as the towns are already almost entirely connected in parcel 23. Parcel 24 has a mixed contribution towards this purpose; while the narrow wedges of land in the northern and southern part provide a slight/negligible local contribution to the retention of open land, the wider central part (in conjunction with Green Belt land within the adjoining borough) provides a major contribution to preventing towns from merging.

3.5 Purpose 3 - To assist in safeguarding the countryside from encroachment

3.5.1 Most of the parcels in the borough are found to be playing a paramount or major role in protecting the countryside from encroachment: 8 parcels make a paramount contribution and 9 parcels fulfil a major contribution.

3.5.2 Parcels 3 and 24 have a major/moderate contribution as the countryside within the parcels varies in quality. Moderate scores are awarded to parcels 21 and 22 as they contain some characteristics of countryside, with some examples of encroachment or non-countryside uses. Parcel 23 is not considered to be open countryside, but contains recreational uses which are beneficial uses in the Green Belt. It therefore makes a slight/negligible contribution.

3.5.3 The land within parcel 24 has a mixed performance against this purpose. Small areas are characteristic of 'normal' countryside, with most of the parcel consisting of recreational land with natural assets. Therefore the parcel has a moderate to major contribution to safeguarding the countryside from encroachment.

3.6 Conclusions

3.6.1 This section sets out the conclusions and recommendations of the Green Belt Study building upon the findings presented in the previous sections of this report.

3.6.2 This study provides evidence on how the land in the Green Belt in Havering is performing in relation to the purposes of the Green Belt as defined in the NPPF. For the purpose of this study the Green Belt in Havering has been divided into strategic parcels, which have been assessed against the first three purposes only, as justified in this report. These are:

1. to restrict the unrestricted sprawl of large built-up areas;
2. to prevent neighbouring towns from merging into one another; and
3. to assist in safeguarding the countryside from encroachment.

3.6.3 The assessments of the Green Belt parcels in the borough have found that all of the Green Belt in Havering has value when considered against the purposes of the Green Belt. The majority of the parcels have been found to be of paramount or high value to the Green Belt. One parcel has a moderate/high performance, which is likely to improve over time due to site restoration works. Another parcel has a low performance, with limited contributions against two purposes. This parcel also benefits from other policy constraints which restrain development.

3.6.4 There is found to be a variation in the performance of parcels against the different Green Belt purposes and in some instances there are also differences in performance within a parcel. These are largely due to the location in respect of large built-up areas and towns. However, some parcels have been found to have a semi-urban character, already contain limited sprawl, or simply do not possess many countryside qualities. To improve the performance of these parcels and the Green Belt as a whole, it is therefore recommended that improvements to the quality and objectives of the Green Belt are made, in line with the NPPF.

3.6.5 Modifications to the Green Belt boundary can only be made through the Local Plan, when very special circumstances have been identified. This study does therefore not conclude if Green Belt boundaries need to be changed. Instead it provides a strategic assessment of the performance of Green Belt parcels in the borough against the purposes identified in the NPPF, which can together with other evidence be used to inform decisions in the Local Plan. Parcels could be considered for further study, if very special circumstances can be demonstrated.

Annex F: Assessment forms

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 01 (Thurrock parcel 38)

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Whilst not adjoining southern edge of Romford built up area land within parcel restricts the westward sprawl of Thurrock urban area towards Rainham; whilst Purfleet already extends towards Rainham the western part of this parcel extends beyond and closer to the edge of the Greater London built up area.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	Prevents westward expansion of Purfleet towards Rainham although a gap of around 800m exists between the edge of the parcel and Rainham with other intervening Green Belt land.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Adjoining western edge of Purfleet quite well defined by infrastructure and any development beyond these limits would be perceived as a clear encroachment into wide open expanse of Rainham Marshes. Development within Rainham marshes within Havering Borough would be an isolated encroachment.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Strong sense of openness. Broad open marshland with wide and expansive views, including across estuary and to urban areas beyond parcel to west and north west. Devoid of inappropriate development.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Expansive and beyond district boundary, including across estuary.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Well defined to north (railway) and south (estuary). South east boundary reasonably well defined along Mar Dyke although area of similar land has been excluded creating poorly defined boundary. No clearly defined feature along borough boundary so this parcel has been extended into Thurrock to the edge of Green Belt at Purfleet.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (towns as per second purpose; relationship to other 'non-principal' settlements)	Eastern side defines edge of Purfleet and separates 'arm' of employment land north of railway (very evident) from western edge of town (generally well contained by vegetation). No obvious relationship with Rainham evident to north west due to distance and containment provided by significant area of raised landfill between parcel and town.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Broad expanse of exposed open marshland with strong association with estuary within Rainham Aveley and West Thurrock Marshes LCA. Strong character with some external influences from infrastructure, employment development on north west edge of Purfleet, and landfill operations beyond to west.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Flood Zone 3 and RAMSAR/SSSI constraints. Much of area is RSPB Rainham Marshes Reserve.	**Substantial constraints over much of area**
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	Remnant area of open marshland landscape highly sensitive to change from development.	**High**
		Moderate
		Low

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 02

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Designation prevents south eastward encroachment of Romford built up area at Rainham. Also constrains expansion of existing pockets of inappropriate development within parcel which may otherwise be difficult to resist in this highly accessible location. Also contributes to restricting north westerly extension of Purfleet (part of Thurrock built up area).	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	Parcel provides a significant contribution to this purpose by preventing outward growth of Rainham and Purfleet on either side of parcel.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Designation provides valuable protection to further encroachment from inappropriate development into area of open productive farmland (notably in southern part) and remnant marshland, within a strategically attractive location.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Generally a level primarily fenland landscape with clear perception of openness across marshes south of Wennington Road, and broadly open mainly arable land to north of the road. Clusters of development along Wennington Road create perception of encroachment, although much of this development appears to pre-date designation. Encroachment apparent with development and storage uses associated with farmsteads at junction of Wennington Road and A1306 and at East Hall Farm. Prominent block of industrial buildings, and extensive storage yards and car sales are a clear encroachment in the parcel just north of A13/A1306 junction. School building complex at Chafford School extends edge of Rainham into parcel. Area north of A3106 is significantly affected by mineral works/landfill and former workings; large cemetery in northern corner which affects perception of openness.	Very apparent
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Generally open views across much of area, although vegetation along Common Watercourse limits views in this area and softens views towards edge of Rainham. Much of parcel inter-visible with land rising up towards Aveley (Thurrock parcel 19). Road and rail infrastructure limits views to south although views possible over much of parcel from raised A13 crossing marshes. Vegetation along A3106 visually divides the parcel in local views.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Clearly defined by Channel Tunnel railway along south west side; A1306 on eastern side and Launders Lane and ribbon of vegetation along north east side. Northern end defined by Upminster Road North. Lambs Lane South and belt of vegetation forms a strong edge to south east side of Rainham, with school grounds within parcel also contained by strong tree belt. Weaker edge along back gardens on edge of Rainham south of Wennington Road. The parcel could be subdivided further along A1306 of Wennington Road. The small area adjoining Purfleet Industrial Park is separated from rest of parcel by A13. Otherwise there are no other clear internal boundaries.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	Direct relationship with south eastern edge of Rainham, although this edge is generally discreet from wider parcel. South eastern end of parcel abuts Purfleet Industrial Park which forms north west edge of Purfleet.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Southern part of parcel lies within Rainham Aveley and West Thurrock Marshes LCA, an open landscape affected detrimentally by significant infrastructure with longer distance views to south where not prevented by elevation of A13. Much of this southern part appears to be actively farmed (mainly arable), with a depleted field pattern, with grazing on the southern marshland. Northern part within edge of Belhus Lowland Quarry Farmland which has a more fragmented character due to different uses (cemetery; landfill; recreation). Overall, the area has a generally open rural character but is fragmented to varying degrees by infrastructure and various other uses and this engenders a sense of a landscape 'under pressure'.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Area between Wennington Road and railway and along Common Watercourse is within Flood Zone 3; cemetery; local nature site along Common Watercourse; open space.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	Due to its generally open nature this area has a high visual sensitivity to change, where any significant development is likely to be particularly prominent and increase the perception of encroachment that already exists within parts of the parcel. The area south of the A1306 is particularly sensitive due to its relationship with the important remaining marshes.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 03 (Thurrock parcel 19)

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Parcel lies approx. midway between large built up areas of Romford on edge of Greater London and Thurrock urban area. Other intervening land on the periphery of those urban areas (parcels 2 and 4 in Havering and parcel 22 in Thurrock) provide this constraint, although the edge of Romford at Rainham is less than 400m from the north west edge of the parcel and the adjoining part of the parcel does make some contribution to containing the outward growth of that built up area.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	Parcel lies approx. midway between towns of Purfleet and Lakeside/West Thurrock, and Romford towns of Upminster and Rainham. Lies approx. midway between South Ockendon and Rainham. Separation between these towns is in excess of 3km. Strategic level of development in this parcel could reduce separation between Aveley village and Rainham where existing separation is approx. 2.6-3km.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Approx. 50% of the parcel (much of which is within Havering), is or has been subject to mineral extraction/landfilling with a consequential adverse effect on the character of the countryside although it is to be expected that restoration upon cessation of use will re-establish a more rural appearance to these areas. The remaining undisturbed parts (primarily within Thurrock) have a strong rural character which designation assists in safeguarding.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Strong perception of openness in most parts as very little encroachment except from active/disused mineral workings (not inappropriate development).	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Variable. Contained/limited in most eastern parts due to high level of vegetation cover. Visually exposed with open views in western part across lower lying land and mashes beyond.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Well defined along roads extending into Havering, as no alternative boundaries exist within parcel.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (towns as per second purpose; relationship to other 'non-principal' settlements)	No clear relationship. South east corner adjoins Aveley but generally well contained from it. The edge of Rainham is less than 400m from the north west edge of the parcel where the intervening land is occupied by a large cemetery within the northern part of parcel 2.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Two distinct areas of differing character within parcel although all within the Belhus Lowland Quarry farmland LCA. Strongly wooded and rural in north eastern part (part of Thames Chase Community Forest) where there is Open Access. Much of exposed sloping western half of parcel is open degraded land with no landscape structure, due to past or quarrying, much of which is restored or being restored. Immature golf course on part of restored landfill.	**Strong rural**
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Some areas of nature conservation value. Thames Chase Open Access land. Flood Zone 3 along upper reach of Common Watercourse.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT (as informed by the Landscape Character Assessment)	High throughout area; although degraded land is of low landscape sensitivity it is of high visual sensitivity, although elevated areas are visually highly sensitive due to exposure to far reaching external views.	**High**
		Moderate
		Low

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 04

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	The parcel provides strong containment of the easterly and southerly expansion of the Romford built up area and the northern expansion of the built up area at Rainham.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The country park and Ingrebourne valley provide a strong level of constraint to the expansion of Romford (at South Hornchurch) and northern side of Rainham. The Green Belt designation fulfils a supporting role in preventing expansion that could lead to merging of these parts of the Romford towns in this area (although they are already connected to the south). Land within the rest of the parcel provides no real contribution to the purpose due to the considerable separation between the Romford towns and South Ockendon and the Thurrock towns to the south east.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	The country park and Ingrebourne corridor in the western part of the parcel prevents encroachment of development along the adjoining edge of Hornchurch. In the rest of the parcel the designation provides a strong level of protection to varied and quite rural areas of countryside. Designation also provides a constraint to further encroachment of existing inappropriate development at the farmsteads.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Parcel is substantially free of inappropriate development and therefore there is a strong perception of openness throughout most of the area with localised intrusions from uses (light industrial, recycling, waste transfer, caravan storage, etc.) based primarily within/around what appears to be most farmsteads, mostly within the eastern and northern parts where access is from lanes (Berwick Pond Road and Park Farm Road which defines the eastern boundary of the parcel). Hornchurch Country Park occupies the majority of the western part of the parcel and is free of roads. St Georges Hospital comprises a large building complex in the north west corner and appears to be available for redevelopment (major developed site within Green Belt).	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Views are variable throughout the parcel. Within the country park there are local high points which facilitate long distance panoramic views over the surroundings including towards the City and North Downs. In lower parts developing woodland provides significant containment and this will increase as woodland develops. Outside the park viewing opportunities are limited to lanes where intermittent roadside vegetation prevents most wider views. In the eastern part there are extensive areas of new woodland some associated with mineral working restoration/landfill sites, where there is also public access.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	South eastern and eastern boundary well defined by roads (Warwick Lane and Park Farm Road). Northern boundary by rear gardens and estate roads on southern edge of Upminster. On the western side by clearly defined estate roads and residential property boundaries adjoining the country park; in the north western part the Ingrebourne corridor reinforces this edge. On the southern boundary the A3106 defines the boundary together with the residential area of north Rainham where the boundary is partly integrated by vegetation along the boundary of the park. Whilst Park Farm Road and Hacton Lane provide well-defined physical features within the parcel on the south western edge of Upminster the existing boundary is already well defined in this location.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	Direct relationship to southern part of Hornchurch/Upminster where country park defines much of the edge, also northern edge of Rainham on southern boundary. Rest of area has no clear relationship with principal settlements.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Country Park is based around the Ingrebourne Valley LCA which provides a distinctive yet significantly re-modelled landscape with some marshland and ponds in the southern part; there is a surprising sense of relative remoteness in some areas despite the proximity of the urban area. This is an accessible recreational landscape with a high proportion of developing woodland. The others parts, within the Belhus Lowland Quarry Farmland LCA, are distinctly different, traversed by tree and hedge lined lanes. The northern part has pronounced rural open farmland character with geometric fields (mainly arable with some horse paddocks), often with hedges removed. In the eastern part quarrying has affected the landscape with areas now largely restored (although there is evidence of some activity east of Gerpins Lane) and there are areas of developing woodland and with public access. An active airfield (Damyns Hal Aerodrome) is located in the south east corner and is a source of noise and activity.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Large area of open space with public access (Country Park); SSSI, SNCIs and Flood Zone 3 associated with Ingrebourne; Local Nature Reserve.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	Landscape is very sensitive to change from strategic level of development given the existing recreational uses that prevail. The Ingrebourne is an important part of the green infrastructure of Thames Chase. The central and northern parts display strong rural characteristics despite the quite close relationship to the built up area and provides a rural edge extending up to the edge of Upminster. Whilst in the eastern part there is evidence of some disturbance, this area is removed from the built up area and within open countryside.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 05 (Thurrock parcel 24)

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Parcel is quite remote (approx. 2.6km) from northern edge of Thurrock urban area, but lies closer to edge of Romford on edge of built up area of Greater London (1.3km from Upminster and 2.2km from Rainham). As such it provides a negligible contribution to constraining the outward expansion of Greater London as other intervening land within Havering (parcels 3, 4 and 6) fulfils this function, and no contribution to checking the growth of Thurrock urban area (and Aveley intervenes).	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	Parcel located between, but separated from, South Ockendon, Rainham and Upminster. Strategic level of development would not lead to merging of these towns, although it would reduce separation.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Parcel comprises extensive area of countryside parts of which have been modified significantly by quarrying/landfill operations. These areas have been restored and the landscape forms an attractive complex mosaic of existing and developing woodlands interspersed with fields. A significant central southern part forms part of Belhus Woods Country Park (including Thames Chase Community Woodland). South eastern part of parcel contains northern part of Belhus Park (Park and Garden of Special Historic Interest). There is some encroachment by development (haulage yard, storage and light industrial uses) along Romford Road. Whilst significant constraints apply in some areas Green Belt designation provides protection.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Very little development and clear sense of physical openness (visual openness limited by substantial woodland cover).	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Views within and out of parcel limited by vegetation cover.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Well defined on three sides by roads (extending beyond borough boundary). Southern boundary along clear bridleway route. No obvious internal boundaries.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (towns as per second purpose; relationship to other 'non-principal' settlements)	No relationship.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Located within Belhus Lowland Quarry Farmland LCA and possesses a rural character with extensive woodland forming part of Country Park/Thames Chase.	**Strong rural**
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Belhus Chase Country Park and Open Access land; nature conservation sites (Borough and local value); former landfill. Ancient woodland and part of Registered Park & Garden within Thurrock.	**Substantial constraints over much of area**
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	A predominantly rural area with much of southern part within Havering defined as a country park with a mosaic of woodlands and widespread access. Northern part comprises more open fields and has generally strong rural character.	**High**
		Moderate
		Low

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 06

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	The north western part of the parcel adjoins the south eastern edge of the Romford built up area at Upminster; as such this part of the parcel acts to restrict the expansion of the built up area in this direction (although the two Conservation Areas that define much of the land within the edge of this parcel are a significant constraint in their own right). The parcel, in association with the eastern part of parcel 12 to the north, defines the eastern limit of the Metropolitan built up area and, as such, plays a particularly important role in containing the eastward expansion of the Metropolitan area (although the M25 to the east would provide a robust boundary to any further eastward expansion).	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	Whilst the parcel lies between Upminster and South Ockendon within Thurrock the two towns are separated by a substantial gap (approx. 3km wide) within which lies the substantial barrier of the M25.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Whilst there is evidence of some encroachment of inappropriate development within the parcel, the parcel has a predominantly rural character which is safeguarded by the designation.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	There is a strong perception of openness in this parcel and very limited evidence of encroachment by inappropriate development. Existing development is limited primarily to development extending southwards from the southern edge of Upminster at Corbets Tey (equestrian centre, care home, and ribbon of houses along Sunnings Lane). Some farmsteads show evidence of other uses such as caravan storage at Sullens Farm; paintballing at Bush Farm and outdoor pursuits centre at Russell's Lake. Upminster cemetery and two school sites lie within the northern part of the parcel.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	The topography is gently undulating and this, combined with areas of woodland, hedgerows and hedgerow trees limit views throughout much of the area. Where views are possible they are generally over short to medium distances. Views from roads and lanes across the parcel are, in the main, limited by roadside vegetation. The M25 which is on embankment along most of the eastern boundary of the parcel prevents views intervisibility with the land to the east. Development and vegetation along St Marys Lane to the north, and along Park Farm Road and Bramble Lane/Dennises Lane that form the western and eastern parcel boundaries respectively curtails intervisibility with adjoining parcels.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Parcel edges are clearly defined by roads except on the southern edge of Upminster at Corbetts Tey where rear garden boundaries of residential properties (sometimes reinforced by notable vegetation) form the Green Belt boundary. Other roads within the parcel could form alternative Green Belt boundaries should realignment of the Green Belt boundary be considered appropriate.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	The north west side of the parcel adjoins the south eastern and eastern side of Upminster. Vegetation along and within the vicinity of this edge assists with 'softening' the interface between built development and countryside within the parcel, except along Argyle Gardens where the built edge is more prominent. There are no other smaller settlements within the parcel.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	All but the northern edge of the parcel lies within the Belhus Lowland Quarry Farmland LCA, with the northern edge within the Thurrock Reclaimed Fens LCA although there is no obvious differentiation between the two apparent on the ground. The area comprises a mosaic of agricultural land, woodlands, and other uses (mentioned above) and golf course. Mineral extraction has created a number of water bodies although there is little evidence of large scale extraction and landfilling within this part of the Belhus LCA. Whilst there are pockets and small ribbons of development these are generally reasonably well integrated into the landscape such that the predominant character is rural. Cranham Hall in the northern part of the parcel forms the centre of an extensive Conservation Area defining the south eastern edge of Upminster; parkland surrounds the immediate environs of the hall but the much of the beyond arable within amalgamated fields. The edge of Corbetts Tey is also defined by a Conservation Area. A railway line cuts across the 'grain' of the landscape and together with the elevated M25 forms a source of noise and movement.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Two Conservation Areas defining much of the parcel's edge with Upminster. Significant number of quite extensive nature conservation sites (valued at a metropolitan, borough and local level). Very small areas of Flood Zone 3.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	This broadly rural area has a generally high sensitivity to strategic development due to its reasonably intact nature and significant level of environment of constraints.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 07 (Thurrock parcel 16)

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Parcel lies 1.9km from Upminster on eastern edge of built up area of Rainham and over 3km from northern edge of Thurrock urban area. As such it provides No contribution to constraining the outward expansion of Greater London as other intervening land (primarily parcel 6) fulfil this function within Havering.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	Provides No contribution to preventing the merger of the northern edge of South Ockendon with Upminster due to the significant separation which exists, and the boundary provided by the M25.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Parcel comprises an expansive, broadly level, open/semi open and largely unspoilt area of productive farmland, with a notable field pattern. Existing development is confined to small clusters of residential development in northern part which is generally well assimilated within the landscape. Designation provides valuable protection in an area where there are no other high level constraints.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Strong perception of openness throughout area with little encroachment by development.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Flat landscape with limited vegetation cover allows open views across area. Inter-visible with adjacent part of parcel 8 (parcel 15 within Thurrock).	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Very well defined by roads on all sides, including section of M25. Railway forms an alternative boundary in south western part although it is not a significant feature in the landscape.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (towns as per second purpose; relationship to other 'non-principal' settlements)	Physical and visual relationship with development on northern edge of South Ockendon.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Within Belhus Lowland Quarry Farmland LCA. Productive, level, primarily arable farmland with generally weak field boundaries, with largely unspoilt rural character; absence of quarrying. Whilst southern edge within Thurrock adjoins north side of South Ockendon, development does not exert a strong influence on this character.	**Strong rural**
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Small area of former landfill south of North Ockendon where there is also a Conservation Area. Nature Conservation sites (important at Borough level).	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	A generally rural open landscape where any development is likely to have significant effects on the surroundings and the setting of the North Ockendon Conservation Area.	**High**
		Moderate
		Low

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 08 (Thurrock parcel 15)

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Large parcel that is separated from the Thurrock urban area (by parcel 17 within Thurrock study; minimum distance of approx. 800m between southern edge of parcel and north edge of Grays/Stifford Clays), and by some 2.9km minimum from the Greater London/Romford built up area by parcel 7 (Thurrock parcel 16) and substantial area of other intervening land within Havering. Only northern part of parcel lies within Havering. As such the parcel provides No contribution to this purpose.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	Parcel located beyond north east edge of South Ockendon on west side of large gap (over 8km wide) between the town and Basildon to the north east; strategic level of development would have no effect on merging of these two towns. Development in southern part of parcel (outside Havering) would not lead to merging with towns making up Thurrock urban area.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	All but the northern edge of the parcel lies within Thurrock. The southern part of the parcel within Thurrock contains significant encroachment from residential development off Sycamore Way (a Major Developed Site in Green Belt), Gypsy and Traveller development (north of Buckles Lane) and other small incidental developments. Mineral extraction sites (partly restored) lie within the central and southern parts of the parcel (within Thurrock). All but the southern part (assessed as making a Moderate contribution to this purpose in the Thurrock assessment) has a generally pronounced rural, largely open character with productive farmland and distinct sense of openness and is adjudged as making a Major contribution to this purpose in the Thurrock assessment. The small northern part of the parcel that lies within Havering comprises arable fields and a golf course (possibly based on former land filling and with a complex of buildings), which is at odds in character terms with the surrounding landscape, but nevertheless forms part of the open countryside which adjoins this part of the parcel and this land makes a similar contribution (Major) to the purpose as land within Thurrock to the south.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Northern half largely open with no significant intrusion by development. Major development site in Green Belt on north east edge of South Ockendon does not contribute to openness and warrants removal from Green Belt. Southern part contains significant encroachment by gypsy and traveller sites.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Varied views –expansive/long distance in northern part due to elevated topography falling away to fenland to east from which there are views of chimneys and tall buildings in Thurrock urban area to south. Woodlands and tree belts in area east of South Ockendon create a more contained landscape.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Erratic boundary along western side coexistent with Green Belt boundary/settlement edge. North west, north and south boundaries defined by roads/lanes. Eastern boundary along tracks (mainly associated with past/present quarry/landfill sites) which are often flanked by notable vegetation. No other alternative clearer internal boundaries exist; Mar Dyke could form an alternative eastern boundary. Parts inter-visible with parcel 9 (Thurrock parcel 14) and Thurrock parcels 16 and 17.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (towns as per second purpose; relationship to other 'non-principal' settlements)	Direct physical and visual relationship between southern part of parcel with edge of South Ockendon (built up area at Sycamore Lane falls within Green Belt). No relationship in northern part.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Parcel straddles two LCAs – Belhus Lowland Quarry Farmland LCA and Thurrock Reclaimed Fens LCA. Principally strong rural character with much arable land in northern half. Settlement primarily focused on higher ground along B186 with small group of dwellings at North Ockendon. Prevailing degraded urban fringe and residential character in southern part adjoining South Ockendon. Some mineral workings and landfill sites (some possibly still active) have affected character of some parts.	**Strong rural**
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Extensive areas of landfill (including historic landfill sites) and Flood Zone 3 along Mar Dyke (within Thurrock).	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	High sensitivity in areas away from intrusion and influence of development on edge of South Ockendon due to open rural character of fen/fen edge landscape which is largely devoid of development. Small area within Havering within wholly rural and open surroundings. Low sensitivity where significant development within Thurrock has extended beyond edge of South Ockendon and eroded landscape character.	**High**
		Moderate
		Low

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 09 (Thurrock parcel 14)

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Very small part of parcel lies within Havering. All but southern edge of parcel is remote from large built up areas and therefore provides No contribution to this purpose. Southern boundary defined by A13, with narrow parcel 27 separating the road/parcel boundary from the northern edge of Grays/Stifford Clays. Thurrock parcel 27 and this major infrastructure contains the Thurrock built up area.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	Very small part of parcel lies within Havering. The parcel is reasonably well separated from towns by other parcels such that strategic level of development would not lead to merging.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Very small part of parcel lies within Havering. Designation safeguards an expansive, low lying open fenland landscape with a very strong sense of openness with little encroachment of inappropriate development, except for historic residential development on southern edge of Bulphan (core of settlement is excluded from Green Belt). Green Belt designation provides valuable protection to this distinctive fenland countryside.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Very strong with very limited encroachment.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Generally expansive and far-ranging; slightly more enclosed around Bulphan. Inter-visible with all adjoining parcels, except most of Thurrock parcel 41.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Well defined along roads except around north side of Orsett where coexistent with Green Belt boundary along rear gardens, and tracks along western side where Mar Dyke could form alternative parcel boundary.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (towns as per second purpose; relationship to other 'non-principal' settlements)	Northern edge of parcel, almost all of which lies within Thurrock, has been defined along Fen Lane within Havering as the administrative boundary follows weak field boundary within Thurrock. Southern boundary extends close to northern edge of Grays/Stifford Clays but is separated from it by A13 and parcel 27. Adjoins small village of Orsett, set on higher ground adjoining south eastern edge of parcel, and Bulphan on north east corner of parcel.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Located within Thurrock Reclaimed Fens LCA, an expansive, low lying open fenland landscape, primarily in arable use with a low level of vegetation cover. Settlement limited primarily to farms with some other uses (industrial/storage) apparent south of Bulphan.	**Strong rural**
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Some areas of Flood Zone 3 within Thurrock. Part within Havering falls within Countryside Conservation Area.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	A distinctive open fenland landscape that is highly sensitive to change from built development.	**High**
		Moderate
		Low

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 10 (Thurrock parcel 13)

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Parcel not directly related to edge of Greater London at Upminster on the edge of Romford built up area, the edge of which is some 1.4km to the west and is separated from it by other land which, together with the M25, constrains the outward growth of the built up area. Almost 4km separates the southern edge of the parcel from the northern edge of the Thurrock urban area; over 5km separates it from the nearest edge of Basildon to the east. As such other land adjoining these large urban areas fulfils this purpose.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	As purpose 1. The separation of this parcel from other towns, including South Ockendon means that any strategic level of development would not lead to merging, although separation would be reduced to some extent.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	A broad expansive fenland landscape with a strong sense of openness and long distance views with development limited primarily to farmsteads and small areas of development along roads on north, west and east sides; greater incidence of scattered development at North Ockendon creating some sense of encroachment. Designation provides high level of protection against piecemeal encroachment of inappropriate development, particularly adjoining existing development.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Very strong perception of openness, with development mainly limited to farmsteads; some sporadic development along St Mary's Lane and B186 which creates some sense of encroachment.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Expansive and long distance, including to hills to north and north east, and rising ground to west. More enclosed in north west part where vegetation cover is slightly more significant. Mainly inter-visible with Thurrock parcels 12, 14 and northern edge of 15, and Havering parcel 11.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Well defined along roads, with much of parcel extending into Havering as no alternative boundary within Thurrock. Railway forms northern boundary to ensure consistency with Thurrock parcels 03 and 12, although St Mary's Lane forms an alternative northern boundary.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (towns as per second purpose; relationship to other 'non-principal' settlements)	No apparent relationship.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Majority of parcel lies within Thurrock Reclaimed Fens LCA, and open level fenland landscape rising up to south west. Geometric largely open arable and pasture fields with low level of vegetation cover, more fragmented/smaller scale through North Ockendon area where suburban development and varied land uses evident. Utility features (sewage works, sub station and associated overhead infrastructure) present.	**Strong rural**
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Areas of Flood Zone 2 and 3 within northern part. Extensive areas of nature conservation value (at Borough level). Much of area within Havering falls within Countryside Conservation Area. South west edge adjoins North Ockendon Conservation Area.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	Northern part of extensive area of open fenland landscape which extends south through parcels 8 and 9 towards the Thurrock built up area; as such the landscape is highly sensitive to intrusion from development.	**High**
		Moderate
		Low

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 11

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	The western edge of the parcel at its closest point is just over 1km from the eastern edge Cranham on the eastern edge of the Romford built up area. The northern boundary is also around 3.75km from Warley on the southern edge of the Brentwood built up area. The parcel therefore does not contribute to this purpose.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The parcel lies within an area of land between Upminster and Basildon which is over 7km wide. It therefore makes no discernible contribution to this purpose.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Green Belt designation provides protection to the countryside within the parcel where there is already some development within reasonably sized plots at North Ockendon that could be otherwise susceptible to piecemeal encroachment by 'infilling' and where there are no other significant constraints (other than normal countryside protection policy) to constrain such development.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	The perception of openness within this parcel is variable. The southern part north of Ockendon Road forms the summit of Clay Tye Hill and is elevated and exposed to the north where the land falls away. There is significant encroachment from development within the parcel with a collection of redundant farm (?) buildings and group of dwellings on the north side of Ockendon Road and ribbon of development within deep plots (likely to pre-date Green Belt designation) on the west side of Clay Tye Road, including an area of caravan storage, along the eastern edge of the parcel forming part of the straggling settlement of North Ockendon.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Views generally limited due to lack of public vantage points although there are views across the parcel from parts of the adjoining M25 and up the rising ground to the south. Views from Clay Tye Road are limited primarily to glimpses where development and roadside vegetation permits. Whilst southern part of parcel is elevated the appreciation of the wider views available from this elevated area are not readily appreciated due to the containment provided by roadside vegetation, although the area is exposed to views from the countryside north of the borough. The area of developing woodland in the central western part of the parcel has public access from the Thames Chase Forest Centre on the other side of the M25. There is an open view south over the parcel from St Marys Lane on the northern boundary.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Well defined on all sides by roads with no obvious internal boundaries.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	Separate from principal settlements. No apparent relationship with Upminster to the west due to separation provided by barrier of M25 and northern part of parcel 03. Contains western part of straggling settlement of North Ockendon.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Southern elevated part and associated slopes lie within Belhus Lowland Quarry Farmland LCA and comprises regular sided level to sloping arable fields. Small regular sided partially enclosed fields of rough grassland lie in the northern part within the Thurrock Reclaimed Fens LCA where no obvious fenland character remains with the area apparently separated from the wider character area to the east within parcel 10 (Thurrock parcel 13) and remnant fenland area to the west (northern part of parcel 06) by the M25. The elevated section of the M25 forms an intrusive element along much of the western edge and the discontinuous ribbon of development along Clay Tye Road creates a disjointed and undistinguished character.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Conservation Area at North Ockendon, just beyond southern boundary of parcel (within Havering parcel 7). Area of open space as part of Thames Chase Community Forest (including ForestCentre).	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	Although a landscape of diminished quality, a strategic level of development would be unrelated to a built-up area or significant settlements and erode the dispersed nature of the settlement of North Ockendon. The sloping and elevated southern part is most sensitive to change due to its visual prominence as part of the higher land rising above the reclaimed fenland landscape.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 12

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	The parcel extends around the eastern edge of the built up area of Romford at Cranham and therefore provides an immediate constraint to the expansion of the built up area. Much of this edge contains nature conservation sites valued at borough level, and an area of open space which also provides constraint.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The parcel provides a negligible contribution to this purpose as it lies on the southern edge of an area of countryside which is around 3km wide that separates the northern/north eastern edge of Upminster at Cranham from the south western edge of Brentwood.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Designation provides additional protection to an area of countryside with a predominantly rural character which provides a buffer between the edge of the built up area and major roads. The high level of woodland cover provides very substantial physical and visual containment of the adjoining built up area.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	There is a strong perception of openness within the eastern part of the parcel where woodlands, small fields and an area of arable land are free of encroachment. In the northern part there is some encroachment from existing development in the form of a ribbon of houses along Front Lane, which is perceived as a northern 'extension' of Cranham and a large caravan storage area between the northern edge of Cranham and the A127; whilst this is generally quite well contained it is perceived as an encroachment in limited views from the main road. There also appears to be some encroachment in small plots on Brookmans Park Drive. In the southern part there is some evidence of encroachment/urban fringe activity east of Cranham Court.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Views are generally enclosed and, where available, limited to short distances due to the high level of vegetation throughout the parcel. There are occasional short distance views into the edge of the parcel from Hall Lane on the western edge of the parcel. There are a number of footpaths within the parcel which allows views from within the area. Woodland provides strong containment of the adjoining urban edge.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	The inner boundary adjoining the residential development at Cranham if defined mainly by rear garden boundaries which are reinforced by woodland, except north of St Mary's Lane where the tree belt west of Cranham Court forms a more robust boundary than the rear garden boundaries of properties along the east edge of Winchester Avenue. The outer edges of the parcel are well defined by roads (St Mary's Lane to the south; M25 to the east; A127 to the north; Hall Lane to the west. Well defined internal boundaries can also be found along the defined outer edge of woodland to the east, the railway which crosses the southern part of the parcel,	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	Immediate relationship to the northern and eastern edge of Upminster at Cranham.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Northern part lies on southern edge of Brentwood Wooded Hills LCA where land begins to rise northwards. Eastern side lies within the edge of the Thurrock Reclaimed Fen LCA but separated from the wider fen landscape by the M25. Overall the area has a predominantly rural character with limited evidence of urban influences. The woodland provides an attractive well-defined wooded context to the northern end eastern edge of the built up area.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	A number of borough and local nature conservation sites, primarily relating to woodlands on the northern and eastern edges of Cranham.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	This area possesses a strong landscape structure and provides a valuable buffer of attractive countryside on the north eastern edge of the Metropolitan built up area where there is likely to be pressure for development within the generally well contained small fields east of Hall Lane and north of St Mary's Lane.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 13

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Land within the parcel contains the outward growth of the Romford built up area (i.e. eastwards from development at Emerson Park; northwards and westwards from the edge of Upminster) into the Ingrebourne valley. Given the visually exposed elevated nature of the valley sides any development extending into this area is likely to be perceived as 'sprawl'.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The parcel provides separation between the northern part of Upminster at Cranham and development at Emerson Park on the eastern edge of Romford.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	A surprisingly largely intact area of countryside, comprising part of the Ingrebourne Valley, which forms a 'wedge' of countryside extending northwards from Upminster between existing areas of development on the eastern edge of Romford and western edge of Cranham.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Strong sense of openness throughout area, enhanced by the perception that the land provides physical and visual separation as part of the Ingrebourne valley extending between existing areas of development. Perception of openness is enhanced by the views available across and along the valley. Given the proximity of the built up area on three sides surprisingly the parcel shows little evidence of encroachment from inappropriate uses except in the north west corner where there is a concentration of inappropriate uses including gypsy/traveller development, collection of buildings, yards and storage areas; retention of this area in the Green Belt is likely to assist control of further development in this area.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Where not shielded by vegetation views are available along and across the Ingrebourne valley from the valley sides and along the valley from within. Views to land to the north (parcel 7) are interrupted at lower levels by the A127 cutting across the valley. There is intervisibility between this parcel and land to the north in views from more elevated locations. Views are more open on the western valley side due to the reduced level of vegetation.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Parcel edges reasonably defined in places although pockets of development projecting from adjoining urban edges create irregular parcel boundary with boundaries defined by rear gardens of residential properties; a number of these boundaries are reinforced by adjoining woodland which assist with reducing the visual impact of this development on the valley. Whilst the watercourse could be used as a boundary to sub-divide the parcel this would serve little purpose and not reflect the fact that the valley is a single landscape 'unit'. Piecemeal 'inappropriate' development at Hubbards Close compromises the openness of this small area although no better alternative boundary exists.	Well defined
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	Immediate relationship with eastern side of Romford and northern parts of Upminster.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Parcel comprises southern part of the northern section of the Ingrebourne valley with an obvious valley landform. Much of the land is in agricultural use (arable and pasture) with some horse grazing extending right up to the built up area; a golf course occupies the south eastern part. A number of footpaths provide access through parts of the valley. The steeper eastern valley side supports more vegetation in the form of small woodlands and copses linked to the riparian vegetation along the course of the river. Vegetation assists with assimilating the urban edges. Emersons Park Academy and related playing fields extend eastwards into the central part of the valley. Surprising level of tranquillity in some parts despite proximity of built up areas.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Sites of nature conservation importance at Metropolitan level along Ingrebourne River; local nature conservation site north of Hubbards Close. Area of open space at golf course.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	An area that is particularly sensitive to change given its reasonably intact valley character, visual prominence and the separation that it provides between areas of development.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 14

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	The western half of the parcel adjoins the north eastern part of the Romford built up area at Harold Wood; the southern edge of the eastern part of the parcel extends close to the northern edge of the built up area at Cranham, although separated from it by the A127 and narrow area of land within the northern part of parcel 5. As such the parcel contributes to the containment of this outer edge of the Metropolitan built up area.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The parcel makes a limited contribution to the separation of the north eastern edge of the Romford towns, which the western boundary adjoins at Harold Wood, from the south western edge of Brentwood which is some 2km from the north east edge of the parcel.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	The area has a generally strong rural character, although it does contain scattered development along roads and lanes. The mosaic of small fields and vegetation creates a distinctive landscape that the designation safeguards from encroachment (such as the piecemeal expansion of existing development and introduction of inappropriate uses within the small plots and small holdings)	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	There is a strong perception of openness throughout most of this area with some localised exceptions. The western half of the parcel (west of Hall Lane) contains some small areas of development and storage (notably on the A127) and development at farms beyond Prospect Road. A ribbon of houses extends east along Shepherds Hill from the adjoining edge of Harold Wood. Large properties which have expanded within the contained small scale field pattern are strung out along Tomkyns Lane in the eastern part of the parcel and create a perception of leafy suburbia. A pocket of development adjoins the A127 in the south eastern part of the parcel which, together with other development along the road corridor, creates a perception of encroachment. Farmsteads on Folkes Lane now contain various uses including caravan storage.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Due to the high level of vegetation that characterises much of this area (including extensive areas of new woodland at Pages Wood and tree belts along the boundaries of small fields with the eastern part of the parcel) views are generally restricted to short distance with little inter-visibility with adjoining parcels. Some longer distance views are possible from more elevated areas but overall views are generally contained.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Parcel edges well defined by roads to the north (Shepherds Hill and Warley Road), east (M25), and south (A127). The western edge is less distinct with an irregular edge formed by development on the edge of Harold Wood. The parcel could be subdivided along Hall Lane.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	Western part has an immediate relationship with the eastern edge of Romford at Harold Wood although vegetation in the adjoining landscape assimilates the built up edge. The parcel separated from the south western edge of Brentwood by the M25 and intervening land beyond.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	The western edge of the parcel forms part of the upper reach of the Ingrebourne river valley (within the Ingrebourne Valley LCA) and is characterised by narrow valley topography and small pastoral fields which retain a distinctly rural feel to the area. The eastern side of the valley merges into the extensive area of Pages Wood which has good public access as the land rises up to Hall Lane. The eastern half of the parcel lies within the edge of the Brentwood Hills LCA and is characterised by an undulating topography and distinctive mosaic of small regular sided, tree lined fields with an extensive area of woodland with public access (Folkes Lane Woodland) towards the M25. Due to the level of containment provided by the patchwork of vegetation to the pockets of development that exists within some parts of the parcel, the over-riding perception is that of a distinctly rural area with a sense of remoteness from the built up area, although road noise affects tranquillity.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Extensive areas of well-used woodland open space. Some local sites of nature conservation importance. Countryside Conservation Area covering large area east of Hall Lane.	**Substantial constraints over much of area**
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	Overall, this area has a high sensitivity to change from strategic development due to the extensive accessible recreation areas forming part of Thames Chase, the integrity of the Ingrebourne valley, and the generally intact rural character of the landscape.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 15

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Green Belt designation constrains the outward growth of the Metropolitan built up area on the north east side of the Romford built up area.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The parcel forms part of the undeveloped land (in conjunction with the southern part of parcel 16) that separates the north eastern side of Romford from the south western side of Brentwood, although the M25 forms a significant barrier passing through the centre of this area. The northern part of the parcel lies within the narrowest part of this gap (around 700m wide) and therefore contributes most to this purpose.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Designation protects countryside that has a generally strong rural character, much of which is accessible for recreation, and is a constraint to 'inappropriate' development at the farmsteads and other building complexes that lie within the area.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	The parcel retains a generally strong level of openness with the only conflicting elements being the ribbons of historical development along the north side of Shepherds Hill and north end of Nags Head Lane (just beyond borough boundary), and the sewage works complex (a major developed site within Green Belt) between the lane and railway line. There appears to be some ancillary uses of buildings at some of the few farmsteads located within the parcel. A garden centre lies towards the southern end of Nags Head Lane. A gypsy and traveller site lies on the northern boundary with the A12.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Views throughout the area are generally limited due to the combination of the high level of vegetation cover and varied topography. Views from roads/lanes are generally contained by roadside vegetation.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Parcel edges well defined by roads to north (A12), east (M25), and south (Shepherds Hill/Warley Road). Whilst the western and north western edges are less well defined along the edges of development at Harold Park, the Ingrebourne river defines the edge of the built up area along the narrow strip of land between development and the railway and vegetation assist with strengthening boundary definition. The parcel could be subdivided along Nags Head Lane and the railway line.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	The western/north western part of the parcel has a strong relationship with the edge of development on the north eastern edge of Romford at Harold Park/Harold Wood with the northern part (together with the adjoining land within Brentwood Borough) contributing to the retention of separation between this built up area and the south western edge of Brentwood (although the M25 provides a strong barrier in this area). The riparian vegetation along the combined river and railway corridor on the southern edge of Harold Park provides a strong buffer on the edge of the built up area. The eastern part of the parcel has no relationship with the built up area.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	The majority of the parcel lies within the Brentwood Wooded Hill LCA, with a small part in the western part forming the upper reach of the Ingrebourne Valley LCA. Overall the area has a generally strong rural character with some remnant field patterns in the west and north east corners, with most of the rest of the area defined by extensive areas of woodland with recreation access (Harolds Court Wood and Tylers Common). There is a large complex of fishing of ponds (Tylers Common Fishery) south of the sewage works which has a more open modified character with views of development at Harold Park on rising ground beyond. The remaining pockets of farmland appear to be well managed. There is a notable area of land in use for horse grazing associated with Tylers Hall Farm which appears to be an equestrian centre.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Significant areas are identified as open space and there are a number of nature conservation sites important at local and Metropolitan level.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	This largely intact landscape with distinct rural qualities and significant areas of accessible open space has a high sensitivity to change to strategic level of development.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 16

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Green Belt designation constrains the outward growth of the Metropolitan built up area on the north east side of the Romford built up area.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The southern part of the parcel (in conjunction with the northern part of parcel 15) forms part of the undeveloped land (around 700m wide) that separates the north eastern side of Romford from the south western side of Brentwood, although the M25 forms a significant barrier passing through the centre of this area.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	The area has a rural character with little evidence of encroachment from inappropriate development. Green Belt designation provides important protection to the countryside and supports the Havering Ridge Area of Special Character designation.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	Strong sense of openness throughout the parcel which contains very little development; that which does exists is limited to a small number of properties along the southern side of Noak Hill Road on the northern edge of the parcel, an area of buildings and yards in the south east corner adjoining J28 of the M25, and three school/education complexes on the north eastern edge of Harold Hill (one of which is identified as a major developed site within Green Belt).	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	The area supports a significant level of vegetation and this, combined with the varied topography, restricts views generally to short and medium distances. Some longer distance views are likely to be possible from the slopes of the western side of Harold Hill. There is little to no inter-visibility with adjoining parcels.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Parcel edges are clearly defined to the north (Chequers Road), east (M25) and south (A12). The eastern edge is more varied being formed by an irregular pattern of development on the north eastern edge of the residential area of Harold Hill, although reinforced in many places by significant woodland.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	Immediate relationship to the north eastern built up edge of Romford at Harold Hill. Falls within the western side of a tract of countryside that extends east of the M25 to the northern edge of Brentwood at Pilgrims Hatch some 3km beyond the motorway. The southern part comprises part of the narrower area of land that separates development at Harold Park from Brook Street on the western side of Brentwood which is around 1.5km wide (and bisected by the motorway). The relationship of the development on the edge of Harold Hill to Brentwood is not evident on the ground.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	The parcel lies wholly within the north western part of the Brentwood Wooded Hills LCA and forms an elevated part of Harold Hill and associated slopes falling to the west into a valley that the M25 follows. There is a generally intact landscape pattern of regular sided tree and hedgerow bounded small fields interspersed with woodlands. The pattern has been eroded slightly within the golf course that occupies the south eastern part of the parcel. Vestiges of a parkland landscape remain evident at Dagnam Park. Overall the area has a strong predominantly rural character with limited localised intrusions.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	The entire parcel falls within the Havering Ridge Area of Special Character. Most of the parcel is covered by some designation(s) including areas of public access/open space and nature conservation areas (valued at local or Metropolitan level). Most of the parcel is identified as a Countryside Conservation Area.	**Substantial constraints over much of area**
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	This mainly intact accessible landscape with a strong rural character and number of valued features is highly sensitive to change from a significant development.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 17

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Whilst the parcel is contained on three sides by existing development the land does constrain the outward growth of these areas into an area that provides clear separation between the adjoining parts of the built up area and where development may be perceived as sprawl, although the A127 which cuts across the southern part would act as a northern limit to any development within that part consequently containing the perception of unlimited growth. There are other significant designations and land uses that also act as a constraint to development.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The parcel contributes to this purpose as it provides clear separation between the towns of Collier Row and Harold Hill.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	The parcel possesses some countryside qualities. Although much of the parcel is modified by golf course development this use is consistent with the objective of enhancing the beneficial use of land within the Green Belt	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	The parcel provides separation between areas of development on three sides; whilst development is often locally prominent this accentuates the sense of openness between developments with the land being perceived as a wedge of undeveloped land extending southwards towards the centre of Romford. There is little inappropriate development with the exception of a loose cluster in the north west corner where historic residential ribbon development has provided opportunities for other activities (such as gypsy and traveller, storage and retail uses) to creep in within the larger plots reducing openness.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Views throughout most of the area are restricted by surrounding development and vegetation except in the north eastern part which is more elevated and from where there are limited views from Lower Bedfords Road southwards, across the open grassland of covered reservoirs and over the built up area beyond to the hills south of the Thames estuary in the distance.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	The parcel is subdivided into two parts by the A12 with all edges defined by residential estate roads or rear gardens except the north where Lower Bedfords Road forms the parcel boundary.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	The parcel has an immediate relationship with the built up area of Romford, providing an open wedge of land that separates the residential areas of on the edge of the towns of Collier Row and Harold Hill.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	The parcel lies within the southern part of the Havering Wooded Hills LCA is primarily a recreational landscape containing the modified landscapes of two golf courses (either side of the A12), allotments, playing fields, parks and other open spaces. There is little of the rural landscape pattern remaining and there is no perception of 'open countryside', but a perception of an area of open landscape. The partially developed area in the north west corner has an unattractive urban fringe character. The golf course at Gidea Park contributes to the setting of the Gidea Park Conservation Area. Overall the area has an urban fringe character.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	The southern part of the parcel is identified as the Gidea Park Special Character Area, with the related Conservation Area extending into the western part of the adjoining golf course which contributes to its setting. The golf course is also an SSSI. North of the A12 much of the area is identified as open space with some nature conservation sites of value (at a local and borough wide level).	**Substantial constraints over much of area**
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	The southern part is highly sensitive to development due to designations that apply. The northern part is less sensitive to change due to the prevalence of the modified golf course landscape but is constrained by open space designation. In the north east part the reservoirs preclude development within the most visually exposed part of the parcel. The north western part is the least sensitive to development given the prevalence of existing uses but does contribute to the continuity of the Green Belt with the land beyond. The area overall is a valuable recreational resource close to a large population.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 18

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Those parts of the parcel adjoining the northern edge of the built up area fulfil this purpose by preventing the growth of development on the north eastern side of the Metropolitan area at Romford.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	Whilst the south western part lies between the northern edges of the towns of Collier Row and Harold Hill, overall the parcel provides no contribution to this purpose.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Most of the parcel is considered to be highly sensitive to change and designation therefore provides valuable protection from encroachment (some of which is already evident within the parcel). The hills are important landscape features within the wider context of the Metropolitan area and identified as the Havering Ridge Area of Special Character.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	There is a recognisable sense of openness throughout much of the parcel, although this is compromised despite encroachment by significant pockets of development and inappropriate uses - notably at Broxhill Road, the area of residential development at The Mount, mobile home park off Cummings Hall Lane, a dense area of plotland development between Church Road and the M25, sporadic plotland development and storage uses along Tyesea Hill/Horseman Side on the northern boundary (outside the borough boundary) and diversified farmsteads.	Very apparent
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Views are variable throughout the area. Vegetation cover is more pronounced in the south western part and land more open in arable areas to the north and east leading to variations in enclosure and views. The wooded hills and slopes in the south western part around Bedford Park, extending up to Havering–atte-Bower, provide a wooded backdrop in views from the area to the south of the parcel and there are occasional far-reaching southerly views from parts of this area. Views from the lanes and roads are generally contained by roadside vegetation.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Parcel edges are defined along roads, with the northern boundary of the parcel being extended beyond the borough boundary (into the districts of Brentwood and Epping Forest) to Tysea Hill road as the administrative boundary does not follow defined features on the ground. The south eastern side is defined by Lower Bedfords Road, western side by Havering Road and Orange Tree Hill through Havering-atte-Bower and north eastern side by the M25. Broxhill Road and Church Road pass through the parcel and could be used to sub-divide the parcel further.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	The southern part of the parcel abuts the northern edge of Romford at Collier Row and Harold Hill. The western parcel boundary passes through the small settlement of Havering-atte-Bower which is linked to Collier Row by an almost continuous ribbon of roadside development (within Green Belt). The rest of the parcel has no clear relationship with these areas of development or principal settlements beyond the borough (Brentwood being several kilometres to the east), although the north west part of the parcel adjoins the edge of Bournebridge within Epping Forest Borough.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	Most of the parcel lies within the Havering Wooded Hills LCA which has a varied topography and contains areas with a strong parkland character (Bedfords Park) and allow occasional long distance views to the south over London from the higher land. The character assessment recognises the detrimental influence that plotlands and piecemeal development has on the character of parts of this area. The adjoining part of the parcel contributes to the setting of the Havering-atte-Bower Conservation Area which extends someway south of the built up area of the village (considered to have a 'typical Essex village form').	**Strong rural**
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	The entire parcel falls within the Havering Ridge Area of Special Character. Conservation Area at Havering-atte-Bower. Extensive area of open space and site of nature conservation importance (at Metropolitan level) at Bedfords Park. Several local sites of nature conservation importance. Countryside Conservation Area at Noak Hill.	**Substantial constraints over much of area**
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	The Land of the Fanns character assessment identifies the area as forming part of an area considered to have high landscape value and have a high sensitivity to change (this excluded the degraded area north of Church Road).	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 19

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	The parcel is separated from the built up area of Romford by parcel 20 which fulfils this role to a greater degree.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The parcel makes no contribution to this purpose as it does not lie between towns.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	The majority of the parcel comprises farmland with a strong rural character which is protected by designation. Designation also safeguards the area from encroachment by piecemeal development within the southern part of the linear settlement of Bournebridge (within Epping Forest District) and west side of Havering-atte-Bower which lie within the north eastern and south eastern edges of the parcel respectively. The Havering part of the parcel falls within the Havering Ridge Area of Special Character.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	There is a strong sense of openness throughout most of this parcel, except where development within parts of the old linear settlements of Bournebridge (within Epping Forest District) and Havering-atte-Bower fall within the edge of the parcel.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	A moderately open landscape of undulating farmland which allows attractive medium to longer distance views across rolling countryside with some limited inter-visibility with adjoining northern parts of parcel 13 and visual connections to the landscape north of the borough. Views more contained along developed edges of the parcel.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Due to the lack of any defined features along the administrative boundary the parcel has been defined along Bournebridge Lane which is the next clear feature beyond within the Epping Forest District. The eastern boundary follows Oak Hill Road the B175 through Havering-atte-Bower; the southern boundary along Bower Farm Road and the track continuing west before turning north to follow the track, field boundaries defined by hedgerows and trees, and a woodland edge before re-joining Bournebridge Road.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	The parcel has no physical or visual relationship with principal towns, being separated from the northern edge of Romford by land within parcel 20. There is a direct relationship with the smaller settlements of Bournebridge and Havering-atte-Bower, parts of which fall within the edge of the parcel.	Very evident
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	The parcel lies within an open elevated part of the Havering Wooded Hills LCA where arable and pasture uses, within mainly medium sized fields, prevails. Vegetation cover is limited to some hedgerows, linear tree belts and copses; the openness has been increased with the depletion of field boundaries. Smaller pockets of land and paddocks create a small scale landscape context to the fringe of settlement at Bournebridge. Long linear rear plots extend west from some of the linear development at Havering-atte-Bower.	**Strong rural**
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Within Havering constraints include the Havering Ridge Area of Special Character, a small area of open space and some small local sites of nature conservation interest.	**Substantial constraints over much of area**
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	This landscape has a high sensitivity to change reflected by the Havering Ridge Area of Special Character designation.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 20

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	Parcel extends around the northern side of the Romford built up area and constrains growth of this outer edge of the Metropolitan area and is therefore fundamental to this purpose.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The western part of the parcel forms approximately half of the open area (approx. 1.8km wide overall) that separates the north western edge of Collier Row from the eastern part of Hainault (within Redbridge Borough). The designation therefore provides a substantial contribution to this purpose.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Although there is some limited encroachment designation provides important protection to the countryside, much of which forms part of the Havering Ridge Area of Special Character.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	There is a clear perception of openness throughout most of the parcel, with only limited encroachment from non-rural uses, the most notable being at Lower Park Farm and north end of Clockhouse Lane in the area directly north of the residential area of Havering Park within the southern central part of the parcel. Redevelopment is underway of previously developed plotland at Five Oaks Lane (within the parcel but within the Borough of Redbridge).	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Views across the area are variable due to variations in topography but are generally partially contained or open and expansive where land is elevated and vegetation is limited. There are long distance views available across the area to the Havering Wooded Hills to the north which form a backdrop.	Contained
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	The parcel boundaries are reasonably well defined running along the edge of a large area of woodland at Hainault Forest Country Park to the north and following the administrative boundary defined by a tree belt across Hainault Golf Course from where it follows Five Oaks Lane to join and follow the A1112 until its junction with Collier Row Road and the along Green Belt boundary following the edge of the built up area on the northern edge of Collier Row. There are no other clear opportunities to sub-divide the parcel internally along logical well-defined robust boundaries within the borough.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	The southern edge of the parcel adjoins the northern edge of Romford at Collier Row. The western edge runs close to the eastern edge of Hainault. The southern part of the parcel lies within the relatively narrow gap that separates these two built up areas. The eastern part adjoins Havering–atte-Bower.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	The parcel has a reasonably diverse character being characterised by a golf course and wooded and open spaces at Hainault Forest Country Park, the wooded Havering Country Park on the hills at Havering–atte-Bower (which contributes to the setting of the settlement and related Conservation Area), areas of farmland and significant areas of woodland. Some areas have an urban fringe character engendered by overgrazing and poor land management where there is evidence of scrub encroachment (most notably north of Havering Park). The country parks provide distinctive well used recreational areas close to a large number of people. The eastern part lies within the western edge of the Havering Wooded Hills LCA.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Most of the area within the parcel lies within the Havering Ridge Area of Special Character. There is open space at the Havering Country Park and some local and Metropolitan sites of nature conservation interest. The Havering–atte-Bower Conservation Area extends into the north eastern edge of the parcel. Land to the north beyond Five Oaks Lane within Redbridge is identified as a site of nature conservation importance.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	The area is considered to have a high sensitivity to change reflected by the Havering Ridge Area of Special Character designation which extends over most of the parcel that lies within the borough.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 21

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	The parcel comprises a wedge of land, around 800m-1km wide, between the edges of the built up areas of Romford and the north side of Dagenham at Chadwell Heath. Although there is a close existing relationship between these two built up areas, which have generally weakly defined edges and are almost linked by development along Collier Row Road which gives the perception of 'sprawl', the parcel overall makes a substantial contribution to this purpose. .	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The parcel separates Collier Row and Chadwell Heath which are in close proximity (although the ribbon of almost continuous development along Collier Row Road on the northern edge of the parcel almost links the two settlements).	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	Whilst there is encroachment of development along the northern edge of the parcel with an absence of 'countryside' characteristics, the rest of parcel primarily contains farmland and a mineral working (presumably to be restored). Designation contributes to the protection of this area which provides a 'wedge' of semi-rural countryside between the urban areas on each side.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	The openness of the area is compromised to some degree by the mineral working on the west side and ribbon of development along Collier Row Road on the northern boundary, otherwise the area has an open nature the perception of which is accentuated by the proximity of development on either side. With the exception of the development along Collier Row Road and roadside development at Marks Gate on the north west side, there is little evidence of encroachment from inappropriate development (mineral workings not being 'inappropriate' within Green Belt) and there is a clear perception of openness.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	The area is generally contained by surrounding development and vegetation along the outer edges of the parcel and this restricts views across it. Footpaths provide access within the parcel in various locations and these allow views along/across it. The parcel has no clear relationship with parcel 20 to the north due to the development along Collier Row Road or to parcel 22 to the south owing to the A12 and raised land within the mineral works immediately beyond.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	The western and northern boundaries are defined by the A112 and Collier Row Road although development along these routes creates a fragmented edge to the parcel. The eastern boundary is defined by the rear of housing forming the western edge of Collier Row; the southern boundary by the A12. The administrative boundary follows weak field boundaries through the centre of the parcel. There are no well-defined boundaries within the parcel.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	There is a very strong relationship with the adjoining towns, with the land lying between the western edge of Romford and eastern edge of Dagenham at Chadwell Heath.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	The parcel forms the northern part of the Dagenham Corridor LCA which is identified as a 'highly valued landscape' as a 'green lung for surrounding populations' and contains the upper reach of the River Rom. The area is semi-rural in character; the significant area of farmland engenders a countryside character but this is eroded by the visibility of surrounding development, encroachment of development and urban fringe uses along the north/north western edge where there are signs of piecemeal encroachment into adjoining land, the large mineral workings and areas of unmanaged rough grassland/scrub. Nevertheless it provides an important 'break' between development and has public access, although limited. Vegetation cover is limited.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Local sites of nature conservation importance along watercourse in north eastern part and north of mineral workings. Conservation Area covering WWII features within mineral working site (within Barking and Dagenham Borough).	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	Despite its varied character and condition the parcel has a high sensitivity to further change. It forms a valuable open break between adjoining built up areas and an integral northern part of the Dagenham corridor which runs north-south between the two boroughs. Given its limited width it is particularly vulnerable to erosion by piecemeal/incremental development.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 22

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	The parcel comprises an area varying in width between 2km on the northern side to 400m in the south, between the edges of the built up areas of Romford and the north side of Dagenham at Chadwell Heath. The wider northern part of the parcel (north of the A118 High Road) makes a substantial contribution to the fulfilment of this purpose (in conjunction with parcel 21 to the north). The narrow southern part (south of High Road has a very close existing relationship between these two built up areas and there is already a perception of 'sprawl'; this area therefore provides no contribution to this purpose.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The parcel maintains the physical separation of the towns of Romford and Chadwell Heath which are in close proximity (as little as 400m in the southern part).	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	The central and western parts of the parcel are in recreational use, with the north eastern part in agricultural use and where some recognisable characteristics of countryside remain. The playing field in the southern part, whilst not countryside, does prevent encroachment into this narrow area. This use is consistent with the objective of achieving the beneficial use of land within the Green Belt. .	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	The parcel is largely free of inappropriate development and provides openness. This perception of openness is enhanced by the fact that the land provides a very significant undeveloped break between extensive urban development which is particularly apparent from the A12.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Public views across the area are generally limited, except for users of the recreational facilities. There are views from parts of the A12 where there is an appreciation of the connectivity with open land to the north (parcel 21). The raised landform of the golf course and mineral working in the north western part restricts some local views. Views in the southern part (south of the A118 High Road) are contained by surrounding development and the railway line along the southern edge; hedgerows along High Road prevent visual connectivity between the playing field and rest of the parcel to the north. There are views to taller buildings within the adjoining built up areas.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	Parcel edges are defined by development (primarily rear gardens) on the eastern and western sides, the A12 to the north and railway line to the south. The A118 provides a clear internal boundary.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	There is a very strong relationship with the adjoining towns, with the land lying between the western edge of Romford and eastern edge of Dagenham at Chadwell Heath.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	The parcel forms a section of the northern part of the Dagenham Corridor LCA which is identified as a 'highly valued landscape' as a 'green lung for surrounding populations'. The area has a semi-rural to urban fringe character. The area of farmland in the north east (centred on Crown Farm) has a remnant countryside character but is affected by the visibility of adjoining development. With the exception of the mineral workings the rest of the area has a recreational character of playing fields, a golf course on raised land, and allotments. Vegetation cover is particularly limited.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Constraints are limited and of a local nature, including open space and a local nature conservation site in the south east corner.	Substantial constraints over much of area
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	Whilst much of the landscape is not sensitive to development due to modified uses, the parcel forms a valuable open break between adjoining built up areas and an integral northern part of the Dagenham corridor which runs north-south between the two boroughs. Given its limited width it is particularly vulnerable to erosion by piecemeal/incremental development. Designation helps to safeguard the remnant agricultural character of the north eastern part of the parcel.	**High**
		Moderate
		Low
		Little/None

HAVERING GREEN BELT ASSESSMENT

Strategic Parcel No. 23

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	The parcel comprises an area varying in width (west/east) between 2.2km in the central part to 250m on the northern edge, and as narrow as 200m in a north/south direction, lying between the western edge of Romford and the east side of Dagenham at Chadwell Heath. The parcel makes no contribution to this purpose due to the fact that it is almost entirely enclosed by existing development, where there is already a perception of urban 'sprawl' and there is significant encroachment. Essentially the area comprises open space/recreational land within the urban area.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The two towns are already almost entirely connected by existing development, and perceived to be connected. The parcel forms an open area that is contained within the built form of the towns and provides a negligible contribution to this purpose.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	The parcel does not contain countryside; it comprises recreational land and a cemetery and some development and therefore makes no contribution to this purpose, although it does prevent encroachment of development into this narrow area. Recreational uses are consistent with the objective of achieving the beneficial use of land within the Green Belt.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	The area possesses a degree of openness but is contained by surrounding development; as such there is no apparent relationship to other open land. There are extensive buildings in the southern part (school, leisure centre, and sports centre) all of which compromise openness. In the narrow northern part there is an area of industrial and residential development either side of Crow Lane which is contiguous with and indistinguishable from development within the built up area to the east; the separation of the built up area is only 250m wide at this location.	Very apparent
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Views within the parcel are contained by surrounding development. There is no clear visual relationship with land within parcel 22 to the north.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	The edges of the parcel are irregular and follow the Green Belt boundary around the parcel; these boundaries follow rear garden boundaries and roads and are confusing due to the encroachment of significant buildings and other development that encroaches into the parcel.	Well defined
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	There is an immediate relationship between the parcel and the adjoining towns (which are effectively joined by existing development within and outside the Green Belt). The parcel is perceived as open space within the urban area.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	The parcel forms a central section of the Dagenham Corridor LCA which is identified as a 'highly valued landscape' as a 'green lung for surrounding populations'. It has an urban fringe character engendered by the predominance of recreational uses, cemetery, leisure and educational buildings, residential and industrial development.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Open space designation applies to most of the area. The cemetery is a local site of nature conservation importance.	**Substantial constraints over much of area**
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	In landscape and visual terms the majority of the parcel has very limited sensitivity to development. However, it is valued and well used open space, forming part of the north/south green infrastructure of the Dagenham Corridor LCA, and therefore an accessible community asset that is valued highly at a local level.	**High**
		Moderate
		Low
		Little/None

Strategic Parcel No. 24

GREEN BELT PURPOSES	ASSESSMENT	IMPORTANCE TO GREEN BELT PURPOSE
Purpose 1: To check the unrestricted sprawl of large built up areas	The parcel contributes to varying degrees, together with adjoining Green Belt land within Barking and Dagenham Borough, to containing the growth of the built up areas of Romford and Dagenham. The wider central parts of the area fulfil the purpose to the greatest degree as these areas are less influenced by existing 'sprawl' of the built up areas; on this basis the parcel is considered to be of paramount importance to the purpose.	**Paramount**
		Major
		Moderate
		Slight/Negligible
		None
Purpose 2: To prevent neighbouring towns from merging into one another	The towns of Romford and Dagenham are effectively already merged to the north (on the A124) and Rainham with Dagenham to the south (south of the A1306). The narrow wedges of land within the northern and southern parts of the parcel (in conjunction with land within the adjoining borough) therefore provide a limited local contribution to the retention of open land between the intervening parts of theadjacent towns. However the wider central part (in conjunction with Green Belt land within the adjoining borough), provides a much more significant contribution to this purpose. Most of the area is largely protected by other land use and policy constraints.	Paramount
		Major
		Moderate
		Slight/Negligible
		None
Purpose 3: To assist in safeguarding the countryside from encroachment	The parcel contains only small areas characteristic of 'normal' countryside as it mainly comprises various forms of recreational land, and some small areas of development. Most of the area forms a valued recreational resource and contains natural assets and prevents encroachment of development. Recreational uses are consistent with the objective of achieving the beneficial use of land within the Green Belt.	Paramount
		Major
		Moderate
		Slight/Negligible
		None

RELEVANT PARCEL CHARACTERISTICS		
PERCEPTION OF OPENNESS (How is the area perceived? Is there a sense/perception of openness? Is there evidence of encroachment from 'inappropriate' development?)	The parcel forms a linear green corridor of variable width extending along the course of the Rivers Rom and Beam between adjoining development on the edges of Romford and Dagenham. The administrative boundary follows the rivers. The parcel contains little development except for school buildings, Breton Hall, and an area of residential development. It is therefore principally open and there is a variable sense of openness that is dependent upon the proximity and intrusion of nearby development. The openness of the corridor is interrupted by development flanking the north side of the A1112.	**Very apparent**
		Recognisable
		Limited
		Negligible/none
NATURE OF VIEWS (including intervisibility with adjoining areas)	Views are variable according to the relationship of the parcel with development and vegetation cover. The corridor widens out at Eastbrookend Country Park (beyond the administrative boundary within Borough of Barking and Dagenham) and views in places are more expansive particularly where there are open areas of playing fields (such as near Bretons Hall). There are visual relationships with similar land within the adjoining section of the corridor within the neighbouring authority area. Where vegetation provides enclosure areas are secluded and the adjoining built up areas, even though they may be nearby, are concealed.	**Contained**
		Partial
		Open/extensive
NATURE OF PARCEL EDGES (including nature and permanence of boundaries; are there potential alternative recognisable boundaries/edges?)	The western edge of the parcel follows the administrative boundary along the watercourse. The eastern boundary follows the Green Belt boundary along the western edge of Hornchurch, defined by rear gardens of residential development and the A125 in places. A railway line bisects the centre of the parcel and the A112 crosses the southern part; both of these features provide robust internal boundaries.	**Well defined**
		Partially defined
		Ill-defined
		Open
RELATIONSHIP TO PRINCIPAL SETTLEMENTS (i.e. towns as per second purpose; relationship to other 'non-principal' settlements)	As the parcel lies between the built up edges of Dagenham and southern Romford on the western edge of Hornchurch it has a direct relationship to Romford (with the land to the west of the parcel, within the same corridor, defining the edge of Dagenham). Where the corridor is wider (such as at Eastbrookend Country Park) the apparent relationship of the parcel with Dagenham is barely evident.	**Very evident**
		Evident
		Limited
		Not evident
LANDSCAPE CHARACTER (What are the principal land uses and landscape characteristics that are evident?)	The parcel forms the southern section of the Dagenham Corridor LCA which is identified as a 'highly valued landscape' as a 'green lung for surrounding populations'. The parcel, whilst defined along the administrative boundary (the river), essentially forms part of the wider corridor which includes the land west of the river within Barking and Dagenham Borough. The whole area has a variable semi-rural to urban fringe character with the land being primarily in recreational uses, ranging from a mosaic of natural areas, informal open space and playing fields, although there is a quarry occupying an area of land south of the A112. There appears to be no actively farmed land within the parcel. There is widespread public access. A combination of reasonably level topography and high level of vegetation (including much new woodland planting) creates areas within that are surprisingly discreet given the proximity of built up areas.	Strong rural
		Principally rural with some limited urban influences
		Rural with significant urban influences
		Urban fringe/semi urban
ENVIRONMENTAL CONSTRAINTS (Are there any 'high level' environmental constraints that could limit potential strategic development within the parcel)	Much of the land is identified as open space and there are sites of nature conservation interest (of value at local and Metropolitan level) along the watercourse corridor.	**Substantial constraints over much of area**
		Moderate level of constraints
		Few/no constraints
SENSITIVITY TO DEVELOPMENT	The parcel has a high sensitivity to change, being highly valued as a recreational asset accessible to the large surrounding population. It also forms a key part of the Dagenham Corridor LCA, an important corridor of green infrastructure which runs between large built up areas.	**High**
		Moderate
		Low
		Little/None

This document has been prepared in accordance with procedure OP/P02 of the *Fairhurst Quality and Environmental Management System*

Notes:

1. This report has been prepared in accordance with procedure OP/P02 of Fairhurst's Quality Assurance System.

2. This report was prepared by Fairhurst for use by, the parties named as client or other beneficiary within the report or third parties to whom reliance has otherwise been formally assigned by Fairhurst. It does not in any way constitute advice to any other third party who is able to access this report by any means. To the fullest extent lawfully permitted, Fairhurst excludes all liability whatsoever for any loss or damage howsoever arising from reliance on the contents of this report by any third party to whom Fairhurst have not formally assigned reliance.

1.0 INTRODUCTION

Introduction

1.1. The London Borough of Havering (LBH) is preparing a new Local Plan that will replace existing planning policies set out in the Local Development Framework (LDF).

1.2. The Local Plan together with the Mayor's London Plan will comprise the Development Plan for the Borough and will be the primary basis against which planning applications are assessed and advice is provided to prospective developers.

1.3. The Council is seeking to include residential car parking standards for new developments within the new Local Plan.

1.4. The London Plan currently sets out residential parking standards to be applied across London (See extract in **Appendix A**), but specifies that in Outer London Boroughs, which generally have less access to good public transport, there is scope for more generous standards. The London Plan uses PTAL (Public Transport Access Level) to determine an accessibility score. PTAL is a measure of connectivity by public transport, which has been used in London for many years. For any selected place a PTAL value is derived which indicates how well the place is connected to public transport services. A PTAL value ranges from zero to six, where the highest value represents the best connectivity. This value is determined by the following factors:

- Distance to the nearest stations or stops;
- Waiting times at the nearest stations or stops;
- Frequency of services at the nearest stations or stops;
- Proximity to passing major rail stations nearby; and
- Any combination of all the above.

1.5. Recent alterations to the London Plan have sought to reflect the unique characteristics of Outer London, stating that:

'Outer London boroughs should demonstrate that they have actively considered more generous standards for housing development in areas with low public transport accessibility (generally PTALs 0 -1) and take into account current and projected pressures for on-street parking and their bearing on all road users, as well as the criteria set out in NPPF (Para 39).'

1.6. LBH has, therefore, appointed Fairhurst to prepare this residential car parking assessment to consider the suitability of the standards set out in the London Plan as a basis for LBH

parking standards and, where these are not considered satisfactory, to inform the development of more appropriate residential parking standards for the Borough.

Background

1.7. The provision of an appropriate level of residential car parking on new developments is seen by LBH as being essential to making LBH a desirable place in which to live. It aims to ensure that residents have the ability to access employment opportunities and essential infrastructure such as schools, health facilities, town centres and leisure and recreation facilities, including open space.

1.8. The number of households in LBH is expected to increase by 15.75% between 2011 and 2026, an average yearly increase of 1.06%. The housing stock within LBH comprises mainly semi-detached and terraced properties, with 48.66% of households having two extra rooms. The majority of housing growth has been, and will continue to be, developed around the 'central' and 'urban' areas of LBH, as these are considered to be the most accessible. These areas have either a mainline railway station (Romford, Upminster and Rainham) or a District Line Underground station (Upminster and Hornchurch). LBH will benefit in coming years from Crossrail services, which will provide access at three stations within the Borough: Romford; Gidea Park and Harold Wood. LBH will also benefit from a new rail station at Beam Park in London Riverside, which will support future growth and development in this area.

1.9. There are a number of factors that have led LBH to consider whether the London Plan parking standards are appropriate for LBH. Key factors include

- The provision of residential parking spaces on recent housing developments in parts of the Borough has caused some concern. This has been linked to on-street parking issues and community tensions, particularly within Romford town centre.
- LBH has one of the highest levels of cars per household in London, reflecting the position in Outer London and the lack of convenient transport options in some areas.
- Existing public transport provision is strongly focussed on east-west movements (e.g. into Central London) and does not cater for local north-south journeys within the Borough.
- Higher car ownership levels reflect changing life-style choices with many households now comprising parents and several family members, who each need to have their own car.
- The current parking standards set out in the Local Development Framework (2008) are more generous than the London Plan standards.

1.10. These issues are, therefore, to be considered in this assessment together with any other factors that would influence the identification of appropriate parking standards. The standards need to reflect the local context of LBH and provide a balance between the reasonable day to day needs of residents and the wider aims of planning policy to promote sustainable travel.

Scope of Assessment

1.11. The scope of this assessment is to consider residential parking within the Borough and whether the London Plan and the minimum parking standards contained within it are appropriate and meet the requirements of new residential development within LBH. The scope, therefore, has been outlined as follows:

- **Romford** - A detailed review of the parking situation in Romford (the main town in the Borough), where there are existing parking pressures in the town centre despite having generally high PTAL scores of 5-6. The review will seek to identify whether a higher or more flexible parking standard could be more appropriate for any future residential development in and around the town centre.
- **Wider Borough** - A broader review of the characteristics of the wider Borough where PTAL scores are significantly lower – generally 0-2 except within the 'urban' areas of (Hornchurch, Upminster, Gidea Park, Harold Wood and Elm Wood) where PTAL scores rise to 3 or more.

1.12. The purpose of this assessment report is to:

- Set out the planning policy context; and
- Draw together and review relevant data that has a bearing on residential parking patterns.

1.13. Based on the above, this assessment will provide information that the Council can draw on when setting residential parking standards in the emerging Local Plan.

Methodology

1.14. The broad methodology adopted for the study is as follows:

Stage 1 – Inception

- Meeting with LBH Client team to establish project parameters, including:
  - Existing parking issues.
  - Existing evidence base on residential parking.
  - GIS data availability from LBH.
  - Emerging local plan policies that could influence the findings of the study.
  - Stakeholder consultations required.
  - Any existing information regarding studies/ findings being undertaken by other London Boroughs.
  - Any planned improvements or initiatives that could affect existing PTAL ratings.
  - The extent of primary survey work to be undertaken.
- Meeting with LBH officers responsible for GIS data, planning and parking control.

Stage 2 – Initial Document Review and Familiarisation

- Review planning policy context.
- Review existing evidence base on parking issues.
- Site visits to specific areas of interest (agreed at inception meeting) to review potential survey and other data collection requirements. Note it was agreed at the inception meeting that existing 'high level' data from existing LBH and Transport for London GIS databases would form the basis of the study, except in Romford where detailed parking survey data would be collected to obtain a detailed understanding of the existing issues.

