

**National Indicators 191, 192 and BVPIs (comparator calculations for England, with use of Question 100)**

This report is calculated from data reported by local authorities to WasteDataFlow. Where returns are not at level 40 the data are subject to change. Further breakdown of the summary figures in the Report can be found on the "Data" tab and the definition of the "C-Variables" (or calculated variables) can be found on the "CVariables" tab and give the definition in terms of the question number in WasteDataFlow.

National Indicators (NIs) 191, 192 and 193 applied from 2008 until March 2011. These replaced Best Value Performance Indicators (BVPIs) which were repealed in March 2008. In spite of no longer being official indicators, NIs and BVPIs have continued to be available as calculations in WasteDataFlow to allow for continuity with past reporting. From April 2014 some English local authorities reported in WasteDataFlow using the new Question 100 which replaced a number of past questions. From April 2015 all English local authorities reported using Question 100. The NI and BVPI calculations have therefore been reproduced, being amended where necessary to use Qu100 and to match the original calculation method as closely as is practicable. This report contains these "comparator" calculations. The calculation methodology will remain under review and may be refined if required in the future in light of experience from wider use.

If data have been entered into a period for a selected local authority which was before the use of Question 100, you will need to download the equivalent report with the "pre-Qu100" label.