Stage 3 – Data Collection

- Commission primary surveys to assess existing issues and establish appropriateness of existing parking standards in Romford – detailed surveys were undertaken by a specialist data collection company and included surveys of key town centre streets to establish parking volumes (day & night), illegal parking and the reasons why drivers park on-street during the day – established through interviews.
- Undertake walkover/ photographic surveys to supplement detailed survey information.
- Obtain data on public transport services and routes.
- Obtain GIS and Census data from LBH or other sources and set up GIS models.

Stage 4 – Data Analysis

- Collate GIS data on population/ development type and mix/ accessibility/ car ownership/ journey to work/ modal split/ PTAL/ parking etc.
- Add/ digitise data from primary surveys to GIS data sets.
- Create GIS models identifying baseline conditions relevant to residential parking, including NPPF key considerations in relation to:
  - Accessibility;
  - Type/ mix/ use of development;
  - PTAL;
  - Car ownership; and
  - Review evidence regarding on-street parking issues that may affect congestion, residential amenity and air quality.
- Take account of wider current and future policy considerations.
- Take account of parking standards developed by other Boroughs.
- Meeting with LBH Client team to discuss broad results of data analysis and identify any further survey work required.
- Undertake initial analysis, as agreed to assist LBH in setting parking standards for the Borough.

Stage 5 – Draft Report and Client Review

- Produce a draft report outlining the preliminary findings, including 'direction of travel' towards identifying the suitability of parking standards for each study area.

Stage 6 – Final Data Analysis

- Finalise analysis and amend report based on Client feedback.
- Apply findings to produce appropriate conclusions.

Stage 7 – Final Report

- Produce final report and presentation materials.

2.0 PLANNING POLICY

National Planning Policy Framework (NPPF)

2.1. The National Planning Policy Framework (NPPF) sets out the Government's planning policies for England and how these are expected to be applied on a local level. The London Plan and emerging LBH Local Plan are required to be consistent with the NPPF. With regard to parking standards, the NPPF, paragraph 39 states:

'If setting local parking standards for residential and non-residential development, local planning authorities should take into account:

- *the accessibility of the development;*
- *the type, mix and use of development;*
- *the availability of and opportunities for public transport;*
- *local car ownership levels; and*
- *an overall need to reduce the use of high emission vehicles.*

London Plan

2.2. The current version of the London Plan was published in March 2016 and consolidates the London Plan 2011 with alterations undertaken since this date, including alterations to parking standards, published in March 2016. All Local Plans produced by the Boroughs of London should be in general conformity with the London Plan, however there is some flexibility.

2.3. The Mayor has adopted the London Planning Statement as Supplementary Planning Guidance (SPG) to provide further guidance on the Mayor's role in planning, with **Section 2** of this document providing detail on the status of the London Plan. In this respect paragraph 3.4 of the SPG recognises that 'general conformity' does not mean that documents have to follow the London Plan in every respect and that the Mayor will only consider that a document is not in general conformity where it either contains an inconsistency, or leaves something out, that could cause significant harm to the delivery of the London Plan as a whole, or its individual policies.

2.4. Chapter 6: Transport, of the London Plan, sets out the Mayors approach to transport provision and is supported by a Parking Addendum.

2.5. Policy 6.13: Parking, seeks to achieve a balance between promoting new development and preventing excessive car parking provision that can undermine cycling, walking and public transport use. The Policy states that the maximum standards set out in Table 6.2 of

the Parking Addendum (see **Appendix A** of this report) should be used to set standards in Development Plan Documents (DPDs). With specific regard to Outer London Boroughs, the Policy 6.13 states the following regarding those boroughs wanting to promote more generous standards; '*Outer London boroughs should demonstrate that they have actively considered more generous standards for housing development in areas with low public transport accessibility (generally PTALs 0 -1) and take into account current and projected pressures for on-street parking and their bearing on all road users, as well as the criteria set out in NPPF (Paragraph 39).*'

2.6. Paragraph 6.42 which provides support text to policy 6.13 states:

'Boroughs wishing to develop their own standards should take the standards in this Plan as their policy context. But he [the Mayor] also recognises that London is a diverse city that requires a flexible approach to identifying appropriate levels of car parking provision across boundaries. This means ensuring a level of accessibility by private car consistent with the overall balance of the transport system at the local level'.

2.7. In this regard, it should be noted that paragraph 6.42 states that borough's adjoining other regions must also liaise with the relevant authorities to ensure a consistent approach to the level of parking provision. A review of car ownership levels of the London Boroughs (shown visually on **Figure 6**) indicates that LBH is the only borough to the east of Central London that has an average of 1.2 cars per household – all other eastern authorities have lower levels of car ownership.

2.8. For information, a summary of the parking standards in other Outer London Boroughs is set out in **Appendix B**. This confirms a broad conformance with the London Plan, with parking standards ranging from 'significantly less than 1' to '2' spaces per dwelling depending on a range of factors, although there is some local variation, particularly at the lower end of the standard; e.g. the revised standards adopted by the London Borough of Barnet, which allow 1 to 1.5 parking spaces for 2 bed properties in all locations.

2.9. Paragraph 6.42 provides further guidance with regard to the setting of parking standards for Outer London Boroughs stating that:

'Outer London boroughs should take account of residents' dependency on the car in areas with low public transport accessibility (generally PTALs 0-1). Where appropriate in these locations Boroughs should consider revised standards (which could include minima) and permitting higher levels of provision there than is indicated in Table 6.2, particularly to

avoid generating unacceptable pressure for on-street *parking. This may be especially important in 'suburban' areas and for areas with family housing.'*

2.10. Paragraph 6.42 also specifically allows for a more flexible approach to be taken in limited parts of areas within PTAL 2, in locations where the orientation or levels of public transport mean that a development is particularly dependent on car travel. In doing so, authorities should take account of the criteria set out in paragraph 39 of the NPPF. The paragraph goes on to outline that the following should also be taken into account in determining local parking standards:

- the extent to which public transport might be provided in the future;
- implications for air quality; and
- impacts of on-street parking measures, such as CPZs, which may also help reduce the potential for overspill parking and congestion, and improve safety and amenity.

2.11. The London Plan recognises that PTALs are used by TfL to produce a consistent London wide public transport access mapping facility to help boroughs, with locational planning and assessment of appropriate parking provision, by measuring broad public transport accessibility levels. However, it does state that at a neighbourhood level TfL would also recommend making use of the Access to Opportunities and Services (ATOS) tool in order to better understand what services are accessible in a local catchment area, by both walking and cycling.

2.12. The Mayor of London in the Supplementary Planning Guidance dated March 2016 considers the design of parking as an important consideration to ensure that provision complements development as a whole. In policy terms, the Plan seeks to ensure an appropriate balance between enabling adequate parking provision, whilst not undermining the use of alternative transport modes (walking, cycling and public transport). The flexibility inherent in striking this balance is an important consideration when coming to a view on an appropriate point within the range of provision set out in the standards and, more generally, in the way the standards are implemented in light of local circumstances and broader policy considerations. This view should include the Plan's approach to air quality and especially in low PTAL 'suburban' neighbourhoods in Outer London (generally PTAL 0-1 and exceptionally, parts of PTAL 2).

2.13. Such sensitivity resonates with the approach proposed in the NPPF while recognising that in the unique circumstances of London parking is also a strategic issue. Further guidance on implementation of Policy 6.13 Parking, is given in the Plan's Parking Addendum to Chapter 6, which summarises maximum standards for dwellings of different sizes. This

takes account of the minor alterations to the London Plan, which requires Boroughs to take account of the distinct parking circumstances of those parts of Outer London with particularly low public transport accessibility and provides flexibility in addressing them.

2.14. For the avoidance of doubt, the second part of Table 6.2 of the Parking Addendum of the London Plan (see **Appendix A** of this report) relating bedrooms to parking spaces 'nests' within' the (coloured) matrix, provides the overarching framework to relate parking provision, accessibility (PTAL), development and local character**.**

London Borough of Havering

2.15. The current adopted planning policies are contained within the Local Development Framework (LDF). Residential car parking standards are contained within Annex 5 of the Core Strategy which was adopted in 2008 (see extract in **Appendix C**). In general, the LDF car parking standards are similar to those in the London Plan in terms of overall maximum and minimum parking provision, although the thresholds in the London Plan are more restrictive, e.g. the LDF would in some circumstances allow up to 1.5 parking spaces for a 2 bed house, although the London Plan standard is 'significantly less than 1' space per 1 / 2 bed property.

2.16. The LDF will be replaced by the emerging Local Plan for which this study forms part of the evidence base.

Conclusion

2.17. The London Plan sets a range of parking standards that are intended to be applied across London. It does, however, recognise that areas of Outer London do have lower public transport accessibility. Therefore, boroughs should consider more generous standards for housing developments in areas of low public transport accessibility or where on-street parking pressures would be problematic. In these areas the standards outlined in the London Plan should be used to set the context.

2.18. It is recognised that the London Plan does use PTAL levels to determine the levels of public transport provision in an area. However, it does also advocate the use of ATOS tools in areas of Outer London, which indicates that the Mayor recognises that the PTAL score does not provide the full picture in all areas of London.

2.19. Although the London Plan specifically states that in areas with a PTAL score of 0-2 more generous parking standards can be explored, the NPPF sets out the full range of factors which should be taken into consideration in the determination of parking standards. This

report will explore whether in consideration of these factors, alternative parking standards should be applied in LBH and suggest potential locations.

2.20. Overall it is important to recognise that the London Plan standards are the starting point but there is an opportunity to assess the suitability of these standards.

3.0 THE HAVERING CONTEXT

London Plan Maximum Parking Standards

3.1. The parking standards set out in the London Plan are displayed in **Table 1**. These are the standards that should be used by boroughs to set standards in DPDs.

Table 1 – Extract of London Plan (Table 6.2), Residential Parking Standard

Parking for residential development

	PTAL 0 to 1		PTAL 2 to 4		PTAL 5 to 6	
Suburban	**150–200 hr/ha**	**Parking provision**	**150–250 hr/ha**	**Parking provision**	**200–350 hr/ha**	**Parking provision**
3.8–4.6 hr/unit	35–55 u/ha	Up to 2 spaces per unit	35–65 u/ha	Up to 1.5 spaces per unit	45–90 u/ha	Up to one space per unit
3.1–3.7 hr/unit	40–65 u/ha		40–80 u/ha		55–115 u/ha	
2.7–3.0 hr/unit	50–75 u/ha		50–95 u/ha		70–130 u/ha	
Urban	**150–250 hr/ha**		**200–450 hr/ha**		**200–700 hr/ha**	
3.8–4.6 hr/unit	35–65 u/ha	Up to 1.5 spaces per unit	45–120 u/ha	Up to 1.5 spaces per unit	45–185 u/ha	Up to one space per unit
3.1–3.7 hr/unit	40–80 u/ha		55–145 u/ha		55–225 u/ha	
2.7–3.0 hr/unit	50–95 u/ha		70–170 u/ha	Up to one space per unit	70–260 u/ha	
Central	**150–300 hr/ha**		**300–650 hr/ha**		**650–1100 hr/ha**	
3.8–4.6 hr/unit	35–80 u/ha	Up to 1.5 spaces per unit	65–170 u/ha	Up to one space per unit	140–290 u/ha	Up to one space per unit
3.1–3.7 hr/unit	40–100 u/ha		80–210 u/ha		175–355 u/ha	
2.7–3.0 hr/unit	50–110 u/ha	Up to one space per unit	100–240 u/ha		215–405 u/ha	

Maximum residential parking standards			
number of beds	**4 or more**	**3**	**1-2**
parking spaces	up to 2 per unit	up to 1.5 per unit	less than 1 per unit

Notes:
All developments in areas of good public transport accessibility (in all parts of London) should aim for significantly less than 1 space per unit
Adequate parking spaces for disabled people must be provided preferably on-site[3]
20 per cent of all spaces must be for electric vehicles with an additional 20 per cent passive provision for electric vehicles in the future.
In outer London areas with low PTAL (generally PTALs 0-1), boroughs should consider higher levels of provision, especially to address 'overspill' parking pressures.

3.2. LBH considers that the main factors that set it apart from other London Boroughs are higher car ownership levels and a public transport that does not provide good coverage for journeys within the Borough.

3.3. The following sections of the report, therefore, explore the LBH context in terms of:

- PTAL scores;
- London Plan Setting (Characterisation);
- car ownership;
- travel patterns; and
- modal choice.

The information contained in this report is intended to assist LBH when making decisions on parking standards as part of the preparation of the Havering Local Plan.

About Havering

3.4. **Figure 1** indicates the individual wards of LBH. The latest Census data 2011, provides data for smaller areas known as Lower Super Output Areas (LSOA). **Figures 2 and 3** identify the population density and number of dwellings per km² respectively within each LSOA.

Figure 1 – LBH Indicating Ward Boundaries

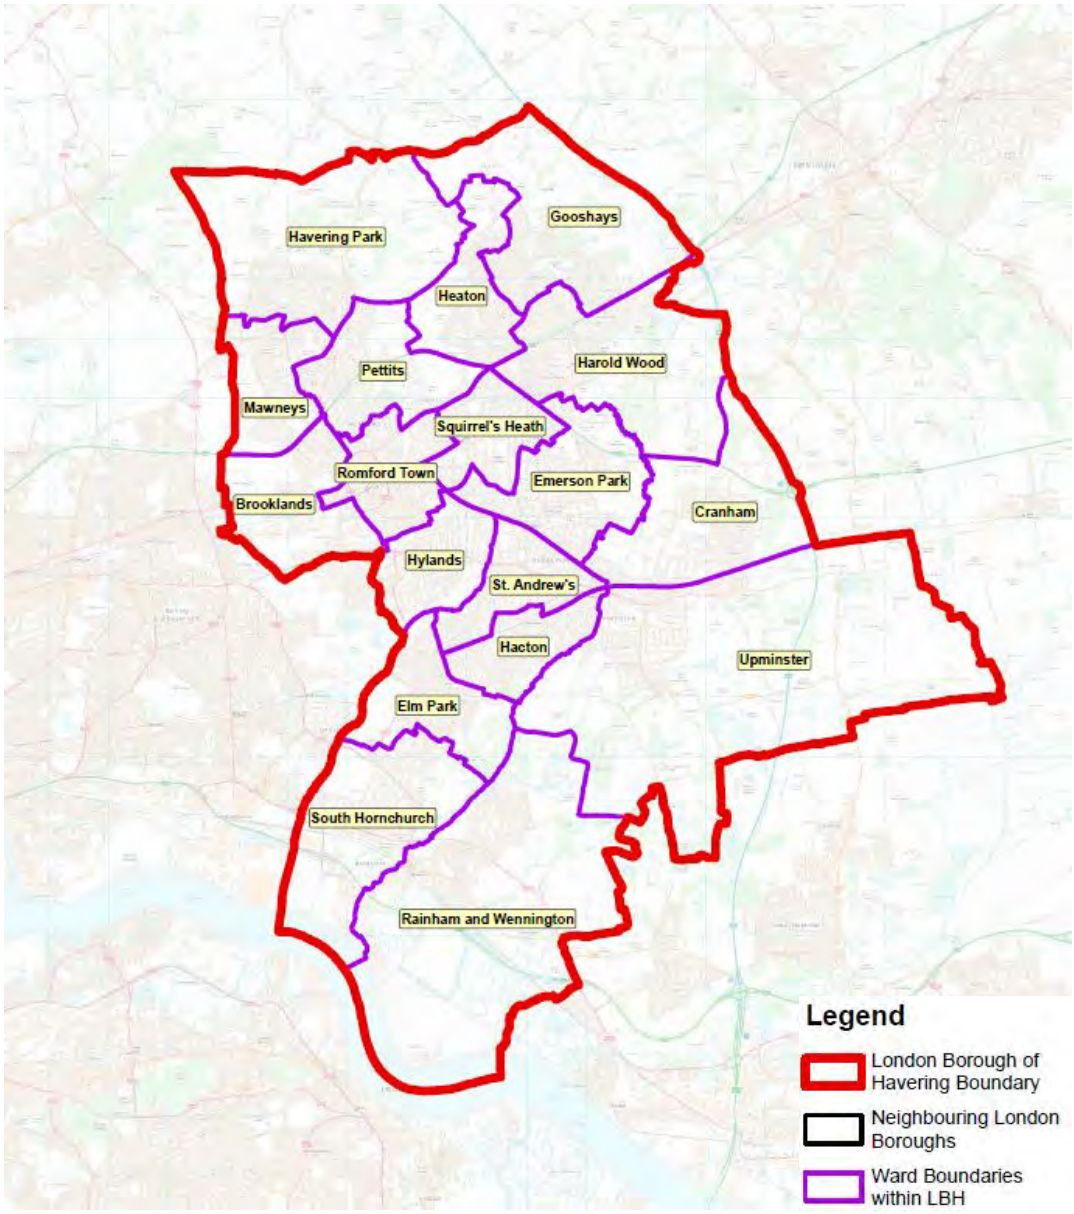

Figure 2 – LBH Population Density by LSOA

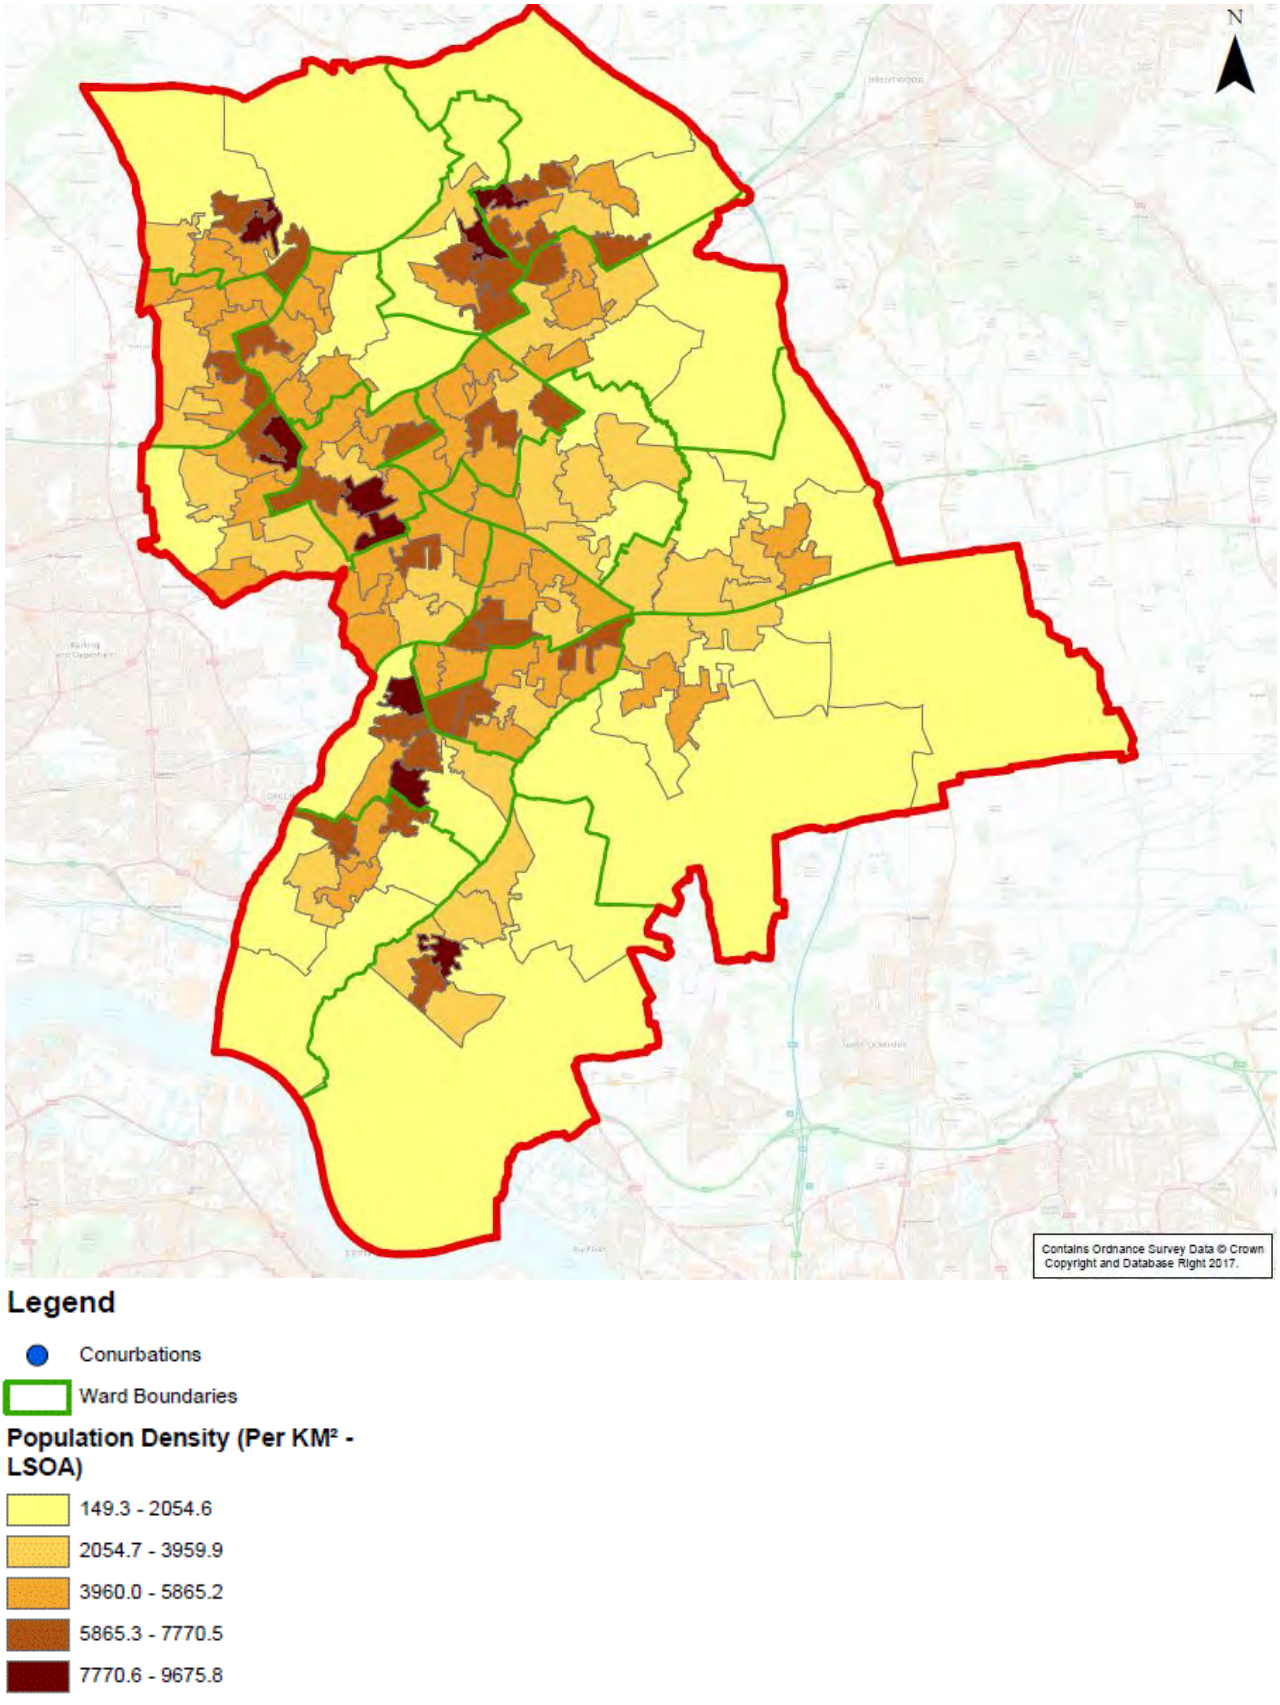

Figure 3 – LBH Dwellings per Square Km by LSOA

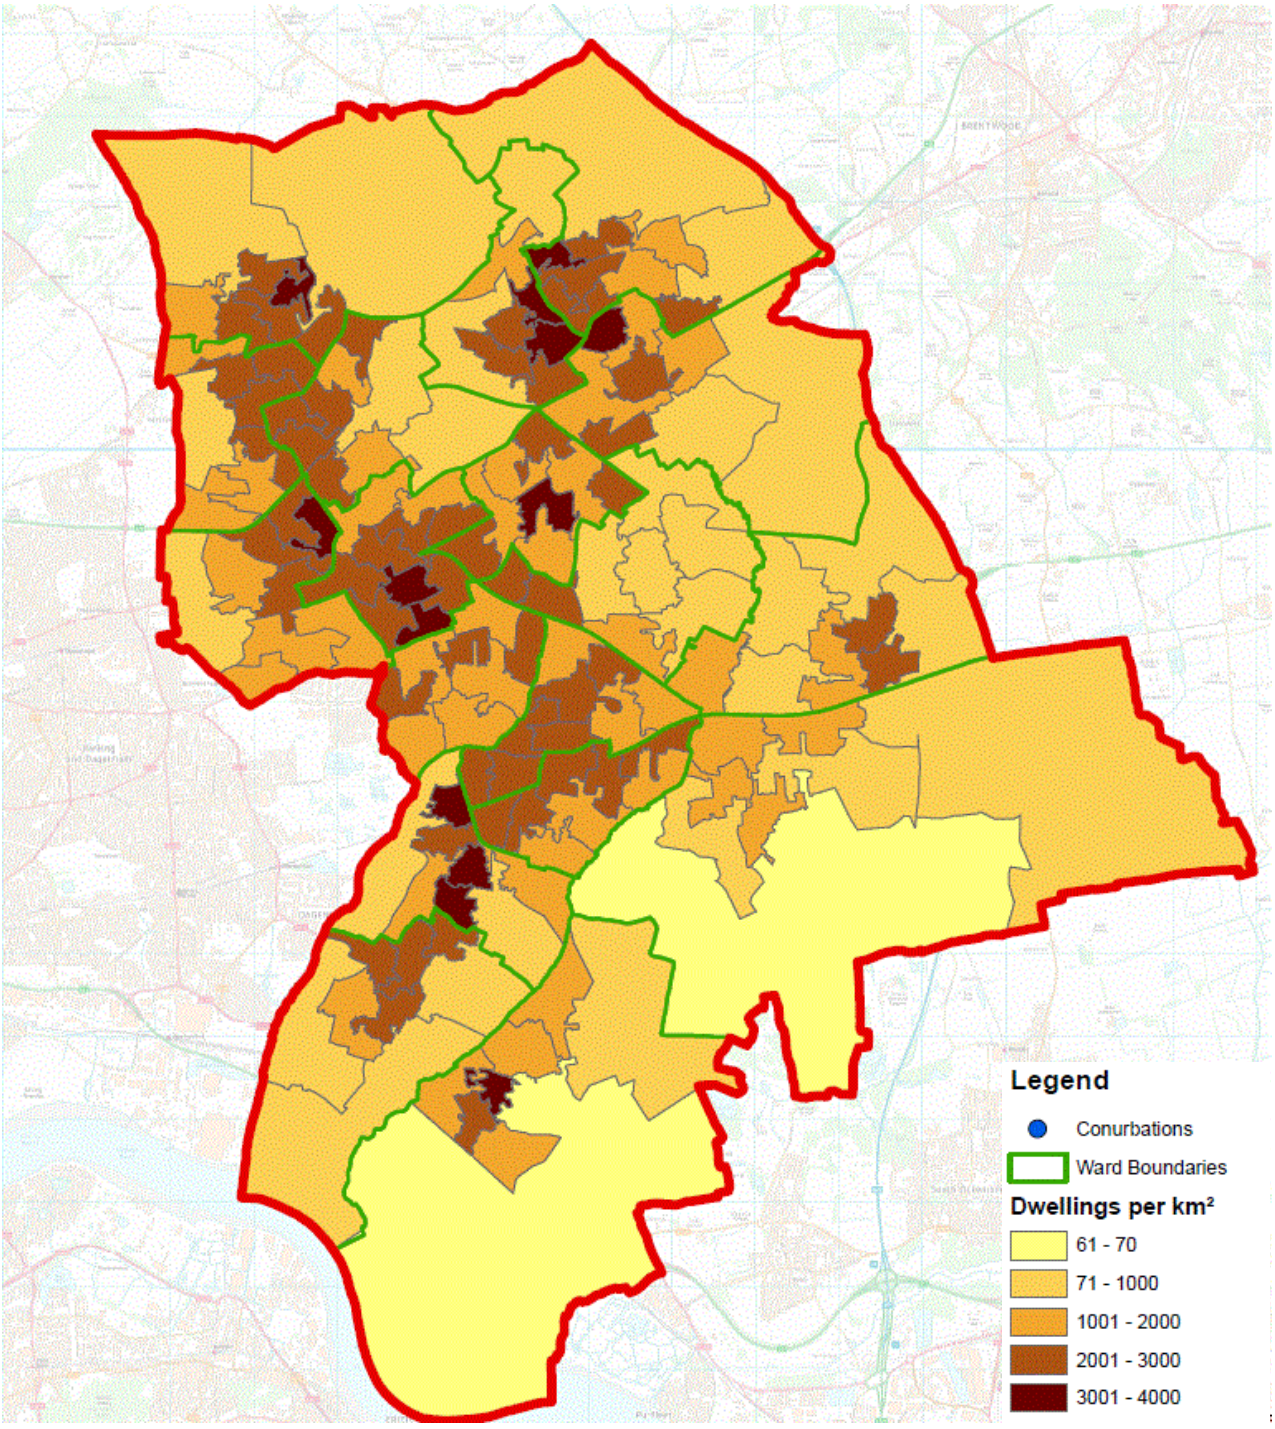


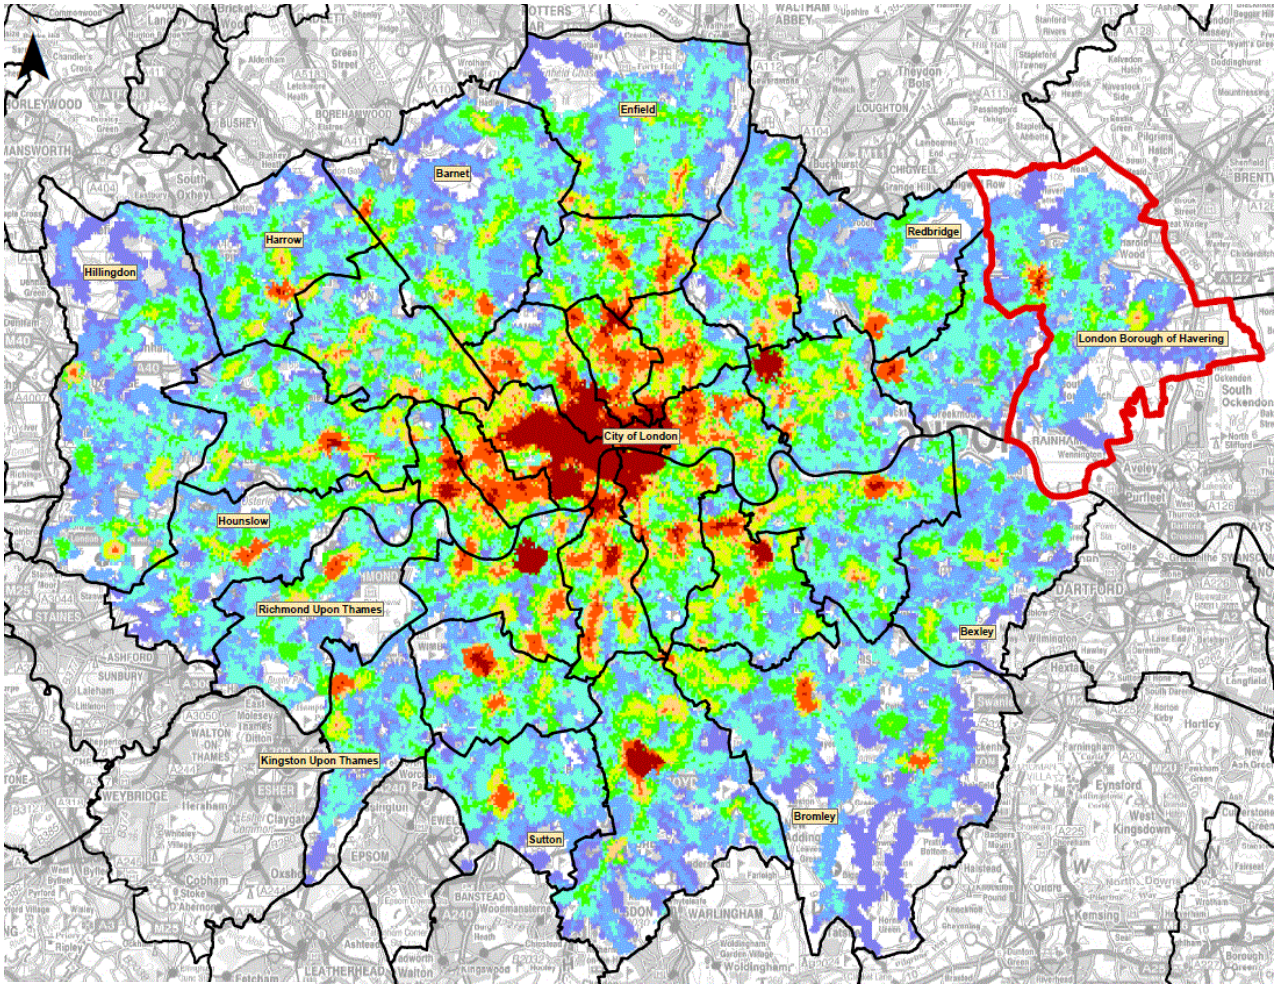
3.5. This initial analysis indicates that the main population centres are located in the west and the southwest, around the main towns of Romford, Hornchurch and Rainham. The lowest population densities are in the southeast of the Borough, where there are no main towns and there is a significant proportion of the Borough's green belt.

LBH PTAL Scores

3.6. The PTAL scores across all London Boroughs are illustrated diagrammatically on **Figure 4** and more locally within LBH in **Figure 5**. The PTAL scores and the assumption derived from these in regard to levels of accessibility needs to be carefully considered, as part of the process in determining what the appropriate parking standards should be, as part of residential planning applications within LBH.

3.7. The PTAL scores show that 93% of LBH has a PTAL score of 0-2, demonstrating that a large proportion of the borough does not have good access to rail or London Underground stations. PTAL scores around 'central' and 'urban' areas are higher, with Upminster scoring 5 in the vicinity of the station and Romford being the only place to score 6a/ 6b. There are concerns that the high PTALs in these areas reflect the availability of public transport for journeys to Central London, rather than being representative of the available public transport accessibility for journeys within LBH and out to adjoining Boroughs of Essex. This could contribute to the current need for residents to own a car for day to day local journeys within the Borough despite living in areas with good access to public transport.

Figure 4 – London PTAL Scores



Legend

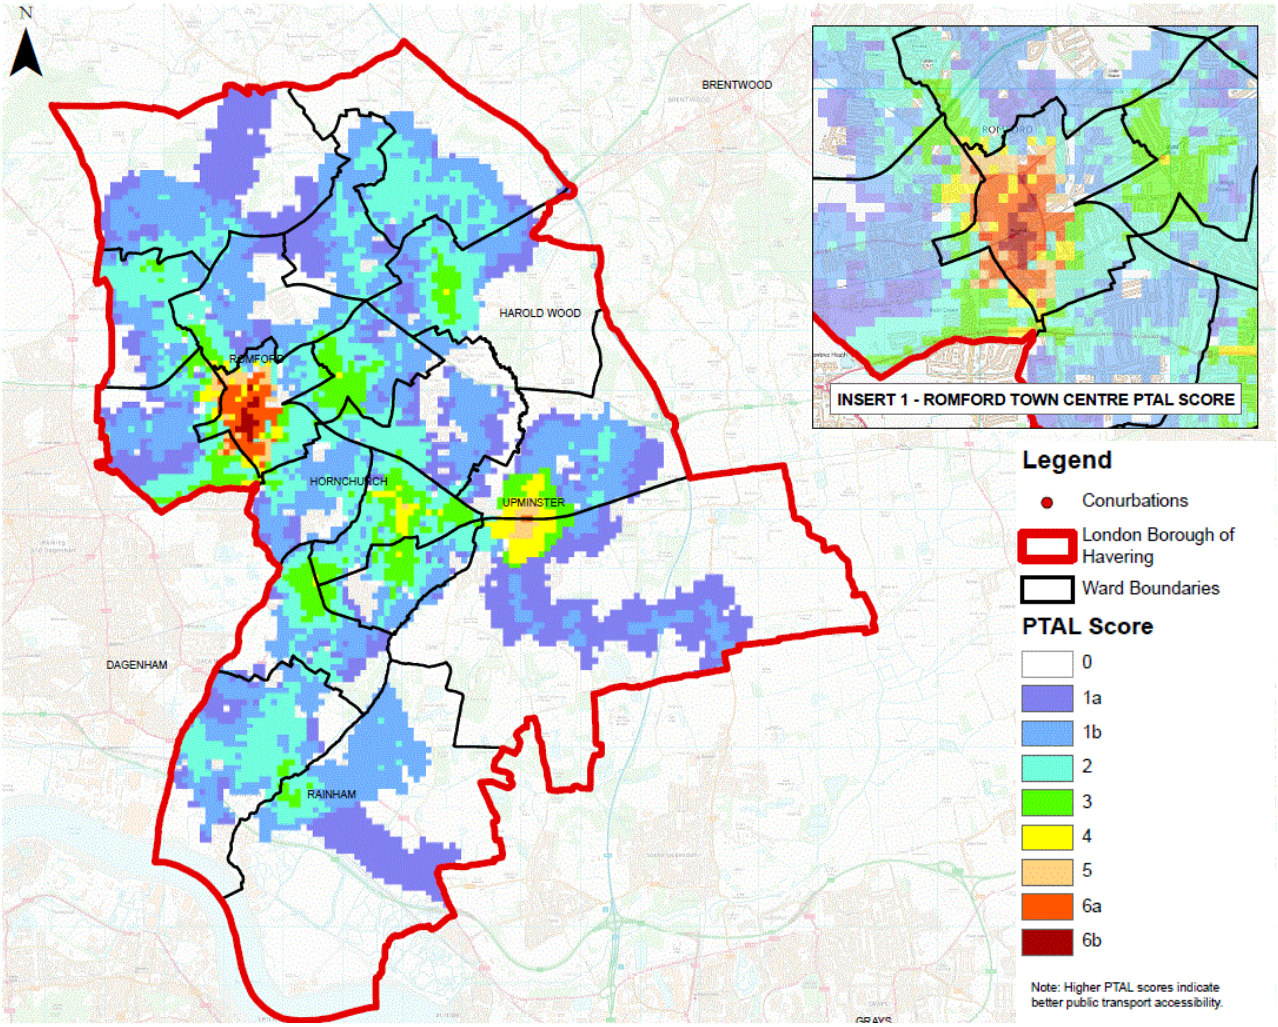
- 2
- 3
- 4
- 5
- 6a
- 6b

Note: Higher PTAL scores indicate better public transport accessibility.

Figure 5 – LBH PTAL Scores



3.8. As expected, the analysis confirms that PTAL scores within LBH are well below those in more 'central' areas of London.

3.9. It is worth noting that London Borough of Barnet (LBB) produced evidence to support a similar argument as above, which was produced within the LDD 'Development Management Policies Residential Car Parking Standards (2011)', to justify their decision to vary the parking standards for the Borough. The following is a quotation from the LBB document:

'Barnet's concern with PTALs is that the PTAL scores measure ease of access to any public transport route, so a location may have a high score because it has good radial links to Central London, but this is not necessarily a reflection of more general public transport provision'.

3.10. It is considered that there are notable similarities between the Borough of Barnet and LBH as both are located in Outer London and have areas with high PTALs of 6 (e.g. Romford), which may only reflect accessibility in one particular corridor. Thus the daily experience of

a high PTAL may be very different depending whether journeys are made by public transport within the Borough or to/ from London.

3.11. A more detailed review has, therefore, been undertaken to assess whether additional relevant factors should be taken into consideration to produce more appropriate residential car parking standards.

London Plan Characterisation

3.12. The London Plan identifies the character of each borough into three settings; 'central'; 'urban' and 'suburban'. The London Plan recognises that defining the setting of an area requires local knowledge and may entail an element of professional judgement, recognising that the character of an area can change over time. Boroughs can define the setting as part of their Local Plan process, drawing on the Mayor's SPG, local characterisation studies and the London Plan. The London Plan gives advice on characterisation as follows:

'The 'central' setting applies generally to locations in, or within 800 metres walking distance of, the Central Activities Zone, an International, Metropolitan or Major town centre as listed in the town centre network in Annex 2 of the London Plan.'

'Locations in, or within 800 m of a district centre are generally considered to give an area an 'urban' setting. These extend along main arterial routes and substantial parts of the remainder of inner London.'

'Dwelling size and, indirectly, built form, should primarily reflect the housing requirements of the group for whom housing is provided. To inform this, the matrix sets out appropriate density ranges for dwellings of different sizes using habitable rooms per unit ratios. These run from 2.7 – 3.0 habitable rooms per unit giving densities of 215 – 405 units per hectare in 'central' locations with good public transport accessibility, to 3.8 – 4.6 habitable rooms per unit giving densities of 35 – 55 units per hectare in 'suburban' locations with low accessibility.'

3.13. The categorization of LBH into 'central', 'urban' and 'suburban' zones, based on boundary information supplied by the Greater London Authority, is shown in **Figure 5**.

3.14. **Figure 6** gives a broad indication of how the PTAL scores and character zones generally combine to influence residential car parking standards. The colours used in **Figure 6** generally reflect with the colour coding in 'Table 6.2, Maximum Residential Parking Standard' of the London Plan to show the predominant maximum parking standard that

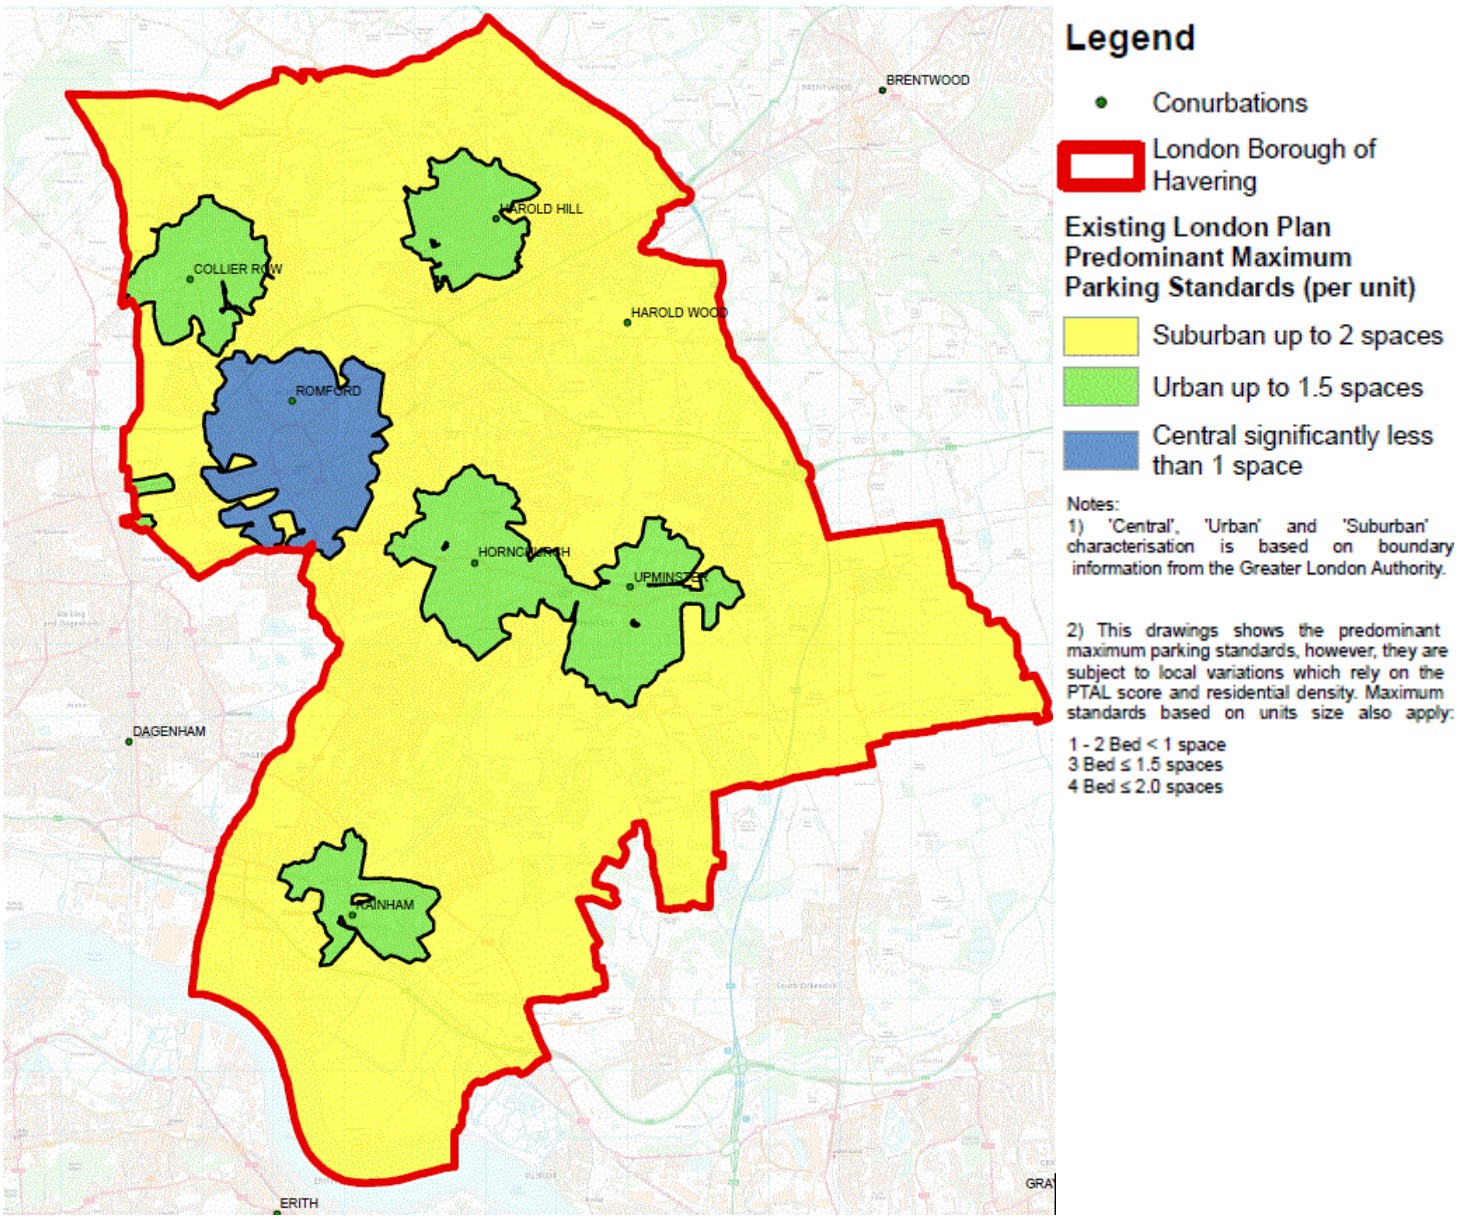
would apply to residential development within each character area. However, there could be variations to both higher or lower standards depending on:

- local variations in PTAL;
- development density; and
- the number of bedrooms, which defines maximum parking provision per unit.

3.15. The effects of local variations would to some extent depend upon how small an area is chosen when applying standards, i.e. whether an average PTAL is adopted across a ward or LSOA. However, in general terms **Figures 5 & 6** confirm that the predominant maximum parking standards in each character area, subject to the variations/ caveats set out above, would be:

- In 'central' areas (i.e. Romford), generally significantly less than 1 parking spaces per unit;
- In 'urban' areas up to 1.5 spaces per unit (for 3+ beds); and
- In 'suburban' areas up to 2 spaces per unit (for 4+ beds).

Figure 6 – LBH – Predominant Maximum Parking Standards Based on the London Plan



3.16. Overall, **Figure 6** confirms that the only large area of LBH to attract the lowest maximum parking standard, of 'significantly less than 1 car parking space per dwelling' across all residential development, would be around central Romford.

LBH Car Ownership – London Context

3.17. LBH is located in Outer London and is the most north easterly of the Outer London Boroughs. Car ownership levels per household in LBH, taken from 2011 Census data, are shown in the context of all other boroughs in **Figure 7**, and full details are set out in **Table 2**.

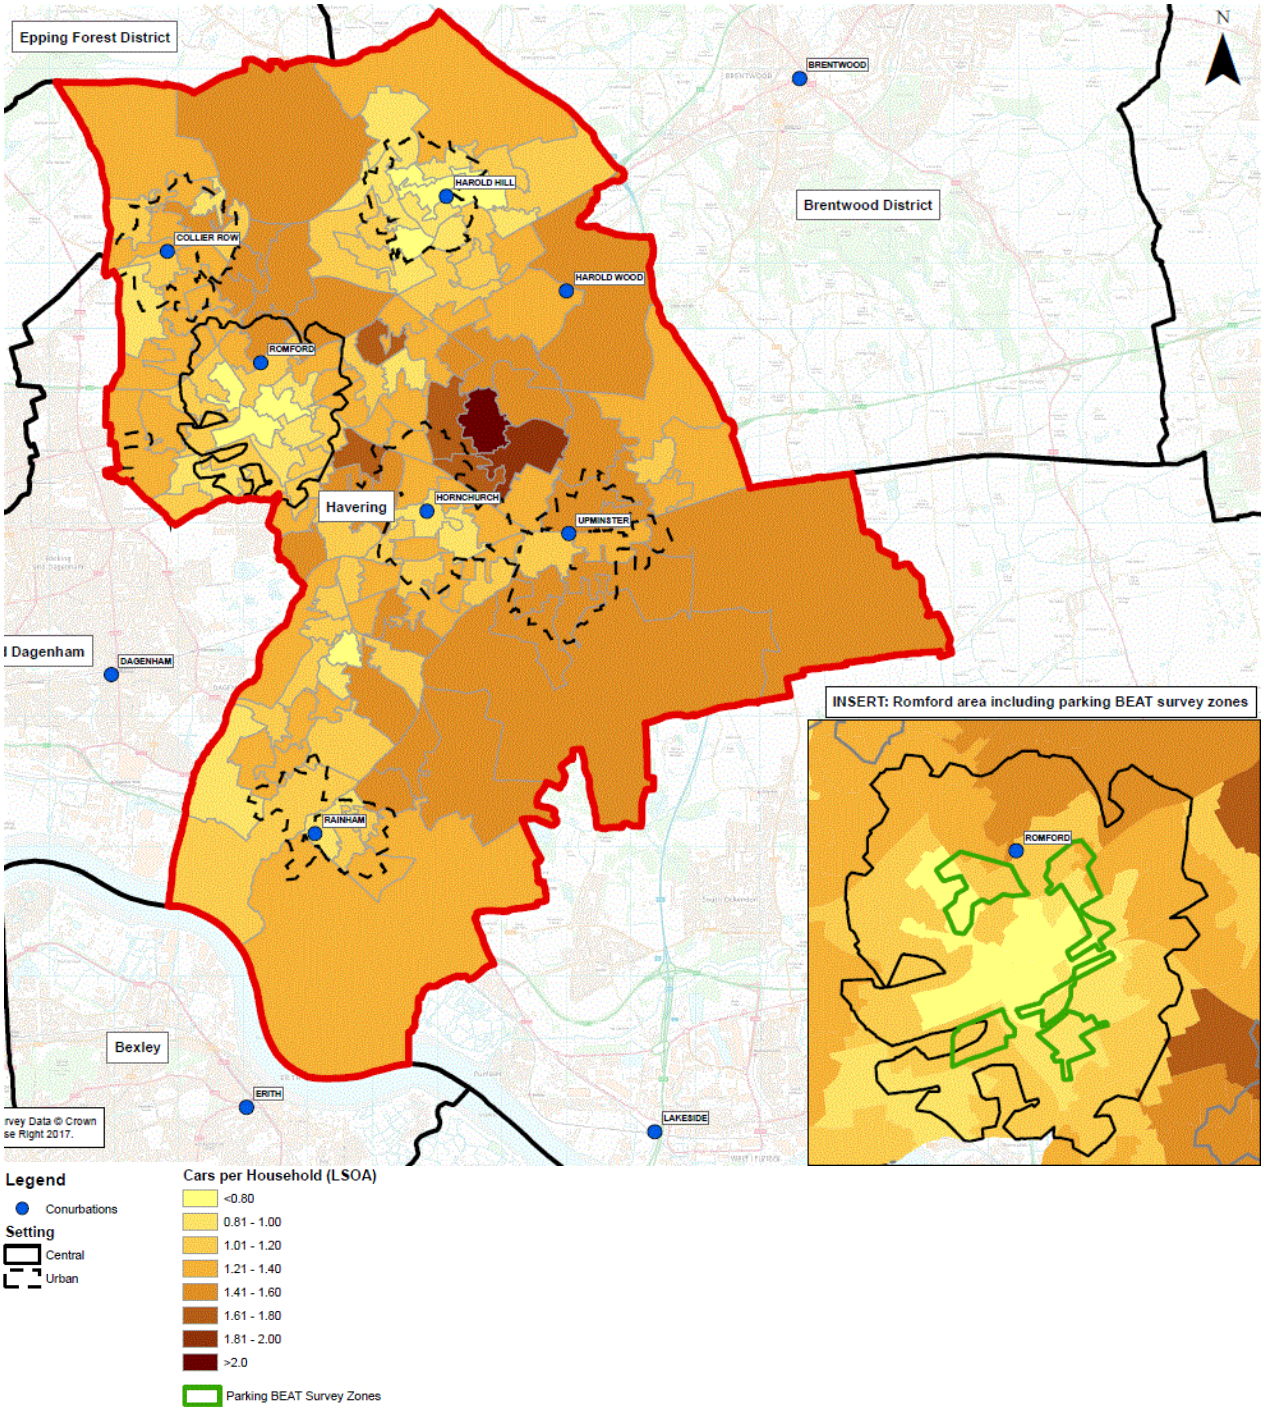
Havering	117,634	99184	1.19
Hillingdon	122,486	103907	1.18
Hounslow	94,042	96892	0.97
Kingston upon Thames	70,421	65198	1.08
Merton	72,777	80919	0.90
Redbridge	106,339	101348	1.05
Richmond upon Thames	84,918	82482	1.03
Sutton	91,266	79696	1.15
Waltham Forest	76,217	98279	0.78

3.18. The review clearly demonstrates that LBH has the highest average car ownership levels of all the London Boroughs at 1.19 cars per household. This compares to an average of 0.51 cars per household for inner London and 1.00 for Outer London.

LBH Car Ownership – Lower Super Output Area

3.19. LBH intends to review a range of information to help determine the suitability of the residential car parking requirements in the London Plan standards and see if these are appropriate in the context of LBH. In order to assess these standards Lower Super Output Area data has, therefore, been used to give detailed information that reflects local variations. Car ownership levels per LSOA are shown in **Figure 8**.

Figure 8 – LBH – Car Ownership per Household



3.20. The LSOA level review broadly shows highest car ownership per household in the areas with poorest public transport accessibility, which is as expected with households having to rely on private means of transport. The review confirms that car ownership is below the London average of 0.79 in only a few areas of the Borough, which generally encompass town centres, where there are few residential properties. For example, the inset within **Figure 8** highlights the 'central' residential areas of Romford, where there are areas with car ownership of 0.8-1.2 vehicles per household, showing that even around the main town centre of the Borough, there are areas with car ownership above the Outer London average. The residential areas surrounding the commercial centre of Romford were, therefore, selected for more detailed survey work to confirm the current parking situation 'on the ground', which is discussed further in **Section 4**.

3.21. The situation appears broadly similar in other main 'urban' areas of the Borough, with general car ownership levels higher than the London average outside of commercial centres.

3.22. In areas of 'suburban' categorisation, car ownership varies up to a maximum of just over 2 cars per household. Although this is well above the Outer London average of 1 car per household, it should be noted that there is some flexibility within the London Plan to allow up to 2 spaces in 'suburban' areas. This is subject to property size and PTAL levels.

3.23. Overall, the findings emphasise that although car ownership varies significantly across the Borough, it is generally high throughout, in comparison to the London average. This is likely to have most impact in areas of 'central' and 'urban' categorisation, where parking is most likely to be restricted by the current London Plan standards, to levels that would fall significantly below existing car ownership figures.

3.24. In addition to PTAL levels, there are other factors which may affect car ownership within LBH. Such factors including affluence correlated directly to higher car ownership levels. An example of this is Emerson Park, with an average income of £910 per household per week, correlating to a car ownership level of 2 cars per household, the highest in the Borough.

3.25. Furthermore, car ownership and household income may be increased by other social factors, such as the number of children remaining in the property who own their own cars. This is directly influenced by property prices, with children choosing to live with parents instead of renting or buying their own properties.

3.26. Although current figures are available for household income, within the scope of parking standards for new residential development, it is difficult to assess the level of influence this will have on car ownership until the master planning stage of the development.

3.27. Overall, it is considered that the initial car ownership analysis is sufficient to confirm that:

- car ownership levels could justify more generous parking standards, particularly in areas with low PTALs; and
- a localised approach may be appropriate to reflect the large differences in PTAL, car ownership and residential character across the Borough.

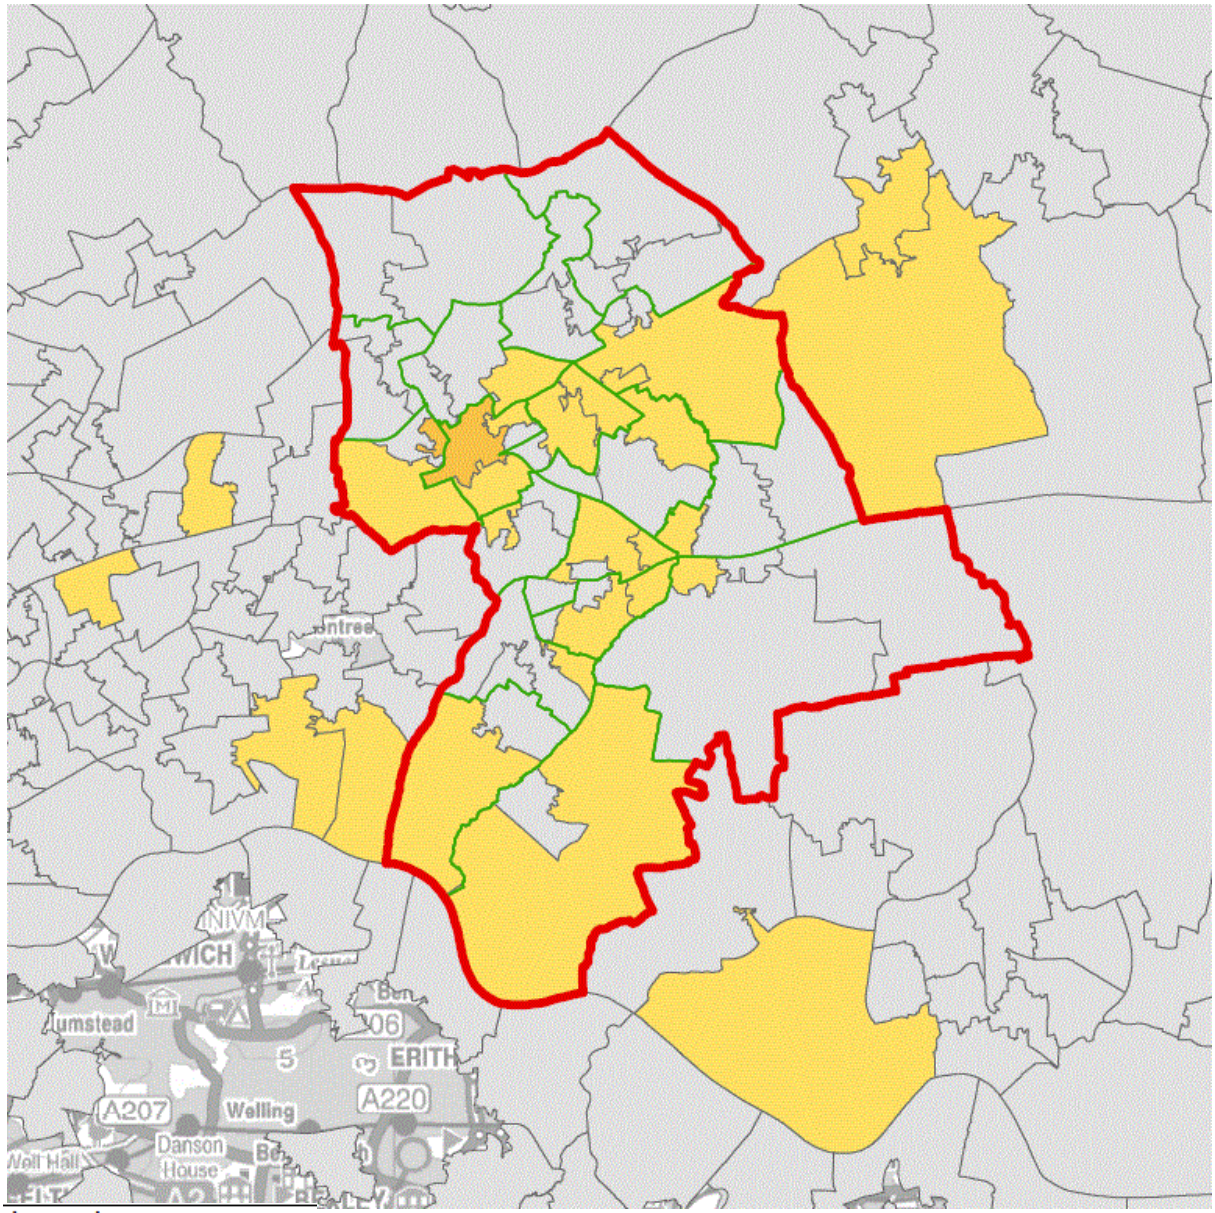
Travel to Work Assessment

3.28. Journey to work data from the 2011 Census (NOMIS) data was used to establish travel patterns of LBH residents for journeys to/ from work, which are a key element of the overall travel patterns of the Borough.

3.29. The journeys to work by driving and public transport are the two main travel modes. The census data is able to identify the destination of people's journeys to work as well as their origin and destination, which are displayed as Middle-Layer Super Output Areas (MSOA). These polygons are generally smaller than wards and one MSOA can fall across many ward boundaries. The data displayed on **Figures 9 and 10** is shown as MSOA (not on a ward by ward basis) and together show the total number of journeys originating in LBH for each of the modes of transport identifying their chosen destination. This is displayed as a percentage of all journeys to work, by the mode considered, originating in LBH.

3.30. **Figure 9** identifies the journey to work trips made by car from the LBH to each MSOA. It is interesting to note that this data indicates that a number of car trips are made to Romford, as a key driver destination.

Figure 9 – LBH, Driver Journey to Work Trips by MSOA Destination

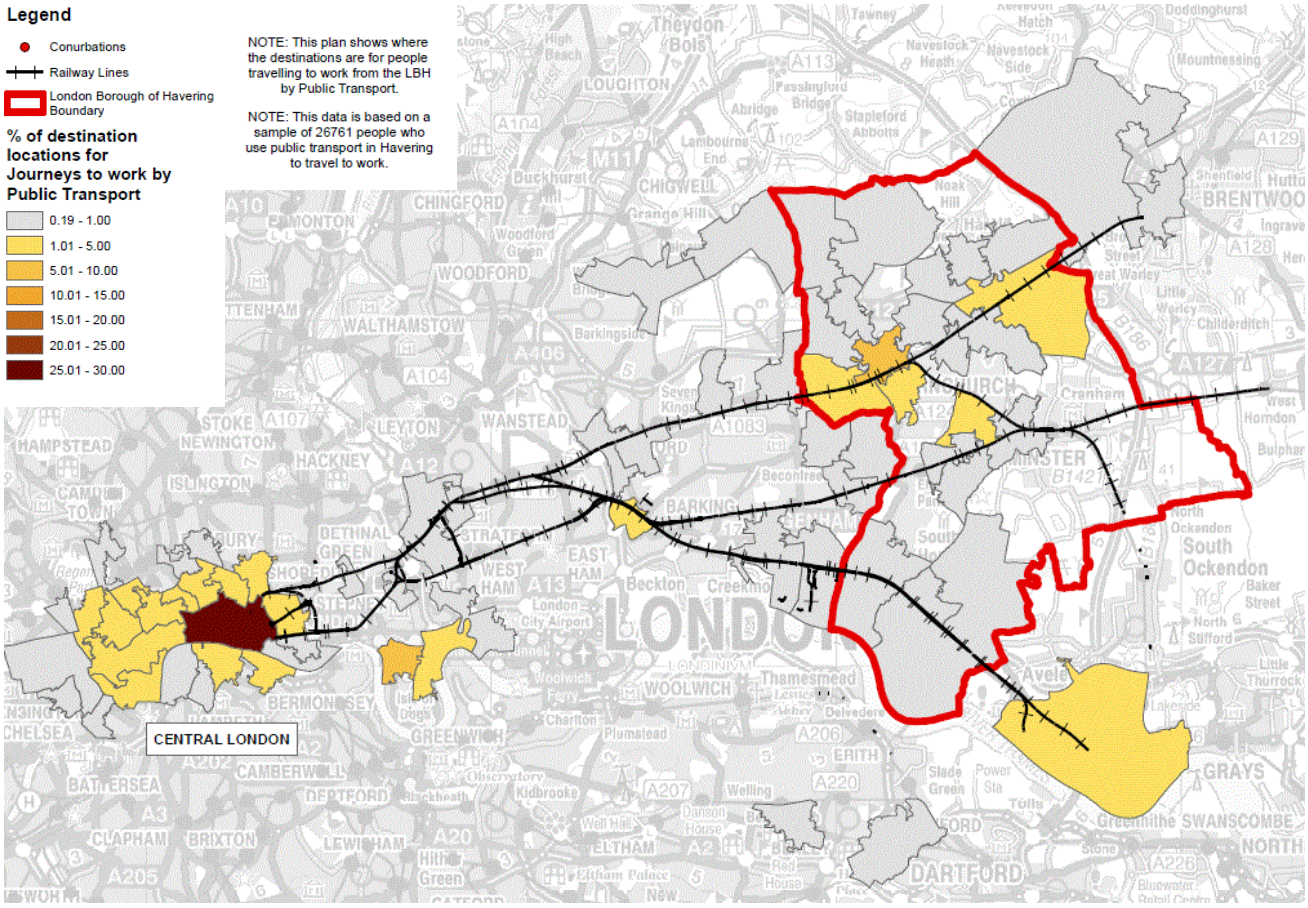


3.31. The analysis shows Romford attracts the highest percentage of driver trips, which would generally be for work within Romford, although there could be some effects of Romford being a public transport hub i.e. some multi-modal journeys to work where the main part is the car journey to Romford. Other trips are focussed around the main conurbations of Rainham, Upminster, Hornchurch and Harold Hill.

3.32. Overall, interrogation of NOMIS data indicates that there is still a reliance on car trips for journeys to work particularly for journeys within the Borough and to neighbouring areas. There are few car driver trips to work destinations in the wider area. There is no data for modal split of non-work related journeys.

3.33. **Figure 10** identifies the destination of public transport trips to work originating in LBH.

Figure 10 – LBH, Public Transport Journey to Work Trips by Destination



3.34. The analysis confirms that the highest number of public transport journeys, by far, is to Central London. The highest number of trips within LBH is, as would be expected, to Romford as the main town in the Borough and also a main transport hub for onward journeys. The other key destination outside of the Borough is Lakeside to the southeast.

3.35. Journeys by public transport to the majority of the Borough, away from the main towns of Romford, Hornchurch and Harold Wood, are low in comparison and may reflect the lack of good public transport links away from these main conurbations and in particular the lack of good north to south public transport links. It can be seen in **Figure 9** the rail links through the Borough run east-west and north-south journeys are, therefore, reliant on bus services. These generally run in and out of the main conurbations, rather than providing good links across the Borough.

3.36. **Figure 10** displays local public transport links and adds to concerns that the areas of LBH with higher PTAL scores, which generally lie on the main rail routes, have achieved those scores largely due to the ease of access to and from London rather than because of good local public transport provision. This is a key point, as Central London is not a focus of driver trips, which are predominantly locally focussed. More local PTAL scores (excluding journeys to London) would, therefore, be lower in effect. It would be these lower scores that are more likely to impact on local car travel and the resultant need of LBH residents to own a car.

3.37. Overall, the analysis suggests that PTAL does not always give the full picture with regard to residential parking standards. Other factors, such as car ownership and the nature of journeys, need to be considered. These factors are likely to be directly related to the limited local level public transport services within LBH, particularly within north-south links.

Travel Analysis for Key Work Destinations

3.38. Further analysis of the data has been undertaken to explore the link as to whether the availability of public transport connections influences people's mode choice to key destinations.

3.39. This data is presented in **Figures 11 and 12**, which identify destination points of interest from LBH for car trips and **Figures 13 and 14**, which identify key destination points of interest from LBH by public transport.

3.40. **Figures 9-14** confirm, for the key destinations considered, that:

- The main mode of travel to work within LBH remains by car, with 48.18% of people driving to work, travelling to local destinations;
- Few people drive to Central London and those trips that do occur originate from various locations across the Borough;
- There are few trips by public transport to destinations within the Borough, except to Romford which attracts trips from the surrounding wards, but few from the southern areas of the Borough; and
- There are a high number of public transport trips to Central London, with the main origin of trips being along the main railway routes.

3.41. Overall, **Figure 11 and 12** confirm that there are a significant number of driver trips at the local level, with public transport trips being more focussed on Central London and, to a lesser extent Romford. The analysis confirms the PTAL scores would not tell the whole story when considering trips at the local level within LBH.

The Romford Experience

3.42. One of the key reasons for commissioning this study is the existing experience of the parking situation within Romford, where the provision of residential parking spaces on recent housing developments reflects Romford's 'central' characterisation. LBH has become concerned that the low provision of off-street residential parking may be linked to on-street parking issues and community tensions; particularly within Romford Town Centre.

3.43. LBH is concerned that part of the pressure comes from increasing car ownership levels in Romford that may, in part, reflect the lack of reach of public transport across the Borough (e.g. there are poor links to the south of the Borough). This adds to general social pressures created from changing life-style choices, with many households now comprising parents and several family members. The family members each are required to have their own car, or who are responsible for works vehicles that are stored overnight, at home in addition to the normal parking demand.

3.44. LBH car ownership reflects the above factors, being significantly higher than the Outer London average.

3.45. Further pressures on town centre parking occur during the day when on-street parking is associated with a range of people that access the town centre, including shoppers, local workers, commuters making onward public transport journeys and visitors to residential

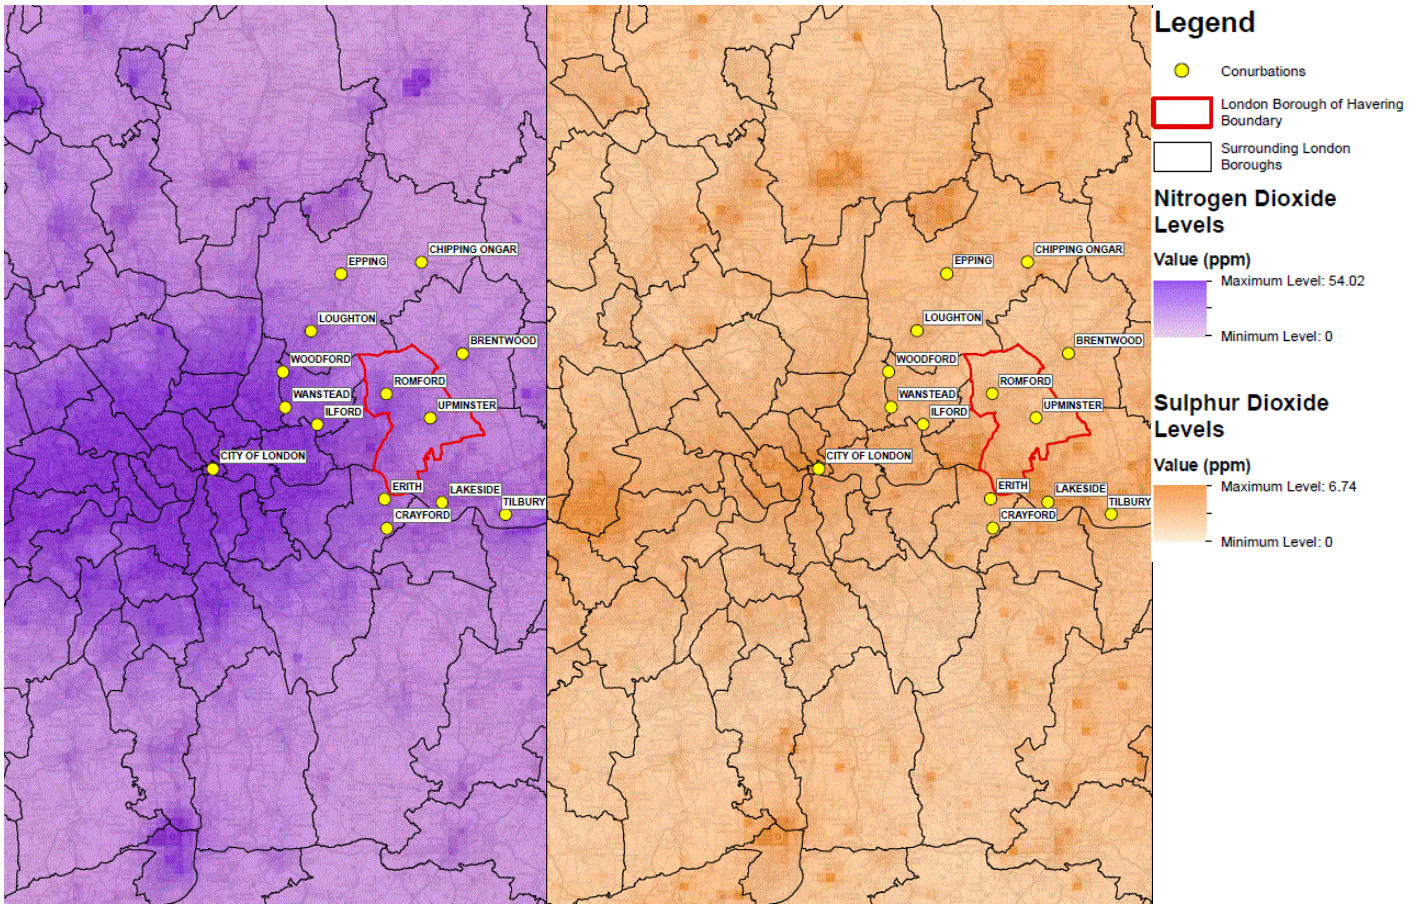
properties. Any overflow of residential car parking into uncontrolled parking areas would, therefore, be problematic.

3.46. These issues combine to produce a situation in and around Romford town centre that the LBH is seeking to understand and plan for. This report will investigate whether part of the solution should be an increase in residential parking standards to reflect the issues of PTAL, car ownership, residential character and existing travel patterns outlined above, together with the additional pressures by other users of the town centre. Under the London Plan, Romford, as a 'central/ urban' area with good PTAL scores (generally 5-6 in the town centre) would generally be subject to a maximum parking standard of 'significantly less than 1 parking space per dwelling', which is well below car ownership levels for the Borough.

Air Quality

3.47. **Figure 15** displays air quality data for the whole of London.

Figure 15 – Air Quality



3.48. LBH is designated as an Air Quality Management Area and within the Borough there are particular pockets of poor air quality (M25, A12, A13 and A127). However, LBH has better Air Quality than most other London Boroughs and LBH has implemented many projects and taken steps to reduce air pollution across the Borough, including launching an air quality publicity campaign.

3.49. Air quality projects within the Borough have been used to promote sustainable development by helping to promote use of the sustainable transport network for every day journeys, thus discouraging unnecessary car journeys in order to improve air quality. Discouraging car ownership by reducing parking standards within residential developments is one factor in promoting sustainable development; however the scheme will only work if the public transport network is sufficient to meet the needs of the public.

3.50. As demonstrated within Section 3 of this report, it is considered that inter-London public transport is adequate; however less effective transport links within the Borough and to key work destinations, is forcing residents to use cars more. This in turn makes car ownership essential to many residents and this need to be reflected within the parking standard.

3.51. It is the Council's intention to continue and enhance this work so that LBH can become an exemplar borough for air quality.

3.52. Marginal changes, such as that resulting from a change to residential parking standards would not have a significant impact, although it will be the responsibility of LBH to consider air quality implications or mitigation measures in taking the Local Plan forward.

LBH Context - Conclusions

3.53. Some areas of LBH have high PTAL scores, however this is largely a consequence of good links to Central London and there is generally less effective public transport connectivity within the Borough and to neighbouring London Boroughs. This is reflected in the mode choice of LBH residents for commuting within the local area, with few public transport journeys and some of the key strategic local destinations being accessed heavily by private car, e.g. Romford.

3.54. LBH, therefore, could argue that a key factor in the high levels of cars per household in London is the lack of convenient and accessible alternative transport options. The car ownership per household in LBH is 1.19 (2011 Census), which is significantly higher than the London average of 0.79 cars per household. Even within Romford, which is characterised as a 'central' area, average car ownership exceeds the London average.

3.55. The residential car parking standards set out in the London Plan are of particular concern in central Romford, where existing on-street parking pressures would be exacerbated if future residential developments do not include sustainable levels of car parking for residents.

3.56. It can be concluded that the high car ownership levels in LBH are reflective of the more 'suburban' way of life experienced in LBH. Many local trips are required to be undertaken by car, thus increasing car ownership levels.

3.57. Overall, on the basis of the above, it is clear that PTAL levels and character classification in LBH do not tell the whole story in terms of setting residential parking standards. There are clearly other factors that need to be considered in order to identify appropriate parking standards that reflect the local context of LBH and provide a balance between the reasonable day to day needs of residents and the wider aims of planning policy to promote sustainable travel.

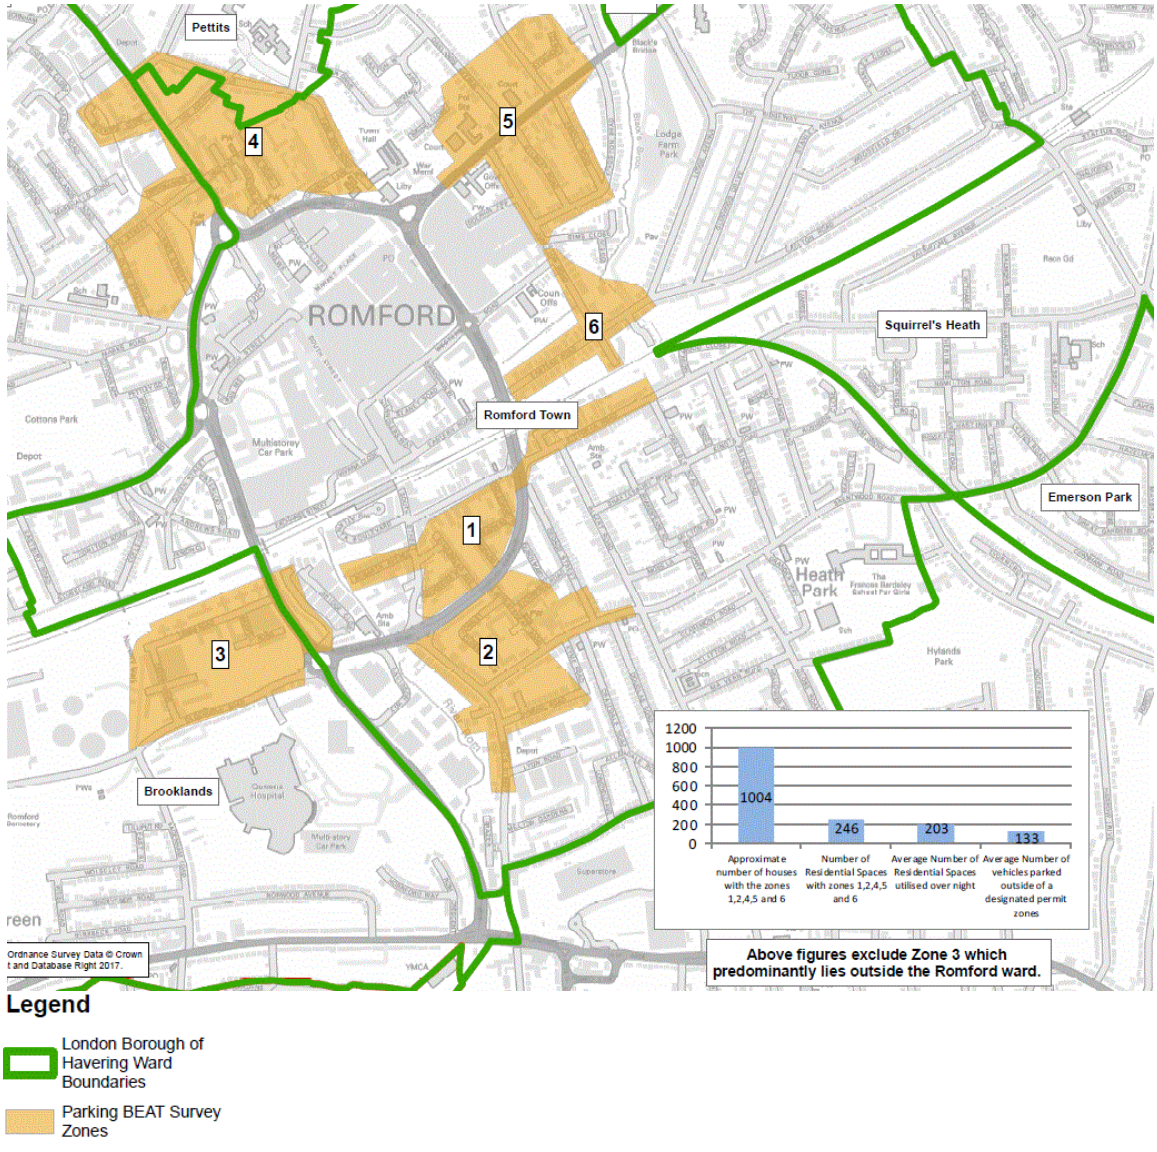
4.0 ASSESSMENT OF RESIDENTIAL PARKING IN CENTRAL ROMFORD

Parking Beat Surveys

4.1. As part of the analysis in deriving parking standards based on the overall context of NPPF Paragraph 39, parking 'stress' within one of the densely populated areas of the Borough was considered. Following consultation with officers, the residential zones within the Romford Ward (Romford Town Centre) were assessed.

4.2. A Parking Beat Survey (PBS) was undertaken in Romford Town Centre, an area within the Borough which has a high PTAL score. Officers at LBH provided a parking street 'hot spot' map displayed in **Figure 16**, which identified the areas within the Borough that experience the highest number of Parking Charge Notices (PCN) or complaints from businesses and residents on illegal or obstructive parking.

Figure 16 – Romford Parking Survey Areas



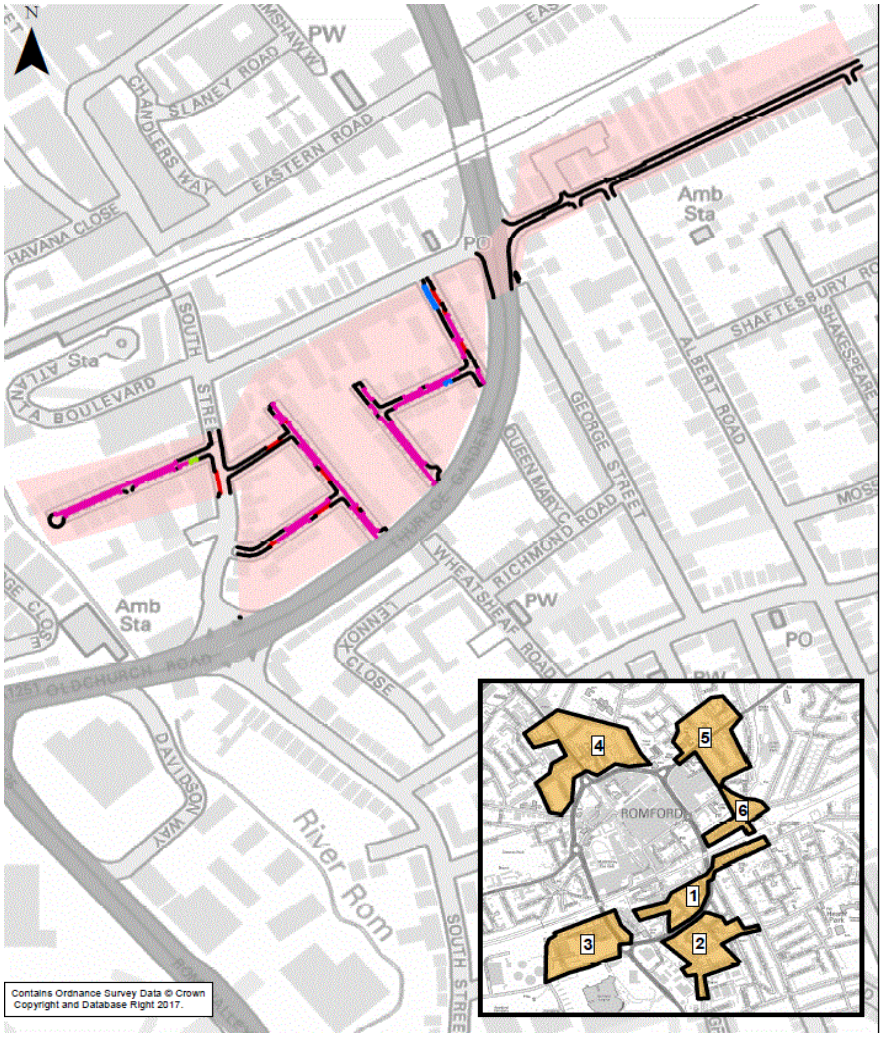
4.3. The PBS was conducted in November 2016. The survey focussed on the five zones, identified by LBH officers as the primary residential zones within Romford Town Centre. It should be noted that only a small part of Zone 3 lies within the Romford Ward, therefore, although the PBS data for this zone is included and discussed, it is not considered within the final assessment of the ward parking situation. A small portion of Zone 4 also lies partially outside the ward boundary; however, as the majority of the zone is within the ward then the data for this zone is included within the final assessment.

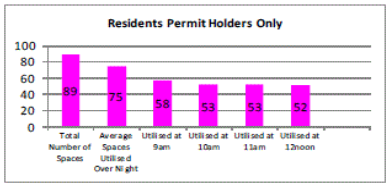
4.4. To allow the findings of the PBS to be considered in context, the number of residential properties within each zone was estimated from IT data, together with the proportion of properties that have access to off-street parking. It was considered that this level of accuracy was sufficient to confirm any broad findings that may be taken from the PBS.

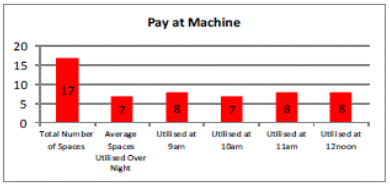
4.5. It was agreed that the parking survey should be undertaken when the highest numbers of residents are at home; generally late at night during the week. A PBS survey was, therefore, commissioned between the hours of 0030-0530 on two separate weekday nights (Tuesday 15th and Thursday 17th November 2016). This was followed up by spot check surveys during the day at 9am, 10am, 11am and 12pm on Thursday 17th November 2016. A copy of the survey results has been included in **Appendix D**. The survey results have also been summarised as Figures, including bar charts, for illustrative purposes in this assessment.

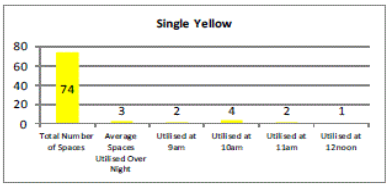
4.6. The Zone 1 survey area, together with the main survey result bar charts are shown in **Figure 17**. Within Zone 1 it was estimated (through IT data) that there are approximately 250 dwellings with approximately 85% of those dwellings estimated to have access to off-street parking. **Figure 17** indicates the various waiting and parking restrictions within Zone 1.

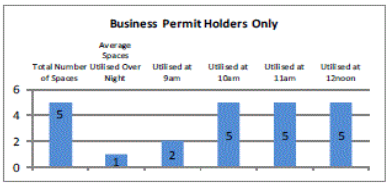
Figure 17 – Parking Survey Zone 1

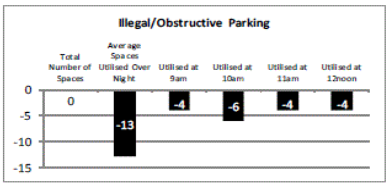












Legend

Zone 1

Waiting Restrictions

- Residential Permit Holders Only
- Pay at Machine
- Business Permit Holders Only
- Illegal/Obstructive Parking
- Unrestricted

4.7. The majority of restrictions within Zone 1 are shown as residential permit holder parking only. There are 89 resident permit holder bays, of which an average of 75 (84%) are occupied by residents overnight. The resident permit bays in this zone extend across residential properties, which also have access to off-street parking and as a result not all of the spaces can be used without blocking cars parked on private property, as shown in **Figure 18**. The apparent spare capacity is, therefore, overstated.

4.8. The PBS also observed an average of 24 vehicles parking overnight outside of residential permit spaces (e.g. at pay and display machines), including 13 vehicles observed to be parking illegally or obstructing driveways.

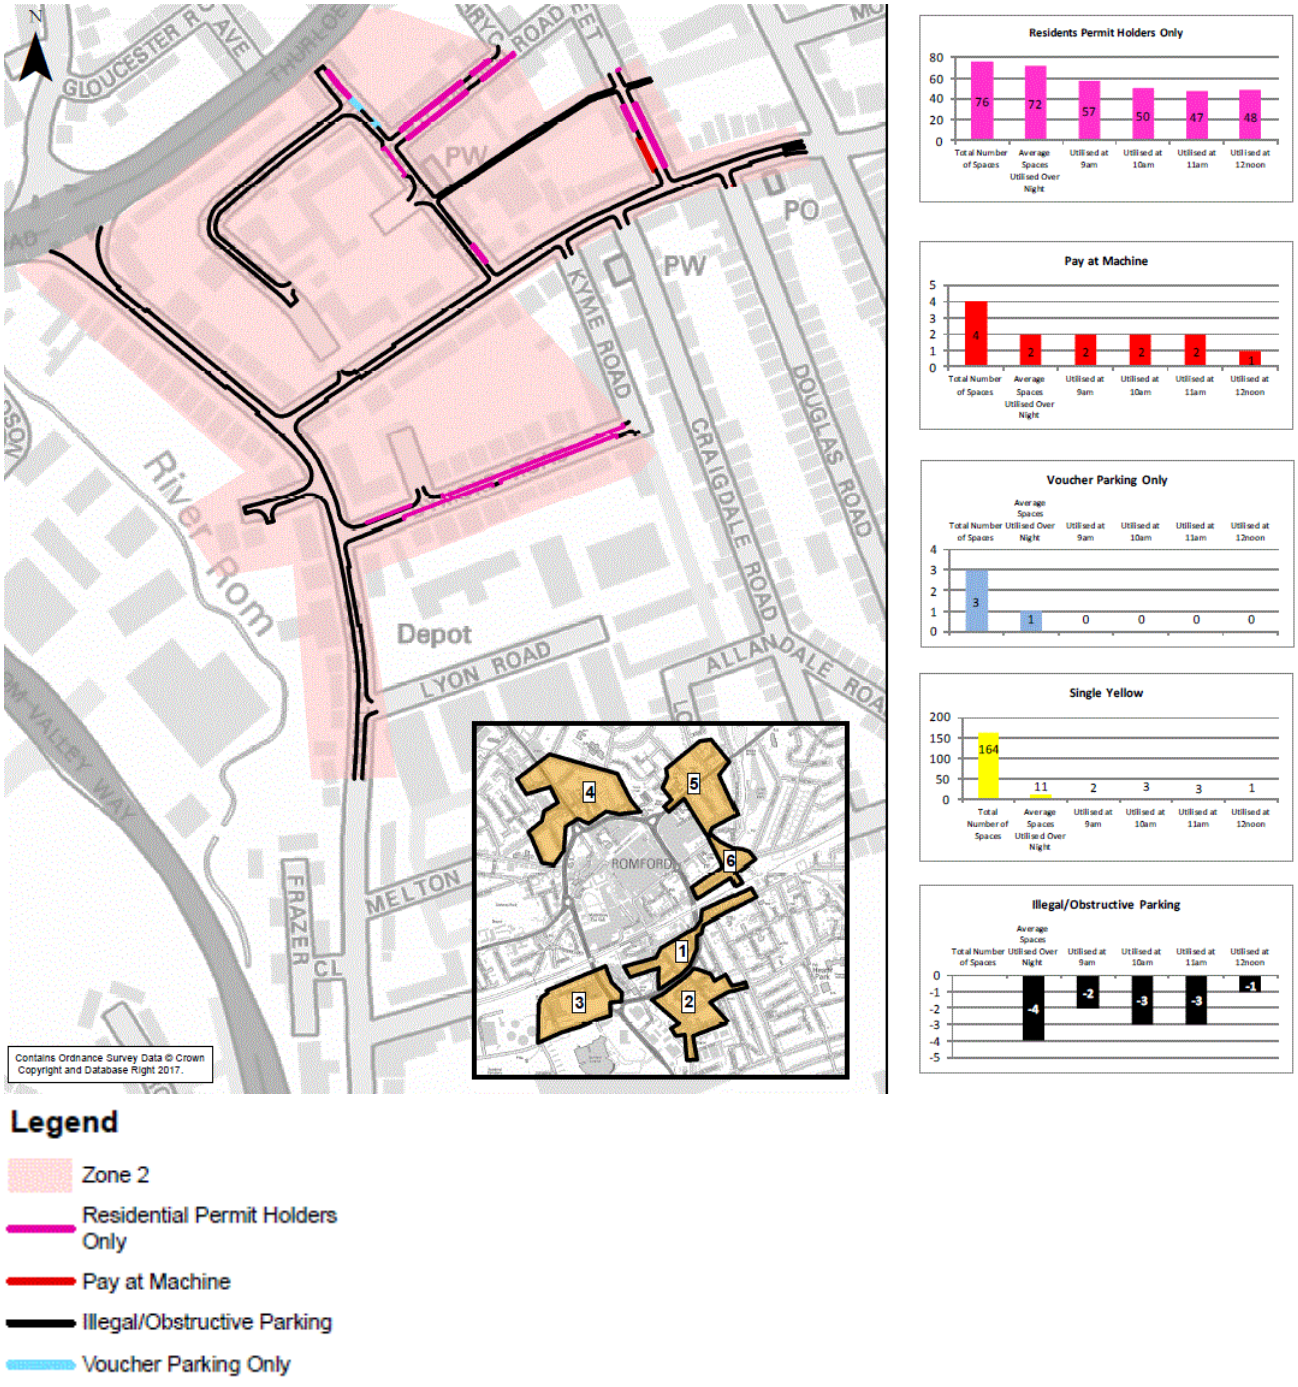
4.9. During the day, average parking levels within the controlled parking zone remain significant, but are lower than overnight levels. However, it is worth noting that some illegal/ obstructive parking continues to occur.

Figure 18 – Parking Survey Zone 1 – Survey Observations

4.10. Overall, the survey indicates that despite the high levels of off-street parking there is an over demand for residential parking on-street overnight. A number of vehicles park illegally or inconsiderately.

4.11. The Zone 2 survey area, together with the main survey results are shown in **Figure 19**. Within Zone 2 there are approximately 150 dwellings, with approximately 75% of those estimated to have access to off-street parking.

Figure 19 – Parking Survey Zone 2



4.12. There are 76 resident permit holder bays on-street, of which an average of 72 (95%) are occupied by resident permit holders overnight. Therefore, all space on-street within the controlled parking zone is effectively used overnight.

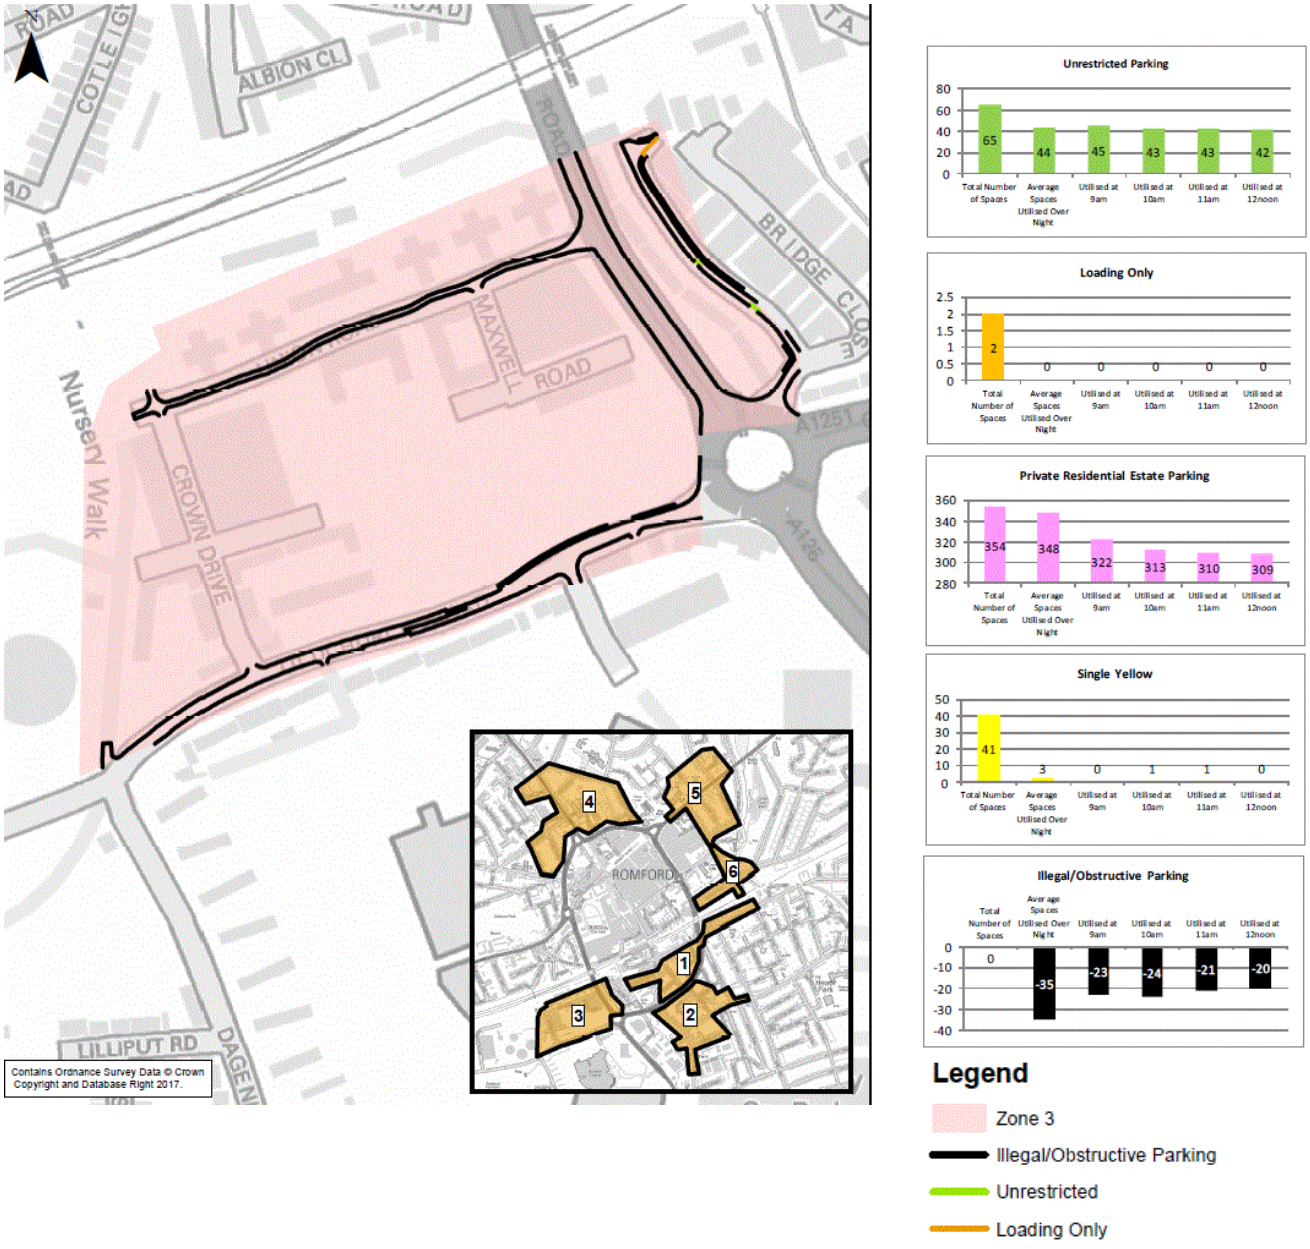
4.13. The PBS also observed an average of 18 vehicles parking overnight outside of residential permit spaces (e.g. at pay and display machines), including 4 vehicles observed to be parking illegally or obstructing driveways.

4.14. During the day, average parking levels within the controlled parking zone remain significant, but are lower than overnight levels. However, it is worth noting that some illegal/ obstructive parking continues to occur.

4.15. Overall, the survey indicates that despite the good levels of in-curtilage parking there is an over demand for residential parking on-street overnight, with a number of vehicles parking illegally or inconsiderately.

4.16. The Zone 3 survey area, together with the main survey results are shown in **Figure 20**. As previously discussed, the data from this zone is set out below for information, but is not used within the final assessment as the zone generally lies outside the Romford Ward.

Figure 20 – Parking Survey Zone 3



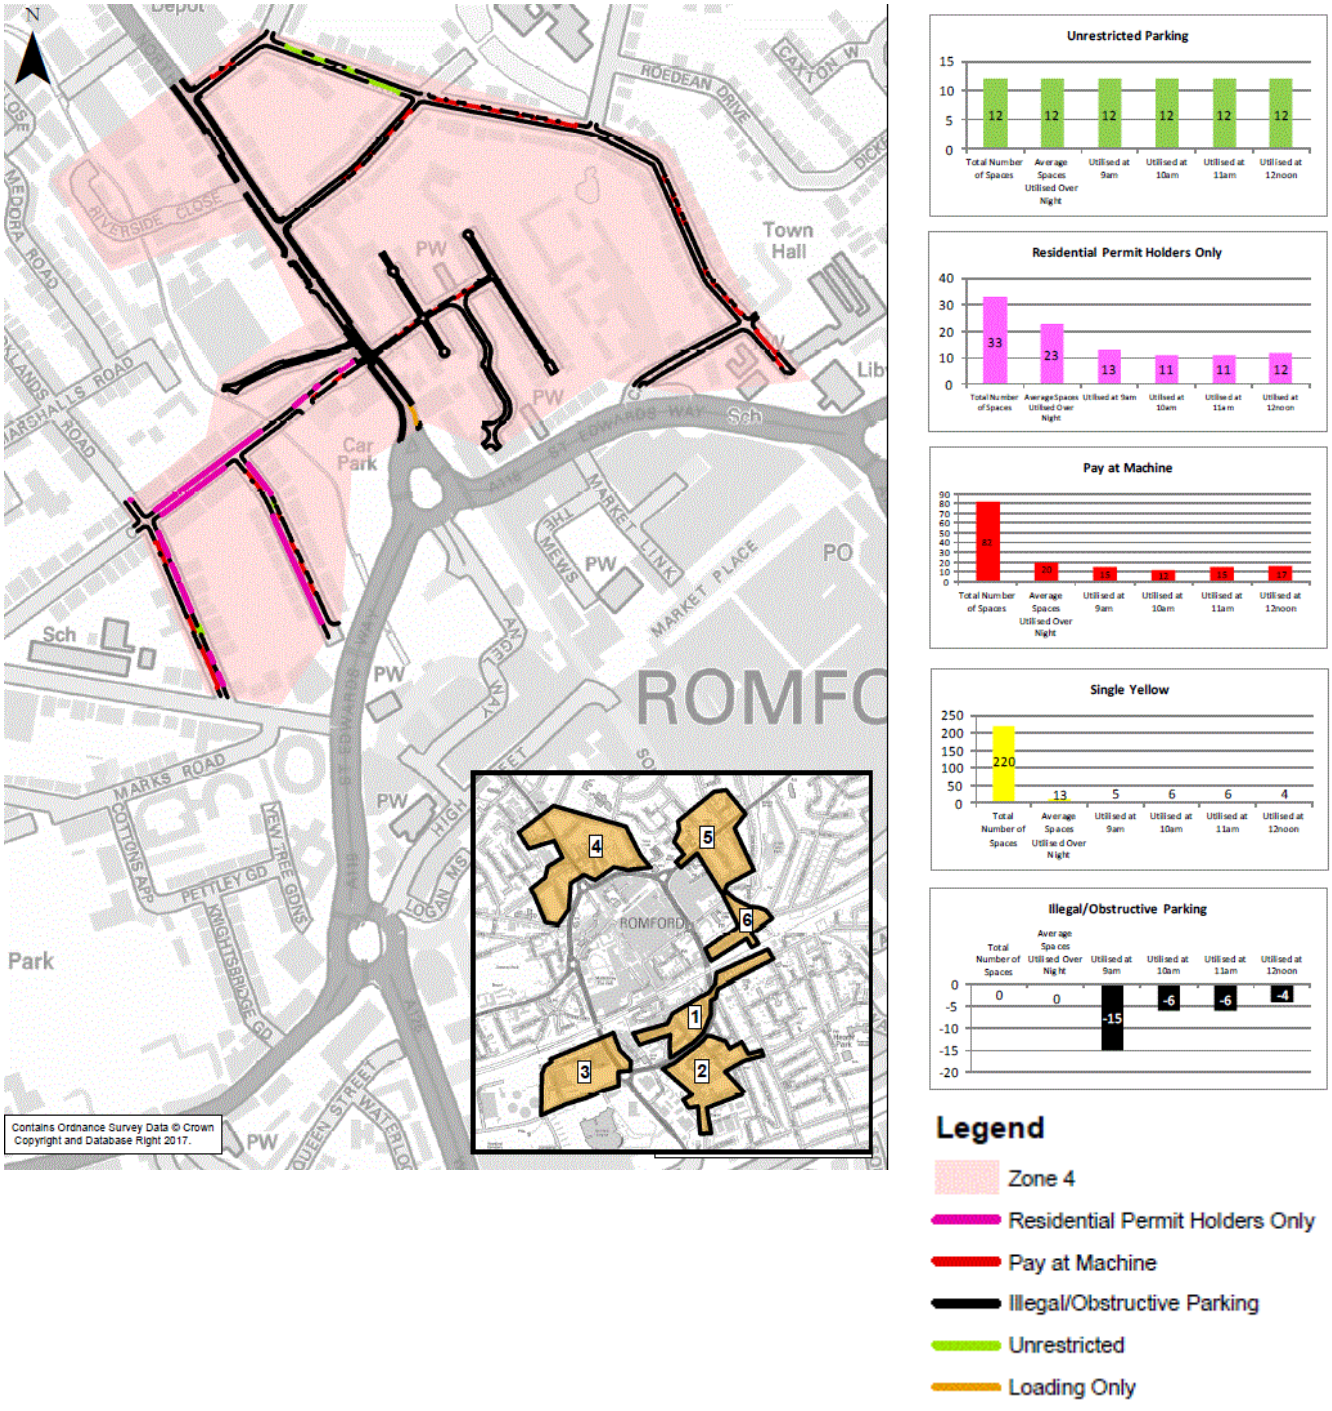
4.17. The data return from Zone 3 indicates that overnight there is an over demand for residential car parking spaces. There are 354 private residential parking spaces of which an average of 348 (98%) are occupied by residents. However, there is also evidence that there is an over demand for on-street parking. An average of 41 vehicles were observed parking on waiting restrictions (yellow lines) in the zone and an average of 35 vehicles were observed parking illegally or obstructing.

4.18. During the day, average parking levels within the controlled parking zone remain significant, but are lower than overnight levels. However, it is worth noting that significant illegal/ obstructive parking continues to occur.

4.19. Overall, the survey indicates that there is an over demand for residential parking on-street overnight. A high number of vehicles park illegally or inconsiderately.

4.20. The Zone 4 survey area, together with the main survey results are shown in **Figure 21**. Within Zone 4 there are approximately 350 dwellings with approximately 80% of those dwellings estimated to have access to off-street parking.

Figure 21 – Parking Survey Zone 4



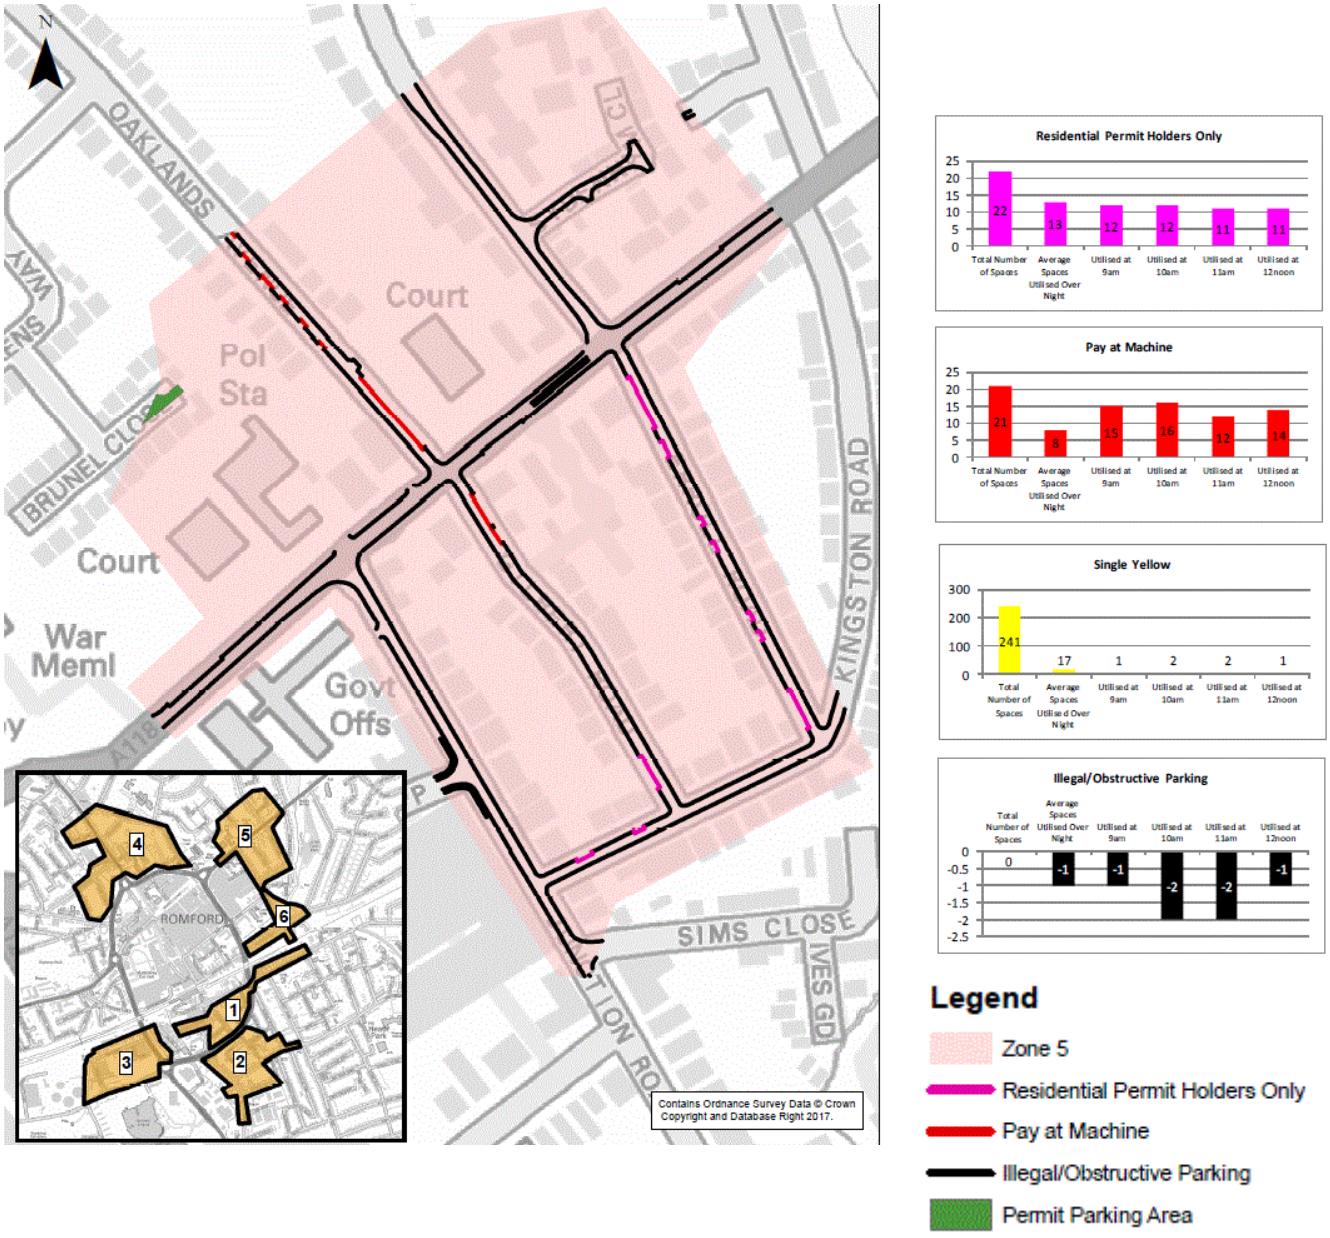
4.21. The data from Zone 4 indicates that there are 33 resident permit holder spaces of which an average of 23 (70%) are occupied by residents overnight. However, there is also evidence that there is an over demand for on-street parking. An average of 20 vehicles were observed parking at pay & display machines. An average of 13 vehicles were observed parking on waiting restrictions (yellow lines) in the zone. An average of a further 12 vehicles were also parked in unrestricted parking areas overnight.

4.22. During the day, average parking levels within the controlled parking zone are lower than overnight levels. However, it is worth noting that some illegal/ obstructive parking occurs during the day, which was not observed overnight.

4.23. Overall, the survey indicates that there is an over demand for residential parking on-street overnight.

4.24. The Zone 5 survey area, together with the main survey results are shown in **Figure 22**. Within Zone 5 there are approximately 148 dwellings with approximately 95% of those dwellings estimated to have access to off-street parking.

Figure 22 – Parking Survey Zone 5



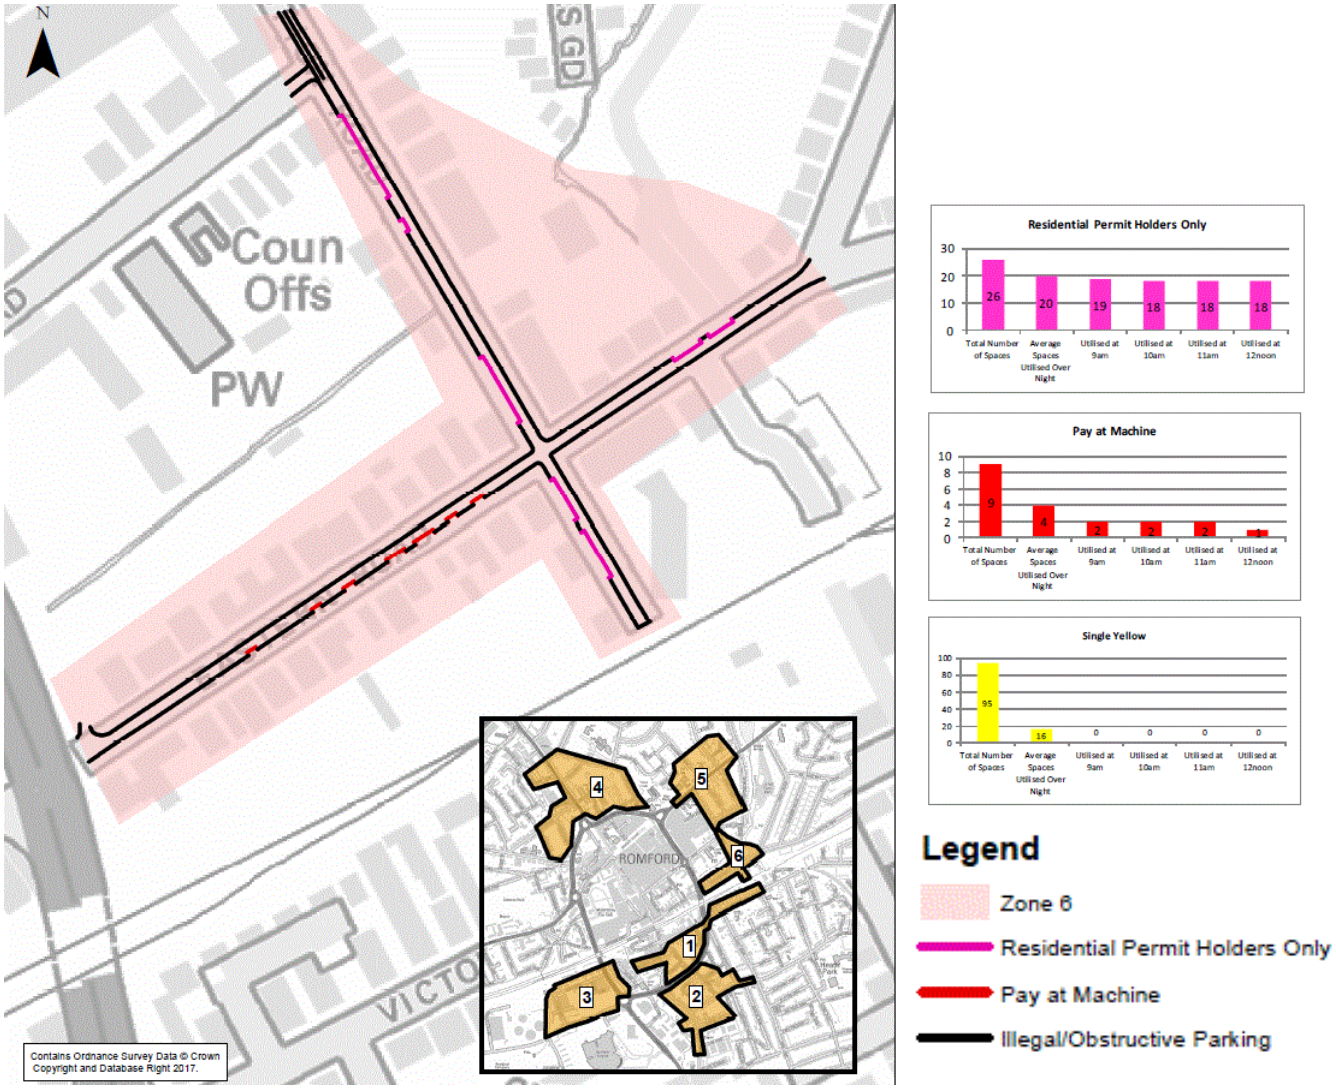
4.25. The data return from Zone 5 indicates that there are 22 resident permit holder spaces of which an average of 13 (59%) are occupied by residents overnight. However, there is also evidence that there is an over demand for on-street parking. Twenty Six vehicles were observed parking on waiting restrictions (yellow lines) and pay and display machines in the zone, with one further vehicle on average parked illegally or obstructing a driveway/ access.

4.26. During the day, average parking levels within the controlled parking zone are similar to overnight levels.

4.27. Overall, the survey indicates that despite the high levels of off-street parking there is still significant demand for residential parking on-street overnight.

4.28. The Zone 6 survey area, together with the main survey results are shown in **Figure 23**. Within Zone 6 there are approximately 102 dwellings, with 95% of those dwellings having access to off-street parking.

Figure 23 – Parking Survey Zone 6



4.29. There are 26 resident permit holder spaces of which an average of 20 (77%) are occupied overnight by residents. However, there is also evidence that there is an over demand for on-street parking. An average of 20 vehicles were observed parking on waiting restrictions (yellow lines) and at pay and display machines in the zone overnight. During the day, average parking levels within the controlled parking zone are similar to overnight levels.

4.30. Overall, the survey indicates that despite the high levels of off-street parking there is still significant demand for residential parking on-street overnight.

Review of Survey Findings

4.31. A broad summary of the survey results is shown in **Figure 16**.

4.32. Within the entire Romford Ward there are 6,658 cars owned (Census 2011) at a ratio of 0.9 cars per dwelling (7,398 dwellings). Within the PBS zones of the Romford Ward there were approximately 1004 dwellings, of which approximately 75% to 95% had off-street parking. Additionally there was space on-street for around 246 vehicles within the resident permit controlled parking zones (all figures quoted exclude Zone 3, which is largely outside the ward).

4.33. Within the 'central' area of the ward covered by the PBS, up to 336 vehicles were observed to be parking on-street during the survey period (this discounts all vehicles observed on-street in Zone 3 as they are not within the defined Romford Ward). Of the 336 vehicles parked on-street, 203 were observed to be residents parked within defined residential permit zones. Of the remaining 133 vehicles (40%) being parked elsewhere, some were parked either illegally or inconsiderately, e.g. obstructing access to off-street parking areas.

4.34. Of the approximately 246 residential permit controlled parking spaces available for residents to park their cars on-street within the surveyed area of the Romford Ward, the PBS established that on average up to 203 spaces were used by residents. A number of spaces are neutralised by driveway accesses, so practical occupancy is higher. Some overall capacity was, therefore, theoretically available to permit holders within the residential controlled parking zones, although it is worth noting that there are some streets where the number of vehicles parked significantly exceeded the notional number of spaces available.

4.35. From the PBS it is clear that the total demand for on-street overnight residential car parking is greater than the available number of spaces currently available on-street to residents, despite a high proportion of properties having off-street parking. The PBS, therefore, also suggests that local car ownership exceeds the 2011 Census average levels for the entire ward, that of 0.9 vehicles per household. This discrepancy between the wider Census data and the PBS may be as a result that the Census data being six years old and, therefore, not reflecting changes in the ward since 2011, e.g. new residential developments. It could also be affected by the number of non-owned vehicles (e.g. trade vans) that are brought home by staff overnight.

4.36. Overall, the PBS detailed in **Appendix D** clearly demonstrates existing overnight on-street parking capacity issues. This is despite the number of properties with off-street parking

matching or exceeding what would typically be achieved from the current London Plan parking standards.

4.37. During the daytime there is still significant parking within the PBS zones and, although, the parking within the residential permit areas is less than overnight, there is still some inconsiderate and illegal parking within the residential area as a whole.

4.38. As a result of the PBS a further questionnaire survey was undertaken to gain further information on the reasons for parking that occurs within the residential areas.

Parking Questionnaire Survey

4.39. A further questionnaire survey was conducted in Zones 1, 3 and 4 to determine why people were travelling to Romford by car and not using public transport – these locations were agreed with LBH to better understand behaviour in areas where parking issues are known to occur. It also asked why the local residents had trouble with parking outside their homes. A survey was conducted in December 2016, with a sample of 88 survey questionnaires completed by drivers using on-street parking. The survey asked the following questions:

1. Please indicate which of the following areas you live in?

2. Generally how often do you drive into Romford Town Centre?

3. What are the main reasons for you driving into Romford Town Centre?

4. Where do you normally park?

5. Do you consider there to be enough overall car parking in Romford Town Centre?

4.40. The questionnaire survey results from the 88 respondents provided the following comments:

- ‘Not enough space for visitors’;
- ‘At night parking can be a problem. Sometimes I park on double yellow lines’;
- ‘People who come and visit me have to park on the double yellow lines’;
- ‘I have an allocated space, but it is hard for my family to find a space if they visit’;
- ‘Used to have 2 cars, but had to sell one as I have only been allocated one space’;
- ‘Two of my cars are parked in Nursery Walk, as there is not enough provision near to my flat’;
- ‘At night most spaces are taken, so I usually have to park on the grass verge in Nursery Walk’;

- ‘At night it can get very full and residents park wherever they can find a space’; and
- ‘Late at night I sometimes have to park on the double yellow lines’.

4.41. The full results from the questionnaire survey are contained in **Appendix E**.

Romford Parking Conclusions

4.42. Under the London Plan the normal parking standard for Romford, as a ‘central/ urban’ area with good PTAL scores (generally 5-6 in the town centre) would be significantly less than 1 parking space per dwelling. This standard is largely driven by the ‘central’ characterisation and high PTAL values.

4.43. The surveys undertaken within Romford Ward broadly support the findings set out in **Section 3** and indicate that there is insufficient car parking to meet current residential demand. Other pressures on on-street parking within Romford were also demonstrated within the surveys.

4.44. The data obtained from the Census (2011) and the Parking Beat Survey (November 2016) suggests that the London Plan Standards for Romford Town Centre do not meet current parking demand, based on:

- car ownership levels;
- density of population;
- journey to work patterns, other than to Central London; and
- existing public transport connectivity for the daily commute.

It is important to note that this reflects the current situation and does not take into account future trends in car ownership and accessibility.

4.45. Overall, there are existing parking issues within residential areas of central Romford, particularly overnight. These issues could potentially be exacerbated through future implementation of the existing residential parking standard in the London Plan. The plan predominantly requires significantly less than 1 parking space per unit in ‘central’ areas and for 1 and 2 bed properties. LBH will need to carefully consider, based on the range of factors that influence the parking standards, how to ensure that residential parking standards in the emerging Local Plan are appropriate and provide sufficient flexibility to meet the existing situation in Romford. They should also strive to ensure that new residential growth in the Borough provides appropriate levels of parking to meet the needs of the community and the aims of wider planning policy.

5.0 GUIDANCE ON SETTING PARKING STANDARDS FOR ROMFORD AND THE WIDER BOROUGH

5.1. LBH seeks to provide residential car parking standards within their new Local Plan that are in general conformity with the parking requirements outlined within the London Plan and Mayor's Supplementary Planning Guidance, but also take into account the unique characteristics of the Borough.

5.2. This document sets out an evidence base to guide decisions with respect to appropriate residential car parking standards in the new Local Plan. The evidence was attained through:

- A detailed review of the local context, including data on population, housing density, car ownership, air quality, journey to work patterns and existing residential parking standards;
- Consideration of the PTAL levels and London Plan character classifications, as they apply to LBH;
- Undertaking parking beat surveys (November 2016) in primary 'central' residential zones of central Romford; and
- Undertaking a detailed 'on-street' questionnaire survey (December 2016) to assist in understanding the background to the parking that occurs in central Romford.

5.3. An assessment of the data concluded that it would be reasonable for LBH to introduce a level of control of parking standards in the new Local Plan, whilst remaining in general conformance with the London Plan, to take account of local factors, including:

- The car ownership levels within LBH, which are the highest of all London boroughs and significantly above the Outer London average;
- The PTAL scores for the Borough, particularly in 'central' and 'urban' areas, which are significantly influenced, and generally increased, by links to Central London rather than the more local connections that influence the decision of residents to own a car;
- The evidence of existing on street residential parking issues in central Romford, one of the most accessible locations in the Borough, which could be exacerbated by new residential development with car parking that accords with the London Plan.

5.4. The evidence gathered in central Romford indicates that more control of parking standards could be particularly appropriate in relation to the lowest maximum residential

parking standard in the London Plan of 'significantly less than 1 space per unit', which would predominantly apply in 'central' areas or to smaller residential units.

5.5. The level of control applied to the residential parking standard in particular areas would depend on a local review of the local factors identified in this assessment, including car ownership, PTAL (to confirm how relevant this is to local travel) and the local on street parking situation (to determine whether new developments would create an issue). The control applied could potentially include:

- Increasing the maximum standard to permit more generous standards, e.g. in areas with low PTAL or where the measured PTAL is not considered to reflect the local travel situation; and
- Defining a minimum parking standard, e.g. in areas where further on street parking could exacerbate existing issues or there is a necessary reliance on private car ownership.

5.6. Overall, this assessment provides evidence (in Sections 3 & 4) that there is current demand for residential car parking spaces even in some of the most accessible locations. As part of the new Local Plan, through wider regeneration initiatives and parking management, LBH will need to carefully consider the extent to which the issue should or can be addressed. This could be done by modifying residential parking standards for new developments, whilst remaining in general conformity with those of the London Plan.

5.7. LBH recognises that any revisions to parking standards for new residential developments would form only part of the picture and will also need to give careful consideration to alternative approaches to simply providing additional car parking provision.

5.8. Presently many residents feel they have no option but to have a private vehicle to be able to travel within the Borough and to neighbouring boroughs. As confirmed in this assessment, residents of Havering have good east-west connectivity across the Borough (and into Central London), however, there has historically been limited public transport links north/south, particularly through the bus network.

5.9. Significantly, improved transport connections between Rainham and Romford are needed to support the two emerging Housing Zones in the new Local Plan, but also to improve access to Crossrail (coming on line in 2019) and the new station to be built at Beam Park (due to be operational by 2020). In addition to this, improving connections further north in Havering, up to Collier Row and Harold Hill, is important due to their relatively modest

PTAL levels and in order to improve access to Crossrail services for residents in the north of the Borough.

5.10. Overall, improving local public transport connections and providing people with alternatives to travel other than the car will help to reduce people's reliance on a private vehicle in order to travel. These improvements will be important aims of the new Local Plan.

5.11. A further key challenge for LBH centres on increasing modal shift away from the private vehicle onto sustainable modes, such as travelling by foot or by cycle. Whilst Havering is likely to remain a borough of very high car ownership (at least in the short and medium term), the Council could explore ways to encourage more people to travel sustainably, particularly for short journeys. In recent years Havering has delivered a number of off-road shared use paths including the Ingrebourne Way and the Rainham to Purfleet path, to provide residents with opportunities to travel within the Borough by sustainable means.

5.12. Delivery of attractive pedestrian and cycle facilities on the existing highway network, as well as working with developers to ensure new developments can be properly accessed by foot and by bike (particularly the Romford and Rainham Housing Zones), will provide residents with options to travel sustainably and negate the need to have a private vehicle.

5.13. LBH recognises it is important to ensure that residential parking policies are designed to work with other parking policies in a co-ordinated way that provides an appropriate parking solution for new and existing residents. To achieve this a range of strategies will be considered, including:

- Utilising planning conditions and legal agreements to make developers fund the implementation of new or amended controlled parking zones to protect existing residents on surrounding streets;
- Where appropriate, ensuring property deeds specify that new residents are ineligible for on-street permits;
- Designing parking controls and new controlled zones in a way that 'future proofs' an area from the impact of new developments. This could help reinforce new resident driver behaviour's and prevent parking problems from occurring in the first place, particularly when on site provision is limited; and
- Controlling the numbers of parking permits able to be purchased by each eligible property and the prices of permits; and
- Encouraging car club provision within new residential areas, which can help reduce car ownership by giving residents an alternative, e.g. in high PTAL areas where

many residents commute to work in London via public transport, but still own a car to meet their other travel needs.

5.14. Havering was declared an Air Quality Management area in 2006 for both Nitrogen Dioxide (NO2) and Particulate Matter (PM10). The key transport routes of the M25, A12, A13 and A127 are major sources of motor vehicle tailpipe emissions, which contribute to air pollution concentrations within the Borough. Particular junctions within the Borough are also major sources of vehicle tailpipe emissions, including Gallows Corner. There are also a number of Air Quality Focus Areas (locations that have been identified as having high levels of pollution coupled with human exposure) in the Borough. This includes Romford town centre, the A124 Rush Green Road and Rainham. Almost 66% of the NOx emissions produced in Havering come from motor vehicles.

5.15. The Council has recently launched an air quality campaign that looks at raising awareness of the dangers of poor air quality and provides advice and guidance on what residents can do to mitigate against exposure to poor air quality. Promoting alternative modes of travel to encourage people out of their vehicles can help to tackle increased car use.

5.16. Through transport programmes such as the Local Implementation Plan (LIP), the Council could consider delivering programmes with an increased focus on sustainable and active travel.

5.17. In conclusion, based on the evidence in this assessment it would be reasonable for LBH to amend the residential parking standards set out in the London Plan, whilst remaining in general conformance with the Plan. New LBH Local Plan policies on residential parking would need to be mindful of the need for a balanced approach with other policies related to the wider aims of minimising car use and promoting sustainable travel, including:

- Promoting new residential developments at locations that have good access to local facilities, amenities and employment by sustainable modes of transport;
- Promoting sustainable travel through improved sustainable transport infrastructure to support residential development, including public transport services that not only meet the needs for day to day journeys to work (e.g. in Central London), but also facilitate access to amenities within the Borough;
- Co-ordinating residential parking standards with the approach to wider parking policies, including sustainable initiatives (e.g. car clubs) and formal parking controls (e.g. controlled parking zones); and
- Co-ordinating with wider policies to reduce congestion and improve air quality.

APPENDIX A

Parking for residential development

Table 6.2 Car parking standards

	PTAL 0 to 1		PTAL 2 to 4		PTAL 5 to 6	
Suburban	**150–200 hr/ha**	**Parking provision**	**150–250 hr/ha**	**Parking provision**	**200–350 hr/ha**	**Parking provision**
3.8–4.6 hr/unit	35–55 u/ha	Up to 2 spaces per unit	35–65 u/ha	Up to 1.5 spaces per unit	45–90 u/ha	Up to one space per unit
3.1–3.7 hr/unit	40–65 u/ha		40–80 u/ha		55–115 u/ha	
2.7–3.0 hr/unit	50–75 u/ha		50–95 u/ha		70–130 u/ha	
Urban	**150–250 hr/ha**		**200–450 hr/ha**		**200–700 hr/ha**	
3.8 –4.6 hr/unit	35–65 u/ha	Up to 1.5 spaces per unit	45–120 u/ha	Up to 1.5 spaces per unit	45–185 u/ha	Up to one space per unit
3.1–3.7 hr/unit	40–80 u/ha		55–145 u/ha		55–225 u/ha	
2.7–3.0 hr/unit	50–95 u/ha		70–170 u/ha	Up to one space per unit	70–260 u/ha	
Central	**150–300 hr/ha**		**300–650 hr/ha**		**650–1100 hr/ha**	
3.8–4.6 hr/unit	35–80 u/ha	Up to 1.5 spaces per unit	65–170 u/ha	Up to one space per unit	140–290 u/ha	Up to one space per unit
3.1–3.7 hr/unit	40–100 u/ha		80–210 u/ha		175–355 u/ha	
2.7–3.0 hr/unit	50–110 u/hr	Up to one space per unit	100–240 u/ha		215–405 u/ha	

Maximum residential parking standards			
number of beds	**4 or more**	**3**	**1-2**
parking spaces	up to 2 per unit	up to 1.5 per unit	less than 1 per unit

Notes:

All developments in areas of good public transport accessibility in all parts of London should aim for significantly less than 1 space per unit

Adequate parking spaces for disabled people must be provided preferably on-site[206]

20 per cent of all spaces must be for electric vehicles with an additional 20 per cent passive provision for electric vehicles in the future.

In outer London areas with low PTAL (generally PTALs 0-1), boroughs should consider higher levels of provision, especially to address 'overspill' parking pressures.

206 Mayor of London. Housing Supplementary Planning Guidance. GLA, 2012. Mayor of London. Accessible London. Supplementary Planning Guidance. GLA, 2014.

APPENDIX B

Table 1 – Parking Standards of Other London Boroughs

Borough	Parking Standard	Reference
London Local Plan	4+ Beds Up to 2 parking spaces per unit 3 Beds up to 1.5 parking spaces per unit 1-2 Beds- Less than 1 parking space per unit	Table 6.2, page 274 of 'The London Plan' (March 2016). These parking standards vary based on area classification and housing density. For a more in depth description, see full Table 1 in Section 3.
Havering	PTAL score 5-6 For Flats – low less than 1 space per unit Car parking spaces considered necessary are 'moderate' at 1.5 – 1 space per unit (In central area predominately Flats, Urban and suburban terraced houses and flats)	Parking standards are implemented from 'Core Strategy and Development Control Policies Development Plan' (2008)
Barking and Dagenham	Adopts the London Local Plan Standard: PTAL 0 -1 up to 2 spaces per unit PTAL 2-4 up to 1.5 spaces per unit PTAL 5-6 up to 1 space per unit	'Planning for the Future of Barking and Dagenham Borough Wide Development policies Development Plan Document' (adopted 2011) outlines in policy BR9 that '*The car parking standards set out in the London Plan will be used as maximum parking standards for new developments'.*
Redbridge	**PTAL of 0-1** 3+ bedroom- 2 spaces per unit 1-2 beds- 1 space per unit **PTAL of 6** 3+ bedroom- 1 spaces per 5 units (0 if <5 units) 1-2 beds- 1 space per 5 unit (0 if <5 units)	Parking Standards set out in 'Redbridge Local Plan 2015-2030 Pre-Submission draft' (July 2016). This local plan is not yet adopted, however, given the late stage of the document it carries significant weight and therefore these standards take precedent as they are in accordance with the London Local Plan parking standards.
Bexley	1-2 habitable rooms 1 car space per dwelling 3-4 habitable rooms 1.5 car spaces per dwelling With 5 or more habitable rooms 2 car spaces per dwelling	Parking Standards are set in Core Strategy (2012) stating that those contained in Annex 1 of the Bexley's UDP will be replaced by London Plan parking standards.
Brent	**1-3 PTAL** 4+ beds – 2.0 spaces per unit 3 beds – 1.5 spaces per unit 1-2 beds – 1 space per unit **4 -6 PTAL** 4+ beds – 1.2 spaces per unit	'Brent Local Plan Development Management Policies' (2016) sets the parking standards.

Borough	Parking Standard	Reference
	3 beds 1.2 spaces per unit 1 -2 beds 0.75 spaces per unit	
Bromley	Affordable Housing (Social rented only): 3+ bedrooms – 1 space per unit 2 bedrooms – 0.75 spaces per unit 1 bedroom – 0.5 space per unit (or) Flats- 1 per unit Terraced houses- 1.5 per unit Detached/ Linked Houses- 2 per unit	Parking Standards set out in 'Written Statement - Appendix II - Parking Standards' Residential Class C3 Maximum Parking Standards
Ealing	Adopts the London Local Plan Standard: PTAL 0 -1 up to 2 spaces per unit PTAL 2-4 up to 1.5 spaces per unit PTAL 5-6 up to 1 space per unit	*Car parking proposals will be considered against the standards set out in the London Plan*
Enfield	Adopts the London Local Plan Standard: PTAL 0 -1 up to 2 spaces per unit PTAL 2-4 up to 1.5 spaces per unit PTAL 5-6 up to 1 space per unit	*Car parking proposals will be considered against the standards set out in the London Plan*
Croydon	Adopts the London Local Plan Standard: PTAL 0 -1 up to 2 spaces per unit PTAL 2-4 up to 1.5 spaces per unit PTAL 5-6 up to 1 space per unit **Allocation will also take into account:** • The scale and nature of the development; • The public transport accessibility (PTAL) of the site; • Existing parking pressure in the locality; and • Accessibility to local amenities, and the needs of the future occupants of the developments.	*Car parking proposals will be considered against the standards set out in the London Plan* 'Development Management Document' (Adopted November 2014) sets out car parking standards in Table 10.1 (which states that parking standards for residential development will be set as per London Plan.
Barnet	Parking standards for Barnet (set out in Policy DM17) are as follows: • 2 to 1.5 spaces per unit for detached and semi-detached houses and flats (4 or more bedrooms)	Parking standards taken from Local Plan – Development Management Policies adopted 2012. Barnet's parking standards as shown in DM17; demonstrate an approved departure from the London Plan for residential parking standards which was subject to extensive challenge. It differs from the plan for 2 bedroom houses by setting standard for 1.5 – 1 spaces per dwelling which differs from the plan which encourages 1 or less parking spaces per dwelling.

Borough	Parking Standard	Reference
	• 1.5 to 1 spaces per unit for terraced houses and flats (2 to 3 bedrooms) • 1 to less than 1 space per unit for development consisting mainly of flats (1 bedroom)	
Harrow	Adopts the London Local Plan Standard: PTAL 0 -1 up to 2 spaces per unit PTAL 2-4 up to 1.5 spaces per unit PTAL 5-6 up to 1 space per unit	The Development Management Policies DPD (adopted 2013) provides a local interpretation of London Plan parking standards. Proposals that make on-site provision for parking will be supported where: • The number of vehicle parking spaces (including those with electric vehicle charging points) would have regard to the maximum London Plan standards; and, • Proposals involving parking provision that would not be consistent with the London Plan will be assessed having regard to any exceptional operational requirements, any special safety considerations and the desirability of achieving modal shift away from private car use.
Hounslow	Adopts the London Local Plan Standard: PTAL 0 -1 up to 2 spaces per unit PTAL 2-4 up to 1.5 spaces per unit PTAL 5-6 up to 1 space per unit	The 'London Borough of Hounslow Local Plan 2015-2030' (Volume One) states that Hounslow Council will use the standards established in the London Plan for car parking (or as updated by alterations to the London Plan). The London Plan specifies the maximum number of car parking spaces that developments should provide, having regard to the type of development and public transport accessibility.
Hillingdon	Houses detached/semi-detached 1.5 – 2 spaces per dwelling Terraced Houses 1 – 1.5 spaces per dwelling Flats 1 space per dwelling	Parking standards for Hillingdon have been implemented from the Unitary Development Plan (2007) as this is the adopted policy. This document states that once the Local Plan Part 2 is adopted, the policies in the UDP will be replaced. The UDP states that '*London Plan parking standards to be used unless a specific London Borough of Hillingdon standard is listed in the appendix and this should be applied'.*
Kingston	Adopts the London Local Plan Standard: PTAL 0 -1 up to 2 spaces per unit PTAL 2-4 up to 1.5 spaces per unit PTAL 5-6 up to 1 space per unit	Sustainable Transport SPD (adopted 2013) states that parking standards will be assessed against the standards set in the London Plan (2011) standards should be used as guidance.
Essex	1 bedroom – 1 space per dwelling 2+ bedroom- 2 spaces per dwelling	Due to the distance from London, parking standards are not as restrictive and the Essex County Council's Parking Standards (2009) states that reducing car parking spaces does not discourage the use of cars. Reference: Sustainable Transport SPD- Local Development Framework Royal Borough Of Kingston Upon Thames (Adopted - May 2013)

APPENDIX C

Havering Parking Standards 2008

The densities set out in this density matrix

				Car parking provision	high 2-1.5 spaces per unit	moderate 1.5-1 space per unit	low less than 1 space per unit
				Predominant existing housing type	Detached Semi and Terraced houses	Terraced houses and flats	Mostly flats
LOCATION	**PLAN**	**PTAL**	**PTAI**	**SETTING**	**UNITS PER HECATRE/HABITABLE ROOMS PER HECTARE**		
Romford pedshed	1 (1a-1c)	5-6	20.01>	Central			240-435 650-1100
				Urban		55-175 200-450	165-275 450-700
				Suburban		50-110 200-300	80-120 250-350
Upminster Hornchurch Upminster Bridge Gidea Park Harold Wood Elm Park	2 3 (3a-3b) 3 (3c) 4 5 6	3-4	10.01-20	Urban		50-110 200-300	80-150 250-450

Rest of Borough	All areas not covered by maps 1-6	1-2	0-10	Urban (Harold Hill and Collier Row District Centres)		50-80 200-250	
				Suburban (All areas outside the PTAL Zones and Harold Hill and Collier Row District Centres)	30-50 150-200		

APPENDIX D

PARKING BEAT SURVEY

ROMFORD TOWN CENTRE

TUESDAY 15TH & THURSDAY 17TH NOVEMBER 2016

360TSL
Traffic Data Collection

1. METHODOLOGY

The method used to conduct this parking beat survey is based on guidance from the 'Lambeth Parking Beat Methodology'.

Each road included as part of this parking beat survey has been measured to establish parking capacity for each section of legal parking available. Where lengthwise parking is available along the kerbside 1 space = 5m long.

Parking capacity has been calculated by measuring each length of road between obstructions (e.g. crossovers, kerb build-outs, illegal parking, etc) then converted into parking spaces by rounding down to the nearest 5m and dividing the length by 5. Parking spaces that have been marked out or are of a crosswise orientation have been counted separately. If the width of the road is such that parking on both sides would cause an obstruction, then only one side of the road has been included as part of the roads capacity calculation. For reasons of highway safety the first 7.5m from a junction has not been counted as part of the capacity calculation.

Vehicles occupying spaces have been counted at set times and recorded according to the type of space they are parked in. A stress calculation has been applied to express the number of parked vehicles as a percentage of available parking for each parking type. Any off-street parking or private parking has not been included in this survey.

Any illegal or obstructive parking (on double yellow lines, crossovers, keep clear lines etc) has been included as part of the stress calculation for the parking classification category that they are closest to and noted separately (if observed). Skips or any other non-vehicle occupying a parking space have not been included in the stress calculation but have been noted separately (if observed).

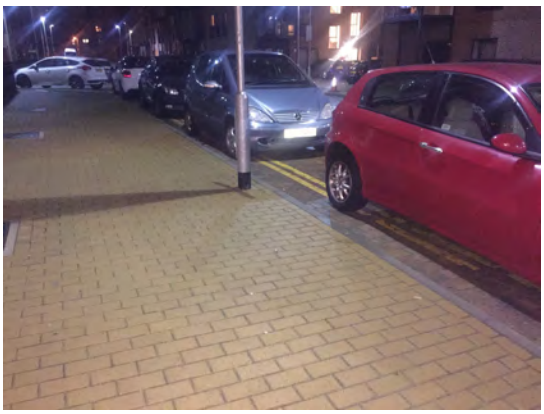
7. SITE PHOTOS



Double yellow parking occurred in zone 3 (more at night) indicating that there are not enough allocated bays for residents

Double yellow and pavement parking in zone 3 at night

Unrestricted parking in Nursery Walk (zone 3) heavily used at night (likely residents overspill parking)

Parking on pavement during the day in Maxwell Road (Zone 3)

Many marked out Residents Permit Holder spaces cannot be parked on as the block private driveways (Zones 1,2,4, 5 and 6)

Unrestricted parking in Nursery Walk (zone 3) also heavily used during the day

ZONE 4 PAY AT METER PARKING SURVEY

	Parking Area							1. Please indicate which of the following areas you live in (tick one box only)			2. Generally how often do you drive into Romford Town Centre? (tick one box only)					3. What are the main reasons for you driving into Romford Town Centre? (tick as many as apply)				4. Where do you normally park? (tick as many boxes as apply)			5. Do you consider there to be enough overall car parking in Romford Town Centre? (tick one box only)			Please provide any additional comments to support your answer
	Como Street (3 Metered Spaces)	Ingrave Road (10 Metered Spaces)	Linden Street (9 Metered Spaces	Olive Street (14 Metered Spaces)	Park Drive (20 Metered Spaces)	Park End Road (18 Metered Spaces)	The Avenue (8 Metered Spaces)	In Romford Town centre	Within the wider borough of Havering	Outside of London Borough of Havering	Every day	Two or three times a week	Once a week	Once a month	Less frequently	Work	Shopping	Leisure	Other	Company or private car park	Public or shoppers car park	On-street	Yes, at all times during the week	Yes, except for a few peak periods of demand	No, there is not enough parking	
1	✔									✔				✔				✔				✔	✔			
2			✔						✔			✔					✔					✔	✔			There is always space to park in Linden St and it's close to the Town Centre.
3				✔					✔		✔					✔					✔		✔			I usually park in Como Street car park as you can stay longer but I am only working for 1.5 hours today.
4		✔								✔					✔				✔			✔	✔			I am visiting my friend who lives on this street. Parking should be free.
5				✔				✔			✔						✔				✔	✔			✔	I'm just parking here to pop to the Tesco Express. There is not enough free parking in Romford.
6				✔					✔				✔				✔				✔	✔		✔		
7						✔			✔				✔					✔			✔		✔			
8						✔				✔				✔												I always park here when I use the library and in Como Street car park when I go shopping.
9		✔								✔				✔					✔	✔		✔	✔			Tradesman working on house extension
10				✔					✔			✔					✔	✔	✔		✔	✔		✔		
11						✔			✔				✔				✔		✔		✔		✔			Too expensive
12						✔		✔				✔					✔	✔	✔		✔	✔		✔		
13				✔					✔			✔					✔				✔		✔			Using parking to go to Tesco Express (didn't pay!)
14						✔			✔				✔				✔	✔			✔	✔	✔			The library has no parking facilities so have to use these meters
15						✔			✔				✔						✔			✔	✔			Using the library briefly
16						✔			✔				✔						✔			✔	✔			Romford has loads of cheap short term parking which is great
17	✔									✔		✔				✔	✔			✔		✔	✔			
18		✔						✔			✔					✔				✔	✔	✔		✔		
19		✔						✔						✔					✔				✔			
20						✔			✔					✔			✔				✔	✔			✔	
21						✔				✔			✔				✔	✔			✔		✔			Lots of parking but should be free
22				✔					✔				✔			✔						✔			✔	Home visits. Not enough parking on some of the streets around here.
23				✔						✔		✔					✔				✔	✔	✔			Better parking here than Ilford
24						✔			✔					✔					✔			✔	✔			

25		✔							✔						✔				✔			✔	✔			
26							✔		✔		✔					✔				✔		✔		✔		
27		✔								✔				✔						✔				✔		
28						✔			✔				✔				✔				✔	✔		✔		I alwasys try around here now to park rather than public car parks
29						✔			✔			✔					✔					✔		✔		More places to park would be great. Etiher paid or unpaid spaces
30						✔				✔			✔						✔		✔	✔	✔			
31						✔			✔			✔					✔		✔		✔	✔		✔

1 Summary

1.1 This report tests the ability of a range of developments identified in London Borough of Havering's Draft Local Plan to be viably developed over the plan period. The study takes account of the cumulative impact of the Council's current planning requirements, in line with the requirements of the National Planning Policy Framework ('NPPF') and the Local Housing Delivery Group guidance '*Viability Testing Local Plans: Advice for planning practitioners*'. As part of the exercise, we have tested the ability of developments to absorb higher amounts of Community Infrastructure Levy ('CIL') than the £50 to £70 per square metre rates contained in the Council's Preliminary Draft Charging Schedule ('PDCS').

Methodology

1.2 The study methodology compares the residual land values of a range of development typologies reflecting the types of developments expected to come forward in the borough over the plan period. The appraisals compare the residual land values generated by those developments (with varying levels of affordable housing and CIL contributions) to a benchmark land value to reflect the existing value of land prior to redevelopment. If a development incorporating the Council's policy requirements generates a higher residual land value than the benchmark land value, then it can be judged that the site is viable and deliverable. Following the adoption of policies, developers will need to reflect policy requirements in their bids for sites, in line with requirements set out in the RICS Guidance on '*Financial Viability in Planning*'[1].

1.3 The study utilises the residual land value method of calculating the value of each development. This method is used by developers when determining how much to bid for land and involves calculating the value of the completed scheme and deducting development costs (construction, fees, finance, sustainability requirements and CIL) and developer's profit. The residual amount is the sum left after these costs have been deducted from the value of the development, and guides a developer in determining an appropriate offer price for the site.

1.4 The housing and commercial property markets are inherently cyclical and the Council is the viability of potential development sites at a time when the market has recovered after a severe recession. Forecasts for future house price growth point to continuing growth in mainstream London housing markets, although there is a degree of uncertainty associated with the outcome of the referendum on the UK's membership of the European Union. We have allowed for this medium term growth over the plan period by running a sensitivity analysis which varies the base sales values and build costs, with values increasing by 5% per annum and costs by 3% per annum.

1.5 This analysis is indicative only, but is intended to assist the Council in understanding the viability of potential development sites on a high level basis, both in today's terms but also in the future. Some sites may require more detailed viability analysis when they come forward through the development management process due to specific site circumstances that cannot be reflected in an area wide assessment[2].

[1] This guidance notes that when considering site-specific viability "*Site Value should equate to the market value subject to the following assumption: that the value has regard to development plan policies and all other material planning considerations and disregards that which is contrary to the development plan*". Providing therefore that Site Value does not fall below a site's existing use value, there should be no reason why policy requirements cannot be achieved.

[2] The Local Housing Delivery Group Guidance 'Viability Testing Local Plans: Advice for Planning Practitioners' notes that "*the role of the test is not to provide a precise answer as to the viability of every development likely to take place during the plan period. No assessment could realistically provide this level of detail. Some site-specific tests are still likely to be required at the development management stage*".

Key findings

1.6 The key findings of the study are as follows:

- The results of this study are reflective of current market conditions, which will inevitably change over the medium term. It is therefore important that the Council keeps the viability situation under review so that policy requirements can be adjusted should conditions change markedly. We have tested the development typologies to consider the impact of growth in values and inflation on costs over the plan period. The results of this sensitivity analysis show a significant improvement in the number of development scenarios which become viable incorporating the Council's policy requirements.

- Some schemes tested were unviable due to market factors, rather than the impact of the Council's policy requirements. These schemes will not come forward until changes in site specific market conditions and their current unviable status should not be taken as an indication that the Council's requirements cannot be accommodated on other schemes.

- In most cases, schemes can accommodate the Council's affordable housing requirement at a level somewhere between 25% to 50%. The type of development is a critical factor; our appraisals indicate that lower density developments providing a mix of houses and flats, are likely to be viable across the borough, including in the lowest value areas. This is because building costs associated with this form of development are lower in comparison to high density flatted schemes. Our appraisals indicate that high density flatted developments are only likely to be viable and able to provide affordable housing at a level of between 25% and 35% in the highest value locations in the borough.

- The Council's flexible approach to application of its affordable housing targets will ensure the viability of developments is not adversely affected over the economic cycle.

- The emerging Local Plan requirement for larger town centre schemes to make a contribution towards provision of employment floorspace requires a subsidy from the private element of developments (the relatively low office rents in the area result in low capital values which are insufficient to cover the development costs). This will result in two policy requirements requiring cross subsidy (affordable housing provision and workspace) as well as CIL and any residual Section 106 requirements. The Council may need to apply the workspace policy flexibly and balance this requirement with the need for developments to deliver affordable housing.

- As an additional requirement, the Local Plan seeks that 20% of newly developed workspace is provided as affordable, which in our appraisals we have tested at a 20% discount to market rent in perpetuity. This requirement has only a modest impact on the residual land values generated by our development typologies in comparison to the appraisals with 100% of workspace let at market rents.

- The Council's PDCS indicates Council's intention to adopt CIL rates of between £50 and £70 per square metre for residential development. These rates are not dissimilar from those adopted by neighbouring boroughs. However, our appraisals adopting higher rates of CIL (+£20 and +£40 per square metre on both rates) show only marginal movements in residual land values which equate to 1.7% and 3.4% of the base residual land value. Consequently, there may be some scope for the Council to consider upwards adjustments to their CIL rates, but this should be explored further with the Council's CIL advisors.

- The Council needs to strike a balance between achieving its aim of meeting needs for affordable housing with raising funds for infrastructure, and ensuring that developments generate acceptable returns to willing landowners and willing developers. This study demonstrates that the Council's flexible approach to applying its affordable housing requirements ensures that these objectives are balanced appropriately.

2 Introduction

2.1 The Council has commissioned this study to contribute towards an evidence base to inform its emerging Local Plan. The aim of the study is to assess at high level the viability of development typologies representing the types of sites that are expected to come forward to test the cumulative impact of planning policies in the emerging Local Plan, alongside the Council's emerging Community Infrastructure Levy ('CIL') rates.

2.2 In terms of methodology, we adopted standard residual valuation approaches to test the viability of development typologies, including the impact on viability of the Council's proposed planning policies alongside the proposed levels of CIL. However, due to the extent and range of financial variables involved in residual valuations, they can only ever serve as a guide. Individual site characteristics (which are unique), mean that conclusions must always be tempered by a level of flexibility in application of policy requirements on a site by site basis.

Economic and housing market context

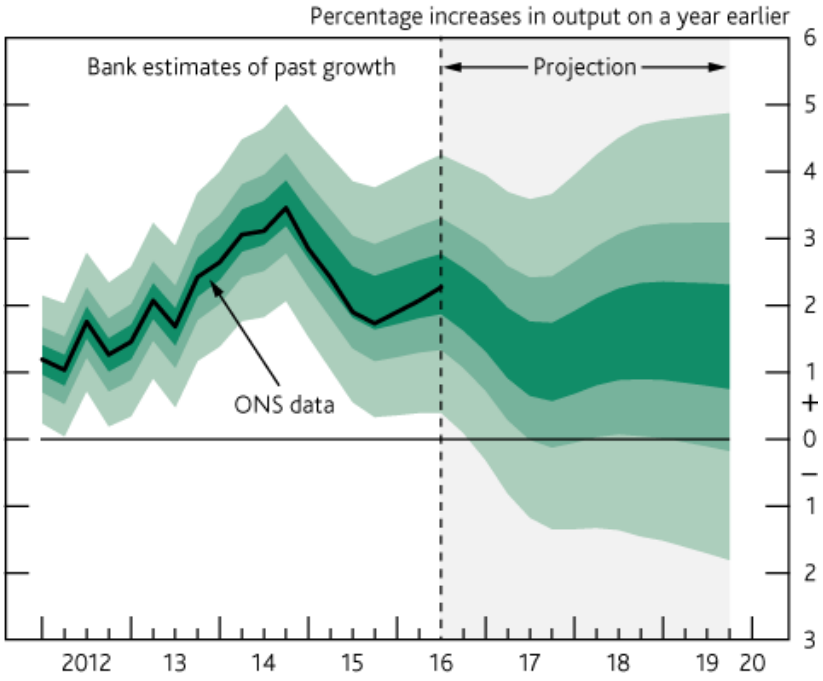
2.3 The housing and commercial property markets are inherently cyclical. The historic highs achieved in the UK housing market by mid-2007 followed a prolonged period of real house price growth. However, a period of 'readjustment' began in the second half of 2007, triggered initially by rising interest rates and the emergence of the US subprime lending problems in the last quarter of 2007. The subsequent reduction in inter-bank lending led to a general "credit crunch" including a tightening of mortgage availability. The real crisis of confidence, however, followed the collapse of Lehman Brothers in September 2008, which forced the government and the Bank of England to intervene in the market to relieve a liquidity crisis.

2.4 The combination of successive shocks to consumer confidence and the difficulties in obtaining finance led to a sharp reduction in transactions and a significant correction in house prices in the UK, which fell to a level some 21% lower than at their peak in August 2007 according to the Halifax House Price Index. Consequently, residential land values fell by some 50% from peak levels. One element of government intervention involved successive interest rate cuts and as the cost of servicing many people's mortgages is linked to the base rate, affordability of repayments helped to boost demand for housing. This, together with a return to economic growth early in 2010 (see November 2016 Bank of England GDP fan chart below, showing the range of the Bank's predictions for GDP growth to 2019) meant that consumer confidence started to improve.

2.5 From the first half of 2010 improved consumer confidence fed through into more positive interest from house purchasers. However, this brief resurgence abated with figures falling and then fluctuating in 2011 and 2012. The improvement in the housing market towards the end of 2012 continued through into 2013 at which point the growth in sales values improved significantly through to the last quarter of 2014, where the pace of the improvement was seen to moderate and continued to do so in 2015. In March 2016, we highlighted downside risks in the form of the changing tax regime for buy to let investments and challenging economic conditions in some parts of the country. The regional economic implications of falling global demand in the manufacturing and oil sectors were also identified as likely to take its toll on house price growth in those exposed regions.

2.6 In the Referendum held on 23 June 2016 concerning the UK's membership of the EU, a decision was taken to exit. The immediate aftermath of the result of the vote was "panic" with the Pound Sterling falling to a 31 year low and stocks overselling due to the earnings of the FTSE being largely in US Dollars. As the Pound dropped significantly this supported the stock market, which has since recouped all of the losses seen and is near the all-time highs. We are now in a period of uncertainty in relation to many factors that impact the property investment and letting markets, however there are tentative signs of improvement and resilience in the market. This includes The International Monetary Fund having revised its forecast for UK growth in 2016 on 4 October 2016 from 1.7% to 1.8%, thereby partly reversing the cut it made to the forecast shortly after the Referendum (1.9% to 1.7%). However it further trimmed its 2017 forecast from 1.3% to 1.1%, which stood at 2.2% prior to the Referendum.

2.7 The UK's first official growth figures since the Brexit vote have been published and exceed initial estimates. Office for National Statistics ('ONS') GDP figures were 0.5%, higher than analyst's predictions of 0.3%. The ONS has highlighted that "*the pattern of growth continues to be broadly unaffected following the EU referendum*". Initial expectations are that the better than expected GDP figures will deter the Bank of England Monetary Policy Committee from going ahead with any further interest rate cuts. The Economy has slowed slightly from the Q2 figure of 0.7% and the pattern is a slightly unbalanced one with the only sector of the economy continuing to grow being the services industry at 0.8%. Data from the construction and manufacturing sector are on a continuing trend of stagnation and decline, with construction contracting by 1.4% and manufacturing 0.4%. It was expected that manufacturing would be bolstered by the unprecedented fall in the value of the pound, however this has failed to materialise. Overall the figures are better than expected, however experts have warned that forecasts for 2017 are gloomier, as Britain begins the formal process of exiting the EU through the process of invoking article 50. Theresa May has announced that Article 50 will be triggered at the end of March (Q1) 2017, and any adverse impacts of leaving the EU on the UK economy are unlikely to become apparent until the terms of departure and future trading arrangements are settled. Nevertheless, the Bank of England's November Inflation report increases predicted economic growth from 0.8% to 1.4% for next year, but decreased growth in 2018 from 1.8% to 1.5%. The revisions indicate that the Bank now considers that the impact of the UK's departure from the EU will be felt later than initially expected.



Source: Bank of England

2.8 The November Halifax House Price Index report indicates that house prices in the three months to October were 5.2% higher on average than the equivalent three months of 2015, with the annual rate of growth easing from 5.8% in October to 5.2%. Martin Ellis, the Halifax housing economist comments that, "*Annual house price growth has nearly halved from a peak of 10.0% in March this year, but remains robust at 5.2%. This expected slowdown appears to have been largely due to mounting affordability pressures, which have increasingly constrained housing demand. Whilst house price growth may ease further in the coming months, very low mortgage rates and a shortage of properties available for sale should help support price levels*".

2.9 It is worth noting that Nationwide's chief Economist reported in Nationwide's October House Price Index that "*Measures of housing market activity remain fairly subdued, with the number of residential property transactions c10% below the levels recorded in the same period of 2015 in recent months*". He reflected that "*this weakness may still in part reflect the after-effects of the introduction stamp duty on second homes introduced in April, where buyers brought forward transactions to Q1 to avoid*

additional stamp duty liabilities (see chart below). Policy changes impacting the Buy to Let market may also be playing a role in dampening activity".

2.10 We also note that the Nationwide have reported that they consider "*the solid labour market conditions and historically low borrowing costs should provide support to buyer confidence. Moreover, the relatively low number of homes on the market and modest rates of housing construction are likely to keep the demand/supply balance fairly tight, even if economic conditions weaken in the quarters ahead, as most forecasters expect*".

2.11 All sources reviewed support the view that the economic outlook is uncertain, and the five year outlook for housing value growth in the UK will be "*almost wholly dependent on the UK's terms of exit from the EU and the agreements that we manage to put in place*" (JLL Unchartered Territory Report (UK Research November 2016, UK Residential Forecasts)).

2.12 Savills identify in their Residential Property Focus Q4 2016 Report (published November 2016) that, "*The effect of Brexit is complicating a natural shift towards the later stages of the housing market cycle, when the strongest growth is seen beyond London and the South East. All regions are expected to see reduced house price growth as the economy slows*". They highlight the expectation that negotiations on the terms of the UK's departure from the EU and future trading arrangements will be concluded by early 2019, which will bring "*to an end the two-year period of greatest uncertainty…As buyer confidence returns, low mortgage rates should mean there is capacity for a small bounce-back in house prices*". Thus the consensus in the market is that UK housing market will be more subdued for the next 2-3 years, as uncertainty in the economy will begin to have a dampening effect on the levels of activity. JLL identify in their November report that, they consider that the housing market "*will remain reasonably active with little chance of meaningful price corrections*".

2.13 According to Land Registry data, residential sales values in Havering have recovered since the lowest point in the cycle in June 2009. Prices increased by 77% between June 2009 and December 2016. In December 2016, sales values were 44% higher than the previous (January 2008) peak value (see figures 2.13.1 and 2.13.2). There is also significant demand for new housing in the Borough, where the housing market operates as part of the wider London housing market. The Further Alterations to the London Plan (2015) have increased housing targets across London to address this demand. Havering's housing delivery target is 11,701 units over the ten period to 2025.

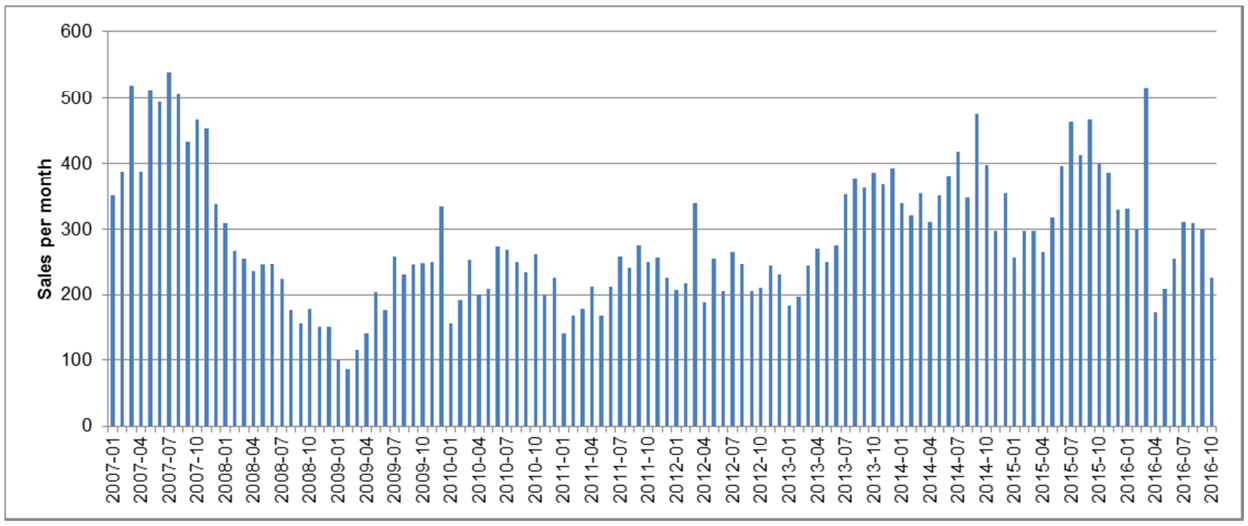
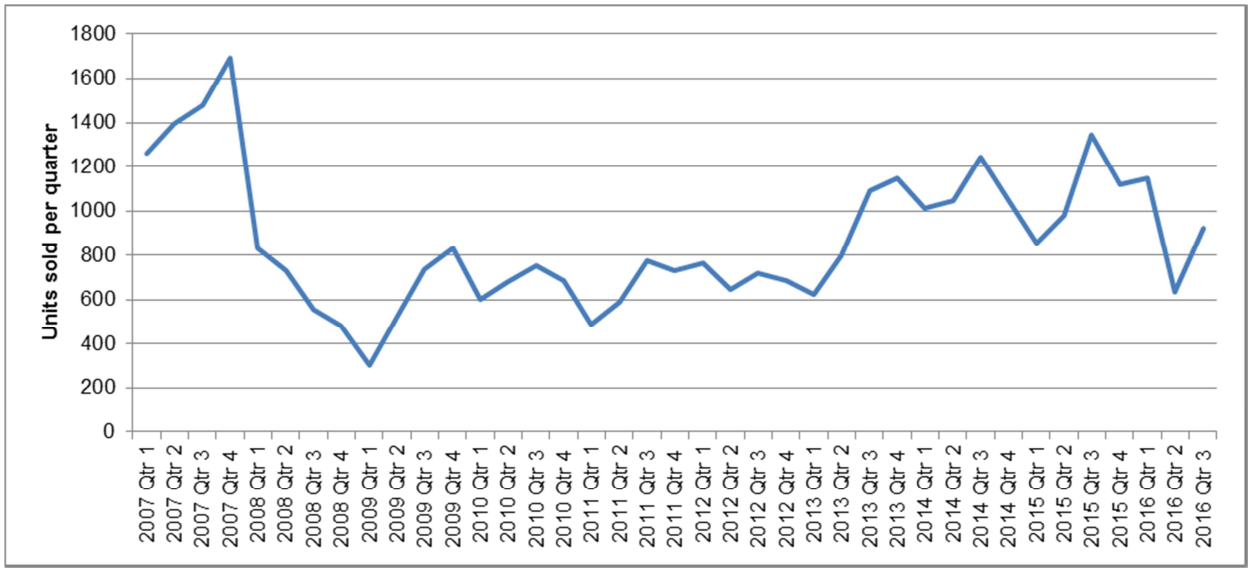
Source: Land Registry

Figure 2.13.2: Sales volumes in Havering (sales per month)



Source: Land Registry

Figure 2.13.3: Sales volumes in Havering (sales per quarter)



Source: Land Registry

2.14 The future trajectory of house prices is currently uncertain, although Savills Property Focus Quarter 4 2016 prediction is that is that values are expected to increase over the next five years. Medium term predictions are that properties in mainstream London markets will grow over the period between 2017 and 2021[3]. Savills predict that values in mainstream London markets (i.e. non-prime) will increase by 1% in 2017, 1.5% in 2018, 6.5% in 2019, 4.0% in 2020 and 6% in 2021. This equates to cumulative growth of 19% between 2017 and 2021 inclusive.

2.15 In common with other Boroughs in London, there are variations in sales values between different parts of Havering, as shown in Figure 2.15.1. Highest sales values are achieved around the key transport hubs of Romford, Gidea Park and Harold Wood, which will benefit from access to Crossrail from 2018) and Upminster. In the centre and east of the Borough, values are slightly lower than in the west. Values are lowest in the south of the borough where public transport accessibility and

[3] Savills Property Focus Quarter 4 (November 2016)

frequency of services is lower.

National Policy Context

The National Planning Policy Framework

2.16 In March 2012, the old suite of planning policy statements and planning policy guidance was replaced by a single document – the National Planning Policy Framework ('NPPF'). The NPPF has subsequently been supplemented by the National Planning Practice Guidance ('NPPG').

2.17 The NPPF provides more in-depth guidance on viability of development than Planning Policy Statement 3, which limited its attention to requiring local planning authorities to test the viability of their affordable housing targets. The NPPF requires that local planning authorities have regard to

the impact on viability of the *cumulative effect* of all their planning requirements on viability. Paragraph 173 of the NPPF requires that local planning authorities give careful attention "*to viability and costs in plan-making and decision-taking*". The NPPF requires that "*the sites and the scale of development identified in the plan should not be subject to such a scale of obligations and policy burdens that their ability to be developed viably is threatened*". After taking account of policy requirements, land values should be sufficient to "*provide competitive returns to a willing landowner and willing developer*".

2.18 The meaning of a "*competitive return*" has been the subject of considerable debate over the past year. For the purposes of testing the viability of a Local Plan, the Local Housing Delivery Group[4] has concluded that the current use value of a site (or a credible alternative use value) plus an appropriate uplift, represents a competitive return to a landowner. Some members of the RICS consider that a competitive return is determined by market value[5], although there is no consensus around this view.

CIL

2.19 The Council issued its 'PDCS for consultation in February 2015. Table 2.19.1 below summarises the proposed rates of CIL. For residential developments, the borough is divided into two zones; north of the A1306 and south of the A3016 at rates of either £50 or £70 per square metre.

Table 2.19.1: CIL rates in the PDCS

Type of Development	CIL Rates £ per square metre Net additional floorspace
Open market residential north of the A1306	£70
Open market residential south of the A1306	£50
Private care/retirement housing north of the A1306	£70
Private care/retirement housing south of the A1306	£50
Office and Industrial	£0
Retail – supermarkets, superstores and retail warehouses above 2,000m2 gross internal area	£175
Retail – below 2,000 m2 gross internal area in Metropolitan, District and Local Centres as defined in the Havering Core Strategy, 2008.	£50
Hotel	£20
All other development	£0

2.20 The Borough is located within Mayoral CIL Zone 3, which attracts a rate of £20 per square metre.

Crossrail Section 106

2.21 Havering has three existing stations that will be served by the new Crossrail service from 2018 (Romford, Gidea Park and Harold Wood. The Borough will not benefit from any new stations as a result of the introduction of the service.

2.22 Developments within one kilometre of the four stations will therefore be subject to the 'Rest of London' Crossrail Section 106 top-up charge. Developments are required to pay the higher of the Mayoral CIL or the Crossrail Section 106 charges which are £31 per square metre for offices and £16 per square metre for retail. The retail rate is lower than the prevailing rate of Mayoral CIL in the Borough (£20 per square metre), so there is no Crossrail Section 106 top up. However, the office charge of £31 per square metre exceeds the Mayoral CIL rate of £20 per square metre, so a top up

[4] Viability Testing Local Plans: Advice for planning practitioners, June 2012
[5] RICS Guidance Note: Financial Viability in Planning, August 2012

of £11 is payable.

Local Policy context

2.23 There are numerous policy requirements that are now embedded in base build costs for schemes in London addressing London Plan requirements, which are mirrored in borough core strategies (i.e. secure by design, lifetime homes, landscaping, amenity space, internal space standards, car parking, waste storage, tree preservation and protection etc). Therefore it is unnecessary to establish the cost of all these pre-existing policy requirements. Appendix 1 summarises the Council's analysis of the anticipated cost of new or amended policies.

2.24 It is therefore considered prudent to assume that developments can absorb the pre-existing requirements in the adopted policies. Therefore only the elements of the policy framework which are proposed to change and which have cost implications for developments will need to be tested.

2.25 In addition to financing infrastructure through Section 106 (subject to pooling restrictions), the Council expects residential developments to provide a mix of affordable housing tenures to help meet identified housing needs. Policy 6 requires all developments of more than 10 dwellings or residential developments of 1,000 sqm or more to provide at least 35% affordable housing based on habitable rooms, subject to individual scheme viability. The Policy sets a proposed tenure mix of 70% social/affordable housing and 30% intermediate housing. We have therefore tested the viability of schemes providing 25%, 35% and 50% of units as affordable.

2.26 In 2015, the Council consulted on its key issues and priorities for a new Havering Local Plan. The Council has considered the viability implications of these emerging policies and their conclusions are attached at Appendix 1. As a result of the recent housing standards review, the government no longer intends to incorporate Code for Sustainable Homes into building regulations in 2016 as previously planned. We have therefore included an allowance for Code for Sustainable Homes level 4 only which reflects the standards currently include in Part L of the Building Regulations.

Development context

2.27 Havering is located in north-east London. It is the third largest borough in London (in terms of land area) with 11,227 hectares. The borough benefits from good transport links and plentiful open space, with over 50% of land within the green belt. There are three main train routes providing services to central London; the Transport for London Rail service which serves stations at Romford, Gidea Park and Harold Wood, with frequent train services to Liverpool Street Station; secondly, the c2c mainline service to Fenchurch Street Station serving Rainham Station; and thirdly, the c2c service at Upminster which provides access to Fenchurch Street. In addition, the Underground District Line serves stations at Elm Park, Hornchurch and Upminster.

2.28 The Borough has significant opportunities for development through the recycling of previously developed sites, including vacant and under-utilised commercial sites, car parks, surplus public sector land and existing Council owned housing estates in addition to smaller infill sites

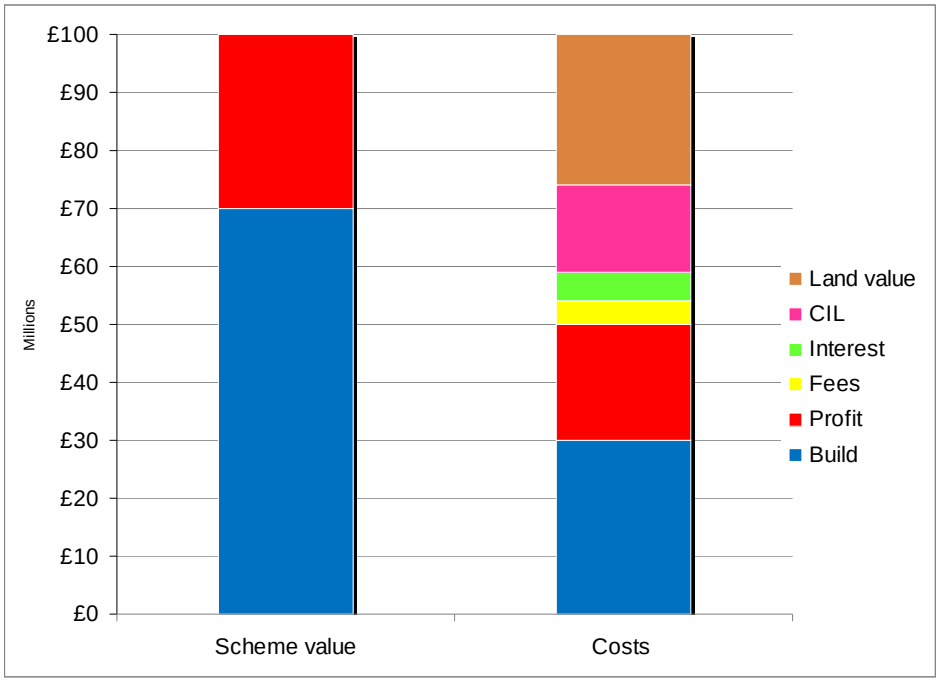
2.29 The Proposed Submission Local Plan identifies two key growth areas in the Borough. Romford Strategic Development Area ('SDA') which has the capacity for at least 5,500 new homes and Rainham and Beam Park SDA which has the capacity for a minimum of 3,000 new homes There is also the potential for an additional 900 homes on existing Council housing estates outside of the two SDAs.

3 Methodology and appraisal inputs

3.1 Our methodology follows standard development appraisal conventions, using locally-based sites and assumptions that reflect local market and planning policy circumstances. The study is therefore specific to Havering and reflects the Council's existing and emerging planning policy requirements.

Approach to testing development viability

3.2 Appraisal models can be summarised via the following diagram. The total scheme value is calculated, as represented by the left hand bar. This includes the sales receipts from the private housing (the blue portion) and the payment from a Registered Provider ('RP') (the red portion) for the completed affordable housing units. For a commercial scheme, scheme value equates to the capital value of the rental income after allowing for rent free periods and purchaser's costs. The model then deducts the build costs, fees, interest, CIL and developer's profit. A 'residual' amount is left after all these costs are deducted – this is the land value that the Developer would pay to the landowner. The residual land value is represented by the brown portion of the right hand bar in the diagram.



3.3 The Residual Land Value is normally a key variable in determining whether a scheme will proceed. If a proposal generates sufficient positive land value (in excess of existing use value, discussed later), it will be implemented. If not, the proposal will not go ahead, unless there are alternative funding sources to bridge the 'gap'.

3.4 Issues with establishing key appraisal variables are summarised as follows:

- Development costs are subject to national and local monitoring and can be reasonably accurately assessed in 'normal' circumstances. In Boroughs like Havering, many sites will be previously developed. These sites can sometimes encounter 'exceptional' costs such as decontamination. Such costs can be very difficult to anticipate before detailed site surveys are undertaken;
- Assumptions about development phasing, phasing of Section 106 contributions and infrastructure required to facilitate each phase of the development will affect residual values. Where the delivery of the obligations are deferred, the less the real cost to the applicant (and the greater the scope for increased affordable housing and other planning obligations). This is

because the interest cost is reduced if the costs are incurred later in the development cashflow; and

- While Developer's Profit has to be assumed in any appraisal, its level is closely correlated with risk. The greater the risk, the higher the profit level required by lenders. While profit levels were typically up to around 15% of completed development value at the peak of the market in 2007, banks currently require schemes to show a higher profit to reflect the current risk. Typically developers and banks are targeting around 17-20% profit on value of the private housing element.

3.5 Ultimately, the landowner will make a decision on implementing a project on the basis of return and the potential for market change, and whether alternative developments might yield a higher value. The landowner's 'bottom line' will be achieving a residual land value that sufficiently exceeds 'existing use value[6]' or another appropriate benchmark to make development worthwhile. The margin above existing use value may be considerably different on individual sites, where there might be particular reasons why the premium to the landowner should be lower or higher than other sites.

3.6 Clearly, however, landowners have expectations of the value of their land which often exceed the value of the current use. Ultimately, if landowners' reasonable expectations are not met, they will not voluntarily sell their land and (unless a Local Authority is prepared to use its compulsory purchase powers) some may simply hold on to their sites, in the hope that policy may change at some future point with reduced requirements. However, the communities in which development takes place also have reasonable expectations that development will mitigate its impact, in terms of provision of community infrastructure, which will reduce land values. It is within the scope of those expectations that developers have to formulate their offers for sites. The task of formulating an offer for a site is complicated further still during buoyant land markets, where developers have to compete with other developers to secure a site, often speculating on increases in value.

Viability benchmark

3.7 The NPPF is not prescriptive on the type of methodology local planning authorities should use when assessing viability. The National Planning Practice Guidance indicates that the NPPF requirement for a 'competitive return' to the landowner will need to allow for an incentive for the land owner to sell and options may include "*the current use value of the land or its value for a realistic alternative use that complies with planning policy*" (para 024; reference ID 10-024-20140306).

3.8 The Local Housing Delivery Group published guidance[7] in June 2012 which provides guidance on testing viability of Local Plan policies. The guidance notes that "*consideration of an appropriate Threshold Land Value [or viability benchmark] needs to take account of the fact that future plan policy requirements will have an impact on land values and landowner expectations. Therefore, using a market value approach as the starting point carries the risk of building-in assumptions of current policy costs rather than helping to inform the potential for future policy*".

3.9 In light of the weaknesses in the market value approach, the Local Housing Delivery Group guidance recommends that benchmark land value "*is based on a premium over current use values*" with the "*precise figure that should be used as an appropriate premium above current use value [being] determined locally*". The guidance considers that this approach "*is in line with reference in the NPPF to take account of a "competitive return" to a willing land owner*".

3.10 The examination on the Mayor of London's CIL charging schedule considered the issue of an appropriate land value benchmark. The Mayor had adopted existing use value, while certain objectors suggested that 'Market Value' was a more appropriate benchmark. The Examiner concluded that:

[6] For the purposes of this report, existing use value is defined as the value of the site in its existing use, assuming that it remains in that use. We are not referring to the RICS Valuation Standards definition of 'Existing Use Value'.

[7] Viability Testing Local Plans: Advice for planning practitioners, Local Housing Delivery Group, Chaired by Sir John Harman, June 2012

"The market value approach…. while offering certainty on the price paid for a development site, suffers from being based on prices agreed in an historic policy context." (para 8) and that "*I don't believe that the EUV approach can be accurately described as fundamentally flawed or that this examination should be adjourned to allow work based on the market approach to be done*" (para 9).

3.11 In his concluding remark, the Examiner points out that

"the price paid for development land may be reduced [so that CIL may be accommodated]. *As with profit levels there may be cries that this is unrealistic, but* ***a reduction in development land value is an inherent part of the CIL concept****. It may be argued that such a reduction may be all very well in the medium to long term but it is impossible in the short term because of the price already paid/agreed for development land. The difficulty with that argument is that if accepted the prospect of raising funds for infrastructure would be forever receding into the future. In any event in some instances it may be possible for contracts and options to be re-negotiated in the light of the changed circumstances arising from the imposition of CIL charges.* (para 32 – emphasis added).

3.12 It is important to stress, therefore, that there is no single threshold land value at which land will come forward for development. The decision to bring land forward will depend on the type of owner and, in particular, whether the owner occupies the site or holds it as an asset; the strength of demand for the site's current use in comparison to others; how offers received compare to the owner's perception of the value of the site, which in turn is influenced by prices achieved by other sites. Given the lack of a single threshold land value, it is difficult for policy makers to determine the minimum land value that sites should achieve. This will ultimately be a matter of judgement for each planning authority.

3.13 Respondents to consultations on planning policy documents in other authorities in London have made various references to the RICS Guidance on 'Viability in Planning' and have suggested that councils should run their analysis on market values. This would be an extremely misleading measure against which to test viability, as market values should reflect *existing policies already in place*, and would consequently tell us nothing as to how future (as yet un-adopted) policies might impact on viability. It has been widely accepted elsewhere that market values are inappropriate for testing planning policy requirements.

3.14 Relying upon historic transactions is a fundamentally flawed approach, as offers for these sites will have been framed in the context of current planning policy requirements, so an exercise using these transactions as a benchmark would tell the Council nothing about the potential for sites to absorb as yet unadopted policies. Various Local Plan inspectors and CIL examiners have accepted the key point that Local Plan policies and CIL will ultimately result in a reduction in land values, so benchmarks must consider a reasonable minimum threshold which landowners will accept. For local authority areas such as Havering, where the vast majority of sites are previously developed, the 'bottom line' in terms of land value will be the value of the site in its existing use. This fundamental point is recognised by the RICS at paragraph 3.4.4. of their Guidance Note on 'Financial Viability in Planning":

"For a development to be financially viable, any uplift from current use value to residual land value that arises when planning permission is granted should be able to meet the cost of planning obligations while ensuring an appropriate Site Value for the landowner and a market risk adjusted return to the developer in delivering that project (the NPPF refers to this as 'competitive returns' respectively). The return to the landowner will be in the form of a land value in excess of current use value".

3.15 The Guidance goes on to state that "*it would be inappropriate to assume an uplift based on set percentages … given the diversity of individual development sites*".

3.16 Commentators also make reference to 'market testing' of benchmark land values. This is another variant of the benchmarking advocated by respondents outlined at paragraph 3.13. These respondents advocate using benchmarks that are based on the prices that sites have been bought and sold for. There are significant weaknesses in this approach which none of the respondents who advocate this have addressed. In brief, prices paid for sites are a highly unreliable indicator of their actual value, due to the following reasons:

- Transactions are often based on bids that 'take a view' on squeezing planning policy requirements below target levels. This results in prices paid being too high to allow for policy targets to be met. If these transactions are used to 'market test' CIL rates, the outcome would be unreliable and potentially highly misleading.

- Historic transactions of housing sites are often based on the receipt of grant funding, which is no longer available.

- There would be a need to determine whether the developer who built out the comparator sites actually achieved a profit at the equivalent level to the profit adopted in the viability testing. If the developer achieved a sub-optimal level of profit, then any benchmarking using these transactions would produce unreliable and misleading results.

- Developers often build assumptions of growth in sales values into their appraisals, which provides a higher gross development value than would actually be achieved today. Given that our appraisal are based on current values, using prices paid would result in an inconsistent comparison (i.e. current values against the developer's assumed future values). Using these transactions would produce unreliable and misleading results.

3.17 These issues are evident from a recent BNP Paribas Real Estate review of the differences between the value ascribed to developments by applicants and the amounts the sites were purchased for by the same parties. The prices paid exceeded the value of the consented schemes by between 52% and 1,300%.

3.18 For the reasons set out above, the approach of using current use values is a more reliable indicator of viability than using market values or prices paid for sites, as advocated by certain respondents. Our assessment follows this approach, as set out in Section 4.

4 Appraisal assumptions

4.1 We have appraised 10 development typologies to represent the types of sites that the Council expects to come forward over the plan period. These development typologies are consistent with those adopted in the Council's CIL Viability Study. The development typologies are identified in Table 4.1.1 below.

Table 4.1.1: Development typologies tested in the study

Typology No.	Number of units	Housing type	Development density units per ha	Site area (ha)
1	10	Houses	30	0.33
1	30	Flats and Houses	40	0.75
2	50	Flats and Houses	60	0.83
3	80	Flats and Houses	80	1.00
4	110	Flats and Houses	110	1.00
5	150	Flats	150	1.00
6	275	Flats	275	1.00
7	325	Flats	325	1.00
8	375	Flats	375	1.00
9	435	Flats	435	1.00

4.2 The unit mix and unit sizes required by the Council are summarised in Table 4.2.1.

Table 4.2.1: Unit size and mix

Site type	1 Bed flat	2 bed flat	3 bed flat	4 bed flat	2 Bed House	3 Bed House	4 Bed House
Size (sq m)	50	70	90	115	75	95	120
1					30%	50%	20%
2	20%				40%	30%	10%
3	20%				40%	30%	10%
4	20%	10%	10%		30%	20%	10%
5	20%	15%	15%		25%	15%	10%
6	20%	25%	25%		25%	5%	
7	20%	40%	30%	10%			
8	20%	40%	30%	10%			
9	35%	35%	25%	5%			
10	40%	40%	20%				

Residential sales values

4.3 Residential values in the area reflect national trends in recent years but do of course vary between different sub-markets, as noted in Section 2. We have considered comparable evidence of transacted properties in the area and also properties on the market to establish appropriate values for each scheme for testing purposes. This exercise indicates that the developments in the sample will attract average sales values ranging from circa £3,445 per square metre (£320 per square foot)

to £5,110 per square metre (£475 per square foot).

4.4 As noted earlier in the report, Savills predict that sales values will increase over the medium term (i.e. the next five years). Whilst this predicted growth cannot be guaranteed, we have run a series of sensitivity analyses assuming growth in sales values of 10%, accompanied by cost inflation of 5%[8] and growth in values by 20% and cost inflation of 10%. The results of these sensitivity analyses are included in Section 6 and provide the Council with an indication of the impact of changes in values and costs on scheme viability.

Affordable housing tenure and values

4.5 Policy 6 of the Council's emerging Local Plan proposes seeking 35% affordable housing on individual sites. Policy 6 indicates that the Council will continue to seek 70% of affordable housing provision as rented housing and the remaining 30% as intermediate housing. We have also tested the impact of seeking higher and lower proportions of affordable housing (25% and 50%).

4.6 Our appraisals assume that the rented housing is let at rents that do not exceed Local Housing Allowance rates, so that they are affordable to households subject to the Universal Credit, as shown in Table 4.7.1. The approach adopted is therefore consistent with the rent caps announced in the Autumn Statement in November 2015. It should be noted that the Local Housing Allowances are considerably lower than market rents. Prior to the Autumn Statement, rents for affordable rented units could have (in theory) been set as high as 80% of market rents (inclusive of service charges), but this is no longer an option.

Table 4.6.1: Weekly rents and Local Housing Allowance limits

Unit type	Local Housing Allowance per week	Net London Affordable Rent assumed in appraisals per week	Social rents per week	Traditional Affordable rent per week (80% of average market rents in Havering)	London Living Rent per week
1 bed	£155.57	£155.57	£89.62	£189.60	£194.08
2 beds	£192.62	£192.62	£101.96	£279.20	£215.53
3 beds	£242.40	£242.40	£114.30	£372.80	£237.23
4+ beds	£312.77	£312.77	£129.33	£461.60	£258.69

4.7 In the July 2015 Budget, the Chancellor announced that RPs will be required to reduce rents by 1% per annum for the next four years. This will reduce the capital values that RPs will pay developers for completed affordable housing units. At this stage, it is unclear whether this requirement will roll forward beyond the four year period 2015/16 to 2018/19. We have therefore adopted a cautious assumption and assumed that the restriction will remain in place in perpetuity (i.e. every new development will face reduced rents for the first four years, even if they are started after the initial four year period).

4.8 Based on the rents above, our modelling indicates that RPs would pay an average of £2,011 per square metre (£187 per square foot) to acquire completed London Affordable Rented units. For 'traditional' Affordable Rented units, RPs would pay £3,095 per square metre (£288 per square foot). For social rented units, RPs would pay an average value of £799 per square metre (£74 per square foot).

4.9 The CLG/HCA 'Shared Ownership and *Affordable Homes Programme 2016-2021: Prospectus'* document clearly states that Registered Providers will not receive grant funding for any affordable housing provided through planning obligations on developer-led developments. Consequently, all our

[8] Our appraisals do not, however, include any inflation on existing use values, as commercial floorspace is not expected to increase in value over the next four to five years. This is due to general weakness in the economy associated with uncertainty caused by the UK's impending departure from the EU.

appraisals assume nil grant. Clearly if grant funding does become available over the plan period, it should facilitate an increase in the provision of affordable housing when developments come forward.

4.10 For shared ownership units, we have assumed that Registered Providers will sell 30% initial equity stakes and charge 2.5% on the retained equity. The rent on retained equity is capitalised using a yield of 6%.

Rents and yields for commercial development

4.11 Policy 22 requires that large scale developments in Romford Town Centre provide flexible office floorspace. Developers are likely to provide commercial floorspace on the ground floor of developments, as these floors are often unsuitable for residential use. A requirement for office floorspace could be accommodated on the floors immediately above the ground floor retail, providing a buffer between uses at street level and residential units.

4.12 Our assumptions on rents and yields for the retail and office are summarised in Table 4.12.1. These assumptions are informed by lettings of similar floorspace in the area over the past year. Our appraisals assume a 12 month rent-free period for both retail and office floorspace.

Table 4.12.1: Commercial rents (£s per square metre) and yields

Commercial floorspace	Rent per square foot	Investment yield	Rent free period (months)
Retail	350	6.00%	12
Office	200	6.50%	12

4.13 Policy 24 requires that 20% of office floorspace is provided as flexible and affordable workspace. We have assumed that this requirement is reflected through a 20% discount to market rents on 20% of the office floorspace.

Build costs

4.14 We have sourced build costs from the RICS Building Cost Information Service (BCIS), which is based on tenders for actual schemes. Base costs (adjusted for local circumstances by reference to BICS multiplier) are as follows:

- Houses: £1,128 per square metre;
- Flats (1-2 storeys): £1,269 per square metre;
- Flats (3-5 storeys): £1,322 per square metre;
- Flats (6+ storeys): £1,737 per square metre;
- Retail: £1,198 per square metre; and
- Offices: £1,625 per square metre.

4.15 In addition, the base costs above are increased by 15% to account for external works (including car parking spaces) and an additional 6% for the standards that are equivalent to Code for Sustainable Homes Level 4 which are now embedded into Part L of the Building Regulations.

Accessibility standards

4.16 Our appraisals assume that all units are constructed to meet wheelchair accessibility standards (Category 2) apply to all dwellings at an average cost of £521 per house and £924 per unit for flats. In addition, we have assumed that Category 3 standard applies to 10% of dwellings at a cost of

£22,694 per flat and £7,908 per flat[9].

Professional fees

4.17 In addition to base build costs, schemes will incur professional fees, covering design, valuation, highways consultants and so on. Our appraisals incorporate a 10% allowance, which is at the middle to higher end of the range for most schemes.

Development finance

4.18 Our appraisals assume that development finance can be secured at a rate of 7%, inclusive of arrangement and exit fees, reflective of current funding conditions.

Marketing costs

4.19 Our appraisals incorporate an allowance of 3% for marketing costs, which includes show homes and agents' fees, plus 0.5% for sales legal fees.

Mayoral CIL and Crossrail Section 106

4.20 Mayoral CIL is payable on most developments that receive planning consent from 1 April 2012 onwards. Havering falls within Zone 3, where a CIL of £20 per square metre will be levied. The Mayoral CIL takes precedence over Borough requirements, including affordable housing. Our appraisals take into account Mayoral CIL and, where necessary, Crossrail Section 106. The Borough is located within the "*rest of London contribution area*" where Crossrail Section 106 contributions of £31 per square will be sought for office development and £16 per square metre for retail development within a 1 kilometre radius of a Crossrail station. However, where a Crossrail Section 106 contribution is less than the CIL payable, only the CIL is payable. If the CIL is lower than the Crossrail Section 106, then the amount payable is the Crossrail Section 106 (i.e. the CIL plus a 'top up' amount)[10]. Mayoral CIL exceeds the Crossrail S106 for retail, but is lower for offices. The top up will therefore apply to retail development but not offices.

Havering CIL

4.21 As noted previously, the Council issued its PDCS for consultation in February 2015. Table 4.21.1 below summarises the proposed rates of CIL. For residential developments, the borough is divided into two zones; north of the A1306 and south of the A3016 at rates of either £50 or £70 per square metre.

Table 4.21.1: CIL rates in the PDCS

Type of Development	CIL Rates £ per square metre Net additional floorspace
Open market residential north of the A1306	£70
Open market residential south of the A1306	£50
Private care/retirement housing north of the A1306	£70
Private care/retirement housing south of the A1306	£50
Office and Industrial	£0
Retail – supermarkets, superstores and retail warehouses above 2,000m2 gross internal area	£175

[9] Based on DCLH '*Housing Standards Review: Cost Impacts'* September 2014

[10] See '*Use of Planning Obligations in the funding of Crossrail, and the Mayoral Community Infrastructure Levy: Supplementary Planning Guidance – April 2013*'

Type of Development	CIL Rates £ per square metre Net additional floorspace
Retail – below 2,000 m2 gross internal area in Metropolitan, District and Local Centres as defined in the Havering Core Strategy, 2008.	£50
Hotel	£20
All other development	£0

4.22 The amended CIL Regulations specify that if any part of an existing building is in lawful use for 6 months within the 36 months prior to the time at which planning permission first permits development, all of the existing floorspace will be deducted when determining the amount of chargeable floorspace. This may be the case for many development sites in Havering. However, for the purposes of our appraisals, we have assumed that there is no deduction for existing floorspace.

Section 106 costs

4.23 To account for residual Section 106 requirements, we have included an allowance of £20 per square metre for non-residential development and £2,000 per unit for residential development. The actual amounts will of course be subject to site-specific negotiations

Development and sales periods

4.24 Development and sales periods vary between type of scheme. However, our sales periods are based on an assumption of a sales rate of 6 units per month, with an element of off-plan sales reflected in the timing of receipts. This is reflective of current market conditions, whereas in improved markets, a sales rate of up to 8 units per month might be expected. We also note that many schemes in London have sold entirely off-plan, in some cases well in advance of completion of construction.

Developer's profit

4.25 Developer's profit is closely correlated with the perceived risk of residential development. The greater the risk, the greater the required profit level, which helps to mitigate against the risk, but also to ensure that the potential rewards are sufficiently attractive for a bank and other equity providers to fund a scheme. In 2007, profit levels were at around 15-17% of development costs. However, following the impact of the credit crunch and the collapse in interbank lending and the various government bailouts of the banking sector, profit margins have increased. It is important to emphasise that the level of minimum profit is not necessarily determined by developers (although they will have their own view and the Boards of the major housebuilders will set targets for minimum profit).

4.26 The views of the banks which fund development are more important; if the banks decline an application by a developer to borrow to fund a development, it is very unlikely to proceed, as developers rarely carry sufficient cash to fund it themselves. Consequently, future movements in profit levels will largely be determined by the attitudes of the banks towards development proposals.

4.27 The near collapse of the global banking system in the final quarter of 2008 is resulting in a much tighter regulatory system, with UK banks having to take a much more cautious approach to all lending. In this context, and against the backdrop of the current sovereign debt crisis in the Eurozone, the banks were for a time reluctant to allow profit levels to decrease. However, perceived risk in the in the UK housing market is receding, albeit there is a degree of caution in prime central London markets as a consequence of the outcome of the referendum on the UK's membership of the EU. We have therefore adopted a profit margin of 20% for testing purposes, although individual schemes may require lower or higher profits, depending on site specific circumstances.

4.28 Our assumed return on the affordable housing GDV is 6%. A lower return on the affordable housing is appropriate as there is very limited sales risk on these units for the developer; there is often a pre-

sale of the units to an RSL prior to commencement. Any risk associated with take up of intermediate housing is borne by the acquiring RSL, not by the developer. A reduced profit level on the affordable housing reflects the GLA 'Development Control Toolkit' guidance (February 2014) and Homes and Communities Agency's guidelines in its Development Appraisal Tool (August 2013).

Exceptional costs

4.29 Exceptional costs can be an issue for development viability on previously developed land. Exceptional costs relate to works that are 'atypical', such as remediation of sites in former industrial use and that are over and above standard build costs. However, in the absence of details site investigations, it is not possible to provide a reliable estimate of what exceptional costs might be. Our analysis therefore excludes exceptional costs, as to apply a blanket allowance would generate misleading results. An 'average' level of costs for abnormal ground conditions and some other 'abnormal' costs is already reflected in BCIS data, as such costs are frequently encountered on sites that form the basis of the BCIS data sample.

Benchmark land values

4.30 Benchmark land values, based on the existing use value or alternative use value of sites are key considerations in the assessment of development economics for testing planning policies and tariffs. Clearly, there is a point where the Residual Land Value (what the landowner receives from a developer) that results from a scheme may be less than the land's existing use value. Existing use values can vary significantly, depending on the demand for the type of building relative to other areas. Similarly, subject to planning permission, the potential development site may be capable of being used in different ways – as a hotel rather than residential for example; or at least a different mix of uses. Existing use value or alternative use value are effectively the 'bottom line' in a financial sense and therefore a key factor in this study.

4.31 The Council's CIL viability study adopts a proxy of industrial value to establish a benchmark land value for testing purposes. The study adopts a rent of £80 per square metre, reflecting low grade single-storey industrial buildings, with 20% site coverage. The rent is capitalised at a 10% yield, resulting in a capital value of £0.64 million per gross hectare, inclusive of a 15% premium.

5 Appraisal outputs

5.1 The full inputs to and outputs from our appraisals of the various developments are set out in Section 6 and Appendix 2. We have appraised 10 development typologies, reflecting different densities and types of development across the Borough. Each appraisal incorporates (where relevant) the Council's emerging 35% affordable housing requirement along with a number of higher and lower levels (25% and 50%).

5.2 For each site, where relevant, the results of the following analyses are provided with regards to the Council's affordable housing policies:

- 25% affordable housing;
- 35% affordable housing; and
- 50% affordable housing.

5.3 Viability has been tested at three four levels of affordable housing, although it should be noted that if a scheme is shown to be viable, a greater level of affordable housing may be provided within the 'interval' that has been tested. For example, if a scheme is shown to be viable with 25% affordable housing, but not with 35% affordable housing the actual level of affordable housing that could be provided will fall between 26 and 34%.

5.4 We have also tested the developments with CIL reflecting the proposed PDCS rates (i.e. £70 per square metre north of the A1306 and £50 per square metre south of the A1306) and £50 per square metre on retail development. We have also undertaken a sensitivity analysis which increases the CIL rates to £90 and £50 per square metre respectively.

5.5 An example of the layout of the results is provided below (Figure 5.5.1) which summarises the residual land values for Development Typology 1. The nine sets of three bars show the residual land values assuming 25%, 35% and 50% affordable housing, with sales values ranging from £3,445 to £5,500 per square metre. The benchmark land value is shown as a vertical line across the chart. Where the bars exceed the line, the scheme is viable, as the residual land value is higher than the benchmark land value.

5.6 At £4,000 per square metre (the third set of bars from the left), the residual land value at both 25% and 35% affordable housing is higher than the benchmark land value, so both levels of affordable housing are viable. However, the residual land value at 50% is negative and unviable.

Figure 5.5.1: Example of appraisal results

	£3,445	£3,750	£4,000	£4,250	£4,500	£4,750	£5,000	£5,250	£5,500
25% AH	-£247,299	£1,324,542	£2,502,069	£3,787,634	£5,061,892	£6,332,791	£7,603,689	£8,874,588	£10,145,486
35% AH	-£1,366,175	£64,008	£1,127,031	£2,283,687	£3,440,343	£4,587,320	£5,730,671	£6,874,023	£8,017,374
50% AH	-£3,044,489	-£1,852,643	-£948,765	£27,766	£991,057	£1,954,349	£2,917,641	£3,873,176	£4,825,206
BLV	£650,000	£650,000	£650,000	£650,000	£650,000	£650,000	£650,000	£650,000	£650,000

6 Assessment of the results

6.1 This section sets out the results of our appraisals with the residual land values calculated for scenarios with sales values and capital values reflective of market conditions across the Borough. These RLVs are then compared to the benchmark land value as set out in Section 4.

6.2 Development value is finite and – in densely developed Boroughs such as Havering - is rarely enhanced through the adoption of new policy requirements. This is because existing use values are sometimes relatively high prior to development. In contrast, areas which have previously undeveloped land clearly have greater scope to secure an uplift in land value through the planning process.

6.3 In assessing the results, it is important to clearly distinguish between two scenarios; namely, schemes that are unviable *regardless of the Council's policy requirements, including the level of CIL* (including a nil rate) and schemes that are viable *prior* to the imposition of policy requirements. If a scheme is unviable before policy requirements and CIL are levied, it is unlikely to come forward and policy requirements and CIL would not be a factor that comes into play in the developer's/landowner's decision making. The unviable schemes will only become viable following an increase in values and sites would remain in their existing use.

Affordable housing (current tenure requirement of 70% rent and 30% intermediate)

6.4 The first set of appraisals considers the impact of the Council's requirements for affordable housing, which seek the provision of 35% affordable housing, with a tenure mix of 70% rented and 30% intermediate housing. The results are summarised in figures 6.4.1 to 6.4.10 which show the residual land values for each development typology with 25%, 35% and 50% affordable housing.

6.5 The first set of appraisals are all in present costs and present values, i.e. the outcome if the schemes were to come forward today. Lower density typologies (i.e. typologies 1, 2 and 3) which are predominantly houses with lower build costs and higher efficiency in comparison to flats, generate positive residual land values across the borough. These residual land values exceed the benchmark land value when affordable housing of up to 50% is included.

6.6 The higher density typologies only generate positive residual land values in the higher value parts of the borough and will only support affordable housing at a rate of between 25% and 35%. This is consistent with the likely development of high density development around the key transport hubs, especially Romford, where values are approaching the top of the range we tested.

Affordable housing – sensitivity analysis with growth over plan period

6.7 We have re-tested the ten development typologies factoring in growth in sales values of 5% per annum and cost inflation of 3% per annum, assuming that developments come forward in the last five years of the plan period. The results are summarised in figures 6.7.1 to 6.7.10. As a result of factoring in growth, there is a significant increase in residual values across all development typologies. This improvement is of sufficient magnitude to ensure that all of the higher density development typologies become viable and able to deliver at least 25% affordable housing from (present) value of £4,250 per square metre. We would again reiterate that we would only expect the higher density development to be located in the town centres, particularly Romford, where values are already at the higher end of the range. These are also the areas that are likely to benefit from higher growth rates in comparison to less well connected areas within the borough, due to the impact of Crossrail.

Workspace requirement

6.8 Development typologies 6, 7, 8, 9 and 10 have been re-run to include an element of commercial floorspace. These are the higher density schemes which will be of sufficient scale to include a number of floors of commercial floorspace at lower levels, with residential above. As noted in Section 4, office rents in Romford are currently relatively low, which will be attractive to start-up businesses and similar occupiers. However, the capital values generated by the rental income do not fully cover the costs of development. As a consequence, the private housing needs to cross-subsidise the delivery of commercial floorspace as well as delivering affordable housing.

6.9 The appraisal results for development typologies 6, 7, 8, 9 and 10 are summarised in figures 6.9.1 to 6.9.5. The requirement to provide workspace within the developments has a significant impact on viability, with the residual land values for Typology 10 reducing by as much as £5 million in some circumstances. The requirement would therefore need to be balanced with the requirement for affordable housing; both policy requirements could only be accommodated if affordable housing is reduced below the emerging 35% policy target.

Affordable workspace

6.10 Policy 24 requires that 20% of employment floorspace in a development be provided as 'affordable', as noted at Appendix 1. Although the policy does not clearly define what the Council regards as affordable, the policy requires that the space be made available on a flexible basis so that it is suitable to a range of enterprises.

6.11 For the purposes of our appraisals, we have assumed that the affordable workspace is let at a 20% discount to market rent. Market rent is £200 per square metre, which is at the lower end of the London range and therefore already accessible to a range of businesses. This accessibility is further improved through a discount of 20% which we have applied in perpetuity. In contrast, the policy clearly fives flexibility in terms of the length of time that the discount is to be applied, subject to a minimum period of five years.

6.12 For the purposes of illustrating the impact of the affordable workspace requirement, we have complied the results of the appraisals for Typology 6 assuming (a) no workspace at all, (b) workspace included but at full market rent and (c) workspace included with 20% at discounted rents. The results are summarised in figures 6.12.1 and 6.12.2, the first assuming that the residential element provides 35% affordable housing, while the second assumes provision of 25% affordable housing. The results clearly show that, while the requirement for workspace itself has a significant impact on viability, the additional requirement for some of that workspace to be provided at discounted rents has only a very marginal additional impact (see the red and green bars in figures 6.12.1 and 6.12.2).

Alternative affordable housing tenure mix Scenario

6.13 The Outer North East London SHMA prepared to inform the Havering Local Plan identifies two different categories of affordable housing need, those who can afford affordable housing for rent with housing benefit support, and those who can afford affordable housing for rent without housing benefit support and therefore require intermediate housing. In Havering the results indicate that there is a need for 80% affordable and 20% intermediate products.

6.14 In light of this the Council has considered it appropriate to test this as an alternative scenario. For the purpose of the scenario test a detailed split has been identified based on average income levels in Havering, as follows:

- 80% rented housing:
  - Social rent: 72%
  - London affordable rent: 19%
  - Traditional affordable rent (at 80% of market rent): 9%

- 20% intermediate housing:
  - Shared ownership: 65%
  - London Living Rent: 35%

6.15 Applying the weightings above to the rented element results in the blended rents shown in Table 6.15.1. Applying these blended rents results in a capital value of £866 per square metre (£80 per square foot). The capital value is significantly lower in comparison to affordable rent due to the high weighting towards social rent (72%).

Table 6.15.1: Blended weekly rents

Unit type	Net London Affordable Rent per week	Social rents per week	Traditional Affordable rent per week (80% of average market rents in Havering)
1 bed	£155.57	£89.62	£189.60
2 beds	£192.62	£101.96	£279.20
3 beds	£242.40	£114.30	£372.80
4+ beds	£312.77	£129.33	£461.60

Blended rents	19%	72%	9%	
Unit type	**Apportioned Net London Affordable Rent per week**	**Apportioned Social rents per week**	**Apportioned Traditional Affordable rent per week**	**Blended rent**
1 bed	£29.56	£64.53	£17.06	**£76.18**
2 beds	£36.60	£73.41	£25.13	**£98.32**
3 beds	£46.06	£82.30	£33.55	**£125.66**
4+ beds	£59.43	£93.12	£41.54	**£160.40**

6.16 The value of intermediate housing is also reduced due to the inclusion of an element of housing provided as London Living Rent, which as a capital value of £2,043 per square metre (£190 per square foot). The results for the analysis above are set out in figures 6.16.1 to 6.16.10.

6.17 The change in tenure mix and in particular the weighting of the rented element towards social rent reduces the residual land values generated by our appraisals, although the results (in terms of which typologies are viable and in which areas) are broadly similar. The results do, however, indicate that there may need to be a trade-off between the revised tenure mix and the overall percentage of affordable housing on individual developments (i.e. a lower affordable housing percentage may be required in order to facilitate the revised tenure mix in some cases).

Changes to CIL rates

6.18 All the analyses so far incorporate the CIL rates as proposed in the Council's PDCS (i.e. £50 per square metre south of the A1306 and £70 per square metre north of the A1306) alongside Mayoral CIL and Crossrail Section 106 (the latter applying only to retail). We have tested the impact of increasing the CIL rates from £50 and £70 per square metre by £20 per square metre increments (i.e. £70 and £90 per square metre, and £90 and £110 per square metre (see Figure 6.13.1 and Figure 6.13.2 showing the results with 35% and 25% affordable housing respectively). The results of this analysis indicate that a £20 per square metre increase in the rates proposed in the PDCS would not have a significant impact on the residual land value generated. For example, in an area with sales values of £4,000 per square metre, the residual land value assuming the rates of CIL in the PDCS is £3,198,208. If the CIL rates are increased by £20 per square metre, the residual land value falls to £3,143,066, a change of just 1.7%. If the CIL rate is increase by £40 per square metre above the PDCS rates, the residual land value falls slightly further to £3,087,925, or 3.4% below the residual value incorporating the PDCS CIL rates.

7 Conclusions and recommendations

7.1 The NPPF states that the cumulative impact of local planning authority standards and policies "*should not put implementation of the plan at serious risk, and should facilitate development throughout the economic cycle*". This report and its supporting appendices test this proposition in the London Borough of Havering.

7.2 We have tested the impact of the Council's emerging affordable housing target of 35% (as well as 25% and 50% affordable housing) and other requirements (together with Mayoral CIL and – where relevant – Crossrail Section 106) as a base position. The results generated by this base position indicate that the Council's flexible approach to affordable housing delivery (i.e. subject to individual site circumstances and scheme viability) will ensure that most developments can come forward over the economic cycle.

7.3 In considering the outputs of the appraisals, it is important to recognise that some developments will be unviable *regardless* of the Council's requirements. In these cases, the value of the existing building will be higher than a redevelopment opportunity over the medium term. However, this situation should not be taken as an indication of the viability (or otherwise) of the Council's policies and requirements.

7.4 The results of our appraisals indicate that the Council's emerging target of 35% affordable housing should be deliverable on some sites that are expected to come forward over the life of the Development Plan. However, the type of development is a critical determining factor, with higher density flatted developments being unviable in all but the higher value parts of the borough, typically around key transport hubs. However, in lower value areas, high density developments are unlikely to provide a good physical fit with the existing townscape in any event and therefore unlikely to be a suitable design solution in most cases. In lower value areas, housing schemes, or mixed schemes of flats and houses, are shown to be viable incorporating the Council's emerging affordable housing target of 35%

7.5 The change in tenure mix from 70% affordable rent and 30% intermediate to 80% rented and 20% intermediate - and in particular the weighting of the rented element towards social rent - reduces the residual land values generated by our appraisals. However, the the results (in terms of which typologies are viable and in which areas) are broadly similar. The results do, however, indicate that an 80%/20% policy requirement would have required a trade-off between higher levels of rented housing and the overall percentage of affordable housing on individual developments (i.e. a lower affordable housing percentage may be required in order to facilitate the revised tenure mix in some cases).

7.6 The Council's requirement for provision of employment floorspace in high density developments requires cross-subsidy from the private residential element of the development, as the capital value of the office rents are insufficient to cover the development costs. As a consequence, workspace can only be brought forward in lower value scenarios if the level of affordable housing is reduced below the 35% policy requirement. However, the impact of the Council's requirement for an element of affordable workspace (assuming 20% of floorspace is let at rents discounted by 20%) has a marginal impact in comparison to the wider requirement for workspace.

7.7 It is critical that developers do not over-pay for sites such that the value generated by developments is paid to the landowner, rather than being used to provide affordable housing. The Council should work closely with developers to ensure that landowners' expectations of land value are appropriately framed by the local policy context. There may be instances when viability issues emerge on individual developments, even when the land has been purchased at an appropriate price (e.g. due to extensive decontamination requirements). In these cases, some flexibility may be required subject to submission of a robust site-specific viability assessment.

7.8 Our appraisals do not consider the potential impact that grant funding might have on scheme viability. This is a realistic assumption for the short term. Given the constraints on public spending and the significant drop in funding during the current spending round. Levels of grant funding may change in the future and an increase in subsidy would clearly improve viability. The Council should therefore monitor the situation closely over the medium term, clearly if grant becomes available, then scheme viability will improve.

7.9 The Council's PDCS indicates the Council's intention to adopt CIL rates of between £50 and £70 per square metre for residential development. These rates are not dissimilar from those adopted by neighbouring boroughs. However, our appraisals adopting higher rates of CIL (+£20 and +£40 per square metre on both rates) show only marginal movements in residual land values which equate to 1.7% and 3.4% of the base residual land value. Consequently, there may be some scope for the Council to consider upwards adjustments to their CIL rates, but this should be explored further with the Council's CIL advisors.

7.10 The Council needs to strike a balance between achieving its aim of meeting needs for affordable housing with raising funds for infrastructure, and ensuring that developments generate acceptable returns to willing landowners and willing developers. This study demonstrates that the Council's flexible approach to applying its affordable housing requirements ensures that these objectives are balanced appropriately.

Appendix 1 - Policy analysis

The table on the following pages identifies all policies that are considered to potentially impact on development costs. Policies that are not listed are deemed not to have any potential impact on viability.

Policy Name	Policy Text / Summary	Comments and analysis of policy costs
Romford Strategic Development Area	• Require developers seeking to develop land adjacent to the ring road to address its perception as a barrier for active travel including opportunities for its greening, and the impact such development will have on the highway network; • Require developers to improve active travel links between Romford Station, Waterloo Road and Bridge Close; and • Require proposals for development along the River Rom to improve the quality and setting of the river and to provide continuous, safe and accessible links alongside the river to promote active travel and improve north south connectivity. Development proposals that generate a primary school child yield equivalent to one additional form of entry will be expected to provide adequate space on site for the provision of a school. The Council will only support proposals without this provision where it can be robustly demonstrated that existing or planned education provision can cater for the additional demand for school places. The Council will support proposals that: xxii. Create active streets with strong and well-articulated frontages to all existing and proposed pedestrian routes, particularly at ground floor level, avoiding blank facades and exposed service areas; xxiii. Incorporate generous floor to ceiling heights at ground floor level to provide for flexibility and adaptability over time and respond to the needs of different retailers; xxiv. Positively respond to the sensitive nature and urban fabric within the conservation area, views of St. Edward the Confessor Church and the historic crossroads where South Street, the High Street and the Market Place meet; xxv. Make a positive contribution towards public realm improvements in the Market Place xxvi. Demonstrate how the proposed scheme responds to wider development opportunities, movement and environmental enhancements in the town centre; xxvii. Open up access to the River Rom and positively incorporates the river into the development scheme(s); and xxviii. Optimises the design and location of development including the incorporation of resilience measures to address potential flood risk, where appropriate	Space for school provision could be accommodated within the site without necessarily reducing the quantum of development. Construction costs would be borne by the local authority, so no direct costs to the developer.
Affordable Housing	Requires all developments of more than 10 dwellings or residential developments of 1,000sq/m to provide at least 35% affordable housing contribution based on habitable rooms. Tenure mix of affordable housing of 70% social/affordable rent and 30% intermediate provision.	Will reduce Gross Development Value of developments as affordable units will be purchased by RPs from developers at a discount to market value.

<table>
<tr><th>Policy Name</th><th>Policy Text / Summary</th><th>Comments and analysis of policy costs</th></tr>
<tr><td>Housing mix</td><td>All housing schemes should include a proportion of family sized homes and be in line with the Housing mix below

<table><tr><td></td><td>1 bed</td><td>2 bed</td><td>3 bed</td><td>4 bed</td></tr><tr><td>Market housing</td><td>5%</td><td>15%</td><td>64%</td><td>16%</td></tr><tr><td>Affordable housing</td><td>10%</td><td>40%</td><td>40%</td><td>10%</td></tr></table></td><td>The housing mix including a high proportion of three bed units reflects the suburban nature of the borough and provides a good fit with the type of housing the market will deliver. It should be noted that in the most accessible and urban areas of the borough the level of family housing may vary.</td></tr>
<tr><td>Residential design and amenity</td><td>To ensure a high quality living environment for residents of new developments the Council will support residential developments that:
iv. Meet the National Space Standards and the London Plan requirement for floor to ceiling heights;
v. Adhere to the London Plan policies in regards to 'Lifetime Homes Standards' and 'Lifetime Neighbourhoods';
vi. Are sited and designed to maximise daylight and sunlight;
vii. Incorporate an appropriate level of high quality, usable amenity space that is designed to be multi-functional and offer a range of leisure and recreation opportunities; that meets the needs of the intended occupants taking account of the need for an attractive outlook, and is not overlooked from the public highway;
viii. Provide both balconies and communal amenity space in flatted schemes;
ix. Provide dual aspect accommodation unless exceptional circumstances are demonstrated;

In any development affordable and market housing will be expected to have the same external appearance and equivalent amenity in relation to views, daylight, noise and proximity to open space.

New developments should promote independent living by utilising designs which can allow for alterations to be made in the future. The Council will require 90% of new build housing to meet Building Regulation requirement M4(2) ‘Accessible and Adaptable Dwellings’, with the remaining 10 percent meeting Building Regulation requirement M4(3) ‘Wheelchair User Dwellings’.</td><td>These requirements reflect standard design standards across London that are required by existing London Plan requirements. In addition, the requirements reflect standards that buyers will require in new developments.</td></tr>
<tr><td>Social Infrastructure</td><td>Requiring major developments to provide new social infrastructure facilities as part of mixed-use developments where feasible, where a deficiency is identified through the Infrastructure Delivery Plan.</td><td>Unlikely to have a significant quantifiable impact and are most likely to be facilities that enhance saleability and values. See also comments above in relation to schools.</td></tr>
</table>

Policy Name	Policy Text / Summary	Comments and analysis of policy costs
Open Space Leisure and Recreation	New developments are expected to create new open space, leisure and recreation facilities to address areas of deficiencies and ensure satisfactory levels of provision as well as safeguard and enhance existing allotments and extend provision, wherever possible, to provide opportunities for food growing, recreation and exercise. Requires developments to provide children's play and informal recreation space on-site in line with the London Plan;	While the requirement will reduce the potential capacity of sites, the policy reflects existing London Plan requirement for open space and amenity space.
Business Growth	Requiring large scale residential proposals in Romford Town Centre to incorporate flexible office space	Residential schemes are likely to incorporate commercial use on ground and lower floors as these are typically less desirable locations for residential. Our appraisals include commercial floorspace to test the impact this has on viability. The impact of policy 24 is also considered.
Affordable workspace	The Council will promote opportunities for start-up and small and medium enterprises by expecting major commercial and mixed-use schemes to provide 20% of its floorspace as affordable workspace.	Requirement for 20% of workspace to be provided as affordable will reduce capital value of commercial floorspace.
Skills and training	The Council will promote employment and skills development opportunities for local residents by supporting major development proposals that commit to: i. A minimum local labour target of 20% during construction and end user phase for major commercial or mixed use developments including a proportion of apprenticeships where the length of construction phase allows; ii. A minimum local labour target of 20% during construction for major residential developments; iii. The notification of all vacancies associated with the development and its end use through the Council's employment service; iv. Offer opportunities to local businesses within their supply chains.	These requirements can be met on-site without additional development costs. All medium and major developers have CSR policies that incorporate local labour and skills opportunities.

Policy Name	Policy Text / Summary	Comments and analysis of policy costs
Transport Connections	The Council supports development which ensures safe and efficient use of the highway and demonstrates that adverse impacts on the transport network are avoided or, where necessary, mitigated. Major planning applications will require a transport assessment in line with TfL's Transport Assessment Best Practice Guidance. When bringing forward a planning application full Travel Plans or Travel Plan Statements will be required for development reaching certain thresholds as set out in Transport for London's (TfL) latest Guidance on Travel Plan requirements. Requiring new development to optimise sustainable access and other future transport connections, Supporting new developments that include shared use routes for people walking and cycling which lead to public open spaces and parks to promote active recreational activities;	Deminimis costs of providing paths which are likely to be required for residents in any event.
Parking provision and design	The Council will require all development to provide sufficient parking provision in accordance with the maximum parking standards in the London Plan. In areas of the borough that have low public transport accessibility levels (PTAL 0-2), the minimum residential parking standards: 1 bed – 1space 2 bed – 1.5 space 3 bed + 2spaces In the most accessible parts of the borough where a standard of up to 1 space per unit applies the Council will expect a minimum of .5 parking spaces per unit. In all areas the Council will support proposals that: i. Consider the location and layout of parking provision at the earliest stage and as an integral part of the design process; ii. Locate parking close to people's homes and in areas with natural surveillance; iii. Provide intensive and durable planting in regular intervals that visually screens the continuity of car parking to the front of dwellings and provides a green street scene; and iv. Include car club membership and provide car club parking spaces	No additional requirement beyond existing London Plan requirement and the levels of car parking that developers would wish to provide to ensure units are marketable. No additional cost burden arising from local plan policy.

Policy Name	Policy Text / Summary	Comments and analysis of policy costs
Digital connections	The council seeks to ensure that all new developments in the borough are equipped with the physical infrastructure necessary to enable the delivery of 'high-speed broadband services, wireless hot-spots and improved mobile signal,' as part of a borough wide initiative to increase connectivity, inclusivity and opportunity across Havering. The council will therefore require developers to: i. 'Future-proof' their developments by installing direct fibre optic cable access wherever possible; ii. Provide suitable ducting from the buildings access point to the public highway- On larger developments all new roads and accesses should include suitable ducting; and iii. Ensure that the visual and environmental impact of such infrastructural works are minimised. Exceptions may be made in exceptional circumstances where applicants can demonstrate through consultation with broadband infrastructure providers that the above requirements would not be possible, practical or economically viable. In these cases an equivalent developer contribution towards off site works will be sought which could enable greater access in the future.	Provision of digital connectivity is a standard requirement in new build developments that buyers will require. No additional cost arising from the policy requirement.
Urban design	Sets out a range of design criteria for new developments	These are all standards that developers typically build to so that there development meets buyers' expectations. No additional cost requirements arising from policy.
Landscaping	Sets out a range of criteria for developers to meet when designing landscaping schemes	These requirements reflect buyers' requirements and do not add to development costs beyond normal build cost allowances.
Green infrastructure	The policy seeks to maintain and expand the network of green spaces and natural features in the borough and supports the provision of green infrastructure within new schemes.	Requirements for provision of green spaces and natural features are design requirements that developments typically provide and buyers expect. No additional costs beyond normal allowances build into development costs.
Biodiversity and nature conservation	The council will require all development to provide appropriate new biodiversity features on site	Reflects existing London Plan requirement – no additional costs beyond existing.

Policy Name	Policy Text / Summary	Comments and analysis of policy costs
Rivers and River Corridors	The Policy seeks to enhance the river environment by requiring developments in close proximity to a river to investigate and, where feasible, secure opportunities to restore and enhance rivers and their corridors. This should, wherever possible, include the integration of flood defences into new developments. Where enhancements or restoration are financially viable but not feasible a financial contribution will be sought towards other relevant projects for the enhancement or restoration of other sections of the waterway. To protect and enhance the biodiversity and amenity value of river corridors while accommodating future adaptations to flood defences the Council will required development to be set back by 8 metres from main rivers, ordinary watercourses and other flood assets, and 16 meters from tidal rivers or defence structures. Development will also be expected to facilitate and act on the recommendations of the Thames Estuary 2100 Plan.	Developments will need to integrate flood defence mechanisms and suitable distances from water to ensure housing units are mortgagable and readily insurable. No additional costs arising from policy.
Flood management	The Council will support development that seeks to avoid flood risk to people and property and manages residual risk by applying the Sequential Test and, if necessary, the Exception Test as set out in the NPPF. The Council will seek to reduce the risk from surface water flooding by requiring development proposals to: iv. Reduce surface water runoff by providing sustainable drainage systems (SuDS), unless there are practical reasons for not doing so; and v. Ensure that proposals for SuDS apply the London Plan drainage hierarchy achieving greenfield run-off rates, where feasible, and include clear arrangements for ongoing maintenance over the lifetime of the development. The Council will expected developments to identify reasonable opportunities for flood risk reduction measures and resilient design and construction and not increase the risk of flooding. The Council will seek financial contributions towards the anticipated costs of flood management infrastructure required to protect the proposed development over its lifetime.	Developments will need to integrate flood defence mechanisms and suitable distances from water to ensure housing units are mortgagable and readily insurable. No additional costs arising from policy. SuDS reflect existing London Plan requirements so the policy does not introduce additional requirement beyond existing.
Air Quality	This policy requires development to be air quality neutral	
Pollution	The Council will support development proposals that: i. Do not unduly impact upon amenity, human health and safety and the natural environment by noise, dust, odour and light pollution, vibration and land contamination; ii. Do not pose an unacceptable risk to the quality of the water catchment, groundwater or surface water; and iii. Optimise the design, layout and orientation of buildings and the use of green infrastructure to minimise exposure to the above pollutants.	Reflects existing London Plan requirements. No additional development cost arising from Local Policy.

Policy Name	Policy Text / Summary	Comments and analysis of policy costs
On-site waste management	This policy sets criteria for the provision of on sites, waste and recycling facilities	This policy reflects current development standards and does not introduce any additional requirements beyond those contained in the London Plan. No additional costs arising from policy.
Low carbon design, decentralised energy and renewable energy	The Council will seek to optimise the energy efficiency of buildings and support low carbon and renewable energy developments including energy efficiency improvements to existing buildings. The Council requires major development proposals to include a detailed energy assessment to demonstrate how the targets for carbon dioxide emissions reduction set out in the London Plan will be met. The Council will require a cash in lieu contribution to the Council's Carbon Reduction Fund on any shortfall to secure the delivery of carbon dioxide savings elsewhere. The Council will require major development to prioritise connection to any existing or planned decentralised energy networks and, where feasible, integrate combined heat and power systems on site.	Sustainability requirements reflected through 6% additional cost on base build costs on all developments.
Delivery and implement-ation	The Council will conduct the following studies which developers will need to adhere to and may have an impact on the viability of a development: Infrastructure Delivery Plan (IDP); Housing Zone's; and Developers contributions	N/A

Glossary and Abbreviations

Term	Definition
Adaptation	Adjustments to natural or human systems in response to actual or expected climatic factors or their effects, including from changes in rainfall and rising temperatures, which moderate harm or exploit beneficial opportunities *(NPPF definition).*
AEP	Annual Exceedance Probability e.g. 1% AEP is equivalent to 1% (1 in 100) probability of flooding occurring in any one year (or, on average, once in every 100 years)
Anthropogenic	Originating in human activity (particularly in relation to climate change)
Climate Change	Long term variations in global temperature and weather patterns caused by natural and human actions.
Core Strategy	Part of the current Local Plan for the London Borough of Havering, which sets the long-term vision and objectives for the area. It contains a set of strategic policies that are required to deliver the vision including the broad approach to development. The Core Strategy forms part of the 'Core Strategy and Development Control Policies Development Plan Document'.
CLG	Department of Community and Local Government
Defra	Department of Environment, Food and Rural Affairs
Development	The carrying out of building, engineering, mining or other operations, in, on, over or under land, or the making of any material change in the use of a building or other land.
Development Plan	This includes the adopted London Plan, adopted local plans and neighbourhood plans, and is defined in Section 38 of the Planning and Compulsory Purchase Act 2004 *(NPPF definition).*
DG5 Register	A water-company held register of properties which have experienced sewer flooding due to hydraulic overload, or properties which are 'at risk' of sewer flooding with an annual probability of 1 in 20 (5%) or more.
EA	Environment Agency
Flood & Water Management Act	Part of the UK Government's response to Sir Michael Pitt's Report on the Summer 2007 floods, the aim of which (partly) is to clarify the legislative framework for managing surface water flood risk in England.
Flood Storage Area	Land which provides a function of flood conveyance and/or storage, either through natural processes, or by design
Flood Map for Planning (Rivers and Sea)	Nationally consistent delineation of 'high', 'medium' and 'low' probability of fluvial flooding, published on a quarterly basis by the Environment Agency
Formal Flood Management Asset	A feature or structure built and maintained specifically for the purpose of flood risk management

Term	Definition
Functional Floodplain (Zone 3b)	NPPF Flood Zone, defined as areas in which water *has* to flow or be stored in times of flood.
GLA	Greater London Authority – higher tier of government for the whole Greater London area.
Green Infrastructure	A network of multi-functional green space, urban and rural, which is capable of delivering a wide range of environmental and quality of life benefits for local communities *(NPPF definition)*.
Habitable Room	A room used as living accommodation within a dwelling but excludes bathrooms, toilets, halls, landings or rooms that are only capable of being used for storage. All other rooms, such as kitchens, living rooms, bedrooms, utility rooms and studies are included in this definition.
Havering Critical Drainage Areas	Areas which are likely to be most at risk of flooding from local sources (surface water, groundwater and ordinary watercourses) and where sustainable drainage solutions should be a priority. These areas have been termed Havering Critical Drainage Areas or HCDAs to differentiate them from Critical Drainage Areas that can be designated by the Environment Agency. The Environment Agency has not designated any Critical Drainage Areas in the London Borough of Havering.
Informal Flood Management Asset	A feature or structure that provides a flood defence function, however has not been built and/or maintained for this purpose (e.g. boundary wall)
LBH	London Borough of Havering – the borough council and local planning authority for Havering. Under the Flood & Water Management Act 2010 and the Flood Risk Regulations 2009, LBH is also the Local Authority responsible for taking the lead on local flood risk management in its administrative area
Local Plan	The plan for the future development of the local area, drawn up by the local planning authority in consultation with the community. In law this is described as the development plan documents adopted under the Planning and Compulsory Purchase Act 2004. Current core strategies or other planning policies, which under the regulations would be considered to be development plan documents, form part of the Local Plan. The term includes old policies which have been saved under the 2004 Act. *(NPPF definition)*
Main River	A watercourse shown as such on the Main River Map, and for which the Environment Agency has responsibilities and powers. N.B. Main River designation is not an indication of size, although it is often the case that they are larger than Ordinary Watercourses.
National Flood Risk Assessment (NaFRA)	An assessment of flood risk for England and Wales produced using local data and expertise. It shows the chance of flooding from rivers and the sea presented in categories taking account of flood defences and the condition they are in.
National Planning Policy Framework (NPPF)	National planning policy, published by the Government in March 2012. It replaces most of the previous Planning Policy Statements, including that regarding flood risk (PPS25).

Term	Definition
National Planning Practice Guidance (NPPG)	Supporting guidance to the NPPF, published by the Government in March 2014 as an online resource, available at: (http://planningguidance.planningportal.gov.uk/). It replaces previously published Government guidance, including that regarding flood risk.
Neighbourhood Plans	A plan prepared by a Parish Council or Neighbourhood Forum for a particular neighbourhood area (made under the Planning and Compulsory Purchase Act 2004).*(NPPF definition)*
Ordinary Watercourse	All watercourses that are not designated Main River, and which are the responsibility of Local Authorities or, where they exist, Internal Drainage Boards. Note that Ordinary Watercourse does not imply a "small" river, although it is often the case that Ordinary Watercourses are smaller than Main Rivers.
Planning Policy Statement (PPS)	A series of statements issued by the Government, setting out policy guidance on different aspects of planning. The majority of PPSs have now been replaced by the National Planning Policy Framework, including PPS25 regarding flood risk.
PPS25	Planning Policy Statement 25: Development and Flood Risk – previous government planning policy regarding flood risk, which has now been replaced by the National Planning Policy Framework.
Permitted Development (PD)	Permitted Development rights allow for some minor development, such as certain sizes of building extension, without the requirement to submit an application for planning permission.
Previously Developed (Brownfield) Land	Land which is or was occupied by a permanent structure, including the curtilage of the developed land (although it should not be assumed that the whole of the curtilage should be developed) and any associated fixed surface infrastructure. This excludes: land that is or has been occupied by agricultural or forestry buildings; land that has been developed for minerals extraction or waste disposal by landfill purposes where provision for restoration has been made through development control procedures; land in built-up areas such as private residential gardens, parks, recreation grounds and allotments; and land that was previously-developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape in the process of time. *(NPPF definition)*
Residual Risk	A measure of the outstanding flood risks and uncertainties that have not been explicitly quantified and/or accounted for as part of the design process
Strategic Environmental Assessment (SEA)	A procedure (set out in the Environmental Assessment of Plans and Programmes Regulations 2004) which requires the formal environmental assessment of certain plans and programmes which are likely to have significant effects on the environment. *(NPPF definition)*
Supplementary Planning Document (SPD)	Documents which add further detail to the policies in the Local Plan. They can be used to provide further guidance for development on specific sites, or on particular issues, such as design. Supplementary planning documents are capable of being a material consideration in planning decisions but are not part of the development plan. *(NPPF definition)* SPDs are not subject to independent examination before adoption by a local planning authority.

Term	Definition
Sustainability Appraisal (SA)	Appraisal of plans, strategies and proposals to test them against broad sustainability objectives. The SEA forms part of the SA.
Sustainable Development	"Development that meets the needs of the present without compromising the ability of future generations to meet their own needs" (*The World Commission on Environment and Development, 1987*).
Sustainable Drainage System (SuDS)	Term covers the whole range of sustainable approaches to surface drainage management. They are designed to control surface water run off close to where it falls and mimic natural drainage as closely as possible. *(Based on NPPF flood risk guidance text)*
Thames Tidal Defences (TTD)	Tidal flood defences downstream (east) of the Thames Barrier.
Updated Flood Map for Surface Water (uFMfSW)	Under their strategic overview role for flood risk in England and Wales the EA produced and then in 2013 updated the map of flood risk from surface water In 2010 the Flood and Water Management Act (FWMA) defined 'surface runoff' in the following terms: *"The flooding that takes place from the 'surface runoff' generated by rainwater (including snow and other precipitation) which: (a) is on the surface of the ground (whether or not it is moving), and (b) has not yet entered a watercourse, drainage system or public sewer."*
Zone 1 Low Probability	NPPF Flood Zone, defined as areas outside of Zone 2 Medium Probability. This zone comprises land assessed as having a less than 1 in 1,000 annual probability of river or sea flooding (<0.1%).
Zone 2 Medium Probability	NPPF Flood Zone which comprises land assessed as having between a 1 in 100 and 1 in 1,000 annual probability of river flooding (1% – 0.1%) in any year.
Zone 3a High Probability	NPPF Flood Zone which comprises land assessed as having a 1 in 100 or greater annual probability of river flooding (>1%) in any year.

Executive Summary

An SFRA was developed for the London Borough of Havering (LBH) in 2007 and updated in 2014. The 2014 update incorporated new techniques for flood risk mapping and updates to planning policy and guidance including the introduction of the National Planning Policy Framework and the National Planning Practice Guidance. The SFRA set out criteria that would necessitate the update of the SFRA including: "*Has the EA or LBH (as LLFA) issued any amendments to their flood risk mapping and/or guidance since the previous policy review?*" In February 2016 the Environment Agency issued updated guidance on climate change allowances for SFRA's. This requires the uplift factors to be applied to consider the location, design life and vulnerability classification of the development, producing a range of potential factors to be applied rather than a single figure as included in the previous SFRA. Furthermore updated hydraulic modelling by the Environment Agency has been incorporated to delineate flood zones on Blacks Brook and the River Thames.

This report updates the SFRA to reflect those developments.

The primary objective of the Havering SFRA is to inform the emerging Local Plan in respect of the development and review of policies related to flood risk management and also policies for the allocation of land for future development. The SFRA has a broader purpose however, and in providing a robust depiction of flood risk across the Borough, it can:

- Inform the development of LBH policy that will underpin decision making within the Borough, particularly within areas that are affected by (and/or may adversely impact upon) flooding;
- Assist the development management process by providing a more informed response to development proposals which may be affected by flooding, influencing the acceptability and design of future development within the Borough;
- Identify and implement strategic solutions to flood risk, providing the basis for possible future flood attenuation works by a range of agencies with responsibility for flood risk management;
- Support LBH in their role as Lead Local Flood Authority; and
- Support and inform the Council's emergency planning response to flooding.

This is a Level 1 SFRA and as such addresses the requirements of the Sequential Test, which will assist the council to guide development to areas of lower flood risk. LBH intend to progress with their development allocation sites in 2016, which will then be likely to require preparation of a Level 2 SFRA if required to address the requirements of the Exception Test. In discussion with the Environment Agency, it has been agreed that an annex to this Level 1 SFRA be included in order to inform the Local Plan in respect of potential flood risk implications of Rainham and Beam Park (which forms part of the London Riverside Opportunity Area) and Romford Metropolitan Centre, both of which are identified in the London Plan for development over the Plan period.

The following actions have been undertaken to assess flood risk within Havering:

- The identification of flood risk zones 1, 2, 3a and 3b (functional floodplain);
- Identification of locations of flood risk from other sources (ordinary watercourses, groundwater, sewers, reservoirs and canals);
- Identification of locations at risk of surface water flooding (termed Havering Critical Drainage Areas or HCDA), particularly outside fluvial or tidal risk areas;
- The consideration of the impact of climate change upon flood risk within Havering;

- Identification of areas protected by existing flood defences and that could be at risk should they fail.

The SFRA makes a number of planning policy recommendations in Section 7 for adoption by LBH when considering development and flood risk. The SFRA also provides guidance for actions that local communities could take to reduce flood damage. In addition, the report provides guidance for emergency planning within the Borough on infrastructure and vulnerable institutions within Flood Zones.

Finally in Section 7.14 the report provides guidance on how the SFRA should be monitored and reviewed to ensure it remains current.

Figures are provided of the fluvial Flood Zones and other sources of flood risk to classify the risk of flooding across the Borough.

114	Emergency Planning

1. Introduction

1.1 Overview

The London Borough of Havering (LBH) is situated in the north east of London. The Borough covers an area of approximately 11,200 hectares and has a population of approximately 245,974 (2015 Demographic Information). It is adjoined by the London Boroughs of Barking and Dagenham, Bexley and Redbridge and by the Essex Districts of Brentwood, Epping Forest and Thurrock.

There are four distinct watercourses in Havering (please refer to Figure 101):

- The River Beam forms a part of the western boundary of the Borough with the London Borough of Barking and Dagenham to the West. It has three tributaries. The River Rom drains the north-western area of the Borough and is joined by Blacks Brook at Romford. The Emerson Park Stream joins the River Ravensbourne which joins the River Rom at Heath Park, Elm Park. From this point the watercourse is known as the River Beam;
- The Ingrebourne, including its tributaries the Weald Brook and the Paines Brook, drain the centre, east and north of the Borough;
- The River Mardyke drains the eastern area of the Borough although for most of its length it flows through Thurrock, outside Havering;
- The final watercourse is the River Thames into which the above watercourses drain. This forms the southern boundary of the Borough.

Havering has a large proportion of London's floodplains (source: Core Strategy p.152). In addition to the areas of the Borough at risk of flooding from rivers, other areas may also be at risk from flooding from groundwater, surface water runoff, ordinary watercourses and/or culvert blockage, which may result in localised flooding at any location, resulting in damage to property and severe disruption. Flooding has received widespread media attention in recent years and potential associated issues with the cost of and obtaining property insurance as well as the fear of future flooding are well-known. Organisational responsibilities for managing flood risk have changed substantially in the last few years. The following text box provides definitions produced by Jacobs of the principal local sources of flooding referred to in this SFRA.

Local Flood Risk

The London Borough of Havering and their partners have responsibilities for managing local flood risk, i.e. flood risk from sources other than Main Rivers, the sea and reservoirs, principally meaning surface runoff, groundwater and ordinary watercourses.

Surface runoff – rainwater (including snow and other precipitation) which is on the surface of the ground (whether or not it is moving), and has not entered a watercourse, drainage system or public sewer. Note that the term 'surface water' is used generically to refer to water on the surface and is often associated with periods of intense rainfall.

Groundwater – water which is below the surface of the ground and in direct contact with the ground or subsoil. It is most likely to occur in areas underlain by permeable rocks, called aquifers. These can be extensive, however are of limited risk in Havering as the geology is predominantly Clayey.

Ordinary watercourse – all watercourses that are not designated Main River, and which are the responsibility of local authorities

It is essential that future planning decisions do not inadvertently increase the potential risk of localised flooding and, where possible, seek to improve flood management. Specific recommendations have been provided within the SFRA to guide the design of future development accordingly.

The National Planning Policy Framework (NPPF) requires that local planning authorities prepare a Strategic Flood Risk Assessment (SFRA) in consultation with the Environment Agency (EA) and others. The primary purpose of a Level 1 SFRA is to determine the variation in flood risk across the Borough, based upon data from a variety of sources. Robust information on flood risk is essential to inform and support the Council's revised flooding policies in its emerging Local Plan and to inform the decision making process in the allocation of sites for development. It also provides guidance to developers on planning requirements and recommendations for council policy.

A Level 2 SFRA assesses the flood risk at potential development sites in more detail than that covered at Level 1. This SFRA update only covers Level 1 as LBH are yet to allocate development sites. LBH is currently beginning the process of preparing its new Local Plan. In this respect, Jacobs has been commissioned to update the Level 1 SFRA.

A Level 1 and more detailed Level 2 SFRA were prepared for LBH and published in a joint document in November 2007 to inform the development of the Council's current suite of Development Plan Documents, which were adopted in 2008. The Level 1 SFRA was updated in 2014 to reflect new flood risk information and changes to National Planning Policy. The SFRA forms part of the evidence base being used to inform the emerging Havering Local Plan.

This report (and the supporting mapping) represents the Level 1 SFRA[1], and should be used by the Council to inform the application of the Sequential Test (see Section 3.1). Following the application of the Sequential Test, it may be necessary to develop a more detailed SFRA[2] should it be shown that any further proposed allocations fall within a flood affected area of the Borough. The more detailed SFRA should consider the risk of flooding in greater detail within a local context to ensure that the site can be developed in a safe and sustainable manner.

1.2 SFRA Approach and Update

The primary objective of the Havering SFRA is to inform the development and review of policies related to flood risk management and also policies for the allocation of land for future development, within the emerging Local Plan. The SFRA has a broader purpose however, and in providing a robust depiction of flood risk across the Borough, it can:

- inform the development of Council policy that will underpin decision making within the Borough, particularly within areas that are affected by (and/or may adversely impact upon) flooding;
- assist the development management process by providing a more informed response to development proposals which may be affected by flooding, influencing the acceptability and design of future development within the Borough;
- help to identify and implement strategic solutions to flood risk, providing the basis for possible future flood attenuation works by a range of agencies with responsibility for flood risk management;
- support and inform the Council's emergency planning response to flooding.

1 The requirements of a Level 1 SFRA are further detailed in the 'Flood Risk and Coastal Change' section of the national Planning Practice Guidance available online at http://planningguidance.planningportal.gov.uk/

2 The requirements of a Level 2 SFRA are further detailed in the 'Flood Risk and Coastal Change' section of the national Planning Practice Guidance available online at http://planningguidance.planningportal.gov.uk/

Government provides no specific methodology for the SFRA process. Therefore, to meet these broader objectives, the SFRA has been developed in a pragmatic manner in close consultation with the LBH and the EA.

Knowledge exists with respect to flood risk within the Borough, provided largely in the form of records of observed flooding and provided from a variety of sources. The Havering SFRA has gathered and built upon this existing knowledge, underpinning the delineation of the Borough into zones of 'high', 'medium' and 'low' probability of fluvial flooding, in accordance with the NPPF, and together with Havering Critical Drainage Areas (HCDA). These zones have then been used to provide a robust and transparent evidence base for the development of flooding related policy, and the allocation of sites for new development as part of the Local Plan.

1.3 The Need for an Updated SFRA

As stated above, an up-to-date SFRA is required to support planning policy development in Havering. The 2014 SFRA requires updating because:

- In February 2016 the EA published updated guidance[3] on the consideration of the potential impact of climate change upon flood risk for Flood Risk Assessments and SFRA. This SFRA provides the necessary information for these updated factors to be included in the application of the Sequential Test; and
- Since 2014 the EA has completed updates to its hydraulic modelling of the River Thames and the Blacks Brook. The updated modelling has resulted in changes to the extent of Flood Zones adopted in this SFRA.

1.4 Consultation and Co-operation

Consultation and co-operation has formed a key part of the development of the updated Havering SFRA. This is particularly important in light of the 'Duty to Cooperate' brought in by the Localism Act 2011 (Section 110). In addition, paragraph 157 of the NPPF states that Local Plans should *"be based on co-operation with neighbouring authorities, public, voluntary and private sector organisations"*. One of the roles of this SFRA is to support the production of the new Local Plan.

The National Planning Practice Guidance (NPPG) (2014) states that the following organisations / roles should be involved in preparing the SFRA:

- Environment Agency;
- Lead local flood authorities (role within LBH);
- Emergency response (role within LBH);
- Drainage authority (role within LBH under the Land Drainage Act 1991);
- Internal drainage boards (where appropriate).

The NPPG also requires consultation with Thames Water and Anglian Water as the sewerage undertakers, so that the SFRA *'takes account of any specific capacity problems and of the undertaker's drainage area plans'*. We have requested information from them on areas that have experienced flooding.

An internal consultation process with LBH and the EA in relation to the draft of this updated SFRA was undertaken in Summer 2016 to seek their feedback on the document.

[3] https://www.gov.uk/guidance/flood-risk-assessments-climate-change-allowances

In addition, the Development Planning and Emergency Planning functions of LBH were consulted to seek their feedback on specific issues throughout the development of the SFRA and have co-operated fully in the process. The key roles played by the EA and LBH's Emergency Planning function with regard to fluvial flooding and flooding from local sources, respectively, are such that they are in a key position to lead in providing advice on such issues. LBH and the EA were closely involved in ensuring that this SFRA integrates with the advice, guidance and services they already provide and are proposing to provide with respect to flooding.

Most rivers within Havering drain to the Thames without leaving the Borough so there is no need for particular cross boundary consultation. While future development could impact upon the flow regimes in these rivers their impact upon the River Thames is likely to be minimal, given the comparison in flows, so consequently consultation with local authorities downstream on the Thames would not be required. The River Mardyke enters Thurrock from Havering but only a small part of the overall catchment is within the Borough. In this respect LBH should consider consulting with Thurrock Council should they receive planning applications for development within the Mardyke catchment in order for Thurrock Council to be able to assess the potential impact downstream.

Although no issues with cross border management of flows are known to LBH or were highlighted through the consultation on this updated SFRA, it is imperative that all local authorities clearly understand the core issues that flood risk raises within their respective areas and the potential knock on effects to other local authority areas, and adapt their decision making accordingly. They must be aware of the impact that planning policies and development management decisions may have, not only locally, but upon adjoining Boroughs.

2. The Planning Framework

2.1 Introduction

This Section provides a brief overview of the strategy and policy context relevant to flood risk in the Havering area.

The success of the SFRA is heavily dependent upon the ability of the Council to implement the recommendations put forward for future sustainable flood risk management, both with respect to planning policies and development management recommendations (refer to Section 7). The National Planning Policy Framework (NPPF) provides guidance and direction to local planning authorities. Ultimately however, it is the responsibility of the Council to establish 'sound' planning policies that will ensure future sustainability with respect to flood risk.

The policy framework informing the development of this Level 1 SFRA has changed significantly since the previous SFRA was published in November 2007. At the national level, Planning Policy Statement 25 (PPS25) (regarding flood risk) and its supporting guidance has been replaced with the NPPF in 2012 and associated guidance. At the regional level, the London Plan has since been updated, published in 2016. At the local level, Unitary Councils, such as LBH, have been given new responsibilities through the Flood & Water Management Act 2010 with regard to managing local flood risk and best practice and knowledge with regard to the production of SFRAs continues to evolve.

2.2 National Planning Policy

National planning policy is set out in the NPPF, which was published by the Government in March 2012. It forms a more succinct replacement for numerous topic-specific Planning Policy Statements (PPSs), including PPS25 on flood risk. The NPPF is accompanied by online National Planning Practice Guidance (NPPG)[4], first published in March 2014, which provides further guidance on specific issues, including flood risk, and replaces all previously published national planning guidance. The NPPF covers a full range of planning issues drawing on the central issue of sustainable development. Central themes include the re-use of previously developed land of low environmental value, promoting economic growth and high quality design, and transitioning to a low carbon future, including taking full account of flood risk.

The NPPF underpins the process by which local planning authorities are to account for flood risk as an integral part of the planning process. The overarching aims set out by the NPPF for the management of flood risk at a planning authority level are encapsulated in Paragraph 100 of the document:

"Local Plans should apply a sequential, risk-based approach to the location of development to avoid where possible flood risk to people and property and manage any residual risk, taking account of the impacts of climate change, by:

- applying the Sequential Test;
- if necessary, applying the Exception Test;
- safeguarding land from development that is required for current and future flood management;
- using opportunities offered by new development to reduce the causes and impacts of flooding; and

4 http://planningguidance.planningportal.gov.uk/

- where climate change is expected to increase flood risk so that some existing development may not be sustainable in the long-term, seeking opportunities to facilitate the relocation of development, including housing, to more sustainable locations."

The Sequential Test and Exception Test are further explained in Section 3.1.

These aims effectively set the scope for the specific outcomes of the SFRA process. The SFRA in turn then informs planning and development management decisions to ensure that the aims set out above can be achieved.

The NPPF states that '*a sustainability appraisal which meets the requirements of the European Directive on strategic environmental assessment should be an integral part of the plan preparation process, and should consider all the likely significant effects on the environment, economic and social factors*' (paragraph 165). The purpose of Sustainability Appraisal (SA) is to promote sustainable development through better integration of sustainability considerations in the preparation and adoption of plans. The SA developed in conjunction with the new planning policy documents for Havering will be informed by the information and recommendations contained in this updated SFRA.

It is important to reiterate that the NPPF covers a range of planning issues – not just flood risk. The formulation of council policy and the allocation of land for future development must also meet the requirements of other elements of the NPPF, including (for example) with regard to environmental protection, housing and economic growth. The provision of sustainable development requires the balancing of a range of social, economic and environmental factors.

The SFRA aims to assist in this process through the provision of a clear and robust evidence base upon which informed decisions can be made.

In December 2014, the Secretary of State for Communities and Local Government published a written statement (HCWS161) setting out the Government's continuing commitment to protect people and property from flood risk. Local planning policies and decisions on planning applications relating to major development are required to ensure that sustainable drainage systems for the management of run-off are put in place, unless demonstrated to be inappropriate. The policies contained in the written statement came into effect on 6th April 2015.

2.3 London-wide Planning Policy – The London Plan

The London Plan forms part of the Development Plan for Havering. The latest version of the plan was adopted in 2016 and contains a range of policies of relevance to this SFRA. It consolidates all alterations made since the previous adopted version in 2011 including Revised Early Minor Alterations to the London Plan which were published in October 2013 to ensure consistency with the NPPF. In addition, Minor Alterations have been prepared to bring the London Plan in line with national housing standards and car parking policy. Both sets of alterations have been considered by an independent inspector at an examination in public and were published on 14 March 2016

The key London Plan policy regarding flood risk management is **Policy 5.12**, which seeks *'to address current and future flood issues and minimise risks in a sustainable and cost effective way'*. The policy requires planning decisions to *'comply with the flood risk assessment and management requirements set out in the NPPF and associated Technical Guidance [(since replaced with the NPPG)] on flood risk over the lifetime of the development and have regard to measures proposed in Thames Estuary 2100 [(regarding tidal flood risk)] and Catchment Flood Management Plans'*, both produced by the EA. The policy also builds on that set out at a national level, requiring that *'developments which are required to pass the Exception Test set out in the NPPF and the technical guidance [(since replaced with the NPPG)] … address flood resilient design and emergency planning by demonstrating that:*

- the development will remain safe and operational under flood conditions;
- a strategy of either safe evacuation and/or safely remaining in the building is followed under flood conditions;
- key services including electricity, water etc. will continue to be provided under flood conditions; and
- buildings are designed for quick recovery following a flood'.

In support of this, the Greater London Authority's **Housing Supplementary Planning Guidance (SPG) (2016)** requires as **Standard 38** that *'Where development is permitted in an area at risk of flooding, it should incorporate flood resilient design in accordance with the NPPF'*.

Policy 5.12 further states that *'Development adjacent to flood defences will be required to protect the integrity of existing flood defences and wherever possible should aim to be set back from the banks of watercourses and those defences to allow their management, maintenance and upgrading to be undertaken in a sustainable and cost effective way'*.

With regard to policy development, Policy 5.12 requires boroughs *'utilise Strategic Flood Risk Assessments to identify areas where particular flood risk issues exist and develop actions and policy approaches aimed at reducing these risks, particularly through redevelopment of sites at risk of flooding and identifying specific opportunities for flood risk management measures'*. This SFRA will contribute toward the achievement of this requirement.

Policy 5.13 regarding sustainable drainage states that *'Development should utilise sustainable urban drainage systems (SUDS) unless there are practical reasons for not doing so, and should aim to achieve greenfield run-off rates and ensure that surface water run-off is managed as close to its source as possible in line with the … drainage hierarchy'*, which is summarised in Table 2-1.

Table 2-1 : London Plan SuDS Hierarchy

Preference	Technique
HIGH	Store rainwater for later use
↓	Use infiltration techniques, such as porous surfaces in non-clay areas
↓	Attenuate rainwater in ponds or open water features for gradual release
↓	Attenuate rainwater by storing in tanks or sealed water features for gradual release
↓	Discharge rainwater direct to a watercourse
↓	Discharge rainwater to a surface water sewer/drain
LOW	Discharge rainwater to the combined sewer

Based on Table 2-1, in principle planning authorities should prefer development proposals which retain or infiltrate runoff at source rather than discharging them off-site.

In support of this, the **Housing Supplementary Planning Guidance (2016)** requires as **Standard 39** that *'New development should incorporate Sustainable Urban Drainage Systems … where practical with the aim of achieving a Greenfield run-off rate, increasing bio-diversity and improving water quality. Surface water run-off is to be managed as close to source as possible'*.

Policy 5.13 further states that *'Drainage should be designed and implemented in ways that deliver other policy objectives of this Plan, including water use efficiency and quality, biodiversity, amenity and recreation'*.

With regard to plan preparation, the Policy 5.13 states that, within their plans, boroughs should, *'in line with the Flood and Water Management Act 2010, utilise Surface Water Management Plans to identify areas where there are particular surface water management issues and develop actions and policy approaches aimed at reducing these risks'*. This SFRA will contribute toward the achievement of this requirement.

The supporting text to Policy 5.13 notes that green roofs, the subject of Policy 5.11, *'can also make a contribution to sustainable urban drainage by absorbing a proportion of surface water and therefore reducing rates of water flow'*.

Policy 5.11 regarding green roofs states that *'major development proposals should be designed to include roof, wall and site planting, especially green roofs and walls where feasible'*.

In support of this, the **Housing Supplementary Planning Guidance (2016)** requires as **Standard 39** that *'New development should incorporate … green roofs where practical with the aim of achieving a Greenfield run-off rate, increasing bio-diversity and improving water quality'*.

Policy 5.11 states that, with regard to plan development, '*boroughs may wish to develop more detailed policies and proposals to support the development of green roofs and the greening of development sites. Boroughs should also promote the use of green roofs in smaller developments, renovations and extensions where feasible'*.

Policies 5.11 and 5.12 also overlap with London Plan **Policy 5.10** which seeks to encourage *'urban greening'*.

Policy 5.3 regarding sustainable design and construction requires major development proposals to meet the minimum standards outlined in the Mayor's supplementary planning guidance on the topic[5], including with regard to *'avoiding impacts from natural hazards (including flooding)'*.

The policy further states that, in developing their plans, boroughs should *'consider the need to develop more detailed policies and proposals' on such issues that are 'specific to their local circumstances'*.

Policy 2.18 seeks *'to protect, promote, expand and manage the extent and quality of, and access to, London's network of green infrastructure'* – the network of green spaces across London. The policy recognises the importance of green infrastructure for flood mitigation and reducing flood risk through sustainable urban drainage systems, particularly in light of climate change.

The policy states that, in making planning decisions, *'Enhancements to London's green infrastructure should be sought from development and where a proposal falls within a regional or metropolitan park deficiency area'*, which is shown to include London Riverside Conservation Park, within the Borough, *'it should contribute to addressing this need'*. In addition, *'Development proposals should: (a) incorporate appropriate elements of green infrastructure that are integrated into the wider network; and (b) encourage the linkage of green infrastructure, including the Blue Ribbon Network, to the wider public realm to improve accessibility for all and develop new links, utilising green chains, street trees, and other components of urban greening (Policy 5.10)'*.

[5] Sustainable Design and Construction Supplementary Planning Guidance (2014)

The policy currently notes that, in developing their plans, Boroughs should:

a) plan positively for the creation, protection, enhancement and management of networks of green infrastructure. This should be achieved by producing green infrastructure which identify priorities for addressing deficiencies and should set out positive measures for the design management of all forms of green and open space;

b) ensure that in and through Local Plan policies, green infrastructure needs are planned and managed to realise the current and potential value of open space to communities and to support delivery of the widest range of linked environmental and social benefits; and

c) support through appropriate initiatives, the vision of creating and protecting an extensive and valued recreational landscape of well-connected and accessible countryside around London for both people and for wildlife.

It should be noted that a requirement to positively plan for green infrastructure is also stated in paragraph 114 of the NPPF.

Policy 2.18 is supported by more detailed guidance in the form of the '**Green Infrastructure and Open Environments: The All London Green Grid SPG**', which highlights the vital role that green infrastructure can play in managing flood risk.

Policy 7.24 highlights the importance of the Blue Ribbon Network, a strategically important series of linked water-spaces, for drainage and flood management. An element of the network is found in every London borough, including Havering.

Policy 7.29 regarding the River Thames states that, *'following appraisal in accordance with the criteria in paragraph 7.90, Thames-side boroughs should identify a Thames Policy Area within their* [Local Plans] *and formulate policies and a strategy for this area covering the matters set out in paragraphs 7.93 and 7.94 [which include indicative flood risk]. Boroughs are encouraged to work in sub-regional partnerships to progress this work. The existing Thames Strategies have identified a range of actions and planning priorities that should be reflected in relevant* [Local Plans]*'*).

Paragraph 7.90 states that *'Setting the boundary of the Thames Policy Area should be done in consultation with neighbouring authorities, including those across the river'*. In defining the boundaries, the paragraph states that boroughs should have regard to the maps contained within that chapter of the London Plan, which highlight the Thames Policy Area, and a range of specific criteria.

The existing **Thames Strategy East (2008)** already covers the Havering area and was created in partnership with LBH; its policies are therefore of relevance to this SFRA and are discussed later in this section.

Paragraph 7.96 also notes that importance of allowing a margin of land for future flood defences where there are larger areas of development along the Thames.

Policy 2.13 identifies London Riverside, which is on the Thames and falls within both the Boroughs of Havering and Barking and Dagenham, as an Opportunity Area for development. Table A1.1 of the London Plan states that London Riverside covers an area of 3,000 hectares and is noted to have an indicative employment capacity of 16,000 and could provide a minimum of 26,500 new homes. It should be noted that the January 2014 draft amendments to the London Plan envisage increasing the area of London Riverside from 2,500 to 3,000 hectares, the indicative employment capacity from 14,000 to 16,000, and the minimum new homes figure from 25,000 to 26,500 – all increases on current figures. As the area falls within two London Boroughs, not all of this growth will be provided within Havering.

A London Riverside Opportunity Area Planning Framework was also published in 2015. This document forms Supplementary Planning Guidance (SPG) to the London Plan and sits alongside the London Plan's strategic policies. It does not establish new policies but does set the direction of travel for the emerging Local Plan and is a material consideration for decisions on planning applications that fall within its area.

It should be noted that flood risk will be an important consideration for development in London Riverside, with parts in Flood Zones 2 and 3.

Policy 2.15 identifies Romford, as a Metropolitan Centre in London's town centre network, with Medium growth potential. Other towns within the Borough are identified as District Centres with Medium growth potential.

Housing targets for each borough are set out under **Policy 3.3** of the Plan. Havering's target is 1,170 per annum (on average) – a total of 11,700 over the ten year plan period to 2025; this figure is acknowledged by LBH and supersedes the housing figures noted in local policy CP1 below.

2.4 Adopted Local Planning Policy

2.4.1 Adopted Havering Core Strategy and Development Control Policies DPD

The Core Strategy and Development Control Policies Development Plan Document (DPD), covering the period to 2020, was adopted in 2008, with the original SFRA (2007) forming part of the evidence base.

Policy CP1 regarding housing supply seeks to provide a minimum of 535 new homes per year within the borough, prioritising brownfield land and utilising sites identified in the Romford Area Action Plan and the Site Specific Allocation DPD, including sites within the London Riverside Opportunity Area; sites were selected utilising the results of the previous SFRA. A significant number of new homes on 'windfall' sites are also expected.

It should be noted that the Mayor's target for the borough has since increased significantly to new homes 1,170 per annum. As noted above, this figure is acknowledged by LBH and supersedes the housing figure noted in Policy CP1. It is indicative of an upward trajectory of housing demand in the Borough, in common with the rest of London.

The key policy with regard to flood risk is **Policy DC48**, which states that *'Development must be located, designed and laid out to ensure that the risk of death or injury to the public and damage from flooding is minimised whilst not increasing the risk of flooding elsewhere and ensuring that residual risks are safely managed'*.

The policy further states that: *'Planning permission therefore will only be granted for development where it can be demonstrated that:*

- Through a sequential test it is located in the lowest appropriate flood risk zone with regard to the advice in PPS25 and Havering's Strategic Flood Risk Assessment;
- It would not constrain the natural function of the flood plain, either by impeding flood flow or reducing storage capacity;
- With regard to the London Plan drainage hierarchy, surface water is controlled as near to its source as possible to Greenfield rates attenuated up to the 1% annual probability plus climate change, and that the use of Sustainable Urban Drainage Systems (SUDS) has been considered. Where SUDS have not been used the applicant should justify these reasons'.

Policy DC48 requires that 'a Flood Risk Assessment (FRA) which satisfies the requirements in Havering's Strategic Flood Risk Assessment must be submitted with planning applications:

- For major developments in Flood Risk Zone 1 and all developments in Flood Risk Zones 2 and 3. With regard to PPS25, the Flood Risk Assessment must demonstrate that the sequential test has been undertaken and in addition, where the vulnerability classification of the development is not compatible to the flood zone, the exception test has been passed;

- In areas at risk from surface water, sewer, groundwater and lake flooding;

- Where drainage problems are identified by the Environment Agency or the Council'.

The policy specifically states that 'Development will not be permitted where it would undermine or breach flood defences'.

Policy DC48 is supported within the Core Strategy by high-level **Policy CP15** regarding environmental management. This states that new development should 'reduce and manage fluvial, tidal and surface water and all other forms of flood risk through spatial planning, implementation of emergency and other strategic plans and development control policies' and have 'sustainable … drainage infrastructure'.

Policy DC42 on minerals extraction requires there to be 'no significant adverse effect' on flooding from such works. It further states that 'Planning permission for minerals extraction will be granted within the specific sites/preferred areas shown on the proposals map' provided that the various provisions regarding environmental impact and site restoration have been met, including that in relation to flooding noted above. Minerals Safeguarding Areas are indicated on the North and South Proposals Maps. Policy DC42 indicated that a Specific Sites/Preferred Areas for Mineral Extraction DPD was envisaged, but this document is no longer going to be produced.

2.4.2 Adopted Havering Site Specific Allocations DPD

The Havering Site Specific Allocations (SSA) DPD was adopted in 2008 and sets out the specific development allocations for individual sites across the Borough except for sites in Romford Town Centre and those for minerals and waste, which are covered in separate planning policy documents, discussed below.

The majority of development, outside of Romford Town Centre, is proposed to be located at London Riverside, which was, and continues to be, designated in the London Plan as an Opportunity Area.

Each site allocation indicates whether a site-specific Flood Risk Assessment is required.

The development of the SSA DPD was informed by the previous Level 1 and more detailed Level 2 SFRA published in 2007. It includes sites in Flood Zones 2 and 3.

2.4.3 Adopted Romford Area Action Plan

LBH adopted the Romford Area Action Plan in 2008. In addition to a number of specific policies for the Romford area, the plan contains several site allocations.

Each site allocation indicates whether a site-specific Flood Risk Assessment is required.

The River Rom runs through Romford town centre, presenting associated flood risks. This is recognised in **Policy ROM18**, which seeks opportunities, through new development, to improve the river and reduce flood risk. The policy states that:

'The Council will work in conjunction with other bodies, including the Environment Agency, to restore the River Rom through the town centre. The Council will use development opportunities to enhance the River Rom and will place significant emphasis on improving public accessibility through the creation of a river pedestrian route, opening up culverts and naturalising the river channels. Where appropriate, contributions may be sought from developers to enable this'.

The supporting text to the policy states that *'the River Rom has been identified by the Environment Agency as a priority location for river restoration and deculverting'*, which should *'reduce flood risk by making space on site for flood waters to be stored'*, in addition to providing recreational, public realm and wildlife benefits.

2.4.4 Minerals and Waste Planning

Waste developments are considered in accordance with the Joint Waste Development Plan (2012), which was produced in partnership with the London Boroughs of Barking and Dagenham, Newham and Redbridge and covers all four local authority areas. Policy W5 of that plan requires consideration of drainage and flood risk when determining applications for waste management developments. Three sites in Havering are allocated in the plan for waste development, all of which were assessed for flood risk prior to allocation.

Applications for minerals developments are considered in accordance with policies contained in the LBH Adopted Havering Core Strategy and Development Control Policies DPD, flood-related policies from which are detailed in Section 2.4.1 above. With regard to minerals site allocations, as noted in Section 2.4.1 above, the DPD envisages that minerals sites would be allocated in a separate Minerals DPD. Policy CP13 of the Core Strategy states that LBH *'will identify specific sites/preferred areas in a separate dedicated Minerals DPD'*. However, this document is no longer going to be produced and no minerals sites have yet been allocated. Any planning applications for new mineral extraction will be considered in accordance with the policies in Havering's Core Strategy and Development Control Policies DPD, the London Plan (Policy 5.20) and the NPPF. More specifically, applications will be considered against the criteria in Havering's Core Policy CP13 and Development Control Policy DC42 on minerals extraction; the latter includes consideration of flood risk as previously discussed in Section 2.4.1

2.4.5 Adopted Havering Supplementary Planning Documents

LBH has issued a range of topic-specific Supplementary Planning Documents (SPDs) in support of their planning policies, several of which have links to flood management:

- Planning Obligations SPD (2013)
- Landscaping SPD (2011)
- Heritage SPD (2011)
- Residential Extensions and Alterations SPD (2011)
- Residential Design SPD (2010)
- Designing Safer Places SPD (2010)
- Protecting and Enhancing the Borough's Biodiversity SPD (2009)
- Sustainable Design and Construction SPD (2009)

Area-specific SPDs have also been produced for Emerson Park and Hall Lane, but these relate to landscape and townscape character, so are not of direct relevance to flooding. Environment Agency Flood Policy.

2.4.6 Thames Catchment Flood Management Plan (2008)

The Thames Catchment Flood Management Plan (Thames CFMP) assesses flood risk within the Thames catchment, within which the Havering area is situated. It considers all sources of flooding, but acknowledges a lack of available data in relation to surface and groundwater flooding. The CFMP finds that 1,000 to 2,000 homes within the Havering area have a 1% annual probability river flood.

The CFMP uses four key messages to summarise how future flood risk needs to be managed:

- 'Flood defences cannot be built to protect everything'.
- 'Climate change will be the major cause of increased flood risk in the future'.
- 'The floodplain is our most important asset in managing flood risk'.
- 'Development and urban regeneration provide a crucial opportunity to manage the risk'.

Havering lies within the Beam and the Ingrebourne CFMP sub-areas, which are within Sub-Area 9 'London Catchments'. These are identified as areas of low, moderate or high flood risk areas in which the EA are already managing the flood risk effectively but where further action may be needed to keep pace with climate change. The plan states that *'The most sustainable approach to managing future flood risk will be to bring about adaptation of the urban environment. There are some major opportunities to reduce flood risk through the appropriate location, layout and design of redevelopment. This will make properties more resilient or resistant to flood water, therefore reducing the consequences of flooding.'*

The EA state that they will develop their emergency response planning *'to deal with extreme floods, including raising public awareness and working with key partners to identify critical infrastructure at flood risk'*. The EA further note that they *'want to continue to maintain the existing flood defences and when redevelopment takes place, replace and improve them so that they are more effective against the impacts of climate change'*. The EA will also be seeking *'to remove culverts and other structures that cause significant conveyance problems'*. With their partners, the EA state that they *'will look for opportunities to reduce flood risk by recreating river corridors in urban areas'*. The EA note that *'opening up culverts and re-creating river corridors through redevelopment will result in more space for the river to flow, more floodplain where water can be stored and reduced flood risk'*. Regeneration is cited as a key means through which flood risk can be reduced.

2.4.7 South Essex Catchment Flood Management Plan (2008)

The South Essex CFMP includes the River Mardyke catchment. The Mardyke falls under Policy Unit PU11 for which the preferred policy is "*P6 – Take action with others to store water or manage runoff*". The EA have advised that care should be exercised with regard to this policy as the later Mardyke Flood Risk Study (2011) identified limited flood risk to people and property in the downstream policy unit. However the underlying philosophy of the policy is supported by the use of SuDS, promoted by Havering as part of their LLFA role.

2.4.8 Thames Estuary 2100 Plan

The Thames Estuary 2100 (TE2100) Plan, published in 2012, is part of the TE2100 Project, which was set up by the EA in 2002 to pro-actively plan for future flood events on the River Thames from Teddington in the west to its mouth of the estuary, having climate change adaptation at its core. The Plan sets out the EA's recommendations for flood risk management for London and the Thames estuary through to 2100 and beyond, with a range of short, medium and long-term actions.

The TE2100 Plan divides the floodplains of the tidal Thames into 23 separate policy units. These are generally independent flood cells, where tidal flooding could occur from overtopping or failure of defences in the policy unit but not from adjacent policy units. The policy units are grouped into 8 action zones. There is also an estuary-wide action zone (zone 0).

Havering contains most of the TE2100 Rainham policy unit. The western boundary of the LBH area runs along the Beam River and the eastern boundary crosses Wennington Marshes.

The flood risk management policy set out in the TE2100 Plan for Rainham policy unit is as follows:

- Rainham policy unit: Policy P4, to *take further action to keep up with climate and land use change so that flood risk does not increase*. This will be achieved by improvements to the defences including river walls/banks and flood control gates.

Specific actions in the TE2100 Plan that refer to LBH are as follows:

- To maintain, enhance or replace the existing river defence walls/banks and flood control structures;
- Implement a major improvement to the flood risk management system, probably between 2050 and 2070;
- To incorporate the Riverside Strategy concept into local plans, strategies and guidance documents;
- To agree a programme of managing flooding from other sources in the defended tidal floodplain;
- To inform the development and revision of local council strategic flood risk assessments (SFRAs) and flood plans;
- To agree partnership arrangements and principles to ensure that new development in the tidal flood risk area is safe and where possible applies the NPPF to reduce the consequences of flooding;
- To agree partnership arrangements for floodplain management;
- To agree a programme of floodplain management;
- To agree a programme for habitat enhancement and replacement.

The implementation of flood defence improvements has already commenced under the EA's Thames Estuary Asset Management (TEAM) 2100 programme.

It is important that requirements for safeguarding land are incorporated into strategic plans, in particular site allocation documents for Thames riverside development. Most of the hard Thames Tidal Defences (TTD) within Havering could be raised within the existing defence footprint (or with only a small increase in width) but the structures would be tall, unattractive and would restrict public access and views of the estuary. The embankments could accommodate a small amount of raising on the existing footprint but larger amounts of raising would require widening of the embankment. Additional space will be needed when the defences are raised both for the defence engineering works and also for other enhancements such as suitable public access. Land is also required for maintaining, replacing and improving the flood defences along the Thames. To increase the height of a 'soft' embankment significant extra width will be required of approximately 20-30 meters. Without this space it will not be possible to raise the height of the embankment without adding 'hard' structural elements to the top. This is likely to increase costs of future raising and the structures would be tall, unattractive and would restrict public access and views of the estuary.

Corridors of land along the existing defence lines should therefore be safeguarded. This should include space for vehicle access for maintenance and repair of the defences. We suggest that the width of land that should be safeguarded for future flood risk management interventions on the Thames could be of the order of 10 metres. More space may be required especially if wider enhancements are to be achieved. However the land requirements will depend on the particular site, the defence type and proposed riverside improvements, and should be discussed and agreed with the EA.

2.5 Emerging Local Planning Policy

LBH is currently preparing a new Havering Local Plan to replace the adopted Core Strategy and Site Specific Allocations DPDs. The Local Plan will include strategic and development control policies, including broad locations for growth, but will not include site allocations (which will be the subject of a separate Local Plan to follow on). Public consultation on the key issues and priorities for the Local Plan took place in February 2015 however no information on specific policies is available at this time.

2.6 Regional and Local Flood Plans

2.6.1 London Strategic Flood Response Framework (London Resilience Partnership, Version 3, 2015)

The Framework covers flooding with London-wide impacts – either severe flooding in one location requiring a London-wide response or several less severe flooding incidents in multiple locations within London.

The Framework *'aims and objectives are to:*

- Provide strategic direction to London responders, before, during and after a significant flooding incident in London;
- Provide the necessary links to existing plans and procedures;
- Identify triggers and mechanisms for invoking a London-wide response;
- Provide responders with guidance about warning the public before, during and after a flood;
- Confirm the actions responders should take at each stage of a flooding incident'.

2.6.2 Multi-Agency Flood Plan for London Borough of Havering (Havering Borough Resilience Forum / LBH Emergency Planning and Business Continuity Service, 2016)

The Borough Resilience Forum for Havering consists of the following key partners:

- London Fire Brigade;
- Metropolitan Police Service;
- London Ambulance Service;
- Environment Agency;
- NHS E (L) (London);
- London Borough of Havering;
- Barking, Havering & Redbridge University Trust;
- North East London Foundation Trust;
- Public Health England; and
- Port of London Authority

The Plan seeks to provide 'a coordinated multi-agency response framework to mitigate the impact of a large-scale flood event in the London Borough of Havering', through achieving following objectives:

- 'Prepare key parts of the community susceptible to flooding through the provision of advice and information;
- To prioritise the identification and required responses to protect the vulnerable within the community;
- To support the Environment Agency in the provision of warnings to communities at flood risk, where technically feasible;
- Manage precautionary actions to preserve life for the highest impact flood risks;
- Provide accurate and timely information to public and local business on flood response;
- Manage the wider impact of borough flooding events to reduce disruption to the utilities, communities and environment;
- Lead recovery activity to support the recovery of communities and business;
- Maintain critical services within each organisation as part of business continuity arrangements'.

2.6.3 Havering Preliminary Flood Risk Assessment

In order to provide better and more comprehensive management of flood risk, the Flood & Water Management Act 2010 assigned new responsibilities to local authorities. As a result, LBH works in partnership with the EA, water companies and others to manage various aspects of flood risk.

The Preliminary Flood Risk Assessment (PFRA) for Havering was published in April 2011[6] as part of the Drain London[7] programme. The PFRA reviews existing available flood data and seeks to predict the location and likelihood of local sources of flooding, from a range of sources, in the future, taking into account factors such as climate change.

In addition to enabling LBH to comply with their legal requirements as the Lead Local Flood Authority, the PFRA sought to establish productive working partnerships with a range of organisations in relation to flood risk to ensure a co-ordinated approach to the management of local flood risk across London.

The PFRA forms a key data source for this updated SFRA.

2.6.4 Havering Surface Water Management Plan

The Surface Water Management Plan (SWMP) for Havering was developed in 2011 as part of the Drain London[7] programme. The SWMP uses data and modelling to seek to understand the causes and effects of surface water flooding – that from sewers, drains, groundwater, and runoff from land, small watercourses and ditches that occurs as a result of heavy rainfall. The plan also seeks to manage surface water over the longer-term through the work of a range of bodies, including LBH, the EA, Thames Water and Transport for London. It includes potential high-level solutions to the flooding problems identified.

The SWMP collated historic records of flooding within Havering which has been utilised as part of this SFRA. Additionally, as part of the SWMP a hydraulic model was developed in order to assess the potential impact of rainfall generated surface water flooding. However the modelling methodology was not the same as the EA's

6 Available at: http://www.havering.gov.uk/Pages/Services/Flooding-advice.aspx?l1=100001&l2=200039
7 Drain London: http://www.london.gov.uk/priorities/environment/looking-after-londons-water/drain-london

uFMfSW. We have therefore chosen to adopt the uFMfSW for this SFRA to identify areas at risk of surface-water flooding.

The SWMP also divided the borough into Critical Drainage Areas; these delineated the borough into sub-areas and estimated the damages that could result from flooding. However these are not the same as the CDAs that could be defined by the EA or the HCDA defined as part of this study (see Section 4.8). The Drain London CDAs include flood risk from rivers and therefore is not limited to surface-water which is the aim of the HCDA as under this SFRA the fluvial flood risk is incorporated by the inclusion of Flood Zones.

2.6.5 Havering Flood Risk Management Strategy

The Havering Flood Risk Management Strategy (FRMS) was developed in June 2011 and published in 2015. Under the Flood and Water Management Act (2010), each Lead Local Flood Authority is required to develop a FRMS. The objective of the FRMS is to tackle 'local' flood risk (e.g. surface water, groundwater and ordinary watercourses) as opposed to Main River fluvial flooding. In addition it will identify short-term (2 years) measures to tackle flood risk and agree the principles for the longer-term management of flooding in the Borough. The FRMS seeks to bring together all the Flood Risk Management Authorities that contribute to the mitigation of flood risk within Havering.

2.7 Other Relevant Plans and Policies

2.7.1 Thames Strategy East (Thames Estuary Partnership, 2008)

The Thames Estuary Partnership consists of major stakeholders with an interest in the Thames. These include the Department for Communities and Local Government, EA, Natural England, English Heritage, the Royal Society for the Protection of Birds (RSPB), Groundwork UK, the Greater London Authority, the Port of London Authority and relevant local councils, including LBH.

Study area covers land in close proximity to the River Thames, including within the Havering area. The document contains strategic guidance on a range of issues, including planning, flood risk and climate change, with the aim of achieving the 'Vision for the River'. The Vision is to achieve: *'A world class river where the diverse social, economic, cultural and environmental legacy is recognised through:*

- conserving and enhancing the natural assets of the area and making a positive contribution to its character;
- balancing the competing demands placed on the river - the region's greatest physical asset;
- creating vibrant, sustainable communities alongside the Thames that include and benefit new and existing residents;
- creating a high quality, multi-functional, well-connected network of river-related spaces and places that are accessible to all, and are managed and maintained to the highest standards for people and wildlife;
- promoting the use of the river as an artery for public, commercial, industrial, leisure and recreational transport and use'.

Strategic Guidance (SG) 24 to 27 considers flood risk.

SG24 states that *'Development proposals for riverside sites and for existing parks and open spaces should investigate the potential for full or part realigned flood defences prior to commencement of site planning. Flood defences should then be realigned as and when appropriate by following Environment Agency guidance. Even in cases where flood defences are not re-aligned, development should be set back from*

existing flood defences to allow space for their future maintenance and upgrade. It will not be appropriate to set back some river dependent uses such as wharves, boatyards and passenger piers'.

SG25 states that *'Development proposals should seek to improve the visual appearance and ecological value of existing sheet piling and concrete slab river defences following Environment Agency guidance contained in 'Partnership in Planning - Riverbank Design Guidance for the Tidal Thames''*.

SG26 recommends that *'Existing open space infrastructure should be re-assessed in terms of its flood storage potential as part of a multi-functional environmental infrastructure resource. Environment Agency initiatives should identify areas where managed retreat for flood risk management can provide opportunities for habitat creation'*.

SG27 states that *'Development proposals should aim to minimise surface water run-off through incorporation of sustainable drainage systems and should generally avoid discharging clean surface water into the combined sewer system'*.

The Strategy also recognises the increasing risk of flooding resulting from climate change.

Parts of Reach 5 and Reach 6 identified within the Strategy are within the Havering area. Each Reach has specific policy guidance with regard to flood risk management and climate change.

For Reach 5, 'Halfway and Erith Reach', Reach Guidance RG5.10 and part of RG5.12 are of relevance to Havering.

RG5.10 states *'Undertake a hydrological study of Rainham Creek and investigate opportunities to reconnect the Creek to the western edge of Rainham Marshes through intermediary channels and generally enhance the flood management function and biodiversity of the Ingrebourne, Beam and Goresbrook rivers, through creation of floodplain habitat adjacent to the rivers'*.

RG5.12 states *'Seek opportunities for creative realignment of flood defences and making space for water in all riverside development proposals, where defences are being replaced and at riverside open spaces …'*.

For Reach 6, 'Erith Reach, Erith Rands and Long Reach', Reach Guidance RG6.13 and part of RG6.12 are of relevance to Havering.

RG6.12 states *'Continue the research into strategic tidal flood risk management options at Rainham [and] Wennington … Marshes and explore opportunities for flood storage along … marsh watercourses and ditches as part of a multi-functional green space infrastructure designed to enhance biodiversity value'*.

In common with RG5.12, **RG6.13** states *'Seek opportunities for creative flood defence realignment and making space for water in all riverside development proposals, where defences are being replaced and at riverside open spaces'*.

2.7.2 Rainham and Beam Park Planning Framework

In 2015 Rainham and Beam Park was identified as one of Greater London Authority's (GLA's) new housing zones. In January 2016 the Rianham and Beam Park Planning Framework was published which will form part of the evidence base of the emerging Local Plan and will inform area specific policies. It will also be used as a material planning consideration in the assessment of planning applications.

The illustrative masterplan set out in the Framework establishes the following development headlines for the area:

- 3,250 homes, of which 1,000 are houses;

- 3,500 – 4,000m^2 new town centre uses in Beam Park including 2,000 m^2 of retail floor space and a new railway station;
- A new 2-Form Entry Primary School;
- Health and community facilities at Beam Park Centre; and
- Expansion of Havering College.

The Environment Agency Flood Map indicates that the majority of the Rainham and Beam Park Planning Framework area is within Flood Zone 3. However, some areas are located within 'Areas Benefitting from Defences' due to flood protection provided by the TTD, and the flood defences along the River Beam and the Ingrebourne River. A Flood Management and Drainage Strategy has been developed to inform the production of the Planning Framework. The strategy identifies a number of development sites within the Framework area at fluvial flood risk from river flooding in the 1 in 100 year event including climate change and identifies a number of recommendations to mitigate the identified flood risk including:

- 'Dovers Corner / Havering College: Open up the culverted section of the Havering New Sewer which flows through the Dovers Corner site, and provide an open channel with a width of 5m and a bed and bank height the same as the open channel upstream and downstream.
- Suttons Industrial Park: It is suggested to open up the culvert in the Sutton Industrial Park site and provide an open channel with a width of 5m and a bed and bank height the same as the open channel up-stream and downstream to reduce the flood risk at this site.
- Beam Park: Upgrading the existing Washlands Flood Storage Area (FSA) may reduce the risk from flooding at the Beam Park site. It is recommended that the area of the site still shown to be at risk from flooding during the 1 in 100 year event including climate change (when the Washlands FSA is upgraded) is designated as green open space. Planning applications for this site should follow the new Environment Agency guidance on climate change, once published.'

Policy PG28 states that for any planning application '*Applicants are expected to*:

- Limit surface water runoff rate and volume to the peak Greenfield runoff rate and volume;
- Follow a Sustainable Drainage System (SuDS) management train, a set out by the SuDS Manual, CIRIA Report C753, to ensure that natural catchment management processes are replicated as closely as possible;
- Demonstrate how the use of green roofs and rain water harvesting systems have been considered where appropriate;
- Demonstrate how Water Sensitive Urban Design (CIRIA C723, C724) has informed the design and development of the proposals;
- Demonstrate how SuDS are an integral aspect of the development layout and design, its open spaces, public realm and gardens and how they deliver wider community benefits, including improvements in health, wellbeing and quality of life, as well as supporting the provision of habitats and places for wildlife to live and flourish.'

2.7.3 Romford Town Centre

The Romford Town Centre Development Framework will be used to inform the policies and land allocations in the emerging Local Plan. The planning recommendations for development in various flood zones (see

Section 7.12) will help inform decisions on land use policies and site specific land allocations contained in the emerging Local Plan. In summary Romford Town Centre has been identified as:

- A metropolitan Centre, which will continue to be the main focus for retail growth'
- An area with the potential to bring forward high-density residential and mixed use development'
- A focus for office development within Romford Town Centre. The majority of which is included in the Office Quarter and the preferred location for large-scale office development''
- An area to promote cultural and arts uses to diversify the evening economy; and
- An area where accessibility should be increased by considering the potential to introduce a Park and Ride facility as part of a wider strategy to encourage modal shift.

3. Approach to Strategic Flood Risk Assessment

3.1 Role of the SFRA

The important role of SFRAs in the local plan process is set out in the National Planning Practice Guidance (NPPG) (2014). It states that *'local planning authorities should use the Assessment to:*

- determine the variations in risk from all sources of flooding across their areas, and also the risks to and from surrounding areas in the same flood catchment;
- inform the sustainability appraisal of the Local Plan, so that flood risk is fully taken into account when considering allocation options and in the preparation of plan policies, including policies for flood risk management to ensure that flood risk is not increased;
- apply the Sequential Test and, where necessary, the Exception Test when determining land use allocations;
- identify the requirements for site-specific flood risk assessments in particular locations, including those at risk from sources other than river and sea flooding;
- determine the acceptability of flood risk in relation to emergency planning capability;
- consider opportunities to reduce flood risk to existing communities and developments through better management of surface water, provision for conveyance and of storage for flood water'.

The ideal solution to effective and sustainable flood risk management is a planning led one, i.e. where possible prioritise development away from areas that are susceptible to flooding. The NPPF stipulates the application of a sequential approach to site allocation – seeking development sites within areas of lowest flood risk in the first instance (Flood Zone 1 – low probability of flooding). Only if it can be demonstrated that there are no suitable sites within these areas should alternative sites (i.e. within areas that may potentially be at greater risk of flooding – Zones 2 (medium probability), 3a (high probability) or 3b (functional floodplain)) be contemplated, taking account of the vulnerability of the proposed land use.

The Sequential Test, which is set out in the NPPF with further detail provided in the NPPG, must be utilised in both allocating sites and determining applications. Tables 1 to 3 in the NPPG stipulate 'appropriate' land uses for each Flood Zone. Land uses are divided into five 'vulnerability classifications', detailed in Table 2 of the NPPG:

- Essential Infrastructure
- Highly vulnerable
- More vulnerable
- Less vulnerable
- Water-compatible development.

Table 3 of the NPPG (reproduced as Table 3-1) identifies types of development (by vulnerability classification) that should not be permitted in particular Flood Zones. It also identifies circumstances in which the 'Exception Text' must be passed for development not initially permissible in that zone , where, following application of the Sequential Test, no sites are available in zones with lower flood risk.

Table 3-1: NPPG Table 3 - Flood Risk Vulnerability and Flood Zone Compatibility

Flood Zone	Essential Infrastructure	Highly Vulnerable	More Vulnerable	Less Vulnerable	Water Compatible
1	Appropriate	Appropriate	Appropriate	Appropriate	Appropriate
2	Appropriate	Exception Test required	Appropriate	Appropriate	Appropriate
3a	Exception Test required*	Not Appropriate	Exception Test required	Appropriate	Appropriate
3b	Exception Test required*	Not Appropriate	Not Appropriate	Not Appropriate	Appropriate*
* Conditions may be applicable (refer to NPPG)					

Paragraph 102 of the NPPF states that 'For the Exception Test to be passed: *it must be demonstrated that the development provides wider sustainability benefits to the community that outweigh the flood risk, informed by a Strategic Flood Risk Assessment where one has been prepared; and a site-specific flood risk assessment must demonstrate that the development will be safe for its lifetime taking account of the vulnerability of its users, without increasing flood risk elsewhere, and, where possible, will reduce flood risk overall.'*

The latter point includes a requirement to take account of the future risk from climate change over the lifetime of the development.

This Level 1 SFRA provides the information required to enable LBH to apply the Sequential Test and to identify whether the Exception Test will be required.

The Planning Practice Guidance (SFRA guidance, paragraph 012) states that *'where a Level 1 Assessment shows that land outside flood risk areas cannot appropriately accommodate all the necessary development, it may be necessary to increase the scope of the Assessment to a Level 2 to provide the information necessary for application of the Exception Test where appropriate'*. The requirement for a Level 2 SFRA will be determined once LBH have confirmed their planning allocation sites. In the interim period, a Level 1 SFRA annex is included in order to consider the potential flood risk implications of Rainham and Beam Park (part of the London Riverside Opportunity Area) and Romford Metropolitan Centre, both of which are identified in the London Plan for development in Havering over the Plan period. The annex provides recommendations to inform a Level 2 SFRA (should it be required).

In addition to providing the information required to apply the Sequential Test, this document also contains a series of general recommendations for local planning policy and development management. Overlaps with emergency planning are also discussed.

3.2 Methodology for the Level 1 SFRA

In accordance with the NPPF a Level 1 SFRA should collect and refine data in order to define the flood zones. The SFRA should provide the basis of applying the Sequential Test based on this identification of Flood Zones.

The adopted methodology for this Level 1 SFRA is summarised in the subsequent sections.

3.2.1 Data Collection

This involves the collection and review of data pertaining to known and perceived flood risk and current planning policy within Havering. This has been collected from a number of sources including LBH, EA Anglian Water and Thames Water.

3.2.2 Assessment of Flood Risk

The extent and probability of flood risk within Havering has been categorised and assessed for the SFRA. The following actions have been undertaken:

- The identification of flood risk zones 1, 2, 3a and 3b (functional floodplain);
- Identification of locations of flood risk from other sources (ordinary watercourses, groundwater, reservoirs, canals);
- Identification of locations at risk of surface water flooding (termed Havering Critical Drainage Areas or HCDA), particularly outside fluvial or tidal risk areas;
- Identification of areas protected by existing flood defences and that could be at risk should they fail.

3.2.3 Climate Change

Climate change has the potential to significantly increase the consequences of flooding within Havering. The assessment of flood risk has taken into account the estimated impact of climate change up to the year 2115[8]. This has been assessed for both changes in rainfall leading to an increase in fluvial flood risk due to higher river levels and the impact of higher tidal flood levels on the River Thames. This has the potential to increase the current risk of flooding through an increase in rainfall frequency and intensity. The frequency of high water levels on the River Thames is also expected to increase.

3.2.4 Outputs

The following outputs have been produced as part of this SFRA:

- Delineation of Flood Risk Zones (to comply with the Sequential Test);
- Flood maps indicating areas at risk of flooding;
- Assessment of residual risk of flooding;
- Maps of Havering Critical Drainage Areas;
- SFRA Report;
- Suggested policies and guidance for the local planning authority on the management of flood risk in the Borough;
- Guidance for developers and LBH planning officers dealing with applications.

8 This is based on the BIM and river Mardyke detailed modelling increasing the existing 1% (1 in 100) event peak flow rates by factors specified in the Environment Agency's guidance issued in February 2016

4. Data Collection and Methodology

4.1 Overview

This Section details the data used to develop this SFRA and the methodology used to analyse the flood risk.

The flood risk knowledge within Havering includes (but is not limited to):

- experience of council engineers and staff, local councillors and others;
- records and information on past flooding from all sources (primarily river, surface water, groundwater and sewers);
- Flood Map for Planning (Rivers & Sea) and the uFMfSW showing areas most susceptible to local flooding. We have used the latest information, updated by the EA in January 2014;
- Previous studies such as the Drain London project.

The application of this data has facilitated the delineation of zones of 'high', 'medium' and 'low' probability of fluvial flooding, HCDA and the formulation of planning and development management recommendations. A summary of the findings based on the analysis is provided in Section 5.

An overview of the core datasets, including their source and their applicability to the SFRA process, is outlined here. It should be noted that information on flood risk is continually changing as new flooding events occur and further modelling and analysis is undertaken. Therefore, whilst the datasets used are the best available at the time of publication, the SFRA should be reviewed periodically (see Section 7 for a checklist), with LBH contacted in the meantime for the latest information.

4.2 Information from Historic Flooding

Please refer to Figure 102 for fluvial flooding and Figure 110 for surface water flooding

Information on previous flooding incidents within LBH has been collated from a variety of sources. A number of fluvial flood events have been identified dating back to 1707.

Data on previous flood events has been sourced from:

- Previous LBH (2007 and 2014) SFRA's;
- Drain London Preliminary Flood Risk Assessment;
- LBH Records;
- EA records;
- Thames Water records; and
- Anglian Water records.

Thames Water provided information on flooding resulting from surcharge and blockage of surface, combined and foul water sewers for the Drain London project in 2011. Up-to-date information has been provided by Thames Water and Anglian Water for this update of the SFRA. This data, known as DG5 flooding data, is subject to confidentially issues and specific incidences where individual properties were affected cannot be

divulged. However, Thames Water is allowed to confirm how many properties have been subject to DG5 flooding per postcode area (the first four digits of the postcode are provided only).

4.3 Delineation of Flood Zones 1, 2 and 3

The risk of an event (in this instance a flood event) is a function of both the probability that the flood will occur, and the severity of the consequences. This SFRA endeavours to assess the likelihood (or probability) of fluvial (river) flooding, categorising the Borough into zones of low, medium and high probability. It should be noted that this delineation does not incorporate the risk of flooding from other sources, which also pose a risk. It then provides recommendations to assist LBH to manage the consequence of flooding in a sustainable manner, for example through the restriction of vulnerable development in areas of highest flood risk.

To this end, a key outcome of the SFRA process is the establishment of the Sequential Test in accordance with the NPPF. To inform the planning process, it is necessary to review flood risk across the area, categorising the area in terms of the likelihood (or probability) that flooding will occur. The Borough has been delineated into the fluvial Flood Zones summarised below, in line with the NPPF. The delineation of Zones 1, 2 and 3a is based on the EA's Flood Map for Planning (Rivers & Sea), whereas Zone 3b has been derived separately.

The EA's Flood Map for Planning (Rivers and Sea), available on its website[9], shows the natural floodplain, ignoring the presence of defences, and therefore areas potentially at risk of flooding from rivers. The Flood Map shows the area that is susceptible to a 1% (1 in 100) annual chance of flooding from rivers in any one year. It also indicates the area that has a 0.1% (1 in 1000) annual chance of flooding from rivers in any given year. This is also known as the Extreme Flood Outline. The Flood Map outlines for Havering have been produced from a combination of a national generalised computer model and available historic flood event outlines. The EA's knowledge of the floodplain is continually being improved by a variety of studies, detailed models, data from river flow and level monitoring stations, and actual flooding information. The EA has an ongoing programme of improvement, and updates are made on a quarterly basis.

The derivation of Flood Zone 3b is summarised below and presented in Figure 103. Changes to the delineation of flood zones since the 2014 SFRA are summarised in Section 5.6.

Flood Zone 1 – Low Probability

Flood Zone 1 (FZ1) Low Probability comprises land assessed as having a less than 1 in 1,000 annual probability of river flooding (<0.1%). For SFRA purposes, this incorporates all land that is outside of the Zone 2 and Zone 3 flood risk areas. It is important to note that land within Flood Zone 1 may still be vulnerable to flooding from other, non-fluvial, sources.

Flood Zone 2 – Medium Probability

Flood Zone 2 (FZ2) Medium Probability comprises land assessed as having between a 1 in 100 and 1 in 1,000 annual probability of river flooding (1% – 0.1%) in any year. In other words, land situated between Zones 1 and 3a. Zone 2 Medium Probability is based on the most recent (February 2016) EA Flood Map for Planning (Rivers and Sea).

Flood Zone 3a - High Probability

Flood Zone 3a High Probability comprises land assessed as having a 1 in 100 or greater annual probability of river flooding (>1%) in any year. Zone 3a High Probability is based on the most recent (February 2016) EA Flood Map for Planning (Rivers and Sea).

9 http://www.environment-agency.gov.uk/

Flood Zone 3b – Functional Floodplain

Flood Zone 3b (FZ3b) Functional Floodplain is defined in Table 1 of the NPPG as those areas in which "water *has* to flow *or be stored in times of flood"*. The definition of functional floodplain remains somewhat open to subjective interpretation, but the NPPG requires that the boundaries shown in the SFRA should be as agreed with the EA. The NPPG states that *"the identification of functional floodplain should take account of local circumstances and not be defined solely on rigid probability parameters. However, land which would flood with an annual probability of 1 in 20 (5%) or greater in any year, or is designed to flood (such as a flood alleviation scheme) in an extreme (0.1% annual probability) flood, should provide a starting point for consideration and discussion to identify the functional floodplain"* (NPPG, SFRA guidance, paragraph 015). The guidance (paragraph 015) further clarifies that:

'The area identified as function floodplain should take into account the effects of defences and other flood risk management infrastructure. Areas which would naturally flood, but which are prevented from doing so by existing defences and infrastructure or solid buildings, will not normally be identified as function floodplain.'

In addition, the guidance states that areas intended to flood, such as upstream flood storage areas (FSA) (e.g. The Washlands FSA), should also be identified as functional floodplain.

In 2011 the EA completed the Mardyke Flood Risk Study (JBA, March 2011). This included the development of a hydraulic model of the watercourse which was run to develop predicted flood outlines for the Mardyke. The 5% (1 in 20) AEP undefended flood extent developed as part of this study has been adopted as the extent of FZ3b on the Mardyke.

No detailed modelling is available to define the extent of FZ3b on Emerson Park Stream, Paines Brook and Weald Brook. Therefore following consultation with the EA; areas identified as 'high' risk on these watercourses in the National Flood Risk Assessment (NaFRA) have been classified as the FZ3b. It should be noted the NaFRA data identifies 'high risk' as a 3.3% (1 in 30) AEP risk or greater.

The EA completed a project in 2013 to update the hydraulic modelling of the Rivers Beam, Ingrebourne and Marshes (BIM; please refer to Figure 103). One output of this study was detailed flood extent maps of these watercourses for a range of storm events. The 5% (1 in 20) annual chance event extent has been adopted as Zone 3b.

The EA completed a flood mapping study of the Blacks Brook in 2015. The outputs of the hydraulic modelling for the 5% (1 in 20) annual chance event extent have been adopted as Zone 3b.

The open land surrounding existing solid buildings in areas designated as Zone 3b form important flow paths and FSAs. It must be protected from development by appropriate planning policies and decisions. Zone 3b should be interpreted in terms of:

- 'existing development' and
- 'new development' (including all new development on previously undeveloped land, or on surfaces that are currently permeable, or on surfaces that are currently impermeable but not designed to flood).

It is important to recognise that all areas within Zone 3b are subject to relatively frequent flooding – on average, 5% (1 in 20) annual chance. There are clear safety, sustainability and insurance implications associated with future development within these areas, and informed planning decisions must be taken with care. This is reflected in Section 7.

4.4 Dry Islands

There are areas within Havering which, while in Zone 1, would be surrounded by floodwater during a flood event. For this reason, development proposals in these 'dry island' areas should be accompanied by a flood evacuation plan suitable for the NPPF category into which the surrounding area falls. For example, a development proposal on a dry island site that is categorised as Zone 1 Low Probability, but wholly surrounded by the 1% (1 in 100) annual chance floodplain, should be accompanied by a flood evacuation plan appropriate to Zone 3a High Probability.

4.5 Consideration of Climate Change

There is clear scientific evidence that global climate change is happening now and cannot be ignored. Further information is provided in Section 5.5. Changes in the extent of inundation due to climate change are likely to be negligible in well-defined valleys, but could be dramatic in very flat areas. Changes in the depth of flooding under the same allowance will increase the probability of a given flood. This means that a site currently located within a lower risk zone (e.g. Zone 2) could in future be re-classified as lying within a high risk zone (e.g. Zone 3a). This in turn could have implications for the type of development that is appropriate according to its vulnerability to flooding.

In February 2016 the Environment Agency updated its guidance on the allowances to be made for the predicted impact of climate change. Of particular relevance to this SFRA is the revised guidance on:

- Peak river flow
- Peak rainfall intensity; and
- Sea levels.

4.5.1 Peak River Flow and Fluvial Flood Risk

The allowance to be made for the predicted impact of climate change on peak river flows throughout the UK is subject to the location (river basin district[10]), timescale (design-life) to be considered and the vulnerability classification (see Paragraph 66 of the NPPG) of the proposed development. For Havering the uplift factors to be applied are summarised in Table 4-1.

Table 4-1 : Recommended Climate Change allowances for Peak River Flow

Allowance	2015 to 2039	2040-2069	2070-2115
Upper End	25%	35%	70%
Higher Central	15%	25%	35%
Central	10%	15%	25%

The following data and assumptions have been made to estimate the extent of the flood zones as a result of climate change to the year 2115:

- In the absence of detailed modelling FZ3b will broadly become the extent of the current FZ3a (subject to the free passage of water through urban areas; see Section 0);

[10] https://www.gov.uk/government/publications/flood-risk-assessments-river-basin-district-maps

- Future FZ3a has been estimated based on the modelled impact of climate change on the BIM model, Blacks Brook model, the TE2100 hydraulic model and the Mardyke Flood Risk Mapping Study model based on the uplift factors required by EA guidance;

- Analysis of ground levels should be made to determine whether a site currently in FZ1 (<0.1% AEP flood) should be considered as lying within FZ2 (the 0.1% AEP flood) at the end of this century.

Please refer to Figures 105A to E for a comparison of the impact of Climate Change on FZ3 for the full range of potential allowance factors. The predicted flood extents are based upon the undefended scenario i.e. the removal of raised flood defences, for the Mardyke and BIM models.

For certain watercourses the extent of the current hydraulic model used to generate the 'with climate change' predicted flood extents does not cover the full extent of published Flood Zones (for an example see the upper reaches of the tributaries to the River Ingrebourne in Figure 105e). The extent of the published Flood Zones in such areas was developed using a different model to the watercourse model. Should a site be proposed for development in such areas the developer would need to consider the potential impact of climate change through a site-specific flood risk assessment.

It is not possible to extrapolate these assessments of climate change impact to estimate the potential changes to Zone 2. Detailed modelling has not been undertaken to estimate the impact of climate change on such an extreme event. However, given the statistical rarity of a 0.1% (1 in 1000) annual probability event it is likely that the increase in extent due to climate change will be relatively small as the likely increase in rainfall is smaller as a portion of the total.

4.5.2 Peak Rainfall Intensities

The updated guidance requires the testing of two uplift factors across all of England as summarised in Table 4-2. SFRAs and site-specific FRAs are expected to test the impact of both allowances to understand the potential range of impact based on the design-life of the proposed development.

Table 4-2 : Recommended Climate Change allowances for Peak Rainfall Intensity

Allowance	Total potential change (1961-90 baseline)		
	2015 to 2039	2040-2069	2070-2115
Upper End	10%	20%	40%
Central	10%	10%	20%

4.5.3 Sea Level Rise

The allowances for the predicted impact of climate change upon sea level rise is summarised in Section 5.3.2.

4.6 Flood Defences

Please refer to Figure 106 for Tidal/Fluvial defences and Figure 108 for culverts

The EA's Flood Map for Planning (Rivers and Sea) does not take account of the presence of raised defences. The NPPF states that defended areas are still at risk of flooding and therefore the adequacy of these defences must be considered when considering the development of a site in these areas. This will be

included when the Level 2 SFRA is developed for allocation sites, if required. This aspect should also be considered when developing a FRA for a windfall site.

The extent of formal flood defences is indicated in Figure 106. This figure additionally indicates the areas that benefit from these defences (ABDs) in the event of a 1% (1 in 100) annual chance fluvial or a 0.5% (1 in 200) annual chance tidal flood event.

In the complex rural and built environments in which we live, many natural and manmade structures and features can affect the routing of flood waters. Some of these may have been specifically constructed (i.e. known as 'formal') for the purposes of managing water flow and reducing flooding (e.g. flood embankments, culverts and sluices) and are maintained by their respective owner. This could be the EA, Local Authority, or an individual. Others may have been built for a different purpose (i.e. known as 'informal') but which also affect the spread of floods (e.g. buildings, garden walls, railway embankments) but are not maintained for this specific purpose. The structures and features have not necessarily been used in modelling used to generate the flood maps used in this SFRA. However, the location of these assets are mapped and described here since it is important to recognise their function and to ensure that their functionality is not impaired by any development.

The EA has no statutory responsibility to maintain Main Rivers (and/or flood management assets) within the UK. This remains the responsibility of the riparian land owner. The EA retains 'permissive powers' however, and using these powers may carry out a programme of monitoring and maintenance.

Other flood management infrastructure (e.g. culverts) has also been identified across Havering. It is important to recognise the function of these assets and to ensure that their functionality is maintained. Assets should be carefully reviewed in a local context as part of the detailed site based Flood Risk Assessment (see Table 7-1).

Within protected areas there will always be a residual risk of flooding. This may be due to an extreme event that exceeds the design of the asset, changing climatic conditions that increases the frequency and severity of flooding, a structural failure, or flooding behind the asset e.g. due to elevated groundwater levels. It is incumbent on both LBH and developers to ensure that the level and integrity of flood management assets provided within new developments can be assured for the lifetime of the developments.

4.6.1 Flood Storage Areas

Please refer to Figure 107

FSAs have been identified at the following locations within Havering:

River Beam

With reference to the BIM modelling report the Washlands FSA was originally constructed in 1961 to attenuate 430,000m^3 of flood water. A series of modifications have been made to the FSA; the most recent being in 2010 which included works to the spillways and embankments. Subsequently in 2011, landscaping works were undertaken to increase the available storage by 25,000m^3. The FSA is located on the border with Barking and Dagenham.

River Ravensbourne

Harrow Lodge Park reservoirs on the Ravensbourne attenuate a significant amount of flood water (40,000m^3) based on the BIM Modelling study.

There is a FSA upstream of the Main River extent on the Ravensbourne, north of Gallows Corner. The FSA receives flows from the public surface water sewer and attenuates it in a grassed open area south of Faringdon Avenue (NGR TQ 5352 9093) before returning flows to the public sewer. Thames Water has

confirmed the operation of this FSA but no details are available. This area has been designated as a HCDA and as FZ3b.

River Rom

The River Rom Flood Alleviation Scheme built between 1981 and 1984 included the Cross Road FSA (NGR: TQ 4943 9013). The FSA was designed to attenuate peak flows upstream of Romford. The previous SFRA report stated that a timetable of remedial works were proposed after it was inspected in 2006 and found to be below standard. Information provided for this study however stated that the downstream embankment was discontinued in December 2010.

River Ingrebourne

The Dovers Corner FSA (NGR: TQ 5219 8262) is located on the Ingrebourne in Rainham, immediately upstream and downstream of the A1306. There is no control structure at the outlet; the FSA is designed to fill as the water level backs up when Rainham Creek is tidally locked by high levels in the River Thames.

4.6.2 Fluvial Defences

Please refer to Figure 106

Based on the information provided by the EA the majority of fluvial flood defences within the Borough are classified as high ground. There are lengths of raised embankment on the Ingrebourne in Rainham. There are no raised embankments on the upper reaches of the Mardyke.

There are 14 control gates identified on the EA records. These are predominantly located on the lower reaches of the rivers before they outfall into the Thames.

4.6.3 Tidal Defences

Please refer to Figure 107

The Borough is protected from flooding by the River Thames by a series of tidal defences to a Standard of Protection (SoP) of in excess of the 0.1% (1 in 1000) annual chance event. These defences are typically steel piles with concrete capping or concrete walls. In some cases flood gates are provided where access to the riverward side of the defence is maintained. A number of the smaller gates are manually operated and require closing in advance of a tidal event. There are four such gates within Havering. The defences are maintained to a minimum level of between 7.1 and 6.9m AOD along the Borough's boundary.

The flood zone maps (see Figure 103) do not take the protection provided by the TTD into account in accordance with the published mapping of Flood Zones by the Environment Agency. However, when reviewing the suitability of development in such areas the protection provided by the defences should be considered because it is anticipated that the Environment Agency will continue to maintain the defences for the foreseeable future based on the Thames CFMP (see Section 2.5). Proposed Development in these areas would require a site-specific flood risk assessment which would need to take into account of the potential for a breach of the defences and the subsequent flood hazard for future users.

As part of the EA's Thames Tidal Breach Modelling (2013), the impact of breaches in the TTD was assessed. Three locations were tested in Havering and the resultant flood extent and flood hazard (see Section 5.4.1) are included in Figures 107a-g.

4.7 Flood Warning

Please refer to Figure 113

The EA operates the Floodline Warnings Direct[11] service to warn homes and businesses of potential flooding. There are Flood Warning areas on the Beam, Rom and Ingrebourne. The upper reaches of these watercourses are within Flood Alert areas. Section 5.3.1 summarises the extent of fluvial flood risk in the Borough. At present there is only one tidal flood risk warning area within Havering: '062FWB55Dagenham'; The River Beam at Dagenham. Section 5.3.2 summarises the degree of tidal flood risk in Havering.

4.8 Havering Critical Drainage Areas

Please refer to Figure 109

Based on the uFMfSW (2013), a number of residential and commercial properties in Havering could be at risk of flooding from local sources (principally surface runoff generated by intense rainfall, groundwater and ordinary watercourses). In areas susceptible to local flooding, the volume of runoff and sufficiency of the drainage, ordinary watercourse and sewer systems are critical to determining the degree of flood risk. For this reason, this SFRA has delineated HCDA across the Borough. The EA has the ability to delineate Critical Drainage Areas (CDA) to cover such areas, but as is the case across much of the country, has not currently done so within the Borough. Although HCDA and CDA would both cover areas with critical drainage problems, the variation in name has been used to differentiate between those areas delineated by LBH's SFRA and those which may be notified by the EA. Therefore because the HCDAs are locally designated they are subject to local policy requirements and do not necessarily require EA consultation unless they meet other pre-existing criteria.

In the 2007 SFRA, areas at risk of surface water flooding were identified using JFLOW flood mapping, but no further significance was attached to them. Guidance was provided for proposed developments, and that LBH should take responsibility for ensuring flood risk is addressed, in these areas. Since then LBH has become the LLFA and has formally been assigned this responsibility. The identification of the HCDA indicates to LBH where this is required.

Since the 2007 SFRA the EA has produced the FMfSW which was further updated in December 2013 (uFMfSW). This provides refinements over the previously defined areas. The uFMfSW outline of a 1% (1 in 100) annual chance flood event is used in this SFRA as a basis to define HCDA in Havering. Because the HCDA represent flood risk from different sources, no indication of the likely duration of flooding is given.

4.9 Dam Breach

Following a recommendation in the Pitt Review, the EA has provided Reservoir Flood Maps[12] for those reservoirs which it regulates under the Reservoirs Act 1975. These show the likely extent of flooding resulting from a dam breach which could be caused by extreme rainfall or floods, as well as structural failure. For this SFRA a review has been undertaken of the information available on the EA's website to assess the potential area of risk of a reservoir embankment breach, please see Section 5.3.3 0.

4.10 Previous Flood Risk Studies

In developing this SFRA we have drawn upon other studies to provide information on sources of flooding within the Borough.

11 https://fwd.environment-agency.gov.uk/app/olr/home
12 http://watermaps.environment-agency.gov.uk/wiyby/wiyby.aspx?topic=reservoir#x=357683&y=355134&scale=2

4.10.1 Havering SFRA (2007 and 2014)

The first LBH SFRA was completed in November 2007 and was updated in 2014. This SFRA updates and replaces these studies with current information. Instances of historic recorded flooding have been used from that report augmented with the most recent data.

4.10.2 Drain London

A key conclusion of the Mayor of London's consultation on the draft Regional Flood Risk Appraisal (RFRA) in 2007 was that the threat of surface water flooding in the capital was poorly understood. Furthermore the management responsibility was split between a number of organisations. To address these issues Defra funded the Drain London project to produce Surface Water Management Plans for each London Borough.

Through the enactment of the Flood and Water Management Act 2010 (FWMA) the boroughs are also required to produce a Preliminary Flood Risk Assessment (PFRA), also delivered through Drain London.

4.10.3 Havering Surface Water Management Plan (2011)

Surface Water Management Plans (SWMP) identify sustainable responses to manage local flooding and contain Action Plans that provide an evidence base for future decisions. As part of the Drain London[13] project a SWMP was developed for Havering. A hydraulic model was developed to simulate overland flood flows to identify flood prone areas. The project has delivered the following:

- Maps showing predicted flood depth and velocity in different flood event scenarios, including consideration of climate change;
- Development of a number of options to improve management of local flooding, both through changes to policy and practice, as well as location-specific actions including individual property protection, control of runoff close to source and design of urban environments to make space for water. An estimate of their cost is included.

The SWMP made a number of location-specific and policy related recommendations to improve management of local flooding in Havering. LBH are progressing works to investigate the potential options further.

4.10.4 Preliminary Flood Risk Assessment (2011)

A PFRA was required to be completed by December 2011 under the European Floods Directive by each LLFA (including LBH), implemented in the UK as the Flood Risk Regulations 2009. It is a high level screening exercise that identifies areas of significant flood risk from all sources, and summarises the probability and harmful consequences of past (historical) and future (potential) flooding.

Data utilised from this study for the present SFRA includes recorded instances of Surface Water flooding and areas identified to be at increased risk of groundwater flooding.

4.10.5 Environment Agency FRA Database

The EA has developed a database of all the FRAs they have reviewed.

4.10.6 Beam, Ingrebourne and Mayes Brook FRM Study (2013)

This EA study has developed an updated hydraulic model of the three catchments. The model will be used to update the flood extent maps of these watercourses for a variety of storm events. The flood extents have

13 http://www.london.gov.uk/priorities/environment/looking-after-londons-water/drain-london

been used to identify FZ3b and the potential impact of climate change on the Beam and Ingrebourne for this SFRA.

4.10.7 Mardyke Flood Risk Strategy (2011)

The EA undertook a study to update the prediction of flood risk in the Mardyke catchment in 2011. The project included the development of a hydraulic model to update the EA's flood mapping in the catchment. The results from this model have been used to determine FZ3b and the potential impact of climate change on the Mardyke in this SFRA.

4.10.8 Blacks Brook Mapping Study (2015)

The EA undertook a study to develop a hydraulic model of the Blacks Brook and to produce updated flood extents for the watercourse. The study also undertook a number of sensitivity analyses to test a variety of scenarios.

5. Flood Risk in Havering

5.1 Overview

The following maps accompany this SFRA:

- **Figure 101** is a general location plan of the Borough which also indicates the topography and rivers;
- **Figure 102** provides a summary of historic flooding locations, including fluvial flood extents and local incidents of flooding recorded by the EA. It also includes instances of flooding recorded by LBH for Drain London and their likely source which may also be found in Table 5-1;
- **Figure 103** focuses on fluvial flooding and shows the river centrelines, extent of Main Rivers and FZ3a and FZ3b. The map provides an initial indication of the probability of flooding at a proposed development site;
- **Figure 104** focuses on fluvial flooding and shows the river centrelines, extent of Main Rivers, FZ2. The map provides an initial indication of the probability of flooding at a proposed development site;
- **Figures 105A-E** provide an indication of the impact of climate change on the extent of FZ3 in relation to new development or redevelopment in the current FZ2 based on the available hydraulic modelling and the latest peak flow allowances to be applied (see Section 4.5);
- **Figure 106** identifies the location of flood defences within Havering. It also indicates the Areas Benefitting from Defences (ABDs), in other words the areas subject to tidal/coastal flood risk that would flood under a 0.5% (1 in 200) annual chance tidal flood event without the defences;
- **Figures 107A-G** provide an indication of the areas at risk of tidal flooding should the TTD be breached and the impact on the full extent as a result of climate change. They include an assessment of the flood hazard, depth, level and velocity due to a breach at two separate locations;
- **Figure 108** Identifies culverted watercourses within the Borough, as the risk of blockage could lead to flooding not indicated by the identified flood zones;
- **Figure 109** identifies area at risk of flooding from surface water. This is based on the uFMfSW produced by the EA in November 2013. In addition this plan identifies HCDA as a result of non-fluvial flooding;
- **Figure 110** identifies the number of properties that have experienced sewer flooding, by post code based on records provided by Thames Water;
- **Figure 111** indicates the risk of groundwater flooding. This information has been obtained from the EA and work undertaken for Drain London;
- **Figure 112** identifies critical infrastructure in relation to the flood zones. The intention is to identify those that could be at risk of flooding;
- **Figure 113** indicates the EA's Flood Warning and Alert areas within the Borough;

- **Figure 114** indicates emergency services and vulnerable institutions in relation to Flood Zones. This is intended to provide emergency planning with an indication of those institutions that could be at risk of flooding within Havering;

5.2 Historic Flooding

Records of historic flooding within Havering have been collected from a variety of sources. A schedule of recorded flood events is included in Table 5-1.

Table 5-1 : Recorded Historic Flooding in Havering

Date	Type of flooding	Location	Source of information
Easter 1448	Tidal	Rainham Marshes	http://www.british-history.ac.uk/report.aspx?compid=42827
Dec 1707	Tidal	Dagenham Breach / Hornchurch Marshes	Environment Agency Historic Flood Extents
Aug 1888	Fluvial	Beam and Ingrebourne catchment - Romford, Upminster, Hornchurch	http://www.romfordrecorder.co.uk/news/the_125_year_anniversary_of_the_flood_that_devastated_havering_1_2305546
1914	Fluvial	Ingrebourne	"Rainfall observer at Upminster (High House) noted p[7] "Heavy rain throughout the night amounting to 3.35 in. ... The fields along the banks of the Ingrebourne, which flows through the lower part of the village, were flooded. The storm seems to have been a local one" (4)
Mar 1947	Fluvial	Widespread flooding in River Thames catchment	Environment Agency Washlands FSA Improvement Works Report / Previous (2007) SFRA
Feb 1953	Tidal	Extensive flooding of areas adjacent to the River Thames at South Hornchurch, Rainham and the marshes	Environment Agency Historic Flood Extents / Previous (2007) SFRA

Oct 1992	Fluvial	Ingrebourne catchment – Isolated flooding in Upminster and Hornchurch	Environment Agency Historic Flood Extents / Previous (2007) SFRA
Dec 2000	Fluvial	Lower Beam at Dagenham	Environment Agency Historic Flood Extents / Previous (2007) SFRA
Jan 2003	Fluvial	Ingrebourne at Rainham (Dover's Corner)	Environment Agency Historic Flood Extents / Previous (2007) SFRA
June/July 2007	Sewer	Romford and Hornchurch	London Borough of Havering flooding record spreadsheet / Previous (2007) SFRA
June 2016	Surface waterand fluvial	River Rom and numerous locations across Havering	Section 19 investigations are to be progressed by LBH

In addition a record of observed flooding as recorded by LBH was included in the Drain London SWMP and is included in Figure 102.

5.3 Predicted Flooding

5.3.1 Fluvial Flooding

The Borough has been delineated into Flood Zones in line with the NPPF. The risk shown by the Flood Zones (Figures 103 and 104) is interpreted here for the key areas in Havering. Generally flood risk is limited to the southern area of the Borough in the vicinity of the Thames and the valleys of the Rivers Beam and Ingrebourne and their tributaries.

It is important to note that even shallow flood waters can be extremely dangerous. Some people will be at risk when the water depth is only 0.5m if the velocity is 1m/s (about 2 mph). If the velocity increases to 2m/s (about 4mph) some people will be unable to stand in a depth of water of only 0.3m. Most people will be unable to stand when the velocity is 2m/s and the depth is 0.6m[14].

River Beam Catchment

The River Beam rises in Wattons Green and flows through the western area of the Borough to the Thames at Dagenham. Its tributaries are the River Rom (which flows through Romford) and Blacks Brook and further south the Ravensbourne whose confluence is south of Romford. The upper reaches are predominantly rural with significant urban development further downstream. The Wantz Stream joins the Beam further downstream at the Washlands FSA.

River Rom and Blacks Brook

The first urban area the Rom reaches is Havering Park where properties in Carter Drive, which back on to the Rom, are within the extent of FZ3. From this point downstream the Rom flows through undeveloped areas which are within FZ2. The Cross Road FSA is identified as FZ3 (although there is uncertainty to its

14 Further information is contained in the Defra Report "Flood Risks to People" "Flood Risks to People" Phase 1 (July, 2003) and Phase 2 Project Records (FD2321/PR), March 2006)

operation; see Section 4.6.1). The extent of FZ3b is predominantly within the river channel with the exception of a few areas in the vicinity of Como Street which are also designated as FZ3. There are developed areas defined as FZ2 between Mawney Road and Como Street.

Blacks Brook rises in Rise Park and is designated Main River at Brook Road, South of the A12. Based on the NaFRA data there are areas within FZ3b north of Main Road although this does not affect property. Upstream of the A12 there are properties within FZ3 and on Millbrook Gardens to the South. From this point the flood zones are within parks and open areas, until a few properties within FZ3 on Kingston Road and Sims Road, Romford. At this point the flood zones runs between the railway and the main retail area of Romford Town Centre, there is an extensive area of FZ3 which affects properties along Eastern Road. It is understood that the Brook is flashy; responding quickly to rainfall, which limits the time available to prevent flooding.

Downstream of Romford Town Centre the extent of FZ3b and FZ3 is retained within the river corridor and open parks to the confluence with the Ravensbourne.

River Ravensbourne

The Ravensbourne rises in Harold Wood where there is an extensive urban area within FZ3, upstream (north) of the railway. The predicted flood extents suggest the railway crossing is acting as a constraint on the passage of floodwaters. From the railway the Ravensbourne flows through Ardleigh Green in open areas. There are properties at Slewins Lane within FZ3b. To the confluence with the Emerson Park Stream the flood zones are within gardens and not predicted to affect property directly.

From the confluence of the Emerson Park Stream the flood zones are within rear gardens (Lyndhurst Drive and Boscombe Avenue, Hornchurch) or open areas further downstream to the confluence with the Beam.

Emerson Park Stream

The Emerson Park Stream is predominantly culverted; however based on the NaFRA data there are isolated properties within FZ3b along its path at Wakefield Close, Brookside, Woodlands Avenue and Warrington Gardens at the confluence with the Ravensbourne.

River Beam

The Beam starts at the confluence of the Rom and Ravensbourne and forms the western boundary of the Borough. The flood extents are extensive, however, as the river flows through The Chase nature reserve, there are few properties affected.

Upstream of Beam Bridge (A1306) FZ3b extends eastwards and includes properties on Lower Mardyke Avenue, South Street and Walden Avenue. From this point the flood zones are influenced by the Thames.

River Ingrebourne Catchment

Carters Brook, Paines Brook and Weald Brook

Two tributaries of the Ingrebourne: Carters Brook (which becomes Paines Brook) and Weald Brook are located on the north-eastern boundary of the Borough. Carters Brook flows south-easterly through Harold Hill, where there are properties within FZ3 at Dorking Road, St Neots Road, the A12 and an industrial estate at the confluence with the Ingrebourne. Potentially, more significantly, Brookside Primary School is within FZ3.

The NaFRA data does identify an area of FZ3b on Dagnam Park Drive which does place part of Brookside Infants School within FZ3b. There are small areas of FZ3b upstream of the confluence with the Ingrebourne but they do not encompass property.

The Weald Brook is rural in character with no properties at risk of flooding. Its confluence with the Ingrebourne is to the west of Junction 28 of the M25.

River Ingrebourne

The River Ingrebourne flows through rural areas until it reaches Upminster. There are properties at risk (FZ3) to the north of the railway line on Frimley Avenue. Downstream (south) of the railway the River remains in an essentially rural valley with only properties at Derby Avenue and Hornchurch Stadium with FZ3 to Rainham and the confluence with the Thames. There are areas defined as FZ3b but no property is affected. The Ingrebourne becomes the Rainham Creek downstream of the A1306 where flood risk is driven primarily by the Thames.

Rainham Main Sewer

The Rainham Main Sewer is located in the south-eastern corner of the Borough. The floodplain is rural, with three small areas designated as Zone 3b to the west of Rainham Marshes. The watercourse outfalls into the River Thames at Purfleet. The watercourse is protected from tidal flooding by a sluice at its outfall.

River Mardyke

The River Mardyke rises to the east of Upminster and the M25 and flows southwards and then westwards to its confluence with the Thames at Purfleet. The river is predominantly in the neighbouring authority of Thurrock. The catchment is at the far eastern edge of Havering and is predominantly rural, although there are some existing properties within FZ3 to the east of Upminster. Anglian Water's Bury Farm treatment works is alongside the West Branch of the Mardyke (NGR TQ 6071 8672) but is not within FZ3.

5.3.2 Tidal Flooding

The southern area of Havering is at risk of flooding from the River Thames which is tidal at this point. The Borough is protected by the TTD which run along both banks of the river downstream (east) of the Thames Barrier. Typically tidal flooding in the Thames is caused by a storm surge in the North Sea as experienced in 1953. The delineation of flood zones in these areas is the same as for fluvial flooding.

There are tidal sluices at Beam Tidal Sluice, Havering Tidal Sluice and Frog Island Tidal Sluice which prevent ingress of the River Thames. These control structures are complemented by a pumping station at Beam Tidal Sluice to discharge during tidal locking. There is a risk of fluvial flooding resulting from the closure of these sluices if a fluvial flood event coincides with a high tide on the Thames. Consequently FSAs have been constructed to mitigate this risk (see Section 4.6.1).

Dry Islands

Please refer to Figure 103.

In Havering the majority of the area to the south of the A1306 is at risk of tidal flooding. The extent is a worst-case scenario, and does not take account of the tidal flood defences.

Between the River Thames and the A1306 there are areas of land designated as FZ1, which are surrounded by areas designated as FZ2 and 3. Therefore in an extreme flood event there is the possibility that they could become islands, potentially preventing safe access and egress. These include the CEME Conference Centre, Ford Car Compounds, Freightmaster Estate, the Tilda Rice site and the Fairview Industrial Park. These areas were recorded as flooded in 1953.

Impact of Climate Change upon Tidal Levels

One output of the EA Thames Estuary 2100 project (TE2100) was hydraulic modelling to estimate the impact climate change would have on predicted water levels in the Thames. These are summarised in Table 5-2.

Table 5-2: Thames Estuary Tidal Water Levels

Node	Present Day 0.1% (1 in 1000) Annual Chance Level	Predicted 0.1% (1 in 1000) Annual Chance Water Level with Climate Change by Year				
		2040	2070	2100	2120	2170
3.10	5.98	6.19	6.37	6.70	6.90	7.40
3.11	5.97	6.18	6.37	6.70	6.90	7.39
3.12	5.97	6.18	6.36	6.70	6.89	7.38
3.13	5.97	6.18	6.35	6.69	6.88	7.37
3.14	5.98	6.19	6.34	6.67	6.87	7.35

NB: All levels are in mAOD

The EA provided 0.1% (1 in 1000) annual chance water levels which equates to FZ2. The nodes have been selected as representative of the water levels in Havering; 3.10 being upstream/west and 3.14 downstream/east. Please refer to Figure 105 for their location.

Subsequent to the development of these levels the EA has updated the predicted impact of climate change on changes to sea levels. The predicted impact on sea levels is spit by location and epoch as indicated in Table 5-3 as sea level rise allowance for each epoch and the cumulative rise for the next century.

Table 5-3: Sea Level Allowance Guidance for London and the South East

	Epoch				Cumulative (1990 – 2115)
	1990 - 2025	2026 - 2050	2051 – 2080	2081 - 2115	
Yearly	4	8.5	12	15	1.24
Cumulative	140	212.5	360	525	

NB: Figures for Epochs and in millimetres, the cumulative figure is in metres.

The EA guidance provides details of how these figures are to be applied when considering the impact of sea level rise for an individual year over the full time scale if required. Based on this guidance the predicted sea levels for the TE2100 model nodes as listed in Table 5-2 are summarised in Table 5-4.

Table 5-4: Predicted Peak Sea Levels Based on Latest EA Guidance

Node	Present Day 0.1% (1 in 1000) Annual Chance Level	Predicted 0.1% (1 in 1000) Annual Chance Water Level with Climate Change by Year			
		2025	2050	2080	2115
3.10	5.98	6.12	6.33	6.69	7.22
3.11	5.97	6.11	6.32	6.68	7.21
3.12	5.97	6.11	6.32	6.68	7.21
3.13	5.97	6.11	6.32	6.68	7.21
3.14	5.98	6.12	6.33	6.69	7.22

Based on the revised guidance from the EA the peak sea level that needs to be considered for a 100 year timescale in Havering has increased from 5.98 to 7.22m AOD.

Tidal and Fluvial Interaction

The Beam, Ingrebourne, Rainham Main Sewer and Mardyke all drain to the tidal estuary of the River Thames. The EA do not consider there to be any tidal interaction on these watercourses unless the TTD are overtopped. The tidal influence is greater on the Mardyke primarily due to its lower gradient, but this is within neighbouring Thurrock and does not affect the area of the catchment within Havering.

In addition to the watercourses referred to above, a number of other ditches and drains are located in the area. Generally the outfalls of these to the Thames are controlled by sluice gates to maintain the TTD. The sluices effectively defend these areas from flooding from the Thames, however when they are in operation, their closure prevents the watercourses from draining to the Thames. If high water levels are maintained on the Thames then fluvial flooding from these watercourses could result. Figures 103 and 104 identify the areas at risk of tidal and fluvial flooding.

There are two areas at risk of fluvial flooding as a result of tidal interaction as indicated as ‘tidal/fluvial’ in Figure 103. These are the lower reaches on the River Beam, south of the railway bridge in Elm Park and the Rainham Main Sewer.

5.3.3 Other Sources of Flood Risk

Ordinary Watercourses

Where the supplied hydraulic model flood extents do not extend to cover Non-Main River the uFMfSW has bene utilised to identify areas of potential flood risk. The key locations where the ordinary watercourse coincides with predicted flooding in the uFMfSW are as follows:

- Havering Park, west of the River Rom;
- Harold Hill, north-west of Carter’s Brook
- Upstream of the Mardyke, east of Upminster

Surface Water

The EA's uFMfSW was utilised to determine areas at risk of flooding from surface water runoff resulting from rainfall exceeding the capacity of the drainage network.

We have used the uFMfSW to identify HCDA which may be most susceptible to local flooding. These areas are shown on Figure 109. A summary of the larger HCDA lying outside fluvial Flood Zones is provided below.

The EA provide a suitability classification with the uFMfSW data. For the majority of Havering it is classified as "County to Town". This means that the data is suitable to identify which areas are at risk but is unlikely to be reliable at the local scale and individual properties. As recommended in Section 7.5; development within HCDAs will have to consider surface water flood risk in greater detail via a site-specific FRA. There are two small areas classified as "National to County" south of Upminster that are less reliable but there are no HCDAs identified in these areas.

Romford

The extent of FZ3 within the Romford area is mainly within the river channel. However the uFMfSW identifies three areas beyond the area of fluvial flood risk in FZ3 that are at risk of flooding from surface water:

- Upstream of the A12;
- Immediately upstream of the town centre;
- Between the town centre and the A124.

In each case there are extensive areas at risk from surface water flooding under the 3.33% (1 in 30) annual chance event.

Rise Park

The uFMfSW identifies two areas at risk of flooding upstream (north) of the A12 at Rise Park. There is an extensive area at risk from the 3.3% (1 in 30) and 1% (1 in 100) annual chance events in the vicinity of Pettits Lane North, Heather Gardens and Linton Court. The flow path upstream is contained on the highway but its passage appears to be blocked by the A12. The predicted flooding closely matches that predicted by the Drain London SWMP. The second main flow path follows a route through Rise Park itself, following the direction of the watercourse before ponding against the A12 embankment.

Harold Hill

The uFMfSW identifies a flow path to the north of Harold Hill running eastwards towards Carters Brook. There is an extensive area of flooding predicted under the 3.33% (1 in 30) annual chance event. The properties at risk are centred upon Taunton Road and North Hill Drive. Upstream a number of flow paths converge from the rural areas at Noak Hill Road. The Drain London SWMP predicts a similar flow path but with a narrower extent in the urban area.

Gallows Corner

The uFMfSW identifies a flow path running southwards towards Gallows Corner on the A12, north-east of Romford. This closely matches the flood mapping produced by the Drain London SWMP. The flow path affects properties to the south of Myrtle Road and then appears to be impeded by the Gallows Corner roundabout as there is extensive predicted flooding immediately to the north.

Upminster

The uFMfSW identifies two main branches of surface water flood risk upstream of the Main River extent of the western branch of the River Mardyke in Upminster.

The northern flood path rises south of the A127 in Pot Kiln Wood and then flows southwards potentially placing properties at risk in Frin Lane, Waycross Road, and Brunswick Avenue. There is a second smaller branch which places properties at risk on Roseberry Gardens and Cranham Gardens. These flow paths combine to flow southwards along Front Lane and then eastwards along Moor Lane to the Mardyke.

The southern flow path is to the south of St. Marys Lane (B187). This is currently a rural area and consequently few properties are at risk of flooding. But should development be proposed in this area this risk should be considered.

Hacton

There is an Ordinary Watercourse which flows south-westwards from Upminster towards the Ingrebourne through Hacton. This is identified on the uFMfSW but is not designated as FZ3. The watercourse is predominantly rural, however, at its head; the uFMfSW does identify roads in Upminster: Maple Avenue, Oak Avenue and South View Drive as at risk of flooding.

Elm Park and South Hornchurch

Elm Park lies between the Beam and the Ingrebourne and the uFMfSW identifies a flow path running south-westwards towards South Hornchurch where it joins a drain to the Beam. The flow path places properties at risk of flooding on a number of roads and flows through the grounds of Brittons Academy.

There is a second area of flood risk from surface water to the east potentially affecting properties on a number of roads in South Hornchurch. The route initially follows South End Road and then Nelson Road.

Groundwater

The EA have developed a map which identifies the Susceptibility to Groundwater flooding. This is indicated for Havering on Figure 111. This is based on the British Geological Survey Groundwater Flood Susceptibility Map. The map shows the proportion of each 1km^2 grid square where geological and hydrogeological conditions show that groundwater might emerge.

Sewer Flooding

Thames Water has provided information on the number of properties that have experienced sewer flooding In Havering for this updated SFRA, which is summarised in Table 5-5.

Table 5-5: Thames Water Sewer Flooding Records

Postcode	Internal Flooding			External Flooding			TOTAL
	2 in 10	1 in 10	1 in 20	2 in 10	1 in 10	1 in 20	
RM1	0	2	23	6	12	47	**90**
RM2	0	3	13	4	16	30	**66**
RM3	0	0	9	0	2	30	**41**
RM4	0	0	0	0	0	2	**2**
RM5	1	0	47	2	5	85	**140**
RM7	0	0	25	0	3	27	**55**
RM11	1	1	0	0	4	9	**15**
RM12	0	2	22	1	15	21	**61**
RM13	0	0	0	0	2	17	**19**
RM14	0	0	5	0	1	9	**15**
Total	**2**	**8**	**144**	**13**	**60**	**277**	**504**

In addition to the number of properties flooded in Havering Table 5-5 also provides an indication of severity and frequency. Internal flooding is generally considered more disruptive than external or curtilage flooding. For each classification a frequency is provided; for example whether the property has been flooded twice in a ten year period, once in ten, or once in twenty.

The total number of properties flooded from overloaded sewers in Havering are summarised by postcode in Figure 110. The highest risk areas are in the north-west of the borough.

There are other postcodes within the Borough not included in Table 5-5. However they are only partly within Havering and therefore it is not possible to attribute the flooding within those postcodes to the Borough as they may lie outside.

There are a few areas to the east of the Borough that fall into the area served by Anglian Water. They have confirmed that there is one DG5 property within LBH at Rectory Gardens, Upminster, which has experienced external flooding.

Reservoirs

The requirement for regular inspections by a Supervising Panel Engineer means that the likelihood of structural failure of reservoirs is considered to be minimal. The risk of failure remains, however, and the EA has mapped the potential extent of flooding resulting from the failure of a covered water supply reservoir to the west of Harold Hill. However this does not place additional property at risk of flooding. Should the reservoir fail the floodwater will follow the topography, as the reservoir is at the head of the Blacks Brook; once it reaches the A12 it will follow its course to Romford town centre and then the path of the River Rom.

This flow path is indicated by the uFMfSW (see Figure 109) and once it reaches the Main River the flow path remains within FZ3. There are no properties between the reservoir and the A12 / FZ3 extent[15].

It is understood that ground level has been modified locally on the golf course adjacent to the A12 in recent years which may not be represented on the published reservoir flood risk map. If this is the case it is thought that these changes may direct the flow further West placing properties at risk in the vicinity of Petits Lane (which could include Romford Fire Station and Marshalls Park Lower School). From this point the flood water would flow southwards towards Blacks Brook through a residential area.

The Childerditch Hall reservoir (NGR TQ 6069 8672) is non-EA maintained and located outside Havering within Brentwood Borough Council's area. However the risk area published by the EA does include part of the Anglian Water Bury Farm treatment works, which is within Havering. Form this point downstream the risk area is within Thurrock and the Mardyke's FZ3.

There is the possibility that Flood Storage Areas with raised embankments within Havering could fail leading to flooding. The Washlands FSA is located on the River Beam to the east of Dagenham (NGR: TQ5030 8322) and is operated by the Environment Agency, its embankments are approximately 3 metres higher than the surrounding ground level. The embankments were overtopped during an event on 31 December 2001 which resulted in bank erosion. The FSA falls under the auspices of the Reservoirs Act as it has a storage volume greater than 25,000m^3 consequently annual inspections by a Supervising Engineer each year are required and an Inspecting Engineer at least once every ten years. Should the FSA embankment fail the flow path would be expected to follow the course of the River Beam placing the industrial properties south of the A1306 at risk.

5.4 Residual Flood Risk

The 'residual flood risk' is the risk of flooding that remains with a defence in place. This would occur if the defence was overtopped or it failed.

5.4.1 Tidal

The TTD are regulated and maintained by the EA using permissive powers under the Water Resources Act 1991, but the primary maintenance duty rests with the riparian landowner. The tidal defences along Havering's frontage are currently maintained to a crest level of 7.1 – 6.9m AOD (see Figure 107). Given the consequences of failure, the TTD are well maintained. Furthermore, it is unlikely that these would be overtopped by an event considered as part of an SFRA; typically they are designed to exceed the 0.1% AEP flood level and, with reference to Table 5-2, they currently provide approximately 1m of freeboard above this level.

The EA have undertaken modelling to determine the impact of three separate breaches to the TTD. The subsequent combined flood extent is included on Figure 107.

Flood Hazard

The extents of the breaches provided by the EA include an assessment of flood hazard based on the predicted flood depth and velocity, following their guidance[16].

A summary of the flood hazard classifications and their description is included in Table 5-6.

15 http://watermaps.environment-agency.gov.uk/wiyby/wiyby.aspx?topic=reservoir#x=357683&y=355134&scale=2
16 Flood Risks to People Phase 2, Defra, March 2006FD2321/TR2

Table 5-6: Flood Hazard Classification

Classification	Degree of Hazard	Description
Low	Caution	Flood Zone with shallow flowing or deep standing water
Moderate	Dangerous for some (i.e. children)	Danger: flood zone with deep or fast flowing water
Significant	Dangerous for most	Danger: flood zone with deep fast flowing water
Extreme	Dangerous for all	Extreme danger: flood zone with deep fast flowing water

Based on FD2321/TR2 Table 4.2

The areas at greatest risk are the Ford motor works and the western area of Rainham Marshes. There are extensive areas of 'Significant' risk to the south-eastern area of the borough, but these are the currently undeveloped marsh areas south of the A1306.

5.5 Impact of Climate Change

There is clear scientific evidence that global climate change is happening now. It cannot be ignored. Over the past century around the UK we have seen sea level rise and more of our winter rain falling in intense wet spells. Seasonal rainfall is highly variable. It seems to have decreased in summer and increased in winter, although winter amounts changed little in the last 50 years. Some of the changes might reflect natural variation; however the broad trends are in accordance with projections from climate models, suggesting partly anthropogenic causes.

Greenhouse gas levels in the atmosphere are likely to cause higher winter rainfall in the future. Past Greenhouse gas emissions mean some climate change is inevitable in the next 20–30 years. Lower emissions could reduce the amount of climate change further into the future, but changes are still projected at least as far ahead as the 2080s.

There is enough confidence in large scale climate models to say that we must plan for change. There is more uncertainty at a local scale but model results can still help us plan to adapt. For example we understand rain storms may become more intense, even if we cannot be sure about exactly where or when. By the 2080s, the latest UK climate projections (UKCP09) are that there could be around three times as many days in winter with heavy rainfall (defined as more than 25 mm in a day). It is plausible that the amount of rain in extreme storms (with a 20% (1 in 5) annual chance or less) could increase locally by 40%. If emissions follow a medium future scenario, UKCP09 projected changes for Havering by the 2050s relative to the recent past are that winter precipitation will increase by around 15% (central estimate).

Climate changes can affect local flood risk in several ways. Impacts will depend on local conditions and vulnerability. Wetter winters and more of this rain falling in wet spells may increase river flooding in both rural and urbanised catchments. More intense rainfall causes more surface runoff, increasing localised flooding and erosion. In turn, this may increase pressure on drains, sewers and water quality. Storm intensity in summer could increase even in drier summers, so we need to be prepared for the unexpected. Rising river levels may increase local flood risk away from major rivers because of interactions with drains, sewers and smaller watercourses. There is unlikely to be significant change to groundwater flood risk in Havering because the geology is predominantly Clay.

Changes in the extent of inundation due to climate change on fluvial flooding are likely to be negligible in well-defined valleys, but could be dramatic in very flat areas. Changes in the depth of flooding under the same allowance will increase the probability of a given flood. For example, a site currently located within a lower risk zone (e.g. Zone 2) could in future be re-classified as lying within a high risk zone (e.g. Zone 3a).

This in turn could have implications for the type of development that is appropriate according to its vulnerability to flooding. In the absence of detailed flood modelling to define the impact of climate change on Flood Zones in this SFRA, the anticipated extent of Zone 3a (the 1% AEP flood) at the end of the century may be approximated by the current Zone 2 (the 0.1% AEP flood). In the same way, the HCDA could increase in extent and/or depth of flooding with climate change.

It is essential that developers consider the possible change in flood risk over the lifetime of the development as a result of climate change. For planning purposes, the EA assume that the 'lifetime of development' equates to 100 years for residential development, and 60 years for commercial development.

In planning terms, it is essential that Havering consider their response to the potential impacts of climate change within the Borough. While the impact of climate change may in some areas not markedly increase the extent of, for example, Zone 3a, within that Zone the extent of lower severity flood events could increase significantly. Furthermore, there could be an increase in localised surface water issues. It is essential therefore that the development management process (influencing the design of future development within the Borough) carefully mitigates against the potential impact that climate change may have upon the risk of flooding.

For this reason, all of the development management recommendations set out in Section 7.12 require all floor levels, access routes, drainage systems and flood mitigation measures to be designed with an allowance for climate change within Zones 3b, 3a and 2, as well as within HCDA in Zone 1. This provides a robust and sustainable approach to the potential impacts that climate change may have upon the Borough over the next 100 years, ensuring that future development is considered in light of the possible increases in flood risk over time.

It is highlighted that, for planning purposes within the context of the current local planning policy, Zone 3a High Probability is defined on the basis of existing (i.e. 2016) flood level predictions.

5.6 Changes from Previous SFRA

5.6.1 Fluvial Flood Risk

The assessment of fluvial flood risk and the delineation of Flood Zones in Havering is based on the EA's published flood zones of February 2016. There have been minor changes to the extent of the flood zones since the previous SFRA in 2014 due to updated data. This section summarises the key changes.

Flood Zone 3b

The only change in the extent of FZ3b is on the Blacks Brook. As a result of the Environment Agency's update of their hydraulic model this extent is based on detailed modelling rather than NaFRA data used in the previous SFRA (see Section 4.3) which has resulted in a reduction in the extent of this Flood Zone.

Flood Zone 3

There are localised amendments (generally a reduction) to the extent of FZ3 on the Emerson Park Stream, the Paines Brook in Harold Hill and the River Mardyke, west of the M25. The extent of FZ3 at the head of the Blacks Brook; north of the A12, has reduced compared to that in the previous SFRA. The extent of FZ3 has increased at the head of the Emerson Park Stream between Gallows Corner and the railway line at Ardleigh Green.

The main change to FZ3 is at Romford, where the extent has significantly reduced. There remain pockets of FZ3 in the town centre, upstream (north) of Cross Road and the Blacks Brook, but the rest of the previously identified FZ3 is no longer within the zone. This is based on the information provided by the EA (see Section 4.3).

Flood Zone 2

The upper reaches of the Rom are unchanged but downstream of the Cross Road FSA there is a significant reduction in the extent of FZ2 through Romford Town Centre.

On the Blacks Brook the extent is unchanged except for upstream of A12 where it has increased, identifying more properties on Beauly Way as at risk.

The rest of FZ2 is largely unchanged with minor variations except for the upper reaches of the Mardyke and the Paines Brook where the extent has significantly reduced between the A12 and the railway.

5.6.2 Tidal Flood Risk

The extent of Havering at risk from tidal flooding is largely unchanged since 2007 with the exception of the filling-in of three dry islands south of Rainham; other dry islands remain (see Section 4.4).

5.6.3 Surface Water

The surface water flow paths included in this assessment continue to rely on the uFMfSW, therefore the extents have not changed since the previous version of the SFRA in 2014.

5.6.4 Other Sources

No re-assessment of flood risk from other sources has been made in the update of this SFRA as it is not anticipated that they have changed since 2014.

6. Sustainable Flood Risk Management

6.1 Overview

This Section highlights the role of various parties in relation to flood risk and offers recommendations for each to ensure that flood risk is managed in a sustainable manner into the future.

The risk of flooding can never be completely eliminated, but the likelihood and consequences of flooding can be minimised through good management. One of the key aims of the EA's National Flood and Coastal Erosion Risk Management Strategy is to improve flood risk management in a sustainable way. In other words, the risk of flooding must be reduced now, but in a way which does not compromise the interconnected needs of the economy, society and environment in the future. Indeed, one of the defined roles of local authorities in the Flood & Water Management Act 2010 is for them to aim to make a contribution towards the achievement of sustainable development.

The primary purpose of the SFRA is to inform decision making as part of planning policy and development management processes, taking due consideration of the scale and nature of flood risk affecting the Borough. Responsibility for flood risk management resides with all tiers of government, and indeed individual landowners and applicants, as outlined below.

6.2 Responsibility for Flood Risk Management

There is no statutory requirement for the Government to protect property against the risk of flooding. Nevertheless, the Government recognises the importance of safeguarding the wider community and, in doing so, the economic and social well-being of the nation. Following the Pitt Review into the flooding of summer 2007 and subsequent Flood Risk Regulations 2009 and Flood & Water Management Act 2010, new responsibilities for managing flood risk have been assigned to local authorities, the EA and others.

A number of partners manage flood risk within Havering, the key responsibilities of the primary groups relevant to this SFRA are:

- **Environment Agency:** Provides a strategic overview of all sources of flooding. Under its permissive powers, it is responsible for flood risk management activities on Main Rivers, regulating reservoir safety, and working in partnership with the Met Office to provide flood forecasts and warnings. It assists the spatial planning and development management process through the provision of information and advice regarding flood risk and related issues.

- **London Borough of Havering:** As Lead Local Flood Authority, LBH is responsible for coordination of local flood risk management across its administrative area. This includes development, maintenance, application and monitoring of a strategy for local flood risk management, a duty to maintain a register of structures or features which have a significant effect on flood risk and a duty to aim to contribute towards the achievement of sustainable development. LBH is also the Local Planning Authority for the borough and so is responsible for carrying out a SFRA which should consider the risk of flooding throughout the borough and inform the allocation of land for future development, development management policies and sustainability appraisals. LBH is responsible for determining local planning applications and must consult with the EA, where appropriate, when making planning decisions.

- **Landowners** have the primary responsibility for protecting their land against the risk of flooding. They are also responsible for managing the drainage of their land such that they do not adversely impact upon adjoining properties.

The EA has updated its "Living on the Edge" guide in 2013 that provides specific advice regarding the rights and responsibilities of property owners, the EA and other bodies. The guide is targeted at owners of land

situated alongside rivers or other watercourses, and is a useful reference point outlining who is responsible for flood defence, and what this means in practical terms. It also discusses how stakeholders can work collaboratively to protect and enhance the natural environment of our rivers and streams. This guide can be found on the EA's website[17].

7. Recommendations and Policy for the Planning Authority

7.1 Revisions to Local Planning Policy Regarding Flooding

Current LBH planning policy in relation to flooding detailed in Section 2 of this SFRA, pre-dates this SFRA and relevant policy contained in the NPPF, the London Plan and TE2100 Plan (also detailed in Section 2).

RECOMMENDATION: LBH should review their current planning policy in relation to flooding to ensure it is consistent with the NPPF, the London Plan and the TE2100 Plan, including in relation to flood risk assessments, sustainable drainage, green infrastructure and flood resilience. New or revised policy should reflect the findings and recommendations of this SFRA, including requiring applicants to consider the SFRA and its mapping, taking into account the impacts of climate change, as a starting point for the assessment of flood risk in relation to development or redevelopment proposals. Later in this report, section 7.7 focuses on the need to seek opportunities and reduce flood risk where possible.

7.2 Site Allocations

The ideal solution to effective and sustainable flood risk management is a planning led one, i.e. where possible steer urban development towards the areas of lowest flood risk. The NPPF stipulates the application of a sequential approach to site allocation, utilising the Sequential Test. A flow diagram demonstrating the application of the Sequential Test for a local plan site allocation is provided in the NPPG (Diagram 2 in Flood Risk and Coastal Change, Paragraph 021) and this diagram is reproduced in Annex B of this report. Development sites should be allocated within areas of lowest flood risk in the first instance – in Flood Zone 1 (which relates to flooding from river and sea), but the NPPG stipulates that other sources of flooding must be considered, so HCDAs in Flood Zone 1 must be taken into account. Only if it can be demonstrated that there are no suitable sites within areas with the lowest flood risk (taking into account all sources of flooding) should alternative sites (i.e. within areas that may potentially be at greater risk of flooding) be contemplated, taking account of the vulnerability of the proposed land use. Tables 2 and 3 in the NPPG stipulate 'appropriate' land uses for each Flood Zone.

The priority is to allocate sites in areas with the lowest level of flood risk taking account of all sources of flooding, so sites in Flood Zone 1 unaffected by flooding from any source should be the priority for allocations. If sufficient sites in the most sustainable locations for development are not available in Flood Zone 1 (taking into account all sources of flooding), then sites with the lowest flood risk available within Flood Zone 2 should then be sought. If sufficient sites are also not available in Flood Zone 2, only then should sites within Flood Zone 3 be sought, with priority given to those with the lowest flood risk. The Exception Test should be applied where necessary.

Table 3 in the NPPG identifies types of development that should not be permitted in particular Flood Zones via the application of the Sequential Test (see Table 3-1). It also identifies types of development which may be allocated in zones of higher flood risk (from rivers and sea) via the application of the Exception Test.

Paragraph 102 of the NPPF states that 'For the Exception Test to be passed:

- it must be demonstrated that the development provides wider sustainability benefits to the community that outweigh the flood risk, informed by a SFRA where one has been prepared; and
- a site-specific flood risk assessment must demonstrate that the development will be safe for its lifetime taking account of the vulnerability of its users, without increasing flood risk elsewhere, and, where possible, will reduce flood risk overall.'

The latter point includes a requirement for account to be taken to the future risk from climate change over the lifetime of the development.

The NPPG (SFRA guidance, paragraph 012) states that "where a Level 1 Assessment shows that land outside flood risk areas cannot appropriately accommodate all the necessary development, it may be necessary to increase the scope of the Assessment to a Level 2 to provide the information necessary for application of the Exception Test where appropriate".

RECOMMENDATION: Any future site allocations must be determined via the application of the Sequential Test, and the Exception Test if required, in line with Government guidance. The evaluation of potential sites should be guided by the mapping (taking into account climate change) and the findings presented within this Level 1 SFRA, including with regard to HCDA and, if necessary, supplemented by a more detailed Level 2 SFRA which covers all potential sources of flooding. Full account should be taken of all sources of flooding including from rivers, groundwater, sewerage and surface water, together with the potential effects of climate change on flood risk and impacts on and from existing flood management infrastructure (see Sections 4 and 5). The NPPG highlights that a Level 2 SFRA may be required to provide the information necessary for the application of the Exception Test, but a Level 2 SFRA may also be required to assess flood risk from non-fluvial sources on some sites where the information in this Level 1 SFRA provides insufficient detail to enable the allocation to be determined. In this regard, whilst not a Level 2 SFRA, the information provided as Annex A of this SFRA will help inform these decisions.

7.3 Relocation of Unsuitable Existing Development

Paragraph 100 of the NPPF recommends that, where climate change is expected to increase flood risk so that some existing development may not be sustainable in the long-term, local authorities should seek to facilitate the relocation of development, including housing, to more sustainable locations.

RECOMMENDATION: LBH, working in partnership with the EA and others, should seek to identify both existing development which is potentially at risk from future impacts of climate change and, if necessary, potential sites for relocating that development, taking into account the Sequential Test. More suitable alternative uses for such sites should be sought, taking account of Table 3 in the NPPG. The information contained in the SFRA can be used to assist this process.

7.4 Safeguarding

Paragraph 100 of the NPPF states that local authorities should safeguard land from development that is required for current and future flood management. Such land may take the form of multi-function green infrastructure.

The TE2100 Plan also highlights the importance of safeguarding land for future flood management needs, stating that each flood risk management option in the TE2100 Plan *"will require land for new defences, enlarged defences, new barriers, new areas of habitat creation, and in some cases flood storage. Land allocations through the spatial planning system must be guided and informed by the requirements of the TE2100 options to ensure they remain possible"* (p.39).

RECOMMENDATION: In partnership with the EA, LBH should seek to identify land required for current and future flood management, taking account of the TE2100 Plan, and, if justified, safeguard it through planning policy. This can include areas within or adjoining allocated development sites which are particularly suitable for flood management purposes. The information contained in the SFRA can be used to assist this process.

7.5 Havering Critical Drainage Areas

The NPPF requires a site-specific flood risk assessment for all development proposals "*in an area within Zone 1 which has critical drainage problems (as notified to the local planning authority by the Environment Agency)"*. The EA has not specified any CDA in the Havering area. However, areas which are likely to be most at risk of flooding from local sources have been identified as part of this SFRA. They have been termed 'Havering Critical Drainage Areas' to differentiate them from those areas which could potentially be notified by the EA. The wording of the NPPF is such that it is not clear that an FRA would be required in an Area of

Critical Drainage because they were not 'notified to the local planning authority by the Environment Agency'. However, current LBH policy DC48 includes a requirement for an FRA for sites 'w*here drainage problems are identified by the Environment Agency or the Council'*, which would include the HCDA.

RECOMMENDATION: LBH should retain a local policy requiring a site-specific flood risk assessment for all development on sites where drainage problems are identified by the EA or LBH, which would include development in the HCDA identified in this SFRA. FRAs are particularly important in such areas as they have known localised flooding problems which can cause significant damage.

7.6 Washlands Development

It is understood that the Greater London Authority is proposing to develop part of the Washlands FSA for housing. This has flood risk implications for the proposed development and potentially the area currently benefitting from the FSA.

RECOMMENDATION: LBH should retain a local policy requiring a site-specific flood risk assessment for all development on the Washlands FSA specifically requiring demonstration of resilience measures, safe access and egress or places of refuge as well as the potential implications of increasing flood risk elsewhere.

7.7 Best Practice

The London Plan contains detailed policies with regard to SuDS, which is echoed by current LBH policy. In their role as Lead Local Flood Authority, LBH are responsible for managing flooding from local sources and will be the SuDS approval body (SAB). It is important that applicants are made aware of current best practice guidance with regard to sustainable drainage solutions to ensure that such information can be taken into account in development proposals. Best practice guidance on flood management is also published by the EA, National Flood Forum and others. In addition, this SFRA contains links to key information with regard to minimising flood risk in new and existing development. LBH are developing their own SuDS guide for developers which will provide applicants with a summary of what is expected of their application and the approval process.

RECOMMENDATION: Although links to some information are already publicised on the LBH website, this should be extended to provide links of sources of current best practice with regard to SuDS and flood management to be utilised by applicants. It could also be utilised by LBH officers seeking to evaluate FRAs and development proposals. It is anticipated that this information will also be included in the SuDS guide for developers.

7.8 Opportunities to Reduce Flooding

Paragraph 100 of the NPPF recommends that local plans should seek to reduce the causes and impacts of flooding by *'using opportunities offered by new development'*.

The NPPF requires local authorities to work with other local authorities and providers to assess infrastructure needs in their area, including with regard to flood risk (Paragraph 162).

Opportunities to reduce flood risk can be informed by the TE2100 Plan and Havering's Local Flood Risk Management Strategy (see Section 2 of this document).

Section 106 agreements and Community Infrastructure Levy charges provide potential mechanisms for securing new flood risk reduction infrastructure or contributions towards it. However, account should be taken of the potential impact on the financial viability of development proposals and developers should be pro-active and innovative in managing flood risk.

RECOMMENDATION: LBH should:

- Work with other authorities and bodies, as appropriate, to identify specific flood risk infrastructure required within the Borough. The TE2100 Plan, Havering's Local Flood Risk Management Strategy, the information contained in the SFRA, and the potential solutions to surface water drainage problems identified in the SWMP, can be used to assist this process, although more detailed studies are likely to be required.

- In identifying and allocating potential development sites seek reasonable opportunities for flood risk reduction measures; taking into account the Level 2 SFRA which will be prepared in due course.

- Give consideration to a suitable generic policy to be contained within the emerging Local Plan in respect of non-allocated sites where flood risk reduction measures should be sought.

- Continue to seek adoption of the Community Infrastructure Levy charges as a potential additional tool for securing contributions towards the delivery of flood risk reduction measures where a need has been identified. If appropriate, include wording to this effect in a local plan policy, supported by evidence and SPD if necessary.

This section may also be relevant to any neighbourhood plans proposed in future in the Borough.

7.9 Planning Applications – LBH and Applicants

Planning applications can be submitted both for sites allocated within development plans and other sites, known as windfall sites. Flood risk at windfall sites may not have been previously considered in detail by the local planning authority.

The NPPF[18] stipulates that a site-specific flood risk assessment is required for:

- Development proposals on sites of 1 hectare or greater in FZ1;

- all proposals for new development (including minor development and change of use) in FZ2 and FZ3;

- all proposals for new development (including minor development and change of use) in an area within FZ1 which has critical drainage problems (as notified to the local planning authority by the EA); and

- Where proposed development or a change of use to a more vulnerable class may be subject to other sources of flooding (groundwater or surface water flooding).

Table 7-1 summarises LBH's requirements for site-specific flood risk assessments (FRAs). It is noted that the EA has not notified LBH of any areas within FZ1 with critical drainage problems at present. However, areas which are likely to be most at risk of flooding from local sources, and where sustainable drainage solutions should be a priority, have been identified in this SFRA and have been delineated as HCDA. This is different from the CDA terminology used by the EA but nevertheless effectively means the same thing.

Flooding from local sources also occurs outside the mapped HCDAs within FZ1, but a FRA is not always required. In this respect, the NPPF requires a FRA for all sites greater than 1ha in area within Zone 1. FRAs for sites in Zone 1 should be proportionate to the level of risk and focus on records of past flooding and sustainable drainage solutions.

18 Footnote 20, page 24

The EA provides detailed Standing Advice, available online[19], to assist with both the development and evaluation of flood risk assessments. This includes information on what FRAs should cover and what accompanying plans should be submitted. In addition to a Flood Risk Stranding Advice Tool for Local Planning Authorities, advice specific to the fluvial flood zone in which the proposed development lies and the broad size of the development is provided. For example, there is specific standing advice for proposed developments in fluvial FZ1 which are less than 1ha in size. It is also noted that a homeowner's guide to flood resilience has been published at http://www.knowyourfloodrisk.co.uk.

Table 7-1 : Requirements of Flood Risk Assessments

Zone 3b Functional Floodplain		Zone 3a High Probability	Zone 2 Medium Probability	Havering Critical Drainage Areas	Zone 1 Low Probability
Existing Development	New Development				
Detailed FRA required				FRA required (proportionate to level of risk), should focus on records of past flooding and SuDS	FRA required (proportionate to level of risk) for all sites greater than 1ha in area, but should focus on records of past flooding and SuDS. Recommend that sites of 1ha or less carry out an assessment of localised flood risks

The site-specific FRA must follow the Sequential Test, and if required the Exception Test, as noted above and detailed in the NPPF and its accompanying NPPG. The NPPF[20] stipulates that the FRA must demonstrate that:

- the development is appropriate in its proposed location, considering the proposed use and all potential sources of flooding;
- within the site, the most vulnerable development is located in areas of lowest flood risk unless there are overriding reasons to prefer a different location;
- the development is appropriately flood resilient and resistant, including safe access and escape routes where required, and that any residual risk can be safely managed, including by emergency planning; and it gives priority to the use of sustainable drainage systems; and
- The development will not increase flood risk elsewhere.

Paragraph 104 of the NPPF notes the following exceptions to this:

- The Sequential Test need not be applied where the proposed site is allocated in the development plan.
- The Sequential and Exception Tests should not be applied for applications for minor development and changes of use, 'except for any proposal involving a change of use to a caravan, camping or

19 www.gov.uk/planning-applications-assessing-flood-risk
20 Paragraph 103

chalet site, or to a mobile home or park home site, where the Sequential and Exception Tests should be applied as appropriate'.

The NPPF requirements are supplemented by planning policies in relation to flooding set out in the London Plan and in local planning documents produced by LBH, including with regard to FRAs, sustainable drainage and flood resilience. Relevant policies at the time of writing are set out in Section 2 of this SFRA. In its role as a statutory consultee for planning applications, the EA will provide comment on applications for sites at higher risk of flooding, although their role is set to decrease in future.

A Site-Specific Flood Risk Assessment Checklist is provided by the Government as part of the Planning Practice Guidance and should be used as the starting point for all site-specific FRAs. It is available online at:

http://planningguidance.planningportal.gov.uk/blog/guidance/flood-risk-and-coastalchange/site-specific-flood-risk-assessment-checklist/

It should be noted that since the policies outlined in DCLG Written Statement HCSWS161 on sustainable drainage systems came into effect on 6th April 2015, the local planning authority is required to consult the relevant lead local flood authority on the management of surface water in planning applications, and satisfy themselves that the proposed minimum standards of operation are appropriate. This policy applies to all developments of 10 homes or more and to major commercial development.

Developers should be aware that the Environment Agency are continually refining and updating the flood zone mapping. They should therefore consult with the EA to ensure that the latest extents are used when assessing the risk of flooding.

RECOMMENDATION: Applicants should use the Government's FRA checklist as the starting point for any flood risk assessment to be submitted with their planning application, utilising the information contained within this SFRA in both their FRA and design proposals; this will provide the evidence required to enable LBH to undertake the Sequential Test if necessary. In this respect, as noted above, LBH should consider a policy in the Local Plan which would require developers to utilise the checklist and review the SFRA as a starting point in relation to flood risk guidance. Equally, planning officers should use the information contained in the checklist, the NPPG and this SFRA to inform their evaluation of planning applications and any accompanying flood risk assessments. It should be noted that, in line with the NPPF, ALL sources of flooding must be considered, including from surface water and groundwater. When granting planning permission, the use of planning conditions and Section 106 agreements should be considered, where necessary, to prevent any increase in flood risk and to assist in securing flood risk reduction measures.

The SFRA mapping will be of particular use in identifying key information for the FRA, including Flood Zones, HCDA and flood management assets, but must be read in conjunction with the SFRA text. Sections 4 and 5 provide further information on flood risk in specific locations and highlight key issues to consider, including the potential effects of climate change on flood risk and location of flood management infrastructure. Further issues to take in to consideration in developing or evaluating an FRA are noted below.

There is some uncertainty as to the extent of FZ3b on Blacks Brook, Emerson Park Stream, Paines Brook and Weald Brook. Proposed development on these watercourses will need to demonstrate via a suitable site-specific FRA, that the site is outside the functional floodplain.

However, it is important to note that the SFRA provides the most up-to-date information at the time of writing, but the data could change with time. The SFRA mapping is also taken at a borough-wide level and more localised mapping and flood history information will be needed to determine flood risk at particular sites. The EA and LBH will be important sources for the latest data.

Compliance with current planning policy in relation to flooding contained in the NPPF, the London Plan and in planning policy documents produced by LBH should be demonstrated by applicants in their planning

applications and considered by planning officers in their determination of applications, including with regard to FRAs, sustainable drainage and flood resilience.

Know Your Flood Risk - http://www.knowyourfloodrisk.co.uk

7.10 Restriction of Permitted Development Rights

Permitted Development (PD) rights allow for some minor development, such as certain sizes of building extension, without planning permission. The NPPG (Flood risk guidance, paragraph 047) states that minor developments, some of which are covered by PD rights such as small extensions, are *'unlikely to raise significant flood risk issues unless they would:*

- have an adverse effect on a watercourse, floodplain or its flood defences;
- impede access to flood defences and management facilities; or
- where the cumulative impact of such developments would have a significant effect on local flood storage capacity or flood flows'.

Minor developments subject to PD rights, such as some extensions or paving over of gardens, therefore have the ability to raise flood risk and increase surface water run off.. Article 4 of the Town and Country Planning General Permitted Development Order provides a possible vehicle for the removal of PD rights in exceptional circumstances, which the NPPF (Paragraph 200) notes to be *'limited to situations where this is necessary to protect local amenity or the wellbeing of the area'*. This could include situations where minor permitted development has the potential to add to localised flood risk as highlighted above, such as from the cumulative impact of extensions within an area.

If there are areas of the Borough where Permitted Development could lead to an increase in flooding an Article 4 Direction could be explored with the Development Management team. For example, the HCDA's may be locations where this could be considered. There would need to be a strong justification to support this and therefore the implementation of an Article 4 direction would need to be subject to further detailed investigation.

7.11 General Recommendations – Minimising Flood Risk and Impacts

When evaluating the flood risk of an existing or proposed development it is important to consider issues of flood resilience and flood resistance – minimising the likelihood of flooding, minimising impacts if the site does flood, and allowing a quick recovery after flooding. Such measures should also be included in the development of design proposals in planning applications, as relevant to the likely level of flood risk at a site. As noted above, the NPPF requires that planning applications demonstrate that the *'development is appropriately flood resilient and resistant'*, that *'any residual risk can be safely managed'* and *'it gives priority to the use of sustainable drainage systems'*. Potential considerations include:

- A change in land use to reduce the vulnerability of the proposed development;
- Placing uses with greater vulnerability to flooding in higher areas within the site to limit the risk or extent of flood damage;
- Minimising / reducing impermeable surfaces (building footprints and areas of hardstanding);
- Raising internal floor levels above the predicted flood level to reduce the likelihood of the property flooding, taking into account any increase in flood level likely in future as a result of climate change;
- Arranging buildings and solid walls on site to remove obstructions to the overland flow paths of flood waters;
- Identifying potential sources of pollution in the event of flood and seeking to contain them;
- Ensuring there is a safe means of access and escape in the event of a flood;
- Developing a flood evacuation plan in the event of the threat of flood;
- Subject to matters relating to Building Control, raising electrical wiring and sockets to avoid damage to electrical systems in the event of flood, use of tiled or stone flooring etc.

Sustainable Drainage Systems (SuDS) is a term used to describe the various approaches that can be used to manage surface water drainage in a way that mimics the natural environment. The management of rainfall (surface water) is considered an essential element of reducing future flood risk to both the site and its surroundings.

LBH and the EA all strongly advocate the use of SuDS. Policy 5.13 of the London Plan and Policy DC48 of the LBH Core Strategy and Development Control Policies DPD require the use of SuDS unless there are practical reasons for not doing so (see Section 2 of this SFRA).

Schedule 3 of the Flood and Water Management Act (FWMA) 2010, which is yet to be fully enacted, deals with SuDS. In particular, the Act calls for the establishment of a SuDS Approving Body (SAB) to be set up within Lead Local Flood Authorities (LLFAs).As a LLFA LBH will be expected to review and approve SuDS proposed as part of some developments. This includes prior to determination; consultation with other bodies such as the EA, sewerage undertaker, highway authorities, British Waterways and Internal Drainage Boards. Additionally the SAB will need to agree a non-performance bond with the developer. The SAB will have a duty (and the power) to adopt the SuDS which satisfy the conditions of the Act. This SFRA will be updated to reflect these changes when they are enacted. In line with this requirement DCLG Written Statement HCWS161 on sustainable drainage systems requires that SuDS are put in place on all major developments, unless they can be demonstrated to be inappropriate. Local planning authorities are required to consult the relevant LLFA on these proposals.

A wide variety of SuDS techniques are available, potentially providing both water quality and water quantity improvement benefits on a site by site basis throughout LBH. Wherever possible within brownfield areas, the developer should seek to reduce the rate of runoff from the site to the equivalent Greenfield runoff rates (i.e. the rate of runoff generated from the site assuming it were an open grassed area). This is usually within the range of 5 to 9 litres per second per hectare (l/s/ha), depending on site slope and soil porosity. Collectively, the effective application of SuDS as part of all future development has the potential to reduce the risk of flooding within Havering.

Indeed reducing the rate of discharge from urban sites to Greenfield runoff rates is one of the most effective ways of reducing and managing flood risk within the Borough. Although any reduction in the amount of water that originates from any given site is likely to be small, if applied to sites across the Borough in a consistent

way, the cumulative effect could be significant. There are numerous different ways that SuDS can be incorporated into a development and the most commonly found components of a SuDS system are described in the following table. The appropriate application of a SuDS scheme to a specific development is heavily dependent upon the topography and geology of the site.

It should be noted that the London Plan contains a drainage hierarchy, detailed in Section 2.3 of this SFRA, which must be taken into account.

Table 7-2: Summary of Potential SuDS Measures to Reduce Flood Risk

SuDS Measure	Description
Pervious surfaces	Surfaces that allow inflow of rainwater into the underlying construction or soil.
Green roofs	Vegetated roofs that reduce the volume and rate of runoff and remove pollution.
Filter drain	Linear drains consisting of trenches filled with a permeable material, often with a perforated pipe in the base of the trench to assist drainage, to store and conduct water; they may also permit infiltration.
Filter strips	Vegetated areas of gently sloping ground designed to drain water evenly off impermeable areas and to filter out silt and other particulates.
Swales	Shallow vegetated channels that conduct and retain water, and may also permit infiltration; the vegetation filters particulate matter.
Basins, Ponds and Wetlands	Areas that may be utilised for surface runoff storage.
Infiltration Devices	Sub-surface structures to promote the infiltration of surface water to ground. They can be trenches, basins or soakaways.
Bioretention areas	Vegetated areas designed to collect and treat water before discharge via a piped system or infiltration to the ground.

Table 7-3: Summary of Potential SuDS Measures to Reduce Flood Risk

It should be noted that SuDS can have other benefits, depending upon the system installed, in addition to helping to minimise flood risk; these include helping to improve water quality by reducing pollutants, helping to recharge groundwater supplies, reducing the demand for potable water, improving wildlife habitats and helping to provide green corridors and improving local amenity. The cumulative benefits of numerous SuDS schemes over a number of sites in the Borough could therefore be significant.

Table 7-4: Summary of Benefits of SuDS Measures

	SuDS technique	Flood Reduction	Water Quality Improvement	Landscape & Wildlife Benefit
Most Sustainable	Living roofs	✓	✓	✓
	Basins and ponds - Constructed wetlands - Balancing ponds - Detention basins - Retention ponds	✓	✓	✓
	Filter strips and swales	✓	✓	✓
	Infiltration devices - soakaways - infiltration trenches and basins	✓	✓	✓
	Permeable surfaces and filter drains - gravelled areas - solid paving blocks - porous paving	✓	✓	
Least Sustainable	Tanked systems - over-sized pipes/tanks - storms cells	✓		

There are numerous sources of best practice advice with regard to flood resilience and flood resistance measures, including SuDS. Examples are the EA standing advice for development of Flood Risk Assessments and the Know Your Flood Risk guide to flood resilience. These should be consulted in the production of all FRAs.

Key contacts:

- Environment Agency – https://www.gov.uk/government/organisations/environment-agency
- London Borough of Havering – https://www.havering.gov.uk/Pages/Services/Flooding-advice.aspx
- CIRIA[21] – www.susdrain.org
- Know Your Flood Risk - http://www.knowyourfloodrisk.co.uk

21 Construction Industry Research and Information Association

RECOMMENDATION: LBH should encourage developers to consider flood resilience in their developments to permit a quick recovery post-flooding. LBH should continue to mandate the use of SuDS in developments where practicable, as indicated in the London Plan, current LBH policy and by the EA.

7.12 Summary – Development Management Recommendations

The following table summarises the recommendations made in this SFRA regarding spatial planning and development management. It is important to note that the table is designed as a summary of issues covered elsewhere in the SFRA, NPPF and other guidance documents. It should not be relied upon in isolation when writing or evaluating a FRA.

The table is not intended to replace current planning policies within existing development plans prepared by LBH, but it may be useful in their preparation of future planning policies relating to flood risk.

Requirements	NPPF Flood Zone					
	Zone 3b Functional Floodplain (See Section 0)		Zone 3a High Probability (See Section 0)	Zone 2 Medium Probability (See Section 0)	HCDAs [1] (See Section 4.8)	Zone 1 Low Probability (See Section 0)
	Existing Development[22]	New Development				
Important Considerations	Opportunities should be sought: to reduce overall level of flood risk in the area through layout and form of development and appropriate application of SuDS; and to relocate existing inappropriate development to land with lower probability of flooding. Sequential Test required (unless para.104 of NPPF applies) All existing 'solid buildings' that would otherwise be in Zone 3b, unless designed to allow the passage of water, together with any other land prevented from flooding in a 5% (1 in 20) AEP event by the presence of solid buildings and existing infrastructure, are considered to be within Zone 3a for planning purposes. Existing buildings and other land designed to flood will continue to be in Zone 3b.	Includes all new development on previously undeveloped land, or on surfaces that are currently permeable, or on surfaces that are currently impermeable but not designed to flood.	Opportunities should be sought: to reduce overall level of flood risk in the area through layout and form of development and appropriate application of SuDS; to relocate existing inappropriate development to land with lower probability of flooding; and to create space for flooding to occur.	Opportunities should be sought to reduce overall level of flood risk in the area through layout and form of development and appropriate application of SuDS. Sequential Test required (unless para.104 of NPPF applies)	Important to check whether site is a 'dry island' (see Section 3.3.5). HCDA have been identified which are likely to be most at risk of flooding from local sources. Local flooding must be considered as in integral part of the design process for all development. Opportunities should be sought to reduce overall level of flood risk in the local area through layout and form of development and appropriate application of SuDS. (See guidance provided by EA on Critical Drainage Areas - equally applicable here - and best practice guidance on SuDS)	Important to check whether the site is a 'dry island' (see Section 3.3.5). It is important to recognise that sites within Zone 1 may be susceptible to flooding from other sources. Development may contribute to an increase in flood risk elsewhere if not carefully mitigated. Opportunities should be sought to reduce overall level of flood risk in the area and beyond through layout and form of development and appropriate application of SuDS.
Appropriate Land Use (refer to Tables 2 and 3 of the NPPG)	Proactively seek a reduction in risk by reducing the vulnerability of the existing land use.	Water Compatible uses Essential Infrastructure, if passes Exception Test.	Water Compatible or Less Vulnerable uses. More Vulnerable uses or Essential Infrastructure, if passes Exception Text.	Water Compatible, More Vulnerable or Less Vulnerable uses. Highly Vulnerable uses, if passes Exception Test.	No restrictions upon land use.	No restrictions upon land use.
Flood Risk Assessment (FRA) (all sources of flooding)	Detailed FRA required		Detailed FRA required	Detailed FRA required	FRA required (proportionate to level of risk) for a sites in Flood Zone 1,but should focus on records of past flooding and SuDS. Detailed FRA required for sites in Flood Zones 2 and 3	FRA required (proportionate to level of risk) for all sites greater than 1ha in area, but should focus on records of past flooding and SuDS. Recommend that sites of 1ha or less carry out an assessment of localised flood risks

Notes

General *This table should be referred to in conjunction with reference to the rest of this SFRA report.*

1 *This includes areas in Flood Zone 1 that Havering have identified as being at risk of surface water flooding*

22 Existing development specifically designed to allow the passage of flood water, such as buildings on stilts or car parks designed to flood

7.13 Local Community Action to Reduce Flood Damage

It is important to ensure a broad awareness with respect to flood risk, to enable communities to help themselves should a flood event occur. Advice is available on several websites, in particular those of the EA, the Mayor of London and LBH.

Key contacts:

- Environment Agency – https://www.gov.uk/government/organisations/environment-agency
- Mayor of London – www.london.gov.uk/mayor-assembly/mayor/london-resilience
- London Borough of Havering –www.havering.gov.uk/Pages/Services/Flooding-advice.aspx

The EA advises everyone to check whether their property is at risk of flooding; this includes both residential and business premises. For those whose properties are at risk of flooding, the EA advises:

- sign up to their flood warnings;
- make a flood plan;
- prepare the property for flooding; and
- prepare a flood kit.
- Information on all of the above can be found on the EA's website.

It is also important for property owners to ensure that they have sufficient insurance to cover their property if damaged by flood.

7.14 Emergency Planning – London Borough of Havering

The Council is designated as a Category 1 Responder under the Civil Contingencies Act 2004. As such, the Council has defined responsibilities to assess risk, and respond appropriately in case of an emergency, including (for example) a major flooding event. The Council's primary responsibilities are[23]:

- from time to time assess the risk of an emergency occurring;
- from time to time assess the risk of an emergency making it necessary or expedient for the person or body to perform any of his or its functions;
- maintain plans for the purpose of ensuring, so far as is reasonably practicable, that if an emergency occurs the person or body is able to continue to perform his or its functions;
- maintain plans for the purpose of ensuring that if an emergency occurs or is likely to occur the person or body is able to perform his or its functions so far as necessary or desirable for the purpose of:
    - preventing the emergency,
    - reducing, controlling or mitigating its effects, or
    - taking other action in connection with it.

23 Civil Contingencies Act 2004

In addition to the EA fluvial flood warning service, the Flood Forecasting Centre is a partnership between the EA and the Met Office. The centre forecasts for all natural forms of flooding - river, surface water and groundwater. A daily Flood Guidance Statement provides information for Category 1 and 2 responders to help with emergency planning and resourcing decisions. It presents an overview of the flood risk across five days and identifies possible severe weather, which could cause flooding and significant disruption to normal life. These forecasts, combined with understanding of the areas at highest risk of local flooding through the HCDA maps, can inform emergency planning for all sources of flooding.

As water levels rise and begin to pose a risk to life and/or livelihood, it is the responsibility of the emergency services to coordinate the evacuation of residents. This evacuation will be supported by the Council. It is essential that a robust plan is in place that clearly sets out (as a minimum):

- roles and responsibilities;
- paths of communication;
- evacuation routes;
- community centres to house evacuated residents;
- contingency plans in case of loss of power and/or communication.

Dry access (i.e. above flood level) should be sought wherever possible to ensure that all residents can be safely evacuated in times of flood. A Flood Evacuation Plan must be in place, suitable to the type of development, where there is no safe dry access to/from the site (i.e. access through Zone 1).

Emergency Planners have a role through the planning approval process to assess the adequacy of safe access plans for new developments. This will be particularly important for instances where developments pass the Exception Test and are located in a zone of higher flood risk than they would otherwise be. The emergency planners will have to take this into account to ensure the developer has considered this carefully in their proposals and that the plans are appropriate for future users.

Coordination with the emergency services and the EA is imperative to ensure the safety of residents in time of flood. Relatively few areas within Havering are at risk of river flooding (as indicated by the shaded NPPF flood risk zones in the adjoining maps). Flooding of this nature will typically occur following relatively long duration rainfall events, and consequently forewarning will generally be provided to encourage preparation in an effort to minimise property damage and risk to life. It is worth highlighting however that the benefits of flood warning are often compromised to a large degree by the lack of ‘take up’ within the local community. This emphasises the extreme importance of raising local awareness with respect to the potential risks of flooding.

Areas suffering from localised flooding issues may be at greater risk due to the difficulty of forecasting intense rainfall which may lead to surface water flooding and the response of aquifers to above average long-term rainfall which may lead to groundwater flooding. Localised flooding caused by intense rainfall can occur rapidly and pose a risk to life, particularly in confined spaces e.g. basement properties. Furthermore, the blockage of gullies and culverts as a result of litter and/or leaves is commonplace, and this will inevitably lead to localised problems that can only realistically be addressed by reactive maintenance.

It is noted, however, that the EA has recently introduced a Groundwater Flood Warning Service as an extension to its existing Floodline Warnings Direct service. This new service is available to areas which have previously been affected and already receive local information about groundwater flooding. The service will issue Flood Alerts when there is the possibility of flooding from groundwater, Flood Warnings in some areas when flooding of property is expected and support the dissemination of information through the website, flood wardens, flood action groups etc. The areas within Havering that are covered by both the Flood Warning and Flood Alert services are indicated in Figure 113.

It is recommended that the Council advises the Havering Borough Resilience Forum of the risks raised in light of the updated LBH SFRA, ensuring that the planning for future emergency response can be reviewed accordingly. This will inform the Havering Borough Risk Register[24].

7.14.1 Essential Infrastructure

Essential infrastructure has been identified within Havering to provide information to emergency planners. Infrastructure and critical services and vulnerable institutions at risk of flooding have been identified in Figures 112 and 114 respectively. Table 7-5 summarises services at risk of flooding.

Table 7-5: Summary of Flood Risk to Vulnerable Institutions, Emergency Services and Utilities

Type	No. in Flood Zone 3	No. in Flood Zone 2	Comments
Hospitals	0	0	
Ambulance Stations	0	1	Old Church Road Romford
Fire Stations	1	0	Wennington FS
Police Stations	0	0	
Schools	2	0	Newtons Primary School Brookside Infants School
Community Centres	1	1	(3) Mardyke Youth and Community Assoc. (2) Wennington Village Assoc.
Care Homes	0	0	
Telephone Exchanges	1	1	Rainham Road, Rainham
Thames Water Sites	0	2	Riverside STW and Final Sludge Pumping Station
Anglian Water Sites	0	1	Bury Farm Treatment Works
Gas Pipelines	0	1	8171 2430 Fords Branch off Rom/Baker St
Electricity Sub-stations	16	11	*Individual site information not available*

7.14.2 Transport

Figure 112 indicates the location and flood risk to key transport routes in Havering. It should be noted that although some routes appear to be within a Flood Zone, they may be elevated or on an embankment which would mean they would not be at risk of flooding from such an event.

24 http://www.havering.gov.uk/Documents/Emergencies/BoroughRiskRegister.pdf

7.15 Updating this SFRA

This SFRA provides a strategic overview of the spatial variation of flood risk throughout the Borough at a particular point in time, building upon the best available information at that time.

The SFRA has been developed building heavily upon existing knowledge with respect to flood risk within the Borough; with data continually changing as new flooding events occur and further modelling is undertaken, this knowledge is continually evolving. In addition, Government policy on flood risk continues to change, with significant changes to national and local policy evident between the publication of the previous SFRA in 2007 and the production of this update in 2014. Given that this is the case, a periodic review of this SFRA is imperative and it must be treated as a living document.

The following key questions should again be addressed as part of the SFRA review process:

Question 1

Has any flooding been observed within the Borough since the previous review? If so, the following information should be captured as an addendum to the SFRA:

- Location of flooding (grid reference or street name);
- Date(s) of flooding;
- Source of flooding (e.g. surface water, main river, sewers etc);
- Pathway of floodwaters (e.g. along the particular streets);
- Receptors (e.g. properties flooded internally, road, gardens etc);
- Frequency of flooding (e.g. once a year, during heavy rainfall etc).

Question 2

Have any amendments to the NPPF or the accompanying National Planning Practice Guidance (NPPG) or the London Plan been issued since this document was published? If so, does it materially affect any relevant LBH policy or the assessment or recommendations of this SFRA?

Question 3

Has the EA or LBH (as LLFA) issued any amendments to their flood risk mapping and/or guidance since the previous policy review? If so:

- Has any further detailed flood risk mapping been completed within the Borough, resulting in a change to the 5% (1 in 20) AEP, 1% (1 in 100) AEP or 0.1% (1 in 1000) AEP flood outline? If yes, then the Zone 3b and Zone 3a flood outlines should be updated accordingly;
- Has any further detailed or revised mapping been produced for the Borough resulting in a change to the HCDA? If so, then relevant maps should be altered accordingly;
- Has the assessment of the impacts that climate change may have upon rainfall and/or river flows over time altered? If yes, then a review of the impacts that climate change may have upon the Borough is required;
- Do the development management recommendations provided in the SFRA in any way contradict emerging EA advice with respect to (for example) the provision of emergency access, the setting of floor levels and the integration of sustainable drainage techniques? If yes, then a discussion with the EA is required to ensure an agreed suite of development control requirements are in place.

It is highlighted that the EA updates the Flood Map for Planning (Rivers and Sea) on a quarterly basis[25]. If this has been revised within the Borough, the updated Flood Zones will be automatically forwarded to the Council for their reference. It is recommended that only those areas that have been amended by the EA since the previous SFRA review are reflected in Zone 3 and Zone 2 of the SFRA flood maps. This ensures that the more rigorous analyses carried out as part of the SFRA process are not inadvertently lost by a simple global replacement of the SFRA flood maps with the Flood Map for Planning (Rivers and Sea).

Question 4

Has the implementation of the SFRA within the spatial planning and/or development management functions of the Council raised any particular issues or concerns that need to be reviewed as part of the SFRA process?

[25] Available here: http://maps.environment-agency.gov.uk/wiyby/wiybyController?x=357683.0&y=355134.0&scale=1&layerGroups=default&ep=map&textonly=off&lang=_e&topic=floodmap

1. Introduction

1.1 Background

This annex accompanies the London Borough of Havering Updated Level 1 Strategic Flood Risk Assessment (SFRA) which incorporates new flood risk information and provides guidance on applying the updated guidance from the Environment Agency on the consideration of climate change for Flood Risk Assessments and SFRA's. The updated Level 1 SFRA provides the necessary information to apply the Sequential Test across Havering and support the Sustainability Appraisal when considering the allocation of development sites in the emerging Local Plan.

In line with the National Planning Policy Framework (NPPF) and National Planning Practice Guidance (NPPG), the overall aim of the Sequential Test is to steer new development to areas with the lowest probability of flooding (Flood Zone 1). Where there are no reasonably available sites in Flood Zone 1, the allocation of land taking into account the flood risk vulnerability of the land use, development in Flood Zone 2 should be considered next, applying the Exception Test if required. Then, only if it can be demonstrated that there are no reasonably available sites in Flood Zones 1 or 2 should the suitability of sites in Flood Zone 3 be considered, taking into account the flood risk vulnerability of land uses and applying the Exception Test. The Exception Test is defined in the NPPF at paragraph 102 as:

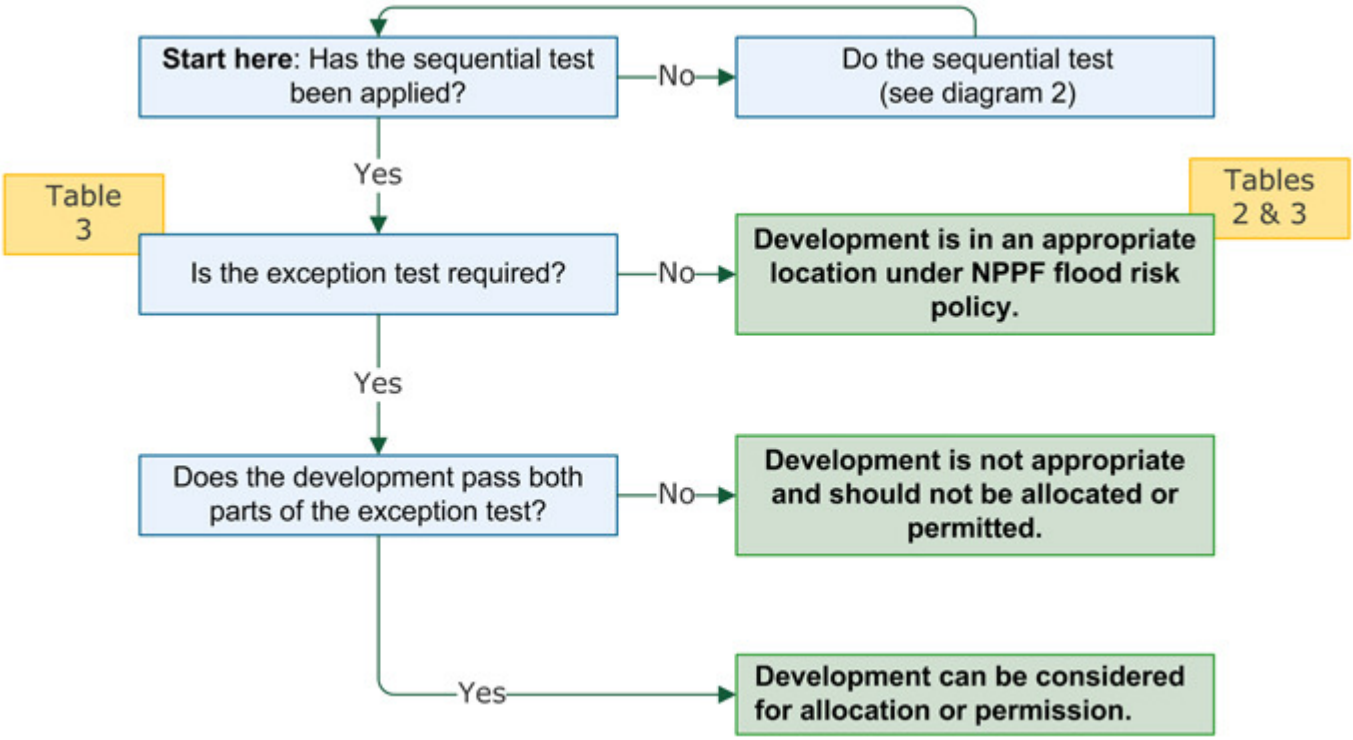
If, following application of the Sequential Test, it is not possible, consistent with wider sustainability objectives, for the development to be located in zones with a lower probability of flooding; the Exception Test can be applied if appropriate. For the Exception Test to be passed:

- *it must be demonstrated that the development provides wider sustainability benefits to the community that outweigh flood risk, informed by a Strategic Flood Risk Assessment where one has been prepared; and*

- *a site-specific flood risk assessment must demonstrate that the development will be safe for its lifetime taking account of the vulnerability of its users, without increasing flood risk elsewhere, and, where possible, will reduce flood risk overall.*

Both elements of the test will have to be passed for development to be allocated or permitted.

The flow diagram below is taken from the NPPG and demonstrates how the Sequential Test is applied in Local Plan making and explains the circumstances where the Exception Test would need to be passed.



It is likely that the Exception Test will need to be passed as part of the emerging Local Plan. In lieu of the Level 2 SFRA which will be required at a later stage once the emerging Local Plan includes site allocations, the Environment Agency has confirmed that an acceptable way forward for this document is to provide a Level 1 SFRA Annex to deal with flood risk relating to the Strategic Development Areas in the emerging Local Plan, including the assessment of residual risk based on the hypothetical failure of a flood defence. The residual flood risk, (i.e. the flood risk that would result should the defences be removed or fail) should be considered in determining the viability of land for future allocation. Therefore, this Annex provides more detail than is normally presented in a Level 1 SFRA but is not a Level 2 SFRA which would still need to be completed where the Exception Test needs to be passed.

The specific objective of the SFRA Update Annex A is to form an important part of the flood risk evidence base for the emerging Local Plan through considering the potential flood risk implications of two strategic Strategic Development Areas proposed as part of the emerging Local Plan:

- Rainham and Beam Park; and
- Romford Town Centre.

This evidence base will partially fulfil the requirements in a Level 2 SFRA in respect of high level information to support strategic Strategic Development Areas in the Local Plan, but not to the same level of detail as would be required for site allocations with defined boundaries.

Strategically, Rainham and Beam Park has been identified as one the Greater London Authorities new housing zones and would be a major area of new development encompassing:[1]

- 3,250 homes, of which 1,000 are houses;
- 3,500 – 4,000 sqm new town centre uses in Beam Park including 2,000 sqm of retail floor space and a new railway station;

[1] Rainham and Beam Park Planning Framework, Final Report, January 2015: https://www.havering.gov.uk/Documents/Planning/Rainham-Beam-Park-Planning-Framework.pdf

- A new 2-Form Entry Primary School;
- Health and community facilities at Beam Park Centre; and
- Expansion of Havering College.

On 15 June 2016, Cabinet Members of London Borough of Havering entered into an overarching agreement with the Greater London Authority (GLA) for funds to become allocated to the Romford Housing Zone. London Borough of Havering is 1 of only 8 Boroughs to be awarded a second Housing Zone. Romford is designated one of the 13 metropolitan centres in the London Plan. The aim of the Housing Zone status to boost housing supply, stimulate building and produce the new low cost homes London needs to meet its growing population. The investment from GLA will support the delivery of:[2]

- 3,304 homes;
- An East-West pedestrian and cycle route;
- New public square; and
- New community related infrastructure.

New development in the two Housing Zones is consistent with the Borough's adopted planning and regeneration strategies.

1.2 Methodology

Inputs from the London Borough of Havering on the quantum and defined boundaries of housing and employment growth for each Strategic Development Area will be considered and assessed against the detailed nature of the flood characteristics of the flood zones relevant to the Strategic Development Areas including:

- Flood probability;
- Flood depth;
- Flood hazard;
- Rate of onset of flooding; and
- Duration of flood.

[2] Romford Housing Zone Decision Details regarding Overarching Borough Agreement with the GLA to support the reinvigoration of Romford town centre. Available at: http://democracy.havering.gov.uk/ieDecisionDetails.aspx?ID=2053

	1	4	20	75

2.1 Description

The Rainham and Beam Park Strategic Development Area (RBPSDARBPSDA) located just north of the Rainham Marshes is bounded by the River Beam, the railway line that services Rainham station, Brookway and Lambs Lane South and slightly north of the A1306.

2.1.1 Flood Defence Assets

Please refer to Figure A05

The RBPSDA is at risk of fluvial flooding from the Rivers: Thames, Beam and Ingrebourne. Of these the most significant is the Thames. The RBPSDA is primarily at risk of flooding should the Thames Tidal Defences (TTD) fail. The TTD provide a minimum standard of protection of the 0.1% 1 in 1,000 annual chance event. The TTD defence (crest) level varies along the frontage of the London Borough of Havering (LBH): the western half defence level is 7.1m AOD which changes to 7.0m AOD approximately halfway along. The boundary between the two levels is approximately at the Rainham Main Sewer which outfalls into the River Thames from the Rainham Marshes adjacent to the Tilda Rice factory (NGR: TQ 5152 8019). At the far eastern end of the Borough boundary there is a relatively short (approximately 140m) length of defence with defence level of 6.9m AOD.

Based on the Environment Agency's AIMS database fluvial flood defences on the River Ingrebourne extend from the Thames to the A1306 and are classified as either high ground or embankments. Defences on the River Beam extend from the Thames to Beam Country Park.

Washlands Flood Storage Area (FSA) is located on the River Beam to the north of the RBPSDA. Dovers Corner Flood Storage Area is adjacent to the River Ingrebourne to the north of the RBPSDA. These Flood Storage Areas are designed to attenuate flood flows on both watercourses during storm events. This reduction in flow would mitigate flood risk along both watercourses in the RBPSDA.

Through liaison with the Environment Agency it is understood that the Washlands FSA is likely to require an increase in storage capacity to continue to provide its current Standard of Protection (SoP) when the impact of climate change is taken into account.

2.2 Flood Risk Summary

2.2.1 Flood Zones

Please refer to Figure A01

Fluvial flood zones from the Rivers Beam, Ingrebourne and Thames encroach upon the Strategic Development Area, the predominant risk is from the River Thames although this is residual risk should the TTD fail.

The River Beam and River Thames define the borders of the Borough in the west and south respectively. The River Ingrebourne flows south-west through the RBPSDA from the east to the River Thames in the south. The Rainham Main Sewer runs from the River Ingrebourne, just south of the A1306 and discharges into Rainham Marshes. The River Beam flood zones indicate the majority of the land along the western boundary of the RBPSDA is designated as Flood Zone 3b – Functional Floodplain. Towards the south of the RBPSDA the land immediately east of the River Beam is designated as Flood Zone 3a. The southern edge of the RBPSDA is land designated as Flood Zones 3a and 2. These extents include both fluvial and tidal modelling from the River Thames, to the south of the RBPSDA. Flood Zones 3a and 2 cover much of the western end of the RBPSDA the land adjacent to the River Ingrebourne is designated predominantly as Flood Zone 3a.

2.2.2 Flood Depth

Please refer to Figure A02

A 1% (1 in 100) AEP event, modelled in 2004 by the Environment Agency, has been used to assess potential flood depths within the RBPSDA. There are localised depressions within the RBPSDA that are potentially at risk of ponding up to depths of 1 metre. Ponding is also indicated against the A1306 embankments immediately to the west of the location where the River Ingrebourne is crossed. Flooding follows the courses of the River Beam and the River Ingrebourne throughout the RBPSDA, however not exceeding 1m in depth, other than the locations previously summarised. Additional localised ponding occurs immediately south of the RBPSDA boundary.

2.2.3 Flood Hazard

Please refer to Figure A03

Flood hazard has been calculated by the methodology contained within the Defra Guidance: Flood Risk Assessment Guidance for New Development; FD2320/TR2. The degree of flood hazard provides a guide to the risk to people from a combination of predicted flood depth and velocity. A ‘Debris Factor’ is added to the calculation to account for the additional hazard posed by floating debris. A summary of the flood hazard classifications and their description is included in Table 1.

Table 1: Flood Hazard Classification

Classification	Degree of hazard	Description
Low	Caution	Flood Zone with shallow flowing or deep standing water
Moderate	Dangerous for some (i.e. children)	Danger: flood zone with deep or fast flowing water
Significant	Dangerous for most	Danger: flood zone with deep fast flowing water
Extreme	Dangerous for all	Extreme danger: flood zone with deep fast flowing water

Based on FD2321/TR2 Table 4.2

Flood hazard modelling has been completed for a hypothetical breach in the TTD. The flood hazard is designated as low for the majority of the Strategic Development Area. The south-eastern corner has a very small area designated as having an Extreme flood hazard rating.

2.2.4 Flood Warning / Onset of Flooding

Please refer to Figure A04

The response time of the River Beam and the River Ingrebourne should be sufficient for Flood Warnings to be issued by the Environment Agency. In the event of a Thames Tidal Breach, it may not be possible to provide flood warnings if the breach results in rapid inundation. In this particular Strategic Development Area, the Flood Alert and Flood Warning areas are extremely similar and resemble the extents of Flood Zone 2.

The Environment Agency aims to issue a 'Flood Alert' two hours prior to the onset of any flooding within the area. They also aim to provide a 'Flood Warning' two hours prior to the onset of property flooding. The warnings are only possible for flooding from fluvial sources as information regarding the possible onset of flooding is collected using telemetry gauges on river levels.

There are currently no formal warning systems in place to raise the alarm in response to anticipated groundwater flooding incidents.

2.2.5 Surface Water Flood Risk

Please refer to Figure A06

Surface water flood risk across the RBPSDA is relatively low with only one substantial surface water flow route. Other locations within the RBPSDA have been identified as being susceptible to localised ponding in natural depressions. The main flow route enters the RBPSDA as it flows south from the Beam Valley Country Park. It is essential that potential surface water flood risk before and after development is assessed at the earliest opportunity of the design process. Please refer to Section 4.8 of the main SFRA report.

2.2.6 Other Sources of Flood Risk

Please refer to Figure A07

Approximately half of the RBPSDA is indicated as having between 50% and 75% of its area susceptible to groundwater flooding. The other half of the RBPSDA is designated as having greater than 75% of its area susceptible to groundwater flooding.

There are currently no internal or external flood records to properties within the RBPSDA.

2.2.7 Impact of Climate Change

Please refer to Figures A08a-e

Figure A08a indicates the predicted Flood Zone 3a climate change extents for flooding from the River Thames, based upon predicted sea level rise. The increase in extents predicts additional inundation against the existing situation along the A1306. The 'undefended; versions of the BIM and Mardyke models have been adopted for this assessment and consequently provide an indication of what Flood Zone 3 could become subject to influence of climate change.

Figures A08b-f indicates climate change extents from detailed modelling of the Rivers Beam, Ingrebourne and Mardyke for a range of uplift factors specified in the updated Environment Agency guidance[3]. The 10% uplift scenario indicates a negligible increase in extents within the Strategic Development Area. The 15%, 25% and 35% uplift scenarios indicate a small increase in extents around the A1306 roundabout just north of Rainham Police Station. The 70% uplift scenario indicates an increase in extents at the aforementioned roundabout as well as in the Rainham Village Primary School grounds; they also show an increase in Flood Zone 3a to as far east as Stirling Close.

Table 2: Peak River Flow Climate Change Factors to be Adopted by development Vulnerability Classification

Flood Zone	Flood Risk Vulnerability Classification				
	Essential Infrastructure	Highly Vulnerable	More Vulnerable	Less Vulnerable	Water Compatible
2	HC + UE	HC + UE	HC + UE	Central	None
3a	UE	Should not be permitted	HC + UE	HC + UE	Central
3b	UE	Should not be permitted			Central

UE= Upper End, HC = Higher Central

The allowance to be made for the predicted impact of climate change on peak river flows throughout the UK is subject to the location (river basin district[3]), timescale (design-life) to be considered and the vulnerability classification (see Paragraph 66 of the NPPG) of the proposed development. For Havering the uplift factors to be applied are summarised in Table 3.

Table 3: Recommended Climate Change allowances for Peak River Flow

Allowance	2015 to 2039	2040-2069	2070-2115
Upper End	25%	35%	70%
Higher Central	15%	25%	35%
Central	10%	15%	25%

[3] https://www.gov.uk/government/publications/flood-risk-assessments-river-basin-district-maps

2.3 Development Acceptability

As set out in Section 3.1 of the main SFRA report flood zones have been delineated across the Borough for LBH to apply the Sequential Test. The purpose is to steer development away from areas susceptible to flooding. However, it is accepted in Table 3 of the Planning Practice Guidance[4] it is not always compatible with wider sustainability objectives for the development to be located in zones of low flood risk. In such circumstances the Exception Test can be applied (see Section 1.1).

Based on the Rainham and Beam Park Planning Framework[5] the RBPSDA is proposed to consist of mixed use development, predominantly residential but also including a primary school, college and library and other mixed use development centred on the proposed district centre. Based on these proposed uses the majority of the development would be classified as 'More Vulnerable' in accordance with *Table 2: Flood Risk Vulnerability Classification* of the Planning Practice Guidance[4]. If the new development includes basements then it would change to 'Highly Vulnerable'.

Table 4: Flood Risk Vulnerability and Flood Zone 'Compatibility'

Flood Zone	Flood Risk Vulnerability Classification				
	Essential Infrastructure	Highly Vulnerable	More Vulnerable	Less Vulnerable	Water Compatible
1	Appropriate				
2	Appropriate	Exception Test required	Appropriate		
3a	Exception Test required	Should not be permitted	Exception Test required	Appropriate	
3b	Exception Test required	Should not be permitted			Appropriate

This table is based on Table 3, Paragraph 067 of the Planning Practice Guidance

With reference to Table 3 assuming the development is classified as 'More Vulnerable' the Exception Test would need to be applied to meet the criteria outlined above for the development to progress. Such development would not be acceptable in areas of Flood Zone 3b. There are small areas of Flood Zone 3b within the GA but these are restricted to the watercourse channel and therefore are unlikely to impinge on the development proposals. The majority of the GA is within flood zone 3 of the River Thames which it would be anticipated would protect the development to at least a 0.1% (1in 1,000) annual chance standard of protection as outlined in Section 2.1.1 and that based on the Thames Estuary 2100 project it is anticipated will be maintained by the Environment Agency.

When considering the impact of climate change on fluvial flood risk based on an assumed 'More Vulnerable' development vulnerability classification, with reference to Table 2 and Table 3 the 70% and 35% uplift factors should be applied to determine the future extent of Flood Zone 3a for an assumed development lifetime of 100 years.

[4] Planning Practice Guidance, DCLG, March 2014: http://planningguidance.communities.gov.uk/blog/guidance/flood-risk-and-coastal-change/flood-zone-and-flood-risk-tables/table-3-flood-risk-vulnerability-and-flood-zone-compatibility/

[5] Rainham and Beam Park Planning Framework, London Borough of Havering, January 2016

2.4 Planning Considerations

Overall the Strategic Development Area encompasses up to 144 ha of land, much of which is already developed. The Rainham and Beam Park and Planning Framework was adopted by Council's Members in February 2016 as a non-statutory planning policy document that would be a material planning consideration when the Council is considering development proposals in the Rainham and Beam Park area. This document considers the existing infrastructure of the area and identifies design principles for future development. It identifies constraints which need to be overcome and development opportunities. In terms of flood risk and water management the document states:

Opportunities

Natural environment – the site has good access to open spaces and the natural environment along the Beam River and River Ingrebourne, to Rainham Marshes, Rainham Wildspace, Thames Chase Community Forest and the All London Green Grid.

Challenges

Flood Risk – some sites are on low-lying land and are vulnerable to fluvial and tidal flooding.

Section 2.2 of this Annex outlines the flood risk constraints noting that a number of potential development sites fall within the fluvial flood risk 1 in 100 year event including climate change. The document suggests potential mitigation including opening up culverts, upgrading and improving existing flood mitigation measures and where flood risk represents a significant risk allocating this land as Green Space. LBH should encourage future riverside development to enhance and help regenerate the River Beam and River Ingrebourne corridors.

The funding of new infrastructure will also be required and the planning framework identifies SuDS as a vital part of the new infrastructure required to facilitate new development.

The Rainham and Beam Park and Planning Framework will support the emerging London Borough of Havering Local Plan through providing supporting evidence to demonstrate how the area can be developed. In particular it contains information and guidance relating to six specific character areas. The planning recommendations for development in various flood zones (section 7.11 of the main document) of the Updated Level 1 SFRA will need to be considered as part of the overall evidence base for determining allocations in the emerging Local Plan.

2.5 Conclusions

The southern section of the Rainham and Beam Park Strategic Development Area is located within fluvial Flood Zones 3a and 2 with areas designated as Flood Zone 3b adjacent to the River Beam and Ingrebourne. Flood depths, modelled for a 1% (1 in 100) AEP event, indicate localised ponding in several locations across the Strategic Development Area with maximum depths exceeding 1m. Flood depths of up to 0.75m, for the same event, are indicated as more widespread across the Strategic Development Area adjacent to the main watercourses. Consequently, the risk to life within the area is considered to be moderate.

3. Romford Town Centre Strategic Development Area

Strategic Development Area Name	Romford Town Centre			
Location	Romford			
River Catchment	River Rom, Blacks Brook			
Flood Risk Zone (% Total Area)	**3b**	**3a**	**2**	**1**
	2	1	20	77
Surface Water Flood Risk Zone (% Total Area)	**High (Greater than 3.3% annual chance)**	**Medium (Between 3.3% and 1% annual chance)**	**Low (Between 0.1% and 1% annual chance)**	**Very Low (Less than 0.1% annual chance)**
	2	5	20	73

3.1 Description

The boundary for the Romford Town Centre Strategic Development Area includes the area inside the A125 and A1251 ring road around the town centre; it also includes the River Rom corridor to the A12 and areas to the north east and south west of the town centre. Seven sites have been earmarked for development and labelled as 'Key Opportunity Sites' in the Romford Town Centre Development Framework (June 2015)[6]. In addition to these seven sites, three key sites have been identified as part of Romford Housing Zone. The nine sites are:

- 1 Como Street
- 2 Angel Way
- 3 The Brewery
- 4 Station Quarter North
- 5 Atlanta Boulevard + 108-116 South Street
- 6 Bridge Close
- 7 Homebase Site
- 8 Waterloo Road Estate
- 9 Romford Gas Works

It should be noted that for the purposes of this Annex, the boundary is based on potential flood risk and the key sites and therefore does not completely align with the Strategic Development Area.

[6] Available from: http://democracy.havering.gov.uk/documents/s15499/Item%201b%20-%20RDF%20Brochure%20-%20not%20on%20agenda.pdf

3.1.1 Flood Defence Assets

Please refer to Figure A12

The area is alleviated from flooding from the River Rom and Blacks Brook by formal flood defences. In this area, these defences are in the form of raised ground along the lengths of the watercourses. No formal Flood Storage Areas have been constructed within the Strategic Development Area. The Strategic Development Area is situated too far north to be affected by a breach of defences along the River Thames. No formal defences exist along the length of the River Rom through Romford town centre. There are no areas indicated as Benefitting from Defences within the Strategic Development Area.

3.2 Flood Risk Summary

3.2.1 Flood Zones

Please refer to Figure A09

The River Rom and one of its tributaries, Blacks Brook, run through the Strategic Development Area. A narrow corridor of land adjacent to the River Rom is designated as Flood Zone 2 with very small areas designated as Flood Zone 3b. Where Blacks Brook enters the Strategic Development Area, the land adjacent is designated as Flood Zone 3a and 3b. The land adjacent to the confluence between the two watercourses, north of Blacks Brook, is also indicated as Flood Zone 3b.

Opportunity site 7 is located solely in Flood Zone 1. Opportunity Sites 1, 2, 4, 5 and 6 all slightly encroach upon Flood Zone 2. The south-eastern corner of Opportunity site 3 is located within Flood Zone 3b.

3.2.2 Flood Depth

Please refer to Figure A10

Modelling by the Environment Agency in 2004 for a 1% (1 in 100) AEP event indicate the flood depths to exceed 1m in four locations within the Strategic Development Area. Three of these locations are adjacent to the River Rom (roundabout between St Edwards Way and the A125, roundabout between the A125 and the A1251 and to the east of Queen's Hospital). The largest area of ponding however is located west of the River Rom, near Cottons Park. Flood depths of up to 0.75m are indicated along the length of the two watercourses within the Strategic Development Area.

Opportunity sites 4 and 5 have some areas identified as having flood depths of up to 0.50m for the modelled 1% (1 in 100) annual chance event. Depths for Opportunity sites 1, 2, 3, 6 and 7 could reach up to 1.00m for the same event.

3.2.3 Flood Hazard

Flood Hazard has not been considered in this Strategic Development Area because there are no Areas Benefitting from Defences or raised embankment defences according to the Environment Agency's AiMS database. The Strategic Development Area is also outside of the reach of a Thames Tidal Breach. Therefore the flood hazard for the Romford Town Centre Strategic Development Area is classified as very low.

3.2.4 Flood Warning / Onset of Flooding

Please refer to Figure A11

The response time of the River Rom should be sufficient enough for Flood Warnings to be issued by the Environment Agency. In this particular Strategic Development Area, the Flood Alert area for Blacks Brook does not cover a substantial area adjacent to the watercourse. No Flood Warnings are available for flooding from Blacks Brook. The Flood Alert and Flood Warning areas for the River Rom are extremely similar and resemble the extents of Flood Zone 2 with Romford town centre omitted.

The Environment Agency aims to issue a 'Flood Alert' two hours prior to the onset of any flooding within the area. They also aim to provide a 'Flood Warning' two hours prior to the onset of property flooding. The warnings are only possible for flooding from fluvial sources as information regarding the possible onset of flooding is collected using telemetry gauges on river levels.

Flood Alerts are available for Opportunity Sites 4 and 5. Flood Warnings are available for Opportunity Sites 1, 2 and 6.

There are currently no formal warning systems in place to raise the alarm in response to anticipated groundwater flooding incidents.

3.2.5 Surface Water Flood Risk

Please refer to Figure A13

There are two major flow paths through the Strategic Development Area. Other locations across the Strategic Development Area are indicated as being susceptible to localised ponding; however no additional major flow routes are identifiable. The first follows the course of the River Rom (North Romford and South Romford Critical Drainage Areas) from the north west of the Strategic Development Area, to the south. The second enters the Strategic Development Area from the east, following the course of Blacks Brook, before joining with the first and flowing south. It is essential that potential surface water flood risk before and after development is assessed during the outline design process of any project.

As the Opportunity Sites are located along the banks of the River Rom and Blacks Brook, all are associated with some degree of surface water flood risk. Each Opportunity Site has areas likely to be affected from surface water flooding during 3.33% (1 in 30), 1% (1 in 100) and 0.1% (1 in 1,000) annual chance events.

3.2.6 Other Sources of Flood Risk

Please refer to Figure A14

Groundwater flooding is identified across the Strategic Development Area as being caused by Superficial Deposits. Approximately 80% of the Strategic Development Area is indicated as having greater than 75% of its area susceptible to groundwater flooding. The remaining area is designated as having between 25% and 50% of its area susceptible to groundwater flooding. One report of groundwater flooding has been identified as from September 2007 in the area just south of the town centre, designated as Opportunity Site 5.

Records indicating both the internal and external flooding of properties are available within the Strategic Development Area. Within the RM7 postcode boundary, there are 25 internal and 33 external reports of flooding to property. Within the RM1 postcode boundary, there are 93 internal and 229 external reports of flooding to property. As the collection of postcode boundaries has a greater area than the Strategic Development Area, these numbers are likely to be smaller within the Strategic Development Area itself.

3.2.7 Impact of Climate Change

Please refer to Figures A15a-e

The 10%, 15% and 25% uplift scenarios indicate small scale extent increases on the River Rom north-west of Romford Town Centre; small increases are also visible in Romford Town Centre on Blacks Brook. The 35% uplift scenario includes increases in similar areas to those described above; however the extents on Blacks Brook are predicted to increase to as far as the Romford railway station. The 70% uplift scenario includes small increases to extents on the River Rom as well as slightly more significant increases in extents on Blacks Brook in Romford Town Centre.

Opportunity Site 1 is predicted to be affected by the increase in extents on the River Rom. Opportunity Sites 4 and 5 are likely to be affected by the increase in extents on Blacks Brook in the town centre.

3.3 Planning Considerations

The Romford Area Action Plan was adopted in 2008 setting out specific policies and allocations to deliver growth and stimulate regeneration of Romford Town Centre. The Romford Area Action Plan will be superseded and replaced by the new Local Plan and the Site Specific Allocations Local Plan.

As part of the evidence base for the emerging Local Plan, the London Borough of Havering commissioned the Romford Town Centre Development Framework which provides '*both a strategic vision and practical delivery plan that sets out a course for town centre improvements over the next 20 years, maximising in particular the opportunities presented by Crossrail's arrival in 2018*'. This framework was agreed by Council Members in August 2015 and is now in place as a vehicle to shape development and promote development opportunities in the Romford area.

The study area of the Romford Town Centre Development Framework is the same as the boundary used for the Area Action Plan. The document defines nine character areas, each with a distinct character and focus, and sets out a design strategy for each. The Framework also identifies seven Key Opportunity Sites. Table 5 identifies nine key sites; seven of which are derived from the Key Opportunity Sites in the Romford Town Centre Development Framework and three additional key sites within Romford Housing Zone have been identified.

Table 5: Romford Town Centre Opportunity Sites

Opportunity Site Number	Site	Site Area (ha)
1	Como Street	0.5
2	Angel Way	2.51
3	The Brewery	2.65
4	Station Quarter North	0.58
5	Atlanta Boulevard + 108-116 South Street	1.9 and 0.25
6	Bridge Close	1.41
7	Homebase Site	1.56
8	Waterloo Road Estate	4.5
9	Romford Gas Works	6.2

In terms of flood risk it is stated that:

'The area is covered by a developing Strategic Flood Risk Assessment that identifies fluvial flooding to the Romford area largely as a result of the River Rom flowing approximately north to south and Black Brook flowing east to west that intersect near Exchange Street. Large parts of the network through Romford are culverted as a result of historical build-over and a requirement of the development plan will be to design for opening up of old culverts where appropriate and practical. They will be a key requirement from the Environment Agency in any future developments and will deliver biodiversity, cost and hydrological benefits. Costs for partial deculverting have been provided elsewhere'.

The Romford Town Centre Development Framework and Romford Housing Zone will be used to inform the policies and land allocations in the emerging Local Plan. The planning recommendations for development in various flood zones (section 7.11 of the main document) of the Updated Level 1 SFRA will help inform decisions on land use policies and site specific land allocations contained in the emerging Local Plan.

3.4 Development Acceptability

As set out in Section 3.1 of the main SFRA report flood zones have been delineated across the Borough for LBH to apply the Sequential Test. The purpose is to steer development away from areas susceptible to flooding.

However, it is accepted in Table 3 of the Planning Practice Guidance[7] it is not always compatible with wider sustainability objectives for the development to be located in zones of low flood risk. In such circumstances the Exception Test can be applied (see Section 1.1).

Romford Town Centre is proposed to consist of primarily mixed-use development including retail, offices and residential. Based on these proposed uses the majority of the development would be classified as 'More Vulnerable' (residential) or 'Less Vulnerable' (shops, offices) in accordance with *Table 2: Flood Risk Vulnerability Classification* of the Planning Practice Guidance[4]. If the new residential development includes basements then it would change to 'Highly Vulnerable'.

With reference to Table 3 assuming the development is classified as 'More Vulnerable' the Exception Test would need to be applied to meet the criteria outlined above for the development to progress if within Flood Zone 3a, it would be deemed acceptable if within Flood Zones 1 or 2. If classified as 'Less Vulnerable' the development would not require the application of the Exception Test unless located within Flood Zone 3b in which case it should not be permitted.

When considering the acceptability of a proposed development the predicted impact of climate change (allowing for the design life of the development) needs to be considered. Based on a classification of 'More Vulnerable' or Less Vulnerable' uplift factors would need to be applied to the 1% (1 in 100) annual chance event of +25%, +35% or +70% subject to which Flood Zone it is located within. Please refer to Tables 2 and 3.

3.5 Conclusions

The land immediately adjacent to the River Rom and Blacks Brook within the Romford Town Centre Strategic Development Area is predominantly located within fluvial Flood Zone 2 with small areas designated as Flood Zone 3b. Flood depths, modelled for a 1% (1 in 100) AEP event, indicate localised ponding in several locations across the Strategic Development Area with maximum depths exceeding 1m. Flood depths of up to 0.75m, for the same event, are indicated as more widespread across the Strategic Development Area adjacent to the main watercourses. Consequently, the risk to life within the area is considered to be low.

Based on an assumed mixed-use development, residential development would be classified as 'More Vulnerable' and would require uplift factors of +70% or +35% on the present-day Flood Zone 3 to account for the predicted impact of climate change. Offices and shops would be classified as 'Less Vulnerable' and would require the consideration of the +25% uplift factor if situated in Flood Zone 2 or +70% to +35% if within Flood Zone 3a.

If located within Flood Zone 2 then the Exception Test would not be required for the development, but if within Flood Zone 3a the Exception Test would need to be applied for residential development only.

Data Sources: In accordance with the latest guidance from the Environment Agency the impact of climate change on predicted fluvial flood extents are based on a +25% change in peak river flow for the 1 in 100 annual chance event where detailed modelling for the undefended scenario is available (i.e. the Beam, Ingrebourne and Mayes Brook, Blacks Brook and River Mardyke). The predicted impact of climate change upon the River Thames flood extent is based upon sea level rise allowances.

This map is based upon Ordnance Survey material with the permission of Ordnance Survey on behalf of the Controller of her Majesty's Stationary Office. Crown Copyright. Notes:
The updated Flood Map for Surface Water (uFMfSW) shows the flooding that takes place from the 'surface runoff' generated by rainwater (including snow and other precipitation) which:
1) is on the surface of the ground (whether or not it is moving), and
2) has not yet entered a watercourse, drainage system or public sewer.

LONDON BOROUGH

CABINET MEETING
19th JULY 2017

HAVERING LOCAL PLAN

TRANSPORT POSITION STATEMENT 2016

Havering Local Plan - Transport Position Statement

June 2017

1. Overview of this Transport Position Statement

Why this paper has been prepared

1.1 This Transport Topic Paper has been prepared as part of the evidence base for the Local Plan and to support its delivery. It also has an important role in highlighting the major interventions and transport investment that the Council considers necessary to support the delivery of the Havering Local Plan.

What the paper does

1.2 The paper sets out Havering's transport context, challenges and strategic transport aspirations the Council believes are needed to deliver its 'Vision' and to support the growth and development expected over the next 15 years particularly in the main areas identified for growth in Havering (Rainham and Beam Park and Romford).

1.3 A series of background papers have also been prepared as Appendices to this paper, providing further detail on a variety of specific transport matters ranging from a policy context to the transport "make up" of the borough.

1.4 Havering recently published its "Vision" – *Havering Making a Greater London*. This sets out how Havering should take advantage of new opportunities for both residents and businesses in the borough. Havering's 'Vision' is focussed on four cross-cutting priorities: Communities, Places, Opportunities and Connections. This paper dealing with transport has particular synergies with the Connections theme, and investment needed to Havering's transport network to support growth and development in the borough.

How Havering works with partners to take forward transport

1.5 In line with the Duty to Cooperate responsibility involved in preparing a Local Plan, the paper stresses the importance of engagement and partnership working especially with the London Mayor but also those authorities in the areas adjoining Havering and further into Essex and London to deliver improved transport infrastructure to support growth in Havering.

1.6 The Council will work with a wide range of stakeholders to secure the delivery of a series of significant transport interventions which the Council considers are

fundamentally necessary to support growth and development in the borough. These include aspirations for improved transport connectivity between Romford and Rainham (such as through a tram or light rail link), reconfiguring of Gallows Corner junction, and improvements to the Romford ring road which could involve sections of it being tunnelled.

1.7 To support the Havering Local Plan, the topic paper identifies existing transport evidence that has been delivered at both a sub regional level (such as studies carried out by TfL) and at a local level (Council commissioned studies). This evidence includes policy documentation, and transport studies that have been undertaken to support the Havering Local Plan and wider transport work. Further details of these can be found in the Appendices to this report.

2. How Havering has dealt with transport in regard to its Duty to Cooperate

2.1 For Havering, working with our neighbouring and sub-regional partners will be key to ensuring the Havering Local Plan is delivered. Such partnership working is already taking place through the Council delivering on its Duty to Cooperate (DtC) responsibilities. In practice, Havering has worked closely with partners such as Transport for London for many years through the work of the Sub Regional Transport Panel (TfL and borough officers) as well as through specific projects such as Crossrail and the Lower Thames Crossing (with Highways England). This strong approach to collaborative working has delivered many transport benefits in the borough and Havering is keen to see this continue so that it can continue to respond positively to growth and opportunities.

2.2 Specifically, linked to the local plan, and as part of the DtC process, boroughs have been briefed on the general context of transport within Havering, transport challenges facing the borough and the aspirations Havering has on delivering transport improvements to address those challenges.

2.3 In several cases these DtC meetings have resulted in further engagement with individual boroughs on specific issues or concerns that they have raised. For example further dialogue has taken place with Essex CC and several of its constituent authorities on the modelling data that Havering has used as part of its evidence base work. Havering is also working closely with other boroughs on the specific issues linked to the A127 Corridor.

2.4 Engagement both through the sharing of information through email correspondence as well as “face to face” meetings has taken place with Essex County Council as well as several district and Unitary Authorities since the initial DtC discussions and are to be reflected in a forthcoming Statement of Common Ground.

2.5 In addition to engaging with our neighbouring authorities, discussions have also taken place with Highways England, the Greater London Authority (GLA) and members of the GLA "family" such as Transport for London (TfL) . These organisations have been involved in discussions as part of the DtC process and in the case of TfL have supported Havering with developing its evidence base.

2.6 The Local Plan will set out how the Council will accommodate the expected growth from a strategic transport perspective. However it is important to recognise that many of the issues affecting transport in the future such as catering for future traffic volumes on strategic roads as a result of growth, are sub regional and can only be tackled at a sub regional level with collaborative working across several organisations and neighbouring authorities. Havering is already looking at this through working with Essex County Council and neighbouring authorities looking at the A127 corridor.

3. Transport Connections in Havering

3.1 Havering has good access to the rest of London, Essex, Kent, and the rest of the South East via its strategic transport connections and routes.

3.2 These include road links such as the M25, A12, A13 and A127 and rail links such as the Great Eastern Mainline railway (GEML), Essex Thameside line, London Overground, TfL Rail and the London Underground District Line.

3.3 Different organisations are responsible for assessing challenges, generating options, funding and identifying investment priorities. These include:

- The Government (responsible for national transport policy) and its agencies such as Highways England and Network Rail for national and international networks and infrastructure
- Transport for London (TfL) for London-wide and certain regional networks; and
- Havering at the local level and sub – regional level;

3.4 Whilst there is an extensive transport network within LB Havering, the Council has limited powers to make significant improvements to the transport network itself, with many key elements of the transport network such as bus services, the Transport for London Road Network (TLRN), and rail services the responsibility of other organisations. The improvements required to the transport network to support growth require support from a number of organisations if they are to be realised. Further details of the roles and responsibilities of the different transport providers operating within the borough together with further information on the transport network in Havering can be found in Appendices B and D of this Topic Paper.

3.5 The section of the Local Plan titled *Borough Wide Strategy for Growth* sets out how the Council intends to meet the needs of a growing population including the level of residential dwellings required and where within the borough these should be located. This has identified the Romford and Rainham areas of the borough as where the majority of growth is expected to be located and have been cited as Strategic Development Areas in the Local Plan (see Section 6 of Local Plan) . Further information on the boroughs strategy for growth including further details on housing development, future employment and how transport infrastructure will help to facilitate this growth can be found in section 5 of the Local Plan.

4. What are Havering's transport challenges?

4.1 Work on the local plan has identified a number of key transport themed challenges. These comprise:

- ***The need to improve north-south connectivity***

4.1.1 Whilst Havering has good east-west connectivity across the borough (and into central London), there has historically been limited public transport links north/south, particular through the bus network. Significantly, improved transport connections between Rainham, and Romford are needed to support the two emerging Housing Zones, but also to improve access to Crossrail (coming on line in 2019) and the new station to be built at Beam Park (due to be operational by 2020). In addition to this, improving connections further north in Havering up to Collier Row and Harold Hill is important due to their relatively modest PTAL levels and in order to improve access to Crossrail services for residents in the north of the borough. In addition, Harold Hill is one the most deprived parts of Havering.

4.1.2 Located just south of the A1306 in Rainham is the Centre of Engineering and Manufacturing Excellence (CEME). CEME is a regeneration charity established in 2003 which supports economic growth within east London and the wider Thames Gateway region. The CEME center in Rainham provides office, training and workshop facilities for companies looking to grow. It is currently poorly served by public transport with only one bus services (174 Harold Hill – CEME) serving the centre meaning many of its customers are left with little alternatives then to travel by car.

4.1.3 Havering College operates the Rainham Construction Centre just off the A1306. The College has recently received planning permission to expand their existing facilities to develop a Construction and Infrastructure Skills and Innovations Centre. Expansion of the campus will increase the numbers of students using the college many of whom will rely on public transport as a method of travel.

4.1.4 Improving access from the north of the borough will also make a big difference to the ability of residents here to gain jobs in London Riverside. In reverse, better links will mean that residents in the south of the borough will be better able to enjoy the facilities and attractions in Romford which is the main retail and entertainment centre in the borough.

- ***The importance of maintaining access to key trip generators***

4.1.5 The Barking, Havering Redbridge University Hospital NHS Trust (BHRUT) have raised concerns with the Council about the need for better bus connections particularly with the reconfiguration of services between King Georges Hospital (LB Redbridge) and Queens Hospital which in particular has placed additional pressures (such as parking availability) at Queens. Commercial centres within Havering's Minor and District Centres including Upminster and Hornchurch rely on good transport links to maintain their competitiveness with other centres in the wider sub region.

- ***The Impact of expected Local Plan growth on highway network***

4.1.6 The level of growth forecast to be delivered in east London generally and in Havering over the next 15 years is expected to put additional pressures on the local and strategic highway network. This arises particularly as a result of the London Plan and the need for boroughs to ensure their plans are in general conformity with the London Plan but also as result of the growth being planned for the areas outside London such as within the Essex authorities.

4.1.7 This issue will need to be addressed at a sub-regional level and involve strategic partners such as Transport for London who are responsible for the operation and maintenance of the TLRN. Havering will continue to work closely with Transport for London because of the key role that it has had in ensuring that the growth envisaged in the London Plan for east London and, in particular, London Riverside, can be accommodated on the existing network or with specific interventions. Havering is already working closely with Essex and its constituent authorities to understand the implications of the growth planned outside London.

4.1.8 Havering commissioned Transport for London to undertake some strategic modelling technical note using their own East London Highway Assignment Model (LoHAM). As section 1 of the Technical note explains, the LoHAM model was developed by TfL to represent traffic flows and congestion across the whole of the Greater London area and also extends beyond the M25 boundary. The note explains that "*LoHAM is used to provide the means for assessing strategic infrastructure and development impacts across London"*. It therefore takes into account sub regional growth rather than of one individual borough. Details of the report's findings and conclusions can be found on the Havering Local Plan Evidence Base website (Havering Strategic Modelling Technical Note)

- ***Modal Shift away from the private vehicle***

4.1.9 According to TfL's latest Travel in London Report, 58% of journeys originating in Havering are made by car, the second highest in London

4.1.10 Schemes are delivered through Havering's Local Implementation Plan to encourage people to travel more sustainably. Havering will continue to work with developers and local businesses to develop Travel Plans that include targets for increasing modal shift away from the car. Havering is already working closely with one of the boroughs biggest employers, Queens Hospital in that regard.

4.1.11 Providing Havering residents with the options to walk, cycle and use public transport that is accessible will be important factors in trying to deliver modal shift in a borough that has a high level of car ownership.

- ***Air Quality***

4.1.12 Poor air quality is a national issue, but particularly in London where 9,000 deaths a year are cited as being directly attributed to poor air quality.

4.1.13 Havering was declared an Air Quality Management area in 2006 due to the levels of Nitrogen Dioxide (NO_2) and Particular Matter (PM10) not meeting air quality objectives in many parts of the borough. In addition to this, the GLA has designated "Air Quality Focus Areas" across London, which are locations identified as being in need of significant investment to improve air quality. Within Havering, three such areas have been identified, Romford Town Centre, A124 Rush Green Road and Rainham – Broadway.

4.1.14 One of the biggest causes of air pollution is road traffic vehicle emissions and the need to tackle air quality across London is a high priority for the new Mayor of London who has recently proposed a series of measures to try and address this issue.

4.1.15 Havering considers that investment in the major transport infrastructure items set out in this paper will assist in improving air quality in the borough by such means as encouraging modal shift and smoothing traffic flows.

5. Havering's 'Vision' : Making a Greater London

5.1 Havering has adopted a new 'Vision' for the borough. It seeks to position Havering to take advantage of new and emerging opportunities for residents and business. The 'Vision' places Havering as a forward looking, exciting place to work live and invest well suited to meeting the London Mayor's agenda for 'good growth'.

5.2 The 'Vision' has four linked themes, one of which is *Connections*. Havering's 'Vision' focusses on the need for fast and reliable transport links, both to ease congestion in the borough and to support regeneration and place shaping in the borough. Further details of Havering's new Vision can be found here: Havering - Making a Greater London .

5.3 Havering is encouraged by the strong reception that the 'Vision' has received both within the borough and beyond. In particular, it has welcomed the positive response from the London Mayor and it is using the 'Vision' as a powerful tool to secure the additional investment in infrastructure improvements that is needed to deliver it.

6. The strategic transport interventions necessary in Havering

6.1 Whilst the Council is committed to delivering measures in the short to medium term to tackle some of these challenges which will involve continued delivery in transport priorities through the Local Implementation Plan programme (and other funding mechanisms), significant major transport interventions are needed to support the substantial growth expected in Havering.

6.2 Ensuring good quality access to jobs and opportunities, and the provision of fast and accessible transport links is a key component of the new Havering *Vision.* However radical change in Havering requires partnership working with a number of stakeholders including both the GLA and Transport for London.

- ***North –South connectivity improvements from light rail / tram proposals***

6.3 Whilst east west links are considered very good in Havering, travelling between the north and south of the borough can at times be challenging. With an additional 17,550 dwellings expected to be delivered through the lifetime of the Local Plan, more reliable, frequent public transport connectivity is needed.

6.4 Whilst the Council has, and will continue to lobby for improved public transport connections in the form of new and improved bus links, securing rapid transit infrastructure such as tram services will be critical to support the expected growth in Havering and its future development.

6.5 The Council has commissioned a high level feasibility study that will examine the benefits/risks of providing such a service, the potential route alignments that could be considered, cost, key deliveries and potential impacts.

- ***Reconfiguring Gallows Corner***

6.6 Gallows Corner is a major roundabout junction located in Havering. The roundabout comprises a busy five arm junction which links the A12 Eastern Avenue and A12 Colchester Road with the A127 Southend Arterial Road, A118 Main Road and Straight Road.

6.7 A two-way flyover structure passes over this roundabout. The flyover was erected in the 1970's. It was built to carry traffic between the A127 Southend Arterial Road and the A12 (Eastern Avenue) into London.

6.8 The Gallows Corner junction (including the flyover and the arterial roads to/from it) is the responsibility of Transport for London (TfL). Because of this, the Council has no control over its funding, management, operation or maintenance.

6.9 There is significant congestion at the roundabout and flyover and on the approaches to it, particularly at peak periods, and occasionally, when there are disruptions on the wider strategic road network (e.g. on the M25).

6.10 For a number of years, Havering has lobbied TfL to improve traffic flow and address safety concerns. Concerns have also been raised about the appearance of the junction and that it forms an unsatisfactory 'gateway' into Havering, as it forms an important approach to Romford.

6.11 TfL recently consulted on proposals for a series of minor safety improvements to the roundabout at this junction. Whilst the Council has expressed support for these proposals in terms of addressing accident rates, in traffic flow terms the proposals do not go anywhere far enough and the Council has requested further work be carried out looking at options for reducing congestion here.

6.12 Havering will continue to put pressure on the Mayor, GLA and TfL for further feasibility work to be carried out looking at options for reducing congestion around Gallows Corner.

- ***A127 Growth Corridor***

6.13 The A127 forms part of the TLRN within Havering stretching from Gallows Corner junction to Junction 29 of the M25. Outside the GLA boundary the A127 falls under the responsibility of Essex County Council and Southend Borough Council. Havering has been in discussions with Essex County Council about the potential for joint working looking at the A127 corridor in its entirety. Further discussions will continue between TfL, Havering and Essex County Council over the next few months.

- ***Romford Ring Road***

6.14 The Romford Ring Road is perceived as a barrier to accessing the town centre. It also gets heavily congested, particularly at the weekend with shoppers trying to access one of the main car parks in the town centre. The Romford Housing Zone is set to be developed inside of the Ring Road (Bridge Close) and the prospect of tunneling the western section of it opens up the possibility of extending the Housing Zone westwards whilst at the same time improving access to the town centre for pedestrians.

- ***River crossings***

6.15 Havering is supportive in principle of additional river crossings across east London and is committed to working with its neighboring boroughs including London Borough of Bexley to ensure the borough is well placed to benefit from further east London Crossing proposals.

6.16 Havering will be working closely with Highways England and other partners following the recent announcement from Highways England on its preferred option and route for a new Lower Thames Crossing. Havering will wish to ensure that any adverse impacts from the preferred route are suitably mitigated against and that residential amenity is maintained and adverse visual impact is minimised.

- ***Station Aspirations***

6.17 As part of funding (£1.4m) the Council has received to improve the public realm outside Romford Station (Crossrail Complimentary Measures) the Council is working closely with both Crossrail, and TfL London Buses on improvements to the public realm surrounding both sides of the station.

6.18 Havering's Approved Local Implementation Plan (April 2012) sets out Havering's key aspirations for the rail network which include the need for a southern entrance at Romford Station. The Council has been working closely with Crossrail and Network Rail lobbying for a southern entrance because of the busy bus interchange on the south side of Romford Station with buses.

6.19 Delivering a new station at Beam Park is progressing and Network Rail are currently going through the Governance for Railway Investment Projects (GRIP) process. It is currently anticipated that Beam Park Station will be open by 2020.

6.20 In recent years the Council has lobbied both in consultation responses and directly to Network Rail/Train Operating Companies for "fast" trains stopping at Romford during the peaks and for additional capacity (both in terms of frequency and train lengthening) on the Essex Thameside mainline.

6.21 These aspirations were raised in Havering's Officer response to the Network Rail Anglia Route Study, a document produced by Network Rail considering the implications of growth in demand on the railway over a 30 year period up to the year 2043. The Council will continue to lobby for such improvements with the relevant train operating company and Network Rail in the future.

7. Conclusion

7.1 This paper has set out the transport context for Havering as it currently stands, and highlight some of the key challenges that will need to be addressed over the next 15 years and beyond in order to support the growth expected in the borough during that period.

7.2 It is clear that many of these challenges do not just affect Havering but are far more strategic and will need to be addressed at a sub-regional level requiring collaborative working and engagement with neighbouring authorities as well as organisations that are responsible for much of the transport infrastructure within Havering.

7.3 Havering will continue to work with relevant transport providers, neighbouring local authorities and regional transport bodies to address these challenges.

Appendices to Transport Position Paper

Content Page

Appendix A – Policy Context

Setting out national, sub regional and local policy guidance that support the transport evidence base.

Appendix B – Transport responsibilities in Havering

Table setting out in broad terms Havering's transport network and responsibilities

Appendix C – Current Transport provision in Havering

This section sets out the transport context for Havering at a national, sub regional and local level.

Appendix D – Havering Transport Network

Transport provision in Havering in table format.

Appendix E – What is Havering already doing to address the Transport challenges

This section sets out the work the Council is currently undertaking to address some of the transport challenges identified within the Transport Topic Paper.

Appendix F – Transport Evidence References

A table setting out details of key transport evidence documents together with a description for each document.

Appendix A – Policy Context

National Planning Policy Framework

The National Planning Policy Framework (NPPF) sets out the Governments Planning Policies for England and provides details on how these policies are expected to be applied. It contains a set of Core planning principles which includes to *"actively manage patterns of growth to make the fullest possible use of public transport, walking and cycling, and focus significant development in locations which are or can be made sustainable…."*. The NPPF was first published in March 2012.

London Plan and Mayor's Transport Strategy:

The London Plan (2015) sets out the Mayor's overarching strategic land use planning priorities and policies for London. It sets the overall context for most, if not all, of the Council's own strategies.

The **London Plan** has six overarching objectives including one with a transport focus to deliver this vision:

'A city where it is easy, safe and convenient for everyone to access jobs, opportunities and facilities, with an efficient and effective transport system which places more emphasis on walking and cycling and making better use of the Thames, and supports delivery of all the objectives of this plan"

The **Mayor's Transport Strategy** (MTS) interprets the Mayor's London Plan transport vision and details how he and his partners will deliver the plan over the next 15 years.

The MTS is a key part of the Mayor's strategic policy framework to support and shape London's social and economic development. It sits alongside his other key documents such as his Economic Development Strategy and his Housing Strategy.

Local Implementation Plan (LIP)

Section 145 of the GLA Act 1999 requires each London borough to produce a Local Implementation Plan (LIP) setting out how it intends to contribute towards the implementation of the Mayor's Transport Strategy. A LIP must detail the specific interventions and schemes intended to contribute towards meeting the MTS goals, challenges and opportunities as well as outlining the borough's local transport objectives. Havering's Local Implementation Plan was approved by the Mayor in 2012.

Boroughs have also been required to produce Three Year Delivery Plans to set out how the Council intends to spend its LIP Funding Allocations that it receives from the

Mayor and the progress it intends to make in delivering on the Mayor's targets and objectives over a three year period.

Sub Regional Strategy Documents

Havering has also been involved in the development of several sub regional transport strategies, working closely with both the Greater London Authority (GLA), and Transport for London (TfL) and neighbouring boroughs. These have included the London Riverside Opportunity Area Planning Framework (supplementary planning guidance to the London Plan) and TfL's Sub Regional Transport Plan for the East.

Part of the GLA's evidence base work for developing the London Riverside Opportunity Area Planning Framework involved preparing a Transport Strategy (Chapter 4 of the OAPF). The study was developed to identify a package of measures required to support the levels of development proposed in the London Riverside OAPF by considering the challenges arising today and in the future.

To help inform the Transport Strategy, a Development Capacity Study was carried out in order to understand in more detail the capacity for new homes and jobs in the London Riverside OA on the transport network.

In early 2016 Havering Council produced a Policy Framework titled the Rainham and Beam Park Planning Framework. The framework covers the historic heart of Rainham and extends westwards to include land along the A1306 New Road corridor.

In April 2016 TfL published its East and South East London Transport Options Study (ELTOS). The study identified a number of challenges that would need to be addressed once all East and South East London growth areas have been developed (including the London Riverside Opportunity Area). This work is ongoing and Havering continues to work with TfL as the ELTOS work is progressed further.

Network Rail is responsible for capacity improvements on the rail network. They have recently published the Anglia Route Study.

The Route Study sets out a vision for the next 30 years (up to 2043) of a much busier railway, with investment enabling faster more frequent and more reliable journeys. The study essentially presents choices for funders to meet this future demand.

Further information on the Networks Rail plan to accommodate future passenger growth can be found on the following link: Anglia Route Study.

Appendix B - Transport responsibilities in Havering

The table below sets out the transport network within Havering together with the organisation responsible for operating and Maintaining that particular piece of transport infrastructure.

Havering's Transport Network	Responsibility
Great Eastern Mainline (GEML)	Abellio Greater Anglia (trains) Network Rail (track)
London Liverpool Street – Shenfield TfL Rail Services (GEML Inner)	TfL Rail (trains) Network Rail (track)
Essex Thameside Line	C2c National Express (trains) Network Rail (track)
Romford to Upminster "Push n Pull"	London Overground Rail Operations Limited (LOROL) - Network Rail (track)
District Line	TfL London Underground (trains and track)
London Buses Network	TfL London Buses (route planning) bus companies (operating routes)
A12,A13,A127 (TLRN)	Transport for London (TfL)
M25	Highways England (HE) but contracted out to Connect Plus M25 Limited under DBFO
Strategic Road Network (SRN)	London Borough of Havering
Minor roads in Havering	London Borough of Havering
Traffic signals	Transport for London (TfL)

Appendix C - Current transport provision in Havering

- **National and International Links**

Havering has good access to the rest of London, Essex, Kent, and the rest of the South East via its strategic transport connections and routes.

These include road links such as the M25, A12, A13 and A127 and rail links such as the Great Eastern Mainline railway (GEML), Essex Thameside line, and the London Underground District Line.

Havering has good road links to Kent and the Channel ports via the M25 and the Dartford Crossing and to the major ports of Felixstowe and Harwich which provide further links to Europe and beyond. The A13 provides access to the DP World London Gateway Port as well as Tilbury Docks.

There is good access to Europe and international destinations through London City and London Stansted airports. The extension of the Docklands Light Railway (DLR) to London City from existing DLR stations has improved the connections for Havering residents which can be made by changing at Stratford and then at West Ham on the Jubilee underground line. Road connections to Stansted are direct via M25 and M11.

- **Sub-regional and Regional Links**

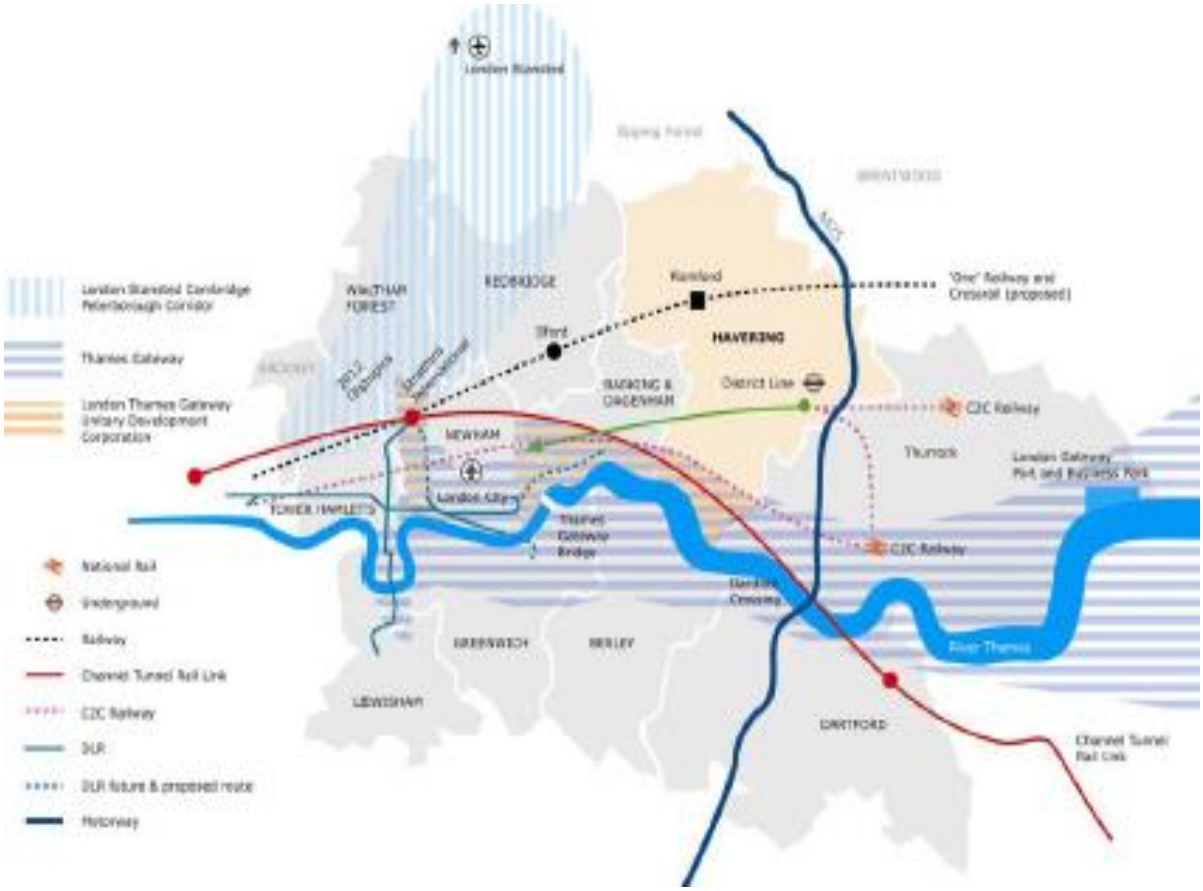
The M25 provides London-wide and regional links for Havering's residents and businesses (and is also part of the national strategic network). This is managed by Highways England (HE)

Road access to the rest of London and the Thames Gateway is also provided by A12, A13 and A127 which form part of the Transport for London Road Network (TLRN). TLRN routes facilitate access to Havering's business, education and residential areas from other areas of London, Essex, and Kent. Once outside of the GLA boundary, the A12 is the responsibility of Highways England, whilst the operation and maintenance of the A127 falls under the responsibility of Essex County Council and Southend Borough Council. Outside the GLA boundary, various sections of the A13 fall under the responsibility of Highways England, Essex County Council, and also Southend and Thurrock Borough Councils (as respective unitary authorities).

Havering has two Mainline railway lines operating through it. The Great Eastern Mainline (London Liverpool Street - Norwich) and the Essex Thameside Line (London Fenchurch Street – Shoeburyness).

Romford Station is operated by TfL Rail. Romford is currently served by National Rail through "fast" off peak services along the Great Eastern Mainline providing access into London Liverpool Street as well as out into Essex (Clacton and Southend). TfL Rail "Metro" services operate between London Liverpool Street and Shenfield in Essex stopping at Romford, Gidea Park and Harold Wood stations in Havering.

Shenfield is a key interchange for both people who live as well as work in Havering where passengers can interchange during the peaks to travel into Havering.



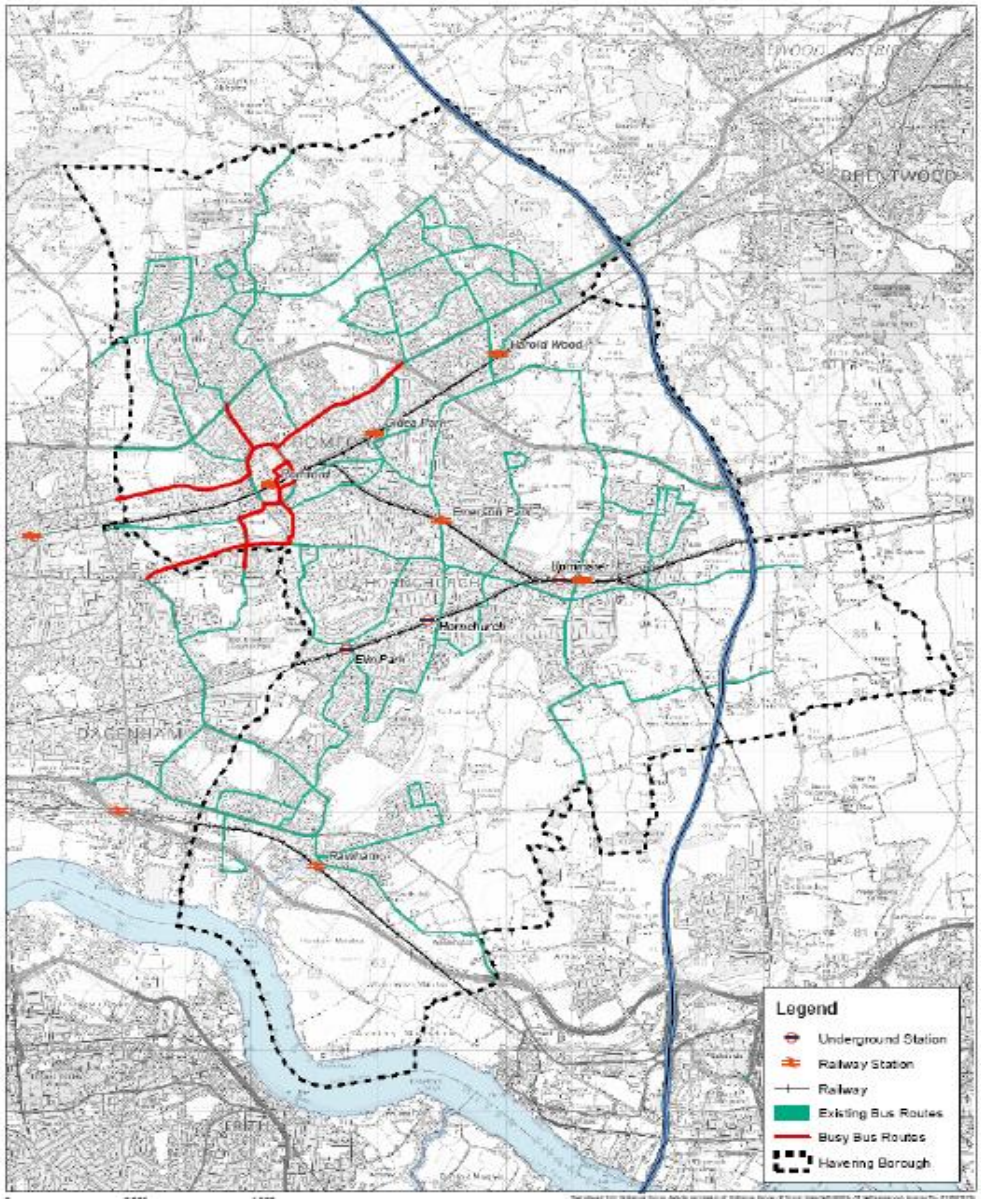
Source: Havering Approved Local Implementation Plan 2012.

Crossrail is a new regional east-west railway line under construction and scheduled to open in 2019. It will connect Heathrow, Reading and Maidenhead with Essex and South London by means of tunnels beneath Central London. The eastern branch (north of River Thames) will run from Shenfield in Essex through the three Havering stations of Harold Wood, Gidea Park, and Romford to London Liverpool Street. The other eastern branch (south of River Thames) will run from Abbey Wood via Canary Wharf.

- **<u>Local Links</u>**
  - Roads

Havering's public highway network consists of 33km of Principal Roads, 117km of Classified Roads and 439km of Unclassified Roads. There are approximately 1,106km of footways, 21,000 street lights, over 100 bridges and structures, 25,000

road gullies and 21,000 street trees. All these roads and facilities are managed and maintained by the Council. A number of Havering's District Centres are connected by Havering's Strategic Road Network (SRN). These are effectively the "A" roads within the borough that are not part of the TLRN. A map below shows Havering's Local Road Network.



Source: Havering Approved Local Implementation Plan 2012

- Rail

Connections to local surface level trains are provided by stations at Romford, Harold Wood, Gidea Park, Emerson Park, Upminster and Rainham. There is access to Underground services (District Line) at Hornchurch, Upminster Bridge, Elm Park and Upminster. Only the surface line between Romford and Upminster (London Overground) provides a form of a north south rail connection in the borough.

London Overground now operates the Romford to Upminster “Push n Pull” line providing passengers with the opportunity to travel into Central London on the London Underground District line or on national rail on the Essex Thameside line from Upminster Station.

- Freight

The road network is the primary freight network in Havering although freight traffic also operates on both the Great Eastern Mainline and Essex Thameside line, the latter of which support freight movements to/from the London Gateway port.

There are no major road freight terminals within Havering although there are container depots in Thurrock and Dagenham located on the A13 trunk road.

The River Thames also has a freight role and has two active wharves (Phoenix Wharf and Halfway Wharf (safeguarded). In 2011 TfL consulted on proposals to retain the safeguarding at Halfway Wharf because of the potential for it to be used more in the future for cargo, but to release Phoenix Wharf from its safeguarding because it was no longer suitable for operation as an active wharf due to its lack of suitable jetty infrastructure.

Most freight traffic comprises deliveries / collections linked to the main employment areas around Romford and in the south of the borough at London Riverside. Servicing for shops (particularly for Romford) also generates a considerable number of deliveries.

- Bus

The rail services (above) are complemented by bus routes and services to the various residential, employment, education and leisure activities and key destinations.

Havering is served by more than 30 bus routes including several dedicated school bus routes which provide morning and late afternoon journeys to schools in the borough.

Romford is the major destination and most routes provide good links to its railway station in the town centre to enable direct rail access into London Liverpool Street railway station, and central London, with subsequent connections to regional and national destinations beyond.

Buses also stop at Newbury Park (LB Redbridge) where passengers can transfer onto the London Underground Central Line and to Upminster Station where passengers can interchange and travel onto the District line into central London or the Essex Thameside railway line.

Bus services to/from the Rainham area and Beam Park area are not as extensive as in then the Strategic Development Areas of Romford with the main routes being the 103, 165, 174, 287, 365, and 372.

- Taxicard and Freedom Pass and Dial a Ride

Havering supports the Freedom Pass scheme to enable older people to make use of bus and train services free of charge at specified times and on specified routes.

Havering also supports the London-wide 'Taxi-card' scheme which provides for people with severe mobility problems to have their use of taxis for a specified number of trips each year, and the 'Dial a Ride' scheme to assist people with less mobility. Dial a Ride is operated by TfL whilst Taxicard is administered by London Councils on the behalf of London Boroughs and TfL.

PTAL Levels in Havering

Transport for London (TfL) have prepared a Public Transport Accessibility Levels (PTAL) Map for Havering using a 2011 base. The PTAL measure was produced by Transport for London and TfL's Transport Connectivity Assessment Guide explains that a PTAL measurement rates a selected place based on how well connected it is to public transport. The Transport Connectivity Assessment Guide lists a number of factors that are considered when measuring PTAL including, waiting times at stations, proximity to major rail stations, and frequency of services. PTAL measures do not however cover trips by car. According to TfL's latest Travel in London Report, modal share of trips made by car in Havering are the second highest in London so the process of measuring PTAL levels may not accurately reflect the picture within Havering given its high level of car ownership.

As the map shows, whilst Romford has the highest PTAL rating in the borough, other centres in the borough also have favourable PTAL ratings, particularly Hornchurch and Upminster which is largely due to the London Underground line providing District Line services to both Hornchurch and Upminster, and Upminster also benefiting from C2C services operating on the Essex Thameside line and a London Overground connection to Romford. Parts of the borough with the lowest PTAL ratings currently include Collier Row, Harold Hill and Rainham. TfL has also produced PTAL forecasts for 2021 and 2031 respectively.

Appendix D – Havering Transport Network

Level	Key Origins / Destinations	Multi-Modal Transport Corridors	Interchanges between Networks
International	-	-	-
National	Romford, London Riverside including Rainham, Wennington and Aveley Marshes	**Rail –** Great Eastern Mainline, Essex Thameside **Road -** M25, A12, A13, A127	**Railway stations** - Romford and Upminster Stations **Road junctions** - Junctions 28 to 30 of M25 with A12, A127 and A13 of the Trunk Road network
London-Wide	**Opportunity Areas -** London Riverside (including Beam Reach, Beam Park, and Rainham West) **Key origin/destination** - Romford	**Rail –** Great Eastern Mainline, Essex Thameside, London Underground District Line **Terminus (London Underground District Line) -** Upminster **Road -** A12, A13, A127,	**Railway stations** - Romford, Rainham and Upminster stations
Sub-Region - East	**Metropolitan town centre -** Romford **Major Shopping Centres -**Romford **Key sub-regional facilities and services -** Havering College campuses, CEME, Queen's Hospital, St Georges Hospital, Queens Theatre, Fairkytes Arts Centre, Central Library, Ice Rink, and Rainham, Wennington and Aveley Marshes **Key employment areas** – Romford Town Centre and London Riverside and south Hornchurch	**Sub-regional strategic transport corridors and services:** **TLRN -** A12, A13, A127, **Major borough roads (SRN) -** Romford Ring Road, A124, A125, and A1306 **Bus Corridors –** Numerous routes serving neighbouring boroughs and night buses into central London **Underground -** District Line **Cycling Corridors -** Ingrebourne Way, Rainham to Purfleet Path, LCN routes **Cross borough -** Public rights of way and informal walking and cycling routes in urban areas and countryside	**Railway stations -** Romford, Upminster and Rainham **Underground -** Elm Park, Hornchurch, Upminster Bridge and Upminster **Bus interchanges -** Romford **Major road junctions:** Gallows Corner , Romford Ring Road.
Local	**Local Town Centres -** Collier Row, Elm Park, Harold Hill, Harold Wood, Hornchurch, Upminster and Rainham Village **Residential Areas** **Major Employers -** Private and public sector employment in town centres and key employment areas **Local facilities and services** **Places to work** – various	**Local transport corridors and services:** **Roads and Streets** – Key local road corridors between Havering's town centres[1] **Bus Routes –** Numerous bus routes **Borough:** Public rights of way and informal walking and cycling routes in urban areas and countryside	**Local road junctions -** all local **Bus stops** – 665 bus stops located on borough operated roads. 95% of Havering bus stops were fully accessible by the end of 2016/17 financial year.

Source: Adapted from Havering Approved Local Implementation Plan 2012

Appendix E - What is Havering already doing to tackle current and future challenges?

Improved bus services

Due to responsibility for operation and management of the bus network being under the jurisdiction of Transport for London (TfL), the Council works closely with TfL on all bus related matters. This includes the delivery of improved bus infrastructure, new routes, and increased capacity/frequency of routes.

The Council regularly meets the TfL London Buses Network Development team to discuss the improvements required to support the Rainham and Beam Park Housing Zone and Beam Park Station.

The Borough and TfL London Buses will continue to engage on the future development of bus routes in the Rainham and Beam Park area in order to improve bus access and provision.

- Queens and Harold Hill Bus Reviews

In recent years, the Council has been working hard with the Barking Havering and Redbridge University Hospital NHS Trust (BHURT) as well as TfL London Buses to improve access by bus. Since the Hospital opened in 2007, the number of bus routes serving it has increased from 4 to 9 (as well as a community bus service) improving access to Queens from Brentwood in Essex, as well as neighbouring boroughs. Further details of the bus routes that operate to/from Queens can be found at the following link: Queens Hospital Bus Routes .

Havering has also commissioned some feasibility work looking at options for improving capacity at the bus interchange (including an additional bus stop) at Queens Hospital to support lobbying for additional services being routed into Queens.

Earlier in 2016, TfL undertook a review of bus services in the Harold Wood/Harold Hill area of the borough, the result of which were a series of recommendations for increasing the capacity on some of the existing route corridors (174, 256 and 294) operating in the Harold Wood/Harold Hill region to support the anticipated increase in passenger numbers resulting from Crossrail. The review also recommended a new route operating from Harold Wood Station to Harold Hill. It should be stressed that these are recommendations at this stage and no funding has been secured to date for any of these recommendations. Further information on these recommendations and the bus review itself can be found here Harold Hill Bus Review.

Whilst it should be recognised that TfL London Buses are responsible for the tendering of contracts for bus routes to operators, delivering new and amended bus routes, bus capacity and bus frequency, the Council will continue to lobby TfL London Buses for further improvements.

Local Implementation Plan Delivery Programme.

Each year Havering receives around £3million that can be spent on projects and schemes that assist with delivering the Mayor's Transport Strategy in Havering and also contribute to Havering's own objectives and targets that are set out within Havering's Local Implementation Plan.

Each year Havering's LIP Programme delivers a variety of projects to assist with supporting regeneration being delivered across the borough, smoothing traffic flow, providing Havering residents with options to travel more sustainably including walking, cycling and bus stop accessibility, as well as tackling air quality.

Havering's annual LIP programme consistently includes a package of measures targeted at the choices that people make about travelling and supports projects, schemes and campaigns to reduce car use in Havering. The benefits, in line with Council policies aims to improve air quality, reduce congestion, improve the health and wellbeing of residents and improve road safety in the Borough.

Through the Council's Borough Cycling Programme, in recent years Havering has delivered an annual cycle parking programme which has resulted in significant investment in cycle parking provision in Havering's town centres, particular Romford and Upminster.

Havering is having discussions with TfL looking at submitting an application later this year under the new "Liveable Neighbourhoods" branding (replacing TfL's Major Schemes programme) for a scheme to improve access to Romford town centre.

In recent years Havering has been very successful in receiving "in year" funding from TfL to supplement its annual LIP Programmes. This has included receiving over £2.5m over the last four financial years for Bus Stop Accessibility Improvements (improving bus punctuality), over £500k for cycling initiatives, and £4.1 million for improvements around rail stations in the borough to support the Crossrail project and make these stations more accessible.

"Soft" Measures

Whilst the Council invests significant levels of funding through its Local Implementation Plan on physical infrastructure measures that encourage modal shift and smooth traffic flows, a substantial element of LIP Funding is also spent on "soft" measures that are delivered across the borough focussed on behaviour change and presenting alternative options to the car. These measures are educational initiatives often delivered in schools, to businesses and other community groups. The aim of delivering such measures is to encourage people to walk cycle or use public transport to/from their destination and ultimately see a reduction in journeys by private vehicle.

- Travel Planning

The Education and Inspections Act 2006 places a duty on local authorities to promote sustainable travel for journeys to/from and between schools and educational institutions.

This duty can be met through a borough's School Travel Plan programme and STARS (Sustainable Travel, Active, Responsible, Safe) accreditation scheme.

A School Travel Plan (STP) is a package of measures aimed at reducing car use and improving safety on the journey to / from school.

TfL encourage boroughs to promote and support these initiatives through their annual Local Implementation Plan (LIP) programmes.

Before school travel plans were fully embedded in Havering, in 2009 the percentage of journeys to school by car in Havering was 39%, by 2016 this had reduced to 20%.

Every school (88) in Havering has an approved School Travel Plan and many of them (58) are very actively using them to encourage active, safe, and sustainable travel.

As part of the Planning Application process, Developers will be required to produce a Travel Plan. Havering's Smarter Travel Team will seek early engagement with prospective developers prior to Planning Applications being submitted to ensure that the new developments include active travel opportunities for residents such as walking and cycling, and that promote alternatives to the car. Havering would seek to monitor and review Travel Plans that are produced for substantial developments to ensure that modal shift targets are being delivered.

- Business Engagement

Whilst Havering works very closely with schools in encouraging sustainable travel by pupils and parents, LIP funding is also used to engage with local businesses, contributing to the Council's business growth agenda.

Officers are now engaging with local businesses who wish to explore the role they could have in improving air quality, reduce the impacts of travel on their bottom line, and improve the health of their staff and the environment. One such opportunity businesses can now take up is to apply for a "grant" from Havering using TfL LIP funding which can be used to deliver initiatives to encourage staff to travel to and from work more sustainably.

2015 saw Havering launch its Business Packs. The aim of the business packs is to raise awareness of Smarter Travel initiatives available to businesses and provides the Council with an opportunity to engage with those businesses who wish to discuss and explore further any smarter travel opportunities.

Tackling poor Air Quality

Havering is developing an Air Quality Action Plan. This is being produced as part of the Council's duty to the London Local Air Quality Management (LLAQM). It outlines the actions the Council will take to improve Air Quality within Havering between January 2017 and September 2022.

In March 2016 Havering formally launched an Air Quality Campaign "Miles the Mole" across the borough. This campaign is designed to raise awareness of air quality issues amongst people who live and work in the borough and to provide advice as to what people can do to help to improve local air quality. To date this campaign has bene very well received both by the GLA and TfL who are keen to explore way in which it may be able to be offered out to other London Boroughs. There has also been interest in the campaign by authorities outside of London.

Havering is located within the Mayor's Low Emission Zone which is a zone that prohibits certain vehicles that do not meet certain emissions standards from entering the zone unless they pay a charge. Further details of the Mayor's Low Emission Zone and what the Mayor is looking to do to tackle air quality across London can be found at the following link - Air Quality .

Appendix F - Transport Evidence References

Document	Description
London Riverside Opportunity Area Planning Framework - Transport Strategy	The Transport Strategy section of the London Riverside OAPF sets out the transport challenges for the London Riverside region, and improvements required to tackle these challenges.
London Riverside OAPF Development Capacity Study (2011)	The GLA's Development Capacity Study (which supports the London Riverside OAPF Transport Strategy) looks at the impact that population and employment growth in the London Riverside OA will have on the transport network, both the highway network and Public Transport. The Study also sets out a series of options for solutions to tackle some of the issues highlighted within the capacity study.
East and South East Sub Regional Transport Plan	The sub-regional plan for East and South-East London reviews population and employment growth and identified areas where the transport network will have to change to cope with future growth in the sub region.
East and South East London Transport Options Study	The ELTOS study sets out the challenges for accommodating further growth in east and south east London on the public transport network and considers three packages public transport improvement schemes to help to meet these challenges.
Anglia Route Study	The Anglia Route Study identifies key corridors and highlights expected increases in passenger and freight flows, proposing options to meet this demand up to 2042
Approved Havering Local Implementation Plan (2012)	Sets out how Havering will implement the Mayors Transport Strategy at a local level over the next 20 years up to 2031. This document sets out a series of borough transport objectives and interventions for how it will deliver on these objectives and Mayoral priorities and targets.
Rainham and Beam Park Planning Framework	The framework covers the historic heart of Rainham and extends westwards to include land along the A1306 corridor. The Planning Framework provides a comprehensive and flexible

	plan for the Rainham and Beam Park area. Section 4.5 of the Planning Framework sets out the Councils Vision for transport within the Rainham and Beam Park area.
Travel in London Report 9	Sets out information concerning transport modes in London including, expected trends in 2025 and the challenges that will need to be tackled in the future. Modal shift data per borough is also provided.
Infrastructure Delivery Plan 2050 - Transport Supporting Paper	This paper sets out the potential transport elements of the Mayor's 2050 Infrastructure Delivery Plan and the implications for transport of the forecast for employment and population growth to 2050.
Bus Network Development Papers - Queens Hospital and Harold Hill • Review of bus services in Harold Hill • Review of bus access to Queen's and King Georges Hospitals	TfL have undertaken two bus review studies in Havering. One has looked at expected future demand for improved bus services to Queens Hospital and King Georges Hospital (in Redbridge). TfL have also undertaken a review of bus services in the Harold Wood/Harold Hill region of the borough looking at where future demand for bus services will be required and future links to Harold Wood station which will provide passengers with an interchange onto Crossrail.
PTAL Ratings	Public Transport Accessibility Levels for Havering using a 2012 base as well as forecast projections for 2021 and 2031. .
Assessing transport connectivity in London	TfL document explaining how TfL measures transport connectivity in London.
Havering Strategic Modelling Technical Note	Provides out a high level analysis of the performance of the highway network and changes between a base year of 2012 and forecast year of 2031. This technical note provides information on distribution of traffic growth and locations of delays across Havering, in particular in relation to the Transport for London Road Network (TLRN).

CABINET MEETING
19th JULY 2017

HAVERING LOCAL PLAN

HAVERING STRATEGIC MODELLING TECHNICAL NOTE 2016

Transport for London

Havering Strategic Modelling Technical Note

October 2016

1. Introduction and Objectives

This note provides a high level analysis of the network performance and changes between the base year 2012 and forecast year 2031 LoHAM (London Highway Assignment Model). Although LoHAM is a London-wide strategic model, the analysis focuses on traffic issues in and around the London Borough of Havering.

LoHAM is a detailed highway assignment model developed by TfL which represents traffic flows and congestion across the whole of the Greater London area and extending beyond the M25 boundary. LoHAM is used to provide the means for assessing strategic infrastructure and development impacts across London.

The LoHAM model employs the SATURN (Simulation and Assignment of Traffic to Urban Road Networks) modelling software package which allows detailed modelling of congestion in urban areas. SATURN is a suite of flexible network analysis programs developed at the Institute for Transport Studies, University of Leeds and distributed by Atkins Limited since 1982.

The base year models, developed for AM and PM peak hours and an average Inter Peak hour are fully calibrated representations of traffic flows and conditions across the modelled area. The models are calibrated to 2012 count data and traffic movements and validated to exacting standards against a large number of observed journey times for routes across the network. The 2012 models serve as bases for the development of 2031 forecast year (Reference Case) models with trip growth controlled to LTS (London Transport Study) trip levels, taking account of changes between base and forecast zonal level trip ends and the inclusion of all committed and funded highway schemes.

The analysis of the strategic highway modelling presented here was undertaken by the Strategic Analysis team within TfL Group Planning on behalf of the London Borough of Havering. The overall objective was to provide information about the network based plots which show distributions of traffic growth and the locations of major delays across Havering, in particular for the major A12 and A127 trunk roads and the A13 in the south of the borough.

This note describes the analysis of the Base 2012 and forecast year 2031 for AM, Inter peak and PM peak hours.

2. LoHAM background Demand Growth

Reference Case Demand matrices were developed using the CHAMP (Cube to HAM Process) process to apply, at zone level, changes in LTS 7.0 demand between the 2012 Base Year and the relevant Reference case year (2031). CHAMP is a calculation process which derives the incremental demand growth between the LTS base and forecast year. CHAMP then applies this incremental growth to the LoHAM base year to create a LoHAM forecast model. The LTS matrices included specific major developments but control of trip totals was applied to wider areas. The 2012 demand matrices were used to pivot from and corresponding to each of the periods.

LTS used the population, household and employment data from the London Plan: the hybrid borough-level projections for the GLA area, produced by the GLA. For the Annulus (the area between GLA boundaries and M25) and External (mostly outside the M25) areas, population, household and employment data was based on Department of Transport projections in TEMPRO 6.2.

Matrices are defined in Passenger Car Units (PCU) and are equivalent to one car. The matrices are one hour demand flow and formed the basis for the development of the Reference Case demand matrices for the following time periods:

- AM peak hour 8:00-09:00
- Inter peak – Average hour of 10:00-16:00
- PM peak hour 17:00-18:00

The model has five user classes factored to PCUs as follows:

1. Car (In Work Time) – PCU Factor 1
2. Car (Out of Work Time) – PCU Factor 1
3. Taxi – PCU Factor 1
4. Light Goods Vehicles (LGV) – PCU Factor 1
5. Other Goods Vehicles (OGV) – PCU Factor 2

A PCU Factor of 2 is also applied to busses.

Table 2.1 below shows the total trip origins and destinations in Havering between 2012 and 2031 Reference Case year for AM, Inter peak and PM. Growth in the totals of trip origins and destinations averages between 3.35% and 3.6% by time period, with growth in the Inter peak slightly higher than in the two peak hours. AM peak

origins and PM peak destinations show the greatest growth at 4.3% and 3.9% respectively.

Table 2.1 Origin/ Destination in Havering

	Origin				Destination			
	2012	2031	Diff	%diff	2012	2031	Diff	%diff
AM	30,898	32,218	1,319	4.3%	30,828	31,519	691	2.2%
IP	25,021	25,894	873	3.5%	25,642	26,583	942	3.7%
PM	28,805	29,611	807	2.8%	30,138	31,307	1,169	3.9%

The 'heat' maps shown in Figure 2.1 to Figure 2.7 show related information on origin and destination trip-end growth from the 2012 base year to the 2031 Reference Case for the AM, Inter peak and PM periods, but by LoHAM zone. The figures confirm that growth is generally concentrated away from Havering, but also serve to highlight the growth hot-spots around designated development areas such as Barking Riverside and North Greenwich.

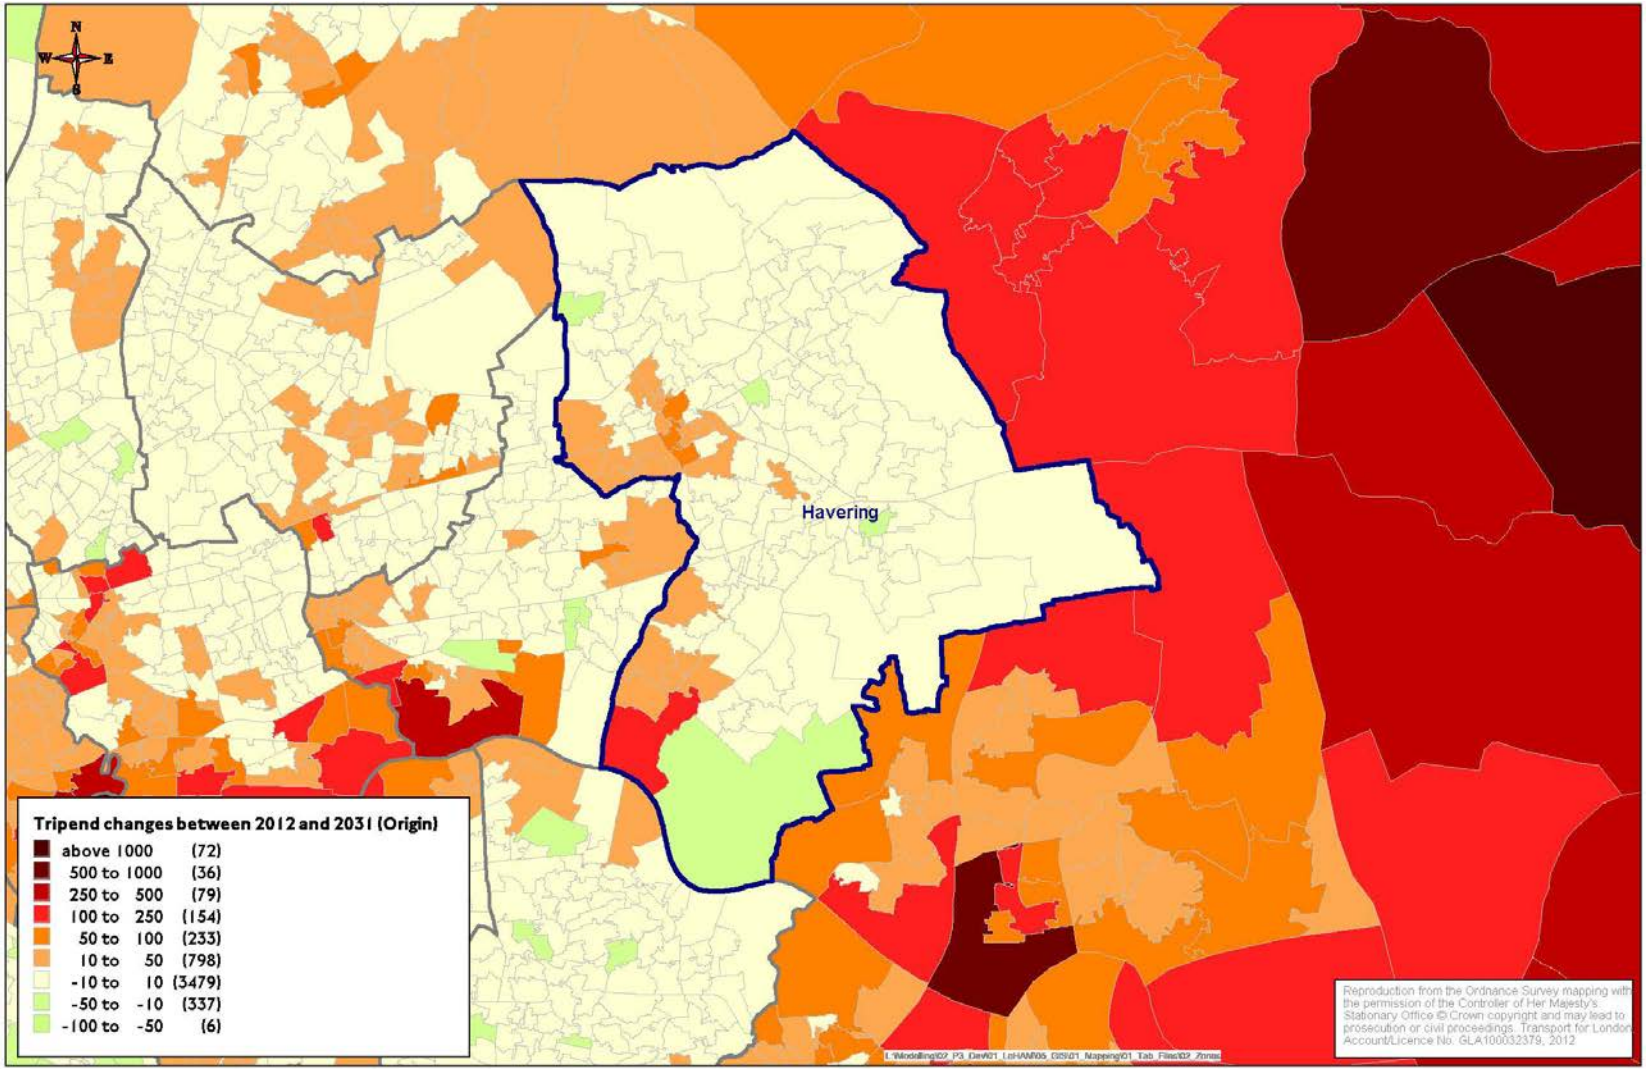

Figure 2.6 Trip End Changes by LoHAM zone: PM Peak Destinations 2012 to 2031

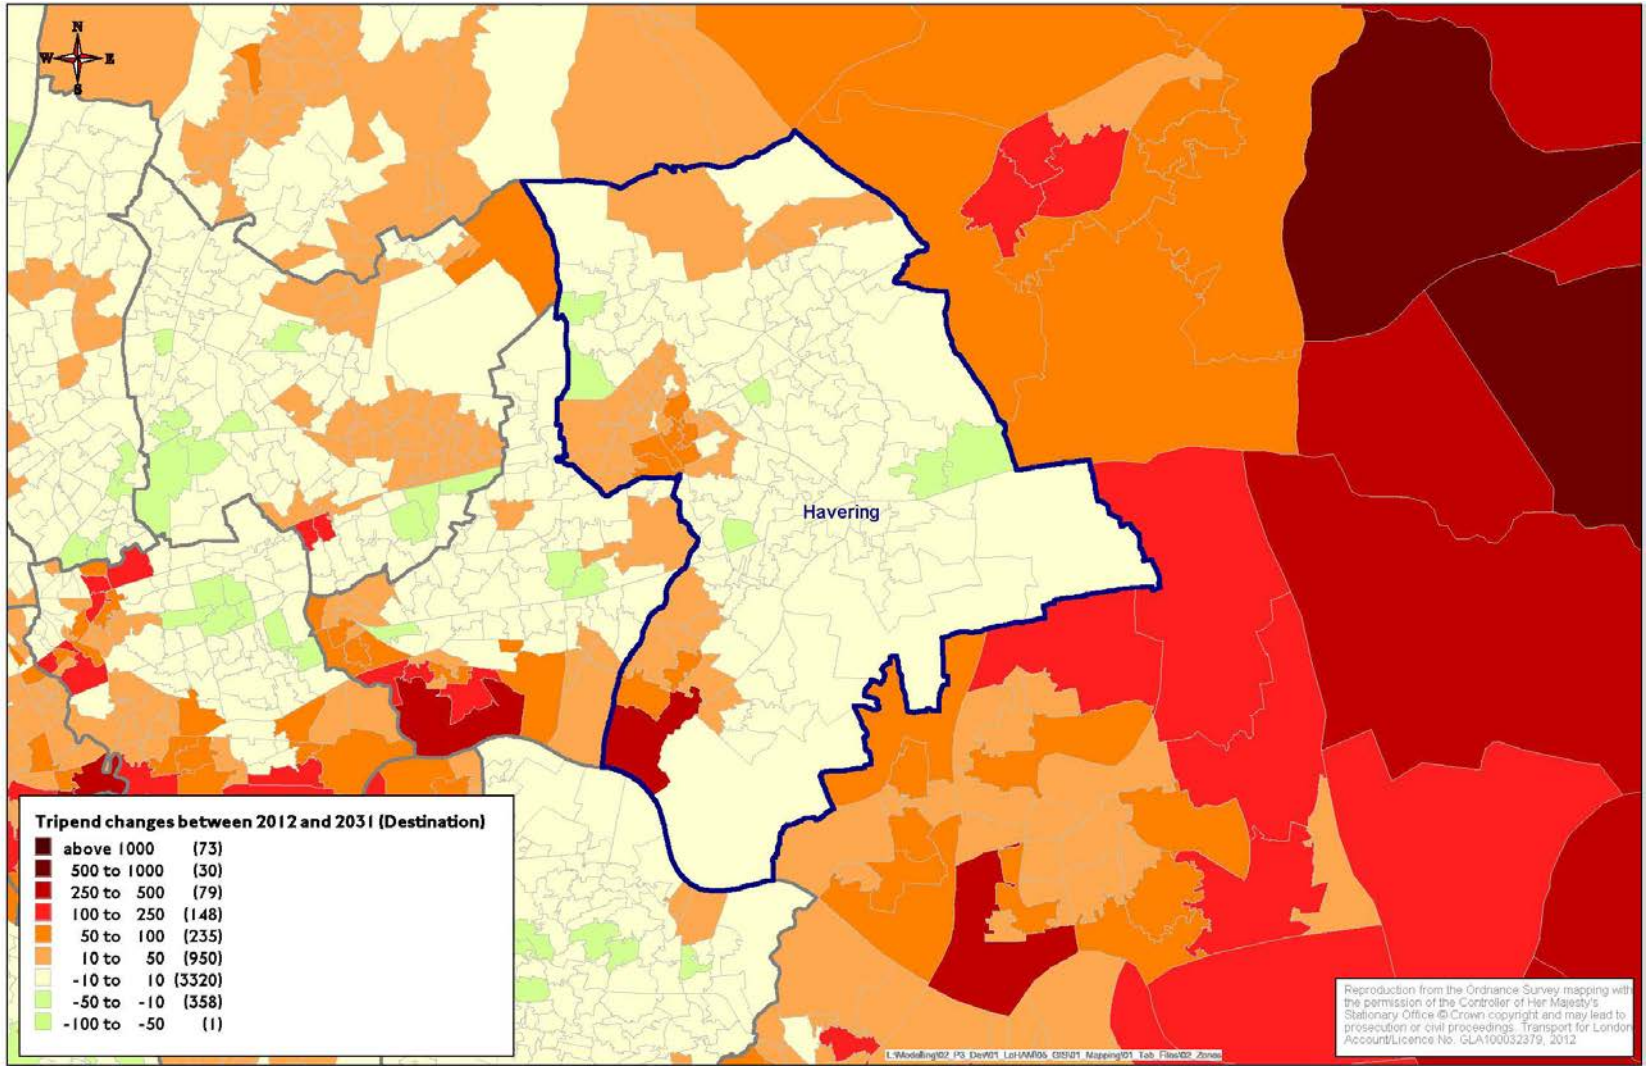

3. Traffic Flow Growth and Comparisons

Figure 3.1 to Figure 3.3 illustrate the change in actual flows (PCU/hour) for the AM, Inter peak and PM peak between the 2012 base year and reference case year 2031.

The green bandwidths show an increase in traffic flows between the reference case year and the base year model and the blue bandwidths show a decrease in traffic flows.

The traffic growth is most evident in outer London, the M25 and principal outer London radial corridors. In all periods, there is a significant M25 growth of traffic that occurs between the junctions 27 to 30, of typically in the range of 7% and 27 % in the AM peak, 14% to 21% in Inter peak and 15% to 33% in PM peak.

The three principle roads in Havering are the A12, A127 and A13 all providing links from M25 towards central London. The pattern of traffic growth shows increase of typically between 5% and 20% across all periods, with peak period growth being strongest against the peak directions, assuming the peak directions to be into London in the AM peak and towards the M25 in the PM Peak. This reflects a general lack of excess capacity in the peak direction in 2012.

For the AM peak, A12 traffic increases by some 13% from Gallows Corners to M25 J28, but by just 5% in the peak westbound direction. West of Gallows Corner, the A12 shows increases in flow in the order of 5% to 7% in the two directions.
On the A127 there is an increase of traffic up to 13% in the contra-peak direction from Gallows Corners to M25 J29, in contrast to the 5% increase in the peak westbound direction. Whilst peak direction flows on the A13 in the Rainham area show a near equivalent level of growth at 4%, eastbound growth is more substantial, reaching a maximum of 40%.

Increases in flow for the Inter peak are generally more balanced than for the AM peak and are typically somewhat higher, particularly in the westbound direction. The A12 from Gallows Corners to M25 J28 shows an increase of approximately 7% eastbound but a more significant 19% westbound. West of Gallows Corner, traffic flows on the A12 increase by approximately 6% to 9%. On the A127 there are increases in traffic of approximately 7% eastbound and 6% westbound, whilst the A13 shows increases of 14% eastbound and 19% westbound.

The pattern of higher levels of traffic growth in the contra peak direction is also reflected in the PM Peak, as in the AM peak. Peak direction flows on the A12 eastbound from Gallows Corner to M25 J28 increase by just 4% but westbound flows increase by some 23%. On the A12 west of Gallows Corner, traffic levels of

increase by around 7% to 8% in the two directions. On the A127 there is an increase in traffic of just 3% from Gallows Corners to M25 J29, with a 2% increase in the contra peak westbound direction perhaps reflecting congestion issues at J29. The A13 near Rainham shows traffic increasing by approximately 30% westbound and about 6% eastbound, effectively mirroring the AM peak findings.

There is generally little growth in traffic demand for the less major roads in Havering, particularly in absolute terms. Flows do increase, but changes are typically in the range 3% to 10%, with relatively few routes displaying increases of greater than 100 pcus per hour. There is no strong trend indicating that peak direction flows on these less major routes increase significantly more due to the higher levels of delay on the major traffic arteries, possibly due to their limited spare capacity in the base year.

Flows on the A1306, particularly east of Rainham, do show significant increases, of typically 400 westbound and 200 eastbound in the AM peak and 300 in each direction in the PM peak. Whilst these changes do represent large percentage increases (of the order 40-70%), some caution must be attached to their interpretation because of the location towards the edge of the simulation model and limited calibration in the area.

Figure 3.1 2012 to 2031 AM Traffic flow Changes

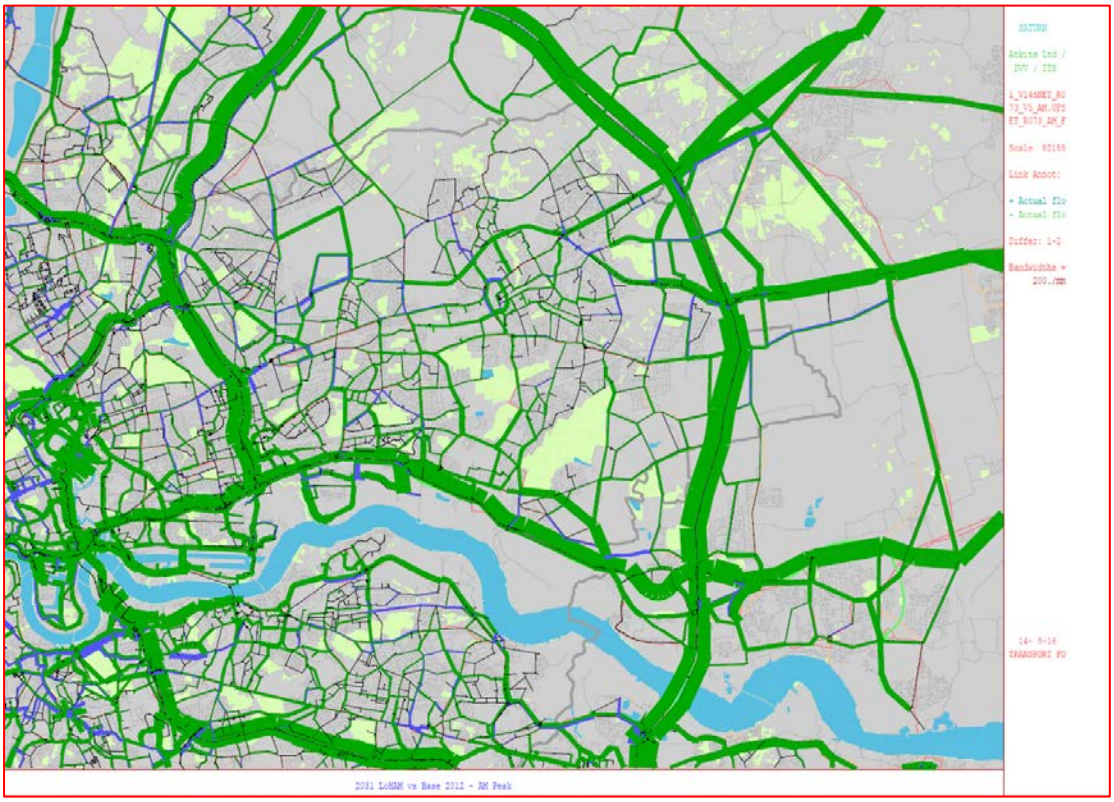

Figure 3.2 2012 to 2031 Inter Peak Traffic flow Changes

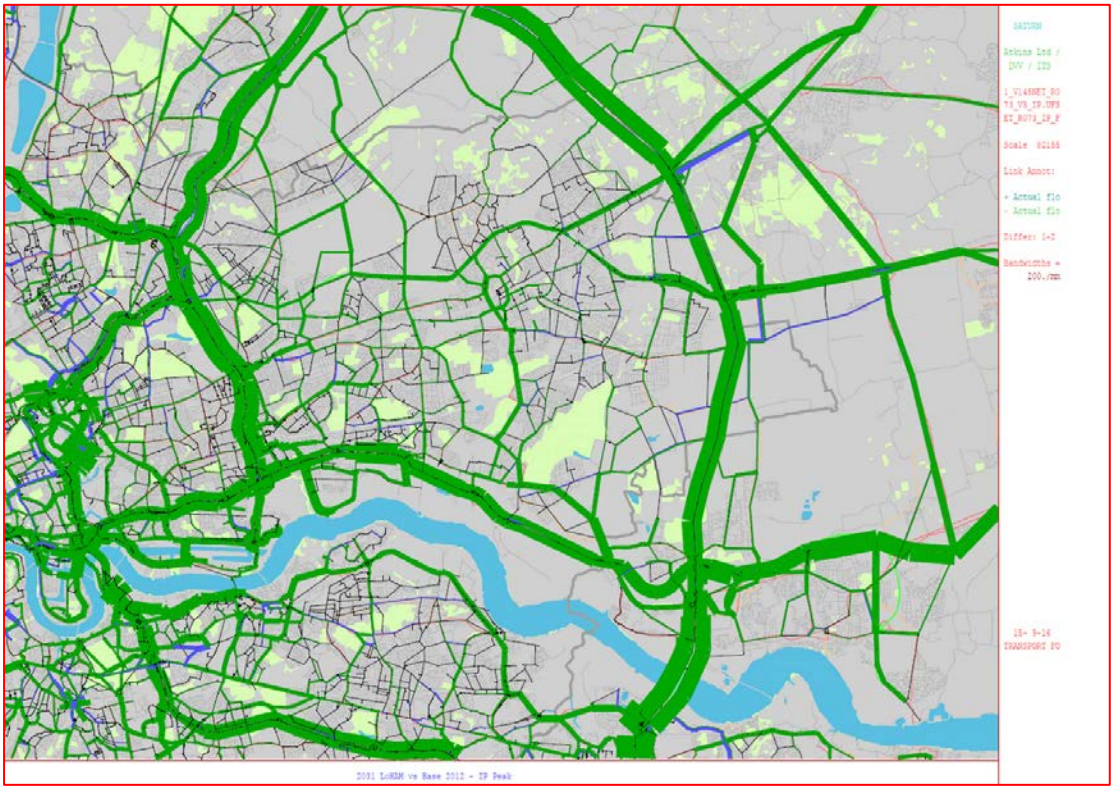

Figure 3.3 2012 to 2031 PM Traffic flow Changes

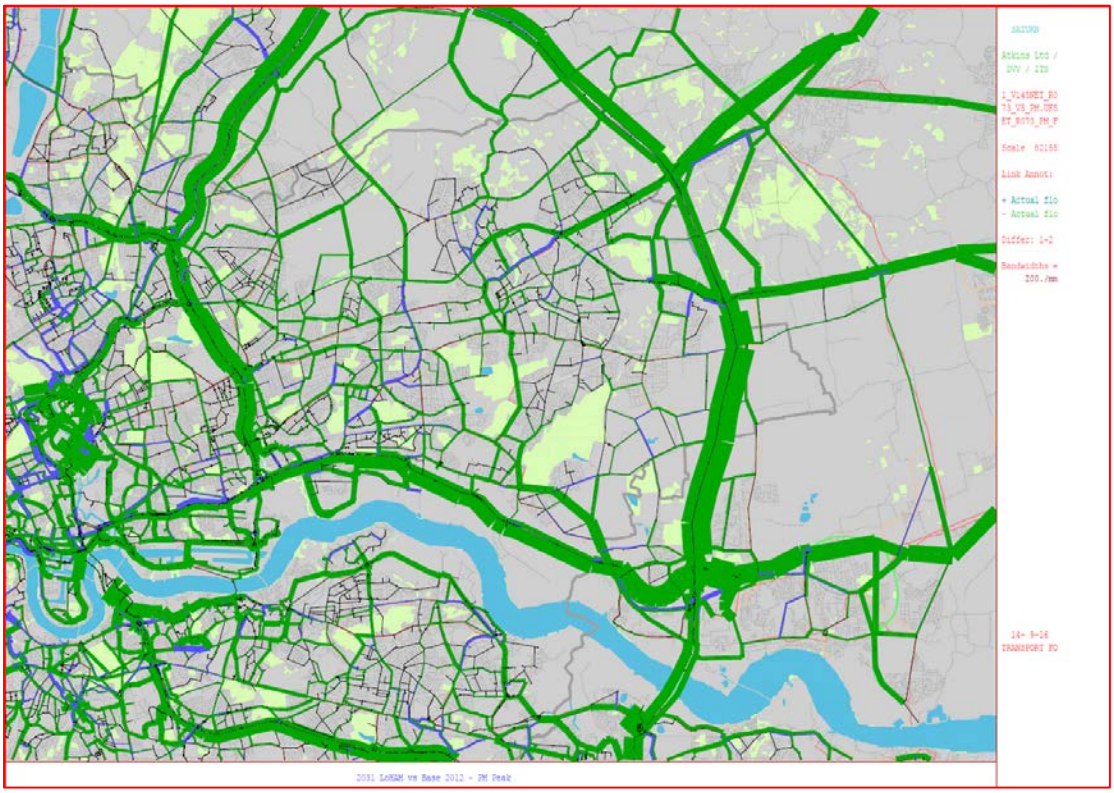

4. Junction Delays

Junction delays, which are reported below (in PCU hours - actual flow multiplied by average delay time per PCU for each simulated junction) provide a measure of total delay accumulated at the junction due to the individual delays, taking into the account the total volume of traffic through the junction. The choice of PCU hours reflects more appropriately the greater importance of changes in delay where high volumes of traffic flows are affected, but does naturally emphasize delays on high capacity roads, particularly motorways.

Figure 4.1 and Figure 4.2 show in graphical form the total AM peak junction delays (in PCU hours) in LoHAM for the 2012 Base Year and 2031 Reference Year. Changes in delay for the AM peak between 2012 and 2031 are shown in Figure 4.3. In these and subsequent 'difference' plots, the cyan bandwidth discs show an increase in delays (PCU hours) between the base and reference case year and the pink discs show a reduction, the disc radius being proportional to the size of change. The delay differences shown relate to individual LoHAM nodes so a junction (or queue) may comprise a number of such nodes.

Equivalent information on changes in junction delays for the Inter peak are provided in Figure 4.4 to Figure 4.6, and for the PM peak in Figure 4.7 to Figure 4.9
Taken together, the plots show the impacts of changes in traffic flow on modelled junction delays between 2012 and the reference year 2031.

For the AM peak hour, increases in delay can be seen across the highway network from the M25 and its approach roads. 2031 shows a significant deterioration in traffic delays relative to 2012. Some of the largest increases in junction delays occur around the M25 Dartford crossing, M25 J29 (A127), junctions around A13 and Southend Arterial Road A127 /Ardleigh Green Road. The overall picture suggests a network under increasing stress.

Figure 4.9 shows the change in PCU hours at junctions relative to 2012. Where differences are shown, the large majority indicate increases in total delays, confirming the observations made above. Around the M25, particular impacts are shown for J29 (A127), Dartford Crossing, the A13 and Blackwall Tunnel also show deteriorating traffic conditions. For the Inter peak, the increases in delays across the network are generally much smaller, especially on the M25 and A13.

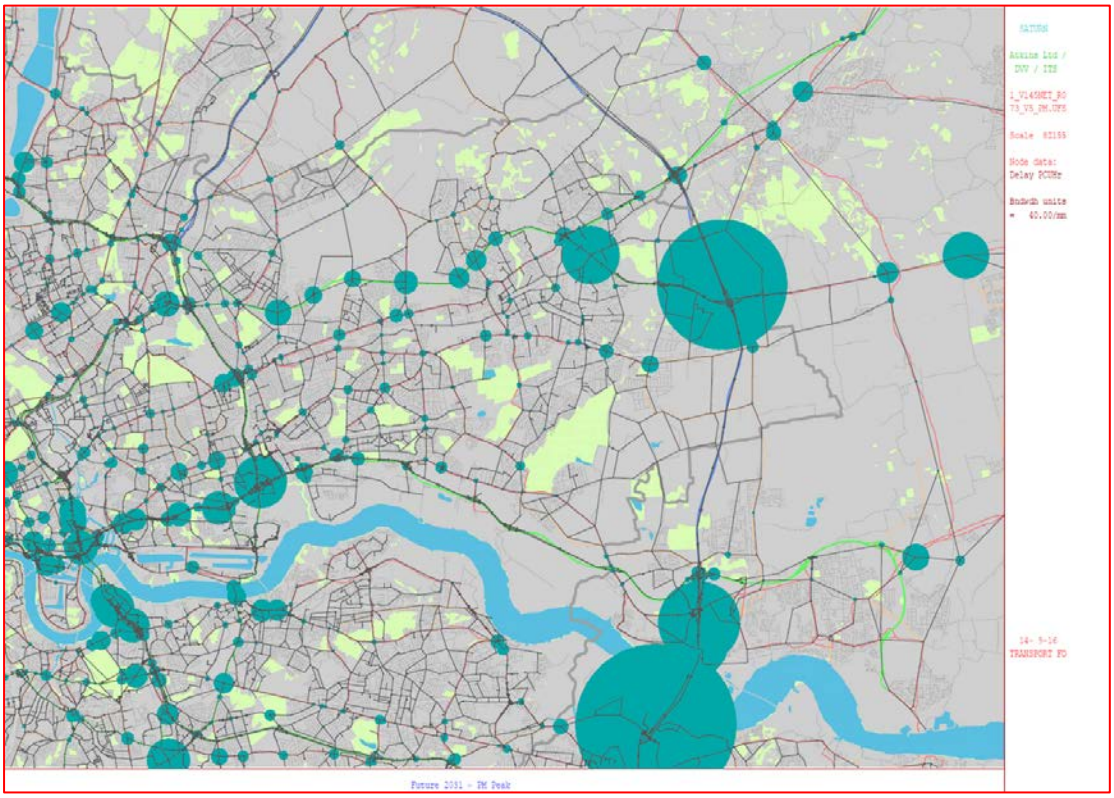

Figure 4.9 2031 PM Total PCU hours Delay Change

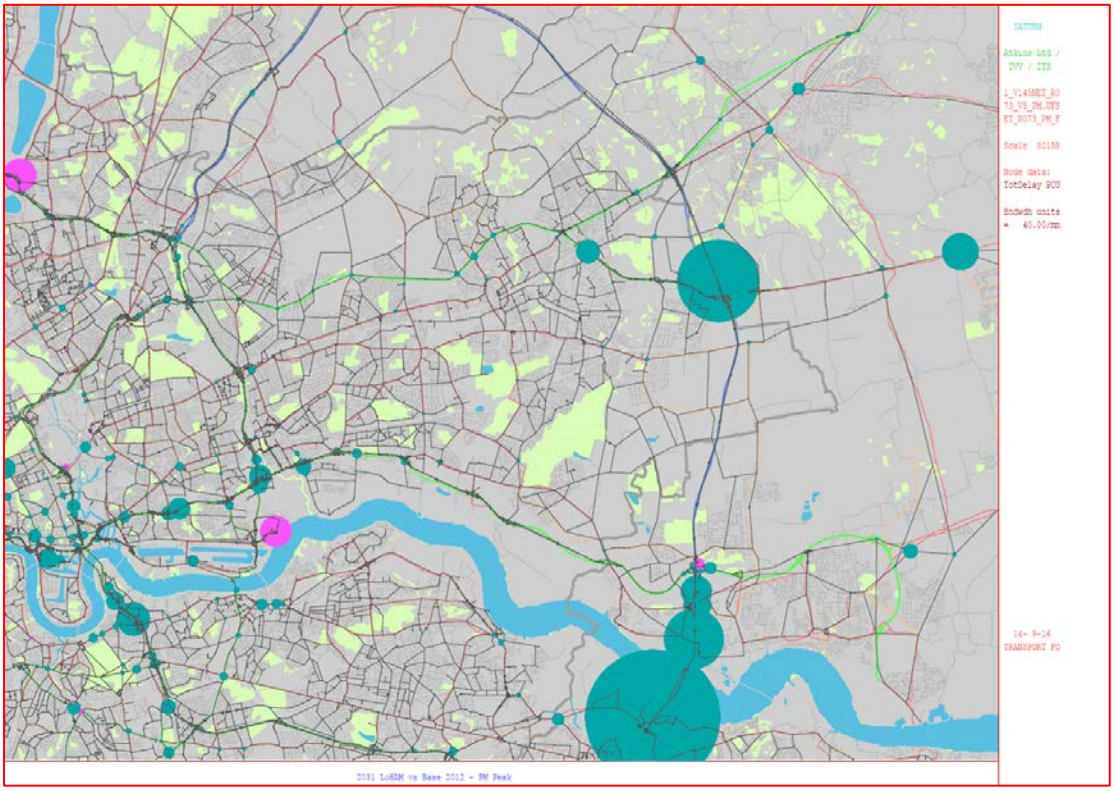

5. Volume over Capacity Ratio (V/C)

The junction volume to capacity (V/C) ratio is a standard indicator to measure how close a junction or link is to theoretical capacity, under actual traffic flows.
The volume-to-capacity ratio can be calculated for an individual turning movement, a link, or for the junction as a whole. In SATURN simulation, it is dependent on a wide range of factors including type of junction, numbers of lanes, lane capacity, traffic signal staging and traffic levels, both opposing and 'on-link' volumes.

Figure 5.1 to Figure 5.4 illustrate the ratios of volume over capacity (V/C) for links and junctions in the AM peak for 2012 and 2031. Figures 5.5 to 5.8, and Figures 5.9 to 5.12 show the same information for the IP and the PM peak respectively.

The different coloured bandwidth illustrate the range for different percentages of V/C with orange coloured bandwidths representing the links with a V/C between 85% and 95%, red coloured indicating links with a V/C between 95% and 100% and black coloured bandwidths showing where link V/C exceeds 100%, The same V/C ranges were also applied to the junctions with different coloured bandwidth discs at the junction.

Conditions in the network could be expected to worsen in the future in line with an estimated growth in traffic of 5% for London between 2012 and 2031; however, the growth in Havering is lower at around 4%.

Figure 5.1 shows the distribution of junction V/C across the network in the 2012 AM peak with all junctions experiencing a total V/C greater than 85% highlighted. There are relatively few junctions in the red or black regions, indicating V/C greater than 95% or 100%. The number and spread of junctions in each of these regions increases between 2012 and 2031, illustrating the increasingly congested state of the network.

The A118 St Edward Way/A125 junction indicate an increase in V/C and some junctions on A12 High Road/ A1112 Whalebone Lane North, M25 Dartford crossing and on A127/ Squirrels Heath Road for both AM and PM peaks.

Figure 5.3 to Figure 5.4 show equivalent information for link data for 2012 to 2031, based on a combination of pure link capacity and capacity constrained by the downstream junction. Although the density of congested links does increase over time in central and inner London, greater impacts are apparent for outer London, non GLA areas inside the M25 and the various radials outside the M25, reflecting the higher traffic growth in these areas.

Figures 5.4 and 5.12 show an increase in link V/C on A127/B186 St Mary, A12/A127 Gallows Corner, A12/ Petersfield Avenue, A127 East of M25 up to A128, A125/ A124 Upper Rainham Rd and A124/B1421 in Upminster.

The IP shows similar trends but remains significantly less congested. For the PM peak, changes over time follow closely those for the AM peak, with widespread overcapacity around and outside the M25. AM and PM peaks, the increase in the number of highly congested links is substantial and some caution is urged when interpreting results.

6. Borough Statistics

Borough statistics were calculated for each time period and for the 2012 base and 2031 forecast years. At the Havering borough level, figures for PCU kilometres, PCU hours and average speeds and queues provide a high level view of changing network conditions over time and by time period.

Table 6.1 shows the calculated statistics in detail for Havering and neighbouring borough in total during the AM, Inter peak and PM peaks respectively for the reference year 2031, with comparisons made to equivalent statistics for 2012 in each case. For 2031 demand, there is clear evidence of a generally small percentage increase in PCU kilometres in most boroughs, typically associated with a larger increase in time (PCU hours) and a commensurate reduction in average speeds.

PCU kilometres increase in all the periods, by some 12% in the AM and Inter Peak and 11% in PM peak. A large increase is in travel time in all periods, by some 21% in the AM Peak and PM peak and 15 % in Inter Peak.

However the Inter peak reduction in speed of 3% is significantly lower than the equivalent 8% reductions in the AM and PM peaks, indicating that the network is less congested in the Inter Peak. Figure 6.1 to Figure 6.3 support the above finding.

Figure 6.4 shows an increase in the total queues at the end of the three time period across Havering, accounting for transient and over capacity queues and indicating the increased congestion in the network. The magnitudes of the increased queues are approximately 1500 PCUs, 280 PCUs and 1400 PCUs in the AM, IP and PM time period respectively.

Table 6.1 Statistics for the London Borough

Time Period	London Borough	Travel Distance (PCU-km) 2012	Travel Distance (PCU-km) 2031	Travel Distance (PCU-km) % Change	Travel Time (PCU-hours) 2012	Travel Time (PCU-hours) 2031	Travel Time (PCU-hours) % Change	Average Speed (km/h) 2012	Average Speed (km/h) 2031	Average Speed (km/h) % Change	Queue at End of Modelled Period (PCUs) 2012	Queue at End of Modelled Period (PCUs) 2031	Queue at End of Modelled Period (PCUs) % Change

7. Summary and Conclusions

The three principle roads in Havering are the A12, A127 and A13 all providing links from M25 towards central London. The pattern of traffic growth shows increase of typically between 5% and 20% across all periods, with peak period growth being a strongest against the peak directions, assuming the peak directions to be into London in the AM peak and towards the M25 in the PM Peak. This reflects a general lack of excess capacity in the peak direction in 2012.

On A12 from Gallows Corners to M25 J28 shows an increase of 13%, 7% and 4% during AM peak, Inter peak and PM peak respectively. Westbound direction shows also an increase of 5%, 19% and 23% during AM peak, Inter peak and PM peak respectively.

On the A127 from Gallows corner to M25 J29 the contra-peak direction show increase of 13% in the AM peak. The Inter Peak shows an increase of approximately 7% and 3% in the PM peak. Westbound direction also experienced a modest increase in traffic flow of 5%, 6% and 2% in the AM peak, Inter peak and PM peak respectively.

A13 in the Rainham area eastbound direction experience a significant increase in traffic flow in the contra-peak direction by 40%, 14% and 6% in AM peak, Inter peak and PM peak. The westbound show increases in traffic flow of 4%, 19% and 30% for AM, Inter peak and PM peak respectively.

It can also be noticed that a little growth in traffic for non-principle road in the borough of Havering. Some of the largest increases in junction delays occur around the M25 Dartford crossing, M25 J29 (A127), a number of junctions around A13 and at the Southend Arterial Road A127 /Ardleigh Green Road junction.

Over all delays noticed to be increased in 2031 with some concerns over the increasing number of links with V/C greater than 100% along the A12/A127 Gallows Corner and A127 east of M25 up to A128.

Total travel times increase significantly by 21% during AM and PM peaks and 15% during the Inter peak and decrease in speed by 8% during AM and PM peaks. However the Inter peak reduction in speed is lower at 3%, indicating that the network is less congested in the Inter Peak.

The overall results in the reference case include all committed schemes but may not fully reflect potential for additional development not committed at this time.

HAVERING LOCAL PLAN

HAVERING SINC REVIEW 2016

Havering SINC Review 2017

This review has been carried out by Havering Wildlife Project, which functions as the Wildlife Sites Partnership for Havering.

Notes

1. Havering's current list of Sites of Importance for Nature Conservation (SINCs) was drawn up in 2003 based on habitat survey work carried out for the GLA in 2000/1. A lot has changed in Havering since then, including the establishment of the Thames Chase Community Forest, and this review has focussed on new wildlife habitat that has developed in the intervening years and significant changes affecting current SINCs.

2. A key conclusion of the Government-commissioned Lawton Report *Making Space for Nature* was that we needed to create larger and better connected natural areas in order to conserve our biodiversity. This places a premium on sites that form part of a larger unit of adjacent SINCs or that interconnect SINCs, and this is reflected in the citations that follow.

3. The previous GLA survey was essentially a habitat survey, supplemented by observations of species using the habitat that were made at the time. For proposed new SINCs, this review has drawn on details of that original survey, plus significant recent records or surveys (e.g. of water voles) and a walkover survey of prospective new SINCs.

4. Sites have been graded this time based on analogy with sites graded by GLA in the previous survey, with additional weight given for membership of a larger grouping and/or connectivity (point 2 above) and for habitats or species of particular significance locally.

5. Two sites are proposed for upgrade to Site of Metropolitan Importance (SMI) – North Ockendon Pit and Beam Valley South. The former is proposed by Havering Wildlife Project, based on recent survey work, and the latter via a review of metropolitan SINCs commissioned by the GLA. Proposed new SMIs must be submitted to the London Wildlife Sites Board for their approval, and approval has been given for North Ockendon Pit and is expected for Beam Valley South. Identifying numbers for new SMIs will be supplied by GIGL (London's biodiversity recording centre) when details are submitted to them.

6. Boundaries follow habitat boundaries rather than ownership boundaries (e.g. including the opposite bank of a watercourse where ownership runs down the middle; including adjacent motorway banks where appropriate) and also align with the boundaries of adjoining current SINCs.

M??? North Ockendon Pit *(formerly HVBII38)*

Grid ref: **TQ 591 844**

Area (ha): **18.7**

Borough: **Havering**

Site first notified: **01/03/2002** **Boundary unchanged**

Citation last edited: **31/03/2017**

Habitat: **Neutral grassland (semi-improved), tall herb, scrub, woodland, scattered trees, standing water, hedges**

North Ockendon Pit lies on the border of Havering with Thurrock. Following gravel extraction it was partially infilled with building rubble and Thames dredgings. It was designated a Site of Borough Importance Grade II in 2003, identified as HvBII38. The citation describes it as 'an area of capped land dominated by couch grassland with areas of tall herb'; 'areas of raised spoil supporting scrub … and planted (trees)'; 'dry grassland' and 'ditches and pools full of brackish water'. Its biodiversity was summarised as 'moderately rich in plant species despite the dominance of couch' and 'undisturbed habitat for a variety of birds'.

Before and since then the site has been locked up and left to itself with no management and largely undisturbed. Even so it appears to have suffered very little succession, still remaining largely open with significant scrub invasion only along the eastern and southern boundaries. It also remains 'moderately rich in plant species', including pyramidal and bee orchids, fig-leaved goosefoot, lesser spearwort, corn mint and golden dock.

During this time the site has developed an invertebrate assemblage of national importance, including several rare bees, wasps and ants. Its geographical situation adds weight to that importance. In its *Stepping Stones* project, BugLife has established a chain of good invertebrate sites across Thurrock. This site lies some 5km north of the western end of the chain (Chafford Gorges Nature Park), extending the chain into Havering and Greater London and towards other brownfield sites in the borough that have the potential to develop valuable invertebrate populations.

Added to this it has significant populations of reptiles, cementing Havering's position as the most important London borough in this respect.

Finally, it is a valuable undisturbed breeding ground for a wide variety of birds in an area dominated by arable farming, including lapwing (red-listed) and reed bunting (amber-listed).

M??? Beam Valley South in Havering *(formerly HVBI17)*

Grid ref: **TQ 506 836**

Area (ha): **10.2**

Borough: **Havering**

Site first notified: **01/03/2002** **Boundary unchanged**

Citation last edited: **31/03/2017**

Habitat: **Neutral grassland (semi-improved), tall herb, scrub, hedges, ditches,** *Typha* **swamp, standing water, river**

This section of the River Beam has a steep-sided, straightened course but supports frequent curled and fennel-leaved pondweeds (Potamogeton crispus and P. pectinatus), and abundant emergent branched bur-reed (Sparganium erectum) and Indian balsam (Impatiens glandulifera). A new channel links into the river and this also has luxuriant submerged and emergent vegetation including Canadian waterweed (Elodea canadensis), common waterstarwort (Callitriche stagnalis), reed sweet-grass (Glyceria maxima) and common spike-rush (Eleocharis palustris) as well as further wetland species in lesser abundance. Mallard, moorhen and grey heron are frequently seen and water voles have been recorded.

Pasture immediately to the east is marshy in places, and includes marsh foxtail (Alopecurus geniculatus), celery-leaved buttercup (Ranunculus sceleratus) and toad rush (Juncus bufonius). A ditch along the western side of the pastures has a good wetland flora including marsh woundwort (Stachys palustris) and marsh yellow-cress (Rorippa palustris). The pasture may be of value to wintering birds.

The Site extends across the River Beam into Barking & Dagenham, where it is called Beam Valley South in Dagenham and the Wantz Stream. It forms part of the Dagenham Corridor, a green corridor running north–south through east London that is an important flyway for migrating birds.

HVBII12 Bonnetts Wood *(formerly **Central Farm Streamsides**)*

Grid ref: **TQ 554 844**

Area (ha): **16.4**

Borough: **Havering**

Site first notified: **01/03/2002** **Boundary last changed: 31/03/2017**

Citation last edited: **31/03/2017**

Habitat: **Broadleaved woodland, scrub, hedges, stream, pond, wet marginal vegetation, semi-improved neutral grassland (some wet)**

The Cranham Brook, a clear-flowing stream feeding into Berwick Ponds and the Ingrebourne Marshes SSSI to the south, flows through the site from north to south. It and an adjoining (and restored) former farm reservoir have a strong population of water voles. The stream is bordered by mature ash, oak, alder and willow trees (some stag-headed with woodpecker holes), and by patches of bramble and thorn scrub.

The northern section was planted up in patches with a variety of predominantly broad-leaved native trees in 2003, which are now maturing and support good numbers of nesting birds. The tree patches are separated from one another and from the stream by broad grassy rides that are moderately rich in flowering plants. The whole is an important feeding and nesting area for bats.

The southern section (formerly designated under the name Central Farm Streamsides) is bordered to the north by a varied treeline including elm, white willow, aspen, ask, oak, hornbeam and field maple, and shrubs including hazel and dogwood, with dense osier scrub further south.

Its northern field has a diversity of grasses and herbs, transitioning from dry grassland to damper areas with abundant marsh horsetail. The southern field has a fen-like quality with a variety of wet grassland herbs including marsh horsetail, hemp agrimony and square-stalked St John's-wort, all uncommon in London, transitioning to the south into grey willow scrub with scattered white and crack willow trees (some massive) with reed, comfrey and meadowsweet growing below and between them. A boardwalk has been installed to allow visitors to visit this unusual habitat and view the water voles without disturbing them.

HVBII44 Gerpins Lane Open Space

Grid ref: **TQ 554 840**

Area (ha): **15.2**

Borough: **Havering**

Site first notified: **31/03/2017**

Citation last edited: **31/03/2017**

Habitat: **Semi-improved neutral grassland, tall herb, scrub, broadleaved woodland (planted in the 1980s), scattered trees, hedges**

This is a former gravel extraction site that was filled with municipal rubbish during the 1960s and 70s. It has been left untouched since then, apart from some tree planting in the 1980s.

A variety of native broad-leaved trees have been planted densely along the western boundary next to Gerpins Lane, including ash, oak, field maple, elm, hawthorn and wild cherry. This has a species-poor ground flora including substantial areas of cow parsley and some nettle. Elsewhere on the site, the trees have been spaced more widely, creating open, sunny woodland with a grassy understorey and patches of ground ivy, red campion and lords-and-ladies.

A substantial proportion of the site to the north and east is open grassland dominated by coarse grasses and with scattered small trees and occasional patches of bramble and nettle. Despite the dominance of coarse grasses it is moderately rich in flowering plants. These are mostly common ruderal plants, including white and red dead-nettle, hemlock, lesser burdock and teasel, but also perforate st-john's wort, knapweed and hairy bittercress. It also has areas of sparser vegetation, supporting low-growing plants such as common whitlowgrass and common stork's-bill. Topography is varied, with many humps and hollows and occasional banks, deep depressions and spoil heaps. This kind of open mosaic habitat is typical of neglected brownfield sites like this one which would now be described as 'poorly restored' and is now very scarce as sites like this are 'tidied up'. It forms valuable habitat for invertebrates, exploiting the variety of niches for nesting and a good foraging resource.

The combination of open woodland and grassland is also optimal habitat for reptiles – common lizard is known to be present.

The site provides undisturbed habitat for a variety of breeding birds and good foraging habitat for raptors such as kestrels and barn owls.

HVBII45 Folkes Lane Woodland

Grid ref: **TQ 575 896**

Area (ha): **48**

Borough: **Havering**

Site first notified: **31/03/2017**

Citation last edited: **31/03/2017**

Habitat: **Mixed woodland (planted in 2002), mature trees (possibly ancient), semi-improved neutral grassland, scrub**

Former arable fields bordering a steep hill, now cut through by the M25 motorway, most of which has been planted up with trees. These are mostly native broad-leaves, with some scots pine and larch. The trees are now maturing and are bordered in places by bramble patches and blackthorn thickets.

Areas of woodland are separated by broad grassy rides and a large open area has been left on high ground towards the northern end of the site. Parts of this are rich in flowering plants, including knapweed and devilsbit scabious.

The site includes several ancient hedges with many massive oaks, some stag-headed and almost all containing nest holes, plus sweet chestnut, wild service, elm and hawthorn. Ground flora includes wood sage, hedge woundwort and great horsetail.

A small pond has been created with good aquatic vegetation.

This large site provides good habitat for a variety of birds and small mammals and forms part of a wildlife corridor running alongside the M25 to its west.

HVBII46 Tylers Wood

Grid ref: **TQ 571 904**

Area (ha): **14**

Borough: **Havering**

Site first notified: **31/03/2017**

Citation last edited: **31/03/2017**

Habitat: **Broad-leaved woodland (planted in 2002), hedges, semi-improved neutral grassland, scrub**

A hilltop and valley side sloping down from the M25 motorway to a bridleway, and with an arm projecting northwards beside the motorway up to a footbridge. Former arable land, it is now substantially open, sunny grassland sheltered by patches of maturing native broad-leaved trees, including much birch. Flowering plants include agrimony and knapweed. This provides good habitat for butterflies and also for reptiles (for which it is being managed).

The northward projection beside Jermains Wood is kept wet by seepage off the motorway bank and has sheets of common fleabane and other damp-loving plants in summer. The steep motorway bank has patches of gorse.

A stream/ditch meanders along the north-west boundary. Its treeline/hedge includes ash, oak, hornbeam and crack willow. Patches of brooklime and fool's-watercress grow on its banks.

Provides supporting habitat for HvBI06 Tylers Common and links it with two ancient woodland SINCs – HvBII20 Jermains Wood and HvBII21 Foxburrow Wood. Also forms part of a wildlife corridor running alongside the M25 to its west.

HVBII47 Harold Court Woods

Grid ref: **TQ 554 915**

Area (ha): **25**

Borough: **Havering**

Site first notified: **31/03/2017**

Citation last edited: **31/03/2017**

Habitat: **Broad-leaved woodland (mostly planted in 2001–3), hedges, semi-improved neutral grassland, ponds**

Former farmland surrounding Harold Court (now residential flats), much of which has been planted with trees, mainly native broad-leaves with some scots pine and larch, supplementing the surrounding tree belts, which include groups of mature hybrid black poplar and horse chestnut. The original hedges include many old trees, including midland hawthorn and wild service, and have dog's mercury among the ground flora. These and the maturing plantations provide a good foraging and nesting resource for birds and other wildlife.

Broad grassy rides and open areas have been left between the groups of trees, These are moderately rich in flowering plants and provide good habitat for butterflies, small mammals and reptiles.

A pond at the northern end has been restored and has good emergent vegetation including common reed and lesser reedmace.

Provides supporting habitat for HvBI06 Tylers Common and links it with a grassland SINC – HvBII24 Bourningwood Fields – and with HvBII42 Railside Land, which also forms part of an east-west wildlife corridor.

HVBII48 Pages Wood

Grid ref: **TQ 558 898**

Area (ha): **61**

Borough: **Havering**

Site first notified: **31/03/2017**

Citation last edited: **31/03/2017**

Habitat: **Broad-leaved woodland (planted in 2002), hedges, semi-improved neutral grassland**

This site includes the remainder of Pages Wood not included in M108 Ingrebourne Valley (which covers land west of the river, i.e. the former Mount Pleasant Farm, plus the river corridor and the tree-lined tributary that leads into it from the eastern boundary). This is a broad valley sloping down to the River Ingrebourne from the north and east. It is former farmland most of which has been planted with groups of trees, predominantly native broad-leaves, separated by grassy rides and open glades which were sown with a wild flower mix and remain moderately flower-rich. The northern boundary hedge has mature oak, ash, field maple, crab apple and wild service trees.

It also includes the part of Harold Wood Park east of the river (again, the river corridor is included in M108). This is flower-rich grassland with daisy, autumn hawkbit, dandelion, self-heal and creeping buttercup, and with scattered birch, poplar and willow. The south boundary consists of a good (and probably ancient) hedge with oak and midland hawthorn, and dogs mercury in the ground flora

This is a large site and the combination of maturing woodland with open, sunny grassland and adjoining watercourses makes it valuable for a variety of wildlife, and particularly invertebrates and reptiles.

Provides supporting habitat for this part of M108 Ingrebourne Valley and links it to HvBI06 Tylers Common and the extensive complex of sites surrounding it.

HVBII49 Ingrebourne Hill

Grid ref: **TQ 525 834**

Area (ha): **74**

Borough: **Havering**

Site first notified: **31/03/2017**

Citation last edited: **31/03/2017**

Habitat: **Broad-leaved woodland (planted in 2008), hedges, semi-improved neutral grassland**

This is a former landfill site immediately south-west of the Ingrebourne Marshes, built up into a low hill. Parts of the gentle slopes and low ground to the north and west have been planted up with trees, mainly native broadleaves with some scots pine. This leaves large areas of open grassland containing a variety of flowering plants, both native and alien. The large flattish area on top of the hill is particularly rich in flowers, among them knapweed, goat's rue, red clover, creeping thistle, yarrow, ox-eye daisy and creeping cinquefoil, and forms a valuable foraging resource for insects, including a national rarity, the brown-banded carder bee.

At its southern tip are two large lakes fringed with common reed and willow. These form a valuable resource for breeding birds, including great crested grebe, little grebe, mallard, coot and mute swan, and for over-wintering wildfowl.

This substantial mosaic of grassland, maturing woodland and water bodies provides habitat for a wide variety of wildlife, and valuable supporting habitat and protection for the southern section of the Ingrebourne Marshes SSSI.

HVBII50 Berwick Glades

Grid ref: **TQ 541 842**

Area (ha): **12**

Borough: **Havering**

Site first notified: **31/03/2017**

Citation last edited: **31/03/2017**

Habitat: **Broad-leaved woodland (planted in 2003), hedges, semi-improved neutral grassland**

This former arable land has been planted up with blocks of predominantly broad-leaved trees. Substantial areas of open grassland have been left and parts of these are rich in flowering plants, including notably knapweed, goat's-rue and various vetches and clovers, forming a useful foraging resource for insects. Skylarks nest in the less disturbed areas.

The boundary tracks and hedges support a good flora including some rare plants. This includes meadow vetchling, narrow-leaved birdsfoot trefoil, field parsley, amphibious bistort, zig-zag clover and wild carrot.

Provides valuable supporting habitat for the northern section of the Ingrebourne Marshes SSSI and for M108 Ingrebourne Valley..

Havering
LONDON BOROUGH

COUNCIL, 26 July 2017

A HOUSING

Motion on behalf of the Independent Residents' Group

The Coalition Administration's promotion of the council booklet "Havering – Making a Greater London" that includes a "Visionary" commitment to support the building of 30,000 properties in Havering is premature and a mistake. Premature, because this "Vision" has not been explicitly endorsed by Council and a mistake, because to build that many properties would require the construction of nearly 1,700 per year, 530 more than Mayoral target of 1,170 per year.

Presently, we have introduced two large GLA housing zones plus various sites under an ambitious Council "re-build our council estates" programme that will total around 11,000 properties, even without the provision of the necessary infrastructure and services being guaranteed. The idea that up to 20,000 more properties could be built without adversely impacting upon the environment and residents' quality of life is risible and dishonest.

At the last Council meeting the Cabinet Member for Housing said the 30,000 figure derives as our apportionment as a member of a London sub-region rather than to meet Havering's specific housing needs. This figure must be resolutely resisted should the Mayor demand in the pending London Plan an adherence to the Strategic Housing Market Assessment.

Council therefore agrees it will not commit itself to any housing numbers above our present already excessive Mayoral target.

Amendment by the Conservative Group

This Council, having received expert advice from Queen's Counsel as explained in detail in a recent briefing open to all councillors, accepts that it must follow the required procedure if it is to obtain approval of its draft Local Plan and protect the Borough from indiscriminate developments across the area lacking proper infrastructure.

It further notes that this is laid down by National Planning Policy, that one of the requirements is to meet objectively assessed housing need and that this is done both in London and elsewhere through the Strategic Housing Market Assessment (SMAH). The most recent updated SHMA indicates a provisional need for 30,000 homes over 22 years up to 2033.

It further notes that the London Plan currently shows a minimum target for Havering of 11,701 new homes from 2015 to 2025. On this basis the emerging draft Local Plan would show a continuing target of 1,170 over the period of the plan which could be reviewed every 5 years in the light of any evidence of changes in need.

It further notes that the proposed Havering Local Plan will be open to extensive public consultation and any submission to the Secretary of State for public examination will be subject to the responses received through the consultation process.

B GREATER LONDON AUTHORITY

Motion on behalf of the United Kingdom Independence Party Group

Over many months members have had concerns about the LIP funding and how it is our money being returned but with strings attached. TFL state 'We allocate money to the London boroughs to spend on projects that support the Mayor's Transport Strategy through a Local Implementation Plan" This money is raised through the GLA precept, only part of which do we see returned and only then to be spent on things that The London Mayor wants and not what is necessarily of any benefit to the people of Havering; rarely used cycle lanes being a case in point.

Most recently the unveiling of plans to build 30,000 homes in the borough over the next 10 years to meet the London Mayors housing target, coupled with the assault on our greenbelt to bury the dead from other London boroughs highlight just how little control we currently have to set our own destiny when it comes to planning.

This has been the case since the creation of the GLA in by the Greater London Authority Act 1999 which passed through Parliament, receiving the Royal Assent in October 1999.

From that day to this Havering has had increasingly less control over its planning decisions. Which with the ever increasing demand for housing largely fuelled by continued uncontrolled mass immigration this situation is not going to get better any time soon.

This council agrees that it would be better off renegotiating our current relationship with the GLA and rather than remain under the Mayors planning authority we should become a Unitary Authority so that we can bring back control of planning and create a local plan that better fits the needs of Havering residents.

Council, 26 July 2017

Amendment by the Conservative Group

This Council notes that, although it has repeatedly argued for greater control over how LIP funding is spent in the Borough and is concerned about London-wide or other outside control over planning policies and decisions, an Act of Parliament would be needed for the Borough to cease to be a London Borough and to become a Unitary Authority and that this would still be unlikely to give the Council ultimate control over such matters. Planning procedure in particular is governed by statute and national and regional policies. Any planning decision is subject to appeal, and if a council departs from such policies the outcomes are taken out of its hands.

The Council notes further that, even if Parliament could be persuaded to pass such an Act, there would be considerable implications including the loss of London-wide Freedom Passes and other subsidised transport schemes for our residents, the apportionment and burden of future funding of liabilities such as GLA pensions, the future of local policing and fire services and involvement in their governance and the future of the local transport and highway infrastructure which are controlled by TFL and its governance.

The Council notes further that the Council has not unveiled plans to build 30,000 homes over the next ten years and that matters such as annual housing targets and the preservation of the Green Belt will be will be part of the draft Local Plan to be considered shortly by the Council after the extensive consultation and evidence gathering which has already taken place.

Amendment by the Independent Residents' Group

Growing demands to leave an institution is also growing evidence of a need to reform an institution and this applies to the Greater London Authority (GLA), which is presided over by an EU inspired Elected Mayor. Havering sits between London and Essex and enjoys the costs and benefits of both, but the Mayor of London's plans to make Havering part of a Greater London to meet ambitious housing targets has incited a renewed debate about the future governance of Havering within the GLA.

This "Essex NOT London" debate involves a wide range of issues beyond planning matters and the Council's official position on whether to remain should be guided by popular support. For this reason Council calls on the Executive to seek a democratic reform of the GLA and consider holding a borough wide constitutional In or Out referendum on our future relationship with the GLA.
